THE REPORT CONSISTS OF THREE VOLUMES: 1. MAIN TEXT 2. HYDROGEOLOGIC AND CONTAMINANT DISTRIBUTION PLATES 3. DATABASES DEVELOPED TO SUPPORT THE EVALUATIONS AND ASSESSMENTS. THE REPORT COVERS THE OPERATING PERIOD OF OCTOBER, 1984, TO SEPTEMBER, 1986. THE OBJECTIVES OF THE REPORT INCLUDE: 1. ASSESS THE CONTINUING EFFECTIVENESS OF THE NORTHWEST BOUNDARY SYSTEM IN PREVENTING OFF-POST MIGRATION OF CONTAMINATED GROUND WATER 2. DOCUMENT SYSTEM OPERATING PARAMETERS 3. IDENTIFY AND DOCUMENT SYSTEM IMPROVEMENTS 4. IDENTIFY AND DOCUMENT OPERATIONAL IMPROVEMENTS THAT WILL ENHANCE LONG-TERM SYSTEM EFFECTIVENESS.

PREFACE

This study was conducted from March 1987 to October 1987 as part of a cooperative effort by personnel from the Program Manager Staff Office for Rocky Mountain Arsenal Contamination Cleanup (PMSO) and the U.S. Army Engineer Waterways Experiment Station (WES). Funding for participation by WES was provided by the Program Manager, Rocky Mountain Arsenal Cleanup via Intra-Army Order Nos. 87-D-2 and 87-D-3. Mr. E. Berry served as Project Coordinator for the PMSO. Project management was provided by Messrs. David W. Strang, PMSO, Norman R. Francingues, WES Environmental Laboratory (EL) and James H. May WES Geotechnical Laboratory (GL).

This study is the first operational assessment of the Northwest Boundary Containment/Treatment System at Rocky Mountain Arsenal (RMA). The contributing authors to this report were Messrs. Edwin W. Berry, Brian L. Anderson and Jerry Barbieri (PMSO), Douglas W. Thompson, Jack H. Dildine, Norman R. Francingues (WES-EL) and Paul Miller and William Murphy (WES-GL). The study and report were authorized by the Program Manager, Rocky Mountain Arsenal, COL Wallace N. Quintrell.

The authors acknowledge the support and assistance of the following people and organizations during this study: Mrs. Marsha Darnell, Ms. Darla McVann, and Mr. Bennie Washington, WES, Mr. Jack Pantleo, Mr. Jim Clark and Ms. Dianna Reynolds, D. P. Associates, and personnel of the Rocky Mountain Arsenal Information Center (RIC).

PART I

Definitions

The abbreviations used in the listing of weekly adsorber flows are explained below.

DATE is in month, day then year format. The total gallon and gallon per minute estimates associated with the date were computed by determining the number of gallons processed (and number of minutes elapsing) during a seven day time period ending on this date.

-1-2 -3-TOTAL- are the headings for columns containing flow data for adsorbers 1, 2, 3, and the total of these adsorbers respectively.

GAL (000) corresponds to the total gallons processed during a seven day time period ending on the date specified. The value must be multiplied by 1000 to determine the total gallons. For example, 280 X 1000 yields a total of 280,000 gallons processed during the seven day period ending on 10/28/84.

GPM corresponds to gallon per minute flow rate. It is determined by dividing the total gallons processed during a seven day time period (ending on the date specified) by the total number of minutes elapsing during the same period.

PART II

Definitions

Definitions for the column headings and abbreviations used in the statistical summaries of the chemical data are given below:

ANALYTE is a code up to six characters long used to identify the parameter being measured. Complete chemical descriptions of the compounds can be found in the front of Part IV.

TOT SAMP (TOTAL SAMPLE) corresponds to the total number of readings taken for a particular adsorber and analyte combination.

SAMP >DL (Sample greater than or equal to the Detection Limit) corresponds to the number of readings taken for a particular adsorber and analyte combination that are equal to or above the detection limit.

% >DL (Percent greater than or equal to the Detection Limit) corresponds to the percent of readings equal to or greater than the detection limit.

DETEC LIMIT (Detection Limit) is the lowest measurement which can be determined.

MEAN is the arithmetic average. The mean was only computed for sets of data where 70 percent or more of the readings fell above the detection limit. When this criteria was met, values falling below the detection limit were made equivalent to the detection limit and included in the computations. An asterisk (*) appears when the mean has not been computed.

UOM (Units of Measurement) are expressed in micrograms per liter (UGL), milligrams per liter (MGL), parts per hundred (PPH) or micromhos per centimeter of conductivity (UMHC). An "S" following UGL or MGL corresponds to internal standard.

MONITORING WELL WATER LEVEL DATA

4th QTR FY81

PART III

Definitions

Definitions for the column headings and abbreviations used in the listings of water level data are given below:

WELL NO (WELL NUMBER) is made up of the section number (01-36) and the well sequence number (001-999) within the section.

AQUIF TYPE (AQUIFER TYPE) is the aquifer where the well's screen is located. The codes associated with it include:

ALL - Alluvium
DEN - Denver

DATE is in month, day then year format.

DEPTH (TOC) corresponds to the depth to water as measured from the top of casing. Water depth is measured to the nearest one hundredth of a foot.

WATER ELEV (WATER ELEVATION) is measured to the nearest one hundredth of a foot.

SAT THICK is the saturated thickness and is computed by subtracting the bedrock elevation from the water elevation. Blanks will appear if the bedrock elevation is not known or if the saturated thickness is found to be negative.

REMARKS will include any special information concerning the well or the measurement. Water levels falling below the bottom of screen will have "DRY" in the REMARKS column. Wells which are clogged, destroyed or coded as being dry will also have an appropriate message in the REMARKS column. The remark "MEAS @ GRND" indicates the well casing had been broken off and the measurement was taken from the ground or surface level.

ANALYTE CODES

PART IV

Definitions

Definitions for the column headings and abbreviations used in the listings of chemical concentrations are given below:

WELL NO (WELL NUMBER) is made up of the section number (01-36) and the well sequence number (001-999) within the section.

AQUIF TYPE (AQUIFER TYPE) is the aquifer where the well's screen is located. The codes associated with it include:

ALL - Alluvium
DEN - Denver

SAMPLE DATE is in month, day then year format.

LAB is a two character code used to identify the laboratory conducting the analysis.

RM - Rocky Mountain Arsenal
ES - Environmental Science and Engineering
(Gainesville)
ED - Environmental Science and Engineering
(Denver)

ANALYTE is a code up to six characters long used to identify the parameter being measured. Complete chemical descriptions of the compounds can be found in the front of this section.

MEASUREMENT is divided into three components:

BOOL (BOOLEAN) corresponds to the two letter code used when the measurement falls below detectable limits.

LT - Less Than
ND - Not Detected

CONCEN corresponds to the chemical concentration.

UOM (UNITS OF MEASUREMENT) are expressed in micrograms per liter (UGL), milligrams per liter (MGL), parts per hundred (PPH) or micromhos per centimeter of conductivity (UMHC). An "S" following UGL or MGL corresponds to internal standard.
