The relaxation of attention to this subject increases the probability of the occurrence of minor errors of which the absence of detection and the accumulation are likely to lead to an incident. Mulder, Vicente, Morey and other authors showed the interest of the study of the spectrum of the power of cardiac rhythm, and more particularly of the frequency band 0.05 - 0.15 Hz in the evaluation of the mental effort of the subject. We have previously shown the existence of a correspondence between measurements of cardiac variability in the temporal field, and the subjective evaluation of the workload of the pilot. This is primarily a mental workload whose main components are the pressure of time, stress and mental effort. We continued this study of the cardiac rhythm of the pilot, in the frequential field, and development of a program to analyze the power spectrum of the heart rate taking into account the limits of studying a discrete signal. The recording of the heart rate is carried out by means of an ambulatory monitoring system and is associated with synchronous observation of the activity of the subject. This method was applied to measurements carried out during psychophysiological tests in the laboratory and during real situations of the piloting of various aircraft. The results obtained show the sensitivity of the spectral energy of the cardiac rhythm in the frequency band 0.05 - 0.15 Hz, to the mental effort of the subject. However, the spectral energy in this frequency band is not correlated with the difficulty of the task, nor with the performance. Certain subjects slacken their mental effort when the difficulty of the task appears excessive to them, others maintain it or increase it without improving their performance. The increase or absence of reduction in the spectral energy of the cardiac rhythm when facing a task of increased difficulty, or during tasks relating to the safety of the piloting of the aircraft, could constitute a factor which leads to error and increases the probability of incident or accident. The Department of Environmental Sciences of RENAULT studies a system of detection of the drops in vigilance of the driver. Installed in the vehicle, this has as its role the prevention of any deterioration in the state of vigilance of the driver. The principle is based on the analysis in real time of the movements which the driver imposes on his wheel. The design of such a system requires, in a study phase, the knowledge at any moment of the level of vigilance of the subject from physiological signals, in order then to determine the parameters of the Flying Angle signal which will be ready to substitute itself there in order to distinguish two states of vigilance. We present here a method allowing the definition of a physiological reference of the level of vigilance of the driver, based on the approach complementary to electroencephalography (EEG), electrooculography (EOG) and on behavioral analysis by video imagery. The trend analysis of the oculographic diagrams significantly improves the early detection of hypo-vigilance. Thanks to the knowledge of this physiological reference, we now have the results obtained on the Flying Angle signal in terms of detection of hypo-vigilance. Author

Birthdate Biorhythm Theory presents a daily guideline to people about the time of their highest and lowest performance. The theory is that it is possible to estimate in which days physical, intellectual or emotional success or failure would happen. The results reached by this investigation, in short, is that popular birthdate biorhythm theory is not capable of explaining the aircraft accidents. Ideal minimum level can be reached by objective and cautious inspections in order to decrease the accidents. The most important conditions in this is to consider the reasons and precautions from scientific perspective. It may be interesting to approach by simple method requiring scientific discussion but one must not fall in its traps. I.I.C.

Disorders of the lipid metabolism in the French flight crew were evaluated beginning with a population having aeronautical expertise who were hospitalized between 1980 and 1989. An anomaly: -pure hypertriglyceridemy (hyper TGD) - mixed lipodystrophy - isolated hypercholesterolemy (hyper CT), were recognized in 52.3% of the cases (483/923). A hyper CT with an elevated risk was confirmed in 34.8% of the cases (294/923). It

is in the group of controllers that this anomaly is th most frequent, with 40% of the subjects affected (50/120), whereas approximately 30% of the subjects are affected in the various groups of pilots as well as among the mechanics and navigators. The follow-up carried out for 177 flying personnel in an average period of two and a half years showed the existence of a cardiovascular attack for 12% of the subjects. Therapeutic treatment (diet +/- medication) was effective in 45% of the cases. The decrease in the numbers for cholesterol, the triglycerides, and for a multifactoral risk factor is established at around 10%. Transl. by FLS

To gain a better insight into the lipidemic profile of our personnel, the serum concentration of total lipids, total cholesterol, triglycerides, phospholipids, high and low density cholesterol, A-1 and B apolipoproteins were measured chemically in 324 healthy ground officers. Additionally, the LDL cholesterol was estimated using the Friedewald's formula LDLfc = chol-HDLc-(trig/5). The population under study, randomly selected, consisted of male, ground officers in active duty serving in the Hellenic Airforce with similar socio-economic status, without any history of coronary heart disease or diabetes mellitus and not receiving any medication. They were grouped into three groups (n= 108) of 31-35, 36-40, and 41-45 years old. A statistically significant increase in the blood concentration of total cholesterol, triglycerides, LDL cholesterol, and apolipoproteinB were found in the 36-40 age group. A significant percentage of individuals in every age group had blood lipid concentrations (cholesterol 41.7 percent, LDL-cholesterol 51.9 percent, triglycerides 7.1 percent, apolipoprotein A-1 43.8 percent) exceeding the desirable levels that prevent an increased risk of a coronary heart disease. Estimated LDLfc values were higher than the measured ones, but from regression analysis, stronger relationship between LDLfc and total cholesterol was found. No correlation between HDLc and total cholesterol was found. Finally our results suggest that: (1) a high percentage of our ground personnel has blood lipid concentrations (principally chol, LDLc, ap-A1) exceeding the levels that prevent an increased risk of coronary heart disease (CHD); (2) people aged over 40 seem to be sufficiently aware of the risk of high blood lipid concentrations and this awareness has to be extended toward younger ages; (3) certain lipids (phos, HDLc, apo-A1) do not vary among the age groups studied and are possibly not discriminatory markers for the screening of lipidemic profile. Estimated LDLfc, though higher than the measured LDLc, showed stronger relationship with total cholesterol and under restrictions can be considered as trustworthy index of the lipidemic profile. BLOOD LIPIDS IN AIRCREW RECRUITS AND IN RAF AVIATORS
D. H. HULL *In* AGARD, Nutrition, Metabolic Disorders and Lifestyle of Aircrew 8 p (SEE N93-32240 12-54) Mar. 1993

Blood cholesterol is a major indicator of cardiovascular risk, mainly from coronary artery disease. Blood lipid elevations are a common cause for referral of RAF aircrew for specialist assessment. The need for investigation, treatment (dietary, drugs), repeated counseling and indefinite follow-up constitutes a significant commitment. Blood lipids were measured in fasting male subjects from two groups; young recruits provisionally accepted for RAF flying training, and trained RAF aircrew. Mean blood cholesterols (SD's) were 4.65 (0.89) mmol/l (180 (34) mgm/dl) in recruits and 5.5 (1.14) mmol/l (213 (44) mgm/dl) in trained aircrew. Corresponding figures for triglycerides were 1.13 (0.56) mmol/l (100 (50) mgm/dl) in recruits and 1.46 (0.86) mmol/l (129 (76) mgm/dl). All differences between groups were significant (p is less than .001). Lipid levels were correlated with age in both groups. Blood lipid levels in recruits were in general satisfactory; the main purpose of measurement remains the detection of the occasional individual with a familial hyperlipidaemia. Blood cholesterols in trained aircrew, though lower than the average for British men, were above desirable limits in 50 percent of all aircrew tested. Ten percent were in the band requiring clinical care and 2 percent might require drug treatment. A program to reduce cardiovascular risk in RAF personnel will include dietary, exercise, and other measures. Author (revised)

Two hundred male subjects from an Italian Air Force AFB were admitted after informed consent to an epidemiological study on the diffusion of cardiovascular risk factors. They were divided in two groups: group A (n=150; aged 37.7 plus or minus 10.7 yr.) was personnel mainly employed in logistic and administrative activities, group B (n=50; aged 35.2 plus or minus 7.8) were pilots regularly performing flight activity. Each subject underwent a clinical examination, height and weight, resting ECG and blood pressure recording, as well as a 20 ml blood sampling. Measurement of total cholesterol, HDL cholesterol, glucose, uric acid, APO-A, APO-B, and Lp(a) lipoprotein concentration was carried out in each subject. Data showed that while lipid values and mean arterial pressure (MAP) levels are significantly lower in group B (p is less than 0.05) as compared to group A, APO A/B ratio and Lp(a) lipoprotein concentration are significantly higher (p is less than 0.05). These findings may suggest that, despite a lipid profile and mean MAP level within the physiological range and independently from these parameters, it may be recognizable in the pilot group a trend towards atherosclerosis development which needs to be further investigated. During the years 1987-1991, 32 Spanish pilots with ages between 39 and 56 years (47.34 +/- 4.81) had demonstrated coronary obstructive lesions by means of coronary angiography. Each case was studied investigating separately, the following cardiovascular risk factors (CVRF) - cigarette smoking, hypercholesterolemia, hypertrigliceridemia, diabetes, arterial hypertension, obesity, and coronary disease family history. It was found that CVRF were present in all the Spanish pilots with proved coronary artery disease. 87.5 percent were heavy smokers and 68.5 percent had high levels of plasma cholesterol. The smoking habit was the most important single CVRF, even more than cholesterol high levels, but they may be relationed with the very high number of cigarettes smoked (33.2 +/- 11.5 for a period of 24.7 +/- 6.3 years). Other CVRF were of little value if not associated to hypercholesterolemia or smoking habit. A proper control of CVRF it should be a priority over the pilot population in order to increase flight safety and the efficiency of the air operations. Author (revised)

RESULTS AND MANAGEMENT OF PATHOLOGICAL LIPOPROTEIN CONCENTRATIONS AND OTHER CARDIOVASCULAR RISK FACTORS IN MILITARY PILOTS OF THE GERMAN FEDERAL ARMED FORCES
ERICH ROEDIG *In* AGARD, Nutrition, Metabolic Disorders and Lifestyle of Aircrew 8 p (SEE N93-32240 12-54) Mar. 1993
(AGARD-CP-533) Copyright Avail: CASI HC A02/MF A03

As a result of research findings during the past years, the level and type of circulating lipoprotein concentrations have become a subject of focal interest. It is now well established that high cholesterol levels are related to the extent and severity of arteriosclerotic heart disease. Before this background, the aeromedical physician is called upon to act now, considering the increased psychic and physical demands the new weapon systems

will impose on the aviator. In a 4-year survey the lipoprotein concentrations of German military pilots were examined under standardized conditions, the results being evaluated in a statistical program at the German Air Force Institute of Aviation Medicine. Additional risk factors influencing the cardiovascular system are also mentioned. Cholesterol level is greater than 220 mg/dl and HDL cholesterol is less than 35 mg/dl are considered as pathological. This is true in 52.4 percent of German military pilots older than 41 years. In 1992, of all pilots (N=4563) examined, 37.2 percent show cholesterol levels greater than 220 mg/dl while 25.1 percent have a tot. chol./HDL-chol. ratio is greater than 6.0. These results differ from those in the years before. Therefore, besides dietary and physical fitness programs, a regime to reduce pathological lipoprotein concentrations will also be introduced. It is mandatory from an aeromedical point of view that risk factors and disorders of the cardiovascular system be detected by medical flying fitness examination. This particularly applies to silent cardiac ischemia. Author (revised)

This Lecture Series will update the information presented in the 1987 AGARD Short course on the Cardiopulmonary Aspects of Aerospace Medicine, and will be of primary relevance to military internists and cardiologists with an interest in aviation medicine, and to military Flight Surgeons. Topics to be discussed will include the following: screening to asymptomatic coronary artery disease in an aircrew population; the aeromedical disposition of aviators with coronary disease; the utility of screening aircrew candidates with echocardiography and echocardiographic findings in trained aircrew; etc. The Lecture Series is designed to be interactive rather than strictly didactic to encourage discussion of problems particular to participating NATO countries. For individual titles, see N94-23314 through N94-23328.

In 1987, the AGARD Aeromedical Panel (AMP) sponsored a Short Course on the Cardiopulmonary Aspects of Aerospace Medicine. The aim of the course was to disseminate current information about the aeromedical implications of cardiac and pulmonary conditions to NATO Flight Surgeons. At the time of the first course, it was proposed that an update course be run every five to six years to keep NATO Flight Surgeons abreast of current developments in aviation cardiology and pulmonology. Since the 1987 Lecture Series, there have been a number of new developments in aviation cardiology. The purpose of this Lecture Series is to disseminate this information. Author (revised)

Predicting the presence of coronary heart disease in an asymptomatic population is a very difficult task. Because of the possible sudden and incapacitating presentation of coronary heart disease and its common occurrence in industrialized nations, screening for this disorder is an important aeromedical concern. Nonsignificant disease can lead to coronary events and is also likely to progress to significant disease. Also, lifestyle changes and other interventions may affect the progress of insignificant disease. Screening efforts in the military aviator population should therefore be aimed at detecting any measurable degree of disease. This review will discuss problems inherent to screening an asymptomatic population, different screening tests, and risk stratified approaches to screening for coronary heart disease. (AGARD-LS-189) Copyright Avail: CASI HC A02/MF A01

Coronary artery disease continues to be a significant concern in aerospace medicine. Coronary disease is a major cause of deaths and sudden incapacitation for males in the flying age population. When coronary disease is found in an aviator, the benefits of his remaining on flying duties must be weighed against his risk of an incapacitating event. The following chapter reviews the probability of a cardiac event in populations of varying degrees of coronary disease including patients following myocardial infarction, angioplasty, and coronary artery bypass surgery. The U.S. Air Force (USAF) experience and recommendation for flying waivers will also be discussed. Author

PRIMARY PREVENTION OF CORONARY HEART DISEASE
WILLIAM B. KRUYER *In* AGARD, Cardiopulmonary Aspects in Aerospace Medicine 6 p (SEE N94-23313 06-52) Oct. 1993
(AGARD-LS-189) Copyright Avail: CASI HC A02/MF A01

The primary prevention of coronary heart disease is a very prominent and vigorously discussed topic in the medical literature, especially in the area of appropriate lipid profile management. Secondary preventive efforts in patients with known disease seem to be clearly beneficial, but the literature and opinions vary considerably regarding primary preventive efforts and how the existing data should be applied to other patient population subgroups. Studies demonstrating regression of coronary artery atherosclerotic lesions seem to lend support to the validity of primary prevention. This topic is of major interest to the military aerospace medicine practitioner. Classic risk factors which are most applicable to the military aviator include lipid profile, smoking, and regular exercise. These factors will be discussed with pertinent information from the literature with the intent of providing a better understanding of the issues and a reasonable approach to this problem. Screening asymptomatic individuals for occult cardiac disease continues to be a difficult task. One of the standard screening procedures continues to be electrocardiography. Electrocardiography is neither a sensitive nor specific tool in identifying heart disease but continues to offer useful information. Interpretation of these studies for aeromedical purposes requires an appreciation for certain differences between a standard clinical population from which the significance of most ECG findings were obtained and the asymptomatic, generally healthy aviator population. The United States Air Force Central Electrocardiographic Library is the repository for all electrocardiograms obtained on Air Force aviators. This facility was established in 1957 in order to review electrocardiograms performed on Air Force aviators to determine the significance of electrocardiographic findings in asymptomatic individuals and to provide consultative services to local flight surgeons as well as the Surgeon General. The following sections discuss the major classes of electrocardiographic findings, their significance, and additional evaluations required by the USAF. Author (revised)

Military pilot training is expensive for all NATO countries, and screening techniques which detect medical conditions at selection which might later result in grounding or operational restriction of trained pilots are generally cost-effective. Although a careful physical examination and electrocardiogram will detect most disqualifying conditions, there are a number of structural cardiac abnormalities which may be missed by these standard screening measures. These include the following: mitral valve prolapse; bicuspid aortic valve; hypertrophic cardiomyopathy; left ventricular hypertrophy; diastolic dysfunction; regurgitant valves--aortic, mitral, tricuspid, and pulmonic; significant stenosis--aortic, pulmonic, and mitral; and congenital lesions, e.g Ebstein's anomaly. Only four of thirteen NATO aeromedical agencies polled by questionnaire reported that an echo cardiogram is included in the routine initial screening of air crew candidates. The detection of disqualifying or limiting cardiac abnormalities in trained air crew is a clear argument in favor of screening, but it is really the incidence of such abnormalities detected in air crew candidates which determines the cost effectiveness of the procedure. During the AGARD conference 'Medical Selection and Physiologic Training of Future Fighter Aircrew' in Apr. 1985, a paper was presented on echocardiography in Mirage 2000 pilots. In this study, 32 Mirage 2000 pilots and 34 transport pilots underwent echocardiography in order to evaluate the possibility of cardiac changes occurring because of high performance flying. The authors found a statistically significant increase in left atrial size and left ventricular septal thickness. They also felt that there was a very significant difference in right ventricular dimensions. The mean right ventricular size for the transport pilots and the Mirage pilots was 13.265 mm and 16.750 mm, respectively. They felt that 8 of the Mirage 2000 pilots had dilated right ventricles whereas only one of the transport pilots had an enlarged right ventricle. Although the cause of this apparent difference could not be determined by the study, the presence of right ventricular dilatation in high performance pilots raised a significant occupational concern among the NATO countries. Although this may simply be an artifact of the small sample size or a result of the inherent difficulty in obtaining right ventricular dimensions, the possibility that this represented a true occupational hazard was seriously considered. In order to determine the significance of this finding, a larger study was undertaken. The intention of this study is to perform a large cross-sectional study comparing the echocardiographic findings obtained on pilots flying high sustained G aircraft with non high sustained G pilots (tanker, bomber, transport, helicopter pilots, etc.). Left ventricular hypertrophy (LVH) means literally, overgrowth of the left side of the heart. However the term is generally limited to an abnormal increase in the mass of the left ventricular heart muscle. In pathological terms, this means an increase in the size of the cardiac myocytes as opposed to hyperplasia, an increase in their number. In common parlance, any thickening of the left ventricular wall tends to be described as LVH; this is incorrect where the thickening is due to increase in the size or number of cells other than myocytes, such as fibroblasts, or to abnormal deposits, e.g., amyloid. LVH may be present with normal wall thickness in an enlarged ventricle, for example in volume overload. In health, left ventricular mass is directly related to stature and to body weight, and it increases steadily with age so a single standard (maximum) left ventricular wall thickness for all ages, both sexes, and all bodily configurations must be inappropriate. However, normative standards incorporating these sources of variability are rarely employed. Author (revised)

The aortic valve, like the pulmonary valve, forms early in foetal cardiac development soon after the fusion of the 2 bulbar ridges which thus become a septum dividing the primitive bulbus cordis into the aortic and pulmonary trunks. Two cusps of each valve arise from the fused ridges, whilst a third cusp is formed from accessory ridges in each outflow tract. The normal arrangement is of symmetrical semilunar 3-cusped valves in the aorta and the pulmonary trunk, but variations are common. A bicuspid aortic valve is present in 1-2 percent of adults; a unicuspid or quadricuspid valve is much rarer. Bicuspid valves are 4 times commoner in men than in women. Lesser degrees of asymmetry are so common as to be the rule; in one series, only 16 percent of normal aortic valves were perfectly symmetrical in the sense that all 3 cusps were within 5 percent of each others dimensions; in 33 percent of valves, all 3 cusps differed from each other by more than this amount. The significance of these minor degrees of asymmetry, particularly with regard to the later development of aortic valve disease, is unknown. Congenital aortic valve abnormalities are common associations of other types of congenital heart disease, notably of coarctation of the aorta and ventricular septal defect. Aortic valve lesions are asymptomatic in most young people; because of this, and of male preponderance, congenital aortic valve disease is quite common in applicants for flying training; as abnormal physical signs are often trivial or absent, acceptance into air crew training is probably the rule, and the abnormality is recognized only later. AEROMEDICAL IMPLICATIONS OF MITRAL VALVE PROLAPSE
P. V. CELIO *In* AGARD, Cardiopulmonary Aspects in Aerospace Medicine 3 p (SEE N94-23313 06-52) Oct. 1993
(AGARD-LS-189) Copyright Avail: CASI HC A01/MF A01

Mitral valve prolapse (MVP) is the most common cardiac valve disorder in the general adult population. Although the prevalence has been estimated at between 4 percent and 21 percent, the true prevalence is dependent upon the specific population evaluated and the diagnostic criteria applied. For the adult male population of aircrew age, the prevalence is probably between 4 to 7 percent. Although the prognosis of individuals with MVP is generally good, rare complications do occur which include sudden death, infective endocarditis, stroke, transient ischemic attacks, and progressive mitral regurgitation. The following discussion will review the diagnostic criteria as well as the probable risk of each reported complication. Author (revised)

Chronic Obstructive Pulmonary Disease (COPD) remains a common cause of illness and death in many Western countries and is an increasing problem in developing nations. Although COPD is declining slowly in the UK, it still causes 15,000 deaths annually and is responsible for 10 percent of all working days lost through illness. This is despite improved working conditions, reduced atmospheric pollution, and decreased tobacco consumption. In the USA, COPD is the fifth most common cause of death, causing 57,000 deaths per year. It is estimated that 81.5 percent of this toll is due to cigarette smoking. Clinically apparent disease is largely

confined to middle-aged and elderly people, but many young cigarette smokers can be shown to have early evidence of airways disease if adequately investigated. Two main types of COPD are seen, chronic bronchitis and emphysema, though patients may show features of both disorders. Chronic bronchitis is defined as the production of mucoid sputum on most days for at least 3 months during 2 consecutive years. Recurrent respiratory infection is increasingly common as the disease progresses. Stopping smoking may, especially early in the disease, arrest or slow its progression. Otherwise deterioration is relentless. Apart from variable rhonchi, physical signs are often slight till the onset of cor pulmonale, that is failure secondary to the broncho-pulmonary disease. Finger-clubbing, raised venous pressure, fluid retention, evidence of right ventricular hypertrophy, hypercarbia with respiratory acidosis and raised intracranial pressure, and eventually hypoxaemia are the main features; despite remissions cor pulmonale is usually fatal within a few years. SARCOIDOSIS AND THE AVIATOR

DAVID H. HULL *In* AGARD, Cardiopulmonary Aspects in Aerospace Medicine 3 p (SEE N94-23313 06-52) Oct. 1993 (AGARD-LS-189) Copyright Avail: CASI HC A01/MF A01

Sarcoidosis is a chronic granulomatous disease of unknown aetiology. It is of particular importance in clinical aviation practice, for a number of reasons. Although it is a world-wide disease, it appears to be much more prevalent in the populations of developed countries. It is common in young adults; in Europe, more men than women being affected, but possibly the reverse in the USA. The onset may be acute and incapacitating, for example with florid erythema nodosum and acute arthropathy. Other cases are a symptomatic and may be detected only by special tests, e.g., screening chest x-ray, ECG, or blood biochemistry. Though often apparently confined to the thorax, sarcoidosis is typically a multi-system disease with involvement, often silent, of many organs: the skin, eyes, liver, spleen, lymphnodes, bone, central nervous, and cardiovascular systems. Hypercalcaemia is quite a common feature but causes symptoms only when potentially dangerous blood calcium levels are attained. No curative treatment is known, but moderate, severe or progressive disease usually leads to steroid treatment which may have to be prolonged and given in high doses. Cardiac involvement is often inapparent, but can be present with incapacitating arrhythmias, complete heart block with Stokes-Adams attacks, or sudden death. A table summarizes the aspects of main aeromedical concern. Author (revised)

SPONTANEOUS PNEUMOTHORAX, CYSTS AND BULLAE

DAVID H. HULL *In* AGARD, Cardiopulmonary Aspects in Aerospace Medicine 2 p (SEE N94-23313 06-52) Oct. 1993 (AGARD-LS-189) Copyright Avail: CASI HC A01/MF A01

Spontaneous pneumothorax is defined as the presence of air in the pleural cavity without apparent cause. Pulmonary conditions such as tuberculosis or cancer may cause spontaneous pneumothorax, but are excessively rare in aeromedical practice. The usual victims are apparently healthy young men, often in the third decade of life, very often tall and of lean, asthenic build. The chest x-ray may be normal before or after the illness, but may show sub-pleural blebs or small cysts, usually at the lung apex; the rupture of a bleb creates a broncho-pleural communication and the natural elastic lung recoil plus negative pleural pressure draws air into the pleural space. Consequent pulmonary collapse and contraction will narrow and perhaps seal the defect, which usually closes spontaneously in a few days. However the air may take several weeks to reabsorb fully, especially if the pneumothorax is large, so that some form of evacuation of the air, e.g., by underwater seal or flutter valve, is usually desirable for any but the smallest pneumothoraces. The disease is disproportionately important in aeromedical practice, for various reasons. Author (revised)

ASTHMA IN AIRCREW

GARY GRAY *In* AGARD, Cardiopulmonary Aspects in Aerospace Medicine 3 p (SEE N94-23313 06-52) Oct. 1993 (AGARD-LS-189) Copyright Avail: CASI HC A01/MF A01

Asthma is a disease characterized by airway inflammation and increased bronchial reactivity. Symptoms, which characteristically are variable, include wheezing, shortness of breath, chest tightness, and cough with sputum. In the past, attention was focused on the airway hyper-reactivity with bronchospasm and wheezing, and treatment was directed towards bronchodilation as first line therapy. In recent years the central role of airway inflammation in the pathogenesis of asthma has gained increasing recognition. Airway inflammation is present in even mild asthmatics, and the treatment of asthma has evolved towards more aggressive management of the underlying inflammatory response as a key element in control. ARTERIAL HYPERTENSION AND THE AVIATOR

DAVID H. HULL *In* AGARD, Cardiopulmonary Aspects in Aerospace Medicine 7 p (SEE N94-23313 06-52) Oct. 1993 (AGARD-LS-189) Copyright Avail: CASI HC A02/MF A01

Arterial hypertension is of great importance in the practice of clinical aviation medicine, mainly because of its prominence as a major risk factor for coronary artery disease and other disabling cardiovascular diseases and because it is so common. Timely recognition of early or mild hypertension should facilitate appropriate intervention which will prevent complications and enable the air crewman to continue his career, hopefully, to normal retirement age. The consequent health benefits and fiscal advantages, both to the individual and to the air forces and airlines of the world, are obvious and substantial Author (revised)

PREDICTION OF SURVIVAL TIMES ON LAND IN A COLD CLIMATE

G. MAIDMENT *In* AGARD, The Support of Air Operations under Extreme Hot and Cold Weather Conditions 12 p (SEE N94-28420 08-51) Oct. 1993 (AGARD-CP-540) Copyright Avail: CASI HC A03/MF A03

Eight subjects were exposed to three different combinations of air temperature and wind speed for two hours in a climatic chamber. Changes in core temperature, surface temperatures and heat flux, and metabolic rate were recorded during the exposure. The results obtained were compared with the predictions derived from a sophisticated computer model of human thermoregulation and heat exchange. Conclusions about the factors responsible for the rate of body cooling in air and the causes of the wide range of variability observed are discussed. The problems of predicting survival times on land for a diverse population are considered, and possible solutions are suggested. Author (revised)

Military cold survival research has traditionally concentrated on ways of conserving body heat. In contrast, this paper will describe recent investigations of metabolic heat production during cold exposure. In humans, increased heat production in the cold is achieved by increased shivering, i.e. involuntary intermittent skeletal muscle contractions, which must be fuelled. This research has focused on the thermoregulatory effects of manipulating the availability of specific fuel substrates to the shivering musculature. Using procedures such as muscle biopsies to quantify intramuscular substrate utilization, venous blood sampling to quantify circulating substrates, and continuous monitoring of metabolic rates and rectal temperatures during cold exposure, the importance of skeletal muscle carbohydrates stores has been demonstrated for the ability to maintain heat production and delay the onset of hypothermia during cold water immersions. Acute reductions in muscle carbohydrate stores were associated with significant reductions in heat production by the body during shivering, and a more rapid decrease in rectal temperature. In contrast, another series of studies induced acute reductions in circulating fat stores, but there was no effect on body temperature regulation. The availability of sufficient carbohydrate stores to the shivering musculature seems to be critical for the body's ability to delay hypothermia during acute cold stress. Author (revised)

BIOCHEMICAL ENHANCEMENT OF COLD TOLERANCE

A. L. VALLERAND *In* AGARD, The Support of Air Operations under Extreme Hot and Cold Weather Conditions 8 p (SEE N94-28420 08-51) Oct. 1993

It is well established that humans have a poor resistance to cold. Once the insulation provided by the microclimate and by peripheral vasoconstriction has been maximized, the last line of defense against the cold resides in an increase in metabolic heat production (M-dot). Several techniques have been used to further enhance M-dot in the cold, but it is a pharmacological approach that has received the most support. To that effect, recent experiments in cold-exposed subjects have shown that the ingestion of ephedrine (E; a decongestant) and caffeine (C; a methylxanthine) improves M-dot, heat debt (body heat deficit), and the drop in body core (rectal) temperature T(sub re), (P less than 0.05). The ingestion of an E, C, and theophylline (T; a bronchodilator) capsule produced about the same beneficial effect (P less than 0.05). Although some authors have reported that T alone reduces the drop in T(sub re) (i.e. warmer T(sub re)), these improvements require further clarification since M-dot and mean skin temperature T(sub sk)-bar practically did not change. A theobromine-based (another xanthine) Recreation and Sports bar (Cold Buster) is purported to reduce the drop in T(sub re) and thus delay the onset of hypothermia. However, such claims could not be confirmed in two different studies performed in our lab. Despite an increase in M-dot in some studies, C alone did not alter T(sub re) in the cold. It is concluded that ephedrine/xanthine mixtures represent at the moment, one of the best and safe pharmacological agents to enhance heat production and cold resistance. Author

Adequate nutrition and hydration can be crucial to the survival of downed aircrews. To determine the nutritional adequacy and palatability of an improved, all-purpose, all-environment survival packet (GP-I) compared to the old survival packet (GP), a field test was conducted using combat survival school students. During a five day survival exercise, 41 aircrew members ate the GP-I and 57 ate the GP. Nutrition/hydration status were assessed from food/fluid intake records as well as changes in body weight. Water turnover was measured in a subset of subjects (n=30) using deuterium oxide. Pre- and post-test hemoglobin, hematocrit, plasma osmolality, urine specific gravity (SG) and ketones were also measured. Acceptability of the two rations was evaluated. Subjects eating the GP-I consumed more calories; GP-I 774 +/- 436 versus GP 642 +/- 408 kcal/d. Carbohydrate and protein consumption were similar but the GP-I group ate significantly more fat, 35 +/- 21 versus 24 +/- 18 g/d. Mean fluid intake was similar for both groups (GP-I 4.3 +/- 1.7, GP 4.4 +/- 1.9 L/d). Sodium intakes were 1.1 g/d. Weight decreased significantly for the GP-I and GP groups (2.9 +/- 1.4, 3.4 +/- 1.7 kg, respectively); changes were similar between groups. Water turnover data indicated subjects maintained adequate hydration as did hemoglobin, hematocrit, and plasma osmolality. Mean post-test urine SG was 1.024 +/- 0.007 and moderate amounts of ketones were detected in urine. Both rations received favorable ratings, but the greater variety of the GP-I ration resulted in higher acceptability ratings. Either ration is adequate; however, the GP-I is more desirable and palatable than the GP. Author

DETERIORATION OF MANUAL PERFORMANCE IN COLD AND WINDY CLIMATES

H. A. M. DAANEN *In* AGARD, The Support of Air Operations under Extreme Hot and Cold Weather Conditions 10 p (SEE N94-28420 08-51) Oct. 1993

(AGARD-CP-540) Copyright Avail: CASI HC A02/MF A03

Manual performance during work in cold and windy climates is severely hampered by decreased dexterity. In this study, the quantitative performance decrease is investigated as a function of climatic factors. The decrease in finger and hand dexterity and grip force was quantified for nine combinations of ambient temperature (-20, -10, and 0 C) and wind speeds (0.2, 4, and 8 ms(exp -1)), controlled in a climatic chamber. Finger dexterity was determined by the Purdue pegboard test, hand dexterity by the Minnesota manual dexterity test, and grip force by a hand dynamometer. Twelve subjects with average to low fat percentage were exposed to cold air for one hour with and without extra insulation by a parka. The subjects were clothed in standard work clothing of the Royal Netherlands Air Force for cold conditions. Extra insulation did affect cold sensation but not manual performance. The deterioration (in percent) in performance is strongly dependent upon Wind Chill Equivalent Temperature (C),

and exposure time (min). In a computer program, the performance decreases and freezing risk is indicated for variable climatic conditions. Derived from text

THERMOREGULATION IN THE EXTREME COLD ENVIRONMENT
LEIF VANGGAARD *In* AGARD, The Support of Air Operations under Extreme Hot and Cold Weather Conditions 5 p (SEE N94-28420 08-51) Oct. 1993

Thermoregulation is normally viewed as the physiological responses aimed towards keeping the deep body temperature constant and high. For this work, this viewpoint is changed, and the human thermoregulation is viewed as those physiological mechanisms that keep the body at an optimal functional state. Here, the extremities and their thermal state is of the highest importance. In the extremities, the arteriovenous anastomoses (AVA's) determine the local temperatures, and by their action also define the thermoregulatory state of the body. The AVA's are centrally regulated, they determine the heat exchange with the environment, and they are the main determinants of the average skin temperature. By following their reactions, man's thermoregulatory state can be ascertained. In the treatment of hyperthermia and hypothermia, these functions are highly relevant. The role of the AVA's place them as a specific thermoregulatory organ responsible for the maintenance of optimal extremity temperatures. Derived from text

The decrease of central body temperature by warmth withdrawal leads in most cases to pathological changes of signal devices as the energy metabolism. The central body temperature may be lowered to 28 to 26 C without irreversible disturbances of life functions occurring. Not earlier as below 26 C rectal temperature life sustaining becomes critical. With continued exposure to cold and missing therapy, hypothermia passes several phases. Below 26 C rectal temperature in a phase of paralysis death occurs with cardiac disturbances like cardiac oscillation and disorders of atrio-ventricular conduction. Findings on the corpses of persons dying by cold exposure are discussed. Findings of a crew member dying after ejection and immersion in cold water are demonstrated and weighted by means of differential diagnosis. Author (revised)

Hypothermia may occur with prolonged exposure to cold air or water. Recovery from hypothermia involves removing the individual from the cold environment and utilizing a rewarming strategy. Three major rewarming strategies include the following: passive rewarming, active external heating, and active internal heating. Controversy continues regarding the best rewarming procedure for use in the field. Author (revised)

A COMPARISON OF FOUR METHODS OF REWARMING INDIVIDUALS COOLED BY IMMERSION IN COLD WATER
C. J. CAHILL, P. J. BALMI (Surrey Univ., Guildford, England.), and M. J. TIPTON (Institute of Naval Medicine, Alverstoke, England.) *In* AGARD, The Support of Air Operations under Extreme Hot and Cold Weather Conditions 8 p (SEE N94-28420 08-51) Oct. 1993
(AGARD-CP-540) Copyright Avail: CASI HC A02/MF A03

It has been suggested that hypothermia individuals could be actively rewarmed in the field by immersion of only the extremities (hands and feet) in hot water. If successful this technique would have enormous potential in the pre-hospital and hospital care of the victims of accidental hypothermia. The theory is that local heat to the extremities results in opening of the arteriovenous anastomoses with return of warmed blood directly to the core, via the superficial veins bypassing the intervening cold peripheral tissues. A comparison of four techniques for rewarming subjects with lowered core temperatures has been undertaken. The techniques examined were: immersion to the neck in water at 40 C; immersion of one hand in water at 40 C; immersion of two hands plus forearms in water at 42 C; and passive rewarming. During rewarming, core and skin temperatures, heart rate, blood pressure, oxygen consumption, and peripheral blood flow were measured at frequent intervals. No significant difference, in the ability to raise the core temperature, was found among the techniques. It is concluded that hand rewarming, although theoretically attractive, does not work in practice and may even be detrimental in some circumstances, by suppressing intrinsic heat production. EFFECTS OF THREE HYDRATION BEVERAGES ON EXERCISE PERFORMANCE DURING 60 HOURS OF SIMULATED DESERT EXPOSURE
L. G. MEYER, D. J. HORRIGAN, JR., H. M. NEISLER, and W. G. LOTZ *In* AGARD, The Support of Air Operations under Extreme Hot and Cold Weather Conditions 10 p (SEE N94-28420 08-51) Oct. 1993
(AGARD-CP-540) Copyright Avail: CASI HC A02/MF A03

Without adequate hydration, profound heat stress and dehydration can occur in military forces operating in hot environments. The purpose was to evaluate the effectiveness of three beverages on temperature regulation, cardiovascular response, and work performance during prolonged heat exposure. Nine male subjects, attired in standard military combat uniforms, lived in a climatic chamber for 3 days (60 h) in simulated desert conditions varying from 25 to 45 C, 20 percent relative humidity. Three submaximal treadmill exercise bouts (40 min at 4.8 km/h, 0 percent grade) were performed at 4-h intervals each day. Subjects randomly consumed three beverages: a water placebo of water, citric acid, and aspartame (WP); a 5 percent carbohydrate drink containing water, citric acid, sucrose, fructose, and electrolytes (CE); and a 4 percent carbohydrate drink containing water, citric acid, sucrose, glucose, electrolytes, pyruvate, and 1 percent glycerol (CEG). Subjects drank only one of the three beverages ad libitum during the 60 h but were encouraged to drink every 15 min during exercise. Each subject tested all three beverages in a double blind, repeated-measures experimental design. Sweat rate (SR), core (rectal) temperature (Tre), average skin temperature (Tsk), heart rate (HR), oxygen consumption (VO2), and subjective ratings of perceived exertion (RPE) were recorded during exercise. Body temperatures and metabolic parameters remained within expected physiologic limits during 60 h of simulated desert conditions. During exercise, RPE and HR were similar for all beverages, but VO2, Tre, Tsk, and SR differed among beverages. During the 3rd exercise session on all days, VO2 was higher for CE than CEG and WP; CEG tests had the lowest VO2 on the 2nd and 3rd days. Rectal temperature was lower with CE and CEG than with WP on the 2nd and 3rd exercise periods of each day. Skin temperatures were different during the second exercise period on all three days. Exercise sessions with CEG produced the highest SR. It was concluded that carbohydrate-electrolyte beverages, preferably with a small amount of glycerol, may provide beneficial physiological responses during exercise in hot-dry

conditions during the first 24 h of exposure. However, water alone appears to provide adequate hydration for working in desert conditions over extended periods of time. Author (revised)

Thermal stress can be a serious problem for military personnel. This is largely because the measures employed to reduce such stress under normal working conditions are impractical under operational circumstances. For example, the specialized clothing worn by soldiers cannot generally be removed to reduce insulation and facilitate cooling. Similarly, operations are often conducted in hostile environments where ambient conditions, even inside vehicles, cannot be altered substantially. While reductions in work rate are feasible during peacetime, they have little place in combat as they compromise objectives and may still not be adequate to reduce thermal strain to acceptable levels. When operationally feasible, the provision of personal cooling can assist the body with heat dissipation and thermoregulation, often to the point that work can be continued at a near-normal rate with only slight to moderate thermal strain. An overview of personal cooling technology studies conducted at DCIEM within the last decade is presented. It outlines the problems of thermal stress in operations and its effects on performance, examines various solutions to the problem, and summarizes the R&D efforts that culminated in the integration of personal cooling into the CH124 Sea King helicopters during Op Friction. This was to our knowledge the world's first use of air crew personal cooling garments during combat and it enabled the Canadian Forces (CF) to conduct their Sea King helicopter operations without being time-limited due to thermal physiological strain. EXPERIMENTAL EVALUATION OF TWO SYSTEMS OF INDIVIDUAL AIR-CONDITIONING [EVALUATION EXPERIMENTALE DE DEUX SYSTEMES DE CLIMATISATION INDIVIDUELLE]

D. LEJEUNE, J. M. CLERE, M. BEAUMONT, and M. LONCLE *In* AGARD, The Support of Air Operations under Extreme Hot and Cold Weather Conditions 8 p (SEE N94-28420 08-51) Oct. 1993 In FRENCH

(AGARD-CP-540) Copyright Avail: CASI HC A02/MF A03

The thermal stress in military aeronautics can involve a drop in physical and psychomotor performances; in particular the tolerance for accelerations is decreased. The use of a system of individual air-conditioning is likely to decrease the storage of heat and to thus allow the prolongation of missions. Two techniques are possible: a circulation of cooled fluid in contact with the body or a ventilation of cooled air inside the suit. Two systems were tested, one using a cooled water circulation, the other a circulation of air saturated with 20 C water vapor. The fluid, air, or water circulating in contact with the body is cooled using thermoelectric modules. The tests carried out on voluntary human subjects, in a hot environment going from 40 to 50 C, made it possible to highlight a clear improvement in thermal comfort. Each system has advantages and disadvantages. They must undergo technological improvements in order to allow their use on board combat aircraft. Author

DETERMINANTS OF SUBJECTIVE FATIGUE FOR C-141 CREWS DURING OPERATION DESERT STORM

JONATHAN FRENCH, KELLY J. NEVILLE, WILLIAM F. STORM, ROGER U. BISSON, and PATRICIA BOLL *In* AGARD, Recent Advances in Long Range and Long Endurance Operation of Aircraft 12 p (SEE N94-36321 11-05) Nov. 1993

(AGARD-CP-547) Copyright Avail: CASI HC A03/MF A03

As aircraft flight endurance capabilities increase, the importance of attenuating fatigue during long duration missions increases. Profile of Mood States (POMS) data were used to document cumulative fatigue and to explore the relationships between mission characteristics and changes in mood of C-141 aircrew members during Operation Desert Storm. In particular, this research assessed the effects of increasing the limit of 30-day cumulative flight for long duration transport crews from 125 to 150 hours. POMS data were collected at the beginning of the legal for alert (LFA) and crew rest (CR) intervals. Correlational analyses were used to compare POMS dimensions (anger, depression, confusion, fatigue, vigor, tension) with 13 flight and sleep schedule variables. During both LFA and CR intervals, 30-day cumulative flight hours were not related to subjective mood dimensions. However, when 30 day cumulative flight hours exceeded 125 hours, POMS vigor was decreased by recent flight and sleep hours. Therefore, attending to recent sleep and flight history may predict decrements in vigor when operational pressures require exceeding the normal cumulative flight hours per month. A first attempt to construct a crew rest equation is proposed that accounts for these factors. This equation is based on a stepwise multiple regression procedure which revealed that vigor and fatigue were best predicted by cumulative 24-hour sleep and 48-hour flight time. In addition to improved crew rest schedules, dedicated crew rest facilities and sleep hygiene instruction are recommended before flying long duration missions. Author

SOME SOLUTIONS TO REDUCE THE HUMAN EFFECTS OF EXTENDED OPERATION TIMES [QUELQUES SOLUTIONS POUR REDUIRE LES EFFETS SUR L'HOMME DES OPERATIONS DE LONGUE DUREE]

D. LAGARDE and D. BATEJAT *In* AGARD, Recent Advances in Long Range and Long Endurance Operation of Aircraft 17 p (SEE N94-36321 11-05) Nov. 1993 In FRENCH

(AGARD-CP-547) Copyright Avail: CASI HC A03/MF A03

Mostly, in aeronautical environment, the extended operation times assume the continued operations aspect with long duration flights, sometimes transmeridian. In this operations setting, the fast and repeated passing of several time zones is attended with the classical symptomatology of 'jet-lag', intensified by the conditions of the mission. The appearance and the extent of 'jet-lag' are variable according to the flight and the involved subject characteristics; nevertheless, the psychomotor performances decrease is a constant factor of these disorders. In order to investigate with a greater accuracy this aspect in laboratory, the authors present a study model represented by the STRES battery, an ensemble of seven psychomotor tests, recommended by the working group n degrees 12 of the AGARD/NATO, that allows the evaluation of the whole psychomotor register of a subject situated in stress environmental conditions, in a broad meaning. Two examples of these tests to sleep deprivation states are introduced so as to illustrate the sensibility and the interest of implementing this test battery. In view of the disorder's penalizing effect, several authors have postulated solutions in order to suppress or at least to reduce the duration and importance of such symptoms. Thus, some accurate instructions have been recommended relating to the maximum workload condition that can not be exceeded and to the dual aircrew. Others have enjoined to be synchronized with the new time table before departure or to strengthen the social 'zeitgeber' at arrival. Phototherapy, naps, dietetic measures, and physical exercise are also a part of the suggested steps. The pharmacological approach with the use of caffeine, hypnotics, and more recently melatonin have a new lease of interest especially with the appearance of new awakening drugs, as powerful as amphetamines but without their secondary effects. Thus, after the justification of the stimulating drugs' use in the setting of wake sleep rhythms desynchronization, the authors present concisely the modafinil, main representative of this new molecule category. Then, from examples from the laboratory, on occasion of psychomotor performance evaluation with the STRES battery on subjects under sleep deprivation, or on field, they present some results obtained after dispensation of this drug. At the end of this review and of the experimental results, it appears that the extended operation times induce wake-sleep rhythm and psychomotor performances disorders. Numerous possibilities, complementary, exist in order to reduce the observed disorders; none of them appears alone sufficient. Nevertheless, the new

awakening drugs appearance, on account of their great efficiency and their whole inocuity, should constitute a major element in biological rhythms resynchronization in the future.

Motion sickness symptoms are an unwanted by-product of exposure to virtual environments. This problem is not new and was reported in the early flight simulators and experiments on ego motions and vection. The cardinal symptom of motion sickness is, of course, vomiting, but this symptom is ordinarily preceded by a variety of other symptoms. In his classic studies of motion sickness conducted before and during World War II, G. R. Wendt introduced a three point scale to score motion sickness beyond a vomit/no vomit dichotomy. Later, Navy scientists developed a Motion Sickness Questionnaire (MSQ), originally for use in a slowly rotating room. In the last 20 years the MSQ has been used in a series of studies of air, sea, and space sickness. Only recently, however, has it been appreciated that symptom patterns in the MSQ are not uniform but vary with the way sickness is induced. In seasickness, for example, nausea is the most prominent symptom. In Navy simulators, however, the most common symptom is eye strain, especially when cathode ray tubes are employed in the simulation. The latter result was obtained in a survey of over 1,500 pilot exposures. Using this database, Essex scientists conducted a factor analysis of the MSQ. We found that signs and symptoms of motion sickness fell mainly into three clusters: 1) oculomotor disturbance, 2) nausea and related neurovegetative problems, and 3) disorientation, ataxia, and vertigo. We have since rescored the MSQ results obtained in Navy simulators in terms of these three components. We have also compared these and other profiles obtained from three different vitual reality systems to profiles obtained in sea sickness, space sickness, and alcohol intoxication. We will show examples of these various profiles and point out simularities and differences among them which indicate aspects of what might be called 'virtual-reality sickness'. Author

Research has shown that when subjects are seated upright and asked to perform an earthward head movement in the dark during whole-body rotation, they find the head movement disorienting if it is preceded by prolonged rotation of constant velocity, but not if it is made during the initial acceleratory phase of rotation. The disorienting effects of a head movement after prolonged constant velocity rotation can be attenuated by providing a visual reference to the Earth before the head movement. However, humans may not respond to vestibular or optokinetic simulation the same way for different planes of motion. We tested the disorienting effects of an earthward head movement during rotation about a vertical axis to see if the attenuating effect of a visual reference would be altered. Some subjects were tested while lying on their side and some while lying on their back. Subjective reports concerning head movements in the dark were similar to previous research, suggesting that an acceleratory stimulus in the plane of rotation will attenuate disorientation, regardless of the plane of rotation tested. Likewise, the visual reference attenuated the disorientation that is usually associated with a head movement following prolonged constant velocity rotation. However, the visual reference did not appear to exert as strong an attenuating effect as it had for subjects seated upright. The implication of this finding for the design of centrifuge-based flight simulators is discussed. Author

SOME SIDE-EFFECTS OF IMMERSION VIRTUAL REALITY

E. C. REGAN *In* AGARD, Virtual Interfaces: Research and Applications 8 p (SEE N94-37261 12-53) May 1994

(AGARD-CP-541) Copyright Avail: CASI HC A02/MF A02

Virtual reality (VR) has become increasingly well-known over the last few years. However, little is known about the side-effects of prolonged immersion in VR. The main study described in this paper set out to investigate the frequency of occurrence and severity of side-effects of using an immersion VR system. Out of 150 subjects 61 percent reported symptoms of malaise at some point during a 20 minute immersion and 10 minute post-immersion period. These ranged from symptoms such as dizziness, stomach awareness, headaches, eyestrain, and lightheadedness to severe nausea. Some research which has been conducted which attempted to identify those factors that play a causative role in the side-effects of the VR system is discussed. Finally, some areas for future research are highlighted. Author

THE CLINICAL BASIS FOR AEROMEDICAL DECISION MAKING [LES BASES CLINIQUES POUR LA PRISE DE DECISION DANS LE DOMAINE AEROMEDICAL]

Sep. 1994 257 p In ENGLISH and FRENCH Symposium held in Palma de Mallorca, Spain, Apr. 1994

(AGARD-CP-553; ISBN-92-836-0003-7) Copyright Avail: CASI HC A12/MF A03

This symposium addressed the rationale behind aeromedical decisions. Lack of available data required decision-makers to be conservative when deciding who should fly or not. Papers in this symposium updated available data and provided a focal point for discussion and re-evaluation of aeromedical selection and retention standards. Discussion periods allowed for open exchange on particular topics of concern, i.e., cardiovascular and neurological problems and HIV. Our purpose was to exchange data, experience, and management rationales dealing with the very difficult task of aeromedical decision-making. Information sharing would enable nations to update management protocols based upon experience and collectively more powerful data. The elimination of costly redundant research, the focusing of future research, and collaborative efforts between AGARD member nations is the hope of this exchange. For individual titles, see N95-19414 through N95-19443.

AEROMEDICAL RISK MANAGEMENT FOR AIRCREW

T. M. GIBSON (Royal Air Force, Farnborough, England.) and P. M. GIOVANETTI *In* AGARD, The Clinical Basis for Aeromedical Decision Making 8 p (SEE N95-19413 05-52) Sep. 1994

Medical waivers for aircrew are exceptions to aeromedical standards which have operational justification. The goal of the waiver process is to preserve flying experience to the fullest extent while preserving flight safety, individual health and mission completion. Unfortunately, the flight surgeon has historically been forced to be conservative in deciding who was or who was not fit to fly because of a paucity of relevant scientific data. Moreover, the waiver process has not always been applied logically or consistently. The US Air Force has recently applied the philosophy of aeromedical risk management to produce a waiver guide for flight surgeons. The guide lists the aeromedical concerns for selected chronic conditions met by the flight surgeon. Advice is given on the workup required for each waiver request and a discussion section examine the rationale for the aeromedical disposition. For each condition, an indication is given of the US Air Force waiver experience over the last few years. This paper examines the basic philosophy and describes the use of the waiver guide. Author

The medical and physical examinations our pilots go in for at recruiting and during their annual revision become more extended and accurate thanks to new medical techniques. On the other hand we notice that the importance of human factors as a cause of flight accidents increases. Therefore, the medical Commission (GCGLUD) responsible for declaring pilots fit to fly has to describe the affections regarding to risks and prognosis in more detail, and has to impose flight restrictions adapted to the type of airplane and the function of the pilot involved. The medical Commission for suitability to fly's decision thus has an important influence on the further career of the pilot in question and on flight safety in common. The Commission has to find a balance between common and personal interest. The main intention of this study was to critically evaluate the procedures followed by the Commission, based on an investigation on the cases of all pilots, in the Belgian Airforce, who were restricted definitely during the year of 1992. The population, the different kinds of affections and the resulting flight restrictions were studied. These data will be followed by a critical view on the method of procedure of the Commission. In the United States Navy, many diagnoses are considered disqualifying for aviation duty but may be 'waived' to return to flight duties after resolution of the disease or appropriate treatment of the condition. Personnel with waivers are usually subject to more frequent physical examinations and/or special diagnostic procedures. Although the Naval Aerospace and Operational Medical Institute promulgates written aeromedical guidelines that delineate which disease conditions may be waived and which may not, waivers are granted on a case-by-case basis considering not only the diagnosis, but the age, experience, and type of aviation duty of the individual in question. This study was undertaken to determine which conditions were most and least likely to be waived. We reviewed all cases entered in the Naval Aviation Medical Data Bank who had been diagnosed with a condition considered disqualifying for aviation duty, totaling over 39,000 records. Cases were stratified by diagnosis and aviation duty and the percentage waived was calculated for major diagnostic groups. Approximately 66% of all cases with a disqualifying diagnosis were recommended for a waiver. Otolaryngologic, ophthalmologic and musculoskeletal disorders accounted for over 50% of diagnoses in personnel recommended for a waiver. Fear of flying, personality disorders and adjustment disorders were the three diagnoses least likely to be granted a waiver. The most common disqualifying diagnoses of aviation personnel not recommended for waiver were disorders of refraction and accommodation, obesity, allergic rhinitis, alcohol dependence, and hypertension. Designated aviation personnel were significantly more likely to be waived than students. Author

The flight surgeon is frequently asked to make a determination on the 'fitness to fly' of a member of his or her squadron. Common medical conditions that are transient, unlikely to progress in the operational environment, and have no sequelae that could compromise safety of flight do not result in the physical disqualification of the aviator. These simple cases lend themselves to a prompt aeromedical disposition and are routinely handled by the squadron flight surgeon through the issuance of temporary grounding notices. Following resolution of the acute illness, the aviator can immediately return to full flight status. If any of these prerequisites are not met, however, the aeromedical disposition becomes more complex. Medical conditions that may have significant sequeale, require long term follow up, or those that require chronic medication are not compatible with existing Naval aviation physical standards. If the aviator's career is to be preserved, a waiver of physical standards must be obtained. These challenging cases are generally handled by the squadron flight surgeon, with input from higher medical authorities. These recommendations are forwarded to the Bureau of Personnel for final action. The line community is the final arbiter of standards, and will issue a waiver for flight status based on the needs of the service. Since 1956, the U.S. Navy aeromedical community has officially recognized the need for an approach to evaluate aviators with significant fitness for flight questions. In 1957, the Chief of Naval Air Training established a reviewing body of speciality trained flight surgeons at the Naval Aviation Medical Center in Pensacola, Florida. This group became known as the Special Board of Flight Surgeons. The Senior Board of Flight Surgeons can make recommendations that supersede the recommendations of the Special Board of Flight Surgeons, and in effect can serve as the court of last resort for aviators seeking another hearing of their case prior to final recommendation. A Special Board of Flight Surgeons is requested by an aviator's commanding officer. Medical information is supplied to the clinical departments at the Naval Aerospace and Operational Medical Institute (NAMI) and a recommendation on the merits of hearing the case is then made to the commanding officer of NAMI. All special board cases presented at NAMI from 1 January 1984 until 31 December 1993 were reviewed. There were 119 special board cases involving 116 individuals. These individuals appeared before the board on two separate occasions. Pertinent demographic data were entered into a computerized database program (dBase III, Ashton-Tate Inc.) for trend analysis. The rationale for the aeromedical conclusions reached in each of the 119 cases presented in the past ten years was explored in detail. No statistical analyses were attempted on the data. The effect of sex and race on board outcome were considered, however, there were only two females and few minorities during the time frame considered negating any statistical significance. Author

Medical fitness is an essential part of air safety. Aircrews undergo their regular medical review to ensure their physical and mental status will enable them to carry out their onboard functions in both normal and exceptional circumstances. Medical screening during the selection process followed by continued medical vigilance over the health of aircrews has been the major contributor to air safety by reducing the risk of potential incapacitation during flying duty. Because preexisting disease has been described as a contributor to aircraft mishaps military aviators undergo detailed initial flying physical examinations designed to find those with physical defects or disabilities that could potentially compromise flying safety. Another major objective of the physical examination is to periodically reevaluate conditions already known to the pilot and flight surgeon which may or may not have required the granting of a waiver previously, as there are many medical problems or conditions which are not static but may become improved or worsened over the time interval since the last periodic check up. The decision whether to let a pilot fly again is always a difficult one, especially since the airman involved is usually very keen to return to duty and will do his utmost to convince those who make these decisions that he is capable of flying. Flight surgeons have the responsibility to confirm this capability prior to putting a pilot back in the cockpit. The purpose of this study was: (1) to review the aeromedical disposition of Spanish military personnel through the first half of 1993 and identify the major reasons for permanent or temporary disqualification; (2) to determine the incidence or various medical causes for permanent or restricted status; and (3)

to determine the incidence and reasons for restrictions or temporary disqualification among aviators who, after appropriate follow-up were returned to flying duties. ESDU

The Aviation Medical Data Retrieval System (AMDRS) is a dynamic, expanding database that currently contains information on 150,000 individuals, and approximately 75,000 separate complete examinations. The Naval Aerospace and Operational Medical Institute (NAMI) developed AMDRS in March 1989. The Aviation Epidemiological Data Register (AEDR), developed by the US Army Aeromedical Research Laboratory, is the temporary repository of information from which the AMDRS develops. After the medical record is completed by reviewers, information is transferred for permanent storage in the Aviation Medical Data Base (AMDB). The purpose of this paper will be to provide detail about the information available in the database, examples of previous studies completed, and propose specific areas for future study. Author

Laboratory tests in body fluids are an essential part of the aeromedical examination. It helps to find objective data in a poor anamnesis. Nearly all pilots tell us they feel healthy and fit for flying duty. The chemical finding sometimes give surprising results. Measurements are of a high technical standard, quality control guarantees reliability. So no-one can ignore an abnormal laboratory measure, the range of test profiles in aeromedical examination in civil and military regulations is different. Our laboratory program for pilots is now reformed and will be part of the regulations for the aeromedical examination. The selection of laboratory screening test follows some criteria: (1) relevance for a safety relevant disorder; (2) test is sufficient specific and sensitive; and (3) test can be automated and economically performed. Specials in military duty asymptomatic chronic diseases, which may be aggravated in extreme climate, must be excluded. Author

The prevalence of thyroid diseases is almost 5 to 7%. Hypothyroidism, whether primary (thyroidal) or secondary (hypothyrotropic and, rarely, hypothalamic) occurs at all ages and is more common in women. Its frequency varies depending on the population studied. The prevalence of overt hypothyroidism is 0.5 to 2%. Even though hypothyroidism is an uncommon cause of disease, it nevertheless decreases psychological and physiological efficiency, modifying the aeromedical standards. Hypothyroidism is an involved clinical, metabolic condition supported by inadequate thyroid function. Elevation of thyrotropin blood levels is a sensitive indicator of decreased thyroid gland function (primary hypothyroidism). In this study we evaluated the prevalence of subclinical hypothyroidism, characterized by an elevation of TSH levels with low levels of serum thyoxine and medium-low levels of free tiroxine, in subjects examined at the Forensic Medical Institute of IAF, during ordinary checkups. During the last 16 years, we have performed 86 in-flight EKG's on french aircrew members in order to have additional arguments for fitness decisions. Fighter pilots were the most important group (39%) followed by helicopter pilots (27%), transport pilots (13%) and student pilots (9%). The most important reasons were EKG disturbances and in particular excitability disorders. Cardiac troubles like coronary or valvular disease were more rare. This examination provided positive indication of flying fitness in 70% of cases, negative indications in 15% and no indication in 15% of cases. It is a useful complement to conventional cardiac investigations before medical decision in certain cases. Author

EVALUATION OF THE EKG'S ISOELECTRIC T WAVE IN AIR FORCE PILOTS
M. A. GOMEZ-MARINO, F. RIOS-TEJADA, and V. VELAMAZANPERDOMO *In* AGARD, The Clinical Basis for Aeromedical Decision Making 7 p (SEE N95-19413 05-52) Sep. 1994
(AGARD-CP-553) Copyright Avail: CASI HC A02/MF A03

171 out of 5126 performed EKG's from aircrew members (3.33%), showed some ST-T wave abnormalities. We studied 23 out of the 171 with isoelectric (low amplitude or moderate inversion, but less than 1 mm) in all leads but not in V2-V3 where the T wave were normal. Six of those, had T wave inversion in III and avF leads. All 23 are healthy males, between 30-55 years old (43.6 plus or minus .3), without associated EKG disorders, ionic alterations, and no one regularly practiced heavy exercise. Each one had had between 3 and 21 (11.5 plus or minus 6.5) EKG recordings along a following period of 3 to 20 years (13.0 plus or minus 6.3). All of them has been evaluated through treadmill test (Bruce protocol, submaximal greater than 90%), Doppler-Echocardiography and 24 hours Holter monitoring. We found in 22 cases (95.6%), echocardiographic criteria of left ventricular hypertrophy (IV septum more than 13 mm). 15 out of 15 were symmetric and 6 were asymmetric. 19 cases (86.4%) had a mitral filling flow pattern typical of left ventricular compliance disorder, with atrial wave (A) bigger than fast filling wave (E). Only 3 cases (13.6%) had normal mitral flow Doppler pattern. Valvular or subvalvular aortic gradient was not found in any case. Bruce test results were negative in all cases, but in 21 of those (91.3%), during exercise or the first minute of recovery, T waves became normal, returning to be isoelectrics before 10 minutes. We conclude that asymptomatic flyers without coronary risk factors with isoelectric T waves in all EKG leads (but normals T waves in V2-V3), with or without T inversion in III and avF leads, should be adequately tested in order to rule-out mild hypertrophic myocardiopathy, by Doppler-Echocardiography, and not focus attention in trying to find coronary artery diseases. CENTRIFUGE TESTS OF THE MEDICAL CONDITION OF FRENCH FIGHTER PILOTS [EPREUVE EN CENTRIFUGEUSE DANS LE CADRE DE L'APTITUDE MEDICALE DES PILOTES DE CHASSE FRANCAIS]
G. OSSARD, A. SEIGNEURIC (Service de Medecine Aeronautique, Versailles, France.), J. M. CLERE, and J. P. BURLATON (Service de Medecine Aeronautique, Versailles, France.) *In* AGARD, The Clinical Basis for Aeromedical Decision Making 8 p (SEE N95-19413 05-52) Sep. 1994 In FRENCH
(AGARD-CP-553) Copyright Avail: CASI HC A02/MF A03

The performance of piloting may be involved with processes of which the etiology is not well known today. In the French Air Force, after a serious illness, the pilots undergo a medical examination of their condition to resume flying. Therefore, in order to insure that no risk remains due to accelerations, the pilots undergo a standardized centrifuge test in the Aerospace Medicine Laboratory. From 1983 to 1993, 112 centrifuge tests were

conducted. The requirement for having a centrifuge test is largely predominated by illness of loss of consciousness and cardio-vadcular disturbances which are essentially transitory electrocardiograph anomalies. In certain cases, the disorders have been reproduced and analyzed. The centrifuge test frequently permit avoidance of a disqualification which would have grave consequences for the pilot, based on physiological findings, and for the savings to the Air Force of an investment in operational status. IS THE PILOT FIT FOR FLYING AFTER AN ACCIDENT?
GRETE MYHRE *In* AGARD, The Clinical Basis for Aeromedical Decision Making 3 p (SEE N95-19413 05-52) Sep. 1994
(AGARD-CP-553) Copyright Avail: CASI HC A01/MF A03

It has been recommended that a pilot should fly as soon as possible after an aviation accident or incident, provided he is medically fit. This tradition has been successful in many cases and has therefore been accepted as the right thing to do in the flying society. New knowledge about post traumatic reactions related to accidents has led to new procedures in the Royal Norwegian Air Force in the wake of a crash. Since an accident necessarily affects many persons, much like rings in the water after throwing a pebble, the new post accident debriefing procedures cover the involved parts after a survivable accident in addition to the rest of the squadron. A considerable problem with post traumatic emotional reactions are that they are not usually detected right after the accident, but are elements in a process rather than immediate results of the acute event. So far this program has demonstrated two effects: (1) maintaining the confidence level the aviator had prior to the accident, and (2) demystifying normal emotional reactions in flying personnel, which in itself is a very important accomplishment. In conclusion, the pilot is fit for flying when he has been made aware of the emotions connected with an accident and what to do if and when they appear. The pilot will be able to continue his duties if he has a supportive team that he can lean on in the first period of time after his traumatic experience. For most people it is an advantage to get back to work and resume the normal activities as soon as possible. The aviator will be able to execute his duties without limitations, knowing that the emotions he has gone through are normal and expected, provided the flight surgeon has performed this part of his job carefully. Physicians working in the field of aviation medicine have known from the earliest days of the specialty that the psychological fitness of aviators was a critical element in minimizing aircraft accidents. Studies, spanning 8 decades of aviation, have demonstrated that the majority of aviation accidents have been the result of human factors. Selection of psychologically fit candidates and monitoring the status of designated Naval Aviation personnel has thus been one of the major tasks performed by Naval Flight Surgeons. To guide them, the concept of Aeronautical Adaptability has been developed. Composed of two similar but separate concepts, the first one requires the flight surgeon to evaluate the motivation, temperment, flexibility, and appropriate psychological defense mechanisms of aviation candidates. The second concept accepts that once designated, an aviator has proven his ability to adapt to the rigors of aviation. Still, it requires monitoring of the experienced aviator's pattern of coping with the stresses of aviation, and provides the means to find designated personnel not Aeronautically Adaptable should maladaptive behavior affect the safety of flight. This paper will explore the early psychological standards in the U.S. Navy, then discuss Aeronautical Adaptability as it evolved over the last 15 years. It will discuss the rational behind the current concept and show how Aeronautical Adaptability provides a fair, timely system of review to help the U.S. Naval Flight Surgeon process difficult cases that could present an unacceptable safety risk in Naval Aviation. An analysis is presented of data obtained from vestibular examinations on student pilots prone to airsickness. It is shown that those pilots who were most susceptible during the initial flight training course, in the laboratory even suffered from mild conditions of the Coriolis test. Abnormal postural behavior in the tilting room test, or long time constants of the nystagmus decay after sudden stops from constant velocity rotation, do not contra-indicate a successful desensitization program. A Practical Flying Selection considerably diminishes the number of student pilots suffering from airsickness. Those who pass this test, but got nevertheless into motion sickness trouble during the pilot training, were successfully treated with a desensitization program. Author

THE NAMI SYNCOPE TEST BATTERY AND CLINICAL DECISION-MAKING IN AVIATORS WITH SYNCOPE
J. R. DEVOLL and E. W. HOPKINS *In* AGARD, The Clinical Basis for Aeromedical Decision Making 9 p (SEE N95-19413 05-52) Sep. 1994
(AGARD-CP-553) Copyright Avail: CASI HC A02/MF A03

The Syncope Test Battery (STB) was adopted in 1988 at the Naval Aerospace and Operational Medicine Institute (NAMI) to provide a coherent and consistent methodology for the evaluation of physiologic or secondary syncope. Records from 1988-1992 that utilized the STB were reviewed, and STB results were compared against final diagnostic categories of physiologic or secondary syncope (n=55). Analysis of the STB showed a sensitivity of 20.6 percent, specificity 100 percent, predictive value positive 100 percent, predictive value negative 43.8 percent, and concordance 50.9 percent. These results failed to support the effectiveness of the STB, and the STB did not result in any change between the preliminary and final diagnoses as made on other clinical bases. The evaluation and disposition of syncopal aviators is reviewed in the light of general and aerospace medical literature. It is concluded that the STB is not a useful tool in evaluating syncope in the US Navy aviation population. A step-wise algorithmic approach is recommended for the evaluation of syncopal aviators, but the eventual disposition must still be individualized and remains problematic for the flight surgeon. THINK HEALTH NOT DISEASE
HARALD T. ANDERSEN *In* AGARD, The Clinical Basis for Aeromedical Decision Making 5 p (SEE N95-19413 05-52) Sep. 1994
(AGARD-CP-553) Copyright Avail: CASI HC A01/MF A03

At air crew selection time many important medical decisions are made, most of them relying on simple clinical methods such as preliminary case history and physical examination. Information obtained using sophisticated laboratory methods may give crucial information when results are evaluated against occupational hazards, but it is important to keep in mind that such procedures are not clinically indicated. Health management of those successfully trained is not performed towards a background of disease but to the contrary, in order to promote health. Retention of those treated for illness is a decision of fitness to fly after evaluation of treatment. Clinicians may be satisfied with the treatment of a patient, flight surgeons may or may not be happy with the result considering the occupational hazards of military aviation. It follows that selection, health management and retention of aviators are in principle considerations of health not of disease. Examinations performed on asymptomatic military aviators using diagnostic high technology instrumentation may not contribute essentially to medical decision making. Author

NEUROPSYCHOPHYSIOLOGIC SEQUELAE OF MILD HEAD INJURY

ANTONIO BELLI, SILVIO PORCU, and ANDREA BELLATRECCIA *In* AGARD, The Clinical Basis for Aeromedical Decision Making 11 p (SEE N95-19413 05-52) Sep. 1994

(AGARD-CP-553) Copyright Avail: CASI HC A03/MF A03

Psychologic or neuropsychologic consequences of severe closed head injury have received much attention in both clinical and experimental studies. Nevertheless, it has been clearly established that even mild closed head-injured patients may develop psychologic or even psychiatric sequelae of clinical relevance, including poor social adjustments as well as cognitive impairment. Symptoms such as dizziness, fatigue, irritability, headaches, insomnia, anxiety, and amnesia are also frequently reported, these being usually the major features of post-concussion syndrome. Cognitive impairment is responsible of attention and concentration capability disorders, with consequent difficulty in retrieving acquired information and performing usual tasks. Full or satisfactory recovery from such symptoms is normally achieved in few months, with persistence in a minority of cases with distinct risk factors (age, gender, multiple trauma, history of previous head injuries). Such manifestations of head trauma are satisfactorily detected and followed up by means of specific neuropsychologic tests in several studies, while CT-scan fails to provide but scarce prognostic reliability. The role of neurophysiology is controversial, although opinions are that it should be referred to in selected cases and in a multidisciplinary approach. Finally, an interesting and significant correspondence of neuropsychologic tests, behavioral data and MRI or SPECT findings casts a new light on both clinical and research aspects of the question. Making a decision whether returning a head-injured pilot to flight activity or not certainly constitutes an additional problem for the risk of epilepsy and of other neurological or neurosurgical complications is to be considered of primary importance even for mild head trauma (which accounts 75 percent or more of the total, with an annual incidence of about 150 per 100,000 population). Neuropsychologic sequelae themselves do require a restriction from flying duties for months or years. It is advisable to await normalization of neuropsychologic and neurophysiologic parameters, in absence of neuroimaging (i.e. MRI) signs, before returning the patient to flight activity. Neurophysiology (EEG, evoked potentials) provides cost-effective, sensible and reproducible means for diagnosis and follow-up and its value could be boosted by the implantation of an individual neurophysiological database for all the flying personnel. NEUROLOGICAL DECISION MAKING IN AVIATION MEDICINE BASED ON ELECTROPHYSIOLOGICAL METHODS

H. GLASER and W. FREUND *In* AGARD, The Clinical Basis for Aeromedical Decision Making 7 p (SEE N95-19413 05-52) Sep. 1994

(AGARD-CP-553) Copyright Avail: CASI HC A02/MF A03

The task of neurology in aviation medicine is to determine whether a person is without disturbances of the nervous system's function and without elevated probability to show relevant disturbances in future. Besides medical history and clinical examination, decisions are based on technical methods. Concerning image generating methods, testing of higher brain functions, and sonotopographic methods neurology for the most part utilizes the service of the specialities radiology, psychology, and angiology, while application of electro-physiological methods like electroencephalography, electromyography, neurography or examination of evoked potentials are the neurological specialities own methods. The main task of electroence-phalography in aviation medicine in our opinion is to identify persons with an individually higher electrophysiological lability, which is a lower threshold for abnormal activity of the brain. These persons under conditions of military duty bear a higher risk of developing epileptic phenomena, even if they stay asymptomatic under conditions of everyday life. Author

THE EEG IN THE EVALUATION OF APPLICANTS TO AIRCREW MEMBERS

NUNO PEDRO RIBEIRO *In* AGARD, The Clinical Basis for Aeromedical Decision Making 4 p (SEE N95-19413 05-52) Sep. 1994

(AGARD-CP-553) Copyright Avail: CASI HC A01/MF A03

The E.E.G. has been used since its beginning as a tool in selection of aircrew personnel. Knowing that even in epileptic patients the E.E.G. in a great majority of cases doesn't show abnormalities, the problem is raised on the meaning of such method in the selection of aircrew candidates. On the other hand we must agree in the definition of a 'normal' E.E.G., and what are the meanings of certain abnormalities in an individual that says that he/she is healthy and denies in his/her clinical history, epilepsy, febrile convulsions, headaches and head traumas. Acording to Niedermeyer and Lops da Silva, the usefulness of the E.E.G. in aircrew selection is that we'll have a record to compare in case of need of repetition of E.E.G. In the Portuguese Air Force the selection is seriated, the neurological observation being one of the last ones and only one small part of all applicants submitted to it. The evaluation consists on a clinical history, in which the denial of all pathology is the rule (they are all voluntary), neurological examination and an E.E.G., 30 minutes duration, in the 10-20 system (since 1990), with two hyperventilations and one photic stimulation. CLINICAL BASIS FOR AEROMEDICAL DECISION-MAKING: THE EEG EXAMPLE

J. L. FIRTH *In* AGARD, The Clinical Basis for Aeromedical Decision Making 8 p (SEE N95-19413 05-52) Sep. 1994

(AGARD-CP-553) Copyright Avail: CASI HC A02/MF A03

The EEG, electroencephalogram, is used as a test in aircrew selection. Given that the natural history of the seizure disorders has been described, the validity of this practice is questioned and potentially more rewarding applications of the EEG suggested. System reliability is a major component of aircraft system performance. In military aviation both are central nervous system dependent. In aircrew assessment and management the EEG, electroencephalogram, has traditionally played a major role. Advances in technology, data retrieval, storage, presentation, processing, interpretation and assessment make this an appropriate time to review the place of the EEG in aeromedical decision-making and research. SPINE INJURIES: UP TO DATE EVALUATION IN AIRCRAFT EJECTIONS

FRANCISCO RIOS, JOSE A. AZOFRA, PATRICK P. MILES, CARLOS VELASCO, JUAN SIEIRO, and ALFREDO CUEVAS *In* AGARD, The Clinical Basis for Aeromedical Decision Making 6 p (SEE N95-19413 05-52) Sep. 1994

(AGARD-CP-553) Copyright Avail: CASI HC A02/MF A03

Spinal injury during aircraft egress has been a well known phenomenon since the early days of flying, though at that time usually secondary to ground impact. However, the development of High Performance Aircraft (HPA) has forced the consequent development of high performance ejection mechanisms. These modern ejection systems have functioned superbly with the latest generation mechanism allowing 91.1 percent survivability when egress takes place above 500 ft from ground level and 79.2 percent pilot survival rate when egress is undertaken at flying level less than 500 ft. However, while the overall success rate of 88 percent has resulted in many more pilots surviving an egress experience, 21 percent of these flyers have been shown to suffer some degree of significant spinal injury (vertebral compression-fracture) during egress, potentially threatening their ability to return to the cockpit. Modern HPA, with their ability to inflict immediate and sustained high +Gz forces to the cockpit environment challenge the flight surgeon now as never before to carefully and successfully evaluate the pilot who has suffered egress-related spinal injury in order to determine whether it will be safe for the flyer to return to such an environment. This challenge is made even more pressing by the fact that pilots who eject are often well-trained, experienced flyers

whose potential lost services, either due to permanent disqualification from flying duties or due to further, additional spinal injury, represent a significant potential loss of valuable human resources to NATO Air Forces, already facing the loss of key personnel and resources due to today's economic pressures. These factors make it imperative that all of the modern medical means at hand be utilized in the analysis of post-ejection spinal injuries.

CLINICAL PRACTICE, DIAGNOSIS AND THERAPY OF INTERVERTEBRAL DISK LESION: IMPORTANCE TO FITNESS FOR MILITARY FLYING DUTIES
T. PIPPIG *In* AGARD, The Clinical Basis for Aeromedical Decision Making 6 p (SEE N95-19413 05-52) Sep. 1994
(AGARD-CP-553) Copyright Avail: CASI HC A02/MF A03

The intervertebral disk, central element of the motion segment, may be exposed to high strains which occur when piloting a jet aircraft or a helicopter. Isolated traumatic ID lesions due to flying strains do probably not come into existence neither ID degeneration according to our actual findings and knowledge of the matter. When there is an accurate diagnosis as to ID prolapse considering clinical and radiological findings, ability for military flying duties is exempted for the next six months. Adequate therapy, either by conservative or surgical treatment, is to be initiated. In the case of cervical ID prolapse however, we do not recognize ability for military flying duties for pilots of jet aircraft seated on an ejection seat and for helicopter pilots, even after good results of treatment. After lumbar ID prolapse and good results of treatment we consider the ability for military flying duties as being restored. Thereafter and when the first flying strains set in, the responsible flight surgeon should examine the pilot regularly, at least in the beginning.

SPINAL NERVE SYNDROMES: THE NEED TO CONFIRM THE DIAGNOSIS WITH NEUROPHYSIOLOGICAL EXAMINATIONS
WOLFGANG FREUND and H.-J. GLASER *In* AGARD, The Clinical Basis for Aeromedical Decision Making 8 p (SEE N95-19413 05-52) Sep. 1994
(AGARD-CP-553) Copyright Avail: CASI HC A02/MF A03

Because even the normally healthy pilots suffer from the usual aging and degeneration of the spine, sudden g-stress may lead to compressions of spinal nerves if degenerated intervertebral discs protrude into the intraspinal space. To avoid risks to general flight-safety as well as to the pilot's health, back-pain and sciadic syndromes have to be evaluated aeromedically. The common methods to investigate the cause of spinal-nerve affections can be divided into three steps: first the intensified interrogation and clinical examination of the pilot, which usually leads to the rough specification of the location of the lesion as well as a first hypothesis of the cause (e.g.: A probably traumatic lesion of the left first thoracal nerve). Second usually come radiological methods such as X-ray of the spine and, more promising, a X-ray computer-tomography (CT) and in difficult cases magnetic-resonance-imaging (MRI), which can differentiate between tumors and protusions of intervertebral discs. In the third step the extent of the damage is evaluated by neurophysiological methods. From the viewpoint of aeromedical decision-making this step is the most critical. Of the suitable methods there are the following used the GAF Institute of Aviation-Medicine (GAFIAM): Electromyography: Fast, rather accurate and reliable, though it covers only the motorical part of the nerve-root); Neurography (F-wave measurements can detect lesions in the motorical part of the nerve-root); Somatosensory Evoked Potentials (SEP) (though time-consuming and demanding they offer the only way to measure sensory deficits); and Magnetically Evoked Potentials. To illustrate the decision-making process, examples are demonstrated.

THE AEROMEDICAL IMPLICATIONS OF SUPRAVENTRICULAR TACHYCARDIA
LONDE A. RICHARDSON and PAUL V. CELIO *In* AGARD, The Clinical Basis for Aeromedical Decision Making 5 p (SEE N95-19413 05-52) Sep. 1994
(AGARD-CP-553) Copyright Avail: CASI HC A01/MF A03

Supraventricular tachycardia (SVT) is uncommon in healthy screened populations and has an overall prevalence of 0.02 percent and a maximal prevalence 0f 0.1 percent on routine screening electrocardiograms (2-8), 4.6 percent on Holter monitors (9-12) and approximately 0.6 percent on treadmills (13, 14). A review of the clinical literature reveals that occupational and aeromedical risks for aviators with SVT remains inadequately addressed. Long term follow-up data in aviators with SVT is limited to a single small series by Matthewson and Varnam who followed four aviators for 14 years and found no deaths or coronary events. The Aeromedical Consultation Service (ACS) is a centralized United States Air Force (USAF) referral center which performs aeromedical evaluations in aviators to determine their fitness for flying. The ACS has evaluated aviators with SVT since 1955. In 1973, the ACS developed a protocol permitting resumption of flying duties in aviators with SVT; waivers were granted in selected low aeromedical risk cases. We have continued to provide clinical follow-up of aviators with SVT to insure that waivers for SVT are recommended only in low aeromedical risk cases. Although uncommon, SVT can present suddenly with presyncope, syncope or sudden death with potentially catastrophic results during flying duties. Aviators with SVT were disqualified historically because of these risks. Medical standards must be conservative to insure that USAF aviators are free of such conditions. However, this conservative approach has disqualified many asymptomatic aviators who may have safety flown if data had been available demonstrating that certain subsets had an acceptably low aeromedical risk. When evaluating an aviator with SVT, waiver authorities must determine the extent of aeromedical risk, the level of risk acceptable for continued flying duties and which waiver restrictions should be applied. This paper provides outcome data, acquired from aviators with various SVT presentation profiles to assist in that risk stratification. With these data, a safe return to flying duties for those aviators with acceptably low levels of aeromedical risk can be achieved.

SARCOIDOSIS IN US MILITARY AVIATORS
ROBERT MUNSON, B. TUOMALA, PAUL V. CELIO, and LONDE A. RICHARDSON *In* AGARD, The Clinical Basis for Aeromedical Decision Making 3 p (SEE N95-19413 05-52) Sep. 1994
(AGARD-CP-553) Copyright Avail: CASI HC A01/MF A03

Sarcoidosis is a systemic granulomatous disease of unknown etiology and is generally a benign, self-limiting disorder. Myocardial involvement has been known since 1929, but several articles published in the early 1970's indicated that myocardial involvement was a more common and serious problem. In 1974, Fleming reported on 50 cases of myocardial sarcoidosis with cardiac involvement confirmed in 20 cases by necropsy. He suggested that myocardial sarcoid was probably underdiagnosed and was not a rare condition. In 1984, he also suggested that sarcoidosis was frequently overlooked until sudden death occurs, often in relatively young people, 25-54 years of age. In 1976, Matsui, et al., reported in a Japanese population on 72 individuals with sarcoidosis at autopsy. Fifty-eight percent of these individuals died because of myocardial involvement. Most of these deaths were sudden and the diagnosis was generally not suspected during life. In addition, myocardial involvement was apparently a late complication and was not predicted by progressive pulmonary involvement. In 1977, Roberts et al., reported on 113 patients found to have myocardial sarcoidosos at autopsy. Seventy-nine percent had cardiac dysfunction due to myocardial involvement, 67 percent experienced sudden death, and 23 percent developed congestive heart failure. Most patients with myocardial sarcoid presented initially with cardiac symptoms and most had little or no evidence of other organ involvement. In 16 percent sudden death was the initial manifestation of sarcoidosos. In view of the possible catastrophic consequences of sudden unexpected death

or sudden incapacitation of a military aviator, the United States Air Force (USAF) became concerned about the implication of myocardial sarcoidosis. Prior to 1978, all USAF flyers with sarcoidosis were evaluated at the local flight surgeon's office. After they became stable and the findings of sarcoid resolved, they were returned to flying duties with a local waiver. The details of the local evaluation were not prescribed by protocol and were based solely on the judgment of the local physician. In 1978, the USAF initiated the sarcoidosis study group. This program was initiated to solve 2 basic problems. First clinical studies indicated that a more thorough evaluation was required to examine the possibility that an individual with a history of pulmonary sarcoidosis may have asymptomatic butsignificant myocardial granulomas. This program also provided a mechanism for recurrent periodic evaluations to ensure the aviator's continued fitness for flying. The second objective of the sarcoid study group was to perform these evaluations in a systematic fashion with periodic review to determine the outcome of individuals with a history of sarcoidosis to insure that the prognosis of this grop was consistent with continued flying duties. THE AEROMEDICAL RISK ASSOCIATED WITH ASYMPTOMATIC CHOLELITHIASIS IN USAF PILOTS AND NAVIGATORS

G. W. SABOE, J. W. SLAUSON, R. JOHNSON, and T. H. LOECKER *In* AGARD, The Clinical Basis for Aeromedical Decision Making 6 p (SEE N95-19413 05-52) Sep. 1994
(AGARD-CP-553) Copyright Avail: CASI HC A02/MF A03

The USAF aeromedical policy regarding incidentially discovered, asymptomatic cholelithiasis requires the aircrew to undergo cholecystectomy prior to being considered for return to flying duties. The merit of continuing this USAF policy was evaluated at the request of the USAF Surgeon General. A review of the medical literature predicted a 1 percent to 4 percent annual event rate of acute cholecystitis in individuals with previous asymptomatic cholelithiasis. The prevalence of asymptomatic cholelithiasis in USAF pilots and navigators was determined to be 2 percent to 3 percent, based on data acquired at the Ellingson Aerospace Medicine Consultation Service (ACS). Of 11.685 pilots and navigators evaluated at the ACS, 0.7 percent (n = 880) were diagnosed with cholelithiasis or previous cholecystectomy. Between 1972 to 1992, 16,232 man years of pilot and navigator exposure to asymptomatic cholelithiasis was estimated to have occurred; however, only 50 cases with a diagnosis of cholecystectomy or cholelithiasis were reported in the USAF Surgeon General waiver file. Mortality and morbidity associated with cholecystectomy by either open or laparoscopic technique were reported as 0.2 percent and 5 percent, respectively. Using 1994 USAF pilot and navigator manpower data and the worse case scenario of a 0.7 percent occurrence for the onset of acute symptoms associated with previously asymptomatic cholelithiasis, up to five aircrew would be expected to experience acute symptomatology at some time during 1994. However, if every pilot and navigator flew 200 to 1,000 flying hours during 1994, 0.1 to 0.6 individuals, or essentially none, would be predicted to experience acute symptoms related to gallstones inflight. The natural history of cholelithiasis in USAF pilots and navigators is more favorable than suggested by the clinical literature. The inflight risk of experiencing acute symptoms associated with previously asymptomatic cholelithiasis is essentially nonexistent in USAF aircrew. Author

CLINICAL BASIS FOR AEROMEDICAL DECISIONS IN AIRCREW HIV POSITIVE

JOSE A. AZOFRA, FRANCISCO RIOS, JUAN J. CANTON, PATRICK P. MILES, CARLOS VELASCO, and V. VELAMAZAN *In* AGARD, The Clinical Basis for Aeromedical Decision Making 3 p (SEE N95-19413 05-52) Sep. 1994
(AGARD-CP-553) Copyright Avail: CASI HC A01/MF A03

There has been appropriate concern regarding HIV infection and its effect on aviation safety. Among reasons cited is the consideration that the nervous system is involved early in HIV infection and that dementia in its early stages may be subtle and difficult to detect, on opinion not currently supported by the medical literature. Others have felt that seropositivity alone did not constitute an unacceptable risk to aviation safety, suggesting that other criteria be used, such as the development of AIDS related symptoms, or laboratory abnormalities, prior to grounding a flyer. Discussion and controversy will continue in this area until specific studies of asymptomatic seropositive individuals' performance in real and simulated flying environments are carried out by the aeromedical community. As the prevalence of this disease continues to grow exponentially in the general population the answers to these questions will become increasingly more important. Author

COLOR VISION ISSUES IN MODERN MILITARY AVIATION OR THE SEARCH FOR THE ABOMINABLE CONEMAN

DOUGLAS J. IVAN, J. TERRY YATES, THOMAS J. TREDICI, and JOHN M. GOOCH *In* AGARD, The Clinical Basis for Aeromedical Decision Making 17 p (SEE N95-19413 05-52) Sep. 1994
(AGARD-CP-553) Copyright Avail: CASI HC A03/MF A03

Visual information provided to the modern military aircrew member accounts for the preponderance of data contributing to situational awareness. Although long recognized as a critical factor in aviation, as a result of advancing technological developments, color vision is emerging as an ever-increasing critical requirement in modern and future cockpits. Despite that premise, the modern battlefield is characterized by a vast array of technological weaponry that increases the threat to the visual system and dictates effective countermeasures that compromise visual performance in general and color perception in specific. This paper will review the aeromedical basis of color testing developments and issues that effect aeromedical decisions in color standards and performance as they relate to the modern military aircrew member. It will include an update on color vision issues raised by protective equipment such as selective waveband filters that include sunglass materials and laser protective eyewear/visors. Color-related aircraft accident issues will be addressed. Author

PHOTOREFRACTIVE KERATECTOMY (PRK) IN THE MILITARY AVIATOR: AN AEROMEDICAL EXPOSE

DOUGLAS J. IVAN *In* AGARD, The Clinical Basis for Aeromedical Decision Making 18 p (SEE N95-19413 05-52) Sep. 1994
(AGARD-CP-553) Copyright Avail: CASI HC A03/MF A03

Refractive surgery to correct rehabilitate refractive errors of the eye continues to evolve at a significant pace and is here to stay. The surgical manipulation of the cornea by carefully planned incisions, as in radial keratotomy, represented the first technological procedure to evolve for the correction of ametropia and is an area of continued active development and improvement. More recently, photorefractive keratectomy (PRK) using laser technology to ablate and recon-tour the corneal surface has emerged as a viable modality. This paper explores the aeromedical factors surrounding this new revolutionary procedure and discusses the issues relevant to evaluating its applicability to the modern aviator as well as reviewing results of the latest clinical trials currently in progress. The goal is to provide the aeromedical community with the fundamental information required to formulate aeromedical decision- and policy-making in regard to a new procedure that is certain to have tremendous impact on future aircrew candidates. MEDICATION IN THE COURSE OF ACTIVE FLYING DUTY

M. RADA, A. DVORAK, and J. SULC *In* AGARD, The Clinical Basis for Aeromedical Decision Making 8 p (SEE N95-19413 05-52) Sep. 1994
(AGARD-CP-553) Copyright Avail: CASI HC A02/MF A03

The Czech Institute of Aviation Medicine deals with the practice of medication of airmen without the prohibition of active flying over 25 years. The experience with medical treatment of 420 airmen during the 1982-1993 period is presented in details. Main reason for employment of this policy follows from the successful management of initial stages of primary hypertension as well as of other health disturbances. Hypertension counts for 57.9 percent of all cases liable to medication, being most often started in the second half of the fifth and first half of the sixth decade. Mean duration of medication took 3, 4 years leading to the overall

prolongation of active flying for 2, 9 years. A combination of two antihypertensive agents, viz. the diuretic and the beta-blocking agent appears to be the most effective method. Among other frequently applied pharmaceuticals hypolipidaemic and hepato-protective agents along with vitamin compound remedies should be included. The introduction of medication must precede a thorough medical and psychological examination, repeated prior to waivered certification. Regular observation performed by a flight surgeon or a licensed aeromedical examiner is mandatory. With observance of responsible policy the preservation of an airman in active duty despite his/her medication brings significant economic as well as social benefits without the flight safety impairment. ASSESSMENT OF MORALE IN TURKISH AIR FORCE PILOTS WITH TWO CLINICAL PSYCHOLOGICAL TESTS

MUZAFFER CETINGUC, SAIT DEGER, and O. YALUG *In* AGARD, Aircraft Accidents: Trends in Aerospace Medical Investigation Techniques 4 p (SEE N93-19653 06-03) Sep. 1992

(AGARD-CP-532) Copyright Avail: CASI HC A01/MF A04

In popular understanding good morale is equal to the perception of well being, lack of distress and absence of anxiety and depression. Actually the term morale is related to anxiety and depression. The rational of this survey is to assess numerically stress levels by using anxiety and depression scores. 345 active duty Turkish Air Force (TuAF) pilots and 70 non-flying air force officers as control group, have been taken into this study. 'State Trait Personality Inventory' (STPI-Spielberger) and 'Zung Depression Scale' (ZDS) were applied to both groups in 1988. As an unexpected result, the flyer group has reflected lower scores than the non-flyers. Different explanations are available but they are most likely to be related to high motivation and job satisfaction as well as ego strengths of flyers. These factors can elevate the ability to cope with stressful conditions. Author

EPIDEMIOLOGY OF UNITED STATES AIR FORCE SPATIAL DISORIENTATION ACCIDENTS: 1990-1991

TERENCE J. LYONS, WILLIAM R. ERCOLINE, JAMES E. FREEMAN, and KENT K. GILLINGHAM *In* AGARD, Aircraft Accidents: Trends in Aerospace Medical Investigation Techniques 11 p (SEE N93-19653 06-03) Sep. 1992

(AGARD-CP-532) Copyright Avail: CASI HC A03/MF A04

Spatial disorientation (SD) continues to be a contributing factor to a fairly constant proportion of military aircraft accidents. The United States Air Force (USAF) fielded a new accident investigation reporting form in July 1989, which for the first time specified SD Type 1, Type 2, and Type 3 as possible causes of aircraft accidents. Of a total of 91 major accidents that occurred over the 2-year period beginning in October 1989, SD contributed significantly to 13 (14 percent). Although this percentage is higher than that reported in previous studies, the actual rate of SD accidents per 100,000 flying hours (.1843) is lower than previously reported. Type 1 SD was the cause of all 13 accidents; 9 of the 13 were fatal; 6 occurred in night or instrument meteorological conditions (IMC) conditions; and 11 involved cockpit attention problems, such as inattention, distraction, or channelized attention. Pilot inexperience did not appear to be a factor: average total flying time for the 13 pilots was 1,687 hours. Coding for SD on accident investigation reporting forms was not consistent. There were both individual differences between flight surgeons and pilots, and trends in reporting overtime. There is, however, a consensus that SD represents a major problem in military aviation. A scientific approach to this important problem would be facilitated if agreement could be reached on definitional and semantic issues. Author

DISORIENTATION AND FLIGHT SAFETY: A SURVEY OF UK ARMY AIRCREW

S. J. DURNFORD *In* AGARD, Aircraft Accidents: Trends in Aerospace Medical Investigation Techniques 14 p (SEE N93-19653 06-03) Sep. 1992

(AGARD-CP-532) Copyright Avail: CASI HC A03/MF A04

This paper reports the finding of a questionnaire survey intended to gather disorientation. 440 UK Army aircrew were targeted and the response rate was 79 percent. The survey confirmed the high incidence of disorientation (24 percent of aircrew had suffered at least one episode severe enough to have put flight safety at risk at some point during their flying career and 6 percent had suffered such an episode in the previous 4 months). Only 10 percent had never suffered any disorientation. I.I.C.

OTOLITHIC ILLUSIONS ON TAKEOFF AND VISUAL INFORMATION: REFLECTIONS IN CONNECTION WITH AN AIR ACCIDENT CASE [ILLUSIONS OTOLITHIQUES AU DECOLLAGE ET INFORMATIONS VISUELLES: REFLEXIONS A PROPOS D'UN CAS D'ACCIDENT AERIEN]

A. LEGER, C. MARTIN, and R. PARUS *In* AGARD, Aircraft Accidents: Trends in Aerospace Medical Investigation Techniques 8 p (SEE N93-19653 06-03) Sep. 1992 In FRENCH

(AGARD-CP-532) Copyright Avail: CASI HC A02/MF A04

Otolithic illusions on takeoff (takeoff illusions) have long been known as causes of air accidents. They originate in acceleration + Jx of the aircraft which, while adjusting to the gravity vector, produces an otolithic stimulation generating an excessive feeling of being pulled (somatogravic illusion). This type of illusion appears primarily when the visual references are insufficient (night takeoff, foggy environment). An air accident having led to the loss of a modern combat aircraft is reported. The circumstances and the various parameters of flight (accelerations Jx and Jz, speed, trajectory and altitude, actions of the pilot, etc.) are analyzed. From these data, the resulting otolithic stimulation undergone by the pilot during the flight was reconstituted. The evolution of this stimulation makes it possible to explain perfectly the actions carried out by the pilot, making this accident a typical example of takeoff illusion. The analysis of this air accident shows that the pilot never seemed to have used the visual attitude information presented by the head high visor in the aircraft. Beginning with these elements, a reflection of the visual information of the space orientation presented in the sights is carried out. It results in the consideration of various solutions likely to reduce the risks of confusion. The introduction of display systems connected to the head poses a certain number of new problems in this field, but also opens up interesting prospects. Author

Accident prevention has been a continuous concern since the early beginnings of aviation. Early efforts in prevention have been devoted to system reliability, then to physiological factors. Improvements in both these directions lead to consider cognitive factors as the main source of accidents. Prevention effort must take into account pilots' cognitive processes. In depth cognitive analysis of aircraft accidents serve to point out error mechanisms. Statistics complete this figure showing the respective occurrence frequency of these mechanisms, therefore orient the preventive actions. Such an approach, focused on the cognitive factors involves to define a specific analysis grid from psychological theories on human error. The elaborated grid is the basis to design a cognitive oriented data base. Author

Spatial Disorientation (SD) is a leading human-factors cause of class A mishaps in all branches of the U.S. Armed Forces. Recently, several pilots who performed well under most flight conditions were referred to the Naval Aerospace Medical Research Laboratory (NAMRL) because of inability to fly under specific conditions conducive to SD. Most had been neurologically classified as normal using the presently available clinical tests. The pilots were then referred to NAMRL for assessment of vestibular function. Some of these pilots demonstrated perceptual anomalies in attitude perception that rendered them unable to fly safely under select combinations of acceleration and visual presentations. Although U.S. Navy pilot applicants are thoroughly assessed to meet visual and auditory standards, there are no specific screening tests for vestibular function. Thus, it is possible for members of the pilot community to possess reactions that under certain conditions will render them particularly susceptible to SD. In response to requests from clinicians, we have initiated the development of a Pensacola Vestibular Test Battery (PVTB) to assess aircrew referrals. The PVTB is being used to build a normative and pathological data base that will be incorporated into mathematical models that will inform the clinicians of the perceptual consequences of vestibular anomalies in the flight environment. The same computer-based models will be useful for aircraft design, pilot selection, and mishap investigation. Author

The Department of Environmental Sciences of RENAULT studies the behavior of a broad sample of drivers (100 people of both sexes, of all ages and all driving experiences) implied in an accidental situation (simulation of an intersection between two roads). The goal is to analyze the way in which the driver of a car uses the device for anti-locking wheels or not, not only to slow down but also to carry out a lateral offset in order to avoid the obstacle. It appears that the sensitivity of the subjects to stress, evaluated by a physiological approach during the experiments but also by psychological tests carried out before and after the experiments, explains for a considerable portion the success or failure to avoid the obstacle. GREMLINS: A DOZEN HAZARDOUS THOUGHT AND BEHAVIOR PATTERNS AS RISK FACTORS

MUZAFFER CETINGUC *In* AGARD, Aircraft Accidents: Trends in Aerospace Medical Investigation Techniques 4 p (SEE N93-19653 06-03) Sep. 1992

(AGARD-CP-532) Copyright Avail: CASI HC A01/MF A04

The term 'Gremlins' is known as fictitious ill-tempered spirits loved by children as comic strips and movie characters. During World War 2, it was an easy and unscientific way to throw blame on Gremlins which were considered responsible for unexplainable mechanical difficulties, as if a gin caused malfunctions in the aircraft. It was the gremlin, that diagnosis of pilots and engineers for mechanical malfunctions, that caused aircraft accidents during World War 2. Today they are nothing but puppets and movie characters. Reasons of accidents are explained by more scientific methods. Although modern technology presents materials providing safety in almost all conditions, accidents continue on faults rising from human beings. In this concept, it fits more to use gremlins as 'ill-temperness belonging human psychology that may cause risk'. Some certain personality variances effect the decision and judgement functions. These disorders reflected to thinking and behavior, sometimes may be leading reasons of accidents. I.I.C.

PERCEPTION IN FLIGHT: SHAPE AND MOTION PERCEPTION, SPACE PERCEPTION, SPATIAL ORIENTATION, AND VISUAL VESTIBULAR INTERACTION

HERSCHEL W. LEIBOWITZ *In* AGARD, Visual Problems in Night Operations 9 p (SEE N94-23976 06-54) May 1992

(AGARD-LS-187) Copyright Avail: CASI HC A02/MF A01

Differences between the normal terrestrial and the flight environment are described which may lead to perceptual errors in flight. Specific examples involving the perception of shape and height are discussed as they may relate to nighttime landing accidents. The possible role of misperceived risk is suggested as a contributing factor. The mechanisms subserving motion perception and gaze stability are outlined briefly as the basis for understanding false sensations, illusory motion, spatial disorientation, and motion sickness. It is suggested that an appropriate countermeasure to perceptual errors in the nighttime flight environment is to inform flight crews of the mechanisms and mode of operation of the perceptual systems involved as the basis for understanding how they might misfunction.

MENTAL IMAGES [LES IMAGES MENTALES]

RENE AMALBERTI *In* AGARD, Visual Problems in Night Operations 10 p(SEE N94-23976 06-54) May 1992 In FRENCH

(AGARD-LS-187) Copyright Avail: CASI HC A02/MF A01

The concept of mental images is paradoxically poorly linked to visual perception. It is related to the domain of mental representation, and thus is explained with reference to the field of cognitive psychology. This domain being relatively new for most of the listeners of this short course, basic concepts are didactically introduced. A framework model of cognitive activities is set up, introducing first the various memories, then focusing on mental representation processes. The specificites of mental representation are detailed (laconism, distorsion, parcimony, and task-oriented). Special emphasis is given to the mental representation theory of double coding: verbal and image coding and its relationship with activity. A last section describes how mental representation, especially mental image, could serve or impair night-flight activities. Author (revised)

VIRTUAL INTERFACES: RESEARCH AND APPLICATIONS [LES INTERFACES VIRTUELLES ENTRE RECHERCHE ET APPLICATIONS]

May 1994 186 p In ENGLISH and FRENCH Symposium held in Lisbon, Portugal, 18-22 Oct. 1993

(AGARD-CP-541; ISBN-92-835-0746-0) Copyright Avail: CASI HC A09/MF A02

Recent advances in technologies for information display and sensing of human movements, combined with computer based models of natural and artificial environments, have led to the introduction of so-called virtual interfaces. Virtual interfaces offer increased flexibility and naturalness, so are considered for use in several domains including aviation, training, design, and simulation. Papers presented at this symposium considered issues of research and application in virtual interfaces broadly defined. Issues of technology integration for system development were considered separately from issues of movement monitoring or sensory display. Issues of human performance measurement were presented in the context of both research and application. For individual titles, see N94-37262 through N94-37281.

Under the control of the Center d'Etudes de la Navigation Aerienne (CENA: Air Navigation Study Center), the 'SPEECH' project utilizes the complementary input of industries (STERIA ENGINEERING AND TELECOM, SEXTANT AVIONIQUE and VECSYS) and of a research center (LIMSI) in the study and creation of a tool that would assist in the instruction and training of air traffic controllers. Based on the concomitant use of voice interface (synthesis and identification of speech) and of a supervisory system monitoring the dialogue, the prototype is able to rely completely on the audio channel. A validation from the operators of IHM vocal concepts, makes it possible today to consider operational usage of 'SPEECH' within the training process of air traffic controllers. The structure and the various elements of 'SPEECH' are introduced before attempting to evaluate its possible future applications. Details on the methodology used, based on the study of natural language, are also included. Author

The staff of the Combined Stress Branch has completed the integration of a system to allow quantitative measurement of perceived attitude while under sustained acceleration. Equipment involved included the computer control system of the Dynamic Environment simulator (DES), a computer generated graphics system, a virtual world helmet mounted display, and a tactile device for reporting attitude perception. The use of a new perceived attitude measurement system in this experiment required not only the technical achievement of the distributed system on the DES, but also required better parameter characterization and basic psychophysical performance studies. In addition, we recorded several confounds and issues concerning the use of a helmet mounted visual system for attitude information as well as head and neck support limitations of such a system. Experimental results include basic psychophysical accuracy and precision, evidence supporting the haptic system sensitivity to a G-excess illusion (even while the vestibular system is maintained at a constant position relative to the G vector), and modeling of pooled response that supports and quantifies the vestibular component of the G-excess illusion. VISUAL ACCOMMODATION TO VIRTUAL IMAGE DISPLAYS WHEN KNOWLEDGE OF OBJECT DISTANCE CONFLICTS WITH OPTICAL DISTANCE
JOHN C. KOTULAK, STEPHEN E. MORSE, and ROGER W. WILEY *In* AGARD, Virtual Interfaces: Research and Applications 4 p (SEE N94-37261 12-53) May 1994
(AGARD-CP-541) Copyright Avail: CASI HC A01/MF A02

In virtual image displays, the image is typically at or near optical infinity, while the object may be at any distance. This can create a conflict between the known distance of a target and its optical distance. If accommodation is drawn to the known distance of the object rather than the optical distance of its image, considerable retinal image blur can result. To determine whether this actually occurs, we measured the accommodation of seven young adult subjects with a dynamic infrared optometer. The subjects viewed a collimated virtual image of a target monocularly through third generation night vision goggles (ANVIS). Although the target itself was positioned randomly at either 6.0, 1.0, 0.5, or 0.33 m from the observer, its image was maintained at infinity by compensatory adjustments of the ANVIS objective lens. The observer was aware fully of the actual distance of the target. A simulated clear starlight night sky condition was used in order to degrade image quality such that the accommodative feedback loop was semi-open, an intermediate state between the closed and open loop conditions of previous experiments. The results show that for some subjects, knowledge of object distance is a more powerful cue for accommodation that the image's optical distance; however, for the majority of subjects, this is not the case. The subjects who were susceptible to the knowledge of object distance cue reported severe blur when the object was nearby. We also found that these same subjects, i.e., the susceptible ones, tend to have a more proximal dark focus than those whose accommodation is not influenced by knowledge of object distance. The linkage between dark focus and susceptibility to proximal influences has not been previously demonstrated and needs to be explored further. Author

The study of human-centered operationally-relevant problems in aerospace and aviation research and development can be enhanced by the inclusion of psychophysiological techniques. By measuring physiological variables in conjunction with performance and subjective measures, a more thorough understanding about the processes underlying performance can be obtained. This report presents a summary of the general utility of psychophysiological assessments, the types of applied problems which can be addressed with these assessments, and the qualities of several psychophysiological techniques. In addition, safety and ethical considerations, guidelines for making determinations about the most appropriate research strategy, and three research examples are discussed. The report concludes with a series of appendixes which offer the reader information on how to collect and analyze each of the psychophysiological measures. This Advisory Report was sponsored by the Aerospace Medical Panel of the Advsiory Group for Aerospace Research and Development (AGARD). Author

The use of computer simulation in the investigation of the crash of Boeing 737-400 at Kegworth has highlighted the importance of the technique in aiding the accident and medical investigations. The analysis has shown the importance of adopting a full brace position for crash landing thus offering significant protection against injury. The major value of the study has shown that a unique and definitive estimation of the occupant kinematics and the effects on the crash victims are possible for an aircrash. Author

In the field of flight safety research there is a growing interest for mathematical simulation of human response and injuries associated with survivable aircraft accidents. A mathematical tool can be very helpful to evaluate and improve on-board restraint systems or to assess the effectiveness of different seat designs. The passenger brace position, being a human factor, can be evaluated efficiently as well. MADYMO is a well accepted integrated multibody/finite element program for Crash Victim Simulation. Recently the two-dimensional version of MADYMO was successfully applied for reconstruction of seat and passenger behavior during the M1 Kegworth air accident. In this paper a brief description of MADYMO as well as three flight safety applications are presented. Special attention is given to the application concerning a dynamic seat test involving a 50th percentile Hybrid 2 dummy and a greater than P3/4 dummy, representing a nine-month-old child, seated in a child seat. The MADYMO model used for this application was validated on the basis of sled test results. It can be learned that MADYMO is capable of predicting passenger and seat response in an aircraft crash environment. A discussion on future developments in this field concludes this paper. Author

Two programs demonstrating the feasibility of improving the dynamic response of ejection system test manikins have been completed for the U.S. Air Force. The first program developed a manikin neck that has greater biofidelity during vertical impact conditions than currently available manikin necks. The second program developed manikin arms and legs with proper mass and mass moments of inertia to improve dynamic response. Both programs were conducted to support the development of the U.S. Air Force's Advanced Dynamic Anthropomorphic Manikin (ADAM). Author

Anthropomorphic crash test dummies have been used by the automotive industry for many years in order to develop safer road transport. Accident investigations have shown how vehicle design has improved, with the number and severity of road casualty injuries decreasing despite increased use of road transport. Several different types of dummies of differing levels of sophistication are used to approve vehicles to a number of different standards and regulations. Dummies are used either to approve restraint systems at the component level or in full vehicle impact tests. Various performance criteria must be met by anthropomorphic test dummies, and these criteria are discussed with reference to the interests of the vehicle designer, the biomechanical engineer and the legislative authority. The paper concentrates on the approach to dummy design used to develop the new European Side Impact Dummy EUROSID-1. The methodology used to develop certification techniques is described as well as the dummy itself. Techniques to calibrate a dummy in terms of predicting human injury risk are reviewed. The techniques described are common to all automotive crash test dummies and can be applied to the design and development of anthropomorphic dummies to be used in other disciplines. Author

This paper reviews recent experience with a new test dummy intended principally for use in motorcycle crash testing. Modifications to the Hybrid 3 to better service this particular environment also makes the device potentially suitable in aicraft occupant crash protection assessment. This new ATD contains a 16-channel on-board data acquisition system, lower extremities that are capable of monitoring for leg and knee injuries, a more flexible lumbar spine, a penetration monitoring abdomen, a deformable thorax with improved motion sensing capabilities and a neck with improved flexion and extension bending response. The femur and tibial complex are constructed of frangible elements whose biomechanical responses are based on available cadaver data. The knee is designed with fusible links that fail at load levels commensurate with that of human knee ligaments. The test device has been used in full-scale crash tests as well as limited laboratory validation tests. This paper illustrates the potential of this injury monitoring device for aerospace applications as well as identifying areas of future work. Author

THE APPLICATION OF HYBRID 3 DUMMY TO THE IMPACT ASSESSMENT OF A FREE-FALL LIFEBOAT
D. H. GLAISTER, P. J. WAUGH, and L. NEIL *In* AGARD, Aircraft Accidents: Trends in Aerospace Medical Investigation Techniques 6 p (SEE N93-19653 06-03) Sep. 1992
(AGARD-CP-532) Copyright Avail: CASI HC A02/MF A04

A requirement to monitor occupant forces during the launch of a free-fall lifeboat has led to the definition of a transportable instrumented dummy and data-acquisition system. Good quality data have been recorded during 21 free-falls from which advice has been given concerning the acceptability of launch forces for both injured and non-injured personnel. Head restraint is not considered in the International Maritime Organization's current assessment criteria for free-fall lifeboats, but was shown to have a pronounced effect on head and neck forces, with significant overshoots being seen when no restraint was available. It is concluded that the dummy and data-acquisition system developed for these trials offers a valid means for assessing impact forces

and injury risk in novel impact environments such as the launch of a free-fall lifeboat. Author

Recently developed angular motion sensors, based on the laws of magnetohydrodynamics, have potential application in biodynamic research. These sensors were tested on the Naval Biodynamics Laboratory's (NBDL) vertical accelerator, using the Hybrid 3 manikin as the test subject. The sensors were used to measure the manikin's head motion in three dimensions. Experiments were conducted at impact levels up to 13g in the vertical (+Z) direction. Data was collected using both the new sensors and the standard NBDL package of nine linear accelerometers. A new method for obtaining initial position and orientation information using still photogrammetry was also evaluated. The analyses of the tests show that the new sensor and photogrammetry system compared well with the nine accelerometer array and the direct photographic measurement of displacement. Comparisons were made between measurements of acceleration, velocity and displacement. The new system yielded equivalent and, in some instances, more accurate results. This study extends the results of previous preliminary testing and confirms the value of the new system as a simpler, more accurate and portable replacement for the old one. Author

Aircraft escape systems - the ejection seat - have saved a lot of lives, however they often have several secondary problems. First, the physical injuries directly produced by the ejection itself; and secondly, the psychological alterations caused by the fact of suffering from an aircraft accident. This study has been made to get more data on ejections raised in some Spanish Air Force pilots in order to correct the possible mistakes in further ejections. The most remarkable results are: First, the importance of performing the ejection within the safety limits of the seat, and with a very good sitting posture, to minimize possible injuries. Secondly, the necessity for both ejection seat simulator and parachute training of pilots since most injuries are generated when the pilot has a wrong sitting posture and when he lands on the ground. And finally, the quick incorporation to flying duties as soon as the ejected pilot accomplished his total recovery.

Several aviation accidents are caused by inadequate or misinterpreted communication within the crew or between cockpit and ATC. The present pilot training put more highlight on personality attitudes that favor crew coordination in addition to technical expertise than earlier days. This may imply that cultural differences more easily will emerge and have to be taken into training considerations instead of more or less ignoring them as was possible when the operational performance proficiency was all that really mattered for the professional pilot. With more females entering pilot training one should accept that the two sexes emerge from different training strategies, especially within crew resource management training may work more effectively than it has up till now. The applications and limitations of high resolution afforded by modern display technologies are discussed, in relation to the properties of the human visual system; and how much 'engineering' may become possible early in the design phase by the use of model(s) of the 'visual system - technology interface' (VSTI). Display technology models provide good predictions of the distributions of luminance, color, and contrast under specified driving and environmental conditions. Coupled to suitable vision models, estimates of visibility of pattern details can be made. In VSTI models, the beholder of the imagery is regarded as a detector responding to displayed pattern with 'yes', 'no', or even be allowed fuzzy and false responses. Some conclusions are given concerning design of pattern details in imagery, given the characteristics of the display and of the observer. Author

Twenty eight problem areas where human factors engineers lack the information needed for development of crewstations for advanced military fighter and attack aircraft are identified and discussed. Emphasis is on naval air missions projected during the early 21st century against land and sea-surface targets. The 28 problem areas are based on the functions that the crews must carry out for successful mission accomplishment. Human capabilities and limitations documented in the human factors literature that relate to these aircrew functions were used to define the problem areas. The goal is to ensure that aircrew performance will be satisfactory for anticipated air missions. The 28 problem areas are grouped into nine human factors problem categories. For each category, the human factors knowledge and man-machine interface engineering capabilities that should be extended during this decade are noted. The human factors problem categories are (1) physical and physiological stress, (2) vigilance and aircrew alerting, (3) individual differences, (4) information integration, (5) visual displays for various missions, (6) mission management, (7) decision support, (8) automation, and (9) system design and evaluation. Modern cockpit designs require new modular architectures for mission and image-management with regards to hardware and software aspects. The main task is the collection of aircraft specific data using the appropriate data management, the transformation of such data to graphical images with the appropriate logical image management, the generation of physical graphical images on several image devices by physical image management and the conversion and combination/mixing of physical graphical data with the data, created by external video sensors using video management. Finally the video-data has to be presented on several devices, like head down-, head up-, and helmet mounted displays. The main goal for us as basic system supplier is to give the application programmer an abstract high-level interface for all these functions. This is to be done and is specially supported by the program language Ada, which is the required language for military and civil aircraft applications. The system described herein was developed for the German experimental helicopter program AVT and two special applications for the X31A experimental aircraft. Author

The concept of human-electronic co-operation in the cockpit is synonymous with that of a team. Whether or not team members interact effectively will rely largely upon the pilot's acceptance of his electronic team mate. This paper reports on the attitudes of eight British Aerospace test pilots towards the future of such co-operation. Particular emphasis is laid upon the factors of system function, task allocation, and trust. Pilots opinions are examined against a schema of 'Operational Relationships', recently proposed in the literature. Author

An important aspect of a pilots situational awareness is the need for accurate real time information on the operational status of all aircraft systems. False and intermittent indications have been a problem with many of the built-in-test (BIT) functions in aircraft systems. These indications result in Retest OK (RTOK) and Cannot Duplicate (CND) maintenance events when the aircraft returns. These types of events account for 35 percent to 65 percent of the indicated faults in many Air Force avionics systems. Any false indications put an unnecessary and potentially fatal burden on the pilot during the operational scenario and also consume significant maintenance resources. Many of these false alarms and intermittent status indications are related to the environmental conditions present at the time of the indication. Time Stress Measurement Device (TSMD) technology offers a means of providing this crucial environmental information to the system's BIT. TSMD's are digital environmental measurement and recording devices in a microelectronic package which can be embedded into a system at the time of manufacture or on a retrofit basis. The information collected and provided by the TSMD can be provided in real time for the on-board BIT to try and discriminate between transient system performance anomalies and hard failures. Thus, only accurate performance status information is reported to the pilot. The paper describes the background of TSMD development, current state-of-the-art in TSMD hardware and software, current applications which address the enhancement of on-board BIT performance, and future thrusts in the TSMD area. The motivation for development of virtual crew system technologies stems from the growing complexity of cockpit interfaces and the realization that humans are spatial beings who are much better equipped to process and control information if it bears a spatial and temporal relationship to the way the real world exists at the moment. The virtual cockpit will provide three-dimensioanl (3-D) spherical awareness, intuitive control interfaces, and automated assistance to the pilot. Three-dimensional visual and auditory information will be presented via the pilot's helmet, while tactile information may be presented through micro-stimulators within the pilot's glove, which are activated as a function of hand and/or finger position within the cockpit. The intent is to build a virtual cockpit that creates a representation of the look and feel of the real world, to the extent that the interaction with the display and control of information is as natural as possible. The notion of a virtual cockpit has been popularized in the 'Super Cockpit' concept. The Super Cockpit concept demands a functional integration of a broad range of advanced control, display, and avionic technologies. The successful marriage of the individual capabilities that each of these technologies represent demands an understanding and appreciation of the requirements for sensing, processing, and displaying information to provide the pilot the advantage of 3-D spatial/situational awareness throughout the mission. The multifaceted development issues associated with realization of the virtual cockpit are addressed. Author

The great challenge of today's cockpit designers is to provide the 21st century pilot the necessary situation awareness to be effective in combat. This situation awareness is difficult to achieve because a pilot has to look at numerous dials and indicators, multiple small displays with different range scales and ownship locations, and distorted radar images. Today the pilot must fuse all information and be able to make immediate critical decisions in a combat environment. Part of the solution to this information overload problem is a panoramic agile-window display. The advantages of a large area display system were recently demonstrated in the Panoramic Cockpit Control and Display System research program. The principal objective result was a 45 percent increase in pilot combat effectiveness. The key to the implementation of the panoramic cockpit concept is a large area display together with a helmet-mounted equivalent of the present day head-up display. The large area head down system uses direct view or projected view to create an aggregate display area of 650-2000 sq cm. The status of cockpit displays is reviewed with an emphasis on hardware. Several technologies are being developed simultaneously and are analyzed here against requirements of our cockpit visions for new systems such as the F-22 and RAH-66, retrofit programs like the C-130/C-141, and advanced fighter and transport concepts. Research for stealth methods of low level penetration flight leads us to consider the use of terrain data bases which are

becoming more and more easily available. This is why the French Ministry of Defence has granted DASSAULT AVIATION a contract in the scope of the APIS Exploratory Program. The purpose of this study was to consider the use of terrain files for designing synthetic images intended for combat aircraft. The aim is to provide the pilot with pictures replacing direct sight on the outside world, thus helping him to conduct the flight by any weather or at night. The research for this new concept was supported by intensive software development on real time simulation tools. The latter permitted the proposal of different APIS representations for both head-up and head-level displays. The process followed during the elaboration of the images with the active participation of the French Officials is presented. We also give some examples of proposed pictures. At the end of the study these proposals were assessed by a team of ten military pilots, belonging either to flight test teams or coming from French Navy and Air Force. This evaluation has been carried out by the CERMA (French Aero-Medical Research Institute). However, many points are still to be examined: how to display these pictures onboard while managing safety and limiting costs and resources consumption at an affordable level.

As a result of progressively adding on capabilities to the basic protective flying helmet, present solutions to operational requirements result in barely acceptable flying helmet assemblies. The devices which provide these capabilities must all be compatible with each other, with the rest of the pilot's Aircrew Equipment Assembly (AEA), and with the aircraft. Often conflicting requirements result in compromises being made. Fundamental rules of optics cannot be changed, and in general, improved optical performance results in larger, heavier head-borne load. Heretofore, the solutions were engineered by several companies, each specializing in a particular discipline, resulting in the present 'add-on' philosophy. The UK MOD has taken the view that the time is appropriate for industry to adopt a more coordinated approach. The Integrated Helmet Technical Demonstrator Program (IHTDP) is aimed at encouraging a helmet to be designed from the outset with wide ranging capabilities, stimulating industry to form consortia to produce a truly integrated helmet. The background to the program and the requirements from the operators' point of view are discussed and the specification of requirements are described.

A multitude of new roles are required for future aircrew visors. Large numbers of visors on a single helmet is not an acceptable solution. There is therefore a requirement for Multi-Function Visors which perform numerous roles. Many of the optical protective functions carry an unavoidable loss of visual transmittance. When these are combined, the overall visual transmittance may typically be 40 percent or lower. These functions therefore need to be combined on an outer Multi-Function Visor which the pilot can deploy at will. A permanent inner clear visor will provide all the mechanical protection and will also host the HMD combiner. A suite of outer MFV's may be required to cover all the combinations of laser threats in the visible, with the appropriate visor being selected for each mission.

The display devices of the future will call upon multimedia systems allowing a multimode dialogue between the man and the system. We describe the concept of a large interactive screen, built around an image wall in the instrument panel and an assembly of the means of dialog used simultaneously. It will make it possible to reduce the workload of the pilot by an optimization of the dialogue with the system while using, among other things, an intelligent dialogue assisting device. Many studies have been carried out on the isolated use of input-output devices (keyboard, mouse, handle, vocal reconnaissance...), but none presents a global solution of the multimode dialogue in the cockpit. We thus developed and implemented an experimental device to study man-system interactions using the eye, the hand, and the voice.

The integration of voice into a complex interface like that between a pilot and an aircraft is not trivial. We try to address some of the factors affecting the use and integration of voice in human-machine interfaces. We describe general principles for merging different kinds of human-machine interaction, and apply them to voice interaction in the cockpit. We do this despite published opinion that psychological principles cannot be applied in the design of human-computer interaction. The theory of Layered Protocols (LP) is introduced in context of the more general Perceptual Control Theory of behavior (PCT). LP theory provides a model for describing interaction between complex partners based on a layered structure of protocols that differ in levels of abstraction. The proper use of feedback is fundamental to both LP and PCT. Voice interaction is useful mainly for the control of tasks requiring discrete information. Failure of voice recognition systems is often caused by inappropriate feedback. Providing feedback and forcing

correction word by word may increase the mental load on a user, often leading to instability in the interaction. Such inefficient, and often frustrating, use of voice interaction can often be overcome through the use of feedback at higher, more abstract, layers of interaction. Successful adoption of voice interaction depends on allocating the appropriate tasks of communication to the voice protocol, the dynamic modeling of the partner, and the use of higher level protocols to help control potential instability. G-LOAD EFFECTS AND EFFICIENT ACOUSTIC PARAMETERS FOR ROBUST SPEAKER RECOGNITION
CH. GULLI, D. PASTOR, A. LEGER, P. B. SANDOR, J. M. CLERE (Centre d'Essais en Vol, Bretigny-Air, France), and P. GRATEAU (Centre d'Essais en Vol, Bretigny-Air, France) *In* AGARD, Advanced Aircraft Interfaces: The Machine Side of the Man-Machine Interface 14 p (SEE N93-19757 06-54) Oct. 1992
(AGARD-CP-521) Copyright Avail: CASI HC A03/MF A03

Acoustic features of the speech production with G-load effects were found from the computer signal analysis. Their correlates with physiological features will permit an interpretation of the variability of formant and pitch shifts. The pilot study experiments were conducted by SEXTANT and the LAMAS (Laboratoire de Medecine aerospatiale). Six subjects participated in the experiment. Their mean age was 30 years. A series of experiments in centrifuge environment were performed as part of a research program. A specific vocabulary was made for the first investigation with speakers in centrifuge. Comparison of spectrographic analysis and wavelet decomposition have permitted to show a spectral pattern modification for recognition process. Due to the accuracy and limitations of the sonograph measurements, we developed multiresolution transforms. A window Fourier transform is better suited for analyzing signals where all patterns appear approximately at the same scale. The old multivariate statistical analysis, after the Bark's transformation, can produce a good projection on the eigenvectors of the correlation matrix. The choice of the eigenvalues seems very easy for seeking the best representation of speech production. An interpretation of the mechanical effects due to the acceleration can be shown with analysis tools. We observed, in agreement with acoustic multi-resolution analyses, that producing speech in G-load conditions can increase energy, pitch, and formant frequency locations. The influence of the breathing on some parameters is noticeable. The last section discusses the incidence of these results on the robust speech recognizer for military cockpit environment. Author

Current thinking on the aircraft man-machine interface focuses primarily on the cockpit. My proposed approach will view the mission planning/mission rehearsal and the aircraft as an integral system that can perform three functions: (1) dynamically adjust itself to the particular pilot response in the planning/rehearsal stage, (2) adjust itself during the strike based upon the scenario encountered, and (3) adjust itself after each mission to enhance planning for follow-on missions. The objectives are to improve strike effectiveness and to shift portions of the pilot's work load from the attack to the planning phase of the strike. This concept can be implemented using existing and emergent technologies. Aircraft now coming on line are equipped with removable disks that are used to load mission specific data for the avionics and weapon systems (maps, ELINT files, route plans, navigation data, target coordinates, etc.). Mission planning systems are being configured not only to provide these data, but also to evaluate post flight data from flight recorders. Mission planning and rehearsal with the resulting aircraft mission data package will provide more inputs for the aircraft mission computer that will eventually fly the mission. Inter-aircraft computer communications will support adaptively optimizing the strike based upon the threat and target conditions encountered and the success of the strike to that point in time (adaptive mission control). Pilot intervention may only be required for aircraft-to-aircraft combat, freeing the pilot to attend to weapon aimpoint selection tasks (where the automatic systems have low confidence in their selections) or for unplanned contingencies. The mission planning/aircraft system, the notional aircraft avionics for adaptive mission control, and the implications for the man-machine interface are described. Author

The rapid developments in avionics and the associated processing power now available in aircraft have produced cockpit systems which can quickly saturate the crew with information. Only by understanding man's capabilities and limitations will it be possible to design integrated avionics systems which match man's requirements and result in an effective man-machine combination. Only by paying great attention to management of the information flow between aircrew and avionics systems will it be possible to optimize the man-machine system in future combat aircraft. Examples of past problems and current developments in the management of data flow in the cockpit are given. Author

With the advances in display technology and the increasing use of software control, more information in the modern commercial aircraft cockpit is available on request only instead of continually. Furthermore, the reduction in crew size has resulted in a reduction in the routine monitoring of system parameters. However, advances in sensory capability are enabling far more system parameters to be measured. The combination of these trends leads to the perception by the aircrew of an abrupt transition from normal operation to the need to deal with system malfunction. Work undertaken to maximize the use of available information in order to maintain the aircrew's awareness of the status of the aircraft's systems and to provide advice in the advent of malfunction or abnormality is outlined. The appropriate carrier of such information is the modern centralized cockpit warning systems. Author

The way in which typical operational scenarios that are representative of future conflict impact on the specification and design for man/machine performance is examined. Operational Requirements for aircraft to survive and deliver the goods in this context present a tremendous challenge to the Prime Weapon System Contractor. Military procurement agencies have long been striving to realize increased weapon system performance from dwindling resources. Thus current initiatives such as MANPRINT have been launched to change an equipment-oriented view of system development towards a broader view that considers hardware, software, and operator together as a system. It is argued that unless the piloting function and system integration tasks are considered as an integral part of the design process from day one, a less than optimum design will always result. It is recommended that a structured top-down design methodology be employed that translates Operational Requirements into piloting and system functions at one and the same time. An overview is given of use of just such a design process developed at BAe Warton, with particular reference to the European Fighter Aircraft (EFA) project. The various stages of the design process are explained and indications given of current progress of EFA. Emphasis is given to the tools and methods used to ensure that

a highly integrated system and advanced cockpit design are successfully achieved. Author

The conceptual design and development of a modern helicopter cockpit requires the consideration of ergonomic, operational, and technical aspects. New and additional technologies lead to a steady increase of data and workload, so that an essential task is to obtain an optimum layout of the 'Man-Machine-Interface' (MMI). For the performance of this task, MoD has charged ESG to generate a national Cockpit Design Tool CVA and to operate it in parallel with the TIGER development. Due to the national character of the CVA those tasks are primarily handled which concern the specific German portion of the TIGER program, e.g. the control and display system of the digital map generator, the helmet-mounted sight/display system, and the HF data link. These complex systems, however, cannot be investigated separately due to the multiple reciprocal actions with the remaining display and control systems, but have to be considered with the overall cockpit. Thus the CVA is the reproduction of a functioning 1:1 cockpit of the PAH2 version of the TIGER and is operated in close cooperation with the future user (pilot). It is a closed-loop simulator which enables the checking of important areas of the MMI not only in theory, but mainly under practical conditions long before a prototype of the new helicopter exists. Growing numbers of targeting information sources in military cockpits have led to the development of automatic target recognition (ATR) systems. Since initially most ATR's will be used with an operator, a series of experiments was conducted to investigate aspects of the interface between the operator and the ATR. Two experiments are described which measured the speed and accuracy of ship identifications made by an operator using information from an imaging sensor and a simulated ATR. These measures were compared to performance of the unaided operator and to performance of the autonomous ATR. The accuracy of the ATR, the format of its output, and the quality and type of the sensor information was varied in the experiments. The results are discussed in terms of their implications for the design of the operator-ATR interface that will lead to satisfactory system performance. Author

After a protracted development period, the active-matrix addressed liquid crystal light valve is finding increasing employment in a variety of head-down primary flight instrument applications. While the packaging efficiencies of such a flat panel technology are self-evident, many of its other attributes are also likely to have a profound impact upon crew station design. In order to successfully exploit the positive aspects of this technology, it is appropriate that the avionics systems architects benefit from the, albeit limited, current operational data base and develop a realistic understanding as to the limits and rate of advancement pertinent to this class of display device. The following paper is offered as an element in this information dissemination process from a source that has maintained a presence in the technology since 1984 and has participated in active-matrix liquid crystal display (AM-LCD) solutions for such diverse air-vechicle requirements as YF-23, LH, P-3C, and C-130. The Navy is exploring the use of an adaptive autonomous target cuer that is potentially more reliable than existing systems. Variations in the operational environment and target type are major factors that can degrade an autonomous sensor-based cuer performance. The solution presented here is to have several parallel algorithms for each functional component in our target cuer. Each algorithm is tuned to handle a particular situation. Based on certain indicator functions, a fuzzy logic expert system controller will select the most suitable algorithm and optimal parameters to process the sensor data. Although the proposed system is essentially comprised of conventional components such as image preprocessing, feature extraction, and correlation, it distinguishes itself because of its use of fuzzy logic in decision making and its adaptive nature. In designing an expert system, we will select the optimal set of indicator functions using the Taguchi process-control methodology. Preliminary results will be presented. Author

The ominous lethality of the modern battlefield necessitates the maximum exploitation of the cover afforded by darkness, making the ability to operate effectively at night a key factor in winning any major conflict. Unfortunately, the majority of the operational helicopter fleet was designed years ago with mainly daylight operations in mind. Converting these existing cockpits to an appropriate standard of night vision goggle (NVG) compatibility is no simple task. Quick fit, inexpensive fixes are rare and offer only limited value. The United Kingdom's Ministry of Defense (UK MOD) has learned this lesson well in recent years, having made large investments in both money and manpower to achieve an acceptable NVG standard of cockpit compatibility in the Sea King, Wessex, Lynx, Puma, Chinook, Gazelle, Scout and A109 helicopters. This paper will present an overview of helicopter NVG compatibility testing in the UK. A synopsis of the principles of image intensification will justify the logic behind various NVG modifications. An historic overview will then set the stage for the NVG cockpit developments, followed by a general discussion of some important compatibility issues. A review of the NVG operational assessments conducted in several different flight environments will conclude this discussion by presenting results peculiar to each environment. These wide-ranging assessments have provided the experience to develop a practical scientific approach to NVG cockpit compatibility testing which is offered in a summary of test methods. Author

COMBAT AUTOMATION FOR AIRBORNE WEAPON SYSTEMS: MAN/MACHINE INTERFACE TRENDS AND TECHNOLOGIES [L'AUTOMATISATION DU COMBAT AERIEN: TENDANCES ET TECHNOLOGIES POUR L'INTERFACE HOMME/MACHINE]

Apr. 1993 268 p Symposium held in Edinburgh, Scotland, 19-22 Oct. 1992

(AGARD-CP-520; ISBN-92-835-0706-1; AD-A267033) Copyright Avail: CASI HC A12/MF A03

Recent advances in combat automation technologies offer significant potential for improving overall mission effectiveness. Development of advanced situational awareness display concepts, parallel distributed computer architecture, and tactical information fusion techniques have paved the way for new operational capabilities and weapon system employment tactics. Harnessing these innovative technologies is critically dependent upon establishing an effective and intuitive pilot vehicle interface. The symposium addressed changing and possible future operational scenarios, advanced technology concepts, application issues and experimental development efforts and included sessions on: fusion, situation awareness, human capabilities and limitations, and design and evaluation of integrated systems. For individual titles, see N93-28851 through N93-28872.

PILOT DECISION AIDING FOR WEAPON DELIVERY: A NOVEL APPROACH TO FIRE CONTROL CUEING USING PARALLEL COMPUTING

A. R. BUFFETT and R. M. WIMBUSH *In* AGARD, Combat Automation for Airborne Weapon Systems: Man/Machine Interface Trends and Technologies 18 p (SEE N93-28850 11-54) Apr. 1993

(AGARD-CP-520) Copyright Avail: CASI HC A03/MF A03

This paper describes the application of advanced technology, both hardware and software, to provide improved pilot Man-Machine Interface (MMI) automation for the central function of an airborne weapon system, namely weapon release. The specific scenario addressed is that of providing the pilot with decision aiding, in the form of firing cues, for the use of air-to-air missiles. The paper gives an overview of the need for automation/decision aiding in air-to-air missile fire control, by illustrating the way in which missile performance can vary greatly with the changes of engagement parameters which occur rapidly in an air-to-air combat scenario. The high pilot workload in this type of scenario, and the future requirement for multiple simultaneous missile firings, further support the need for automation to provide pilots with simple, processed, predictive data on which to base their firing decisions. PILOT INTENT AND ERROR RECOGNITION AS PART OF A KNOWLEDGE BASED COCKPIT ASSISTANT

T. WITTIG and R. ONKEN *In* AGARD, Combat Automation for Airborne Weapon Systems: Man/Machine Interface Trends and Technologies 10 p (SEE N93-28850 11-54) Apr. 1993

(AGARD-CP-520) Copyright Avail: CASI HC A02/MF A03

A Pilot Intent and Error Recognition module as part of a knowledge based Cockpit Assistant System is presented, which is being developed at the University of the Armed Forces in Munich in cooperation with the Dornier company and implemented in a flight simulator. The system mainly supports the pilot crew with regard to the monitoring and planning task and provides assistance for a number of plan execution functions for the civil flight operation under Instrument Flight Rules. During the whole flight, the Pilot Intent and Error Recognition module monitors pilot activities and the flight status in order to detect deviations from the actual flight plan immediately. In this case, the current flight situation is evaluated, the pilot behavior is analyzed over a certain time period and by use of both pilot intent or error is recognized. Pilot errors lead to warning messages, and recognized pilot intent to a modification of the flight plan. In this paper, a short survey is given of the concept and the function of the Cockpit Assistant System. After that the structure of the Pilot Intent and Error Recognition will be described in detail. At the end, the integration of this module into the Cockpit Assistant System and the evaluation in a flight simulator are presented. Derived from text

THE DESIGN AND DEVELOPMENT OF THE NEW RAF STANDARD HUD FORMAT

J. R. HALL *In* AGARD, Combat Automation for Airborne Weapon Systems: Man/Machine Interface Trends and Technologies 11 p (SEE N93-28850 11-54) Apr. 1993 Sponsored by RAF

(AGARD-CP-520) Copyright Avail: CASI HC A03/MF A03

In poor weather and on instruments, the safe piloting of an aircraft requires the display of basic flight information to the pilot in a manner that is instinctive, immediate, and unambiguous. Head-up display formats have singularly failed in this regard over the years and are known to be a contributing factor in many incidents involving lack of spatial awareness by the pilot. This paper describes the theory, experimental development, and flight proving of the DRA Fast-Jet HUD Format (FJF). This format has been designed to keep the pilot spatially aware under the most dynamic of flight maneuvers while retaining the flight-path information so necessary for mission effectiveness during normal tactical maneuvering and steady flight conditions. These include low level night operations with FLIR and NVGs and highly dynamic, hard maneuvering flight in poor weather or on instruments either at low level or in the air-to-air role. SYMBOLOGY FOR HEAD UP AND HEAD DOWN APPLICATIONS FOR HIGHLY AGILE FIGHTER AIRCRAFT: TO IMPROVE SPATIAL AWARENESS, TRAJECTORY CONTROL, AND UNUSUAL ATTITUDE RECOVERY, PART 1

G. FISCHER and W. FUCHS *In* AGARD, Combat Automation for Airborne Weapon Systems: Man/Machine Interface Trends and Technologies 6 p (SEE N93-28850 11-54) Apr. 1993

(AGARD-CP-520) Copyright Avail: CASI HC A02/MF A03

The progressively increasing agility of modern fighter aircraft (a/c) with high onset and high sustained pitch and roll rates makes spatial orientation and awareness an even more demanding task for the operator. Pilots already complain about fast moving and twisting pitch bars in the HUD and the necessity to concentrate almost their entire attention on maintaining spatial orientation. Scaled and geared pitch bars relieved the problem to some extent but didn't solve it, at least according to our opinion. The above mentioned problems are aggravated with the introduction of advanced fighter a/c capable of even higher onset and angular rates and flying at higher angles of attack (AoA) or even in the post-stall regime where the actual flight path in space and the a/c attitude may deviate to a great extent. In order to overcome the problems mentioned above, a more stationary and more easily interpretable reference symbology, a circular arc segment, is used to indicate pitch (theta) or flight path angle (gamma), whereas the roll angle (phi) is given by the angular relation between a/c reference symbol and the center of the arc segment. VIRTUAL INTERFACE APPLICATIONS FOR AIRBORNE WEAPONS SYSTEMS

EMILY HOWARD *In* AGARD, Combat Automation for Airborne Weapon Systems: Man/Machine Interface Trends and Technologies 6 p (SEE N93-28850 11-54) Apr. 1993

(AGARD-CP-520) Copyright Avail: CASI HC A02/MF A03

This paper addresses a class of control and display technology that shall be referred to collectively as Virtual Interface (VI) technology. The contents of this paper are presented in three parts. Part 1 will describe what is meant by a 'virtual interface,' a suite of control and display technology being developed for future implementation in operational aircraft systems. The problem that will be discussed is how the transition process between development and operational status is particularly difficult for VI technology, given current applications. Part 2 will describe some new applications of VI technology, based upon several programs that utilize embedded simulation for operational test and evaluation and training purposes. A review of the benefits of VI technology shows promise for accelerating the transition process at least

toward these operational activities. Part 3 then will describe a new display concept, based on virtual interface technology, that was designed for one of these embedded simulation applications and conclude with a discussion of plans for future development.

A comprehensive flight test program of a head-steered FLIR/HMD night attack system was conducted between Aug. 1987 and Jan. 1990. Seventy-five development and demonstration F-16B flights were flown. Approximately 90 percent of the flights were conducted in night visual meteorological conditions. The remainder were conducted in daytime with the pilot's vision obscured by an opaque visor cover to simulate night and to study laser eye protection. Because the new FLIR/HMD systems were fully integrated with the F-16B fire control, navigation, communication, and display system, it was possible to achieve a considerable degree of tactical relevance in the tests. The night attack portion of the testing was a subset of a broader series of tests to explore advanced techniques for close air support (CAS). The work was industry sponsored by a number of corporations in a cooperative effort of about thirty million dollars. The tests and demonstrations culminated in operational test by (then) Tactical Air Command pilots at Nellis Air Force Base, Nevada, and Fort Hood, Texas. The night CAS systems evaluations were quite favorable and were planned for production until the remarkable end of the cold war reoriented (or perhaps gave pause to) planned introduction of the concepts to the fleet. In this paper, the author provides a summary overview of the mission, a description of the systems, the lessons learned, and some thoughts about future system requirements.

The addition of vision enhancement, display, and control functions to aviator's headgear is operationally attractive. The jets and helicopters that are currently under development call for headgear with a combination of these novel facilities. This paper reviews the recent history of such helmet systems, which demonstrate admirably the inventiveness of the design teams. However, there are attendant perceptual and operational concerns and the addition of extra components invariably compromises basic ergonomic qualities. A new design philosophy, which emphasizes functional integration rather than the incorporation of compatible sub-systems, is emerging. This will be assisted significantly when key optical and electro-optical technologies become mature.

THE PHYSIOLOGICAL LIMITATIONS OF MAN IN THE HIGH G ENVIRONMENT
N. D. C. GREEN *In* AGARD, Combat Automation for Airborne Weapon Systems: Man/Machine Interface Trends and Technologies 8 p (SEE N93-28850 11-54) Apr. 1993
(AGARD-CP-520) Copyright Avail: CASI HC A02/MF A03

The physiological limitations imposed upon man by the high-G environment are discussed, with particular reference to the cardiovascular, respiratory, and musculo-skeletal systems. Anti-G technology has been developed specifically for agile fighter aircraft, but it is apparent that if man is to have the capacity to tolerate any further increases in aircraft agility, a radically different approach to G protection is required. The most effective physiological solution is to change the orientation of the pilot such that his long axis is no longer in the plane of greatest acceleration, entailing major cockpit redesign. This and other solutions are examined, and their acceptability to aviators is considered. Author (revised)

Virtual image displays are likely to become more prominent in the cockpit, the most common examples being the head-up display (HUD) and, more recently, the helmet-mounted display (HMD). This paper describes a series of experiments highlighting some of the advantages and disadvantages of displays of this type. The first experiments demonstrate that introducing perceived depth differences into displays may improve eye-tracking performance. The second series of experiments illustrates some of the problems with virtual image displays; namely that the eyes may be inappropriately accommodated (focused) when using virtual image displays. The possible consequences of these problems are discussed. Author

Achieving high situation awareness (SA) is a major goal in the design of aircraft systems. Efforts are currently underway by a number of individuals who are attempting to address this need through improvements in avionics system design, automation, and the pilot-vehicle interface (PVI). These efforts can be greatly enhanced through an understanding of human capabilities and limitations in achieving SA. This paper presents an identification of those factors which underlie basic human SA capabilities, including key information processing mechanisms, critical human skills, and a discussion of external factors which act to hamper SA. The implications of each of these issues for the design of systems, including PVI and automation efforts, are discussed.

A review of the role of operator and automation capability analysis in aircrew systems design is provided. The changing perceptions of human and machine functionality with increasing machine capability, from early pilot-in-the-loop control, through to the division and sharing of responsibilities for systems management and mission problem solving, are charted. Concepts for the integration of human and machine resources in the performance of physical and cognitive tasks, including decision-making, are discussed in the context of developments in machine intelligence. Operator capability and task analysis, and the modeling of human performance, are seen to have developed from providing tools for system design, to giving critical support for real-time dynamic function allocation in advanced adaptive systems. A model of cooperative teamwork, with the machine conceived of as an electronic-crew teaming resource, is proposed as broad framework for thinking about future adaptive systems requirements. The results of a recent study of human-electronic crew teamwork with RAF Harrier and Tornado aircrew are reported. The results provide evidence for the validity of the teamwork model, and indicate directions for extending the capability for cooperative functioning in future aircrew adaptive systems. COGNITIVE INTERFACE CONSIDERATIONS FOR INTELLIGENT COCKPITS
ROBERT G. EGGLESTON *In* AGARD, Combat Automation for Airborne Weapon Systems: Man/Machine Interface Trends and Technologies 16 p (SEE N93-28850 11-54) Apr. 1993
(AGARD-CP-520) Copyright Avail: CASI HC A03/MF A03

The concept of an Intelligent Cockpit as a knowledge-based aiding system is presented. It argues that, in order to maximally support the air crew, user aiding in two areas is required: mission task aiding and interface useability aiding. These areas of aiding are discussed in relation to four different forms of an intelligent cockpit. The central purpose, however, is to introduce the concept of a cognitive design requirement for aiding systems, and to suggest its importance to design solutions expected to achieve crew aiding in both the mission task and interface useability areas. Two arguments are made: (1) A deeper knowledge of human capabilities and limitations is needed to generate effective cognitive design requirements for an aiding system; and (2) more cognitive design requirements are needed for an intelligent cockpit in comparison with a conventional one. Illustrations of possible cognitive design requirements are presented in support of these arguments. Special attention is given to requirements that derive from human capabilities and limitations. Based on the general discussion, it is also concluded that an intelligent cockpit should be a separate module from the traditional systems avionics, since it requires a unique process architecture. In the high workload environment of the cockpit, the importance of efficient transfer of information from visual displays to the pilot is of the highest priority. British Aerospace, Kingston, has developed a prototype Situational Awareness display which successfully combines tactical information with a digital map and aeronautical information. The interface in terms of presentation and functionality is designed to complement the process whereby visual information is cognitively integrated into mental models of Situational Awareness by the user. The development of the display involved a comprehensive literature search on perception and cognition, analysis of map representations, and an iterative evaluation whereby successive prototypes were developed and refined. The many visual design principles which were identified during this work which were successfully incorporated into this display and which may in addition be of great benefit to other displays are detailed. Where displays are being radically revised, a holistic redesign from first principles is preferable to simply adding new features. Author (revised)

Unconstrained low-altitude night attack is achievable today through automation and integration of current technologies. Many of these technologies are advanced avionic systems that still require additional development before they are production-ready. However, their performance and synergistic benefits have been demonstrated. Additional efforts are still warranted to increase system safety, improve situational awareness, decrease pilot workload, and provide a more effective weapon system. Author

With the emergence of thrust-vectoring aircraft such as the X-31 and F-22, new questions arise regarding the maximum potential of this technology for increasing air-to-air combat effectiveness. Recent dome-to-dome (man-in-the-loop) simulations have demonstrated a significant increase in close-in air combat effectiveness with the addition of thrust vector capability. Much of this increased effectiveness can be attributed to the ability of the thrust-vectoring aircraft to continue maneuvering while operating well beyond conventional aircraft stall limits. Such poststall maneuvering (PST) can dramatically increase an aircraft's turn rate while simultaneously minimizing its turn radius, providing a significant tactical advantage in close in air combat. Comparisons with all-digital (computer-in- the-loop) simulations under the same test conditions, however, show that the combat effectiveness of PST is consistently greater within the all-digital analyses than within the all-manned analyses. These comparisons are summarized and whether pilots may require supplemental assistance in order to exploit the full potential of PST utility is considered. Through analysis of both man- and computer-in-the-loop combat simulations, requirements for pilot assistance were tentatively identified, along with some of the methods applicable to meeting these requirements. These methods include expanded training, improved displays, and increased automation. The results of this analysis, based upon the studies available to date, are presented. Plans for further analysis and validation studies are described.

NUTRITION, METABOLIC DISORDERS AND LIFESTYLE OF AIRCREW [LES DESORDRES METABOLIQUES DUS A LA DIETETIQUE ET HYGIENE DE VIE DES EQUIPAGES D'AERONEFS]
Mar. 1993 230 p Symposium held in Oslo, Norway, 19-23 Oct. 1992
(AGARD-CP-533; ISBN-92-835-0703-7; AD-A267031) Copyright Avail: CASI HC A11/MF A03

These proceedings include the Technical Evaluation Report and 30 papers of the symposium sponsored by the AGARD Aerospace Medical Panel and held in Oslo, Norway from 19-23 Oct. 1992. The theme of the symposium was to review and update the knowledge pertaining to diet and nutrition as it applies to aircrew. The metabolic disorders, including hyperlipidemia and alterations of carbohydrate metabolism, are common problems in aviation medicine that demand specific attention and management by NATO flight surgeons. Hyperlipidemia is a cardiovascular risk

factor that by itself or when combined with cigarette smoking and sedentary behavior as well as other risk factors presents a formidable problem for all NATO Air Forces as this directly impacts at pilot performance. Performance may also be affected by inadequate crew rest, environmental extremes and time zone shifts, all of which were illustrated in the Persian Gulf Conflict. For individual titles, see N93-32241 through N93-32269.

AN AUTOMATED PROCESSING SYSTEM FOR FOOD FREQUENCY AND NUTRITION KNOWLEDGE QUESTIONNAIRE

A VANERP-BAART, M. J., I. C. KISTEMAKER, and M. R. H. LOEWIK *In* AGARD, Nutrition, Metabolic Disorders and Lifestyle of Aircrew 3 p (SEE N93-32240 12-54) Mar. 1993

(AGARD-CP-533) Copyright Avail: CASI HC A01/MF A03

In surveys and intervention studies, food frequency questionnaires are often used to assess habitual dietary intake. Although this is a relatively quick and simple method, the number of subjects to be examined can still be enormous. So, without a good system, the time needed for the processing of the amount of data may be prohibitive for starting such a project. To structure and speed up this work, FOFRIPS, a food frequency interactive processing system was developed. The starting point was that not each developed specific questionnaire should be automated, but instead only the general procedures of the data processing. Author (revised)

The nutritional status of 184 TAC fighter pilots was analyzed for caloric intake, macronutrient composition, alcohol intake, and meal frequency. The dietary habits of fighter pilots relative to their age, family configuration, and level of exercise were also examined. The diets of a sub-group of 43 F-16 student fighter pilots were correlated with the subjective graded performance of a Basic Fighter Maneuver. Pilots energy consumption of 2800 kcal fell within the suggested range for the average U.S. male. The macronutrient composition of their diets was better than that of the mean U.S. male, comprising an average of 46% carbohydrates, 34% fats, 15% protein, and 5% alcohol. Missed meals on the day of flying were a frequent occurrence. The older age pilots consumed less fat than their younger counterparts, but their intake of alcohol was greater. Family configuration had no effect on alcohol consumption, caloric intake, or dietary behavior. Pilots who exercised 4 to 7 day a week were heavier than the non-exercisers, and the non-exercisers consumed more alcohol. No statistical difference could be found between total performance scores in the sub-group of F-16 student pilots and any deficiency or excess of specific dietary components or any combinations of these components. Alcohol consumption was shown to be associated with a low G-tolerance score. Author

The operating principle of Actireg, a new device for registration of changes in human body positions, is described. It is robust and functions well also during prolonged periods of high physical activity, in contrast to accelerometers and other devices used as motion sensors. Preliminary experiments indicate that combined use of heart rate and body position recording for estimation of energy expenditure may be superior to the use of heart rate registrations alone. However, validation experiments with doubly labeled water or a whole body calorimeter are needed in order to reach a firm conclusion on this point. Author

Muscle trophicity is under the influence of four major factors which are nutrition, nervous stimulation, muscle activity, and hormones. Numerous works have shown that substrate availability acts directly on muscle protein synthesis. The glucidic and proteic substrates regulate in a coordinated way the muscle proteosynthesis so that the attention was focused on the role of protein nutriment to protect muscle against protein wasting. Several conditions could decrease protein body stores among which are hypoxia exposure or hypokinesia. Both environmental factors are results of aerospace or military events. Two studies were conducted in order to evaluate the role of protein diet on protein metabolism during hypokinesia or hypoxia exposure. Author

Data on inflight meals were collected during a 30-day field experiment conducted by the Armstrong Laboratory designed to evaluate fatigue in C-141 Military Airlift Command (MAC) aircrew. Flight meal information was collected for one five-member crew throughout the area of operation during the last week of Desert Storm and for 3 additional weeks. Focus is on the nutritional components of a representative sample of the inflight meals provided to MAC aircrew. Nutritional analysis was based on fifteen in flight meals obtained from various Desert Storm staging bases. Analysis concerned kilocalories, protein, carbohydrate, fat, cholesterol, sodium, and saturated fats present in the average meal. The mean value for these components, constituting an average inflight meal, were 1758 Kcal, 53 g protein, 233 g carbohydrate, 66 g fat, 136 mg cholesterol, 3240 mg sodium and 20 g saturated fats. The limitations of this opportunistic evaluation and the need for additional field analyses of inflight meals and aircrew diets is discussed. Author

Military flying is a demanding profession requiring excellent performance during operations. Because the modern western society includes several undesirable lifestyle patterns, dietary counseling has been given increased attention over the past few years in Norway where the government has arrived at an official policy of nutritional standards. In order to provide information about the nutritional pattern of military aircrew, the Institute of Aviation Medicine (IAM) carried out a food survey on aircrew at Andoya Air Base in 1986. The present survey is a follow-up study of the 1986 study, using the same squadron and the same method as the previous study. Our survey has three aims. The first one is to detect any change in aircrew diet over the last six years. Secondly, since the 1986 survey showed that the aircrew took a nutritionally better diet than the average Norwegian population, it was investigated whether this group is still ahead. Finally, to what extent the irregular working and resting conditions of aircrew influence their meal schedule was studied. Author (revised)

The response of normal young volunteers to the Spanish Air Force (SAF) Emergency Rations (ER) (NATO code 8.970-33G02-0140) as the only nutriment during seven consecutive days was tested. The nutritional and metabolic response plus the psychological acceptability of the ER was evaluated. All the volunteers were medical students who were fully informed about the trial and its conditions. Each proband received a daily diet with only ER (1.000 Kcal/day, 10 chewable bars/210 grms total weight) equivalent to 580 Kcal/sqmeter/body surface/day with two optional flavors, orange or chocolate. Quantity of liquids per day/probands was from 1.5 to 2.0 liters. Probands carry out their normal daily activity without changes in usual timing except meals. The trial duration was 7 days. The conclusion was that the SAF ER provides satisfactory nutrition for short periods of time without impairing the daily activities or altering the metabolic and nutritional parameters in a normal young population. IDIOPATHIC REACTIVE HYPOGLYCEMIA IN A POPULATION OF HEALTHY TRAINEES OF AN ITALIAN AIR FORCE MILITARY SCHOOL
STEFANO FARRACE, LUCA URBANI, LORENZO SAKARA, and CLAUDIO DEANGELIS *In* AGARD, Nutrition, Metabolic Disorders and Lifestyle of Aircrew 3 p (SEE N93-32240 12-54) Mar. 1993
(AGARD-CP-533) Copyright Avail: CASI HC A01/MF A03

Idiopathic Reactive Hypoglycemia (IRH) was investigated among a population of young trainees of an Italian Air Force military school. One hundred and twenty male healthy subjects underwent a 300 min Oral Glucose Tolerance Test (OGTT) after an overnight fasting. Nine out of 120 subjects (group A: 7.5 percent) showed a glycemia nadir below 50 mg/dl. Moreover, in group A eight out of nine subjects reported symptoms referable to clinical hypoglycemia during the glycemia nadir. Furthermore, a lack in glucagon response to hypoglycemia was observed in group A. Data are suggestive for the presence of Idiopathic Reactive Hypoglycemia in group A subjects. Data suggest that IRH may be considered relevant as a possible reason of in-flight accident due to human factor.

A group of 50 pilots selected from a non-academic pilot background, born between 1947-1960, had their body weight, smoking and drinking habits, and blood pressure evaluated during a 10 year survey. Fifty six percent had Real Body Weight (RBW) greater than the Ideal Body Weight (IBW), with a 28 percent of RBW greater than + 10Kg of the IBW. Smoking habits were over 20 cigarettes per day in 36 percent and only 10 percent didn't smoke. Declared alcoholic intake, over average consumption, was admitted in 14 percent, with 3 alcoholic psychiatric treatment and 1 admission to hospital with Acute Alc. Hepatities. Blood pressure was over normal range in 12 percent. A modified clinical and Laboratorial screening is being applied, since 1991.

Certain serum analytes (glucose, total cholesterol, HDL cholesterol, triglycerides, uric acid, and y-glutamyltransferase) were correlated with some lifestyle variables (dietary features, anthropometrics, and physical exercise) in military (n=157) and civilian (n=157) male pilots in order to determine a possible relationship between these variables and their health status. The subjects, randomly selected within a certain period, were currently active without any history of coronary heart disease or diabetes mellitus and were not receiving any medication. In total, military pilots had statistically significant increased mean values of glucose, while a correlation of the mean values between groups with similar age showed that military pilots had increased cholesterol values and civilian pilots had increased triglycerides, LDL cholesterol, and y-GT values. Both had an average body mass index (weight/height(sup 2)) of 25 and very few of them were following an effective physical exercise program toward lowering cholesterol level. They preferred taking few (82.1 percent, 80.9 percent for military and civilian pilots respectively) but large meals (59.2 percent, 52.2 percent respectively). Concerning food composition, almost 30 percent of them were eating meals containing 38 percent or more fat, and 15 percent of them were eating meals with less than 44 percent carbohydrates of total daily caloric intake. Finally, our data suggest that: (1) the concentration of certain blood analytes (glucose, cholesterol) should be reduced, (2) an effective regular aerobic exercise program should be followed, and (3) meals should be altered toward the pattern of 'many and small' per day containing less fat and more carbohydrates. A lifestyle survey was developed and distributed to two flying squadrons and to the rated officers of the 12th Flying Training Wing to examine lifestyle habits and dietary consumption patterns. Blood lipid profiles were gathered and classified using National Cholesterol Education Program (NCEP) guidelines. Eighty two of 100 surveys were returned, and 75 completed 24-hour dietary recalls. As a group, these surveyed aviators consumed significantly less total fat, saturated fat, and dietary cholesterol than found in the typical American diet. Ninety three percent were non-smokers and 16 percent did not drink alcohol. Twenty eight percent described themselves as overweight by 6-10 pounds. Sixty-two percent exercised aerobically with 56 percent exercising three times a week or more. Monitoring total blood cholesterol level was important to 86 percent of respondents. Using NCEP guidelines, 36 percent of randomly sampled aviators were identified with LDL cholesterol which may warrant dietary or lifestyle intervention. Future research efforts and a proposed approach for educational intervention are discussed for this population. Author (revised)

The effect of diet and sport practice in a homogeneous--age, sex and environmental stress--group of pilots (n=90) was investigated in order to evaluate the impact of diet and sport practice on body weight and plasma lipid levels. The dietary intake was a typical mediterranean diet (55-60 percent carbohydrates, 25 percent lipids, and 15-20 proteins and 3000 Kcal daily). It was controlled by the Flight Surgeon Office. The sport practice was grounded in a physical training program for pilots, directed by the Physical Training Officer. A marked difference in all studied lipid parameters was found between groups with free diet versus controlled diet. A difference in HDL-C levels and TC/HDL-C ratio was found between groups with regular physical training versus free sport practice. Author (revised)

THE INFLUENCE OF DIETARY COUNSELING AND CARDIAC CATHETERIZATION ON LIPID PROFILES IN AMERICAN MILITARY AVIATORS
B. TUOMALA, R. MUNSON, W. BESICH, and P. CELIO *In* AGARD, Nutrition, Metabolic Disorders and Lifestyle of Aircrew 6 p (SEE N93-32240 12-54) Mar. 1993

The purpose was to determine the combined effect of dietary counseling and cardiac catheterization on lipid profiles when compared to a control group that did not receive dietary counseling or cardiac catheterization. The medical records and lipid profiles of 109 military aviators who underwent cardiac catheterization and dietary counseling and 109 matched controls who received neither were reviewed. All individuals were seen twice at the Aeromedical Consultation Service (ACS) between July 1987 and March 1992. Lipid profiles of the two groups were compared during their first evaluation and again at follow-up. Overall, there was a trend towards improvement in lipid profiles, but the changes between the 2 groups were not statistically significant. The cardiac catheterization group was divided into 3 subgroups based on severity of disease and compared to their matched control. The subgroup with minimal coronary artery disease (max lesion is less than 30 percent) showed a small but statistically significant improvement in HDL cholesterol. Otherwise the aviators knowledge of his angiographic results did not lead to any significant change in lipid profiles. This suggests that lipid profiles in aviators is not significantly affected by the combined influence of nutritional counseling and cardiac catheterization. The design of this study did not preclude members of either group from receiving dietary recommendations from physicians as part of their overall evaluation. Author (revised)

Medical records from candidates accepted for military training in the Royal Norwegian Airforce (RNoAF) between 1978 to 1980, and who still are on flying standards in the RNoAF, were examined. Cholesterol, HDL-cholesterol, resting heart rate, blood pressure, body weight, and maximum oxygen uptake were studied over a 12 year period, i.e. at approximately 20, 26, and 32 years of age. Our pilots gain weight at a rate twice that of the general Norwegian population. They maintain the same physical fitness from the age of 20 to 26, and from 26 to 32 there is a significant increase in maximum oxygen uptake. A 32 year old pilot is in a distinctly better physical condition, both compared to his younger colleagues, and to the average Norwegian of the same age. There is also a significant increase in serum-cholesterol from the age of 20 to 32. HDL-cholesterol and resting heart rate remained unchanged over the period. Systolic blood pressure was unchanged from 20 to 26, but decreased significantly from 26 to 32. Diastolic blood pressure dropped significantly from 20 to 26 years of age. Dietary/lifestyle consultation, as a matter of routine, may be of great importance to young pilots in order to prevent coronary heart diseases in the future. Such information should be given at an early stage, before symptoms occur. Author (revised)

Cigarette smoking is a well known cause of major illnesses in the general population, illnesses that can impair a pilot's performance of duty and even result in temporary or permanent disqualification of the aircrew member. This results in a diminished return on a significant investment of time and resources used to train the individual, a loss that is even more critical as the competition for such resources in an era of budget reduction, becomes more intense. The purpose is to review the diseases and physiologic changes related to cigarette smoking, especially as they relate to the flying environment. Then the prevalence of both the smoking habit and these related impairments in the Spanish Air Force aircrews are specifically examined. Finally, this data is utilized, compared to previous epidemiologic surveys in this target population, to draw conclusions regarding the effectiveness of past efforts at reducing cigarette smoking and propose future methods that might be used to reduce the negative impact of smoking related illness on the SAF mission. THE EFFECTS OF AN ANTIJET LAG DIET
CHARLES A SALTER, LAURIE S. LESTER, EDWARD HIRSCH, MARGARET MOLINE (Cornell Univ., White Plains, NY.), CHARLES P. POLLAK (Cornell Univ., White Plains, NY.), and DANIEL R. WAGNER (Cornell Univ., White Plains, NY.) *In* AGARD, Nutrition, Metabolic Disorders and Lifestyle of Aircrew 13 p (SEE N93-32240 12-54) Mar. 1993

The unpleasant symptoms surrounding jet lag or phase shifts (fatigue, insomnia, etc.) generally interfere with biological rhythms, performance, and subjective well being. A popular 'jet lag diet' has been touted widely as an effective countermeasure to alleviate symptoms through systematic alternation of high (greater than 3600 calories per day) and low (less than 800 calories per day) food intake, timed consumption of methyl xanthines, high protein breakfasts and lunches, and high carbohydrate dinners. Unfortunately, this system as a whole has never been adequately tested with humans. Fifteen male subjects (aged 18-25) lived individually in time-isolation apartments for 15 consecutive days.

For the first seven days they ate and slept according to their usual schedule. During the seventh night, they were phase advanced 6 hours, to simulate an easterly jet flight, and maintained their new schedules for 8 days. The eight control subjects consumed their normal diet throughout the study, while the seven diet group subjects consumed the 'jet lag diet' prescribed by Charles Ehret. All subjects experienced jet lag as evidenced by disrupted sleep and body temperature rhythms, mood and performance decrements, and lessened physical activity. The antijet lag diet did not lessen the severity of these symptoms and, in fact, worsened sleep. Although, the two groups did not differ with respect to sleep latency, duration, or composition before the simulated jet lag, afterwards subjects in the diet group slept on average 30 minutes less and were 31 percent less efficient than the control subjects. These results indicate that a popular antijet lag diet is not effective in young male subjects and may even worsen symptoms for air crew members relying upon it.

SUBJECTIVE MOOD AND FATIGUE OF C-141 CREW DURING DESERT STORM

JONATHAN FRENCH, PATRICIA A. BOLL, ROGER U. BISSON, KELLY J. NEVILLE, WILLIAM F. STORM, STEPHEN H. ARMSTRONG, TIMOTHY SLATER, and ROBERT L. MCDANIEL (Military Airlift Wing, 437th, Charleston AFB, SC.) *In* AGARD, Nutrition, Metabolic Disorders and Lifestyle of Aircrew 6 p (SEE N93-32240 12-54) Mar. 1993

(AGARD-CP-533) Copyright Avail: CASI HC A02/MF A03

Profile of Mood States (POMS) data were used to assess the subjective condition of C-141B air crew members during Operation Desert Storm (March/April, 1992). The POMS dimensions used were anger, fatigue, vigor, tension, depression, and confusion. Data were collected during 2 intervals of the MAC crew duty day; legal for alert (LFA) and crew rest (CR) intervals. The POMS dimensions correlated with one another during the 30-day study. Fatigue, vigor, and confusion were different between LFA and CR suggesting that the CR interval was restorative. During both LFA and CR intervals, cumulative flight hour blocks from 0-75, 76-100, 101-125, and 126-150 hours per month revealed no significant effects on subjective mood states. However, mood was sensitive to conditions of recent (1-2 days) flight hours and sleep hours in combination with cumulative flight hours per 30-days. In particular, when cumulative flight hours exceeded 125 hours per 30-day period, the vigor dimension was affected by the amount of sleep and flight hours in the most recent 24-48 period. Therefore, attending to recent sleep and flight hours as well as cumulative flight hours per 30-day interval may reduce fatigue and improve mood when operational pressures require exceeding the normal 125 flight hours per 30-days. THE EFFECTS OF COCKPIT HEAT ON AVIATOR SLEEP PARAMETERS

J. LYNN CALDWELL, ROBERT THORNTON, JACQUELYN Y. PEARSON, and BARBARA L. BRADLEY *In* AGARD, Nutrition, Metabolic Disorders and Lifestyle of Aircrew 10 p (SEE N93-32240 12-54) Mar. 1993

(AGARD-CP-533) Copyright Avail: CASI HC A02/MF A03

Aviators are frequently required to work in hot environments while performing the complex cognitive tasks necessary to fly their aircraft. Objective measures of sleep were taken to determine the effects of exposure to high cockpit temperatures. Army helicopter pilots were required to fly a UH-60 simulator while wearing NBC IPE in temperatures of 35 C and 41 C. Additionally, various cooling vests were tested to determine if these cooling mechanisms would alleviate any heating effect seen in sleep parameters. During the day, pilots flew the simulator continuously for 6 h unless they were withdrawn because of excessive core temperature or they voluntarily withdrew. During the night, pilots slept in a cool bedroom in the laboratory while their sleep patterns were recorded by electroencephalography. Analyses of the data indicated when core body temperature rose during the flight by at least 1 C and the flight was at least 5 h in length, rapid eye movement (REM) sleep was significantly reduced. No rise in slow wave sleep (SWS) was seen although there was a tendency for the relationship between SWS and REM sleep to be altered. The results suggest aviators operating in a hot environment for a long period of time may have altered sleep the following night. Author (revised)

HUMAN FACTORS AND THE SAFETY OF FLIGHTS: THE IMPORTANCE OF THE MANAGEMENT OF SLEEP [FACTEURS HUMAINS ET SECURITE DES VOLS: IMPORTANCE DE LA GESTION DU SOMMEIL]

P. CABON, R. MOLLARD, A. COBLENTZ (Paris V Univ., France.), J. P. FOUILLOT (Paris V Univ., France.), and J. J. SPEYER (Airbus Industrie, Toulouse, France.) *In* AGARD, Nutrition, Metabolic Disorders and Lifestyle of Aircrew 11 p (SEE N93-32240 12-54) Mar. 1993 In FRENCH

(AGARD-CP-533) Copyright Avail: CASI HC A03/MF A03

In the field of civil air transport, the fatigue and sleep of the pilots becomes more and more of a concern in the area of flight safety, in particular for long distance flights. Indeed, these flights produce important stresses for the pilots: fast and multiple time shifts, work at night or with shifted schedules with occasionally very high amounts of work. The cumulated effect of these stresses involves disturbances of the circadian rhythms and sleep deprivations reducing the performance and the alertness level of the pilots. These difficulties are particularly elevated by the lengthening of the duration of flights with the modern planes such as the Boeing 747-400 and Airbus A340 (flights can attain a duration of 14 hours). These flights which remain for the moment limited to certain types of routes will tend to become more common in the near future. They are carried out with a reinforced crew, the French regulation of civil aviation prohibiting the work of pilots beyond one period of 8 or 10 hours according to the type of aircraft. The relatively recent appearance of these aircraft raises the very delicate question of the management of sleep for the whole crew, during the stopover and the flight. To these physiological constraints, it is necessary to add the modifications of the activity of piloting on the modern aircraft. Sometimes the increasing automation of the cockpits contributes to making the tasks of the pilot very monotonous as well as reducing the sensory stresses considerably. Similar work was also carried out in the military field. The cumulated action of these two factors, sleep disturbances and monotony of activity, are likely to involve states of hypovigilance which can appear, in certain circumstances, prejudicial to the safety of the flight. The results of research aimed at the study of the duration and quality of sleep of the crews of civil aircraft during rotations including long distance flights of durations equal to or greater than 8 hours. DIGITAL FLIGHT DATA AS A MEASURE OF PILOT PERFORMANCE ASSOCIATED WITH FATIGUE FROM CONTINUOUS OPERATIONS DURING THE PERSIAN GULF CONFLICT

ROGER U. BISSON, KELLY J. NEVILLE, PATRICIA A. BOLL, JONATHAN FRENCH, WILLIAM R. ERCOLINE (Krug Life Sciences, Inc., San Antonio, TX.), ROBERT L. MCDANIEL (Military Airlift Wing, 437th, Charleston AFB, SC.), and WILLIAM F. STORM *In* AGARD, Nutrition, Metabolic Disorders and Lifestyle of Aircrew 11 p (SEE N93-32240 12-54) Mar. 1993

(AGARD-CP-533) Copyright Avail: CASI HC A03/MF A03

The results of a field study using the C-141 Digital Flight Data Recorder (DFDR) to evaluate whether fatigue affected piloting precision during the Persian Gulf conflict are described. This is the first time digital flight data from the C-141 was used to evaluate routine aircrew performance. Five C-141 military transport crew were granted scheduling priority to quickly accumulate 150 flight hours in less than 30 days. Fatigue estimates were based upon activity logs, fatigue ratings, oral temperature, and mood surveys. Eighty seconds of the instrument landing system (ILS) final approach above decision height were isolated from digital flight data downloaded after each flight. Both an average and a standard deviation were calcualted for airspeed, heading, vertical velocity, pitch, and roll for each of the 80 second ILS segments. The standard deviations served as estimates of piloting precision and were correlated to fatigue measures. No significant differences in piloting precision categorically attributable to fatigue were found. However, individual examples of decreased precision associated with high fatigue levels were observed. These deviations did not occur with enough regularity to conclude whether fatigue or other factors were the root cause. DFDR data can be a sensitive measure of performance, but the operational setting of Desert Storm did not permit control of important variables in this first time effort. The findings suggest that DFDR assessment of flying precision could be of value in controlled studies of fatigue, workload, or drugs that affect pilot performance. Future studies need to evaluate digital flight data versus other cognitive and psychomotor tasks that are sensitive to changes in performance. Transl. by FLS

EFFECTS OF CAFFEINE ON MENTAL PERFORMANCE AND MOOD: IMPLICATIONS FOR AIRCREW MEMBERS

HARRIS R. LIEBERMAN, BERNARD J. FINE, JOHN L. KOBRICK, and JOHN D. E. GABRIELI (Stanford Univ., CA.) *In* AGARD, Nutrition, Metabolic Disorders and Lifestyle of Aircrew 10 p (SEE N93-32240 12-54) Mar. 1993

(AGARD-CP-533) Copyright Avail: CASI HC A02/MF A03

Caffeine is generally regarded as the most widely used drug in the world. However, it is also a food constituent. Its acute effects on behavior appear to be greater than those of any other food constituent as they are detectable when caffeine is administered in doses found in single servings of coffee, tea, and soft drinks. Caffeine affects the central nervous system by binding to adenosine receptors, and it has acute and chronic, dose dependent effects on brain function. Low and moderate doses have beneficial effects on mental performance but high doses may have adverse effects. Tolerance develops to continued use of caffeine, so that its acute effects are altered when it is used chronically in high doses. Physical and mental symptoms associated with sudden withdrawal of caffeine have also been reported. The acute effects of caffeine on vigilance, simple and complex cognitive performance, and mood state are discussed. Doses equal to single servings of beverages consistently improve auditory and visual vigilance. In addition, moderate doses of caffeine increase self-reported alertness. The duration and magnitude of these effects on individuals are related to habitual caffeine consumption and interact with tobacco use. In view of its dose-related beneficial and deleterious effects, aircrew personnel, flight surgeons, military commanders, and planners should have knowledge of the potential influence of caffeine on performance, especially vigilance, and mood, as well as the consequences of its abrupt withdrawal. VISUAL PROBLEMS IN NIGHT OPERATIONS [PROBLEMES DE VISION DANS LES OPERATIONS DE NUIT]

May 1992 96 p In ENGLISH and FRENCH Lecture series held in Madrid, Spain, 1-2 Jun. 1992, in Soesterberg, Netherlands, 4-5 Jun. 1992, and in Brooks AFB, TX, 15-16 Jun. 1992

(AGARD-LS-187; ISBN-92-835-0676-6) Copyright Avail: CASI HC A05/MF A01

The aim of this Lecture Series is to provide the aeromedical specialist with a thorough understanding of the physiology of the visual system with particular concentration on the impact of the environment presented during night tactical air operations. Methods to preserve, protect, or enhance unaided night vision will be discussed. Information concerning visual performances with electro-optic devices derived from aeromedical research and field experiences will be detailed to provide the medical specialists, the engineers, and operational pilots with appropriate understanding of these increasingly common operational tools. This Lecture Series, sponsored by the Aerospace Medical Panel of AGARD, was implemented by the Consultant and Exchange Programme of AGARD. For individual titles, see N94-23977 through N94-23984.

NIGHT OPERATIONS

WILLIAM E. BERKLEY *In* AGARD, Visual Problems in Night Operations 4 p (SEE N94-23976 06-54) May 1992

(AGARD-LS-187) Copyright Avail: CASI HC A01/MF A01

Strategists have long sought to exploit the night in military operations, not only to avoid detection and as a means to defeat visually or optically aimed weapons, but also to deny the enemy an opportunity to rest or resupply his troops. With the advent of practical and effective imaging devices, true night war fighting capability has at last become a reality (as demonstrated in the recent Gulf War). It is safe to assume that night military operations will receive even more emphasis in the future. Current aviation activities range from basic single pilot helicopter operations with night vision goggles (NVG's) to complex missions utilizing a mix of highly sophisticated aircraft with multiple sensors, precise navigational capabilities, and advanced weapons delivery systems. (AGARD-LS-187) Copyright Avail: CASI HC A02/MF A01

The various physical and psychophysical aspects of the visual stimulus are considered. It is a question of defining as precisely as possible the physical stimulation of input to the visual systems (nature of radiation, light intensities, colors, and organization in space and time). It is often difficult to dissociate the physical aspect from the psychophysical aspect. This last aspect translates the impact of the physical aspect on the socket and the treatment of information through the visual channel. It is consequently important to define as precisely as possible the operation of the retinal sensor. Mechanisms of the integration of information are described. The physical structure of the images of several systems of substitution to night vision are analyzed. Transl. by FLS

MULTI-SENSORAL APPROACH TO NIGHT FLIGHT: PERCEPTIVE AND COGNITIVE LIMITATIONS [APPROCHE MULTI-SENSEURS POUR LE VOL DE NUIT: LIMITATIONS PERCEPTIVES ET COGNITIVES]

RENE AMALBERTI *In* AGARD, Visual Problems in Night Operations 9 p (SEE N94-23976 06-54) May 1992 In FRENCH

(AGARD-LS-187) Copyright Avail: CASI HC A02/MF A01

Night-flight activities have significantly grown to allow Forces being permanently operational. The level of performance for these activities is expected to be the same as it is in day time. Thus,

visual support systems have been designed to mitigate the consequences of night-vision limitations, e.g. Electro-optical systems (radar), NVG, FLIR, and Real-time terrain image. Some of these support-systems are mixed, using several sources although they provide the pilot with only one resulting integrated image. Moreover, when the pilot continues to have a direct vision of the external world (vision through the optical system), the human vision has to be considered as another point of view to be integrated with this type of visual support system. This is typically what is termed the integrated multi-sensor and sensory approach. Humans have a special position in such conditions: first, from a perceptive point of view, although they are impaired by night-conditions, their eyes complement machine vision. Second, from a reasoning and decision making point of view, they must adapt their mental processes to this complex visual input made of a mixture of natural and artificial vision. The resulting effects of this position for perception and reasoning activities are described. The framework model of cognitive activities described in the previous course on mental images serves as a departure point. Then the following are discussed: (1) how humans solve the possible distorsions between sensors and human vision; (2) how these perceptive input are integrated into mental representations; (3) the central question of confidence into visual support-systems; and (4) the related consequences for workload. Night vision goggles (NVG's) are widely used to enhance visual capability during night operations. NVG's are basically composed of an objective lens which focuses an image onto the photo-cathode of an image intensifier tube which in turn produces an amplified image that is viewed through an eyepiece lens. There are several versions of NVG's in use and in development. These include the AN/PVS-Five, AN/AVS-Six, PVS-Seven, Cat's Eyes, Nite-Op, Eagle Eyes, Merlin, and others. The first section of this paper provides a brief description and characterization of each of these NVG's. There are several parameters that are used to characterize the image quality and capability of NVG's. These parameters include field-of-view (FOV), resolution, spectral sensitivity, brightness gain, distortion, magnification, optical axes alignment, image rotation, overlap, beamsplitter ratio, exit pupil diameter, eye relief, and others. Each of these is discussed in the second section of this paper. Author (revised)

COCKPIT/NVG VISUAL INTEGRATION ISSUES
H. LEE TASK *In* AGARD, Visual Problems in Night Operations 6 p (SEE N94-23976 06-54) May 1992
(AGARD-LS-187) Copyright Avail: CASI HC A02/MF A01

This paper is divided into two main sections: visual significance of night vision goggles (NVG) characteristics and cockpit/NVG integration issues. The first section deals with the relationship between the NVG characteristics discussed in the previous paper and visual capability. The second section explores several issues associated with successfully integrating the NVG with the aircraft cockpit for optimum system performance. Author (revised)

NIGHT VISION GOGGLE ILLUSIONS AND VISUAL TRAINING
WILLIAM E. BERKLEY *In* AGARD, Visual Problems in Night Operations 6 p (SEE N94-23976 06-54) May 1992
(AGARD-LS-187) Copyright Avail: CASI HC A02/MF A01

Night vision goggles (NVG's) possess certain specific visual characteristics related to their limited resolution, field of view and automatic gain control. In addition, the near infrared energy to which NVG's are most sensitive has somewhat different properties as compared to visible light. These factors combine to produce certain effects, limitations and illusions not ordinarily encountered with unaided vision. NVG visual training for aircrew members is conducted with didactic presentations, terrain board simulation, video tape presentations of intensified imagery, flight simulators utilizing computer generated imagery, and actual flight with NVG's. Computer based training and an interactive videodisc are under development. Derived from text

The paper surveys briefly the role of textile materials in enhancing comfort and survival prospects, in both cold and hot climates, identifying the fiber, fabric and textile construction factors of critical importance. An examination of the interaction between these factors, showing how they enhance or interfere with one another, is also carried out in outline. Selected new textile fibers and fabric construction or finishing techniques are then analyzed to determine how their novel characteristics can improve their cold- or hot-weather performance, with a prediction in each case of how the advantages derived from their incorporation may potentially be of use in improving aircrew or ground support staff clothing applications. Compared to closed cell foam, constant wear garments designed with this material provide added comfort due to increased heat losses during sweating, shortened drying times after sweating, and added flexibility. Although introducing water vapor permeability causes a degradation to the material's cold water immersion protection, the integrity of its fire protection and buoyancy remains unaltered. Author

In 1976 W. L. Gore & Associates, Inc. invented GORE-TEX fabric utilizing expanded polytetra-fluoroethylene (ePTFE). This was the first truly waterproof and moisture vapor permeable fabric laminate. In 1980 the company began to develop products for military applications. Since that time, Gore has supplied GORE-TEX fabric for, and assisted in the development of, some of the military's most technically sophisticated apparel: the U. S. Army's Extended Cold Weather Clothing System (ECWCS), the U. S. Navy's Over Water Flight Suit (OWFS), and the U. S. Air Force's Security Police Jacket being but a few examples. All of these garments provide the user with increased levels of protection from harsh environments and have proved themselves to be very durable. GORE-TEX fabric laminate has consistently proven itself to be technically superior to any other material. This paper details the

development by Gore of a new chemical warfare protective material based on proven ePTFE technology combined with a new highly activated polymer system (APS). Author

The purpose of this research was to evaluate the relative effectiveness of different clothing systems in their contribution to protection against exposure to high heat flux flash fires. All systems were exposed to controlled simulated flash fires (80 or 84 kW/sq m) on a thermally instrumented mannequin. The percentage of the mannequin surface reaching second and third degree burn criteria was recorded. In addition, the multiple layers of fabrics which were used together in each of the garment systems were tested according to a standard thermal protective performance (TPP) test. The protection provided by multiple layered garment systems was significantly greater than would be expected from the additive effects of the layers used singly. The outer layer of a garment system must be flame retardant, however; wearing a flammable garment over a flame retardant one clearly negates the benefits of the FR layer. While it cannot be concluded for certain that undergarments must also be flame retardant, results demonstrate that FR undergarments offer more protection than non-FR ones, especially when worn under the relatively light-weight fabrics which may be used for military flightsuits. Only in one experiment with garment systems comprising all-FR layers did small-scale TPP tests indicate the relative protection provided by the systems. The TPP test did not indicate the potential hazard of systems in which the outer layer is non-FR. Nor did it differentiate among the three different flight suit fabrics or demonstrate the relative protective performance of different underwear materials.

During a night formation mission including an approach without establishing a connection to the tanker aircraft a collision of both aircrafts, Typ PA 200 Tornado occurred. The four aircrew members performed an ejection. The site of the accident is located over the baltic sea in the Skagerrak region. At the time of accident, the air temperature was noted with 6 C, the water temperature with 11 C, and the sea with waves of 4 to 4.5 m height with a frequency of 8 waves per minute. The time of rescue ranged from 1 hour 28 minutes to 2 hours 14 minutes. This document reports on clothing and personal equipment, on the clinical findings, and on statements of the crew members. The crew member who was recovered after 2 hours and 14 minutes did not survive. This accident shows that with the ordered clothing, a survival under these conditions is supported, yet with incomplete equipment, it must be reckoned with a fatal outcome. Further details are discussed. Derived from text

In this paper, the concept of an Advanced Integrated Survival System is introduced and discussed in relation to the Helicopter Crew Member and Passengers, although the principles are equally applicable to many other types of user and circumstances requiring specialized protective clothing. The fundamental principles behind the concept are firstly that the wearer should be given protection against all of the hazardous responses associated with immersion in cold water and secondly, that the individual components which make up the integrated survival system (ISS) must be compatible and complementary. They may also be interdependent.

Aeromedical support for operations in hot climates involves exposure to acute heat injury and chronic heat stress which are unfamiliar to many medical personnel in NATO nations. Preparation for deployment to a hot climate should include review of climatic data for the site, appropriate adjustment to supplies and equipment needed to handle predicted numbers of heat casualties, and education of all air base personnel regarding methods of preventing heat illness. Medical facilities at the remote site may include local buildings or air transportable units. Special care is required with respect to housekeeping and provision of safe food and water in hot climates. Casualties arriving from remote sites should be assumed to suffer from heat stress and dehydration; those with elevated temperatures or disturbed consciousness must be treated as heat stroke cases until proven otherwise. Oral rehydration mixtures should be used whenever possible, reserving intravenous fluids for severe cases. Plans for air evacuation of all patients should attempt to minimize heat stress during loading and allow for continued rehydration in flight. Author

Humans and animals often exhibit a remarkable ability to adapt to harsh or rapidly changing environmental conditions. One obvious means of adaptation is to move to where the environmental stresses are less severe. The body also has a great physiological capacity for adaptation. There exists ample literature on adaptative mechanisms and processes. When a person becomes acclimatized, the hypothalamus and other body control organs and systems settle into cooperative equilibrium, with certain chemical or hormonal levels that are appropriate for that particular season. The present study, describes how simple dietary rules can prevent involuntary dehydration brought about by sweating.

A flight trial was conducted at RAF Akrotiri to assess the level of thermal strain associated with, and the G protection provided by, the prototype European Fighter Aircraft (EFA) interim aircrew equipment assembly (AEA) in a warm climate. Six subjects flew a standardized sortie four times in the RAF IAM Hawk aircraft: two while wearing the EFA AEA, and two wearing standard Hawk Summer AEA. The sortie profile included simulated air combat and four high G turns. Cockpit temperatures, rectal and skin temperatures, heart rate, and sweat rate were recorded. Subjective thermal comfort, fatigue, and G tolerance were also assessed. Skin temperatures at the chest, back, and upper thigh sites and mean skin temperatures were greater in flight, and sweat rate was increased when the EFA AEA was worn. However, rectal temperature and heart rate did not differ significantly when the EFA AEA was worn indicating that homeostasis was maintained by thermoregulatory mechanisms. Superior G protection was provided by the EFA AEA. Taken as 8 whole, these findings suggest that wearing the EFA AEA in a warm climate is associated with an increased but not unacceptable level of thermal stress while offering greater G protection. These results may not generalize to conditions where ambient temperatures are higher or where more insulative protective clothing is required. Author (revised)

The NBC protective equipment and facilities in service with UK forces must be used when an appropriate threat exists irrespective of climate. Modifications to the individual assemblies, including provision of heated ventilating air to the aircrew respirator and additional insulation in cold conditions together with means to increase loss of body heat in hot climates and combined with changes to procedures and adaptation of concepts of use, can minimize the impedance to effective air operations which may occur from the additive effects of wearing NBC protective equipment in climatic extremes. The environmental symptoms questionnaire (ESQ) was developed to aid in the standardized assessment of symptoms experienced by individuals exposed to environmental extremes. It was used initially to delineate the symptoms of acute mountain sickness, but has since evolved into a more comprehensive tool for assessing subjective reactions to ambient heat and cold, to diet, physical exercise, and medications. The ESQ has also been made more reliable and user friendly by revision, addition and removal of certain items, and by compression of the initial scale values. Factor analysis of responses has identified several meaningful symptom clusters, and has provided a useful technique for scoring those clusters under both laboratory and field conditions. Studies utilizing the ESQ under various environmental extremes are summarized and reviewed. Current administration and scoring methods are presented. Author (revised)

The Gulf war created an unusual incentive to the rapid development and deployment of active cooling systems for defense personnel. One of the most successful efforts in this respect concerned a liquid-circulating system which departed from prior art in a number of significant ways. The system was deployed first by Canadian aircrew, and then by their British counterparts in the later stages of the conflict. The systems used by these forces are described, with an account of their physical and thermal characteristics, and an account of their performance in the field. Very recent developments in electrically powered cooling units for microclimate use are also described. These new devices offer very real advantages in terms of power and space consumption. The impact they will have on air operations in extreme heat is discussed. Author

Within the framework of the research and technology program, a whole-body protection suit with integrated helmet was developed by the Dornier Company. The thermophysiological capabilities of this suit were tested by Division IV Ergonomics of the German Air Force Institute of Aviation Medicine. Ambient temperatures higher than those normally to be expected in the cockpit were chosen intentionally. In spite of this fact, pulse rates remained below the limiting value and the average rise in core temperature was insignificant. Loss of weight through sweating amounted to approximately 1% of body weight. It proved possible to remove 82% of this sweat by means of ventilation. Based on the results of the questionnaires on subjective sensibility, no prejudice to well-being and no negative effects in respect of the capability to act were established with regard to the testing of the whole-body protection suit under laboratory conditions. The effects of microclimate cooling on aviator performance and physiology in Nuclear, Biological, and Chemical (NBC) Individual Protective Equipment (IPE) were evaluated in the USAARL UH-60 research flight simulator. Sixteen male aviators flew the simulator in two temperature conditions, 35 C and 41 C, both at 50% relative humidity (RH). Two thermoelectric conditioning units were used, one providing cooled blown air, the other cooled water to the aviators. At each temperature they flew for up to six hours in NBC IPE with no cooling, air cooling, and liquid cooling. Author (revised)

EXPANDING THE PILOT'S ENVELOPE
BRUCE E. HAMILTON *In* AGARD, Technologies for Highly Manoeuvrable Aircraft 6 p (SEE N94-34605 10-05) Mar. 1994
(AGARD-CP-548) Copyright Avail: CASI HC A02/MF A03

Advances in aircraft technology have allowed the construction of fighters which can easily exceed the pilot's capability to react and to sustain G forces. Advances in avionics have allowed these airframes to be fitted with sensors, weapons, and data processors

to the point that the workload associated with mission accomplishment sometimes exceeds the pilot's capabilities. Consequently, some aircraft capabilities are rarely used due to lack of familiarity. These developments highlight the fact that the ability of the aircraft to fulfill its mission is dependent upon the pilot's utilizing its capabilities as an integrated weapon system. Pilots, like airframes, have operational envelopes and expanding the pilot's envelope allows fuller exploitation of the airframe's envelope and the avionics capabilities. The nature of the pilot's envelope is presented along with attributes of a pilot interface which support expansion of the pilot's envelope.

ADVANCED HELMET TRACKING TECHNOLOGY DEVELOPMENTS FOR NAVAL AVIATION

JAMES H. BRINDLE *In* AGARD, Pointing and Tracking Systems 15 p (SEE N94-36616 12-18) May 1994

(AGARD-CP-539) Copyright Avail: CASI HC A03/MF A02

There is a critical need across the Services to improve the effectiveness of aircrew within the crewstation by capitalizing on the natural psycho-motor skills of the pilot through the use of a variety of helmet-mounted visual display and control techniques. This has resulted in considerable interest and significant ongoing research and development efforts on the part of the Navy, as well as the Army and the Air Force, in the technology building blocks associated with this area, such as advanced head tracking technologies, helmet-mounted display optics and electronics, and advanced night vision or image intensification technologies. Advanced multi-mode visually-coupled systems combine the attributes of image intensification with those of the helmet-mounted display capabilities for symbology and thermal sensor presentation. Examples of this class of system could be something as simple as the night vision goggle HUD, or NVG-HUD, which combines head tracking, image intensification, and simple symbology overlay, to the more complex multi-mode systems with high resolution miniature CRT's. This class of systems is capable of presenting to the pilot correlated, spatially-referenced information from both the image intensification technology, as well as a dynamic, high fidelity symbology overlay, and correlated thermal sensor imagery.

TASK-SPECIFIC USABILITY REQUIREMENTS FOR VIRTUAL INFORMATION ENVIRONMENTS: INTERFACE DESIGN AND DATA REPRESENTATION FOR HUMAN OPERATORS OF COMPLEX MEDICAL SYSTEMS

MICHAEL S. NILAN *In* AGARD, Virtual Interfaces: Research and Applications 8 p (SEE N94-37261 12-53) May 1994 Sponsored in part by New York State Center for Advanced Technology in Computer Applications and Software Engineering; Alex Nason Foundation of New York City; and AFOSR

(AGARD-CP-541) Copyright Avail: CASI HC A02/MF A02

The National Research Council has identified 'usability' as one of two major requirements for coherent development of computer and information systems over the next ten years. The use of multisensory virtual environment technology to display and provide access to system functions and data relevant to large-scale, complex, potentially volatile medical tasks (e.g., telepresence surgery) increases the (already critical) need for unobtrusive, transparent interface designs, and data representations. Unfortunately, the medical community must take responsibility for providing requirements specifications to the computer industry or else be forced to adapt to existing technical constraints. Recent research in interface design and data organization/representation for two dimensional computer applications indicates that dynamic representations of the specific task or problem that the human operator is performing is very effective. Employing a task-specific, 'user-based' methodology, steps in the task resolution are organized into a dynamic model of the task. Linked to this model are the functional system requirements and information/data need requirements divided into specific content requirements, display requirements (including spatial organization) and system help requirements. The resultant model is readily interpretable by system designers and in addition, provides them with specific task-related system evaluation criteria. Usability advantages of dynamic task representations include: minimal system/application training requirements for operators; and coherent, comprehensible, and uncluttered sensory field organization of system functions, relevant data, and help information. Because of its ability to provide specific task-related requirements to system designers, this methodological approach will insure maximum usability of high performance computing (including virtual reality technology) for critical medical applications. ON THE FEASIBILITY OF VIRTUAL ENVIRONMENTS IN MEDICINE

A. C. M. DUMAY and G. J. JENSE *In* AGARD, Virtual Interfaces: Research and Applications 8 p (SEE N94-37261 12-53) May 1994

(AGARD-CP-541) Copyright Avail: CASI HC A02/MF A02

Virtual Environments (VE) allow a human to interact with a (computer) system in such a way that a high level of presence in a computer-synthesized world is experienced. In principle, all human senses are involved with the interaction. Many applications may benefit from this type of human-machine interfacing, however, little have emerged so far for medicine. In this paper, we elaborate on

some realistic potential applications of virtual environment technology in the field of medicine. These applications can be found in education/training, therapy, surgery, rehabilitation, diagnosis, telemedicine, and biomechanics. The value to be added to these applications by VE technology lies in the fact that patient data or patient models may be moderated to the physician in a more intuitive and natural manner. Despite these potentials, the short-term feasibility of these applications can be put into question for various reasons. Firstly, the current generation of display devices have a resolution that may show to be too low to achieve a sufficiently high degree of realism for medical applications. Secondly, there are no commercially-available actuators for tactile and force feedback which the physician desperately need for the simulation of the contact with the (virtual) patient. Thirdly, the enormous computing power required for these applications needs (yet) a considerable investment. With these limitations in mind, we believe that we are at the cradle of a whole new generation of VE applications in medicine. Author

IMMERSIVE VIRTUAL ENVIRONMENTS AS TRAINER: SYSTEM DESIGN FROM A COGNITIVE STANCE
M. WIERDA, P. C. VANWOLFFELAAR, and W. VANWINSUM *In* AGARD, Virtual Interfaces: Research and Applications 6 p (SEE N94-37261 12-53) May 1994 Sponsored by Ministry of Transport and Public Works
(AGARD-CP-541) Copyright Avail: CASI HC A02/MF A02

Many of today's training-simulators for guiding, steering, or flying a vehicle are designed to have a safe, environmentally clean, flexible and cost effective educational environment. It is claimed that the training effectiveness can be increased significantly if the starting point of the design would be shifted from the 'enabling technology' position to a cognitive approach of the task to be learned in the simulator. An outline is given of this approach, encompassing a behavioral task-analysis, a cognitive process model, and an analysis of the educational goals in terms of cognitive and perceptual skills. It is concluded that knowledge in the domains of cognitive science and artificial intelligence is hardly used while this knowledge may bring about training simulators of a significantly other quality. The aim of this paper is to describe work in progress at the Defence Research Agency (DRA) Farnborough on the Virtual Cockpit, with particular emphasis on format design and development. The paper reviews the reasons why the concept of the Virtual Cockpit is of interest, and the ways in which it differs from the common understanding of Virtual Reality. The potential advantages and disadvantages of such a man-machine interface are discussed. The overall aims of the DRA Virtual Cockpit research program are listed, together with a more detailed discussion of the areas of concern in the presentation of visual information. The current status of the research program is described. The hardware being used for this program comprises a head-coupled binocular helmet-mounted display (HMD) system in a skeletal cockpit rig with stereoscopic, computer generated graphics, and a set of demonstration formats showing examples of the type of imagery which might be employed in a Virtual Cockpit. This is followed by a description of APHIDS (Advanced Panoramic Helmet Interface Demonstrator System) - a more capable Virtual Cockpit research rig currently being built for DRA, and of its strengths and limitations. The paper concludes with an outline of how APHIDS will be employed in the next stage of the research program. Author

VIRTUAL REALITY EVOLUTION OR REVOLUTION
CHARLES GRIMSDALE *In* AGARD, Virtual Interfaces: Research and Applications 4 p (SEE N94-37261 12-53) May 1994
(AGARD-CP-541) Copyright Avail: CASI HC A01/MF A02

There is a growing body of research which can now lead us to a strong rationale for Virtual Reality as the next generation of Human Computer Interface. As an interface metaphor Virtual Reality clearly has great potential, throughout industry, commerce, and leisure. But how will it gain acceptance. It is my belief that this will be a process of evolution rather than revolution. Much has been written about the limitations of underlying computer systems, and 3D peripherals but there is a fundamental need for more powerful and flexible software upon which to build this new generation interface. This study compares a virtual hand controller (magnetic sensor attached to a glove) with a physical displacement stick in a single-axis manual control task. Three different control/display (C/D) ratios were used with each controller. Control performance was found to vary significantly with C/D ratio. When across-device comparisons were made at identical C/D ratios, a slight but significant performance advantage was found for the displacement stick at one C/D level. When between-device comparisons were made on the basis of a performance matching technique, the results were comparable for the virtual and physical hand controllers. The issue of how to best match test conditions to achieve an unbiased comparison of control devices is addressed. Arguments are advanced in favor of using the performance based matching technique. From this perspective, the data are interpreted to support the claim that comparable manual control performance can be achieved with a virtual hand controller. Author

OBSERVER is an instrument for obtaining data about where a subject is looking on fixed user specified surfaces. Since the processing of data takes place in real time, this instrument can be used to indicate areas of interest just by looking at them. In this paper, after an introduction on the application of point-of-gaze (POG) data, the OBSERVER system is described. Attention is given to subsystems as well as to calibration. As the first application of OBSERVER, that of a measuring instrument, an 'eye-witness quality experiment' is discussed. Author

OPERATOR GAZE POSITION CONTROL INTERFACES: INVESTIGATION OF PSYCHOPHYSICAL AND OPERATIONAL PARAMETERS
DAVE M. STAMPE, EYAL M. REINGOLD, and JULIUS J. GRODSKI *In* AGARD, Virtual Interfaces: Research and Applications 9 p (SEE N94-37261 12-53) May 1994
(AGARD-CP-541) Copyright Avail: CASI HC A02/MF A02

Real-time monitoring of an operator's gaze position on a computer display of response options may form an important element of future computer interfaces and teleoperation control systems. In one implementation, the gaze position can serve as a pointer, and a critical length of gaze serves as selection, leaving the operator's hands free for other tasks. Control tasks such as multiple option selection, or looking for targets embedded within a picture are especially suited to selection by gaze position monitoring, since the search usually terminates on the object to be selected. More complex control functions can be implemented through multilevel 'menus' of choices. In the past, gaze monitoring systems restricted operator movement or required head restraints. The newest generation of gaze tracking systems allow free head movement and accurate gaze position monitoring over extended periods and are highly suited for control applications. Although gaze position control systems have been tried with moderate success in the past, little systematic investigation of the human parameters of gaze position control has been performed. In the present research program, important parameters of gaze selection such as fixation position accuracy, selection error rates, and the effects of real-time gaze position feedback were investigated. Experimental results will be used to suggest guidelines for creation and use of gaze position response in control interfaces. Author

GAZE ORIENTATION UNDER G(Z)-LOAD. METHODOLOGICAL ASPECTS: PRELIMINARY RESULTS [ORIENTATION DU REGARD SOUS FACTEUR DE CHARGE. ASPECTS METHODOLOGIQUES: RESULTATS PRELIMINAIRES]
PATRICK B. SANDOR, ISABELLE HORTOLLAND, FREDERIC POUX, and ALAIN LEGER *In* AGARD, Virtual Interfaces: Research and Applications 7 p (SEE N94-37261 12-53) May 1994 In FRENCH
(AGARD-CP-541) Copyright Avail: CASI HC A02/MF A02

Gaze in head-free condition was computed under G(sub z)-load. Eye movements were measured with an oculometer using the pupil-to-corneal reflex method. Head movements were measured with an electro-optic system. The subject's head was at the center of a hemisphere (diameter 1.80 m). The internal face of this hemisphere was forming a screen on which a laser spot was to be projected. The subject's line-of-sight was computed, i.e. the direction of the eyeball in the head frame, which is mobile relative to the space. A procedure of correction of the parallax error allowed the determination of the point-of-gaze, which is the intersection point of the LDV with the screen. After static validation, two pilot experiments were performed under low G(sub z)-load. Results showed feasibility of the method in the experimental environment, and pursuit errors were quantified. Improvements are proposed. Author

This paper is an account of an investigation of the performance of various position measuring devices which use low frequency AC or pulsed DC magnetic fields. They are used in many applications in computer graphics, and now for virtual reality, where it is necessary to estimate the observer's direction of gaze. As part of the Sowerby Research Center's program of eye movement research one such system is being integrated with a video based eye-tracker. There seems to be no independent, published assessment covering all aspects of all the systems which are of interest to this research program. This paper aims to fill that gap: it includes information relating to the static performance of two measuring systems: the 3-Space Polhemus Tracker and the Ascension Technologies' 'Bird'. The measurements relate to repeatability, noise, cross-talk, stability, range, and linearity. The influence of metal objects close to the transducers is also investigated. In most respects the 'Bird' sensor was found to be more appropriate for this application. Author

Under normal terrestrial conditions, perception of position and motion is determined by central nervous system integration of concordant and redundant information from multiple sensory channels (somatosensory, vestibular, visual), which collectively yield vertical perceptions. In the acceleration environment experienced by the pilots, the somatosensory and vestibular sensors frequently present false information concerning the direction of gravity. When presented with conflicting sensory information, it is normal for pilots to experience episodes of disorientation. We have developed a tactile interface that obtains vertical roll and pitch information from a gyro-stabilized attitude indicator and maps this information in a one-to-one correspondence onto the torso of the body using a matrix of vibrotactors. This enables the pilot to continuously maintain an awareness of aircraft attitude without reference to visual cues, utilizing a sensory channel that normally operates at the subconscious level. Although initially developed to improve pilot spatial awareness, this device has obvious applications to 1) simulation and training, 2) nonvisual tracking of targets, which can reduce the need for pilots to make head movements in the high-G environment of aerial combat, and 3) orientation in environments with minimal somatosensory cues (e.g., underwater) or gravitational cues (e.g., space). Medical concerns of mechanical loading of biological systems during repeated sustained acceleration exposure of high performance aircraft were expressed during an AGARD conference of 24th-28th April 1989 (AGARD-CP-471) entitled 'Neck Injury in Advanced Military Aircraft Environments'. Biological systems of primary concern were direct effects on the spine causing neurological injury and on the otoliths of the vestibular system causing disorientation related pathologies. In addition, secondary vestibular effects can occur from cervical pathologies. The technical evaluation and overview of that conference expressed concerns that 'large gaps exist in our clinical and biomechanical knowledge of the problems of neck injury in high performance aircraft'. Advisory Report (AR) 317 addresses those concerns with an in-depth review of available pertinent information with recommendations on several courses of action directed towards the spine and vestibular systems. Specific topics covered include: (1) the physical environment of aerial combat maneuvers; (2) anatomy and biomechanics of the spine; (3) G-loading effects on the musculoskeletal system of the spine including risk factors and the prevention of injuries; (4) imaging considerations; (5) high sustained G effects on the vestibular system and methods to test organ dysfunctions; and (6) topical research proposals. Recommendations include: (1) study requirements; (2) aircrew selection training and education; (3) equipment modifications and development; and (4) research requirements. AR 317 contains 215 references. Author (revised)

This paper presents human factors considerations of remote manipulation, sometimes called teleoperation. The paper reviews two broad classes of sensing and display considerations, namely (1) vision and video feedback, and (2) haptic sensing and display, including force and touch feedback from remote manipulators. Next 'telepresence' and virtual environments are discussed in relation to one another. The paper then discusses two broad classes of teleoperator control, namely (1) direct manual control and (2) supervisory control. Finally the paper considers briefly the subjects of cognition and mental models as they relate to remote manipulation. Author (revised)

A study is described that compares the capability of a fuzzy logic controller with a classical controller P+D (proportional plus derivative). The model used for this investigation is the attitude control of a microsatellite launcher, during the first stage of flight. This model has been chosen because it performs on a very unstable plant; the launcher is conceived without stabilization surfaces and only the body is considered as a generator of aerodynamics forces. Movable-nozzle Thrust Vector Control (TVC) will be used as a flight control device. The problem is studied under three degrees of freedom simulation at two levels, software and hardware. The concept formulated in this work is the analysis of the fuzzy rules that perform robust control during the flight. It has been used on perturbations, a wind profile and misalignments in the launcher. The wind model generates a wind velocity vector, which is constant throughout each run. The wind velocity vector is parallel to the surface of the earth. Author

Our goal was to develop a method for detection of man-made targets in infrared (IR) scenes. The application required detection to be independent of the polarity of the image and independent of the rotation. The approach had to be realizable in real time hardware and compatible with size and weight restraints. We made a laboratory demonstration of the detection algorithm using a general purpose image processor. The resultant demonstration showed the capability of detecting targets. Real imagery was used and the results were promising. We made an architectural design to implement the algorithm in hardware, simulated the feasibility of the approach, and made a detailed hardware design. A prototype system was fabricated and tested. In view of ever decreasing budgets, the Aspect Life Cycle Cost (LCC) of a product is gaining in importance. Telefunken Systemtechnik has been working for more than 10 years in the area of Integrated Logistic Support with the aim of minimizing the LCC for new products. TICAMS is one result of this work. TICAMS is a general test system for development, production, and utilization phases. This universal concept automatically provides the practical and theoretical knowledge of each phase while minimizing costs. In doing so, the overall system requirements with regard to the user are supported by TICAMS thus leading to cost minimization in the utilization phase. TICAMS supports the user in conducting maintenance and repair work, optimizes essential tests and diagnosis procedures during the test procedure, and supports the user during each of the work stages by means of a comprehensive user interface and information system. TICAMS uses test strategies specified to the product which is to be tested and maintained, and works with an expert system for optimizing the diagnosis and test. Author

(AGARD-CP-524) Copyright Avail: CASI HC A02/MF A02

Image registration is an important preprocessing step often used in applications, such as automatic target tracking, to decouple image motion from target motion. This paper presents an image registration algorithm designed for a real-time implementation on platforms such as precision guided weapons. The algorithm uses a set of small optimal windows to register successive images from a video sequence. The windows are tracked over time and assessed for their quality in providing a good and persistent registration measure. Areas selected over moving objects are also detected and replaced. The image motion vectors obtained from each window are used to estimate the image motion correction. Evaluation of the performance of the algorithm in critical areas, such as its expected registration accuracy and its tolerance to image deformation caused by rotation, are presented. Results are presented when the algorithm is applied, in conjunction with a motion tracker, to the detection and tracking of targets in video sequences acquired from moving platforms and presenting difficulties of partial occlusion, high background clutter and low target-to-background contrast. The registration algorithm has demonstrated properties of robustness and computational efficiency that are of interest for guided weapons applications. The limitations of the method are also discussed. Author

Digital filters can easily be used to alter signal flows. As long as the desired transfer function of the filter is causal, a great variety of responses is made possible by appropriate choice of filter coefficients. To make use of this property in vibration control, algorithms should automatically change the filter coefficients to meet any given objective. A class of adaptive algorithms which search the gradient of a given performance function is described. In order to illustrate the requirements of adaptive structures, such as structurally conformed design, the feed-forward control environment serves as an example for applying these algorithms. (AGARD-CP-545) Copyright Avail: CASI HC A02/MF A03

The design of the optimal strategy for decision making is intractably difficult when information sources (sensors) provide different amounts of information and have different costs associated with their use. This paper describes a sub-optimal design algorithm which can be further simplified if the user specifies some parts of the decision process to be executed at run-time. The design algorithm is provided with diagnostics so that the result can be compared with accuracy and response time requirements, and a

learning module which enables new information to be incorporated into the knowledge base. The complexity of this algorithm is compared to that of the optimal design algorithm. Author

This paper is presenting a methodology for the integration of an expert system in an embedded real time software running the VRTX operating system. We define the 'Expert Unit' concept and its life cycle referring to a real experimentation. The production of operational embedded expert system becomes a reality because of the use of efficient tools and an original methodology for its integration. This paper is showing how software engineering techniques and methods (Life-Cycle definition, identification of generic configuration items) can help an embedded expert system development to be more efficient and controllable than by using the Boehm's spiral model. This Life-Cycle is compatible with military quality standards (GAM T17 and DOD 2167a). Derived from text

(AGARD-CP-545) Copyright Avail: CASI HC A02/MF A03

Since the early Eighties the Object Oriented approach to software system development was proposed as a possible solution of the so called 'software crisis'. The claimed benefits were that Object Oriented Design (OOD) had the potential to improve software quality by making possible a direct and natural correspondence between the real world and its model. Many variants of the original approach were proposed and the new trend was spread across the Software Engineering community. The 'traditional' functional oriented methods were suddenly considered out of date and not appropriate to support development of large real time systems. There were, of course, some drawbacks but they were always attributed to method immaturity and poor tool support, two self-solving problems as time passed. Ten years or more have gone since then and OOD methods have been widely adopted for the development of large distributed real time systems. Are the lessons learnt from such projects according to the expectations? Are Functional Oriented methods still able to support software projects of the size required by the Aerospace industry in the years leading to the 2000? This paper proposes a possible answer to these questions comparing the pro and cons of both methods. This comparison will be carried out on issues like transition from requirements to design and to Ada code, traceability from requirements to design, software safety, software maintainability, software testing and relationship with DOD-STD-2167. The goal of this article is to sketch a first evaluation after almost four year usage of the Hood methodology in the context of Ada real time software systems. For this purpose, it is made up of four parts: First, we will give a brief outline of Hood methodology. Secondly we quickly sketch out four years of Hood usage. Thirdly, we will summarize the main lessons learned throughout this experience. Fourthly, we will outline some directions useful to follow-up in the future. Author

HOOD represents one of the most interesting approaches of the recent years to support an object oriented SW design for large embedded systems written in Ada. This paper reports about experiences gained by the authors in the context of a current large European avionic development project, where the Ada SW design has been performed using HOOD Version 3.0. A simplified example describes the approach taken in the project for SW architectural design. A critical evaluation of the HOOD method follows, where advantages and disadvantages are discussed and some hints are given to overcome some identified weak areas. The paper concludes with the recognition of HOOD as a promising approach and encourages further discussion to remove the weak areas. Derived from text

SOFTWARE ENGINEERING METHODS IN THE HERMES ON-BOARD SOFTWARE
PHILIPPE LACAN and PAOLO COLANGELI *In* AGARD, Aerospace Software Engineering for Advanced Systems Architectures 12 p (SEE N94-29315 08-61) Nov. 1993

The HERMES On-board Software is executed in a complex multi-processor environment composed of two segregated computers pools. It provides all services to control the trajectory and the attitude of the space plane and its configuration. It also provides aids to the On-board Crew and the Ground Facilities in the Mission and Space Vehicle management. Being highly 'Safety Critical', the attitude control functions are foreseen to be supported by a quad-computers pool in hot redundancy, running in parallel and tightly synchronized. To support 'Mission Critical' functions, as mission and vehicle management, a dual-computers pool in cold redundancy is the baseline. This paper describes how the use of HOOD methodology has been experienced in the HERMES On-board Software Mock-Up framework, from now onwards designated for the sake of brevity as MU. In this technical survey of MU, a number of figures characterizing application size, specification and design complexity of the developed software along with a technical balance of the experienced methods are given. REACTIVE SYSTEM SOFTWARE CONCEPT WITH AUTOMATION USING THE LDS LANGUAGE [CONCEPTION LOGICIELLE DE SYSTEME REACTIF AVEC UNE METHODOLOGIE D'AUTOMATES UTILISANT LE LANGAGE LDS]
J. J. BOSC *In* AGARD, Aerospace Software Engineering for Advanced Systems Architectures 7 p (SEE N94-29315 08-61) Nov. 1993 In FRENCH
(AGARD-CP-545) Copyright Avail: CASI HC A02/MF A03

The phase of conception of a reactive system is the most important step, as the paths that are chosen will only be validated when the software is integrated with the material and when the real time conditions are tested and verified. Thus, a very strict method has to be adopted, which takes into account the specifics of the problems to be solved. The question is to assess how far the LDS language can be taken and what associated coding techniques can be used. Transl. by FLS

Nerviano Plant is mainly involved in the development of complex avionic systems, of which software is essential component, often presenting safety critical features. The traditional techniques and methods imposed to support them with additional refinement tools to build the product safety during developing phases are inadequate. The paper describes a methodological approach for the systematic identification and classification of the effects caused by potential software failures. The potential software failures are identified evaluating the effects that would be produced by incorrect outputs on the other software parts and on the external environment. Furthermore, the proposed approach allows us to evaluate the necessity of introducing fault tolerance, recovery and backup procedures, and to define the adequate quantity and typology of testing and quality activities. (AGARD-CP-545) Copyright Avail: CASI HC A02/MF A03

This paper highlights the technology recently developed or under development in the US Air Force's Rome Laboratory Software Engineering Technology Branch. This program is generic in nature and is focused around the development and support of large, mission critical and embedded software systems, and thus, is very relevant to the development and support of avionics systems. Further, when a technology is programming language sensitive or a demonstration vehicle requires selection of a specific language, the program language selected is always Ada. Finally, this program has four major thrusts. One thrust emphasizes system definition technology and is concerned with development and validation of requirements and specifications. A second thrust explores and builds technology for integrated software and system engineering environments, with emphasis on tools, process support and enforcement, and support to development and acquisition managers. New explorations in this area include certification methodologies and tools for reusable software components, and software fault-tolerance (robustness). A third thrust deals with the specification, prediction, and assessment of software quality. Rome Lab has a framework for dealing with all aspects of software quality that has proven itself in Japan. The newest thrust is on software engineering for high performance computing. This unique program is evaluating and developing generic software methods and tools for using high performance, massively parallel computers in embedded and other mission critical applications.

The experiences of an aerospace company in solving specific problems associated with the host testing of embedded software is described. Operational applicability and exploitation of off-the-shelf tools, solutions for the management of both process and testing information, and the impact of the possible use of formal methods for the automatic generation of test cases are investigated and assessed from the user's point of view. The driving topics are the analysis of the effects of the assessed solutions on the current working practices together with their transfer to operational divisions. Author (revised)

The ability to accurately test a system is a highly desirable feature in the engineering design process. The ability to model your system's environment and to exercise your system, in that environment, is also highly desirable. Operational Flight Programs are the software programs of avionics embedded computer systems. Not only is it desirable to be able to test and model Operational Flight Programs, it is essential. The consequences of not performing accurate Operational Flight Program testing can be devastating. Some of these include premature weapons release, erroneous flight instrument displays, and complete system failure. In order to test Operational Flight Programs, there are several things one must know about the Operational Flight Program, its weapons system host, its support environment, and how to generate and perform its test. This paper will address these issues as it develops a strategy to test an Operational Flight Program.

Embedded software providing the functionality for a flight vehicle self destruct system was judged to be safety critical and required the highest level of assurance in its correctness. In order to achieve this a program of independent verification and validation was initiated which involved the definition of a formal specification of the software combined with static analysis and dynamic testing. The formal specification, written in an Object Oriented form of Z, was used to clarify the requirements and to provide a definition against which the code could be formally verified. A range of static analyses were performed culminating in Compliance analysis which effectively provided a proof of the code against low level mathematical specifications that were refined down from the Z specification. The dynamic test sets were chosen partly from the requirements specification and partly from the static analysis results so that complete path coverage through every module was achieved. The work revealed a number of errors within the code and its specifications, which were corrected. Through its rigor and the identification of errors, the analysis has given a very high degree of confidence in the correctness of the software.

A new approach is presented to the through-life support and evolution of software-intensive systems. The new approach involves a sequence of development contractors. The problems addressed have to do with the avoidance of a 'through-life dependency' on any of the development contractors, and of achieving a unified engineering system description without imposing undue restrictions on the use of evolving software methodologies. The UNICON approach is to vest the through-life continuity in a unified engineering description held in a new type of Project Support Database. This scheme now views the development contractors as having a 'jobbing' role. The technical feasibility of this approach was held to depend on achieving a much more complete engineering description--from the Statement of Requirement, through to the mapping of the software onto the hardware (variants)--than any yet available. This led to the development of the UNICON system description language, based on extensions to the familiar ENTITY/RELATION/ATTRIBUTE notation. Details are presented of a reverse engineering experiment.

A GENERALIZATION OF THE SOFTWARE ENGINEERING MATURITY MODEL
KARL G. BRAMMER and JAMES H. BRILL *In* AGARD, Aerospace Software Engineering for Advanced Systems Architectures 9 p (SEE N94-29315 08-61) Nov. 1993
(AGARD-CP-545) Copyright Avail: CASI HC A02/MF A03

The software process consists of the methods, practices, and tools used to generate a software product. The Software Engineering Institute at Carnegie Mellon University has developed a capability maturity model (CMM) which defines five levels of maturity for the software process. Also included are sets of criteria that allow the specific assessment of actual software engineering maturity in given projects or organizations. In aerospace projects, software engineering very often is coupled with or embedded in systems engineering. It is therefore desirable to know if and how the CMM can be extended to systems engineering. The paper shows that this approach is feasible. After a brief summary of the original capability maturity model, an overview and comparison of software and systems engineering disciplines is provided. Differences between software and systems engineering are highlighted and modifications are proposed to adapt and generalize the CMM accordingly. Finally, the framework for a systems engineering maturity model is presented. This model is intended as a reference scale for systems engineering capability, in a similar way as the CMM applies to the software process.

THE DISCIPLINE OF DEFINING THE SOFTWARE PRODUCT
JOHN K. BERGEY *In* AGARD, Aerospace Software Engineering for Advanced Systems Architectures 13 p (SEE N94-29315 08-61) Nov. 1993
(AGARD-CP-545) Copyright Avail: CASI HC A03/MF A03

An initiative was undertaken to establish a de facto project standard for a 'software product' for mission critical computer resources (MCCR). This effort is an outgrowth of a risk reduction approach to improving the MCCR software development and acquisition process based on Deming's quality principles. While defining a 'software product' might appear to be rudimentary, the hypothesis is put forth that the software product itself, which has been inexplicably neglected by the software engineering community, is the key element and focal point for understanding and improving the software development and acquisition process. A model of a 'software product' is described that was developed to promote uniform software product nomenclature, serve as a reference point for software process improvement, provide a basis for developing a more cost-effective software documentation standard, and provide a more rigorous means of specifying software deliverables for MCCR. Other potential benefits of the software product model include providing a convenient and effective means to uniformly baseline diverse software products, establish software configuration management and control, ensure the capture of all software components required for regeneration, provide a natural mechanism for the collection of software product metrics, and facilitate the on-line sharing and reuse of software programs, documents, and data. The software product model that has been developed is referred to as SPORE, which stands for software product organization and enumeration. SPORE is a graphical, hierarchical model that provides a complete and logical decomposition and description of a software product for MCCR.

The studies conducted within the MODULOR project were centered on the necessary specifications for the creation of a modular parallel machine whose dynamics could be reconfigured. The software tools needed for reconfiguration during the development of parallel applications were also studied. The functional architectural reconfiguration was first considered, in view of automatically adapting the interconnective topology as efficiently as possible for a given application. Adding reconfiguration capabilities to the interconnective systems, in order to ensure a tolerance of the parallel architecture against processing systems failure, was treated in the second part of the study. The studies stress the importance of the complementary reconfiguring systems ('functional' and 'in case of failure') and define the architecture which guarantees the maximum efficiency in real time communications, in spite of the failure of some of the components of the system. AIMS is a European industrial research project which focuses on the process for the development and maintenance of embedded computing systems which are an integral part of high technology aerospace products. It is a user driven project which uses a problem oriented approach to solve the difficulties encountered in the production of such systems. The relevance of the proposed solutions to the problems is ensured by involving aerospace engineers, who work on the development and maintenance of embedded systems. This involvement ensures that new technologies, or improved practices, can be rapidly introduced into operational projects. Author (revised)

An object-based environment for implementing distributed systems is described. This can be used to create worlds of interacting objects, operating over a network of processors. The precise manner of the distribution is transparent to the objects within the environment. A prototype of this environment is being implemented in Ada, augmented by support for object-oriented constructs. This is intended for use in real-time simulations of combat missions and will be known as Multi-sim. Author

The fuzzy logic theory is used to derive knowledge combination rules for heuristic search algorithms and data fusion problems. Heuristic search algorithms are especially designed for expert systems which have to explore a large solution space in a limited amount of time. Therefore, search algorithms using heuristic knowledge are designed to limit the exploration of the solution space while preserving some quality in the results. An automatic target recognition expert system was designed using this approach. However, the fuzzy logic approach could be applied to other types of expert systems and to data fusion problems. HIGH ACCURACY CONTROL ALGORITHM APPLICATION TO A TRACKING TURRET
P. NICODEME and P. POULAIN *In* AGARD, Pointing and Tracking Systems 11 p (SEE N94-36616 12-18) May 1994
(AGARD-CP-539) Copyright Avail: CASI HC A03/MF A02

The aim of the application described in this paper is to provide high accuracy control to a servomotor driven tracking turret. The system principles and requirements (target tracking and pointing capabilities for static and dynamic working) are presented. Then, the functional structure of the servos system to be controlled is explained: (1) mechanical system; (2) motor and electronics; and (3) digital computer for servo loops. The steps of the study to obtain robust, 'modern' and accurate control laws are detailed: (1) mechanical modelization for computer simulation; (2) motor and electronic representation; (3) simplified linear transfers identification (methods to obtain linear transfer; results for this particular application); and (4) design of high capability controllers. For this servo application, two 'new control methods' are presented for various hardware configuration of the turret (with or without a mechanical structure damping system such as a tachometer loop): (1) 'Model Based Predictive Control' with the 'Predictive Functional Control' method and the associated computer aided design tool; and (2) H-infinity controllers and the CAD tool. The basic principles of the two methods are explained and the way to obtain control laws are presented. Then, some simulation results obtained with these control laws for various pointing scenarios are discussed: (1) fixed or low speed target; (2) dynamic capability (gathering from an initial position to the turret, high speed passing target); and (3) stability and robustness (disturbance robustness, mechanical characteristic variation). The constraints and advantages of the various control laws are compared and discussed. Then, some trial results are summarized in a brief description. As a conclusion of the paper, the compliance of the results obtained by these methods with high accuracy requirements for pointing and tracking systems is discussed. Author (revised)

(AGARD-CP-541) Copyright Avail: CASI HC A02/MF A02

Many interface systems require generation of 3D graphics, whether as the entire display in virtual reality systems or as an overlay on live video in teleoperation. Costs must be kept low to make such systems practical, but real-time response speed must not be sacrificed. Described here is a very low-cost rendering and VR support package for 386 and 486 PC's, which requires no added hardware to achieve real-time drawing rates (20 to 60 frames per second). It includes integral support for generation and display of stereoscopic graphics in many formats, including field-alternate displays using LCD shutter glasses, and wide-angle head mounted displays. Many common PC interface devices are supported, including mouse, joystick, 6D pointing devices, and head trackers. Inexpensive PC multimedia cards allow output to be recorded on a VCR, or overlaid onto live video, including stereoscopic TV images from teleoperated remote cameras. Full source code is available, allowing the software to be customized for any application.

As more and more capabilities are added to avionics and other real-time or embedded systems, it becomes necessary to increase the processing power of the underlying executors. At any point, technology imposes limits on the available performance of individual processors. Increasing the computing power beyond those limits requires the use of multiple processors. This paper presents an implementation of a multiprocessor multitasking real-time operating system on difficult architectures. The development of applications on this operating system does not require any special software development tools such as special compilers. Furthermore, the applications can be ported to a very wide range of multiprocessor architectures. The principles of operation of the operating system can be applied to the implementation of an Ada runtime environment, if some restrictions are observed. Author (revised)

Autonomous analysis of complex image data is a critical technology in today's world of expanding automation. The growth of this critical field is slowed by problems in traditional image analysis methods. Traditional methods lack the speed, generality, and robustness that many modern image analysis problems require. While neural networks promise to improve traditional techniques, homogeneous neural network systems have difficulty performing all the diverse analysis required of an autonomous system. Proposed here is a dual-staged, heterogeneous neural network approach to image analysis; specifically, a way to solve the cuing problem. Author

Human perceptual capabilities involve the extraction of task-oriented information from environmental stimuli through physical sensing and the use of background knowledge. There are many activities underway aimed at providing similar capabilities of artificial machine perception. Some success is achieved by exploiting what is known of corresponding human cognitive processes and by making use of the increasing power of information processing techniques. For this purpose, the recognition of sharply contrasted as well as fuzzy patterns (stationary or dynamically changing) plays an important role along with other aspects of processing of complex information structures. This lecture series covers the following subjects: pattern recognition techniques; real time visual machine perception, principles and applications in guidance and control (G&C); and real time speech recognition and understanding in the G&C domain. For individual titles, see N93-13239 through N93-13245.

(AGARD-LS-185) Copyright Avail: CASI HC A03/MF A03

Automatic recognition and understanding of speech signals is one of the key issues of advanced information technology. Language and speech are the relevant topics of cognition and therefore to understand spoken and written language offers basic capabilities for universal processing of information. Speech is man's generic communication medium. Information transfer is widely done by speech communication between humans. There is a basic commonality of understanding each other's spoken messages. This common understanding must be the basis of machine understanding too. Automatic recognition and understanding of spoken language is done in a multistep approach, which starts with the low level signal processing. The output of the recognition step is word recognition. Many possible words, the so called word hypotheses are the basis for intensive linguistic processing. Linguistic processing includes syntactic analysis and semantic analysis. The semantic analysis needs, again, many additional parameters from spoken language, like intonation and prosody to derive the meaning of a spoken phrase. All the processing of natural speech is narrowly related to human information processing. It is therefore possible to learn much from our human processing or from models of this processing. On the other side, statistical methods of information processing offer rather systematic and in many cases advanced methods for handling much of the information contained in speech using purely statistical approaches. To estimate the advantages of the more statistical approaches or more rule based approaches will be a great challenge for future research. Human perception will always be a guide for how to process speech with machines. Author

(AGARD-LS-185) Copyright Avail: CASI HC A03/MF A03

Robotics is where artificial intelligence meets the physical world. Computer vision provides robots with the perceptual capabilities which are especially critical for robots that operate in an unconstrained natural environment. In computer vision, recovery of 3D shape and motion is the key to understanding scenes. Thus, the problem has attracted much of the attention of vision researchers over the last decade, and many sophisticated algorithms have been developed. I address three recently developed methods for sensing and interpreting 3D shape and motion: the factorization method for image sequence analysis; very fast range imaging by analog VLSI smart chip; and the multi-baseline stereo method. It is interesting to note that while the performance of these methods has exceeded that of previous methods, the algorithms, themselves are simpler and more straightforward. In addition to enhanced performance, these algorithms are suitable for real-time parallel implementation by special hardware or VLSI. A detailed description of these methods is presented. Author

The task of having computers able to understand their environments through direct imaging has proved to be formidable. With its beginnings about 30 years ago, the field of computer vision has grown as a major part of the pursuit for artificial intelligence. Most elements of this pursuit - language understanding, reasoning and planning, speech - are very difficult challenges, but vision, with its high dimensionality of space, time, scale, color, dynamics, and so forth, may be the most challenging. Early attempts to develop computer vision focused on restricted situations in which it was feasible to provide the computer with fairly complete descriptions of what it would encounter. In such cases, single images provided the sensory information for analysis. As the domains of application grew, the requirements for more competent descriptions of the world increased. Dealing with three-dimensional (3D) dynamic structures (the real world) from 3D dynamic platforms (we humans) calls for greater capabilities on both the analysis and synthesis sides of the issue. The analysis side is the processing of sensory data for such tasks as recognition and navigation, and a number of techniques are discussed here for dealing with these two-, three-, and higher-dimensional data. The synthesis side is the construction of 'internal' descriptions of what is seen in the environment - constructed now so that they may be used subsequently for the above tasks. This latter issue is the underlying theme we pose in this paper - developing representations from vision that will later enable effective automated operations in our 3D dynamic environments. Author

A smart retina is a device which intimately associates an optoelectronic layer with processing facilities. The rapprochement between acquisition and processing is particularly suited for the emergence of novel kinds of interaction, between analog and digital massive computations. Therefore, several attempts of analog, possibly neural, computations linked to the vision process are listed and discussed. But analog is not enough for really smartening retinas. Then, an additional plausible coat of cellular boolean iterative processing in these 'human size' vision machines is described, and commented on through examples. Author

The aim of this lecture is to investigate how much visual sensors may be effective in supporting autonomous navigation of mobile robots. Although in practical realizations, with robustness and reliability constraints, it is always necessary to integrate multi-sensor modalities, the discussion here is limited to an analysis of computer vision advantages and disadvantages, with particular attention given to: (1) a binocular stereo vision module for obstacle detection, with no precise calibration (reactive process to operate at a fast rate, from 5 to 10 Hz); trinocular stereovision based on segment primitives for the reconstruction of free space for navigation, in which case an acccurate calibration procedure is requested; and landmark detection for self-positioning and orientation of a mobile vehicle, using perspective invariants, for indoor navigation. Some comments are also provided on computer vision architectures to support real time implementations. A real-time front end vision subsystem is described, which is able to compute 3D segment based stereovision at 5 Hz and segment token tracking at 10 Hz. Finally, some demo arrangements are briefly discussed where an intense experimentation of such results is in progress, as a test bed for different industrial applications. Author

A paradigm for machine perception is presented which takes time and 3D space in an integrated manner as the underlying framework for internal representation of the sensorially observed outside world. This world is considered to consist of material and mental processes evolving over time. The concept of state and control variables developed in the natural sciences and engineering over the last three centuries is exploited to find a new, more natural access to dynamic real-time vision and intelligence. Schopenhauer's conjecture of 'The world as evolving process and internal representation' (1819) is combined with modern recursive estimation techniques (Kalman 60) and some components from geometry and AI in order to arrive at a very efficient scheme for autonomous robotic agents dealing with evolving processes in the real world in real time. Application to autonomous mobile robots is discussed. Author

Imaging sensors are powerful tools enabling remote control, by tele-operation, of numerous tasks where the operator requires an appreciation of the three-dimensional structure of the viewed scene. Passive video sensors also lend themselves to tasks where covert operation or electromagnetic compatibility is required. A commonly mooted tele-operational task is that of driving a known vehicle through an unknown terrain - or keeping station on a known object moving through an unknown terrain. The computer vision aspects of automating this task are divided into two separate vision functions, which are the subjects of this paper: (1) analysis of image sequences of a general scene to extract its three dimensional (3D) structure without any prior information; and (2) analysis of images of a well defined object, to extract its 3D position and orientation relative to the sensor. For both these functions, the paper provides a brief introduction to possible techniques followed by further descriptions of particular systems, DROID and RAPiD, developed by Roke Manor Research Limited. DROID is a general, feature-based 3D vision system using the structure-from-motion principle. That is, it uses the apparent image-plane movement of localized features viewed by a moving sensor to extract the three-dimensional structure of the scene. RAPiD is a model-based real-time tracker which extracts the position (X,Y,Z) and orientation (roll, pitch, yaw) of a known object from image data. The system operates iteratively, using prediction of object pose (position and orientation) to cue the search for selected edge features in subsequent imagery. This approach results in minimal processing of image pixels, so that the system can be implemented at full video rate using modest hardware. Author

The Missile-Borne Integrated Neural Network Demonstration (MINND) Program is a Navy 6.3A Advanced Technology

Demonstration program, with the goal of demonstrating the application of artificial neural network technology to improving the performance of IR seekers. The specific technical objective is to demonstrate the realtime detection of moving point targets in IR clutter. The program has developed neural network-based system design in several stages of increasing capability for moving target detection. The program has developed several stages of hardware, supporting neural chip testing/learning, followed by realtime processing hardware for implementation of software designs. MINND is currently in its final phase of integrated demonstration testing using real sensor inputs. Author

(AGARD-LS-191) Copyright Avail: CASI HC A03/MF A02

Quantitative Feedback Theory (QFT) has achieved the status as a powerful design technique for the achievement of assigned performance tolerances over specified ranges of plant parameter uncertainties without and with control effector failures. It is a frequency domain design technique utilizing the Nichols chart (NC) to achieve a desired robust design over the specified region of plant parameter uncertainty. An introduction to QFT analog and discrete design techniques is presented for both multiple-input single-output (MISO) and multiple-input multiple-output (MIMO) control systems. QFT computer aided design (CAD) packages are readily available to expedite the design process. The purposes of these lectures are: (1) to provide a basic understanding of QFT, (2) to provide the minimum amount of mathematics necessary to achieve this understanding, (3) to discuss the basic design steps, and (4) to present two practical examples. (AGARD-CP-539) Copyright Avail: CASI HC A02/MF A02

Mobile robots operating autonomously have to perceive their environment; many advantages favor using a vision sensor. The concept of dynamic vision is an adequate solution to this problem. The ability to track moving objects is essential. Therefore, a two axis camera platform is described having several modes of operation, which can be mounted on a mobile robot. An active vision system is presented, including the design of the pan-tilt head and the controller. Problems arising due to image processing delays, robots' own motion and platform actuator disturbances, e.g. friction, are treated. An aircraft application for vision based autonomous landing is given. Author

To ensure the capability of defense, a demand for equipment and systems which can be embraced under the title of 'Robotics' will emerge in the near future. In this context, 'Robotics' represents a specific problem area involving all the guidance and control functions which are associated with achieving goal-oriented autonomous behavior in structured and unstructured environments for mobile and manipulator systems as applied to ground, sea, air, and space operations. Related robotic systems must combine constituent functions such as intelligent decision making, control, manipulation, motion, sensing, and communication. The scope of the special course will cover new developments in the areas of autonomous navigation for planetary and surface systems, and control and operations of remote manipulators. For individual titles, see N95-14943 through N95-14949.

In the same way that the launch of Yuri Gagarin in April 1961 announced the beginning of human space flight, last year's flight of the German ROTEX robot flight experiment is heralding the start of a new era of space robotics. After a gap of twelve years since the introduction of a new capability in space remote manipulation, ROTEX is the first of at least ten new robotic systems and experiments which will fly before the year 2000. As a result of redefining the development approach for space robotic systems, and capitalizing on opportunities associated with the assembly and maintenance of the space station, the space robotics community is preparing a whole new generation of operational robotic capabilities. Expanding on the capabilities of earlier manipulation systems such as the Viking and Surveyor soil scoops, the Russian Lunakhods, and the Shuttle Remote Manipulator System (RMS), these new space robots will augment astronaut on-orbit capabilities and extend virtual human presence to lunar and planetary surfaces. A robotics system is composed of a hardware platform which provides the stability, mobility, and manual dexterity and a software system which acts to interpret the input sensor data and the mission statement and then to create the required excitation to the hardware. Stated in this rather simplistic way, there seems to be little reason for the vast array of laboratories feverishly working on the creation of fully autonomous robots. The overall task and its components, however, has proven of intricate complexity, with succeeding layers of hidden problems becoming exposed just as a solution appears imminent. This paper is concerned only with the software components of a robotics system, and in particular with that portion of the system which comes under the general description of intelligent software. It is a 'stand-off' approach derived from a software engineer's point of view. The intent is to review, from a particular and perhaps novel point of view, the various software paradigms and their intrinsic capabilities and functionalities. This review provides the basis for a detailed map of the current capabilities of software paradigms onto the guidance and control problems of intelligent robotics systems. The paper is partitioned into two parts: Machine Intelligence as a Robotics

Component, and Expectations and Projections. In the first, a perspective of intelligent software is presented which provides the basis for considering guidance and control problems. In the second part, the utility of this perspective is demonstrated by exploring a generic guidance and control architecture. The paper ends by suggesting some approaches for future directions in developments in this field. Author

Robotics systems are beginning to emerge as an effective alternative to humans for tasks that are either hazardous or routine and repetitive. Remotely operated manipulation systems have been accepted and widely used for the past ten to twenty years in two terrestrial applications: underwater exploration, servicing, and repair and handling of hazardous materials in the nuclear industry. Technology advances have enabled new, broad space and terrestrial applications for remotely operated manipulation systems. However, in order to promulgate robotic systems further in the terrestrial work place, elements of these systems must have requirements traceable to operations with humans nearby, or manipulation of delicate objects. A representative space-system manipulator will be used to provide an illustrative example of the evolution of remotely operated manipulation systems. The manipulator is initially intended to provide the astronauts a tool to perform routine tasks such as inspection, worksite preparation/teardown, or routine servicing and maintenance, thereby improving the astronauts' efficiency during EVA's. Emphasis is placed on the system-level requirements and design drivers. Technology advances that enable new applications, and impediments to using robotics, will also be discussed. Control techniques and the operator interface developed for this manipulator could be commercially demonstrated in an underwater servicing exercise - providing the link to the remotely operated manipulation system that are the subject of this lecture. As manned space flight passes into its fourth decade, many of the activities in space appear to be almost routine. However, the space environment is exceedingly hostile to humans and necessitates substantial effort and funding to provide an infrastructure to support human life. Increased attention is therefore being directed toward the application of robotics technology to more effectively carry out tasks in space which, up to now, have been carried out by human extravehicular activity (EVA), or which could not be carried out because of human limitations or limitations of available equipment. Manipulator systems are better suited to operation in the external space environment and can augment or replace the human presence. They can also play an important role in the spacecraft intravehicular activity (IVA) to replace some of the human tasks. To date few robots have been developed for space applications; however, as human activity increases in earth orbit and beyond, robotic systems will play an increasingly vital role. Control and operation of space manipulator systems are addressed with emphasis on those designed for the external space environment. Applications of the technology are discussed in the context of the Mobile Servicing System (MSS) being developed for the International Space Station. The Mobile Servicing System incorporates two manipulator systems, the Space Station Remote Manipulator System (SSRMS) and the Special Purpose Dexterous Manipulator (SPDM). The modes of operation and selectable control features are discussed with some of the more advanced features demonstrated by simulation and laboratory test results. Author

A method, based on the finite element technique, is proposed in order to study the behavior of an adhesive single lap joint, together with stochastic material properties, taking into account the uncertainties of design parameters. The technique is applicable to linear and nonlinear problems, with more or less complicated structures. The needs are experimental determination of the components properties and numerical tools. Inexpensive computing power has made computer-intensive methods, such as Monte Carlo simulation, available to a wide range of engineering problems, including risk assessments for structural components. Because well-designed structures have low probabilities of failure during their service lifetimes, it has become increasingly helpful to simulate the behavior of these unlikely events, so as to quantify the risk of failure. This paper considers the behavior of the 'tails' of the statistical distributions chosen to describe the behavior of life-controlling variables and their influence on the estimation of aggregate risk. It may seem obvious that the form of the probability distributions will necessarily have a profound influence on the resulting estimated probabilities of failure. What is perhaps less obvious are the subtle differences among candidate distributions in the range where most defining data will necessarily be obtained, namely between their fifth and ninety-fifth percentiles. We examine and compare several commonly used distributions: normal, log-normal 2- and 3-parameter Weibull, and Beta. Also considered here is the often used, but less often understood, concept of confidence associated with a probability of failure. Because it relies on knowing which one of several potential underlying probability distributions actually governs the observed behavior, it can result in a meaningless estimate of 'confidence', and thus presents the potential for a false sense of security.

The Gulf Air War started for Royal Air Force Tornado GR1 aircraft with the delivery of JP 233 weapons from low level at night. After sustaining unacceptable losses at low level, tactics changed to delivery of freefall 1000 lb bombs from medium level, at first by night and then by day. Accuracies, however, improved dramatically with the arrival in theatre of precision guided munitions. Described here is a typical mission covering all aspects from initial tasking by ATO, through mission planning and coordination with intelligence input to deconfliction and mission execution. Missions were flown as co-ordinated packages, Tornado GR1's being supported by F15C fighter escorts with EW support from F4G 'Wild Weasels' and EF111 'Raven' aircraft. Mission planning by the Royal Air Force was manpower intensive and could have been streamlined with the availability of more automated systems. Several lessons were learned from the conflict, which are listed and discussed. Author

Airborne or Ground-Based Pilot Mission Planning is a single important link in the chain of activities that is required to facilitate operating airpower from an airbase. Other elements of that chain include Target Recce and Allocation and Sortie Generation. It turns out that information management problems associated with intelligence generation, also apply to effectively controlling Sortie Generation, both to make most efficient use of scarce resources and to generate an organization that is able to benefit from Pilot Mission Planning improvements. An obvious solution to improving an information management problem is designing a Command, Control Communications and Information System (C3IS). To improve design and development of these C3I systems, it is proposed to combine the design of those systems and the use of Battle Management Training Systems. Developing operational and training systems together has possibilities to increase user involvement and acceptance and incorporate studies towards not only just fielding a C3I system, but looking at the most effective combination of System and Organization. As a case, the design of the Airbase Operations Wargame for the Royal Netherlands Airforce is presented and some conclusions are drawn regarding the possible use of this system in designing C3I systems such as the Airbase Command and Control Information System ABCCIS. Paladin is a real-time tactical decision generator for air combat engagements. Paladin uses specialized knowledge-based systems and other Artificial Intelligence (AI) programming techniques to address the modern air combat environment and agile aircraft in a clear and concise manner. Paladin is designed to provide insight into both the tactical benefits and the costs of enhanced agility. The system was developed using the Lisp programming language on a specialized AI workstation. Paladin utilizes a set of air combat rules, an active throttle controller, and a situation assessment module that have been implemented as a set of highly specialized knowledge-based systems. The situation assessment module was developed to determine the tactical mode of operation (aggressive, defensive, neutral, evasive, or disengagement) used by Paladin at each decision point in the air combat engagement. Paladin uses the situation assessment module; the situationally dependent modes of operation to more accurately represent the complex decision-making process of human pilots. This allows Paladin to adapt its tactics to the current situation and improves system performance. Discussed here are the details of Paladin's situation assessment and modes of operation. The results of simulation testing showing the error introduced into the situation assessment module due to estimation errors in positional and geometric data for the opponent aircraft are presented. Implementation issues for real-time performance are discussed and several solutions are presented, including Paladin's use of an inference engine designed for real-time execution. Author

Advances in automation and control/display technology have enabled design effort to focus on how aircrew system interfaces can be created to help perform the mission and to help solve mission problems. Evidence of this development towards a concept of aiding the pilot, rather than replacing pilot functions, comes from recent systems proposed for both ground and airborne mission control and management. Interface design solutions for aircrew systems problems usually evolve pragmatically, based on considerations of convenience, availability, utility, familiarity and operator acceptance. Currently, there is no substantial theory of the pilot-aiding concept. In the absence of a theoretical basis, pilot-aiding interfaces for mission control and management will lack theoretical consistency and they will be without any formal, systematic procedures for establishing design criteria, goals and objectives. Some of the consequences of this will be sub-optimal utilization of system function, loss of situational awareness, a low level of pilot trust, and failure to reduce pilot workload. In order to address the requirements for a theory of the pilot-aiding concept, we propose a model based on the principles of teamwork, where the human and 'electronic' crew components work co-operatively towards achieving mission objectives. Characteristics of the model are incorporated into a prototype tool for auditing the quality of interface design solutions with respect to teamwork criteria. Teamwork audits are reported for several aircrew systems, including pilot aids for mission control and management, in order to test the validity of the model, and to establish its sensitivity and diagnostic power. Conclusions are drawn about interface design

requirements affecting pilot-aiding and mission performance. Author

The USAF Electronics System Division (ESD) is currently developing a common air mission planner in a phased program for multiple aircraft and weapons. It is called Air Force Mission Support System (AFMSS) and will be used by the Strategic Air Command, Tactical Air Forces, Military Airlift Command, and Special Operations Forces of the United States. Discussed are the common elements that constitute the core of that mission planning system, as well as the accommodation of unique elements for each different aircraft. The open system architecture concept is established, and the technology trends and standards that drive the architecture are defined. Performance issues are discussed, and the Common Mapping System is presented. Finally, future challenges in mission planning systems are discussed. Author

In order for sound and timely decisions to be made, commanders and staffs require a continuous source of information about the tactical situation they are facing. Unmanned Air Vehicle (UAV) technology offers a potential solution to augment a commander's surveillance resources. UAV's offer the land force commander the possibility of conducting wide range surveillance and target acquisition in near real time. UAV's will extend the range of observed fire to the limits of available weapons. Maritime forces could employ UAV's from or in support of small ships to augment manned aircraft. Examined here are the requirements for UAV's to support both land and marine operations. The characteristics and concepts of employment which make UAV's desirable for military applications are discussed. Author

Air combat planning has always proven very difficult because of the dynamic environment, intelligent adversaries, group operations, and the incomplete nature of any information. Two approaches, those of 'expert systems' and classical adversary search are presented and compared. Searching is then described and developed in detail. The implications of such an approach are considered for the future of air combat. Derived from text

In the next century, combat aircraft will be even more complex than those planned as current replacements; this is to counter increasingly competent aggressors, who may operate anywhere in the world. This paper covers the integration of a mission management aid (MMA) into future combat aircraft, its operation, the core topics of Sensor Fusion, Situation Assessment (including Dynamic Threat Assessment), Planning and Tactical Routing (with Defense/Attack Options Management). Evaluation of the MMA is showing that better situation awareness is obtained, increasing mission effectiveness and survivability, and that overall the MMA is a vital integral system for future aviation. The complexity of modern military simulations poses a formidable debriefing task. A study was therefore conducted to demonstrate feasibility of an evaluation aid system for close air-to-air combat analysis. This analysis is based on a new concept of Time Interval Characterization (TIC). This concept is an extension of the method of breaking down a combat sequence into individual maneuvers. The TIC concept is also generic enough to ensure that the proposed aid system is adequate for every type of mission, and not only in the very specific domain of aircraft close-in combat. The analysis system does principally: (1) a measurement of pilot performance; (2) an extraction of characteristical intervals; (3) a detection of good or bad behavior according to expertise rules of debriefing; and (4) an optional generation of alternative trajectories by an aircraft combat expert system. Results obtained during these stages can be fully exploited with the interactive Man Machine Interface (MMI) which forms a part of the aid system. Expertise rules and MMI were defined in consultation with relevant experts. Author (revised)

Modern data processing technology with greatly enhanced capabilities is being used in both the airborne and ground-based segments of the NATO Air Forces. A key element in the interface between these segments is provided by the mission planning systems which are used to analyze, fuse, and refine the information at air bases. The synergy of modern avionics systems and ground-based data networks cannot be fully realized unless mission data are provided effectively and rapidly to aircraft before the mission is commenced. Aircrew workloads must be minimized by the development of user-friendly planning systems which incorporate rehearsal facilities. To present some of the design and engineering aspects of mission planning systems, with particular emphasis on human factors considerations, examples

of modern mission planning and rehearsal systems will be described. For individual titles, see N94-25009 through N94-25016.

This paper describes the fundamental system concepts that are useful in addressing future growth areas of mission planning systems as reported in Section 2.1 of the AGARD Advisory Report 313 'Mission Planning Systems for Tactical Aircraft' (Pre-Flight and In-Flight). A significant requirement for mission planning systems, especially for autonomous vehicles, is the ability to quickly plan and/or replan a complex task or mission. Fast, efficient replanning is especially important because the state of the world can change abruptly and radically during the course of a mission. Mission planning systems must embody the capabilities necessary to swiftly replan actions in order to accommodate a vehicle's changing health or environment while continuing to pursue mission objectives. The complexity of mission planning problems has led to the use of hierarchical decompositions to make those problems manageable. The hierarchical approach to decision-making decomposes a large problem into a number of separate levels or sub-problems, thereby reducing the overall complexity, ideally without compromising overall system performance. In this lecture paper, an architecture for a mission planning system is presented with descriptions of the associated planning algorithms and planning management functions. Author (revised)

Human factors of advanced Mission Planning Systems (MPS) are considered from a theoretical and conceptual point of view. MPS's are treated as a class of human-machine systems concerned with the functions of planning and rehearsal of mission tasks. The functions of planning and rehearsal are considered in relation to decision-making and actions in dynamic situations. Planning and rehearsal are essential for the identification and clarification of mission goals. Planning and rehearsal are cognitive tasks involving the skills of reasoning, decision-making, visualization, and mental simulation, with associated human capabilities and limitations. Performance of these preparatory cognitive skills reduces in-flight workload and affects the availability, quality, and structure of mission-relevant knowledge. Knowledge and understanding gained during planning influences the performance of in-flight mission tasks. Perceptions of mission problems and situations are initially formulated during planning and rehearsal. Inappropriate perceptions result in inappropriate plans, reduced in-flight situational awareness, erroneous decisions, and degraded mission performance. The psychology of systems design is reviewed with reference to MPS requirements. Particular attention is given to the role of automation and aiding technology in the performance of planning and rehearsal tasks. The nature of air crew involvement in MPS decision making is a key system design issue determining mission effectiveness. Relevant human capabilities and limitations, and the level of air crew active involvement and machine autonomy, need to be carefully considered in initial systems design. A human-systems design paradigm based on principles of adaptive aiding and co-operative functioning is proposed for advanced MPS design. The cognitive compatibility of the air crew task and system interface is a key requirement for effective air crew involvement in MPS processes and for successful MPS functioning. Author (revised)

It was apparent from the beginning of the work carried out by the Joint Working Group in Phase One, that the successful application and implementation of human factors considerations were an essential part of the design of Mission Planning Systems (MPS). Although these considerations were discussed in Phase One, in Phase Two human factors were investigated in greater detail. It was considered essential that, as with all systems design, a full understanding of the information requirements and information flow of MPS's in Pre-flight, In-flight, and Post-flight situations was understood, as well as the dependencies under which the system must operate. Ideally, each component should be complimentary and be designed in accordance with requirements of each component as well as the 'mission' system as a whole. The Phase One report included descriptions of the emerging MPS including the ergonomics and the interface of each system. There was a high degree of similarity apparent in both approach and implementation. The Phase Two report explored many of the issues raised in greater detail, particularly that of trust that aircrew must have in the systems and the subsequently planned mission and the interface through which the user must communicate with the system. COMPUTING TECHNIQUES IN MISSION PLANNING
STEPHAN E. KOLITZ *In* AGARD, New Advances in Mission Planning and Rehearsal Systems 20 p (SEE N94-25008 06-66) Oct. 1993
(AGARD-LS-192) Copyright Avail: CASI HC A03/MF A02

This lecture paper addresses issues related to the major concern stated in Section 5.1 of the AGARD Advisory Report 313 'Mission Planning Systems for Tactical Aircraft (Pre-Flight and In-Flight).' A major concern involving all aspects of mission planning systems is the tremendous computational burden that is required for a wide variety of mission planning functions. The approaches for solving the Mission Planning Problem can generally be grouped into two categories: approaches that guarantee optimality; and heuristic approaches that do not guarantee optimality. Useful solution methodologies can be characterized by polynomial running time complexity. This paper concentrates on computational issues that arise when using hierarchical decomposition to solve the Mission Planning Problem. An analytic methodology and sample analyses are presented for an abstract planning system.

Recent years have witnessed a very rapid growth in the power of computer-based systems of all types. This rapid growth has been based on faster devices, better interfaces, and the use of parallel processing. Mission planning systems have shared in this evolution and there is every reason to believe that, for the medium term at least, this increase in power will continue. The effective use of this power by the user implies that a proper collaboration is established between the user (man) and the system (machine) which can utilize to the maximum the particular capabilities of each. This requires that the greatest attention is given to the design of the interface between machine and user since the interface can significantly constrain the overall performance of the man-machine system. This lecture describes the man-machine interface technologies which are currently available to the developer of mission planning systems and provides descriptions of some of the advances in these technologies which are expected to become available in the short to medium term. For complex combined missions, it has been necessary for Ground Based Mission Planning to be performed as close to the individual mission as possible. With the advent of intelligent Automated Mission Planning Systems (AMPS) and reliable, secure communications, the speed of data exchange and completion of the subsequent mission planning has greatly increased. This paper outlines the mission cycle and briefly examines a range of mission tasking activity. This framework is used to describe a possible operating base tasking and planning system architecture, within which the AMPS architecture is explained. Typical AMPS databases and functions are examined before a description of the actual task definition and mission planning processes. Mission validation and rehearsal capabilities are outlined, and the range of data outputs is examined. The paper concludes by briefly explaining the archiving of the resulting data. Author (revised)

This paper describes the functional aspects and the engineering guidelines of an in-flight mission planning system. The system is being developed as a part of the French project known as 'Electronic Copilot.' This project is lead by Dassault Aviation with the support of French official services (DRET STTE) and involves many industrial and scientific partners. Emphasis is put on the in-flight Pilot-System relationship and dynamic task allocation. A few words are said about knowledge acquisition methodologies and tools that are suitable for the development of a cognitive planning assistant. Author (revised)

Historically, fighter aircraft tactics were not developed until a new aircraft reached operational use. In the past, this pilot/aircraft intensive process was affordable. In the future, budgets and limited flying time will likely necessitate a more cost-effective way to develop tactics for innovative and unfamiliar aircraft technologies. Such is the case for WVR technologies as high angle-of-attack (70 degrees) super maneuverability (X-31, F-18 HARV) and super maneuverable missiles (Archer-11, Aim-9X). The advent of very high, cost-effective computer power has made affordable optimal control techniques (that have been traditionally computationally prohibitive) and low-cost real-time piloted simulation of credible realism. Together, these two tools provide a cost-effective means to develop tactics for new technology prior to the new technology reaching the field in operational use. This paper presents the successful results of a first attempt to use Differential Games (the Eidetics AACDG) and the Eidetics low-cost ARENA simulator to develop new tactics for new technology such as extended flight maneuvering, (EFM). This work was sponsored by the Four-Power Senior National Representatives (SNR) through Aeronautical Systems-Center at Wright-Patterson Air Force Base, Ohio, USA. Author (revised)

The introduction of long-haul aircraft which can be operated by a 2-crew flight deck over expanded duty hours, raises serious concerns about flight safety. It is a matter of intense discussions between authorities, operator and pilot associations in the USA, in Japan and in Europe whether the legal standards of flight duty limitations presently in force are still adequate or must be modified for minimum crew operations under the changing conditions. In cooperation with various air carriers, different approaches have recently been undertaken by international scientific laboratories to investigate physiological and psychological responses of the human element to the new technology in the cockpit during long-haul operations. In the conventional 3-man cockpit, pre-planned controlled rest on the flight deck has been investigated. In augmented crews, comparison have been made between the 3-man flight deck and the newly introduced 2-crew cockpit. The efficiency of onboard rest facilities has been investigated during long-haul augmented 2-crew operations. Workload, alertness and fatigue are under investigation in single 2-crew operations with non-stop flights of up to 14 hours flight duty time. Because not all of these investigations are completed, scientific contributions for discussions about flight time limitations and rest requirements must still be limited. However, in certain countries, scientific results have already led to recommendations for amendments in the actual legislation. Author

A modern tactical aircraft is faced with ever increasing threats and, to be effective against them, it needs to know what and where they are as early as possible during any encounter. It must do this day and night, in all weather, in hostile countermeasure environments and in the presence of clutter. Tactical aircraft receive large amounts of information from multiple sensors and data communications systems. To allow the crew to manage the aircraft and ensure its mission is fulfilled, the information must be aligned,

correlated, consolidated and presented to them in a meaningful form. The paper introduces a model of tactical situation awareness processing which comprises sensors, data fusion, situation assessment and sensor management. The purpose of each component of the model and the relationships between them are discussed. The requirements placed on sensor data fusion by air to air sensing are discussed, and so is the way in which they are dominated by particular features of the tactical aircraft platform and its mission. The influence of these factors on the design of air to air situation awareness systems is considered. A computer test harness, developed by BAe Defence, Military Aircraft Division, is described, along with built-in tools which calculate test statistics. The harness was developed as part of a program of studies carried out by the Mission Systems group of the Design Quality and R&D team within the Systems Engineering Department at BAe's Warton unit in Lancashire, U.K. Examples of the results which were obtained when an air to air sensor data fusion model was evaluated are reproduced. These take the form of graphs and diagrams representing test statistics and offer a means by which different solutions to various data fusion problems may be compared under identical conditions. This paper begins with a brief description of the basic theoretical framework for analyzing chaotic time series and then goes on to discuss recent work in this area in the Long Range Research Laboratory. As a particular example, we shall show how the ability to make short term predictions of chaotic time series can be used to extract small signals from a complex deterministic background. Experiments with simulated data have shown that it is possible to recover signals to a reasonable accuracy in situations where the ratio of amplitudes of signal to chaotic background is as low as 10(exp -5):1. The contradiction between mathematical reversibility and physical irreversibility has traditionally led to the suspicion of 'hidden correlations' that will allow, in some cases, the decrease of the entropy of isolated systems. This idea seems wrong, as shown by a very simplified model. The true reason of the physical irreversibility is certainly the very large number of parameters of irreversible systems. The Conference Proceedings contain 26 papers presented at the Propulsion and Energetics Panel 78B Specialists' Meeting on 'Combat Aircraft Noise' which was held 23-25 Oct. 1991 in Bonn, Germany. Noise emission from combat aircraft during low-altitude, high-speed training missions over populated areas has led to massive complaints. The purpose of the meeting was to offer a forum for specialists to discuss the latest state of the technology concerned and--if possible--to find solutions for overcoming the problems. The Specialists' Meeting was composed of the following sessions: User's Demand, Experience of Noise Effects; Mechanisms of Noise Generation; Noise Measurements, Predictions Methods; and Noise Reduction. Questions and answers of the discussions follow each paper in the Proceedings. For individual titles, see N93-10667 through N93-10692.

The deterrence potential of an Air Force, and by that the capability to fulfill their mission in times of war, relies on threat oriented training in peacetime. Low level flying is a major tactical means to help aircrews reduce the anticipated threat imposed to them by enemy air defence systems to an acceptable degree. The demand for this capability applies also to air defence tasks against attacking fighter bombers. Military low level flying requires a high degree of proficiency, which can only be reached and maintained by constant training. A high performance level is then the key to air power. The possibilities for this kind of necessary training are restricted by superior demands concerning, amongst others, flying safety and environmental reasons. Too intensive restrictions might reduce the fighting capability of the wings to such an extent, that mission fulfillment could be seriously endangered. Author

Combat aircraft are not subject to the same noise reduction regulations as civil aircraft. Additionally, combat aircraft are operated closer to their performance limits and at high power settings for extended periods. There is general pressure to reduce noise of all kinds, but particularly noise from low flying aircraft. Although there is little that can be done to quiet in-service engines, operational palliatives, such as noise abatement procedures and restrictions on low flying, have been introduced. Moreover, there has been a concerted education and public relations campaign, and numerous airspace management changes have been introduced to reduce the impact of low flying on the population. These subjects were considered during a Pilot Study into aircraft noise under the auspices of the NATO Committee on the Challenges of Modern Society; the findings of the Study are discussed, giving both the international viewpoint and the UK

perspective in particular. Some options for the reduction of low flying are also considered, but so long as military aircraft need to fly low to evade enemy air defences, low flying will remain a principal tactic of NATO air forces, and peacetime training will remain an essential military requirement. Thus, noise from low flying combat aircraft will remain a sensitive issue, and ways of reducing it will continue to be of importance for many years to come. Author

The operations carried out by combat aircraft are a source of nuisance for the populations situated in proximity to air bases. The noise of jet aircraft constitutes the dominant source of noise in the operations in question. The authors propose to approach the question of the reduction of the corresponding sonic nuisances by utilizing experience acquired by SNECMA over the course of more than twenty years of research on the noise of civil jet turbine engines, and especially of the Concorde supersonic transport program. The important experimental database resulting from these studies has permitted the development and evaluation of preview methods and solutions in noise reduction. The different mechanisms and significant sources of noise will therefore be reviewed at the same time as the possibilities for current or future improvement. Author

(AGARD-CP-512) Copyright Avail: CASI HC A02/MF A03

The potential impact of noise in the community surrounding a proposed outdoor test facility in the Ottawa area was evaluated. The test stand was planned for the testing of high performance gas turbine engines. Theoretical predictions based on the outdoor sound propagation model were made for the noise generated from a General Electric F404 engine. The results were verified by carrying measurements of noise generated from a single engine of a parked CF-18 aircraft. The measured results qualitatively confirmed the validity of theoretical predictions. However, the tests clearly demonstrated the strong influence of the atmospheric conditions in the observed noise levels in the surrounding community. The usefulness of the theoretical predictions in devising noise control measures in the test area and for the scheduling of tests in favorable weather conditions to minimize noise impact in the surrounding area were discussed. In the first part of the paper, the contribution of airframe noise to total aircraft noise on approach is assessed for a large current technology transport and for the same airframe powered with bypass ratio 10 engines with an additional 5 dB noise suppression applied to the fan and turbine noise sources. The airframe noise of the envisioned advanced subsonic transport is 2 EPNdB less than the largest contributor to the total aircraft noise, the fan inlet. The noise impact of the airframe noise, as measured by noise contour area, is 1/4 that of fan noise. Further fan noise reduction efforts should not view airframe noise as an absolute noise floor. In the second part of the paper, the results from one recent cavity noise wind tunnel experiment is reported. A cavity of dimensions 11.25 in. (28.58 cm) long, 2.5 in. (6.35 cm) wide, and variable depth was tested in the Mach number range of .20 through .90. Reynolds number varied from 5 to 100 million per foot (16 to 328 million per meter). The 1/d ratio was varied from 4.4 to 20.0. The model was tested at yaw angles from 0 to 15 degrees. In general, the deeper the cavity, the greater the amplitude of the acoustic tones. Reynolds number appeared to have little effect on acoustic tone amplitudes. Tone amplitude and bandwidth changed with Mach number. The effect of yaw on acoustic tones varied with Reynolds number, Mach number, 1/h, and mode number. At Mach number 0.90, increased yaw shifted the tone frequencies of the higher modal frequencies to lower frequencies. As cavity depth decreased, the effect of yaw decreased. Author

Flyover noise measurements are evaluated for four different military jet aircraft types flying at low altitudes. Flight Mach numbers ranged from 0.5 to 0.9. The analysis shows that noise emission is caused by jet mixing and broadband shock associated noise. Based on the experimental results, existing noise prediction schemes are extended toward higher subsonic flight Mach numbers. The novel prediction schemes describe the observed acoustic signatures quite accurately. This holds for the overall sound pressure level independently of the emission angle, for sound-pressure level time histories and for one-third-octave spectra. Author

Until the end of 1990 a great amount of low altitude flying of military airplanes was done in the Federal Republic of Germany. Up to then approximately 80,000 low altitude flights were performed annually. Many of these flights took place at a height from 500 ft to 1500 ft. Nearly 2/3 of the whole area of the Federal Republic of Germany was used for low altitude flights between 500 ft and 1500 ft. In seven distinct low flying areas flights even down to a height of 250 ft above ground were allowed. In a relative densely populated country these low altitude flights caused a great amount of disturbance and annoyance. In order to have some information on noise emission of military airplanes flying at subsonic speed at low altitude a measurement campaign was done in the vicinity of the shooting range in Meppen. A special aim of the campaign was to obtain insight into the influence of operational parameters on the noise emission during low altitude flights. The results of these measurements, for instance noise emission as a function of speed and height above around, will be presented. In general, people affected by low altitude flights would not often receive extremely high noise levels because only a part of the population

was exposed to direct overflights. It was therefore of interest to determine the number of occurrences and the statistical distribution of noise levels experienced by people living in low flying areas of Germany. For this purpose a research activity was performed in Germany in the years 1986 and 1990. During six weeks at 16 locations within four low flying areas continuous noise measurements were made. The results, such as relative frequency of noise levels and noise duration, are to be presented. Author

A discussion of the characteristics and the noise levels of combat aircraft and of a transport aircraft in taking off and landing are presented. Some methods of noise reduction are discussed, including the following: operational anti-noise procedures; and concepts of future engines (silent post-combustion and variable cycle). Some measurement results concerning the noise generated in flight at great speeds and low altitude will also be examined. Finally, the protection of the environment of French air bases against noise will be described and the possibilities of regulation examined. Author

The flight of a supersonic projectile is accompanied by a clapping called ballistic detonation. At the same time an aircraft in supersonic flight creates a boom which travels to the ground. The boom represents an impulsional characteristic which provokes a startled reaction in living beings and makes structures vibrate. Because of the elevated altitude of the flight of aircraft the boom is felt along a band of terrain situated along each side of the trajectory of the aircraft, as large as many tens of kilometers. The intensity of the boom essentially depends on the size of the aircraft that creates it, on its altitude, and on the maneuver that it is executing; the maneuvers which are executed by military aircraft provoke locally a very great intensification of booms, these are focalizations and superfocalizations. These phenomena appear especially at the time of transonic acceleration and when turning. The annoyance resulting from these focalized booms is therefore certain and related damage to aging or poorly constructed structures can occur; the sole means of limiting the nuisance which results will be to situate these focalized boom zones over uninhabited regions. A good preview of the affected zones requires precise a priori knowledge of the actual trajectory of the aircraft and the meteorological conditions; in practice therefore, the zones susceptible to being affected by these phenomena are fairly large. Above all, the effects of boom must not be overestimated. The first temporary damages to the auditory system are observed for levels of wave intensity greatly superior to the levels of booms (3000 to 5000 Pa as opposed to 50 or 70 Pa for a boom). The structural effects of normal booms are comparable to those resulting from natural inclemency (wind) or related to modern life (highway traffic). The focalized boom cannot have an impact on sound and well-constructed buildings except by cumulative effect (fatigue). Author

Although the last two decades have seen major reductions in the noise from civil aircraft, noise from military operations, both around airfields and from low-flying aircraft, continues to be a source of irritation and a potential health hazard. Because of the continuing concern about the noise levels produced by combat aircraft, the following paper is intended to provide some of the background to the main conclusions and recommendations reached in the final report of the NATO/Committee on the Challenges of a Modern Society (CCMS) Pilot Study on aircraft noise. Although biased towards fixed wing combat aircraft noise, the paper also considers other fixed wing military aircraft, but specifically excludes sonic booms and rotary wing aircraft as they both have their own particular noise sources and problems. Methods of noise prediction and attenuation based on results obtained in civil applications are presented. Input data for directivity and radiation forecasts are given by measurements of vane and blade pressure fluctuations and by modal analysis of the spinning waves propagating in the inlet duct. Attention is given to sound generation mechanisms for subsonic and supersonic single jets and bypass jets. Prediction methods, based on Lighthill's equation (tensor due to the turbulence), are discussed, and the various means of jet noise reduction are reviewed. The CEPRA 19 anechoic wind tunnel, which is primarily designed for studying the jet noise radiated in the far field with flight effects is described. Author

The aeroacoustic performance of several generic nozzle geometries was tested to evaluate the potential benefits of using non-round jet exit geometries to reduce noise from combat military aircraft. Both the aerodynamics and far field acoustics of several M(sub d) = 1.5 and 2.0 round, elliptic, and rectangular nozzles, including an augmented deflector exhaust nozzle (ADEN), were studied to assess noise emission. The nozzles were operated to jet total temperatures, T(sub 0) = 1160 degree R, and the data scaled to constant thrust. The data were propagated to 1500 ft. and corrected to perceived noise level. The aerodynamic results of the study show that the non-round nozzle geometries mix much faster with the surrounding medium than does an equivalent round nozzle plume. Both the ADEN and elliptic nozzles provide significant reduction of noise, 6 to 7 PNdB, along the major axis direction with little expected impact on nozzle performance. Shock noise processes are eliminated for elliptic nozzles, but are still significant with rectangular nozzles. Comparison of measurements to theoretical predictions of noise using the quasi-linear instability wave model demonstrates good qualitative agreement. Author

The sensitivity of screech coupling in supersonic jets to nozzle installation geometry is explored as a function of nozzle shape, spacing, and orientation. The coupling phenomenon is shown to be a function of geometry for a variety of twin axisymmetric and rectangular nozzle configurations as well as for a single jet in proximity to a solid surface. Rapid plume merging or close proximity to a wall are shown to minimize the noise increment due to coupling. Twin impinging supersonic plumes experience more complex aeroacoustic interactions. The acoustic near field is dominated by screech and impingement tones, but the fuselage undersurface dynamic loads are primarily due to impingement of the unsteady upwash fountain flow on the fuselage undersurface. This paper is concerned with some aspects of non-linear behavior of unsteady motions in combustion chambers. The emphasis is on conditions under which organized oscillations having discrete frequencies may exist in the presence of random motions. In order to treat the two types of motions together, and particularly to investigate coupling between noise and combustion instabilities, the unsteady field is represented as a synthesis of acoustic modes having time-varying amplitudes. Each of the amplitudes are written as the sum of two parts, one associated with the random field and the remainder representing the organized oscillations. After spatial averaging, the general problem is reduced to solution of a set of second-order ordinary differential equations whose structure depends on the sorts of nonlinear processes accounted for. This formulation accommodates any physical process; in particular, terms are included to represent noise sources, although only limited modeling is discussed. Our results suggest that random sources of noise have only small effects on combustion instabilities and seem not to be a cause of unstable motions. However, the coupling between the two sorts of unsteady motions may be important as an essential process in a proposed scheme for noise control. It is now a familiar observation that many nonlinear deterministic systems are capable of exhibiting apparently random motions called 'chaos.' This is a particularly interesting possibility for systems which also executed non-deterministic random motions. In combustion chambers, a nonlinear deterministic system (acoustical motions) exists in the presence of noise produced by flow separation, turbulent motions, and energy released by combustion processes. The last part of the paper is directed to the matter of discovering whether or not chaotic motions exist in combustion systems. Analysis has not progressed sufficiently far to answer the question. We report here recent results of processing data taken in one combustor to determine the dimensions of any attractors in the motions. No evidence has been found for chaos in the strict sense, but the method seems to be an important means of investigating the nonlinear behavior of combustion systems. Author

The effects of rapid onset times and high absolute sound pressures near military training routes (MTR's) including possible startle effects and increased annoyance due to the unpredictable nature of these flights, have been of longstanding concern. A more recent concern is the possibility of increased annoyance due to low ambient noise levels near military flight training operations and differences in expectations about noise exposure in high and low population density areas. This paper describes progress in developing audibility-based methods for predicting the annoyance of noise produced at some distance from aircraft flight tracks. Audibility-based models which take into account near-ground acoustic propagation and ambient noise levels may be useful in assessing environmental impacts of MTR's and Military Operating Areas (MOA's) under some conditions. A prototype Single Event Annoyance Prediction Model (SEAPM) has been developed under USAF sponsorship as an initial effort to address these issues, and work has progressed on a geographic information system (GIS) to produce cartographically referenced representations of aircraft audibility. This paper describes the prediction of noise radiation from supersonic elliptic jets. The noise is associated with the large scale structures in the jet mixing layer. These structures are described as instability waves. The local characteristics of the instability waves are determined from a compressible, linear, analysis. The jet mean velocity and density are described in elliptic cylindrical coordinates. The local eigensolution for the instability waves is determined from a finite difference solution of the non-separable boundary value problem. This inner solution which is formulated in terms of the method of multiple scales is matched with the radiated field using the method of matched asymptotic expansions. The form of the far-field directivity is derived. Predictions are presented for the noise radiation by the several modes of instability in the elliptic jet. The radiated field is not axisymmetric and certain modes radiate strongly in the directions of the major and minor axes of the jet. The extension of the present work to other geometries and flow fields is discussed. Author

A method for the prediction of single stream jet mixing noise in flight is presented that can be used for flight Mach numbers up to 0.9. The method is similar to the empirical SAE method. However, two important results of the theoretical scaling law of Michalke and Michel are incorporated: (1) the total noise of heated jets is separated into quadrupole and dipole noise components because they are influenced differently by the flight Mach number and, (2) the influence of the stretching of the jet plume in flight on the overall sound pressure and the frequency of the emitted sound is considered. A relative velocity exponent law is used to correlate experimental flyover data. The correlation is based on all available data for combat aircraft with fuselage mounted engines and flight Mach numbers between 0.5 and 0.9. The difference between predictions with this new method and measured overall flyover levels is generally less than two decibels. The spectra are also well predicted. Author

Before considering means for alleviating the noise from modern military combat aircraft operating in high-speed low-level flight, it is important to identify the principal noise sources. To this end, a

carefully-controlled flight test program has been carried out using a Tornado aircraft (in standard training configuration) operating at flight speeds from 0.5M to 0.8M. The major sources of the aircraft noise, airframe noise, installed jet mixing noise and jet shock noise, have been successfully identified, quantified and correlated. Although the jet mixing noise tends to be the major source at low flight speeds, and the shock noise at high flight speeds, all three sources are comparable in magnitude during the rapid rise-time of the noise signal and at its peak. Indeed, were it possible to reduce greatly both the jet mixing and shock noise, the peak noise levels would only reduce by about 5 dBA. Author

In response to the rapid growth in demand for information on noise levels around military airfields in the UK, NPL developed AIRNOISE, a mathematical model for computing aircraft noise contours. Since its first applications in 1981, the model has been used to determine zones of eligibility within the MoD compensation scheme. The model has been subject to continuous development, e.g., the incorporation of Harrier V/STOL operations. We have now extended the model to include noise from high-speed, low-level operations. The model predicts not only maximum levels but the complete time-history, so that the time-onset rate can be estimated. To aid refinement and validation of the model, a special exercise has been conducted in which Tornado, Harrier, Jaguar, Hawk, F-15 and F-16 aircraft have flown straight and level at heights between about 100 and 400 feet, at various speeds and engine power settings over an array of microphones. This paper describes the trial and the results obtained. The prediction model is outlined and comparisons made between predictions and measurements. Author

The noise of combat aircraft during low level flight is dominated by the jet. Technical noise reduction measures must therefore reduce the specific thrust of the engine. This can be achieved by altering the engine cycle or by using secondary air to increase the mass flow though the nozzle. In the first part the influence of nozzle area, bypass ratio and variable cycle features on the specific thrust of modern fighter engines is shown. The effects on noise, thrust and fuel consumption are discussed. In the second part ejector-mixer nozzles and the aft-fan are considered. Both reduce the jet velocity by entraining air through secondary inlets and expelling it together with the engine's exhaust flow through a common nozzle. Author

STUDY RESULTS ON COMBAT AIRCRAFT SOURCE NOISE REDUCTION
I. U. BORCHERS, H. J. HACKSTEIN, and P. BARTELS *In* AGARD, Combat Aircraft Noise 24 p (SEE N93-10666 01-71) Apr. 1992
(AGARD-CP-512) Copyright Avail: CASI HC A03/MF A03

For use in combat aircraft noise control, important results of extensive studies on jet noise reduction are presented. The studies covered low-noise nozzle designs such as linear arrays of circular nozzles, inverted profile jets as well as special shape mixing nozzles and coaxial bypass flow configurations. In addition interesting results of systematic research on special acoustic absorbers for propulsion system internal noise reduction and of initial theoretical and experimental studies on promising ejector flow systems are reported. The results of the different investigations are explained and discussed. Furthermore, practical applications, including examples of performed and possible future integrations of the considered noise control measures into aircraft, are presented. It is noted that the implementation of these methods could significantly reduce combat aircraft engine noise. For substantial noise reductions, of the order of 20 dB or more as obtained for civil jet transport aircraft, the integration of advanced ejector flow systems is suggested which are capable of effectively lowering the jet exhaust speed as required and with this strongly reduce the jet noise generation. It is concluded that extensive information and an advanced technology basis for jet engine noise reduction exist. Applying this, by giving the needed noise control equal importance and priority as other critical aircraft aspects, may help resolve the related noise problem. Author

Active noise control, a method of cancelling noise by means of interference with a secondary anti-noise source, is now in full development. The first commercial application of this technique is in the case of active electronically controlled head sets. The next step will be the active noise cancellation in air ducts and in passenger cabins. The aim of this paper is to assess the possibilities of the anti-noise technique for reducing propeller noise. First, by a mathematical simulation the theoretical noise reduction on the ground was calculated and found to be promising for further investigations. In the case of the periodic engine and propeller noise, for example, with only a single anti-noise source, the noise foot prints of the lower propeller harmonics can be reduced by up to 10 dB. In laboratory tests the theoretical values will be confirmed experimentally. For cancellation of the periodic noise one can use synchronous anti-noise generators. Compared with the engine and propeller noise the reduction of jet noise by the anti-noise technique is much more difficult. Therefore a sensor and controlling unit are necessary because of the stochastic nature of jet noise. Since aircraft noise is a severe problem, all methods are to be considered. Author

The principle of 3D sound, its domain of application and the mechanisms used by man to locate sounds are reviewed. The work in progress is described. The goal is to measure human performance in locating a simulated sound source, using a stereophonic helmet. The study is made of two parts: individual measurements on the head's acoustic dispersion characteristics (head transfer functions) on four subjects, and performance testing on finding locations, the subjects listening to sounds issued from their own transfer functions. The subject must aim toward the perceived source as previously as possible, regardless of the length of time needed to respond. The sources are not materialized and the subject is kept in a dark environment. Results show that finding the angle of location is easy for the 4 subjects. On the other hand, finding the site is very difficult for 2 of the subjects. In the case of the best subject, there is an actual 6 degree error in the aim. Author

(AGARD-CP-549) Copyright Avail: CASI HC A01/MF A03

Acoustic fatigue failures can be caused by the dynamic response of aircraft structures to unsteady pressure loading from aerodynamic and engine acoustic sources. The life of structures is often difficult to assess accurately and may be greatly affected by steady thermal, in-plane and out-of-plane loads. Furthermore, currently available methods do not enable fatigue life assessment of the substructure to be made, despite these failures occurring regularly in service. This paper discusses current problems associated with structural acoustic fatigue and extends upon this to account for likely clearance philosophies and configurations for future aircraft. Author

Compared to fixed wing aircraft, helicopter interior noise is higher, and subjectively more annoying. This is mainly due to discrete frequencies by the main transmission system, and also from other components like main and tail rotor, engines, or cooling fans. Up to now, mainly passive measures have been used for interior noise reduction. Despite intensive experimental and theoretical investigation to improve acoustic treatment, their weight penalties remain high especially in the low frequency range. Here, active noise control offers additional capacities without excessive weight efforts. Loud-speaker based systems are sufficiently well developed for implementing a prototype system in the helicopter. Two other principles are in development: active panel control which introduces mechanical actuators to excite the cabin walls, and active control of gearbox struts with actuators in the load path between gearbox and fuselage. General problems of aeroacoustic analysis are presented, taking as an example shingle studies of the HERMES space shuttle. Analysis of shingle behavior meets this problem in a particularly difficult way (very hard environment, specific difficulties due to design of shingles). Available analysis tools include: (1) calculation means, which are mainly those of aeroelasticity, and (2) ground test means (wind tunnel, progressive wave tubes, shaker,...). None of these means can alone satisfy the needs of structural dimensioning and qualification; in particular the calculation of turbulent sources is not possible today, and they are very difficult to simulate with ground testing of actual structural parts. In spite of these difficulties, and referring to the preliminary tests and calculations of HERMES shingles, a rational strategy is proposed for aeroacoustic dimensioning and qualification of structural parts. This leads to a succession of tests, the conditions of which are determined by calculations, calculation models being themselves validated by comparison with test results. Author

An aircraft weapons bay exposed to freestream flow experiences an intense aeroacoustic environment in and around the bay. Experience has taught that the intensity of this environment can be severe enough to result in damage to a store, its internal equipment, or the structure of the weapons bay itself. To ensure that stores and sensitive internal equipment can withstand this hazardous environment and successfully complete the mission, they must be qualified to the most severe sound pressure levels anticipated for the mission. If the qualification test levels are too high, the store and its internal equipment will be over designed, resulting in unnecessary costs and possible performance penalties. If the qualification levels are below those experienced in flight, the store or its internal equipment may catastrophically fail during performance of the mission. Thus, it is desirable that the expected levels in weapons bays be accurately predicted. A large number of research efforts have been directed toward understanding flow-induced cavity oscillations. However, the phenomena are still not adequately understood to allow one to predict the fluctuating pressure levels for various configurations and flow conditions. This is especially true at supersonic flow speeds, where only a small amount of data are available. This paper will give a background of flow induced cavity oscillations and discuss predictions, control and suppression, and the future of weapons bay acoustic environments. The present paper describes the general philosophy and the followed methodology in engine nacelle design, usually resulting in the embodiment of acoustic treatment in intake and exhaust ducts to make the relevant aircraft compliant with noise certification requirements. A general description of conventional acoustic liners currently in service, and liners of innovative design currently being investigated is also included, giving emphasis to the methodology for the selection of the proper acoustic treatment. Finally the Alenia software package (ALNOIS), ad hoc developed to cover the complete engine nacelle acoustic design and to support the acoustic panels manufacturing, is briefly described. Author

Aircraft dynamic loads produced by engine exhaust plumes are examined for a class of military fighter and bomber configurations in model and full scale. The configurations examined are associated with the USAF F-15 and B-1B aircraft, and the US F-18 HARV and ASTOVL programs. The experience gained as a result of these studies is used to formulate a level of understanding concerning this phenomena that could be useful at the preliminary stage of propulsion/airframe design. The Wright Laboratory is the Air Force center for air vehicles, responsible for developing advanced technology and incorporating it into new flight vehicles and for continuous technological improvement of operational air vehicles. Part of that responsibility is the problem of acoustic fatigue. With the advent of jet aircraft in the 1950's, acoustic fatigue of aircraft structure became a significant problem. In the 1960's the Wright Laboratory constructed the first large acoustic fatigue test facilities in the United States, and the laboratory has been a dominant factor in high-intensity acoustic testing since that time. This paper discusses some of the intense environments encountered by new and planned Air Force flight vehicles, and describes three new acoustic test facilities of the Wright Laboratory designed for testing structures in these dynamic environments. These new test facilities represent the state of the art in high-temperature, high-intensity acoustic testing and random fatigue testing. They will allow the laboratory scientists and engineers to test the new structures and materials required to withstand the severe environments of captive-carry missiles, augmented lift wings and flaps, exhaust structures of stealth aircraft, and hypersonic vehicle structures well into the twenty-first century. The problem of the response of a panel belonging to a space structure or to a launcher is considered. By using a modal approach in the frequency domain, the structure is described through a finite element model, and the acoustic field through Green's function. The presence of the air is considered, and it leads to an addition to the mass matrix and to the damping matrix of the relevant terms. The transfer function is then applied to the case of random inputs, for which an analytical expression is provided. Some numerical examples show the effect of the additional terms on the spectral distribution and on the relevant RMS value. Author

APPLICATION OF THE PSD TECHNIQUE TO ACOUSTIC FATIGUE STRESS CALCULATIONS IN COMPLEX SUBSTRUCTURES
H. CLIMENT and J. CASALENGUA *In* AGARD, Impact of Acoustic Loads on Aircraft Structures 11 p (SEE N95-19142 05-71) Sep. 1994
(AGARD-CP-549) Copyright Avail: CASI HC A03/MF A03

A method for stress calculation using the Power Spectral Density (PSD) technique for acoustic fatigue evaluation is presented. The sound pressure levels (SPL) are converted to acoustic pressures PSD and applied to a finite element model representation of the substructure. This technique can cover: complex geometries in substructures, detailed effects of reinforcements and the contribution of several normal modes, improving the previous procedure based on ESDU data sheets that accounts for simple geometries and only contributions of the first mode are considered. The method is used to predict stresses at substructures subjected to a severe acoustic environment. Comparison with acoustic fatigue test results show good correlation between experimental data and theoretical analyses in terms of stresses and accelerations providing an encouraging basis for further work in this direction. Within a comparative study, 29 different coupons covering 8 different designs and 6 different materials were fatigued by an excitation of 30 g(exp 2)/Hz on a shaker. The selected designs and materials represent realistic alternatives of an aircraft surface structure. The investigation led to the following conclusion: (1) Besides classical aluminium, CFRP is the best material with regard to sonic fatigue. (2) Al/Li, ARALL and Al layer materials showed shorter life times than the classical Al. (3) The most striking improvement in design for the dimensions selected here was achieved with separate doublers between skin and stringer. (4) The modal damping found was most often smaller than the 1.7 percent of the critical as known from ESDU for Al. (5) Pure CFRP without rivets showed the smallest damping: 0.6 - 0.9 percent. Author

A summary of McDonnell Douglas Aerospace's (MDA) capability for treating acoustic loading on modern fighter aircraft structure is given. A brief overview of techniques that have been developed since the mid-70's are presented. In metallic structure fabrication concepts such as Super Plastic Formed/Diffusion Bonding (SPF/DB) suddenly required new analysis procedures. In addition, the 1980's brought the additional complications of structures exposed to high thermal and acoustic environments on such vehicles as the AV-8V Harrier II and National Aerospace Plane (NASP). Methods developed to handle these new material forms, intense noise, and thermal loads are discussed. The influences of nonlinear structural responses on fatigue life due to combined load environments are also discussed. Additional developments in thermal-acoustic testing capability are also discussed. Author

Based on the acoustic fatigue endurance curve of CFRP-probes (Carbon Fibre Reinforced Plastic) obtained within the BRITE EURAM PROGRAMME - ACOUFAT further investigations have been carried out with respect to (1) nonlinearities in the measurements for the calibration of the different transducers; (2) effects of residual strength for the coupons; (3) effects of moisture and temperature in the material due to storage and testing in humid environment. For one chosen coupon type, the sum of these effects leads to a reduction of the allowable strain in the range of high cycles by a factor of approximately 4 compared to the value obtained originally for the coupon using the 2 percent failure criterion and tested at room temperature. The modifications are considered step by step and the resulting curve is given in this paper. Author

The Brite/Euram programme ACOUFAT is concerned with 'Acoustic fatigue and related damage tolerance of advanced composite and metallic structure'. Three main fields of the ACOUFAT results are discussed: (1) The use of a 'frequency degradation' criterion, usually applied to classical metallic materials and early Carbon Fiber Reinforced Plastic (CFRP) materials, is not considered suitable, as the only parameter, for determination of CFRP specimen 'failure' in acoustic fatigue. It is suggested that a suitable criterion should be based, in further work, upon the degradation of the mechanical properties of the specimens; (2) On the basis of Wind-Tunnel (WT) calibration tests, a semi-empirical model of the spatio-temporal characteristics of the aero-acoustic loads exerted on a flat panel by the turbulent field created by a flap has been developed and utilized as 'Load Data Input' for Finite Element (FE) calculations. The WT tests have been reasonably well presented: the development of this semi-empirical model is an encouraging initial success. The results from the initial modelling suggest that this can be extended to the modelling of the acoustic loads in Progressive Wave Tubes (PWT); and (3) The excitation of structures by aero-acoustic loads may not be simulated fully in PWT by simply modifying and correctly shaping the spectral content. The effect of the spatial distribution of the loading is clearly different in both cases and the tested specimen endurance may be significantly different. It is clear that a theoretical approach based on a correct prediction of the responses to both types of environment is required. Author

The GLARE (Glass Aluminum Reinforced) laminates, a new type of fiber metal laminates with promising fatigue behavior, are evaluated for their acoustic fatigue properties. In this investigation, the endurance data are developed by using shaker test specimens. Since the GLARE laminates make use of lay-ups and metal bonding, the influence of the laminate lay-up configuration and temperature on the acoustic fatigue strength is investigated from the shaker test results. Four types of shaker specimens are used in this investigation: plain cantilever, riveted skin-stringer, bonded skin-stringer, and rib-mode vibration specimens. Two stiffened GLARE skin panels are tested in the Progressive Wave Tube (PWT) at IABG. The panel testing indicates the importance of the secondary structure in the acoustic environment, although the GLARE skin itself does not show any damage. Author (revised)

The present paper describes the applicable concepts for cockpit noise verification in military aircraft. A design-to-noise procedure is outlined and the overall requirements for medical, intelligibility and operational aspects are discussed, including the proposition of an adequate index to quantify the quality of noise at the pilot's ear. Guidelines for cockpit noise control, to be applied during the design phase of the project, are given together with the expected benefits. Advanced noise control measures and noise measuring techniques are also dealt with and a specific case of cockpit noise verification is described. Author (revised)

There is considerable interest in reducing the cabin noise environment in turboprop aircraft. Various approaches have been considered at deHaviland Inc., including passive tuned-vibration absorbers, speaker-based noise cancellation, and structural vibration control of the fuselage. These approaches will be discussed briefly. In addition to controlling the noise, a method of predicting the internal noise is required both to evaluate potential noise reduction approaches, and to validate analytical design models. Instead of costly flight tests, or carrying out a ground simulation of the propeller pressure field, a much simpler reciprocal technique can be used. A capacitive scanner is used to measure the fuselage vibration response on a deHaviland Dash-8 fuselage, due to an internal noise source. The approach is validated by comparing this reciprocal noise transmission measurement with the direct measurement. The fuselage noise transmission information is then combined with computer predictions of the propeller pressure field data to predict the internal noise at two points. Author

The incorporation of rare earth ions into glass fibers to form fiber lasers and amplifiers is not a recent development. However, the fiber laser is only now beginning to receive widespread attention as a possible contender for a well controlled, stable light source for telecommunications, lidar, sensors, and meteorology, despite its obvious advantages of high power pulse operation, single frequency capability, ease of access to the resonator, and compatibility with communications fibers. Much of the current interest stems from the unique ability of the fiber laser to generate high purity soliton pulses of a few picoseconds in duration for potential application in the soliton-based, long haul high capacity communications links of the future. The concept of smart structures integrates structural engineering, sensing, control systems, and actuation to provide a mechanical assembly which is capable of responding to its environment and/or loading conditions. The realization of the smart structure requires integration of skills in a variety of scientific and engineering disciplines ranging from mechanical engineering through materials science into signal processing, data analysis, sensing, and actuation. The sensing technology must have a number of key features of which the ability to take distributed measurements of various parameters throughout the structure is paramount. Fiber optics technology therefore promises to have a significant role to play in the evolution of smart structures concepts. This paper analyzes this role in detail, presents an assessment of the current state-of-the-art in fiber optic technology related to smart structures and presents a scenario for future developments. The interpretation of images could be greatly facilitated by simultaneously considering the images of the same scene produced by captors of different types. Thus, a global approach to the problem of opto-electronic fusion between two captors, infrared (IR) and visible, is arrived at here, with three levels of association of data. The fusion of data can be made at the decision making level (class of objects), at the intermediary level (elementary objects), and finally at the level that the signal is issued directly to the captors. At each step of fusion, the problem of the placement in the correspondence of the IR and visible data is posed. This alignment must be as much or more precise as the level of data. The preliminary phase of treatment strongly affects the fusion step. The rules of fusion are developed in such a way as to improve the power of classification, augmenting the probability of detection, utilizing the eventual complementarity of the captors, and permitting a simultaneous visualization of pertinent IR and visible information to the operator. Presented here are certain aspects of the treatment techniques of images and the reconnaissance of forms for automatic detection of targets in infrared imagery. The algorithms described here are put to work in real time for plane, helicopter, and missile targets in view of their integration into the solar defense system. Nevertheless, the algorithms are sufficiently general to be applied to optoelectronic equipment in air to ground and air to air systems. The treatments are of two categories. The first category includes those which are carried over the reduced zones of the entire field analyzed by the sensor (typically, 2 degrees by 3 degrees for a thermal camera from a short range arms system). These systems extract from the background potential targets (called alarms). The criteria of segmentation are based on the contrast and the movement of targets in relation to the background. The second

category includes those which are carried over the reduced zones of an image (pursuit window) and which have as a goal the classification (recognition) of potential targets and their pursuit.

The objective of the Infrared Targeting System (IRTS) is to successfully demonstrate the mission performance that can be achieved in manned air-to-ground targeting applications utilizing a synergistic combination of state of the art active/passive infrared sensor and automatic target recognizer (ATR) technologies. The IRTS program is centered around a demonstration FLIR/Laser Radar/ATR (FLASHER). The FLASHER consists of a dual field of view (2 x 2 degree and 6 x 6 degree) second generation FLIR pixel mapped to a CO2 laser radar, with a FLIR ATR processor, a laser radar ATR processor, and a sensor fusion ATR processor. Following construction and laboratory testing of the IRTS, the system will be installed on a test aircraft and demonstrated in flight against realistic tactical, strategic, and special operations scenarios.

British Aerospace (Systems & Equipment) Ltd (BASE) has been working in the field of automatic electro-optical tracking (Autotrack) systems for more than 12 years. BASE Autotrack systems carry out the automatic detection, tracking and classification of missiles and targets using image processing techniques operating on data received from electro-optical sensors. Typical systems also produce control data to move the sensor platform, enabling moving targets to be tracked accurately over a wide range of conditions. BASE Autotrack systems have been well proven in land, sea and air applications. This paper discusses the relevance of Autotrack systems to modern high-technology warfare and charts the progress of their development within BASE, both with respect to current products and active research programs. Two third generation BASE Autotrack systems are described, one of which provided a sophisticated air-to-ground tracking capability in the recent Gulf War. The latest Autotrack product is also described; this uses ASIC and Transputer technology to provide a high-performance, compact, missile and target tracker. Reference is also made to BASE's research work. Topics include an ASIC correlator, point target detection and, in particular, the use of neural networks for real-time target classification.

Based on lessons learned during the accomplishment of a National Technology Project in the Netherlands, a simple and low cost Fiber Optic Guided Weapon (FOGW) concept was contrived. The main characteristics of the concept are the short range of 10 km, the simple strapdown television CCD-camera, and the solid fuel rocket propulsion. This low cost concept is more closely examined. The concept was evaluated by conducting flight trajectory simulations. An already existing six degrees of freedom (6-DOF) trajectory simulation program was modified. The program and especially the relatively simple target sensor system model are described. The problem of choosing an appropriate target configuration for system evaluation is attended to. A target configuration consists of various target positions, various target maneuvers, and various target speeds. The probability of hit is calculated for a chosen target configuration base-case. Miscellaneous model parameters are varied, especially the target sensor system is investigated. The probability of hit is determined as a function of the sensor resolution, the sensor field of view, and the modeled characteristics of the image processing algorithm. Another investigation concerns a simple addition to the normal guidance commands trying to reduce target-lost situations. The effect of two different implementations of this addition is calculated for the same situation as the basic guidance configuration.

Theoretical studies and empirical tests were conducted as part of the development and demonstration of a fiber-optic data link for weapon system guidance and control. These studies characterized the performance capability of several unique payout system concepts that permit the dispensing of a small diameter (170- to 250-micrometer) fiber-optic data link from military weapon systems at high subsonic velocities. Theoretical predictions were compared with laboratory payout test results. Several engineering models that allow linear dispensing of the fiber from a fiber canister or spool were developed and tested. Material, mechanical, and physical concepts evaluated included spiral flow of air through a payout nozzle, rotating nozzles with fixed geometries, fiber adhesives, and mechanical vibrations. Fiber real-time payout tension loads were measured for several fiber diameters and adhesives. Excellent results were obtained with a silicon-based adhesive with a low coefficient of friction and a 170-micrometer-diameter fiber. The prototype tests verified the results predicted by the theoretical string dynamical models.

This paper is based upon a session of the NATO Advanced Research Workshop, New Trends in Instrumentation for Hypersonic Research held at the ONERA La Fauga Facility in France during the week of 27 Apr. 1992. The discussion includes some of the frontiers of the technology of flow visualization and spectroscopy as well as a discussion of the current development needs and trends. Included in the discussion are optical integrated measurements such as resonance absorption, schlieren, interferometry, and holographic methods. The discussion shows that while the technology is mature in a broad sense, a significant number of new development areas exist such as resonant holography and phase shifting holographic interferometry. The maturity of the technology makes it immediately applicable to many problems and the untapped potential offers considerable room for improvement of existing capability. The methods which are described can be used in harsh environments and have the potential for becoming flight test diagnostics for the measurement of temperature, density, constituency, and velocity.

The detectability of a target in the infrared spectral region is determined by differences between the radiative signatures of the target and the local background. This implies that both, the difference in surface temperature and emissivity Delta T resp. Delta epsilon and the distribution of these differences over the target area and the background, are of major importance. Therefore camouflage measures have to address both issues in order to achieve maximum signature adaptation to the background. To determine the ability of a camouflage material to follow temperature changes in the background, measurements of camouflage and background temperatures have to be performed under a variety of meteorological conditions. Measurements of representative weather and background conditions are needed to determine those situations, where the camouflage material effectively reduces the target signature. The degree of temperature reduction depends on the required level of protection, that is for detection, recognition and identification. Statistical analyses are given for various camouflage materials in relation to a number of background elements. Camouflage effectiveness is expressed in the percentage of time for which the apparent temperature contrast between the camouflage material and a background element is 1, 2 or 5 C. Analyses are performed for five consecutive weeks of measurements in summer and winter, using data which were taken during a measurement campaign at Gilze Rijen air force base in 1990. Author

This paper proposes a procedure for the numerical evaluation of the efficiency of countermeasures in the thermal infrared. This procedure consists of three phases. In the first phase the characteristics of different thermal camouflage materials are tested on a lab-scale. These tests comprise measurements of the attenuation of the incident infrared energy and/or of the thermal emissivity factor. With respect to the attenuation measurement, a calibrated infrared sensor is used, to determine the radiation patterns of an object. The comparison of these patterns before and after the application of a camouflage system, gives an absolute measure of its attenuation. The result of this measurement is important since the attenuation is closely related to the contrast between the camouflaged object and its background and thus to the probability of detection. Contrast however, is not the only important feature for the detection of an object in a thermal image. That is why in a second phase the countermeasures under evaluation are tested in a real environment. During this phase, a numerical value is given to the efficiency of the considered camouflage in the thermal infrared, using features selected from those which are known to be important for human vision. These include, besides contrast, other features such as correlation and texture. The third and final phase aims at a verification and a validation of the test results. Indeed, it is of crucial importance to find a link between the performance obtained in the field and the characteristics measured on a lab-scale. It is also necessary to verify that a good correlation exists between the efficiency as determined by human observers and the result of this numerical evaluation procedure. This will be done using a database of thermal images taken with a GEC Avionics TICM II (8 to 12 micron). Those images are then presented as well to human observers as to the machine in a project called 'Psychotest'. Author

The objective of the infrared search and track (IRST) program is to develop demonstration hardware which will be capable of long range detection and tracking of air targets in an airborne environment. This paper describes each of the major subsystems of the IRST equipment, which comprises the pointing system, the thermal imaging systems and the signal processing system. The various modes of operation are outlined which provide the capability to search for, detect and track multiple targets; to display imagery of a selected target and to provide passive ranging information. The equipment will be flown in an experimental Tornado aircraft and the installation and proposed trials are also described. A description of the ground proving equipment is also included. Author

Advanced space systems for earth observation sensing and defense applications share a common objective: high-resolution monitoring. They require subsystems that accurately provide precise line-of-sight (LOS) pointing of the monitoring sensor with extreme jitter suppression and a precision attitude control system. To address this objective, Draper has developed a pointing system, the Inertial Pseudo Star Reference Unit (IPSRU). The IPSRU effort is a DARPA and SDI sponsored program at Draper under contract with the USAF Phillips Laboratory. The IPSRU implements a collimated light source mounted on a wide-band, extremely low-noise inertially stabilized platform. The collimated light beam becomes, in effect, a jitter-stabilized pseudo star. In addition, its direction in inertial space can be pointed at a precise rate by commands applied to the platform. Optical pressure measurement (OPM) is a new pressure measurement method rapidly developed in several aerodynamic research centers: TsAGI (Russia), Boeing, NASA, McDonnell Douglas (all USA), and DLR (Germany). Present level of OPM-method provides its practice as standard experimental method of aerodynamic investigations in definite application fields. Applications of OPM-method are determined mainly by its accuracy. The accuracy of OPM-method is determined by the errors of three following groups: (1) errors of the luminescent pressure sensor (LPS) itself, such as uncompensated temperature influence, photo degradation, temperature and pressure hysteresis, variation of the LPS parameters from point to point on the model surface, etc.; (2) errors of the measurement system, such as noise of the photodetector, nonlinearity and nonuniformity of the photodetector, time and temperature offsets, etc.; and (3) methodological errors, owing to displacement and deformation of the model in an airflow, a contamination of the model surface, scattering of the excitation and luminescent light from the model surface and test section walls, etc. OPM-method allows getting total error of measured pressure not less than 1 percent. This accuracy is enough to visualize the pressure field and allows determining total and distributed aerodynamic loads and solving some problems of local aerodynamic investigations at transonic and supersonic velocities. OPM is less effective at low subsonic velocities (M less than 0.4), and for precise measurements, for example, an airfoil optimization. Current limitations of the OPM-method are discussed on an example of the surface pressure measurements and calculations of the integral loads on the wings of canard-aircraft model. The pressure measurement system and data reduction methods used on these tests are also described. Author

An experimental study was carried out by DASA and Daimler Benz Research to demonstrate the feasibility of fiber optic technology for use in Modular Avionics. In the first step of the study an inter module communication up to 16 subscribers, with interconnection length of about 1 m was demonstrated. Backplanes being composed of multimode and monomode fibers were tested in a configuration of 4 parallel data channels, each running with 1 GBit/s. This paper will resume results of investigations as: power budget, influence of modal noise with multimode fibers, effects of feedback, as well as optical interference caused by reflections. The paper then goes on to describe the transparency for given protocols (e.g., PI-bus). A prospect of problems arising of optical interconnections of a relatively large number of subscribers and possible solutions by using in-line amplifiers (optically) are reviewed. The backplane implementation is prepared to be arranged as a serial/parallel bus or a part of a switched network. Finally, this paper will give a synopsis of optical backplane solutions. Author

The new multimode connector has been developed that will function under harsh environmental conditions. It meets the military's need for a reliable optical insert that can be integrated into existing electrical, card-edge connectors. Expanded-beam optics and micro-machined silicon sub-assemblies are employed to achieve low optical loss (less than 1 dB) under blind-mate conditions. Low-mass, floating termini and kinematic design make the ROC connector insensitive to high levels of shock and vibration. Self sealing doors protect the optical assemblies from particulate contamination and abusive handling. The connector has performed flawlessly under extensive environmental and durability testing. This paper will describe the ROC design, features, and test results. Author

A thermodynamic model of air in chemical equilibrium is described. The model includes 13 chemical components, namely N, O, Ar, e(-), NO, N2, 02, N(+), 0(+), Ar(+), NO(+), N2(+), O2(+), and is treated as a mixture of perfect gases. The constant pressure specific heats of the components constitute the basic information to be provided and they are assumed to be specified in the form of interpolating polynomials valid in assigned subranges of a given temperature range; the polynomial expressions were structured to preserve generality and flexibility with respect to temperature range subdivisions and polynomial coefficient data published by various sources. The set of the chemical reactions includes 47 reactions, of which only 9 are independent. The equilibrium composition is solved, in terms either of mass fractions or molar fractions, according to the method of the equilibrium constants and numerically computed by an iterative scheme which proves fast and accurate. A FORTRAN program was written to perform the numerical calculations of the thermodynamic properties and of the equilibrium composition. Temperature range subdivisions and polynomial coefficient data can be implemented at will. Presently, the program includes data from 3 US sources and 1 Soviet source. Discrepancies in the constant pressure specific heats of the components deriving from the choice of different data sources are put in evidence. The process to validate the program is described and validation evidence is given in the relevant diagrams. Author (revised)

Many efforts were oriented towards the understanding of the unexpected behavior of systems - linear or non-linear. These could be large (weather systems, biological life) or small (automatic pilot). A new branch of dynamics is now considered; it is called 'chaos'. Some general theories emerged and reconsideration of concepts of non-linear control to determine the stability of such systems is now intensively studied in the scientific community. The following topics are covered: linear (including time varying coefficients equations) vs non-linear systems; types of non-linearity; curved characteristics, jumps, bifurcation; nonlinear dynamics; sensibility to initial conditions and/or uncertainties on the system parameters; robustness; neuronal-type machines; chaos - random process behavior; reversibility; irreversibility; Newtonian mechanics and

thermodynamics; fractals; and applications. For individual titles, see N94-18237 through N94-18241.

This communication is the first part of the three papers which are presented by the author in the same AGARD Lecture Series (LS 191). It aims at the study of asymptotic solutions of non-linear differential equations depending on parameters. The first part is devoted to a brief presentation of the basis of Bifurcation Theory which is limited to the non-linear phenomena observed by the author when he analyzed high performance aircraft behavior. In particular, complex bifurcations and chaotic motions are not treated. Numerical procedures developed to use results from Bifurcation Theory are presented. Then, some remarks are stated to establish a connection between asymptotic and quasi-stationary behavior. Finally, a methodology dedicated to the analysis of non-linear systems is proposed. The last few years have seen rapid advances in a number of new technologies aimed at improving the storage and retrieval of information. Information scientists may be aware of their potential but may have reservations concerning the absence of suitable standards or the short life associated with some developments. This conference brought together a group of experts to explain the practicalities of applying these new, powerful technologies, their successes and failures. Topics addressed included Artificial Intelligence, CD-ROM, Hypertext, and Local Area Networks. These topics were addressed within the framework of finding practical solutions to the problems of achieving efficient and effective information transfer. For individual titles, see N92-32183 through N92-32192.

Documentary databases that are accessible on-line are, at the present time, underused. This is due to several causes such as the difficulty in efficiently manipulating query languages, the heterogeneity of such languages, the diversity of middle-men with whom one must sign a contract to access the information, the clumsiness of the connection procedures, the costs, and the difficulty associated with choosing the best database. The problem of cost should be resolved as databases are used more effectively. The resolution of the difficulties cited above can be realized along different points of the information chain. It is possible to imagine the placement of considerable intelligence in the workstation of the searcher, but this would require large amounts of computing power. As an alternative, this could be done on a powerful autonomous system: the gateway. It is probably at this level that the majority of the problems could be the most easily resolved. It is for this reason that, even though a large part of what we will develop here can be placed in the workstation, we prefer to concentrate on the possible functionalities of gateways. The goal is not to list the functionalities proposed by existing gateways, but

to list the group that current technology allows in the short term. Author

Information retrieval is a wide, often loosely-defined term, but in these pages I shall be concerned only with automatic information retrieval systems; automatic as opposed to manual and information as opposed to data or fact. Unfortunately the word information can be very misleading. In the context of information retrieval (IR), information, in the technical meaning given in Shannon's theory of communication, is not readily measured. Nevertheless it has become apparent that there is a notion of information fundamental to the information retrieval process that underlies our intuitions about what it is we attempt to retrieve. In many cases one can adequately describe this kind of retrieval by simply substituting 'document' for 'information' where a document may be text, image, etc. This implies that the process is concerned with the identification of certain kinds of objects, viz. documents. It does not explain what is the basis of this identification process, and it is here that the notion of information plays a role. In the case of Boolean retrieval, an attempt is made to measure the extent to which the information is contained in a particular document by establishing whether a document satisfies the request. In the non-Boolean case, this process of satisfaction has a measure of uncertainty attached to it. This paper will explore methods for non-Boolean retrieval. Author

AUTOMATED INPUT INTO DATABASES: OCR AND DESCRIPTIVE CATALOGUING
GERHARD E. KNORZ *In* AGARD, Bringing Down the Barriers to Information Transfer 10 p (SEE N92-32182 22-82) Feb. 1992 Sponsored by BMFT
(AGARD-CP-505) Copyright Avail: CASI HC A02/MF A02

The technology of automated input from written text into databases is discussed. The current emphasis in office automation and desktop publishing helped optical character recognition to become a useful and affordable method. Different approaches (pixel-oriented, feature-based, using dictionaries, using special algorithms for special problems, character transition probabilities, or grammars) form the basis for meeting different classes of requirements such as demanded by small fonts, large varieties of fonts, special characters, different layout structures with mixed text and graphics, difficult printed matters with ligatures and kerning, and poor printing quality. On the way to an automated (or semi-automated) input process from printed matters into databases (OCR) is nothing but a necessary step within the line of scanning, character recognition, descriptive cataloging, and (optional) content analysis. Cataloging here is to be understood in a broader sense convering the identification and classification of the relevant pieces of input and the normalization process according to database-specific rules. The role of efficient input into bibliographic databases is discussed, as well as problems and techniques of optical character recognition. AUTOCAT, a software prototype for automated cataloging is introduced: its foundation, approach, and user interface. Author

(AGARD-CP-505) Copyright Avail: CASI HC A01/MF A02

Data compression can be used to reduce the volume of documents. This results in considerable savings on storage capacity and in transmission time. In general, there are two classes of compression techniques: reversible compression or statistical compression, with which documents can exactly be reproduced, and non-reversible or noisy compression, with which documents can be reproduced up to a given fidelity. Non-reversible compression most often gives a higher compression factor, but, obviously, at a price. Reversible algorithms are suitable for text compression and black-and-white images. Non-reversible algorithms are suitable for images. This paper describes the advantages and caveats of data compression. What is to be expected if data compression is used and, more important, what is not to be expected. Author

The Defense Technical Information Center (DTIC) provides services primarily to librarians and technical information specialists. In an effort to better serve engineers and scientists, the end users, DTIC conducted a technology assessment of users and developers of scientific and technical numeric databases. DTIC's Department of Defense Gateway Information System (DGIS) provides the access mechanism to databases and the Multi-Type Information, and Data Analysis System (MIDAS) will provide the capabilities to process bibliographic information and numeric data. SEMINAR ON BASIC DOCUMENTATION PRACTICES [LES PRATIQUES DE BASE EN MATIERE DE DOCUMENTATION]
Aug. 1992 192 p Seminar held in Ankara, Turkey, 3-4 Sep. 1992, in Athens, Greece, 7-8 Sep. 1992, and in Lisbon, Portugal, 10-11 Sep. 1992
(AGARD-R-788; ISBN-92-835-0681-2; AD-A255673; AD-A255822) Copyright Avail: CASI HC A09/MF A02

Application of new technology to the management of scientific and technical information relies upon a thorough grounding in basic concepts. The acquisition, storage, retrieval, and dissemination of material is becoming ever more complex and is a process which requires an understanding of how knowledge is perceived by the end user, the mechanics of data transfer, and the principles of responsible information exchange. In addition, the proliferation of information and the variety of media currently available make clear objectives and practical solutions essential. The AGARD Technical Information Panel (TIP) has produced a number of publications aimed at establishing and raising the standard of information management. This seminar brings together expert speakers to update the information in these publications and to contribute towards further improvement in basic documentation practices. For individual titles, see N93-10594 through N93-10603.

The information 'explosion' combined with the capabilities offered by the new technologies poses a new challenge to all those involved in documentation work: producers, librarians, documentation and information specialists, and users. An overview of current documentation practices in Greece is presented. It also addresses subjects associated with documentation work, such as standards, telecommunications networks, education and training, and library automation issues. It outlines the progress made in some areas during the recent years and attempts to identify the major problems related to the delayed implementation of modern means and practices in the Greek documentation environment. As a result of the rapid advancement of science and technology during the last decades, there is a tremendous increase in the accumulation of scientific, technical information (STI) and knowledge. The problem of collecting, cataloging, and accessing information to transfer to those who need it, when they need it, is a challenge faced by all information professionals. The application of information technologies to the management of STI represents an area where promising advancements are taking place, but where the user needs should be the 'push'. An overview is presented of the national scene in Portugal which covers some aspects related to different areas of scientific and technical information (SI) management and the application of new technologies to it. In particular, aspects related to the following are addressed: modernization of libraries; access to foreign databases (online and CD-ROM); advanced training in information management; development of information systems; development of advanced information products; participation in NATO programs in the field of STI; and research in information science in Portugal. (AGARD-R-788) Copyright Avail: CASI HC A03/MF A02

In the last 50 years, technological advances have accelerated at a rate unprecedented in history. We are experiencing a tremendous expansion of scientific and technological effort in many directions, and the result is a fantastic increase in the accumulation of scientific and technical information (STI) and knowledge. An integral part of the research and development (R&D) process is the STI associated with it. STI is both a raw material (input) and a product (output) of this process. The topics addressed include the following: the value of STI, management of an STI program, program policy and guidance, organizational structure, data sources, training/orientation, and the current information environment. The acquisition of stock for any library is of course an essential activity, without stock there is no library and no service can be provided. It is sometimes difficult to find or create general rules because every library is different with different budgets, users, user needs, and organizational aims. Some general guidelines will be of some help but most decisions rest with the library after weighing all the evidence. Unless you are running a national library or a very large system it will not be possible to buy or acquire all that is published. Even if it could be acquired there may not be the space to store all stock. You are then forced to be selective due to the limits imposed by your organization. When stock has been selected it must be purchased at reasonable prices and at suitable speed. The acquisition of library stock is covered, and selection and acquisition processes are included, starting with the need for selection policies and moving on to establishing user needs, stock types, evaluation methods, purchase methods, and stock suppliers. The procedures used by the NATO Communications and Information Systems Agency (NACISA), when acting as host nation for the implementation of a communications and information systems (CIS) project, are outlined. The procurement, acquisition, and maintenance of configuration management documentation required in support of a CIS are addressed. For the purposes of this exercise, configuration management documentation is defined as specifications, handbooks, drawings, and records that pertain to the design, performance, installation, operation, and maintenance of a CIS. Emphasis is on the activities involved in the acquisition of technical handbooks and drawings required for operation and maintenance, and the various end-users requiring this data are briefly outlined. In addition, the procedures currently used to maintain this documentation during the in-service phase of a CIS are described, and the present storage media utilized and future automation plans are addressed. (AGARD-R-788) Copyright Avail: CASI HC A03/MF A02

Information systems operating a referral-type database, need to produce references for their documents in order to successfully retrieve the information. The same references serve as an initial user information, thereby enabling the users to decide upon the information value of the document contents for their own specific requirements. The various steps in producing such references, the process we call document processing, are addressed: descriptive cataloging deals with the various bibliographic data of documents. Content analysis, subdivided into classifying, indexing, and abstracting, is discussed in some detail. The thesaurus as the main instrument of an indexer, its function, and its structure are described. Finally, the data of the reference are entered into the data base for information retrieval, while the document is stored in the document collection. Author

Information technologies are evolving at a rapid pace in today's world. But the electronic technologies needed to transform today's libraries and information centers into electronic 'libraries without walls', where an end-user has instantaneous access to all the information needed from a desktop workstation, have not yet arrived. Even so, there are many technologies available today that can be applied in the library/information center environment to yield increased productivity. However, not all technologies are right for or successful in every environment. Mission, budget, infrastructure, client profiles, and staff skills are a few of the 'environmental' issues that must be considered when selecting and introducing new technologies into a particular information center. Key technologies used in libraries today are reviewed; it can be used as background for targeting technologies that could be successfully implemented in your own environment to further service goals. Before focusing on a selection of technologies, you must first focus on the strategic goal of your organization. The same technology is not right for every library/information center. An overview of technologies that are readily available and can be applied today is presented. Author

SERVICES: USER SERVICES IN DEFENCE AND AEROSPACE DOCUMENTATION CENTRES
CHRIS BIGGER *In* AGARD, Seminar on Basic Documentation Practices 8 p (SEE N93-10593 01-82) Aug. 1992
(AGARD-R-788) Copyright Avail: CASI HC A02/MF A02

When the Library stock and layout have been considered, the question of exploiting the collection arises. If money has been invested in stock, staff, and equipment then maximum use must be obtained from them, otherwise the library is failing the parent organization or funder. Full exploitation will produce useful returns on the money invested and further support for library services and future funding. Use of a library means matching users to information in the collection and various library services are available to achieve this. These services are described, highlighting the options, benefits, and problems. It is hoped that the discussion presents a starting point for further investigation of each area. Loans, interlibrary loans, and circulation systems are discussed first followed by information services such as bulletins, inquiry services, online, and current awareness. Author

Military information systems, as well as systems operating in a governmental environment, will administer classified information as well as documents, which are not to be released to the public. Such information needs reliable protection against unintentional disclosure and unauthorized access. Advice on the principles of a security risk analysis is presented, and methods for adequate handling of sensitive information are outlined, considering objectives, requirements, and functions of network security.

(AGARD-INDEX-89-91; ISBN-92-835-0682-0; AD-A255629)

Copyright Avail: CASI HC A22/MF A04

This volume provides abstracts and indexes for AGARD unclassified publications published during the period 1989-1991. Full bibliographical citations and abstracts for all the documents in this publication are given in the abstract section, which is organized in the major subject divisions and specific categories used by NASA in abstract journals and bibliographies. The major subject divisions are listed, together with a note for each that defines its scope and provides any cross-references. Category breaks in the abstract section are identified by category number and title, and a scope note. Within each category, the abstracts are arranged by series and year. Six indexes -- subject (based on NASA Thesaurus nomenclature), personal author, corporate source, panel, report/accession number, and accession number -- are included. Sample entries are shown on the first page of each index. Author

A RESEARCH AGENDA FOR SCIENTIFIC AND TECHNICAL INFORMATION [UN PROGRAMME DE RECHERCHE POUR L'INFORMATION SCIENTIFIQUE ET TECHNIQUE]

Nov. 1992 61 p Workshop held in Lisbon, Portugal, 7-9 Apr. 1992

(AGARD-AR-316; ISBN-92-835-0691-X) Copyright Avail: CASI HC A04/MF A01

The results of a workshop are presented and includes three position papers on user needs, information access, and the organization and transfer of information, prepared by the authors as a result of the discussions at the workshop. The outcome of the workshop, in the form of a 53-item research agenda, is given under the headings: information management; provision of information; and access to information. Each is examined from the aspects of human resources, quality assurance, cost, and technology, where appropriate. The report also includes a list of 15 additional areas meriting further investigation, which were identified by participants, during the final session of the workshop. For individual titles, see N93-19797 through N93-19800.

This report addresses the relationship between library science and information science theory and practice, between the development of conceptual understanding, and the practical competence of information professionals. Consideration is given to the concept of research, linking theory with practice, and the reality of theory based practice. Attention is given to the need for research and research priorities, focus on the user and information-seeking behavior, and a user-oriented research agenda for STI. Author

INFORMATION ACCESS: A RESEARCH AGENDA

PETER HERNON *In* AGARD, A Research Agenda for Scientific and Technical Information 18 p (SEE N93-19796 06-82) Nov. 1992

(AGARD-AR-316) Copyright Avail: CASI HC A03/MF A01

This paper provides a general overview of information access. The issues identified and discussed ultimately have implications for both developed and developing countries. It is important that developing countries recognize and address these issues in national plans and in practice, for the issues relate to information resources management and use, and to scientific, economic, technological, and societal advancement. The proposed research agenda represents an initial effort to offer direction in an information and electronic age. The agenda provides nations, international bodies, agencies, and organizations with a flexible framework for producing change and for linking that change to decision making and policy review, formulation, and implementation. THE ORGANIZATION AND TRANSFER OF INFORMATION

BILL TUCK *In* AGARD, A Research Agenda for Scientific and Technical Information 11 p (SEE N93-19796 06-82) Nov. 1992

(AGARD-AR-316) Copyright Avail: CASI HC A03/MF A01

The objective of this workshop is to develop a research agenda for management and policy issues relating to scientific and technical information. The intention is not only to inform but also to elicit recommendations for further research and study. In particular, it will be important to determine just what it is we do not fully understand, and also to assess the effectiveness of our programs. These two concepts - 'understanding' and 'effectiveness' - form the underlying themes of the following paper. They are not unrelated: it is clearly a possibility that our programs may be ineffective because we do not fully understand the issues on which they are dependent. Conversely, improving their effectiveness will almost certainly require more detailed knowledge of the underlying dynamics. The class of problems toward which this paper is addressed is concerned with the organization and transfer of information. What barriers exist to the effective retrieval and transfer of scientific and technical information? And how does one ensure the quality and integrity of that information? These are complex issues only partly addressed in the present paper, which is intended to provoke discussion rather than provide detailed solutions.

THE AGARD TIP RESEARCH AGENDA FOR SCIENTIFIC AND TECHNICAL INFORMATION (STI)

WALTER R. BLADOS *In* AGARD, A Research Agenda for Scientific and Technical Information 4 p (SEE N93-19796 06-82) Nov. 1992

(AGARD-AR-316) Copyright Avail: CASI HC A01/MF A01

The Research Agenda contains three themes: information management, provision of information, and access to information. Provision of information is further divided into two subordinate themes, dissemination and bibliographic control; access to information is also further divided into two subordinate themes, barriers and equity and networking. Each theme or sub-theme was examined from four possible aspects, namely, human resources, quality assurance, cost, and technology. It was concluded that, in fact, a theme or sub-theme need not contain all four aspects. Author

THE EFFECT OF CHANGES IN MARKETS AND TRADE BARRIERS ON THE EXCHANGE OF SCIENTIFIC AND TECHNICAL INFORMATION

BRIDGET CZARNOTA *In* AGARD, The Impact of Changing International Relations on the Scientific and Technical Community 3 p (SEE N93-31215 12-82) Apr. 1993

(AGARD-CP-523) Copyright Avail: CASI HC A01/MF A02

The purpose of this paper is to examine the consequences of changes in markets and trade barriers in the exchange of scientific and technical information. The European Community is a particularly appropriate starting point to examine such a question since, as presently constituted, it represents a market of over 30 million people brought together in a single market by virtue of the Treaty of Rome. Undoubtedly, at the time of the signing of that Treaty by the original members of the Community, the same question was asked, namely, how will economic union affect the distribution and circulation of information. Undoubtedly, each Member State that has subsequently joined the market has raised the same issue. And it is certainly a question which arises in a particularly vivid form by the non-static nature of the Community itself. Over and above the Internal Market as we currently know it, we have other dimensions which we must take into account. One of these dimensions is of course that of Maastricht--the question of how far towards closer monetary and political union the Member States are ready to go. The responsibilities will be extended in policy areas such as the environment, consumer protection, health, and education. One of the crucial questions is whether all these far reaching advances in policy areas will finally lead to a European identity. Many commentators however, now focus on Maastricht as a turning point in the Community's history without understanding the realities of the existing market. Author (revised)

NEWLY AVAILABLE TECHNOLOGIES PRESENT EXPANDING OPPORTUNITIES FOR SCIENTIFIC AND TECHNICAL INFORMATION EXCHANGE

JEAN M. TOLZMAN *In* AGARD, The Impact of Changing International Relations on the Scientific and Technical Community 12 p (SEE N93-31215 12-82) Apr. 1993 Previously announced as N93-22470 Sponsored by NASA, Washington

(AGARD-CP-523) Copyright Avail: CASI HC A03/MF A02

The potential for expanded communication among researchers, scholars, and students is supported by growth in the capabilities for electronic communication as well as expanding access to various forms of electronic interchange and computing capabilities. Increased possibilities for information exchange, collegial dialogue, collaboration, and access to remote resources exist as high-speed networks, increasingly powerful workstations, and large, multi-user computational facilities are more frequently linked and more commonly available. Numerous writers speak of the telecommunications revolution and its impact on the development and dissemination of knowledge and learning. One author offers the phrase 'Scholarly skywriting' to represent a new form of scientific communication that he envisions using electronic networks. In the United States (U.S.), researchers associated with the National Science Foundation (NSF) are exploring 'nationwide collaboratories' and 'digital collaboration.' Research supported by the U.S. National Aeronautics and Space Administration (NASA) points to a future where workstations with built-in audio, video monitors, and screen sharing protocols are used to support collaborations with colleagues located throughout the world. Instruments and sensors located worldwide will produce data streams that will be brought together, analyzed, and distributed as new findings. Researchers will have access to machines that can supply domain-specific information in addition to locator and directory assistance. New forms of electronic journals will emerge and provide opportunities for researchers and scientists to exchange information electronically and interactively in a range of structures and formats. Ultimately, the wide-scale use of these technologies in the dissemination of research results and the stimulation of collegial dialogue will change the way we represent and express our knowledge of the world. A new paradigm will evolve--perhaps a truly worldwide 'invisible college.' Author (revised)

INTEGRATED ACCESS TO DISTRIBUTED DATABASES THROUGH INTELLIGENT INTERFACES

INGE BERGHANSEN *In* AGARD, The Impact of Changing International Relations on the Scientific and Technical Community 7 p (SEE N93-31215 12-82) Apr. 1993

(AGARD-CP-523) Copyright Avail: CASI HC A02/MF A02

The IANI interface is one of many attempts to produce efficient access to databases on different hosts. IANI stands for Intelligent Access to Nordic Information and was started as a project by the Nordic Council for Scientific Information in 1986. The aim of the project was to produce an interface which would allow Nordic users to access Nordic databases with one login procedure and one command language. The development of the prototype was a true cooperative exercise involving the Danish contractor CRI and the hosts of union catalogues in Denmark, Finland, and Sweden. After implementation of the prototype software, a Norwegian union catalogue host was added. The prototype was developed for an IBM-compatible PC. Later, the software was ported to a UNIX machine where IANI may serve as a gateway in specific applications. It has been used in an information training scheme by the Ministry of Education for Danish school children. The IANI concept has turned out to be a useful tool for integration of groups of databases. In 1991 it was used for integrated access to the catalogues of libraries of the major European Institutions in the EUROLIB-project. The attempts to integrate the database world through IANI have demonstrated that it is feasible to produce integrated database access in a few weeks. Experience has, however, also shown that database and network access procedures are changed so frequently, that the maintenance costs for interface products are high. The next step on the way towards integration of databases is expected to be implementation of the new ISO Search and Retrieve Standard which now is being used in pilot projects sponsored by NORDINFO and the Commission of EC. The paper concludes with a recommendation to use the many interface prototypes which have been produced in international R&D programs, but still need further development in order to become stable products which can be sold to the information world. AUTOMATING MULTILINGUAL COMMUNICATION

THOMAS SCHNEIDER *In* AGARD, The Impact of Changing International Relations on the Scientific and Technical Community 4 p (SEE N93-31215 12-82) Apr. 1993

(AGARD-CP-523) Copyright Avail: CASI HC A01/MF A02

The integration of Europe and the increasing economic interdependence across continents require an increasing amount of communication across linguistic boundaries. The need for rapid information transfer cannot be met by conventional methods of translation. Thus, the introduction of machine translation seems inevitable. If, in the past, MT systems had not been entirely successful, advances in hardware as well as linguistic approaches have led to the development of viable systems. In the following,

the structure of one such operative system will be described in detail. Author (revised)

The database industry is young. Twenty to twenty-five years ago online databases were little more than a dream, and most of us didn't even dream about CD-ROM and multimedia databases. Much has happened in this business since the first databases took off. The Nordic countries entered the database scene early. In Sweden, the SDI service EPOS/VIRA was started as early as in 1967, and in 1972 the first on-line service, MIC/MEDLARS, was set up in Stockholm, hosting databases mainly within medical disciplines. Both services got users from all of the Nordic countries. In the same period, online searching at hosts such as DIALOG and ESA-IRS got a start, and several Nordic databases emerged--with various search languages on several hosts in each country. At the end of the 70's online searching was relatively well established in science and technology (including medicine). The users were primarily intermediaries in university and research libraries, i.e., scientists and engineers in the libraries. A survey within European countries in 1987 showed that the persons involved in searching were 'still mainly scientists and engineers.' End users are today important market groups for database producers and hosts. Much of the growth in database usage has been expected here. Numerous products and services have been introduced for easier and more efficient information retrieval and management to attract end users. Author (revised)

There are many changes taking place today in the methods and conduct of research and development. These changes have impact and are impacted by the methods of scientific and technical communication. The rapid advances in information technology (computing, telecommunications, and user interfaces) is a root cause of much of this change. The paper will begin by setting the stage with an overview of some issues, statistics, and conclusions about changing patterns in scientific and technical communications system. It will then review plans and strategies of nations and major organizations that were put forward to deal with the changing nature of the information infrastructure and system. Highlights from the following countries will be included: the United States, Germany, and Japan. For the United States, a more highly focused review will be made of areas of interest to AGARD. This will include directions for the NASA Scientific and Technical Information Program in the United States. Responses to the management of changing conditions will be highlighted throughout the paper. In conclusion, comparisons among strategies as well as the relationship between strategies and the fundamental changes in research and development communications will be made.

ELECTRONIC MESSAGING FOR THE 1990'S Report No. 309 [LES MESSAGERIES ELECTRONIQUES DES ANNEES 90]
JEAN MOURAIN May 1993 44 p In ENGLISH and FRENCH
(AD-A267143; AGARD-AR-309; ISBN-92-835-2117-X; AD-A267564) Copyright Avail: CASI HC A03/MF A01

Electronic messaging systems, including their general principles, potential uses for transmitting information between people and between applications, problems of compatibility and possible solutions, messaging and data formats, and system architecture are discussed as well as the advantages and disadvantages of these systems in relation to competitors such as telefax, and the risks inherent in introducing them and ways of overcoming these risks. This publication is concluded with recommendations for AGARD (NATO's Advisory Group for Aerospace Research and Development). This publication was sponsored by the Technical Information Panel of AGARD. The volume contains the original French text and a translation into English. Author

In the technologically advanced field of avionics, quality is required both by the market and the engineers. This means that quality is not only a goal to reach new customers, but is a different way of working which aims to reach a higher and more satisfactory working environment. The attention has been focused on the technical information produced during the development of the project and its diffusion through the technical and managerial environment. The goal is to improve the quality of the whole development process where the quality of the final products improves as a consequence. A methodology experienced in the last few years in ALENIA (Pomezia Plant) to plan, achieve, and manage a more flexible and advanced way of working, through the strong involvement of all who contribute to the realization of the product, is described. Attention was focused both on the organizational aspect of the project and the product configuration. These two aspects are self related and result in a correct management of the project. AN INTRODUCTION TO THE INTERNET AND ITS SERVICES
GARY CLEVELAND *In* AGARD, International High Speed Networks for Scientific and Technical Information 4 p (SEE N94-37333 12-82) Feb. 1994

The emergence of research networks, computer networks that serve academic and educational communities, offer libraries throughout the world the opportunity to enhance library resource sharing and information access. The best known example of this structure are the networks collectively known as the Internet. The Internet is actually a conglomeration of thousands of networks found in North America, Europe, and every other continent. It is a 'metanetwork' that: 1) physically interconnects TCP/IP-based networks, many of which have hundreds of component networks; and 2) provides gateways to other types of networks, such as BITNET, an electronic mail network that supports computer communications through 32 countries. This paper provides a nontechnical, high-level overview of the Internet and its services. Specific topics include a description of the Internet, how it began, and its current size; its overall structure; the types of international networks it interconnects; the network services that are available; and how these network services are used by libraries.

'Network' is a word largely used today in many different contexts, and its meaning is highly dependent on the context. This paper focuses on telecommunications networks. A first distinction is introduced between networks structures, services provided by networks, and services provided by hosts connected to networks. Information services belong normally to the last category. Connectivity is highlighted as a basic network service, to support interactive communications, end-to-end file transfers, and data dissemination. Higher level network functions, such as electronic mail, conferences, bulletin boards, and directories make use of lower level connectivity functions but provided services of a different nature, referred to as value added services (VAS). Examples of this classification, which is mapped along the OSI reference model, are taken from Packet Switched Networks, Internet, Decnet, EARN/Bitnet and the protocols mostly used are outlined. A similar classification is to be made also for the gateways, i.e. devices and systems which interconnect different heterogeneous networks. The importance of gateways is invaluable, being the key to multiplying the connectivity of individual network implementations and fundamental steps towards the creation of a global virtual network for information services. The extension of voice communications to include the simultaneous telecommunication of data, text, and imagery in combined multimedia formats provides researchers with a radically new means of engaging in collaborative research and development with one another. Being able to simultaneously share and manipulate the same images and data on a given topic appearing on their computer screens, at any distance from one another, while at the same time being able to converse on that topic, promises more innovative, more efficient, and less time-consuming ways of conducting research and development. Whereas the speed of computers has risen exponentially over the past two decades, the capacity of telephone lines to carry the data that computers are capable of generating has not kept pace, albeit for very justifiable reasons associated with the traditional environment of the telephone industry. Consequently, governments around the world are fostering the development of very high speed transmission facilities and international telecommunications protocols, as exemplified by the Open Systems Interconnection (OSI) models, in order to exploit the social and economic benefits of multimedia networking in business, research, and education. CANARIE is a proposed, national, high-speed backbone network which, when fully implemented in a multimedia format, will enable engineers and research scientists in any field, and in laboratories anywhere in Canada, to collaborate with one another and with their international colleagues on research and development projects of common interest, without the inhibitions presently imposed by the lack of proximity to one another. It may be anticipated that this 'shortening of economic distance' among them will lead to an increase in research and development activity and improvements in their productivity. It will also tend to accelerate the diffusion of technology from the laboratories into marketable products, and serve as a model for improving performance, hence competitiveness, in every sector of the economy.

STANDARDS FOR DATA AND DOCUMENT INTERCHANGE
GEOFFREY A. STEPHENSON *In* AGARD, International High Speed Networks for Scientific and Technical Information 9 p (SEE N94-37333 12-82) Feb. 1994
(AGARD-CP-544) Copyright Avail: CASI HC A02/MF A02

In this paper I have tried to give an overview of the importance of standards for document interchange and an idea of where we are at present. There is a growing demand for documents in an electronic form to be interchanged between different platforms and software environments. Standards exist to enable most information to be interchanged in an application neutral way. The main barrier to such interchange is lack of awareness of the methods available and a lack of communication between users and vendors as to the priority of improving interchange. Users have to make their priorities clear to vendors if they are to be offered the facilities they require in the application packages they want to use. Author

With the high speed networking capabilities, multiple media options, and massive amounts of information that exist in electronic format today, the concept of a 'virtual' library or 'library without walls' is becoming viable. In virtual library environment, the information processed goes beyond the traditional definition of documents to include the results of scientific and technical research and development (reports, software, data) recorded in any format or media: electronic, audio, video, or scanned images. Network access to information must include tools to help locate information sources and navigate the networks to connect to the sources, as well as methods to extract the relevant information. Graphical User Interfaces (GUI's) that are intuitive and navigational tools such as Intelligent Gateway Processors (IGP) will provide users with seamless and transparent use of high speed networks to access, organize, and manage information. Traditional libraries will become points of electronic access to information on multiple medias. The emphasis will be towards unique collections of information at each library rather than entire collections at every library. It is no longer a question of whether there is enough information available; it is more a question of how to manage the vast volumes of information. The future equation will involve being able to organize knowledge, manage information, and provide access at the point of origin. Author

PROBLEMS OF INTERNATIONAL EXCHANGE OF SCIENTIFIC AND TECHNICAL INFORMATION FOR A RUSSIAN AEROSPACE RESEARCH INSTITUTE
VICTOR M. TYURIN *In* AGARD, International High Speed Networks for Scientific and Technical Information 5 p (SEE N94-37333 12-82) Feb. 1994
(AGARD-CP-544) Copyright Avail: CASI HC A01/MF A02

The problems of international exchange of scientific and technical information for an aerospace research institute in Russia arise from this research area being classified; publications were strictly limited. This resulted in absence of specialized data bases; there is very little amount of information prepared properly for utilization in electronic networks. The other problem is underdevelopment of domestic networks for information exchange; there are not channels for connection with international networks. Changes in Russian policy and economics necessitate settling these problems for increasing efficiency of the organizations. There exists a plan to develop multibranch high-speed information-exchange networks, each having a coordination/control center connected with international networks. Author

Reduced funding, global competition and technological change are forcing libraries and information centers to turn to new methods of providing services. Publishers of scientific and technical information expect printed journals to remain their primary product for several more years, despite the advent of electronic journals. Library collections will continue to be largely paper-based, but clients will demand much faster document delivery services from them. Many libraries must also maximize the investment in their collections by expanding their clientele. Electronic scanning of documents coupled with transmission over high speed, high capacity networks offers a potential solution to these problems. For more than a year, CISTI has been using proprietary imaging workstations to supply documents to one of its Branches. Much more flexibility is needed to reach the disparate receiving equipment used by a varied Canadian and international clientele. The paper describes experience with the Ariel Workstation, able to transmit to a variety of receivers including identical scanning workstations, other workstations, facsimile machines, and microcomputers with facsimile boards. Ability to rationalize library collections is seen as an important consequence. Author

The creation of the Institute for Scientific and Technical Information (INIST - Institut de l' Information Scientifique et Technique) in France in 1988, was the result of a decision from the Ministry on Research to develop a multidisciplinary department in charge of creating a data base in documentation center, for the diffusion of scientific and technical information, for French, European, and international researchers. The most modern technologies were adopted. For each step of acquisition of data, a specific technology was adapted and integrated in the general information system, from the time the documents were acquired to the creation of the data base and the production of primary documents: PASCAL for Science, Technology, and Medicine, FRANCIS for Social and Human Sciences. There are 5 steps in the INIST chain of production: management and classification of documents, using a GEAC 9000 system; analytical indexing of articles in periodicals and creation of abstracts (This work being done on computers and subcontracted to a private firm); numerical classification; storage of document on optical systems; and management of the system created to order and receive documents. The main technological challenges of the Hermes program are perfecting the thermal protection systems, developing fuel batteries, and designing the aerodynamics of the vehicle. This article presents what methods and means have been adopted to define the shapes which will satisfy the objectives of atmospheric travel. Author

In 1981 a Royal Society study of the scientific information system in the UK described the electronic journal as 'perhaps the most radical innovation in prospect for the primary literature'. Twelve years and as many projects later, has the electronic journal gone any way towards realizing its potential? In order to answer this question, it is necessary to consider what the electronic journal has to offer. Or, to put it another way, what is wrong with the paper journal? The common criticisms of the paper journal are that they are often not on the shelf (mis-shelved, gone for binding, being used by someone else); they are hard to search through; they take up too much space; and there are too many of them to keep up with. In contrast, electronic journals are always there (assuming the network hasn't crashed); easy to search (but can flood you with hits unless you are careful in the way you conduct your search); and occupy much less space. In addition, various electronic 'filters' can be used to ensure that users receive notification of relevant journals - the 'selective dissemination of information' or SDI. These are the commonly attributed general advantages of electronic journals. However, they do not seem yet to have been sufficient to establish the electronic journal firmly in the scholarly communication chain. In order to see why this is the case, some of the electronic journal experiments are considered. Finally, suggestions are made regarding problems remaining to be tackled. Derived from text

This paper introduces the present scenario of networking the different systems of exchanging information person to person, the way to access the information and to know where the information is. A summary of the more utilized applications is made, some of them have appeared in the last years as the result of a normal evolution: bulletin boards, Gopher, WAIS, World-Wide Web, e-mail, conferencing, directory service, etc. All these applications represent an added value to networking allowing the user (scientist, engineer, librarian, etc.) to communicate with others on their same area of interest. Additionally the user can obtain information about how to connect to servers and get items, programs, data, etc., and to follow conferences or make questions in a forum. As an example of an important application of distributed directory the Paradise project is discussed, it yields some tools in order to look for information on institutions, people and other objects. Taking all these considerations into account, it is intended to make an analysis about the current use of these tools by engineers and scientists. The role that the libraries and information centers should play in this context is also discussed. Author (revised)

WIDE AREA INFORMATION SERVERS: AN EXECUTIVE INFORMATION SYSTEM FOR UNSTRUCTURED FILES
BREWSTER KAHLE and HARRY MORRIS *In* AGARD, International High Speed Networks for Scientific and Technical Information 9 p (SEE N94-37333 12-82) Feb. 1994
(AGARD-CP-544) Copyright Avail: CASI HC A02/MF A02

In this paper we present a corporation information system for untrained users to search gigabytes of unformatted data using quasi-natural language and relevance feedback queries. The data can reside on distributed servers anywhere on a wide area network giving the users access to personal, corporate, and published information from a single interface. Effective queries can be turned into profiles, allowing the system to automatically alert the user when new data is available. The system was tested by twenty executive users located in 6 cities. Our primary goal in building the system was to determine if the technology and infrastructure existed to make end-user searching of unstructered information profitable. We found that effective search and user interface technologies for end-users are available, but network technologies are still a limiting cost factor. As a result of the experiment we are continuing the development of the system. This paper describes the overall system architecture, the implemented subset, and the lessons learned. Author

INFORMATION RETRIEVAL SERVICES ON WIDE AREA NETWORKS: A VISION OF THE FUTURE
J. LEMEZEC *In* AGARD, International High Speed Networks for Scientific and Technical Information 7 p (SEE N94-37333 12-82) Feb. 1994
(AGARD-CP-544) Copyright Avail: CASI HC A02/MF A02

This paper refers to some existing systems and to R&D work, especially in France Telecom, in order to help define a vision of future systems and services that store and retrieve information on wide area networks. Special reference is made to the Minitel network, a videotex network involving 6 million terminals and 20,000 services; JPEG 'Minitel Photo' and the first Fast Speed Teletel services were developed in 1992. Other services prepared for short-term experimentation, include multimedia videotex on ISDN. Two main contributions to a future broadband multimedia network are then discussed: standardization of multimedia and the deployment of ATM (Asynchronous Transfer Mode). Finally, a vision of a multi-purpose worldwide network of networks is proposed and the challenges posed by its construction are presented.

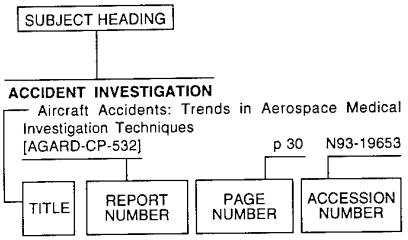
AGARD INDEX OF PUBLICATIONS (1992–1994)

Typical Subject Index Listing



The subject heading is a key to the subject content of the document. When a title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The titles are arranged under each subject heading in ascending accession number order. The report number helps to indicate the type of document cited. It is given only for complete publications, not for individual papers. The page number helps you locate the citation in the abstract section. The accession number is the number by which the document is identified on that page.

ADAPTATION
Work conditions assessment in pilots and ground personnel under high weather temperatures p 277 N94-28444

Adaptive wind tunnel walls versus wall interference correction methods in 2D flows at high blockage ratios p 117 N95-19267
Passive monitoring for automated MMPP communication systems p 177 N95-20927

ADAPTIVE CONTROL
A systems approach to the advanced aircraft man-machine interface p 266 N93-19776
Adaptive autonomous target cuer p 267 N93-19784
Adaptive structures for spacecraft: A USAF perspective p 121 N94-11319
On the stability of shape memory materials and their properties in static and dynamic applications p 133 N94-11329
Adaptive structure design employing shape memory actuators p 133 N94-11331
Adaptive algorithms for use with digital filters in vibration control p 283 N94-11338
Advances in adaptive structures at Jet Propulsion Laboratory p 134 N94-11344
Adaptive reconfigurable flight controls for high angle of attack aircraft agility p 108 N94-11502
Adaptive error-control scheme for 2-200 MHz Multiple-Mechanism Propagation Paths p 177 N95-20926

ADAPTIVE OPTICS
Pointing and tracking concept for a high energy laser weapon application p 222 N94-36619
Adaptive optics for laser beamforming in the atmosphere p 222 N94-36621

ADDITIVES
Active fibres and optical amplifiers p 304 N92-28089
Effects of fuel on Hercules AS-4/8552 composite material p 127 N92-33046
Research and development of high thermal stability fuels p 148 N94-29261

ADHESION TESTS
Investigation of the bond strength of a discrete skin-stiffener interface p 131 N93-21527

ADHESIVE BONDING
Environmental resistance of amorphous bonded thermoplastic joints p 128 N92-33053
Numerical finite element analysis of damage using Monte Carlo techniques p 291 N93-21522

ADIABATIC CONDITIONS
Numerical analysis of the thermoelastic effects in laminated structures and its use in the identification of defects p 129 N93-21511

ADIABATIC FLOW
The 3-D Navier-Stokes flow and temperature field computation for a forced mixer nozzle p 190 N92-27482

ADVECTION
Special Course on Unstructured Grid Methods for Advection Dominated Flows [AGARD-R-787] p 191 N92-27671

AERIAL RUDDERS
Design of a fighter aircraft vertical tail enhanced buffet environment survivability p 48 N92-23235

AEROACOUSTICS
Comparison of flyover noise data from aircraft at high subsonic speeds with prediction p 297 N93-10674
Supersonic acoustic source mechanisms for free jets of various geometries p 298 N93-10680
Nozzle installation effects on the noise from supersonic exhaust plumes p 299 N93-10681
Prediction of jet mixing noise for high subsonic flight speeds p 299 N93-10685
Identifying the principal noise sources of fixed-wing combat aircraft in high-speed flight p 299 N93-10686
Mechanisms of sound generation in subsonic jets p 300 N93-10688
Aeroacoustic qualification of HERMES shingles p 301 N95-19145
Weapons bay acoustic environment p 301 N95-19146
Impact of noise environment on engine nacelle design p 302 N95-19147
Impact of dynamic loads on propulsion integration p 302 N95-19148
Modelling structurally damaging twin-jet screech p 72 N95-19154
Identification and analysis of air- and structure-borne noise and vibration paths p 303 N95-19166

AERODYNAMIC CHARACTERISTICS
First approach to an integrated fin design p 48 N92-23236
Introduction to Special Course on Engineering Methods in Aerodynamic Analysis and Design of Aircraft p 48 N92-23951
Configuration development --- preliminary aircraft design p 48 N92-23953
Panel methods for aerodynamic analysis and design p 49 N92-23955
Aircraft drag analysis methods p 49 N92-23957
Navier-Stokes analysis of turbine blade heat transfer and performance p 188 N92-27468
Technical evaluation report on the Flight Mechanics Panel Symposium on Flying Qualities [AGARD-AR-311] p 49 N92-27870
Computations of unsteady flows around airfoil sections by explicit and implicit methods solving the Euler and Navier-Stokes equations p 5 N92-27948
Vortex flow aerodynamics [AGARD-AR-299] p 7 N92-30947
Test techniques for engine/airframe integration p 192 N93-13200
Aerodynamic analysis of slipstream/wing/nacelle interference for preliminary design of aircraft configurations p 7 N93-13205
Mass flow effects on the low speed characteristics of an advanced combat aircraft p 7 N93-13214
The jet behaviour of an actual high-bypass engine as determined by LDA-measurements in ground tests p 80 N93-13218
AGARD WG13 aerodynamics of high speed air intakes: Assessment of CFD results p 194 N93-13220
Survey on techniques used in aerodynamic nozzle/airframe integration p 51 N93-13224
Prediction of the performances in combustion of ramjets and stato-rockets by isothermal experiments and modeling p 83 N93-17622
System identification for X-31A project support: Lessons learned so far p 54 N93-19914
Heat transfer and aerodynamics of a 3D design nozzle guide vane tested in the Pyestock Isentropic Light Piston Facility p 84 N93-29928
Experimental study of heat transfer close to a plane wall heated in the presence of multiple injections (subsonic flow) p 84 N93-29931
The aerodynamic effect of coolant ejection in the leading edge region of a film-cooled turbine blade p 87 N93-29958
Aerodynamic and aerothermal challenges for the design of the Hermes spaceplane p 119 N94-10423
Experimental results in aerodynamic stability and control of a TSTO configuration p 106 N94-10424
In-flight evaluation of aerodynamic predictions of an air-launched space booster p 9 N94-10427
Planetary entry vehicle design for planned and potential ESA missions to Titan, Mars, and Earth return (FGE TN 51/92) p 121 N94-10428
Nonlinear and dynamic analysis of flight p 107 N94-11496
Non-linear flight dynamics p 56 N94-18240
Wake structure and aerodynamic behavior of high lift aircraft configurations during unsteady maneuvers in ground effect p 17 N94-18439
Effects, limits, and limitations of spanwise blowing p 18 N94-28027
Recent developments in the simulation of steady and transient transverse jet interactions for missile, rotorcraft, and propulsive applications p 203 N94-28030
Design and aerodynamic performance evaluation of a high-work mixed flow turbine stage p 97 N94-34459
Techniques for aerodynamic characterization and performance evaluation at high angle of attack p 63 N94-34614
Aerodynamic design of super maneuverable aircraft p 64 N94-34617
Flying qualities evaluation maneuvers p 64 N94-34623
Technological challenges of High Altitude Long Endurance unmanned configurations p 66 N94-36323
Turbulence: Engineering models, aircraft response p 110 N95-14900
Twin engine afterbody model p 27 N95-17880
Investigation into the aerodynamic characteristics of a combat aircraft research model fitted with a forward swept wing p 27 N95-17884
Aerodynamic investigation of the flow field in a 180 deg turn channel with sharp bend p 210 N95-19257
Interaction of a three strut support on the aerodynamic characteristics of a civil aviation model p 29 N95-19279

AERODYNAMIC COEFFICIENTS
An experimental investigation of the optimum slat setting on a combat aircraft model p 56 N94-18431
Numerical simulation of a powered-lift landing p 60 N94-28033
High incidence flow analysis over the Rafale A p 18 N94-34612
Navier-Stokes predictions of missile aerodynamics p 20 N95-14451
Measurements on a two-dimensional aerofoil with high-lift devices p 21 N95-17848
Two-dimensional 16.5 percent thick supercritical airfoil NLR 7301 p 22 N95-17854

AERODYNAMIC CONFIGURATIONS
Application of S1BYL2 to the AGARD WG18 compressor test cases p 186 N92-27452
Transonic wind tunnel investigation of limit cycle oscillations on fighter type wings p 6 N92-27959
Water tunnel studies of inlet/airframe interference phenomena p 194 N93-13216
Application of subsonic first-order panel methods for prediction of inlet and nozzle aerodynamic interactions with airframe p 8 N93-13223
High-Lift System Aerodynamics [AGARD-CP-515] p 1 N94-18415
Navier-Stokes computations of turbulent flow around high-lift configurations p 14 N94-18420
Control jets in interaction with hypersonic rarefied flow p 122 N94-28020
A selection of experimental test cases for the validation of CFD codes, volume 1 [AGARD-AR-303-VOL-1] p 208 N95-14201
Computational aerodynamics based on the Euler equations [AGARD-AG-325] p 19 N95-14264
Optimum Design Methods for Aerodynamics [AGARD-R-803] p 70 N95-16562
Single-pass method for the solution of inverse potential and rotational problems. Part 1: 2-D and quasi 3-D theory and application p 20 N95-16563
Single-pass method for the solution of inverse potential and rotational problems. Part 2: Fully 3-D potential theory and applications p 20 N95-16564
Optimum aerodynamic design via boundary control p 70 N95-16565
Residual-correction type and related computational methods for aerodynamic design. Part 1: Airfoil and wing design p 70 N95-16566
Tools for applied engineering optimization p 70 N95-16570
A selection of experimental test cases for the validation of CFD codes, volume 2 [AGARD-AR-303-VOL-2] p 21 N95-17846
Interference corrections for a centre-line plate mount in a porous-walled transonic wind tunnel p 29 N95-19280

AERODYNAMIC DRAG
Aircraft drag analysis methods p 49 N92-23957
Special Course on Skin Friction Drag Reduction [AGARD-R-786] p 2 N92-27706
Basic concepts on boundary layers p 2 N92-27707
Drag reduction: An industrial challenge p 2 N92-27708
Aircraft drag reduction p 2 N92-27709
Boundary layer transition: Prediction, application to drag reduction p 2 N92-27711
Turbulent skin-friction drag reduction by active and passive means, part 1 p 3 N92-27714
Hypersonic propulsion system force accounting p 80 N93-13229
The case for surface effect research, platform applications and technology development opportunities p 66 N94-36325
Scale effects on aircraft and weapon aerodynamics [AGARD-AG-323] p 19 N95-14103
Measurements on a two-dimensional aerofoil with high-lift devices p 21 N95-17848
Experimental techniques for measuring transonic flow with a three dimensional laser velocimetry system. Application to determining the drag of a fuselage p 222 N95-19258

AERODYNAMIC FORCES
Unsteady transonic aerodynamics of pointed bodies of revolution in supersonic freestream p 5 N92-27946
Direct coupling of fluid structure in transonic aeroelasticity p 6 N92-27954
Numerical simulation of shock-stall flutter of an airfoil using the Navier-Stokes equations p 105 N92-27956
Experiments on interaction force of jets in hypervelocity cross-flow in a shock tunnel p 17 N94-28022
Force and pressure data of an ogive-nosed slender body at high angles of attack and different Reynolds numbers p 25 N95-17868
Subsonic flow around US-orbiter model FALKE in the DNW p 26 N95-17877
Gyroscopic and propeller aerodynamic effects on engine mounts dynamic loads in turbulence conditions p 71 N95-18599

AERODYNAMIC HEAT TRANSFER
The effect of orthogonal-mode rotation on forced convection in a circular-sectioned tube fitted with full circumferential transverse ribs p 196 N93-29937
Design and production of insulated wind tunnel models of the Hermes shuttle for heat transfer measurements at hypersonic speeds p 116 N94-10431

AERODYNAMIC INTERFERENCE
Survey of experimental techniques for performance prediction p 49 N92-23954
Investigation of interference phenomena of modern wing-mounted high-bypass-ratio engines by the solution of the Euler-equations p 193 N93-13204
Aerodynamic analysis of slipstream/wing/nacelle interference for preliminary design of aircraft configurations p 7 N93-13205
Recent developments in low-speed TPS-testing for engine integration drag and installed thrust reversr simulation p 51 N93-13207
Hypersonic propulsion system force accounting p 80 N93-13229
A study of the use of half-models in high-lift wind-tunnel testing p 16 N94-18434
Vectored jets-induced interference on aircraft, prediction and verification p 202 N94-28012

Lateral jet control for tactical missiles
p 110 N95-14448
2-D aileron effectiveness study p 21 N95-17851
Data from the GARTEur (AD) Action Group 02 airfoil CAST 7/DOA1 experiments p 22 N95-17856
Single-engine tail interference model
p 26 N95-17879
Low speed propeller slipstream aerodynamic effects
p 27 N95-17882
Wall Interference, Support Interference and Flow Field Measurements
| AGARD-CP-535 | p 209 N95-19251
The crucial role of wall interference, support interference and flow field measurements in the development of advanced aircraft configurations
p 209 N95-19252
Boundary-flow measurement methods for wall interference assessment and correction: Classification and review p 210 N95-19262
Estimating wind tunnel interference due to vectored jet flows p 210 N95-19265
Adaptive wind tunnel walls versus wall interference correction methods in 2D flows at high blockage ratios
p 117 N95-19267
Interference determination for wind tunnels with slotted walls p 117 N95-19269
Transonic wind tunnel boundary interference correction p 117 N95-19271
Calculation of low speed wind tunnel wall interference from static pressure pipe measurements
p 211 N95-19273
The traditional and new methods of accounting for the factors distorting the flow over a model in large transonic wind tunnels p 211 N95-19275
Calculation of wall effects of flow on a perforated wall with a code of surface singularities p 211 N95-19277
Evaluation of combined wall- and support-interference on wind tunnel models p 29 N95-19278
Interaction of a three strut support on the aerodynamic characteristics of a civil aviation model
p 29 N95-19279

AERODYNAMIC LOADS
NLR inviscid transonic unsteady loads prediction methods in aeroelasticity p 5 N92-27947
Computation of flutter boundaries in the time and frequency domain p 5 N92-27952
Vortex flow aerodynamics
| AGARD-AR-299 | p 7 N92-30947
Modeling nonlinear aerodynamic loads for aircraft stability and control analysis p 108 N94-11499
Wake structure and aerodynamic behavior of high lift aircraft configurations during unsteady maneuvers in ground effect p 17 N94-18439
Assessment of in-service aircraft fatigue monitoring process p 62 N94-34593
Reduction of fatigue load experience as part of the fatigue management program for F-16 aircraft of the RNLAF p 62 N94-34598
Residual-correction type and related computational methods for aerodynamic design. Part 2: Multi-point airfoil design p 70 N95-16567
Optimal shape design for aerodynamics
p 70 N95-16568
Airfoil optimization by the one-shot method
p 70 N95-16569
Aerodynamic shape optimization p 71 N95-16572
Aircraft Loads due to Turbulence and their Impact on Design and Certification
| AGARD-R-798 | p 110 N95-18597
Design limit loads based upon statistical discrete gust methodology p 72 N95-18603
Brite-Euram programme: ACOUFAT acoustic fatigue and related damage tolerance of advanced composite and metallic structures p 303 N95-19159

AERODYNAMIC NOISE
Non-propulsive aerodynamic noise
p 297 N93-10673
Comparison of flyover noise data from aircraft at high subsonic speeds with prediction p 297 N93-10674
Supersonic acoustic source mechanisms for free jets of various geometries p 298 N93-10680
The prediction of noise radiation from supersonic elliptic jets p 299 N93-10684
Prediction of jet mixing noise for high subsonic flight speeds p 299 N93-10685
Identifying the principal noise sources of fixed-wing combat aircraft in high-speed flight p 299 N93-10686
Mechanisms of sound generation in subsonic jets
p 300 N93-10688
Reduction of propeller noise by active noise control
p 300 N93-10692

AERODYNAMIC STABILITY
Current status of computational methods for transonic unsteady aerodynamics and aeroelastic applications
p 3 N92-27937
Experimental results in aerodynamic stability and control of a TSTO configuration p 106 N94-10424
Stability in Aerospace Systems
| AGARD-R-789 | p 107 N94-11489
Stability analysis and aerospace vehicle dynamics
p 107 N94-11491
On non-linear longitudinal stability of an aircraft in a dive in the presence of atmospheric disturbances
p 107 N94-11492
X-29: Longitudinal instability at high angle-of-attack
p 108 N94-11504
Effects, limits, and limitations of spanwise blowing
p 18 N94-28027
High incidence flow analysis over the Rafale A
p 18 N94-34612
Techniques for aerodynamic characterization and performance evaluation at high angle of attack
p 63 N94-34614
Laminar flow studies at Dassault Aviation: Calculations and flight tests p 207 N94-36328

AERODYNAMIC STALLING
High angle of attack: Aerodynamics p 2 N92-23956
X-31A high angle of attack and initial post stall flight testing p 54 N93-19911
X-31 demonstration of integrated flight and propulsion control for effective combat at extreme angles of attack
p 106 N93-28851
Requirements for pilot assistance in a thrust-vectoring combat aircraft p 270 N93-28870

AERODYNAMICS
Integrated Design Analysis and Optimisation of Aircraft Structures
| AGARD-R-784 | p 47 N92-23227
Special Course on Engineering Methods in Aerodynamic Analysis and Design of Aircraft
| AGARD-R-783 | p 48 N92-23950
Configuration development --- preliminary aircraft design p 48 N92-23953
High angle of attack: Aerodynamics p 2 N92-23956
Comparison of Euler and full potential methods for unsteady transonic flow calculations p 4 N92-27943
Application of piloted simulation to high-angle-of-attack flight-dynamics research for fighter aircraft p 114 N92-28551
A technique for predicting aircraft flow-field effects upon an unguided bomb ballistic trajectory and comparison with flight test results p 8 N93-19922
Nonlinear and dynamic analysis of flight
p 107 N94-11496
Stability model of the atmosphere
p 233 N94-11500
High-Lift System Aerodynamics
| AGARD-CP-515 | p 1 N94-18415
Integrated Airframe Design Technology
| AGARD-R-794 | p 58 N94-24313
Control jets in interaction with hypersonic rarefied flow
p 122 N94-28020
Aerothermochemical calculations in afterburners
p 90 N94-29258
Turbine blade dynamics and blade-vane interaction in a radial inflow turbine p 97 N94-34461
Aerodynamic design of super maneuverable aircraft
p 64 N94-34617
Scale effects on aircraft and weapon aerodynamics
| AGARD-AG-323 | p 19 N95-14103
Quality assessment for wind tunnel testing
| AGARD-AR-304 | p 19 N95-14197
Computational aerodynamics based on the Euler equations
| AGARD-AG-325 | p 19 N95-14264
Missile Aerodynamics
| AGARD-R-804 | p 19 N95-14445
Aeromechanical design of modern missiles
p 19 N95-14446
Engineering Codes for aeroprediction: State-of-the-art and new methods p 19 N95-14447
High angle of attack aerodynamics p 20 N95-14450
Navier-Stokes predictions of missile aerodynamics
p 20 N95-14451
Low speed propeller slipstream aerodynamic effects
p 27 N95-17882

AEROELASTICITY
Integrated Design Analysis and Optimisation of Aircraft Structures
| AGARD-R-784 | p 47 N92-23227
Sensitivity analysis of dynamic aeroelastic responses
p 104 N92-23229
Application of analytical and design tools for fighter wing aeroelastic tailoring p 47 N92-23231
The structural optimization system OPTSYS: Current status and applications p 47 N92-23232
Application of an automated multidisciplinary analysis and optimisation system to the design of aircraft structures p 47 N92-23233
Multidisciplinary optimization studies using ASTROS
p 104 N92-23234
Transonic Unsteady Aerodynamics and Aeroelasticity
| AGARD-CP-507 | p 3 N92-27936
Current status of computational methods for transonic unsteady aerodynamics and aeroelastic applications
p 3 N92-27937
Unstructured-grid methods development for unsteady aerodynamic and aeroelastic analyses p 3 N92-27938
Unsteady aerodynamics for aeroelasticity at the Flight Dynamics Directorate p 3 N92-27939
Recent applications of linear and nonlinear unsteady aerodynamics for aeroelastic analysis p 4 N92-27940
Comparison of Euler and full potential methods for unsteady transonic flow calculations p 4 N92-27943
NLR inviscid transonic unsteady loads prediction methods in aeroelasticity p 5 N92-27947
Transonic aeroelastic calculations in both the time and frequency domains p 5 N92-27950
Aeroelastic calculations for fighter aircraft using the transonic small disturbance equation p 5 N92-27951
Analysis of unsteady aerodynamic and flutter characteristics of an aeroelastic model in transonic flow
p 6 N92-27953
Direct coupling of fluid structure in transonic aeroelasticity p 6 N92-27954
Investigation of the aeroelastic stability of the AFW wind-tunnel model using CAP-TSD p 6 N92-27955
Numerical simulation of shock-stall flutter of an airfoil using the Navier-Stokes equations p 105 N92-27956
Transonic aeroelastic computations on wings using Navier-Stokes equations p 6 N92-27957
Development of a method to predict transonic limit cycle oscillation characteristics of fighter aircraft
p 105 N92-27958
The benchmark aeroelastic models program: Description and highlights of initial results
p 6 N92-27960
Practical architecture of design optimisation software for aircraft structures taking the MBB-Lagrange code as an example p 50 N92-28471
Structural optimization of aircraft p 50 N92-28472
Mathematical optimization: A powerful tool for aircraft design p 50 N92-28474
Current and future design methods for large transport aircraft p 60 N94-24324
Vibrations of structures with cyclic symmetry: Application to the case of turbine engines
p 227 N94-34463

AERONAUTICAL ENGINEERING
Modelisation and computation of composite materials
p 130 N93-21518
Frameworks for integrated airframe design
p 58 N94-24318
The process network in the design and manufacturing of aircraft p 59 N94-24319

AERONAUTICS
AGARD index of publications, 1989-1991
| AGARD-INDEX-89-91 | p 312 N93-10610
Directory of factual and numeric databases of relevance to aerospace and defence R and D
| AGARD-R-777 | p 312 N93-11710

AEROSERVOELASTICITY
Aeroservoelastic stabilization considerations for pointing and tracking systems p 223 N94-36627

AEROSOLS
Remote Sensing of the Propagation Environment
| AGARD-CP-502 | p 230 N92-22790
Radio refractivity profiles deduced from aerosol lidar measurements
| AD-A249074 | p 152 N92-22796
Remote sensing of aerosol extinction using single-ended lidars p 232 N92-22811
Lidar remote sensing techniques for developing and evaluating atmospheric aerosol models
p 232 N92-22813
Far-infrared characterization of horizontal path image degradation p 153 N92-22814
Granulometry in environments with very small particle concentrations p 173 N94-30511
Sensing of radio refractivity and aerosol extinction
p 175 N95-14830

AEROSPACE ENGINEERING
AGARD index of publications, 1989-1991
| AGARD-INDEX-89-91 | p 312 N93-10610
Directory of factual and numeric databases of relevance to aerospace and defence R and D
| AGARD-R-777 | p 312 N93-11710
An overview of DARPA's advanced space technology program p 118 N93-29908
Probabilistic simulation of concurrent engineering of propulsion systems p 58 N94-24317
The process network in the design and manufacturing of aircraft p 59 N94-24319
Aerospace Software Engineering for Advanced Systems Architectures
| AD-A277101 | p 283 N94-29315
An assessment of fatigue crack growth prediction models for aerospace structures p 228 N94-34586
Possibilities and pitfalls in aerospace applications of titanium matrix composites p 135 N94-36650
Optimum Design Methods for Aerodynamics
| AGARD-R-803 | p 70 N95-16562
Tools for applied engineering optimization
p 70 N95-16570

AEROSPACE ENVIRONMENTS
Protein requirements in hypoxia or hypokinesia
p 271 N93-32244

AEROSPACE INDUSTRY
Applications of CFD codes and supercomputers to aircraft design activities p 58 N94-24316
Frameworks for integrated airframe design
p 58 N94-24318
The global aircraft shape p 70 N95-16571

Review of the EUROPT Project AERO-0026
p 71 N95-16573

AEROSPACE MEDICINE

G-tolerance and spatial disorientation: Can simulation help us? p 234 N92-28534
Allergic, Immunological and Infectious Disease Problems in Aerospace Medicine
[AGARD-CP-518] p 235 N93-11283
Space flight and immune system p 235 N93-11284
Relating cognitive function to military aviator performance in early HIV infection p 238 N93-11298
Epidemiologic view of allergic diseases in North America: Implications for aerospace medicine
p 241 N93-11311
In vivo and in vitro diagnosis of allergic respiratory disease during screening procedures in the Italian Navy: Comparative evaluation of a recent quantitative automatized enzyme immunoassay method to dose specific IgE p 241 N93-11314
Asthma in aircrew: Assessment, treatment and disposition p 241 N93-11315
Allergy screening and follow-up in student pilots of the Belgian Air Force (BAF) p 241 N93-11316
Allergic and nonallergic rhinitis in Greek pilots
p 242 N93-11317
Operational use of contact lenses by military aircrew
[AGARD-AG-334] p 242 N93-15824
Aircraft Accidents: Trends in Aerospace Medical Investigation Techniques
[AGARD-CP-532] p 30 N93-19653
An improved anthropometric test device
p 262 N93-19670
US Army's aviation life support equipment retrieval program real world design successes from proactive investigation p 33 N93-19690
27 years armed forces aerospace pathology and toxicology in the Federal Republic of Germany: Development, current status, trends and challenges
p 243 N93-19696
Significance of histological postmortem findings in pilots killed in military and civil aircraft accidents in Germany (West): A 25-year-review p 243 N93-19697
Medical evaluation of spatial disorientation mishaps
p 260 N93-19703
Nutrition, Metabolic Disorders and Lifestyle of Aircrew
[AGARD-CP-533] p 270 N93-32240
Portable equipment developed to estimate energy expenditure by simultaneous recording of heart rate and body position p 271 N93-32243
Protein requirements in hypoxia or hypokinesia
p 271 N93-32244
Idiopathic Reactive Hypoglycemia in a population of healthy trainees of an Italian Air Force military school
p 272 N93-32248
Lipidemic profile of Hellenic Airforce officers
p 245 N93-32250
Cardiovascular Risk Factors (CVRF) in Spanish pilots with coronary artery disease demonstrated by angiographic studies p 245 N93-32253
Results and management of pathological lipoprotein concentrations and other cardiovascular risk factors in military pilots of the German Federal Armed Forces
p 245 N93-32254
The influence of dietary counseling and cardiac catheterization on lipid profiles in American military aviators p 273 N93-32259
Changes in some lifestyle parametres in Norwegian pilots as students, and after 6 and 12 years of service
p 273 N93-32261
Survey of smoking habits in the Spanish Air Force
p 273 N93-32262
Cardiopulmonary Aspects in Aerospace Medicine
[AGARD-LS-189] p 246 N94-23313
Cardiovascular and pulmonary disease in NATO aircrew: An overview p 246 N94-23314
Screening for asymptomatic coronary heart disease
p 246 N94-23315
Aeromedical disposition for coronary artery disease
p 246 N94-23316
Primary prevention of coronary heart disease
p 246 N94-23317
Aeromedical disposition of Arrhythmias and electrocardiographic findings in aircrew
p 246 N94-23318
Echocardiographic screening of aircrew candidates
p 247 N94-23319
Echocardiographic findings in trained aircrew: The effect of +Gz on cardiac structure (working group 18)
p 247 N94-23320
Aortic valve disease p 247 N94-23322
Aeromedical implications of mitral valve prolapse
p 247 N94-23323
Sarcoidosis and the aviator p 248 N94-23325
Spontaneous pneumothorax, cysts and bullae
p 248 N94-23326
Asthma in aircrew p 248 N94-23327
Arterial hypertension and the aviator
p 248 N94-23328
Visual Problems in Night Operations
[AGARD-LS-187] p 275 N94-23976
The Support of Air Operations under Extreme Hot and Cold Weather Conditions
[AGARD-CP-540] p 234 N94-28420
The concept of Royal Navy air operations under extreme environmental conditions p 295 N94-28424
Aeromedical support for casualties in extremely hot climates p 277 N94-28443
Work conditions assessment in pilots and ground personnel under high weather temperatures
p 277 N94-28444
Test of a new protection suit in a climatic chamber
p 278 N94-28452
Psychophysiological assessment methods (including a register of psychophysiologists on microfiches)
[AGARD-AR-324] p 261 N95-12133
The Clinical Basis for Aeromedical Decision Making
[AGARD-CP-553] p 252 N95-19413
Aeromedical risk management for aircrew
p 252 N95-19414
The way to waivers in the BAF p 253 N95-19415
The waiver process and disqualifying medical conditions in US Naval aviation personnel
p 253 N95-19416
The effect of special boards of flight surgeons on the evolution of US Naval flight standards
p 253 N95-19417
Fit to fly: Analysis of the aeromedical disposition in aircrewmembers of the Spanish Armed Forces
p 253 N95-19418
AMDRS: A resource for intelligent aeromedical decision-making p 254 N95-19419
Relevance of laboratory tests in aeromedical decisions p 254 N95-19420
TSH determination in subjects with medium-low levels of serum thyroxine p 254 N95-19421
EKG in flight: Usefulness and limits for aircrew rehabilitation p 254 N95-19422
Evaluation of the EKG's isoelectric T wave in Air Force pilots p 254 N95-19423
The concept of aeronautical adaptability as developed by the US Navy p 255 N95-19426
The NAMI syncope test battery and clinical decision-making in aviators with syncope
p 255 N95-19428
Neuropsychophysiologic sequelae of mild head injury
p 256 N95-19430
Neurological decision making in aviation medicine based on electrophysiological methods
p 256 N95-19431
Clinical basis for aeromedical decision-making: The EEG example p 256 N95-19433
The aeromedical implications of supraventricular tachycardia p 257 N95-19437
Sarcoidosis in US military aviators
p 257 N95-19438
The aeromedical risk associated with asymptomatic cholelithiasis in USAF pilots and navigators
p 258 N95-19439
Clinical basis for aeromedical decisions in aircrew HIV positive p 258 N95-19440
Color vision issues in modern military aviation or the search for the Abominable Coneman
p 258 N95-19441
Photorefractive Keratectomy (PRK) in the military aviator: An aeromedical expose p 258 N95-19442
Medication in the course of active flying duty
p 258 N95-19443

AEROSPACE PLANES

Air inlet with variable intake section: Application to air breathing launch vehicles p 195 N93-13231
The National Aero-Space Plane program: A revolutionary concept p 53 N93-19908
Aerodynamic and aerothermal challenges for the design of the Hermes spaceplane p 119 N94-10423
Some problems of scramjet propulsion for aerospace planes. Part 1: Scramjet: Aims and features
p 92 N94-29295
Some problems of scramjet propulsion for aerospace planes. Part 2: Scramjet: Development and test problems p 93 N94-29301

AEROSPACE SCIENCES

Acquisition 1: Stock acquisition processes in defence and aerospace documentation centres
p 311 N93-10598
AGARD index of publications, 1989-1991
[AGARD-INDEX-89-91] p 312 N93-10610
Problems of international exchange of scientific and technical information for a Russian aerospace research institute p 316 N94-37339

AEROSPACE SYSTEMS

A system approach to aircraft optimization
p 47 N92-23228
The National Aero-Space Plane program: A revolutionary concept p 53 N93-19908
Advances in automatic electro-optical tracking systems p 305 N93-22020
Tactical satellites p 119 N93-29893
Spacecraft and launch systems for TACSAT applications p 120 N93-29904
An overview of DARPA's advanced space technology program p 118 N93-29908
On possible applications of smart structures to control of space systems p 121 N94-11342
Stability in Aerospace Systems
[AGARD-R-789] p 107 N94-11489
A generalization of the software engineering maturity model p 286 N94-29341

AEROSPACE TECHNOLOGY TRANSFER

AGARD index of publications, 1989-1991
[AGARD-INDEX-89-91] p 312 N93-10610
Problems of international exchange of scientific and technical information for a Russian aerospace research institute p 316 N94-37339

AEROSPACE VEHICLES

A CFD validation roadmap for hypersonic flows
p 198 N94-10439
Stability analysis and aerospace vehicle dynamics
p 107 N94-11491
Possibilities and pitfalls in aerospace applications of titanium matrix composites p 135 N94-36650

AEROTHERMOCHEMISTRY

Issues and approach to develop validated analysis tools for hypersonic flows: One perspective
p 11 N94-10446
Aerothermochemical calculations in afterburners
p 90 N94-29258

AEROTHERMODYNAMICS

Presentation of a computational code for 3-D compressible flow in complex channels and cavities
p 189 N92-27475
Aerothermodynamics of nozzle flows for advanced hypersonic propulsion systems p 189 N92-27478
Steady and Transient Performance Prediction of Gas Turbine Engines
[AGARD-LS-183] p 79 N92-28458
Smaller expendable turbojets p 83 N93-17621
Heat transfer in high turbulence flows: A 2-D planar wall jet p 195 N93-29935
Aerothermic calculations of flows in interdisc cavities of turbines p 86 N93-29947
Aero-thermal design of a cooled transonic NGV and comparison with experimental results
p 87 N93-29957
Planetary entry vehicle design for planned and potential ESA missions to Titan, Mars, and Earth return (FGE TN 51/92) p 121 N94-10428
Issues and approach to develop validated analysis tools for hypersonic flows: One perspective
p 11 N94-10446
Thermodynamic model of air in chemical equilibrium
p 307 N94-10448
Three-dimensional hypersonic rarefied flow calculations using direct simulation Monte Carlo method
p 11 N94-10449
Numerical methods for aerothermodynamic design of hypersonic space transport vehicles
p 119 N94-10459
Local aerothermal problems during Hermes re-entry
p 13 N94-10464
Ducted kerosene spray flames p 142 N94-29276
Guide to the measurement of the transient performance of aircraft turbine engines and components
[AD-280272] p 93 N94-33874
Microturbo's experience in the field of APU for civil and military applications and our role in the face of the challenges of the future p 95 N94-34440
Design and aerodynamic performance evaluation of a high-work mixed flow turbine stage p 97 N94-34459
Design and operation of a thermoacoustic test facility
p 117 N95-19150
Thermo-acoustic fatigue design for hypersonic vehicle skin panels p 229 N95-19161

AFTERBODIES

Survey on techniques used in aerodynamic nozzle/airframe integration p 51 N93-13224
CFD calibration for three-dimensional nozzle/afterbody configurations p 195 N93-13226
Single-engine tail interference model
p 26 N95-17879
Twin engine afterbody model p 27 N95-17880
Transonic and supersonic flowfield measurements about axisymmetric afterbodies for validation of advanced CFD codes p 28 N95-19260

AFTERBURNING

Aerothermochemical calculations in afterburners
p 90 N94-29258
Technology rigs: A tool for afterburner development
p 91 N94-29270
Single-engine tail interference model
p 26 N95-17879

AGE FACTOR

Chronic obstructive pulmonary disease
p 247 N94-23324

AGING (MATERIALS)

Evaluation of the effects of the environment on the behavior of the primary structures of composite material aircraft in service: Historic and current situation
p 127 N92-33048

AH-64 HELICOPTER

The use of a dedicated testbed to evaluate simulator training effectiveness p 112 N92-28533

AILERONS
2-D aileron effectiveness study p 21 N95-17851
AIR BAG RESTRAINT DEVICES
US Army helicopter inertia reel locking failures p 33 N93-19689
The effectiveness of airbags in reducing the severity of head injury from gunsight strikes in attack helicopters p 34 N93-19691
AIR BREATHING ENGINES
Aerothermodynamics of nozzle flows for advanced hypersonic propulsion systems p 189 N92-27478
Aerodynamic studies of supersonic air intakes p 8 N93-13222
Air inlet with variable intake section: Application to air breathing launch vehicles p 195 N93-13231
Airbreathing Propulsion for Missiles and Projectiles [AGARD-CP-526] p 123 N93-17607
Development testing of throttleable ducted rockets p 123 N93-17610
Aerodynamic engine/airframe integration for high performance aircraft and missiles p 52 N93-17618
A CFD validation roadmap for hypersonic flows p 198 N94-10439
Research and development of ramjets/ramrockets. Part 1: Integral solid propellant ramrockets p 92 N94-29294
AIR CARGO
The future of large capacity/long range multipurpose air cargo fleets p 67 N94-36326
AIR CONDITIONING
Experimental evaluation of two systems of individual air-conditioning p 251 N94-28450
AIR CONDITIONING EQUIPMENT
The use of liquid and air microclimate conditioning systems to alleviate heat stress in helicopter NBC operations p 278 N94-28453
AIR COOLING
Transient thermal behaviour of a compressor rotor with axial cooling air flow and co-rotating or contra-rotating shaft p 86 N93-29946
Impingement/effusion cooling p 197 N93-29954
The use of liquid and air microclimate conditioning systems to alleviate heat stress in helicopter NBC operations p 278 N94-28453
Chambers of turboreactors with variable geometry: A response to the matrix of pollution in cycles at high temperature, high pressure p 141 N94-29273
AIR DEFENSE
Air situation establishment in a mobile multisensor environment p 292 N92-27891
Situation assessment in the Paladin tactical decision generation system p 292 N92-27892
A teamwork model of pilot aiding: Psychological principles for mission management systems design p 292 N92-27893
Optimal guidance anticipating missile performance p 118 N92-27902
Combat aircraft operations: Training requirements for the German Air Force tactical flying units and the noise problem p 296 N93-10667
Combat aircraft noise: The operator's perspective p 296 N93-10669
Electromagnetic radiating source elimination (ERASE) program p 157 N93-22019
Versatile attack weapon p 149 N93-22027
Detection of active emitters using triangulation and trilateration techniques: Theory and practice p 160 N93-23612
Planning for air to air combat p 293 N93-28852
Computer assisted evaluation for air close combat based on time interval characterization p 293 N93-28868
Requirements for pilot assistance in a thrust-vectoring combat aircraft p 270 N93-28870
AIR FILTERS
Application of CFD in the design of gas turbine engine components p 78 N92-27461
AIR FLOW
ASTOVL model engine simulators for wind tunnel research p 115 N93-13213
Aerothermic calculations of flows in interdisc cavities of turbines p 86 N93-29947
Evaluation of the transient operation of advanced gas turbine combustors p 91 N94-29269
Chambers of turboreactors with variable geometry: A response to the matrix of pollution in cycles at high temperature, high pressure p 141 N94-29273
The influence of air distribution on homogeneity and pollutant formation in the primary zone of a tubular combustor p 141 N94-29274
Vibrations of structures with cyclic symmetry: Application to the case of turbine engines p 227 N94-34463
A selection of experimental test cases for the validation of CFD codes, volume 2 [AGARD-AR-303-VOL-2] p 21 N95-17846
AIR INTAKES
CFD contributions during hypersonic airplane intake design p 188 N92-27472
A novel-high-performance system for recording and analysing instantaneous total pressure distortion in air intakes p 219 N93-13215
AGARD WG13 aerodynamics of high speed air intakes: Assessment of CFD results p 194 N93-13220
Aerodynamic studies of supersonic air intakes p 8 N93-13222
Air inlet with variable intake section: Application to air breathing launch vehicles p 195 N93-13231
Protective coatings for compressor gas path components p 102 N95-19675
AIR JETS
Transitional flight characteristics of a geometrically simplified STOVL model p 61 N94-28035
Analysis of cooling jets near the leading edge of turbine blades p 90 N94-28037
Inclined air-jets used as vortex generators to suppress shock-induced separation p 18 N94-28040
The mixing process in the quenching zone of the rich-lean-combustion concept p 142 N94-29281
Temperature and combustion analysis of combustor with acoustically controlled primary zone air-jet mixing p 143 N94-29284
AIR NAVIGATION
Object oriented design of the autonomous fixtaking management system p 41 N94-29323
Ground independent landing system p 42 N94-29564
GPS/GNSS for ATM p 42 N94-29565
Simulation of fully automated air traffic control concepts p 43 N94-29569
Interactive analysis and planning tools for air traffic and airspace management p 43 N94-29573
ARC2000: Automatic radar control p 45 N94-29583
Landing of an unmanned helicopter on a moving platform. High accuracy navigation and tracking p 69 N94-36618
Assistance in instruction and training of air traffic controllers p 261 N94-37265
Modular CNI avionics system p 77 N95-20659
AIR POLLUTION
On the effect of emissions from aircraft engines on the state of the atmosphere p 229 N94-29247
Pollutant emissions from and within a model gas turbine combustor at elevated pressures and temperatures p 141 N94-29271
Reduction of NO(x) by fuel-staging in gas turbine engines: A commitment to the future p 141 N94-29272
The influence of air distribution on homogeneity and pollutant formation in the primary zone of a tubular combustor p 141 N94-29274
Granulometry in environments with very small particle concentrations p 173 N94-30511
Damage of high temperature components by dust-laden air p 102 N95-19673
Gas turbine compressor corrosion and erosion in Western Europe p 103 N95-19678
AIR TO AIR MISSILES
Potential missile flight performance gains from improvements to the propulsion system p 123 N93-17609
Pilot decision aiding for weapon delivery: A novel approach to fire control cueing using parallel computing p 268 N93-28853
AIR TO AIR REFUELING
The testing of fixed wing tanker and receiver aircraft to establish their air-to-air refuelling capabilities [AGARD-AG-300-VOL-11] p 55 N93-21305
EH101: A new helicopter capable of long range missions p 67 N94-36330
In-flight refueling: Dassault Aviation research on the Rafale aircraft p 68 N94-36341
Future tanker considerations and requirements p 68 N94-36342
Aerial refueling interoperability from a receiver flying qualities perspective p 68 N94-36343
Tanker system and technology requirements definition: A tanker technology road map p 68 N94-36344
Hose-drogue versus boom receptacle air refueling p 68 N94-36345
CC-130H(T) tactical aerial refuelling tanker development flight test programme p 69 N94-36347
AIR TO SURFACE MISSILES
Comparison of performances of different circular intakes p 83 N93-17616
Versatile attack weapon p 149 N93-22027
AIR TRAFFIC
Implementation and operational experience with a new arrival traffic management system at the Frankfurt ATC-Center p 38 N92-27905
Machine Intelligence in Air Traffic Management [AD-A275680] p 41 N94-29558
Ground independent landing system p 42 N94-29564
GPS/GNSS for ATM p 42 N94-29565
Contributions of DLR to air traffic capacity enhancement within a terminal area p 42 N94-29567
Simulation of fully automated air traffic control concepts p 43 N94-29569
DLR's ATM demonstration programme p 44 N94-29575
On-line handling of air traffic: Management, guidance and control [AGARD-AG-321] p 46 N95-18927
AIR TRAFFIC CONTROL
Air Vehicle Mission Control and Management [AGARD-CP-504] p 1 N92-27887
Knowledge-based planning for controlled airspace flight operation as part of a cockpit assistant p 37 N92-27895
On board planning of 4D-trajectories p 37 N92-27897
Implementation and operational experience with a new arrival traffic management system at the Frankfurt ATC-Center p 38 N92-27905
Machine Intelligence in Air Traffic Management [AD-A275680] p 41 N94-29558
Advances in development capabilities for intelligent air traffic management systems p 41 N94-29559
Intelligent systems for air space control and management p 41 N94-29560
Use of advanced technologies in ATM (air traffic management) domain p 41 N94-29561
Air traffic management as principled negotiation between intelligent agents p 42 N94-29562
Use of GPS in automated air traffic control p 42 N94-29563
Ground independent landing system p 42 N94-29564
GPS/GNSS for ATM p 42 N94-29565
ACCS Surveillance Exploratory Prototype (ASEP) p 170 N94-29566
Contributions of DLR to air traffic capacity enhancement within a terminal area p 42 N94-29567
Design of Center-TRACON Automation System p 43 N94-29568
Simulation of fully automated air traffic control concepts p 43 N94-29569
Decision Making Aids (DMA) in on-line ATC systems p 43 N94-29570
Cognitive approach to specifications on air traffic controllers' decision assistance systems p 43 N94-29571
Considerations on graphical user interfaces for intelligent ATM support systems p 43 N94-29572
Interactive analysis and planning tools for air traffic and airspace management p 43 N94-29573
DAISY: A decision aid for an air situation interpretation system p 44 N94-29574
DLR's ATM demonstration programme p 44 N94-29575
Advanced air traffic control and flight management system concepts p 44 N94-29576
Opportunities for integrating the aircraft FMS, aeronautical operational control centers, and future air traffic management systems in oceanic airspace p 44 N94-29577
Profile negotiation: An air/ground automation integration concept for managing arrival traffic p 45 N94-29578
Air-ground integration of the ATM system in PHARE p 45 N94-29579
Experimental flight management system p 45 N94-29580
The PHARE advanced tools p 45 N94-29581
The Common Modular Simulator (CMS): An architecture test bed for future advanced ATM systems p 45 N94-29582
ARC2000: Automatic radar control p 45 N94-29583
A novel near-range radar network for airport surface control p 46 N94-29586
Development of precision runway monitor system for increasing capacity of parallel runway operations p 46 N94-29587
On-line handling of air traffic: Management, guidance and control [AGARD-AG-321] p 46 N95-18927
AIR TRAFFIC CONTROLLERS (PERSONNEL)
Decision Making Aids (DMA) in on-line ATC systems p 43 N94-29570
Cognitive approach to specifications on air traffic controllers' decision assistance systems p 43 N94-29571
Considerations on graphical user interfaces for intelligent ATM support systems p 43 N94-29572
Interactive analysis and planning tools for air traffic and airspace management p 43 N94-29573
DAISY: A decision aid for an air situation interpretation system p 44 N94-29574
Assistance in instruction and training of air traffic controllers p 261 N94-37265
AIR TRANSPORTATION
Technology and standards for a common air mission planner p 293 N92-27899
The future of large capacity/long range multipurpose air cargo fleets p 67 N94-36326
AIR WATER INTERACTIONS
A virtual sensor for evaporation ducts: The impact of data uncertainties p 229 N92-22799

Modelling of microwave propagation and clutter in a maritime environment p 179 N95-20938

AIRBORNE EQUIPMENT

Applications of ASICs to avionics [AGARD-AG-329] p 73 N92-28376

Multisensor airborne target acquisition systems and their integration p 73 N92-32439

Airborne system for detection and location of radio interference sources p 161 N93-23622

An airborne monitoring system for FOD and erosion faults p 102 N95-19668

AIRBORNE RADAR

Ground independent landing system p 42 N94-29564

AIRBORNE/SPACEBORNE COMPUTERS

Mission planning systems for tactical aircraft (pre-flight and in-flight) [AGARD-AR-313] p 35 N93-21187

Software engineering methods in the Hermes on-board software p 284 N94-29326

Ada run time system certification for avionics applications p 75 N94-29332

On ground system integration and testing: A modern approach p 75 N94-29334

Testing Operational Flight Programs (OFPs) p 285 N94-29337

AIRCRAFT ACCIDENT INVESTIGATION

Human factors in aircraft accident investigation p 30 N93-19654

A method for investigating human factor aspects of military aircraft accidents p 30 N93-19656

The human factor problem in the Canadian Forces aviation p 31 N93-19657

Underlying causes of accidents: Casual networks p 31 N93-19658

Assessment of morale in Turkish Air Force pilots with two clinical psychological tests p 259 N93-19660

A novel near-range radar network for airport surface control p 46 N94-29586
Development of precision runway monitor system for increasing capacity of parallel runway operations
p 46 N94-29587
Results from the STOL and Maneuver Technology Demonstration program p 63 N94-34611
On-line handling of air traffic: Management, guidance and control
| AGARD-AG-321 | p 46 N95-18927

AIRCRAFT HAZARDS
Winter storms research in Canada
p 234 N95-14895
Icing: Accretion, detection, protection
p 36 N95-14897
Heavy rain effects p 36 N95-14899

AIRCRAFT ICING
Winter storms research in Canada
p 234 N95-14895
Icing: Accretion, detection, protection
p 36 N95-14897

AIRCRAFT INDUSTRY
Fundamentals of structural optimisation
p 50 N92-28470
Applications of CFD codes and supercomputers to aircraft design activities p 58 N94-24316
The industrial use of CFD in the design of turbomachinery p 207 N95-14133

AIRCRAFT INSTRUMENTS
Equipment, more or less ready to be used in helicopters p 267 N93-19785
The design and development of the new RAF standard HUD format p 268 N93-28856
Cognitive interface considerations for intelligent cockpits p 270 N93-28865
GPS/GNSS for ATM p 42 N94-29565

AIRCRAFT LANDING
Aircraft ship operations
| AGARD-AR-312 | p 49 N92-28468
Active landing gear control for improved ride quality during ground roll p 56 N94-11345
A study of jet effect and ground effect interference on a STOL fighter p 60 N94-28034
Landing of an unmanned helicopter on a moving platform. High accuracy navigation and tracking
p 69 N94-36618
Two-axis camera platform for machine vision
p 290 N94-36628

AIRCRAFT MAINTENANCE
Environmentally Safe and Effective Processes for Paint Removal
| AGARD-R-791 | p 149 N94-10613
Paint removal activities in the US Navy
p 149 N94-10614
Paint removal activities in Canada
p 149 N94-10615
Procedures without danger to the environment and efficiency (PSDEE) for the removal of paint. Point on the French activities concerning the removal of paint
p 150 N94-10616
Paint removal activities in Germany
p 150 N94-10617
The development of alternative paint removal techniques in the RAF p 150 N94-10618
Operational aspects of F.16 plastic media blasting, as carried out by Fokker Aircraft Services
p 150 N94-10619
Use of robots for aircraft dry stripping via plastic media blasting p 150 N94-10620
German Air Forces experiences with plastic media blasting and future requirements p 150 N94-10621
Plastic media blasting activities at Hill Air Force Base
p 150 N94-10622
Large Aircraft Robotic Paint Stripping (LARPS) system and the high pressure water process
p 151 N94-10623
Automated Laser Paint Stripping (ALPS) update
p 151 N94-10624
Aquastrip (tm): An innovative paint removal technology
p 151 N94-10625
Paint removal and surface cleaning using ice particles
p 151 N94-10626
Paint removal using wheat starch blast media
p 151 N94-10627
IATA taskforce: Paintstripping p 151 N94-10628
Selectively strippable paint schemes
p 152 N94-10629
A Recommended Methodology for Quantifying NDE/NDI Based on Aircraft Engine Experience
| AGARD-LS-190 | p 89 N94-11022
Smart structures: A technology for next generation aircraft p 55 N94-11318
In-flight aircraft structure health monitoring based on smart structures technology p 35 N94-11333
Risk analysis of the C-141 WS405 inner-to-outer wing joint p 62 N94-34592
The role of fatigue analysis for design of military aircraft p 62 N94-34594
Calculations used to optimize the installation of civil aircraft engines p 67 N94-36332
Training and operations support system (TOPS)
p 317 N94-37344
Erosion, Corrosion and Foreign Object Damage Effects in Gas Turbines
| AGARD-CP-558 | p 99 N95-19653
Out of area experiences with the RB199 in Toronto
p 99 N95-19654
The operation of gas turbine engines in hot and sandy conditions: Royal Air Force experiences in the Gulf conflict p 100 N95-19655
Navy foreign object damage and its impact on future gas turbine engine low pressure compression systems
p 100 N95-19658
Scandinavian Airlines Systems experience on erosion, corrosion and foreign object damage effects on gas turbines p 100 N95-19659

AIRCRAFT MANEUVERS
Development and evaluation of an attack and maneuvering system with combat development simulators as main development tool
p 113 N92-28541
Propulsion integration results of the STOL and Maneuver Technology Demonstrator p 52 N93-13228
On automated analysis of flight test data
p 54 N93-19913
X-31 demonstration of integrated flight and propulsion control for effective combat at extreme angles of attack
p 106 N93-28851
Planning for air to air combat p 293 N93-28852
The design and development of the new RAF standard HUD format p 268 N93-28856
Adaptive reconfigurable flight controls for high angle of attack aircraft agility p 108 N94-11502
Operational agility
| AD-A283336 | p 61 N94-33875
USAF/AEDC aerodynamic and propulsion ground test and evaluation techniques for highly maneuverable aircraft: Capabilities and challenges p 63 N94-34606
Thrust vector aided maneuvering of the YF-22 Advanced Tactical Fighter prototype p 63 N94-34610
Results from the STOL and Maneuver Technology Demonstration program p 63 N94-34611
X-31 tactical utility: Initial results p 64 N94-34620
Flying qualities evaluation maneuvers
p 64 N94-34623
The influence of flying qualities on operational agility
p 65 N94-34628
An agility metric structure for operational agility
p 65 N94-34629
Application of centrifuge based dynamic flight simulation to enhanced maneuverability RDT/E
p 116 N94-34630
Optimal tactics for agile aircraft technology: A differential game methodology p 295 N94-34631

AIRCRAFT MODELS
ASTOVL model engine simulators for wind tunnel research p 115 N93-13213
On non-linear longitudinal stability of an aircraft in a dive in the presence of atmospheric disturbances
p 107 N94-11492
Nonlinear and dynamic analysis of flight
p 107 N94-11496

Adaptive reconfigurable flight controls for high angle of attack aircraft agility p 108 N94-11502
A study of the use of half-models in high-lift wind-tunnel testing p 16 N94-18434
High lift systems for transport aircraft with advanced airfoils p 57 N94-18446
Yaw control by tangential forebody blowing p 109 N94-34615
Measurements on a two-dimensional aerofoil with high-lift devices p 21 N95-17848
Two-dimensional 16.5 percent thick supercritical airfoil NLR 7301 p 22 N95-17854
Low-speed surface pressure and boundary layer measurement data for the NLR 7301 airfoil section with trailing edge flap p 22 N95-17855
Data from the GARTEur (AD) Action Group 02 airfoil CAST 7/DOA1 experiments p 22 N95-17856
A supercritical airfoil experiment p 23 N95-17858
Two-dimensional high-lift airfoil data for CFD code validation p 23 N95-17859
Measurements of the flow over a low aspect-ratio wing in the Mach number range 0.6 to 0.87 for the purpose of validation of computational methods. Part 1: Wing design, model construction, surface flow. Part 2: Mean flow in the boundary layer and wake, 4 test cases p 23 N95-17860
Detailed study at supersonic speeds of the flow around delta wings p 24 N95-17861
Investigation into the aerodynamic characteristics of a combat aircraft research model fitted with a forward swept wing p 27 N95-17884
Estimating wind tunnel interference due to vectored jet flows p 210 N95-19265

AIRCRAFT NOISE
Combat Aircraft Noise
| AGARD-CP-512 | p 296 N93-10666
Combat aircraft noise: The operator's perspective p 296 N93-10669
Non-propulsive aerodynamic noise p 297 N93-10673
Comparison of flyover noise data from aircraft at high subsonic speeds with prediction p 297 N93-10674
A brief review of the source noise technology applicable to fixed-wing military aircraft p 298 N93-10678
Reduction of propeller noise by active noise control p 300 N93-10692
Helicopter internal noise p 301 N95-19144
Impact of noise environment on engine nacelle design p 302 N95-19147
Modelling structurally damaging twin-jet screech p 72 N95-19154
An overall approach of cockpit noise verification in a military aircraft p 303 N95-19163
Noise transmission and reduction in turboprop aircraft p 303 N95-19164

AIRCRAFT PERFORMANCE
Survey of experimental techniques for performance prediction p 49 N92-23954
Technical evaluation report on the Flight Mechanics Panel Symposium on Flying Qualities
| AGARD-AR-311 | p 49 N92-27870
Technical measures for the attenuation of aircraft noise and their applicability to GAF combat aircraft p 300 N93-10690
AM-X high angle of attack flight test experience (single and two seat versions) p 53 N93-19910
In-flight structural mode excitation system for flutter testing p 105 N93-19915
Decoupling of aircraft responses p 107 N94-11497
Stability model of the atmosphere p 233 N94-11500
High lift and the forward swept wing p 57 N94-18436
Design, development, and flight evaluation of the Boeing YC-14 USB powered lift aircraft p 57 N94-18444
High-lift design for large civil aircraft p 57 N94-18445
Experiments into the scaling parameters required for exhaust gas ingestion testing of vertical landing aircraft p 60 N94-28017
Transitional flight characteristics of a geometrically simplified STOVL model p 61 N94-28035
Operational agility
| AD-A283336 | p 61 N94-33875
X-31 tactical utility: Initial results p 64 N94-34620
EFA flying qualities specification and its utilisation p 64 N94-34621
The influence of flying qualities on operational agility p 65 N94-34628
An agility metric structure for operational agility p 65 N94-34629
Recent Advances in Long Range and Long Endurance Operation of Aircraft
| AGARD-CP-547 | p 66 N94-36321
Scale effects on aircraft and weapon aerodynamics
| AGARD-AG-323 | p 19 N95-14103
Flight in an Adverse Environment
| AGARD-LS-197 | p 36 N95-14893
Wind shear and its effects on aircraft p 36 N95-14898
Heavy rain effects p 36 N95-14899
Turbulence: Engineering models, aircraft response p 110 N95-14900
Design limit loads based upon statistical discrete gust methodology p 72 N95-18603

AIRCRAFT PILOTS
Status of automatic guidance systems for rotorcraft in low altitude flight p 37 N92-27894
ICAAS piloted simulation evaluation p 72 N92-27906
Aircraft simulation and pilot proficiency: From surrogate flying towards effective training p 112 N92-28532
The use of a dedicated testbed to evaluate simulator training effectiveness p 112 N92-28533
Relating cognitive function to military aviator performance in early HIV infection p 238 N93-11298
The screening of inhalant allergic diseases in the selection of candidates for aircraft piloting p 241 N93-11312
In vivo and in vitro diagnosis of allergic respiratory disease during screening procedures in the Italian Navy: Comparative evaluation of a recent quantitative automatized enzyme immunoassay method to dose specific IgE p 241 N93-11314
Allergy screening and follow-up in student pilots of the Belgian Air Force (BAF) p 241 N93-11316
Allergic and nonallergic rhinitis in Greek pilots p 242 N93-11317
Medical evaluation of spatial disorientation mishaps p 260 N93-19703
The next generation female in cockpit: Do we need a new approach to cockpit resource management (CRM)? p 263 N93-19704
Head-steered sensor flight test results and implications p 269 N93-28859
The quest for an integrated flying helmet p 269 N93-28860
The physiological limitations of man in the high G environment p 269 N93-28861
Nutritional assessment of United States tactical air command pilots p 271 N93-32242
The lifestyle and dietary consumption patterns of United States Air Force aviators within air training command at Randolph Air Force Base, Texas p 272 N93-32257
The influence of dietary counseling and cardiac catheterization on lipid profiles in American military aviators p 273 N93-32259
Changes in some lifestyle parametres in Norwegian pilots as students, and after 6 and 12 years of service p 273 N93-32261
The effects of cockpit heat on aviator sleep parameters p 274 N93-32266
Screening for asymptomatic coronary heart disease p 246 N94-23315
Aeromedical disposition for coronary artery disease p 246 N94-23316
Aeromedical disposition of Arrhythmias and electrocardiographic findings in aircrew p 246 N94-23318
Sarcoidosis and the aviator p 248 N94-23325
Arterial hypertension and the aviator p 248 N94-23328
In flight mission planning in the Copilote Electronique p 295 N94-25015
Fit to fly: Analysis of the aeromedical disposition in aircrewmembers of the Spanish Armed Forces p 253 N95-19418
Is the pilot fit for flying after an accident? p 255 N95-19425
The concept of aeronautical adaptability as developed by the US Navy p 255 N95-19426
Vestibular examination in pilots susceptible to motion sickness p 255 N95-19427
The NAMI syncope test battery and clinical decision-making in aviators with syncope p 255 N95-19428
Think health not disease p 255 N95-19429
The aeromedical implications of supraventricular tachycardia p 257 N95-19437
Photorefractive Keratectomy (PRK) in the military aviator: An aeromedical expose p 258 N95-19442

AIRCRAFT PRODUCTION
The integration of design and manufacturing processes at Alenia DVD p 60 N94-24325

AIRCRAFT RELIABILITY
An Assessment of Fatigue Damage and Crack Growth Prediction Techniques
| AD-280273 | p 227 N94-34581
Harrier 2: A comparison of US and UK approaches to fatigue clearance p 62 N94-34596
Fatigue design, test and in-service experience of the BAe Hawk p 62 N94-34597
Possibilities and pitfalls in aerospace applications of titanium matrix composites p 135 N94-36650

AIRCRAFT SAFETY
The human factor problem in the Canadian Forces aviation p 31 N93-19657
Correlations between engineering, medical and behavioural aspects in fire-related aircraft accidents p 34 N93-19693
An epidemiological study in SAF's pilots ejections p 263 N93-19699
Aircraft flight safety: A bibliography
| AGARD-R-805 | p 35 N94-24091
The principles of flight test assessment of flight-safety-critical systems in helicopters
| AGARD-AG-300-VOL-12 | p 35 N95-14199
Flight in an Adverse Environment
| AGARD-LS-197 | p 36 N95-14893
Heavy rain effects p 36 N95-14899
A study of the effect of store unsteady aerodynamics on gust and turbulence loads p 71 N95-18601
On-line handling of air traffic: Management, guidance and control
| AGARD-AG-321 | p 46 N95-18927
Spine injuries: Up to date evaluation in aircraft ejections p 256 N95-19434
Modern transport engine experience with environmental ingestion effects p 100 N95-19660

AIRCRAFT SPECIFICATIONS
EFA flying qualities specification and its utilisation p 64 N94-34621

AIRCRAFT STABILITY
Vortex flow aerodynamics
| AGARD-AR-299 | p 7 N92-30947
Mass flow effects on the low speed characteristics of an advanced combat aircraft p 7 N93-13214
The testing of fixed wing tanker and receiver aircraft to establish their air-to-air refuelling capabilities
| AGARD-AG-300-VOL-11 | p 55 N93-21305
Stability in Aerospace Systems
| AGARD-R-789 | p 107 N94-11489
Stability analysis and aerospace vehicle dynamics p 107 N94-11491
On non-linear longitudinal stability of an aircraft in a dive in the presence of atmospheric disturbances p 107 N94-11492
Decoupling of aircraft responses p 107 N94-11497
Modeling nonlinear aerodynamic loads for aircraft stability and control analysis p 108 N94-11499
Stability model of the atmosphere p 233 N94-11500
X-29: Longitudinal instability at high angle-of-attack p 108 N94-11504
EFA flying qualities specification and its utilisation p 64 N94-34621

AIRCRAFT STRUCTURES
Integrated Design Analysis and Optimisation of Aircraft Structures
| AGARD-R-784 | p 47 N92-23227
Application of an automated multidisciplinary analysis and optimisation system to the design of aircraft structures p 47 N92-23233
First approach to an integrated fin design p 48 N92-23236
A fin optimisation study p 48 N92-23237
Structural optimization of aircraft practice and trends p 48 N92-23239
Integrated Design Analysis and Optimisation of Aircraft Structures
| AGARD-LS-186 | p 50 N92-28469
Practical architecture of design optimisation software for aircraft structures taking the MBB-Lagrange code as an example p 50 N92-28471
Structural optimization of aircraft p 50 N92-28472
Multidisciplinary design and optimization
| AGARD-PAPER-2 | p 50 N92-28473
Aspects of compression in aerospace composites: Future requirements p 126 N92-33036
Evaluation of the effects of the environment on the behavior of the primary structures of composite material aircraft in service: Historic and current situation p 127 N92-33048
Damage detection by Acousto-Ultrasonic Location (AUL) p 224 N93-21529
Smart Structures for Aircraft and Spacecraft
| AGARD-CP-531 | p 132 N94-11317
Smart structures: A technology for next generation aircraft p 55 N94-11318
In-flight aircraft structure health monitoring based on smart structures technology p 35 N94-11333
Structural health monitoring using embedded fibre optic sensors p 35 N94-11334
Fiber-optic sensor systems for measuring strain and the detection of acoustic emissions in smart structures p 134 N94-11337
Aircraft smart structures research in the USAF Wright Laboratory p 134 N94-11343
Integrated stress and strength analysis of airplane structures using the data processing tool ISSY p 59 N94-24320
Application of concurrent engineering principles to aircraft structural design p 59 N94-24321
Some practical problems in multidisciplinary design and optimisation p 59 N94-24322
An Assessment of Fatigue Damage and Crack Growth Prediction Techniques
| AD-280273 | p 227 N94-34581

An assessment of fatigue crack growth prediction models for aerospace structures p 228 N94-34586
Notch fatigue assessment of aircraft components using a fracture mechanics based parameter p 228 N94-34588
Optimisation of composite aircraft structures by direct manufacturing approaches p 67 N94-36327
Applications of Titanium Matrix Composite to large airframe structure p 135 N94-36651
Impact of Acoustic Loads on Aircraft Structures [AGARD-CP-549] p 301 N95-19142
Current and future problems in structural acoustic fatigue p 301 N95-19143
Impact of noise environment on engine nacelle design p 302 N95-19147
High-temperature acoustic test facilities and methods p 302 N95-19149
Nonlinear dynamic response of aircraft structures to acoustic excitation p 72 N95-19151
Acoustic fatigue testing on different materials and skin-stringer elements p 302 N95-19156
Acoustic fatigue characteristics of advanced materials and structures p 302 N95-19157
Application of superplastically formed and diffusion bonded structures in high intensity noise environments p 303 N95-19162

AIRCRAFT SURVIVABILITY
Propulsion system technologies for long range and long endurance aircraft p 98 N94-36334
Challenge of Future EW System Design [AGARD-CP-546] p 174 N95-14200

AIRCRAFT WAKES
Determination of surface heat transfer and film cooling effectiveness in unsteady wake flow conditions p 85 N93-29933
Wake turbulence p 20 N95-14894

AIRFIELD SURFACE MOVEMENTS
Automatic control steps for aircraft taxi guidance p 46 N94-29584
Airside ground movements surveillance p 46 N94-29585
A novel near-range radar network for airport surface control p 46 N94-29586

AIRFOIL OSCILLATIONS
Unsteady flow testing in a passive low-correction wind tunnel p 118 N95-19272

AIRFOIL PROFILES
The benchmark aeroelastic models program: Description and highlights of initial results p 6 N92-27960
Calculation of maximum and high lift characteristics of multi element aerofoils p 14 N94-18419
Measurements on a two-dimensional aerofoil with high-lift devices p 21 N95-17848
Investigation of the flow over a series of 14 percent-thick supercritical aerofoils with significant rear camber p 21 N95-17849
Surface pressure and wake drag measurements on the Boeing A4 airfoil in the IAR 1.5X1.5m Wind Tunnel Facility p 21 N95-17850
Low-speed surface pressure and boundary layer measurement data for the NLR 7301 airfoil section with trailing edge flap p 22 N95-17855
Protective coatings for compressor gas path components p 102 N95-19675

AIRFOILS
Computations of unsteady flows around airfoil sections by explicit and implicit methods solving the Euler and Navier-Stokes equations p 5 N92-27948
Further investigation of the effect of model cooling on periodic transonic flow p 7 N92-27961
Keynote address: Unsteady, multimode transition in gas turbine engines p 84 N93-29927
Determination of surface heat transfer and film cooling effectiveness in unsteady wake flow conditions p 85 N93-29933
Prediction of jet impingement cooling scheme characteristics (airfoil leading edge application) p 196 N93-29941
High-Lift System Aerodynamics [AGARD-CP-515] p 1 N94-18415
Experimental investigation of flow around a multielement airfoil p 14 N94-18417
A design procedure for slotted flaps p 56 N94-18418
Calculation of maximum and high lift characteristics of multi element aerofoils p 14 N94-18419
Efficient simulation of incompressible viscous flow over multi-element airfoils p 14 N94-18421
Navier-Stokes calculations on multi-element airfoils using a chimera-based solver p 14 N94-18422
Numerical solution of the Navier-Stokes equations for high-lift configurations on structured composite grids p 14 N94-18423
High Reynolds number configuration development of a high-lift airfoil p 15 N94-18424
A viscous-inviscid solver for high-lift incompressible flows over multi-element airfoils at deep separation conditions p 15 N94-18425
High-lift system analysis method using unstructured meshes p 15 N94-18426
Prediction of the high-lift performance of multi-element aerofoils using an unstructured Navier-Stokes solver p 15 N94-18427
Numerical calculations of high lift flows using structured and unstructured methods p 15 N94-18428
The GARTEUR high lift research programme p 16 N94-18430
Calculation of multielement airfoils and wings at high lift p 17 N94-18438
Viscous-inviscid calculation of high-lift separated compressible flows over airfoils and wings p 17 N94-18440
High lift systems for transport aircraft with advanced airfoils p 57 N94-18446
Choice and optimization of a high-lift system for an advanced amphibious aircraft p 58 N94-18447
Numerical simulation of airfoil film cooling: A jet in crossflow p 206 N94-34462
Vibrations of structures with cyclic symmetry: Application to the case of turbine engines p 227 N94-34463
A selection of experimental test cases for the validation of CFD codes, volume 1 [AGARD-AR-303-VOL-1] p 208 N95-14201
Computational aerodynamics based on the Euler equations [AGARD-AG-325] p 19 N95-14264
Residual-correction type and related computational methods for aerodynamic design. Part 1: Airfoil and wing design p 70 N95-16566
Residual-correction type and related computational methods for aerodynamic design. Part 2: Multi-point airfoil design p 70 N95-16567
Optimal shape design for aerodynamics p 70 N95-16568
Airfoil optimization by the one-shot method p 70 N95-16569
Review of the EUROPT Project AERO-0026 p 71 N95-16573
2-D airfoil tests including side wall boundary layer measurements p 208 N95-17847
Measurements on a two-dimensional aerofoil with high-lift devices p 21 N95-17848
Surface pressure and wake drag measurements on the Boeing A4 airfoil in the IAR 1.5X1.5m Wind Tunnel Facility p 21 N95-17850
Investigation of an NLF(1)-0416 airfoil in compressible subsonic flow p 22 N95-17852
Experiments in the trailing edge flow of an NLR 7702 airfoil p 22 N95-17853
Two-dimensional 16.5 percent thick supercritical airfoil NLR 7301 p 22 N95-17854
Data from the GARTEur (AD) Action Group 02 airfoil CAST 7/DOA1 experiments p 22 N95-17856
OAT15A airfoil data p 23 N95-17857
Two-dimensional high-lift airfoil data for CFD code validation p 23 N95-17859
Development of pneumatic test techniques for subsonic high-lift and in-ground-effect wind tunnel investigations p 29 N95-19268
Analysis of test section sidewall effects on a two dimensional airfoil: Experimental and numerical investigations p 211 N95-19276

AIRFRAME MATERIALS
High Altitude Long Endurance aircraft design studies p 66 N94-36322
Acoustic fatigue testing on different materials and skin-stringer elements p 302 N95-19156
Acoustic fatigue characteristics of advanced materials and structures p 302 N95-19157

AIRFRAMES
Non-propulsive aerodynamic noise p 297 N93-10673
Water tunnel studies of inlet/airframe interference phenomena p 194 N93-13216
Some aspects of intake design, performance and integration with the airframe p 51 N93-13219
Integrated Airframe Design Technology [AGARD-R-794] p 58 N94-24313
Frameworks for integrated airframe design p 58 N94-24318
Helicopter engine/airframe integration: The way ahead p 61 N94-34433
Fatigue management and verification of airframes p 61 N94-34591
Harrier 2: A comparison of US and UK approaches to fatigue clearance p 62 N94-34596
An overview of the F-16 service life approach p 63 N94-34599
High Altitude Long Endurance aircraft design studies p 66 N94-36322
Characterisation of Fibre Reinforced Titanium Matrix Composites [AD-A277520] p 134 N94-36649
Applications of Titanium Matrix Composite to large airframe structure p 135 N94-36651
SCS-6 (tm) fiber reinforced titanium p 135 N94-36652
Experimental data on the aerodynamic interactions between a helicopter rotor and an airframe p 27 N95-17883

AIRGLOW
Remote sensing of the atmosphere by multi-channel radiometers p 232 N92-22816

AIRLINE OPERATIONS
Drag reduction: An industrial challenge p 2 N92-27708
Design of Center-TRACON Automation System p 43 N94-29568
DLR's ATM demonstration programme p 44 N94-29575
The future of large capacity/long range multipurpose air cargo fleets p 67 N94-36326

AIRPORTS
Noise of combat aircraft in proximity to air bases: Review of the possibilities of noise reduction at the source p 297 N93-10671
A brief review of the source noise technology applicable to fixed-wing military aircraft p 298 N93-10678
Contributions of DLR to air traffic capacity enhancement within a terminal area p 42 N94-29567
Design of Center-TRACON Automation System p 43 N94-29568
DLR's ATM demonstration programme p 44 N94-29575
Development of precision runway monitor system for increasing capacity of parallel runway operations p 46 N94-29587
On-line handling of air traffic: Management, guidance and control [AGARD-AG-321] p 46 N95-18927

AIRSHIPS
Tethered aerostat VLF/LF transmitter system design considerations p 169 N93-30753

AIRSPACE
Contributions of DLR to air traffic capacity enhancement within a terminal area p 42 N94-29567
Interactive analysis and planning tools for air traffic and airspace management p 43 N94-29573

ALCOHOLS
Effects of medium blood alcohol levels on pilots' performance in the Sea King Simulator MK-41 p 243 N93-19683

ALERTNESS
Human factors and the safety of flights: The importance of the management of sleep p 274 N93-32267

ALGORITHMS
Mapping electron content and electron density in the sub-auroral ionosphere p 231 N92-22805
Inverting radiometric measurements with a neural network p 233 N92-22818
Analysis algorithms for processing ultraviolet fluorescence data p 221 N92-22823
On the computation of unsteady turbomachinery flows. Part 1: Euler equations in vibrating cascades p 187 N92-27460
Computation and visualization of specific flow phenomena in turbomachinery application p 78 N92-27463
Unsteady Euler calculations in 3D internal aerodynamics p 188 N92-27470
Aspects of unstructured grids and finite-volume solvers for the Euler and Navier-Stokes equations p 192 N92-27677
Finite element methods in CFD: Grid generation, adaptivity, and parallelization p 192 N92-27679
A frontal approach for node generation in Delaunay triangulations p 192 N92-27680
Comparison of the event-step algorithm to other path planning methods to avoid dynamic 3D obstacles p 37 N92-27896
Search route planning p 38 N92-27900
Fundamentals of structural optimisation p 50 N92-28470
Data compression techniques p 309 N92-32190
Development and flight testing of the multi-source integration algorithms in the F/A-18 mission computer software p 283 N93-19923
Multi-window registration algorithm for automatic detection and tracking of moving targets p 283 N93-22022
Flight evaluation of differential GPS aided inertial navigation systems p 40 N93-22790
Toward achieving global sole means radionavigation systems p 40 N93-22794
Radio location through high resolution eigenstructure processing techniques that yield accurate multipath AOA and differential time delay estimates p 162 N93-23626
Multiple emitter direction finding from a circular array by single snapshot processing p 162 N93-23627
Digital processing for positioning with one satellite p 163 N93-23629
The WG sequences: Quasi perfect binary sequences p 163 N93-23631
Planning for air to air combat p 293 N93-28852
Adaptive algorithms for use with digital filters in vibration control p 283 N94-11338
High accuracy control algorithm application to a tracking turret p 287 N94-36626

Multitarget track initiation using a modified Hough transform p 174 N94-36630
Radar tracking in multipath: Techniques for improved performance p 174 N94-36631
Computational aerodynamics based on the Euler equations
[AGARD-AG-325] p 19 N95-14264
Optimum Design Methods for Aerodynamics
[AGARD-R-803] p 70 N95-16562
Superresolution direction finding algorithms for the characterisation of multi-moded HF signals p 184 N95-20958

ALLERGIC DISEASES
Allergic, Immunological and Infectious Disease Problems in Aerospace Medicine
[AGARD-CP-518] p 235 N93-11283
Immunological parameters in current and former US Air Force personnel p 237 N93-11295
Epidemiologic view of allergic diseases in North America: Implications for aerospace medicine p 241 N93-11311
The screening of inhalant allergic diseases in the selection of candidates for aircraft piloting p 241 N93-11312
Phadiatop: A screening test for inhalant allergy p 241 N93-11313
In vivo and in vitro diagnosis of allergic respiratory disease during screening procedures in the Italian Navy: Comparative evaluation of a recent quantitative automatized enzyme immunoassay method to dose specific IgE p 241 N93-11314
Allergy screening and follow-up in student pilots of the Belgian Air Force (BAF) p 241 N93-11316
Allergic and nonallergic rhinitis in Greek pilots p 242 N93-11317

ALTERNATING CURRENT
A comparison of two examples of magnetic tracker systems p 281 N94-37275

ALTERNATING DIRECTION IMPLICIT METHODS
Navier-Stokes simulation of flow field around a blown-flap high-lift system p 16 N94-18429

ALTITUDE
The cone structure and focusing of the electric field of VLF and LF waves at high altitudes of the ionosphere p 165 N93-30731

ALUMINIDES
Fibre-matrix interface properties in Ti-matrix composites: Chemical compatibility and micromechanical behaviour p 136 N94-36657
Oxidation behavior of titanium aluminide matrix materials p 136 N94-36658
New Trends in coatings developments for turbine blades: Materials processing and repair p 103 N95-19676

ALUMINUM
High temperature cyclic behaviour of aerospace materials: Room temperature validation tests of Ti-6Al-4V
[AGARD-AR-328] p 229 N95-14198
Acoustic fatigue behaviour of GLARE composites p 303 N95-19160
The design and manufacturing development of an active silicon substrate MCM p 185 N95-20645

ALUMINUM ALLOYS
Environmental degradation of high temperature composites p 127 N92-33047
Crack growth prediction models p 89 N93-31747
Fatigue life and crack growth prediction methodology p 227 N94-34583
The crack severity index of monitored load spectra p 228 N94-34585
Growth of artificially and naturally initiating notch root cracks under FALSTAFF spectrum loading p 228 N94-34589
Oxidation behavior of titanium aluminide matrix materials p 136 N94-36658

AMBIENT TEMPERATURE
Deterioration of manual performance in cold and windy climates p 249 N94-28434

AMBIGUITY
SAR peculiarities, ambiguities and constraints p 155 N93-13051

AMMONIUM NITRATES
Development of a minimum smoke propellant based on glycidyl azide polymer and ammonium nitrate p 147 N92-33243
Hazards reduction for tactical missiles p 123 N92-33245

AMMONIUM SULFATES
Gas turbine compressor corrosion and erosion in Western Europe p 103 N95-19678

AMMUNITION
Interdiction mission planning and co-ordination during the Gulf conflict 17 January - 27 February 1991 p 292 N92-27888
Insensitive Munitions
[AGARD-CP-511] p 147 N92-33240
The United States Air Force explosives hazards reduction program p 147 N92-33241

AMORPHOUS MATERIALS
Environmental resistance of amorphous bonded thermoplastic joints p 128 N92-33053

AMPHIBIOUS AIRCRAFT
Choice and optimization of a high-lift system for an advanced amphibious aircraft p 58 N94-18447

AMPLITUDE MODULATION
Results of the joint HIPAS/NUWC campaigns to investigate ELF generated by auroral electrojet modulation p 168 N93-30746

ANALOG CIRCUITS
What is an ASIC? p 73 N92-28377

ANALOG TO DIGITAL CONVERTERS
A novel-high-performance system for recording and analysing instantaneous total pressure distortion in air intakes p 219 N93-13215
Development of a fast sampling system for estimation of impulse responses of mobile radio channels p 180 N95-20943

ANGIOGRAPHY
Cardiovascular Risk Factors (CVRF) in Spanish pilots with coronary artery disease demonstrated by angiographic studies p 245 N93-32253

ANGLE OF ATTACK
High angle of attack: Aerodynamics p 2 N92-23956
The influence of intake swirl distortion on the steady-state performance of a low bypass, twin-spool engine p 194 N93-13211
Comparative performance tests of a pitot-inlet in several European wind-tunnels at subsonic and supersonic speeds p 7 N93-13221
AM-X high angle of attack flight test experience (single and two seat versions) p 53 N93-19910
X-31A high angle of attack and initial post stall flight testing p 54 N93-19911
X-31 demonstration of integrated flight and propulsion control for effective combat at extreme angles of attack p 106 N93-28851
Modeling nonlinear aerodynamic loads for aircraft stability and control analysis p 108 N94-11499
Adaptive reconfigurable flight controls for high angle of attack aircraft agility p 108 N94-11502
X-29: Longitudinal instability at high angle-of-attack p 108 N94-11504
Pneumatic management of blunted-forebody flow asymmetry for high-angle-of-attack directional control p 109 N94-28028
Damage tolerance management of the X-29 vertical tail p 62 N94-34595
High incidence flow analysis over the Rafale A p 18 N94-34612
Dynamic tests to demonstrate lateral control using forebody suction on large scale models in the DRA 24 foot wind tunnel p 109 N94-34613
Techniques for aerodynamic characterization and performance evaluation at high angle of attack p 63 N94-34614
Yaw control by tangential forebody blowing p 109 N94-34615
Aerodynamic design of super maneuverable aircraft p 64 N94-34617
X-31A system identification applied to post-stall flight: Aerodynamics and thrust vectoring p 110 N94-34619
Application of current departure resistance criteria to the post-stall manoeuvering envelope p 64 N94-34622
Engineering Codes for aeroprediction: State-of-the-art and new methods p 19 N95-14447
High angle of attack aerodynamics p 20 N95-14450
Residual-correction type and related computational methods for aerodynamic design. Part 2: Multi-point airfoil design p 70 N95-16567
DLR-F4 wing body configuration p 71 N95-17863
DLR-F5: Test wing for CFD and applied aerodynamics p 24 N95-17864
Low aspect ratio wing experiment p 24 N95-17865
Wind tunnel investigations of the appearance of shocks in the windward region of bodies with circular cross section at angle of attack p 25 N95-17866
Three-dimensional boundary layer and flow field data of an inclined prolate spheroid p 208 N95-17867
Force and pressure data of an ogive-nosed slender body at high angles of attack and different Reynolds numbers p 25 N95-17868
Ellipsoid-cylinder model p 208 N95-17869
Velocity measurements with hot-wires in a vortex-dominated flowfield p 28 N95-19261

ANGULAR VELOCITY
Symbology for head up and head down applications for highly agile fighter aircraft: To improve spatial awareness, trajectory control, and unusual attitude recovery, part 1 p 268 N93-28857

ANIMATION
Aid in investigation by figure animation p 31 N93-19659

ANISOTROPY
Modelling anisotropy and backscatter effects in the subgrid scale stress tensor p 215 N95-21077

ANNULAR DUCTS
Fluid flow and heat transfer in the entrance region of an annulus between independently rotating tubes with a turbulent axial flow p 196 N93-29952

ANNULAR FLOW
Validation of a CANARI code by the computation of three dimensional turbulent flow in turbine valve p 78 N92-27462
Smaller expendable turbojets p 83 N93-17621

ANOMALIES
The longitudinal occurrence of equatorial F layer irregularities p 158 N93-23605
Irregular media effects on radiowave signals used in navigation and positioning systems p 159 N93-23606

ANTARCTIC REGIONS
Transient (approximately equals 10 s) VLF amplitude and phase perturbations due to lightning-induced electron precipitation into the ionosphere (the Trimpi effect) p 166 N93-30736
Medical support for British operations in the Antarctic p 248 N94-28421

ANTENNA ARRAYS
High resolution sampled aperture array direction finding at HF p 160 N93-23611
Fractal theory for large lacunar antenna arrays p 162 N93-23624
Radio location through high resolution eigenstructure processing techniques that yield accurate multipath AOA and differential time delay estimates p 162 N93-23626
Results of the joint HIPAS/NUWC campaigns to investigate ELF generated by auroral electrojet modulation p 168 N93-30746
Study of a VLF distributed antenna array p 168 N93-30749

ANTENNA DESIGN
The real aperture antenna of SAR, a key element for performance p 155 N93-13053
VLF/LF transmitting antennas p 168 N93-30747
Application of the Fourier transform to short antennas p 168 N93-30750
Antenna modeling and analysis for ELF/VLF/LF applications p 168 N93-30751
Angle diversity on digital microwave links: Antenna design and experimental results p 181 N95-20947
Multipath impact on ground-based global positioning system range measurements: Aspects of measurement, modeling, and mitigation p 182 N95-20949

ANTENNA RADIATION PATTERNS
A calibration technique for the CNET HF backscatter radar p 154 N92-22825
Fractal theory for large lacunar antenna arrays p 162 N93-23624
Application of the Fourier transform to short antennas p 168 N93-30750
Antenna modeling and analysis for ELF/VLF/LF applications p 168 N93-30751
Pattern measurements of US Navy ELF antennas p 169 N93-30752

ANTHROPOMETRY
The design and use of automotive crash test dummies p 262 N93-19669
An improved anthropometric test device p 262 N93-19670
Correlation of life-style and dietary concomitants of Greek pilots with serum analytes p 272 N93-32256

ANTIBODIES
Estimates of Human Immunodeficiency Virus (HIV) incidence and trends in the US Air Force p 236 N93-11292
Silent HIV infection p 236 N93-11293
Analysis of disease progression from clinical observations of US Air Force active duty members infected with the Human Immunodeficiency Virus: Distribution of AIDS survival time from interval censored observations p 237 N93-11297
Susceptibility in USAF recruits to vaccine preventable diseases p 238 N93-11301

ANTIGENS
Silent HIV infection p 236 N93-11293
Immunological parameters in current and former US Air Force personnel p 237 N93-11295
Early markers of HIV infection and subclinical disease progression p 237 N93-11296
Use of novel adjuvants and delivery systems to improve the humoral and cellular immune response to malaria vaccine candidate antigens p 240 N93-11308
Cytokines as vaccine adjuvants: Interleukin 1 and its synthetic peptide 163-171 p 240 N93-11309

ANTIINFECTIVES AND ANTIBACTERIALS
Clinical and immunological response to vaccination with parenteral or oral vaccines in two groups of 30 recruits p 239 N93-11305

ANTIMISSILE DEFENSE
TacSats for NATO
[AD-A277710] p 122 N94-30350

ANTITANK MISSILES
The German anti tank helicopter PAH 2: An example of a future sensor platform p 73 N92-32448

AORTA
Aortic valve disease p 247 N94-23322

APERTURES
High resolution sampled aperture array direction finding at HF p 160 N93-23611
Application of the Fourier transform to short antennas p 168 N93-30750
APPLICATION SPECIFIC INTEGRATED CIRCUITS
Applications of ASICs to avionics [AGARD-AG-329] p 73 N92-28376
What is an ASIC? p 73 N92-28377
The silicon compiler for designing military VLSI ASIC's p 73 N92-28378
A radar signal processing ASIC and a VME interface circuit p 73 N92-28380
Generic modular imaging IR signal processor p 282 N92-32440
The design and manufacturing development of an active silicon substrate MCM p 185 N95-20645
APPLICATIONS PROGRAMS (COMPUTERS)
Multidisciplinary optimization studies using ASTROS p 104 N92-23234
Automated software generation approaches for the design and development of guidance and control systems software [AGARD-AR-292] p 282 N92-25980
An improved method of structural dynamic test design for ground flying and its application to the SH-2F and SH-2G helicopters p 54 N93-19928
Integrated stress and strength analysis of airplane structures using the data processing tool ISSY p 59 N94-24320
Some practical problems in multidisciplinary design and optimisation p 59 N94-24322
Flight command software development: RAFALE studies p 284 N94-29320
The development procedures and tools applied for the attitude control software of the Italian satellite SAX p 122 N94-29324
A common Ada run-time system for avionics software p 75 N94-29331
Distributed applications and failure tolerance programs using a reconfigurable parallel architecture p 286 N94-29345
Considerations on graphical user interfaces for intelligent ATM support systems p 43 N94-29572
Ground wave and diffraction, B p 175 N95-14829
Investigation of shear layer transition using various turbulence models p 218 N95-21096
APPROACH
Effective cueing during approach and touchdown: Comparison with flight p 115 N92-28552
APPROACH CONTROL
Advanced air traffic control and flight management system concepts p 44 N94-29576
Profile negotiation: An air/ground automation integration concept for managing arrival traffic p 45 N94-29578
Experimental flight management system p 45 N94-29580
APPROXIMATION
CFD methodology and validation for turbomachinery flows p 207 N95-14131
ARC HEATING
The upgrading of the arc heated wind tunnel of the DLR (LBK) with respect to its effects on the material testing p 116 N94-10432
ARCHITECTURE (COMPUTERS)
Technology and standards for a common air mission planner p 293 N92-27899
Parallel knowledge based systems architectures for in-flight mission management p 38 N92-27904
High speed local area networks p 154 N92-28087
Mission planning systems for tactical aircraft (pre-flight and in-flight) [AGARD-AR-313] p 35 N93-21187
Combat Automation for Airborne Weapon Systems: Man/Machine Interface Trends and Technologies [AGARD-CP-520] p 268 N93-28850
Ground based mission planning systems p 295 N94-25014
How to control the increase in the complexity of civil aircraft on-board systems p 74 N94-29316
Hierarchical Object Oriented Design (HOOD): Possibilities, limitations, and challenges p 284 N94-29322
Distributed applications and failure tolerance programs using a reconfigurable parallel architecture p 286 N94-29345
Elements of a modern turbomachinery design system p 223 N95-14129
The impact of advanced packaging technology on modular avionics architectures p 76 N95-20632
Standard Hardware Acquisition and Reliability Program (SHARP) advanced SEM-E packaging p 76 N95-20633
The IEEE scalable coherent interface: An approach for a unified avionics network p 77 N95-20650
Optical backplane for modular avionics p 307 N95-20652
High performance backplane components for modular avionics p 186 N95-20653
ARCTIC REGIONS
VLF propagation measurements in the Canadian Arctic p 165 N93-30733
Evaluation of life support equipment during an unsupported North Pole expedition p 276 N94-28422
Propagation measurements on a troposcatter link in the Canadian High Arctic p 180 N95-20940
ARITHMETIC
Packaging the MAMA module p 184 N95-20639
ARMED FORCES
27 years armed forces aerospace pathology and toxicology in the Federal Republic of Germany: Development, current status, trends and challenges p 243 N93-19696
Fit to fly: Analysis of the aeromedical disposition in aircrewmembers of the Spanish Armed Forces p 253 N95-19418
ARMED FORCES (FOREIGN)
Dramatic reduction of meningococcal meningitis among military recruits in Italy after introduction of specific vaccination p 239 N93-11303
A guide to tenders and contracts alerting services [AGARD-R-799] p 308 N94-37447
ARMED FORCES (UNITED STATES)
Viral hepatitis in the US Air Force, 1980 - 1989 p 235 N93-11287
Estimates of Human Immunodeficiency Virus (HIV) incidence and trends in the US Air Force p 236 N93-11292
Immunological parameters in current and former US Air Force personnel p 237 N93-11295
Neuropsychiatric morbidity in early HIV disease: Implications for military occupational function p 238 N93-11299
Susceptibility in USAF recruits to vaccine preventable diseases p 238 N93-11301
A guide to tenders and contracts alerting services [AGARD-R-799] p 308 N94-37447
ARPA COMPUTER NETWORK
Advanced Standard Electronic Modules format-E (SEM-E) processes for rapid prototyping p 185 N95-20642
ARRHYTHMIA
Aeromedical disposition of Arrhythmias and electrocardiographic findings in aircrew p 246 N94-23318
Sarcoidosis and the aviator p 248 N94-23325
ARTERIES
Aeromedical disposition for coronary artery disease p 246 N94-23316
Arterial hypertension and the aviator p 248 N94-23328
ARTERIOSCLEROSIS
Cardiovascular risk factors in an Italian Air Force population: Preliminary report p 245 N93-32252
Primary prevention of coronary heart disease p 246 N94-23317
ARTIFICIAL INTELLIGENCE
A teamwork model of pilot aiding: Psychological principles for mission management systems design p 292 N92-27893
Machine Perception [AGARD-LS-185] p 288 N93-13238
Building and using scene representations in image understanding p 289 N93-13241
Machine perception exploiting high-level spatio-temporal models p 289 N93-13244
Adaptive autonomous target cuer p 267 N93-19784
Mission planning systems for tactical aircraft (pre-flight and in-flight) [AGARD-AR-313] p 35 N93-21187
Operator and automation capability analysis: Picking the right team p 269 N93-28864
Cognitive interface considerations for intelligent cockpits p 270 N93-28865
Toward intelligent flight control p 108 N94-11503
In flight mission planning in the Copilote Electronique p 295 N94-25015
Object oriented design of the autonomous fixtaking management system p 41 N94-29323
Artificial intelligence technology program at Rome Laboratory p 290 N94-29328
Machine Intelligence in Air Traffic Management [AD-A275680] p 41 N94-29558
Advances in development capabilities for intelligent air traffic management systems p 41 N94-29559
Intelligent systems for air space control and management p 41 N94-29560
Machine intelligence: The key to guidance and control in robotics p 290 N95-14944
Guidance and control for unmanned ground vehicles p 224 N95-14948
ARTIFICIAL SATELLITES
Fuzzy guidance system evaluation p 282 N92-27903
Electric propulsion for lightsats: A review of applications and advantages p 124 N93-29907
ARTILLERY
Ramjet propulsion for advanced projectiles p 82 N93-17615
ASCENT
Aerodynamic and aerothermal challenges for the design of the Hermes spaceplane p 119 N94-10423
ASPECT RATIO
Calibration of 2D unstructured grid methods on propulsive flowfields p 194 N93-13225
Measurements of the flow over a low aspect-ratio wing in the Mach number range 0.6 to 0.87 for the purpose of validation of computational methods. Part 1: Wing design, model construction, surface flow. Part 2: Mean flow in the boundary layer and wake, 4 test cases p 23 N95-17860
ASSESSMENTS
Pre-flight risk assessment in Emergency Medical Service (EMS) helicopters p 34 N93-19692
The way to waivers in the BAF p 253 N95-19415
ASTHMA
Epidemiologic view of allergic diseases in North America: Implications for aerospace medicine p 241 N93-11311
The screening of inhalant allergic diseases in the selection of candidates for aircraft piloting p 241 N93-11312
Phadiatop: A screening test for inhalant allergy p 241 N93-11313
In vivo and in vitro diagnosis of allergic respiratory disease during screening procedures in the Italian Navy: Comparative evaluation of a recent quantitative automatized enzyme immunoassay method to dose specific IgE p 241 N93-11314
Asthma in aircrew: Assessment, treatment and disposition p 241 N93-11315
Allergic and nonallergic rhinitis in Greek pilots p 242 N93-11317
Asthma in aircrew p 248 N94-23327
ASTRONAUTICS
AGARD index of publications, 1989-1991 [AGARD-INDEX-89-91] p 312 N93-10610
ASYMMETRY
Pneumatic management of blunted-forebody flow asymmetry for high-angle-of-attack directional control p 109 N94-28028
ASYMPTOTIC METHODS
Recent developments in the simulation of steady and transient transverse jet interactions for missile, rotorcraft, and propulsive applications p 203 N94-28030
Asymptotic approaches to transition modelling p 205 N94-33887
ASYMPTOTIC PROPERTIES
Stability analysis through bifurcation theory, 1 p 308 N94-18238
Stability analysis through bifurcation theory, 2 p 308 N94-18239
ASYMPTOTIC SERIES
Stability analysis through bifurcation theory, 1 p 308 N94-18238
ATHLETES
Left ventricular hypertrophy and athlete's heart p 247 N94-23321
ATMOSPHERIC ATTENUATION
Remote sensing of the atmosphere by multi-channel radiometers p 232 N92-22816
Atmospheric Propagation Effects Through Natural and Man-Made Obscurants for Visible to MM-Wave Radiation [AD-A276919] p 170 N94-30495
Evaluation of dual polarization attenuation of millimeter frequencies through a meteorological radar p 170 N94-30496
Propagation modeling of moist air and suspended water/ice particles at frequencies below 1000 GHz p 170 N94-30497
Multispectral transmittance measurements through man-made water fogs p 171 N94-30499
ATMOSPHERIC BOUNDARY LAYER
Compact laser Doppler anemometer p 219 N92-22815
Optical refraction in the atmospheric surface layer p 233 N92-22817
ATMOSPHERIC CHEMISTRY
Probing of the atmosphere with lidar p 232 N92-22812
ATMOSPHERIC CIRCULATION
Compact laser Doppler anemometer p 219 N92-22815
Stability model of the atmosphere p 233 N94-11500
ATMOSPHERIC COMPOSITION
On the effect of emissions from aircraft engines on the state of the atmosphere p 229 N94-29247
Effects of hydrometeors and atmospheric gases at SHF/EHF p 176 N95-14835
ATMOSPHERIC CORRECTION
Adaptive optics for laser beamforming in the atmosphere p 222 N94-36621
ATMOSPHERIC DIFFUSION
Study of the fast and slow variations of the power received at VHF links by tropospheric diffusion p 178 N95-20929

ATMOSPHERIC EFFECTS
Atmospheric Propagation Effects Through Natural and Man-Made Obscurants for Visible to MM-Wave Radiation
[AD-A276919] p 170 N94-30495
Model for the simulation of atmospheric effects on targets to background passive signatures
p 172 N94-30507
Methods for evaluating the effects of conduits at the surface of the sea p 178 N95-20932
Combined effects of atmosphere and terrain on UHF/microwave paths p 179 N95-20935

ATMOSPHERIC ENTRY
Planetary entry vehicle design for planned and potential ESA missions to Titan, Mars, and Earth return (FGE TN 51/92) p 121 N94-10428

ATMOSPHERIC MODELS
Remote sensing of refractivity structure by direct radio measurements at UHF p 230 N92-22791
Use of mesoscale models for refractivity forecasting
p 153 N92-22797
Lidar remote sensing techniques for developing and evaluating atmospheric aerosol models
p 232 N92-22813
The longitudinal occurrence of equatorial F layer irregularities p 158 N93-23605
Radiolocation of a satellite-borne LOVHF beacon
p 160 N93-23613
On non-linear longitudinal stability of an aircraft in a dive in the presence of atmospheric disturbances
p 107 N94-11492
Stability model of the atmosphere
p 233 N94-11500
Propagation Modelling and Decision Aids for Communications, Radar and Navigation Systems
[AGARD-LS-196] p 174 N95-14825
Propagation in the ionosphere, A p 174 N95-14826
Propagation in the ionosphere, B p 175 N95-14827
Ground wave and diffraction, A p 175 N95-14828
Sensing of radio refractivity and aerosol extinction
p 175 N95-14830
Refractive effects from VHF to EHF. Part B: Propagation models p 175 N95-14832
Electro-optics: Propagation from IR to UV and sensor considerations. Part A: Propagation theory
p 175 N95-14833
Electro-optics: Propagation from IR to UV and sensor considerations. Part B: Tools for exploitation of propagation conditions and system range performance
p 176 N95-14834

ATMOSPHERIC MOISTURE
Propagation modeling of moist air and suspended water/ice particles at frequencies below 1000 GHz
p 170 N94-30497
The influence of the evaporation duct on the angle of arrival and amplitude of the backscattered signal from targets low above the sea p 170 N94-30498
Multispectral transmittance measurements through man-made water fogs p 171 N94-30499
Methods for evaluating the effects of conduits at the surface of the sea p 178 N95-20932

ATMOSPHERIC OPTICS
Atmospheric Propagation Effects Through Natural and Man-Made Obscurants for Visible to MM-Wave Radiation
[AD-A276919] p 170 N94-30495
Estimation of transmittance from satellite imagery
p 171 N94-30500

ATMOSPHERIC PHYSICS
The longitudinal occurrence of equatorial F layer irregularities p 158 N93-23605

ATMOSPHERIC REFRACTION
Remote Sensing of the Propagation Environment
[AGARD-CP-502] p 230 N92-22790
Remote sensing of refractivity structure by direct radio measurements at UHF p 230 N92-22791
Over the horizon propagation in a marine environment: Modelling and recent experimental results
p 152 N92-22794
A theoretical study of a radiowave characterization method of the evaporation duct p 152 N92-22795
Radio refractivity profiles deduced from aerosol lidar measurements
[AD-A249074] p 152 N92-22796
Use of mesoscale models for refractivity forecasting
p 153 N92-22797
Refractive assessments from satellite observations
p 153 N92-22798
Optical refraction in the atmospheric surface layer
p 233 N92-22817
The influence of the evaporation duct on the angle of arrival and amplitude of the backscattered signal from targets low above the sea p 170 N94-30498
Combined effects of atmosphere and terrain on UHF/microwave paths p 179 N95-20935

ATMOSPHERIC SCATTERING
Atmospheric Propagation Effects Through Natural and Man-Made Obscurants for Visible to MM-Wave Radiation
[AD-A276919] p 170 N94-30495
The influence of the evaporation duct on the angle of arrival and amplitude of the backscattered signal from targets low above the sea p 170 N94-30498

ATMOSPHERIC SOUNDING
Remote sensing of refractivity structure by direct radio measurements at UHF p 230 N92-22791
ROSE: A high resolution, amplitude coded, high frequency oblique ionosonde p 230 N92-22800
Digital channel sounder for remote sensing of scatterers in mobile radio environment
p 153 N92-22820
Sounder calibration with backscattering from Losquet Island in the presence of multipaths
p 184 N95-20961

ATMOSPHERIC TEMPERATURE
Prediction of survival times on land in a cold climate
p 248 N94-28423

ATMOSPHERIC TURBULENCE
Optical refraction in the atmospheric surface layer
p 233 N92-22817
Calculation of turbulence degraded point spread function of an imaging system p 173 N94-30514
Turbulence: Engineering models, aircraft response
p 110 N95-14900
Aircraft Loads due to Turbulence and their Impact on Design and Certification
[AGARD-R-798] p 110 N95-18597
The impact of non-linear flight control systems on the prediction of aircraft loads due to turbulence
p 110 N95-18598
Gyroscopic and propeller aerodynamic effects on engine mounts dynamic loads in turbulence conditions
p 71 N95-18599
Treatment of non-linear systems by timeplane-transformed CT methods: The spectral gust method p 111 N95-18600
A study of the effect of store unsteady aerodynamics on gust and turbulence loads p 71 N95-18601
Comparison of stochastic and deterministic nonlinear gust analysis methods to meet continuous turbulence criteria p 71 N95-18602
Special effects of gust loads on military aircraft
p 72 N95-18605
Simulation of the impact of atmospheric turbulences on millimeter-wave communications systems
p 179 N95-20939

ATOMIZERS
Experimental studies on effervescent atomizers with wide spray angles p 204 N94-29280
Investigation of the two-phase flow in a research combustor under reacting and non-reacting conditions
p 204 N94-29282

ATOMIZING
Experimental studies on effervescent atomizers with wide spray angles p 204 N94-29280

ATTACK AIRCRAFT
Situation assessment in the Paladin tactical decision generation system p 292 N92-27892
The effectiveness of airbags in reducing the severity of head injury from gunsight strikes in attack helicopters
p 34 N93-19691
Adaptive reconfigurable flight controls for high angle of attack aircraft agility p 108 N94-11502
Operational agility assessment with the AM-X aircraft
p 65 N94-34626

ATTENUATION
Attenuating the disorienting effects of head movement during whole-body rotation using a visual reference: Further tests of a predictive hypothesis
p 252 N94-37276

ATTITUDE (INCLINATION)
An overview of optical gyroscopes for navigation
p 219 N93-22783
Symbology for head up and head down applications for highly agile fighter aircraft: To improve spatial awareness, trajectory control, and unusual attitude recovery, part 1 p 268 N93-28857
Study findings on the influence of maneuverability and agility on helicopter handling qualities
p 64 N94-34624
Creation of a virtual world to study human spatial perception during sustained acceleration
p 261 N94-37268

ATTITUDE CONTROL
Fuzzy guidance system evaluation
p 282 N92-27903
Software engineering methods in the Hermes on-board software p 284 N94-29326
Dynamic tests to demonstrate lateral control using forebody suction on large scale models in the DRA 24 foot wind tunnel p 109 N94-34613
Inertial pseudo star reference unit
p 306 N94-36625
Creation of a virtual world to study human spatial perception during sustained acceleration
p 261 N94-37268

ATTITUDE INDICATORS
Symbology for head up and head down applications for highly agile fighter aircraft: To improve spatial awareness, trajectory control, and unusual attitude recovery, part 1 p 268 N93-28857
The use of a tactile interface to convey position and motion perceptions p 281 N94-37281

AUDIO SIGNALS
Fly-by voice, a technology demonstration
p 105 N93-19918

AUDITORY PERCEPTION
3D sound experimental approach: Methodology and preliminary results p 301 N94-37280

AUGMENTATION
Modeling tropospheric ducting effects on satellite-to-ground paths p 179 N95-20936

AURORAL ELECTROJETS
Results of the joint HIPAS/NUWC campaigns to investigate ELF generated by auroral electrojet modulation p 168 N93-30746

AURORAS
The spatial and temporal characteristics of high frequency auroral backscatter p 158 N93-23604

AUTOCORRELATION
Direct numerical simulation for premixed turbulent combustion modelling p 143 N95-21082

AUTOMATED RADAR TERMINAL SYSTEM
Machine Intelligence in Air Traffic Management
[AD-A275680] p 41 N94-29558

AUTOMATIC CONTROL
Automated target tracking and location techniques applied to optical payloads on remotely piloted vehicles
p 49 N92-27890
From an automated flight-test management system to a flight-test engineer's workstation p 282 N92-27907
Automatic detection, pursuit, and classification in infrared imagery p 304 N92-32445
Mission planning systems for tactical aircraft (pre-flight and in-flight)
[AGARD-AR-313] p 35 N93-21187
Advances in automatic electro-optical tracking systems p 305 N93-22020
Multi-window registration algorithm for automatic detection and tracking of moving targets
p 283 N93-22022
Combat Automation for Airborne Weapon Systems: Man/Machine Interface Trends and Technologies
[AGARD-CP-520] p 268 N93-28850
Operator and automation capability analysis: Picking the right team p 269 N93-28864
System automation and pilot-vehicle-interface for unconstrained low-altitude night attack
p 270 N93-28867
Stability analysis and aerospace vehicle dynamics
p 107 N94-11491
Reactive system software concept with automation using the LDS language p 285 N94-29327
Intelligent systems for air space control and management p 41 N94-29560
Use of GPS in automated air traffic control
p 42 N94-29563
Design of Center-TRACON Automation System
p 43 N94-29568
Simulation of fully automated air traffic control concepts p 43 N94-29569
ARC2000: Automatic radar control p 45 N94-29583
Automatic control steps for aircraft taxi guidance
p 46 N94-29584
Guidance and control for unmanned ground vehicles
p 224 N95-14948
Passive monitoring for automated MMPP communication systems p 177 N95-20927

AUTOMATIC REPEAT REQUEST
Adaptive error-control scheme for 2-200 MHz Multiple-Mechanism Propagation Paths
p 177 N95-20926

AUTOMATIC TEST EQUIPMENT
Time stress measurement devices for enhancement of onboard bit performance p 264 N93-19762

AUTOMATION
Aircrew acceptance of automation in the cockpit
p 264 N93-19761
Use of robots for aircraft dry stripping via plastic media blasting p 150 N94-10620
Large Aircraft Robotic Paint Stripping (LARPS) system and the high pressure water process
p 151 N94-10623
Reactive system software concept with automation using the LDS language p 285 N94-29327

AUTOMOBILES
The design and use of automotive crash test dummies
p 262 N93-19669
Miner's rule revisited p 227 N94-34582

AUTONOMOUS NAVIGATION
3-D computer vision for navigation/control of mobile robots p 289 N93-13243
The avionic system of the experimental standoff dispenser ADW p 74 N93-22028
Radar seeker based autonomous navigation update system using topography feature matching techniques
p 157 N93-22030
Overall system concepts in mission planning
p 294 N94-25009
Object oriented design of the autonomous fixtaking management system p 41 N94-29323

Two-axis camera platform for machine vision p 290 N94-36628
Advanced Guidance and Control Aspects in Robotics [AGARD-LS-193] p 290 N95-14942
Guidance and control for unmanned ground vehicles p 224 N95-14948

AUTONOMY
Visual autonomous automatic landing of airplanes p 40 N93-22791

AUTOPSIES
27 years armed forces aerospace pathology and toxicology in the Federal Republic of Germany: Development, current status, trends and challenges p 243 N93-19696

AUXILIARY POWER SOURCES
Technology Requirements for Small Gas Turbines [AD-280274] p 93 N94-34431
Specifications of auxiliary power units for conformity with helicopter turboshaft engines p 95 N94-34441
The development of an auxiliary power unit for a fighter aircraft p 95 N94-34442

AVIATION METEOROLOGY
Stability model of the atmosphere p 233 N94-11500
Flight in an Adverse Environment [AGARD-LS-197] p 36 N95-14893
Winter storms research in Canada p 234 N95-14895

AVIATION PSYCHOLOGY
The human factor problem in the Canadian Forces aviation p 31 N93-19657
Underlying causes of accidents: Casual networks p 31 N93-19658
Assessment of morale in Turkish Air Force pilots with two clinical psychological tests p 259 N93-19660
Human factors causes and management strategies in US Air Force F-16 mishaps 1984-present p 31 N93-19673

AVIONICS
Knowledge-based planning for controlled airspace flight operation as part of a cockpit assistant p 37 N92-27895
ICAAS piloted simulation evaluation p 72 N92-27906
Applications of ASICs to avionics [AGARD-AG-329] p 73 N92-28376
Applications of silicon hybrid multi-chip modules to avionics p 73 N92-28379
Integrated Target Acquisition and Fire Control Systems [AGARD-CP-500] p 73 N92-32437
Management of avionics data in the cockpit p 266 N93-19777
Equipment, more or less ready to be used in helicopters p 267 N93-19785
YF-22A prototype advanced tactical fighter demonstration/validation flight test program overview p 53 N93-19906
Development and flight testing of the multi-source integration algorithms in the F/A-18 mission computer software p 283 N93-19923
The avionic system of the experimental standoff dispenser ADW p 74 N93-22028
Opportunities and challenges in avionics integration, INS/GPS: A case study p 39 N93-22782
A new class of mission support for combat air-crew p 293 N93-28854
New Advances in Mission Planning and Rehearsal Systems [AGARD-LS-192] p 293 N94-25008
Overall system concepts in mission planning p 294 N94-25009
Aerospace Software Engineering for Advanced Systems Architectures [AD-A277101] p 283 N94-29315
Experiences with the HOOD design method on avionics software development p 284 N94-29325
Potential software failures methodology analysis p 285 N94-29329
Rome Laboratory software engineering technology program p 285 N94-29330
A common Ada run-time system for avionics software p 75 N94-29331
Ada run time system certification for avionics applications p 75 N94-29332
Design of a thinwire real-time multiprocessor operating system p 288 N94-29333
On ground system integration and testing: A modern approach p 75 N94-29334
Software testing practices and their evolution for the 1990's p 285 N94-29335
Validation and test of complex weapon systems p 75 N94-29336
Testing Operational Flight Programs (OFPs) p 285 N94-29337
DSSA-ADAGE: An environment for architecture-based avionics development p 75 N94-29348
DLR's ATM demonstration programme p 44 N94-29575
ICAAS piloted simulation results p 173 N94-36617
Advanced Packaging Concepts for Digital Avionics [AGARD-CP-562] p 75 N95-20631
The impact of advanced packaging technology on modular avionics architectures p 76 N95-20632
Standard Hardware Acquisition and Reliability Program (SHARP) advanced SEM-E packaging p 76 N95-20633
FASTPACK: Optimized solutions for modular avionics derived from a parametric study. Part 1: Platform features p 76 N95-20634
FASTPACK: Optimized solutions for modular avionics derived from a parametric study. Part 2: Avionics p 76 N95-20635
The Advanced Avionics Subsystem Technology Demonstration Program p 77 N95-20636
Ultra-Reliable Digital Avionics (URDA) processor p 226 N95-20638
MCMs for avionics: Technology selection and intermodule interconnection p 77 N95-20641
High density monolithic packaging technology for digital/microwave avionics p 119 N95-20646
High performance backplane components for modular avionics p 186 N95-20653
Composite cases for airborne electronic equipment: A technology study and EMC p 138 N95-20655
Modular supplies for a distributed architecture --- avionics packaging p 77 N95-20657
Modular CNI avionics system p 77 N95-20659

AXIAL FLOW
Fluid flow and heat transfer in the entrance region of an annulus between independently rotating tubes with a turbulent axial flow p 196 N93-29952

AXIAL FLOW TURBINES
Experimental verification of a 3D turbulent flow calculation in an axial turbine cascade p 187 N92-27457
Simple and powerful turbojet with four stage axial compressor and axial flow turbine for the propulsion of subsonic missiles p 83 N93-17620
Smaller expendable turbojets p 83 N93-17621
Aero-thermal design of a cooled transonic NGV and comparison with experimental results p 87 N93-29957
The influence of the inlet boundary layers on the secondary losses of turbine stages p 97 N94-34457
Design and aerodynamic performance evaluation of a high-work mixed flow turbine stage p 97 N94-34459
Hot section materials for small turbines p 97 N94-34465

AXISYMMETRIC BODIES
Pressure distributions on research wing W4 mounted on an axisymmetric body p 24 N95-17862
Ellipsoid-cylinder model p 208 N95-17869

AXISYMMETRIC FLOW
Flow computation in combustion chambers using zonal nonstaggered grids p 190 N92-27483
Stability of hypersonic boundary-layer flows with chemistry p 11 N94-10451

AZIMUTH
The real aperture antenna of SAR, a key element for performance p 155 N93-13053
Polarization effects and multipolarization SAR p 155 N93-13054

B

BACK INJURIES
The musculoskeletal and vestibular effects of long term repeated exposure to sustained high-G [AGARD-AR-317] p 281 N95-14263
Spine injuries: Up to date evaluation in aircraft ejections p 256 N95-19434

BACKGROUND NOISE
The effect of enhanced backscattering on target detection p 172 N94-30508

BACKSCATTERING
Radio refractivity profiles deduced from aerosol lidar measurements [AD-A249074] p 152 N92-22796
Remote sensing of aerosol extinction using single-ended lidars p 232 N92-22811
A calibration technique for the CNET HF backscatter radar p 154 N92-22825
The spatial and temporal characteristics of high frequency auroral backscatter p 158 N93-23604
Automatic feature extraction and localization using data fusion of radar and infrared images p 162 N93-23628
The influence of the evaporation duct on the angle of arrival and amplitude of the backscattered signal from targets low above the sea p 170 N94-30498
The effect of enhanced backscattering on target detection p 172 N94-30508
Polarimetric backscatter measurements of natural surfaces at millimeter wavelengths p 172 N94-30509
A hybrid electromagnetic-statistical approach for characterizing MMW scattering by terrain p 172 N94-30510
The effects of multihop HF propagation on the performance of OTH backscatter radars p 183 N95-20953
Measurements of radar backscatter from the ocean surface at 94 GHz as a function of wind speed, direction and the modulation by the ocean waves during the SAXON-FPN experiment p 184 N95-20960
Sounder calibration with backscattering from Losquet Island in the presence of multipaths p 184 N95-20961
Analysis of subgrid models using direct and large-eddy simulations of isotropic turbulence p 214 N95-21071
Modelling anisotropy and backscatter effects in the subgrid scale stress tensor p 215 N95-21077

BACKWARD WAVES
Active remote sensing of the ionosphere and the Earth surface irregularities p 232 N92-22808
Vibrations of structures with cyclic symmetry: Application to the case of turbine engines p 227 N94-34463

BALLISTIC MISSILES
Launch vehicles for lightweight TACSAT deployment p 118 N93-29903

BALLISTIC TRAJECTORIES
A technique for predicting aircraft flow-field effects upon an unguided bomb ballistic trajectory and comparison with flight test results p 8 N93-19922

BALLISTICS
The design features of rocket motors relating to insensitive munition response to thermo-mechanical stimuli p 147 N92-33244
AGARD flight test techniques series. Volume 10: Weapon delivery analysis and ballistic flight testing [AGARD-AG-300-VOL-10] p 293 N93-11711

BANDPASS FILTERS
A technique for increasing the bandwidth of high performance electrical backplanes p 185 N95-20651

BANDWIDTH
The real aperture antenna of SAR, a key element for performance p 155 N93-13053
A dynamic bandwidth and phase linearity measurement technique for 4-channel MSK VLF antenna systems p 168 N93-30748
A technique for increasing the bandwidth of high performance electrical backplanes p 185 N95-20651
Line-of-sight multipath propagation measurements at 15 GHz over 500 MHz bandwidth p 181 N95-20944
Mitigation of effects of multiple path nulls at super-high frequencies through diversity and networking p 181 N95-20948

BASE PRESSURE
Investigation of the flow development on a highly swept canard/wing research model with segmented leading- and trailing-edge flaps p 26 N95-17876

BAYS (STRUCTURAL UNITS)
Weapons bay acoustic environment p 301 N95-19146

BAYS (TOPOGRAPHIC FEATURES)
Measurements of radar backscatter from the ocean surface at 94 GHz as a function of wind speed, direction and the modulation by the ocean waves during the SAXON-FPN experiment p 184 N95-20960

BEACONS
Radiolocation of a satellite-borne LOVHF beacon p 160 N93-23613

BEAM SWITCHING
Angle diversity on digital microwave links: Antenna design and experimental results p 181 N95-20947

BEAMFORMING
Adaptive optics for laser beamforming in the atmosphere p 222 N94-36621

BEAMS (SUPPORTS)
Identification of delamination by eigenfrequency degradation: An inverse problem p 131 N93-21526

BEARING (DIRECTION)
The effects of multipath scatter from wind driven gravity waves on lines of bearing serving as direction finders p 158 N93-23601
Procedures for determining the location of an HF radio transmitter p 159 N93-23610
Bearing determination and bearing quality indication from a goniometric HF DF system p 161 N93-23617

BELL AIRCRAFT
An evaluation of IFR approach techniques: Generic helicopter simulation compared with actual flight p 114 N92-28550

BENDING
Allowable compression strength for CFRP-components of fighter aircraft determined by CAI-test p 132 N93-21531

BEVERAGES
Effects of three hydration beverages on exercise performance during 60 hours of simulated desert exposure p 250 N94-28448

BIBLIOGRAPHIES
Automated input into databases: OCR and descriptive cataloguing p 309 N92-32189
Document processing p 311 N93-10600
AGARD index of publications, 1989-1991 [AGARD-INDEX-89-91] p 312 N93-10610

Aircraft flight safety: A bibliography
[AGARD-R-805] p 35 N94-24091

BINARY CODES
Adaptive error-control scheme for 2-200 MHz Multiple-Mechanism Propagation Paths
p 177 N95-20926

BINARY DATA
The WG sequences: Quasi perfect binary sequences
p 163 N93-23631

BINDERS (MATERIALS)
Development of a minimum smoke propellant based on glycidyl azide polymer and ammonium nitrate
p 147 N92-33243

BINOCULAR VISION
3-D computer vision for navigation/control of mobile robots p 289 N93-13243

BIOASTRONAUTICS
Space flight and immune system p 235 N93-11284

BIODYNAMICS
Is axial loading a primary mechanism of injury to the lower limb in an impact aircraft accident?
p 242 N93-19664
Design/development of an enhanced biodynamic manikin p 262 N93-19667
The design and use of automotive crash test dummies
p 262 N93-19669
An improved anthropometric test device
p 262 N93-19670
A new instrumentation system for measuring the dynamic response of the human head/neck during impact acceleration p 263 N93-19672
The musculoskeletal-and vestibular effects of long term repeated exposure to sustained high-G
[AGARD-AR-317] p 281 N95-14263

BIRD-AIRCRAFT COLLISIONS
Design of fan blades subjected to bird impact
p 102 N95-19669

BISMALEIMIDE
Environmental degradation of high temperature composites p 127 N92-33047
Fracture analysis of BMI system in presence of moisture p 130 N93-21517
Barely visible damage threshold in a BMI
p 131 N93-21524

BLADE TIPS
Performance deterioration of axial compressors due to blade defects p 101 N95-19665
Erosion of T56 5th stage rotor blades due to bleed hole overtip flow p 101 N95-19666

BLOCK DIAGRAMS
X-31A control law design p 109 N94-34618

BLOCKING
Adaptive wind tunnel walls versus wall interference correction methods in 2D flows at high blockage ratios
p 117 N95-19267

BLOOD
Early markers of HIV infection and subclinical disease progression p 237 N93-11296
Effects of medium blood alcohol levels on pilots' performance in the Sea King Simulator MK-41
p 243 N93-19683
Blood lipids in aircrew recruits and in RAF aviators
p 245 N93-32251

BLOOD FLOW
A comparison of four methods of rewarming individuals cooled by immersion in cold water
p 250 N94-28442

BLOOD PLASMA
Silent HIV infection p 236 N93-11293

BLOOD PRESSURE
Biological parameters and cardiovascular risk factors with the flying personnel of the Belgian Armed Forces
p 273 N93-32260

BLOWING
Theoretical and experimental investigation of a delta wing with turbulent leading-edge jets p 18 N94-28029
Yaw control by tangential forebody blowing
p 109 N94-34615

BLOWOUTS
Studies of lean blowout in a research combustor
p 140 N94-29266

BLUFF BODIES
Experimental analysis of combustion oscillations with reference to ramjet propulsion p 138 N93-17614

BLUNT BODIES
Comparison of computation and experiment for a high enthalpy, heated-driver, shock-tube environment
p 11 N94-10447
Stability of hypersonic flow over a blunt body
p 11 N94-10450
Studies of hypersonic viscous flows
p 12 N94-10454
Ellipsoid-cylinder model p 208 N95-17869

BODIES OF REVOLUTION
Unsteady transonic aerodynamics of pointed bodies of revolution in supersonic freestream p 5 N92-27946

BODY MEASUREMENT (BIOLOGY)
Portable equipment developed to estimate energy expenditure by simultaneous recording of heart rate and body position p 271 N93-32243
Evaluation of the EKG's isoelectric T wave in Air Force pilots p 254 N95-19423

BODY TEMPERATURE
The effects of cockpit heat on aviator sleep parameters p 274 N93-32266
Fuelling shivering in humans during cold water immersion p 249 N94-28426
Biochemical enhancement of cold tolerance
p 249 N94-28427
Treatment of mild immersion hypothermia by body-to-body and forced-air warming
p 249 N94-28428
The potential of new textiles in improving survival prospects p 276 N94-28430
Thermoregulation in the extreme cold environment
p 250 N94-28438
Physiological investigations of the isolated rat's liver in hypothermia and hypoxia and their relevance in aircraft incidents above the sea p 234 N94-28439
Rewarming methodologies in the field
p 250 N94-28441
A comparison of four methods of rewarming individuals cooled by immersion in cold water
p 250 N94-28442
Thermal strain generated by an enhanced anti-G protection system in a hot climate p 278 N94-28445
Implications of climatic extremes in aircrew NBC operations p 278 N94-28446
Alleviation of thermal strain in the CF: Keeping our cool during the Gulf conflict p 251 N94-28449
Test of a new protection suit in a climatic chamber
p 278 N94-28452

BODY WEIGHT
Nutrition and hydration status of aircrew members consuming an improved survival ration during a simulated survival scenario p 249 N94-28429

BODY-WING CONFIGURATIONS
In-flight evaluation of aerodynamic predictions of an air-launched space booster p 9 N94-10427
Numerical calculations of high lift flows using structured and unstructured methods p 15 N94-18428
Aerodynamic shape optimization p 71 N95-16572
Review of the EUROPT Project AERO-0026
p 71 N95-16573
Pressure distributions on research wing W4 mounted on an axisymmetric body p 24 N95-17862
DLR-F4 wing body configuration p 71 N95-17863

BOEING AIRCRAFT
737-400 at Kegworth, 8 January 1989: The AAIB investigation p 31 N93-19661
Occupant kinematics simulation of the Kegworth air accident p 261 N93-19662
Is axial loading a primary mechanism of injury to the lower limb in an impact aircraft accident?
p 242 N93-19664

BOLTS
RB 199 high pressure compressor stage 3 spin pit tests p 81 N93-14893
RB211-524B disc and drive cones hot cyclic spinning test p 82 N93-14895
F100 second stage fan disk bolthole crack propagation ferris wheel test p 82 N93-14897

BOLTZMANN TRANSPORT EQUATION
Chaos, entropy, and reversibility: A simple example
p 296 N94-11495

BONDED JOINTS
Investigation of the bond strength of a discrete skin-stiffener interface p 131 N93-21527
Application of superplastically formed and diffusion bonded structures in high intensity noise environments
p 303 N95-19162

BONDING
Reliability assessment of Multichip Module technologies via the Triservice/NASA RELTECH program p 226 N95-20643
Assuring Known Good Die (KGD) for reliable, cost effective MCMs p 185 N95-20644

BOOLEAN ALGEBRA
Non Boolean search methods in information retrieval
p 309 N92-32187

BOOMS (EQUIPMENT)
Hose-drogue versus boom receptacle air refueling
p 68 N94-36345

BOUNDARIES
A frontal approach for node generation in Delaunay triangulations p 192 N92-27680
Boundary-flow measurement methods for wall interference assessment and correction: Classification and review p 210 N95-19262
Transonic wind tunnel boundary interference correction p 117 N95-19271

BOUNDARY CONDITIONS
A mathematical constraint placed upon inter-blade row boundary conditions used in the simulation of multistage turbomachinery flows p 187 N92-27458
Three dimensional solution of internal flows using a cell vertex finite volume method p 188 N92-27473
Fundamental studies of impingement cooling thermal boundary conditions p 196 N93-29940
Calculation of maximum and high lift characteristics of multi element aerofoils p 14 N94-18419
A numerical investigation of a subsonic jet in a crossflow p 202 N94-28023
Calculation of single and multiple jets in cross-flow with and without impingement using Reynolds-stress-transport closure p 203 N94-28024
Predictions of momentum and scalar fields in a jet in cross-flow using first and second order turbulence closures p 203 N94-28025
Navier-Stokes analysis of a swirling jet in crossflow
p 204 N94-28038
Direct numerical simulation of transition: The spatial approach p 206 N94-33889
Computational aerodynamics based on the Euler equations
[AGARD-AG-325] p 19 N95-14264
2-D airfoil tests including side wall boundary layer measurements p 208 N95-17847
Data from the GARTEur (AD) Action Group 02 airfoil CAST 7/DOA1 experiments p 22 N95-17856
Low aspect ratio wing experiment p 24 N95-17865
Wall correction method with measured boundary conditions for low speed wind tunnels
p 210 N95-19263
Determination of solid/porous wall boundary conditions from wind tunnel data for computational fluid dynamics codes p 211 N95-19266
Analysis of test section sidewall effects on a two dimensional airfoil: Experimental and numerical investigations p 211 N95-19276
Numerical simulation of spatially-developing planar jets p 217 N95-21087

BOUNDARY INTEGRAL METHOD
A boundary integral formulation for unsteady transonic potential flows p 4 N92-27942

BOUNDARY LAYER CONTROL
Special Course on Skin Friction Drag Reduction
[AGARD-R-786] p 2 N92-27706
Basic concepts on boundary layers p 2 N92-27707
Aircraft drag reduction p 2 N92-27709
Laminar-turbulent transition: Fundamentals
p 2 N92-27710
Boundary layer transition: Prediction, application to drag reduction p 2 N92-27711
Turbulent skin-friction drag reduction by active and passive means, part 1 p 3 N92-27714
Aerodynamic design of super maneuverable aircraft
p 64 N94-34617
Optimum aerodynamic design via boundary control
p 70 N95-16565

BOUNDARY LAYER EQUATIONS
Calculation of multielement airfoils and wings at high lift p 17 N94-18438

BOUNDARY LAYER FLOW
Experimental study of heat transfer close to a plane wall heated in the presence of multiple injections (subsonic flow) p 84 N93-29931
Measurement of turbulent spots and intermittency modelling at gas-turbine conditions p 85 N93-29934
Heat transfer in high turbulence flows: A 2-D planar wall jet p 195 N93-29935
Experimental, analytical, and computational methods applied to hypersonic compression ramp flows
p 10 N94-10444
Stability of hypersonic boundary-layer flows with chemistry p 11 N94-10451
On the instability of hypersonic flow past a pointed cone: Comparison of theoretical and experimental results at Mach 8 p 12 N94-10453
Special course on Shock-Wave/Boundary-Layer Interactions in Supersonic and Hypersonic Flows
[AGARD-R-792] p 198 N94-15196
Swept shock/boundary-layer interactions: Scaling laws, flowfield structure, and experimental methods
p 198 N94-15197
An experimental study of siphonal jets in a turbulent boundary layer crossflow p 202 N94-28015
Analysis of cooling jets near the leading edge of turbine blades p 90 N94-28037
Experiments in the trailing edge flow of an NLR 7702 airfoil p 22 N95-17853
Data from the GARTEur (AD) Action Group 02 airfoil CAST 7/DOA1 experiments p 22 N95-17856
Solution of Navier-Stokes equations using high accuracy monotone schemes p 209 N95-19019
Boundary-flow measurement methods for wall interference assessment and correction: Classification and review p 210 N95-19262
Simulations of bypass transition for spatially evolving disturbances p 215 N95-21079

BOUNDARY LAYER SEPARATION
Aircraft drag reduction p 2 N92-27709
Vortex structure and mass transfer near the base of a cylinder and a turbine blade p 84 N93-29929
Swept shock/boundary-layer interactions: Scaling laws, flowfield structure, and experimental methods
p 198 N94-15197
A numerical investigation of a subsonic jet in a crossflow p 202 N94-28023
Theoretical and experimental investigation of a delta wing with turbulent leading-edge jets p 18 N94-28029

Inclined air-jets used as vortex generators to suppress shock-induced separation p 18 N94-28040
Control of leading-edge separation on a cambered delta wing p 109 N94-34616
Low-speed surface pressure and boundary layer measurement data for the NLR 7301 airfoil section with trailing edge flap p 22 N95-17855
Three-dimensional boundary layer and flow field data of an inclined prolate spheroid p 208 N95-17867
Ellipsoid-cylinder model p 208 N95-17869
Supersonic vortex flow around a missile body p 25 N95-17870
Test data on a non-circular body for subsonic, transonic and supersonic Mach numbers p 209 N95-17871
Experimental investigation of the vortex flow over a 76/60-deg double delta wing p 26 N95-17874
Wind tunnel test on a 65 deg delta wing with rounded leading edges: The International Vortex Flow Experiment p 26 N95-17875
Subsonic flow around US-orbiter model FALKE in the DNW p 26 N95-17877
Direct numerical simulation of 2-D and 3-D instability waves in a laminar separation bubble p 218 N95-21095

BOUNDARY LAYER STABILITY
Laminar-turbulent transition: Fundamentals p 2 N92-27710
Special Course on Progress in Transition Modelling [AD-A283337] p 205 N94-33884
Boundary layer transition: Predictions based on linear theory p 205 N94-33886
Parabolized stability equations p 205 N94-33888
Numerical study of realistic perturbations in three-dimensional boundary layers p 217 N95-21091
On subcritical instability of the attachment line boundary layer p 217 N95-21092

BOUNDARY LAYER TRANSITION
Basic concepts on boundary layers p 2 N92-27707
Laminar-turbulent transition: Fundamentals p 2 N92-27710
Boundary layer transition: Prediction, application to drag reduction p 2 N92-27711
The eddy structures in bounded shear flows p 3 N92-27712
Keynote address: Unsteady, multimode transition in gas turbine engines p 84 N93-29927
Determination of surface heat transfer and film cooling effectiveness in unsteady wake flow conditions p 85 N93-29933
Measurement of turbulent spots and intermittency modelling at gas-turbine conditions p 85 N93-29934
Theoretical and Experimental Methods in Hypersonic Flows [AGARD-CP-514] p 8 N94-10421
Control effectiveness at hypersonic speeds p 106 N94-10426
Design and production of insulated wind tunnel models of the Hermes shuttle for heat transfer measurements at hypersonic speeds p 116 N94-10431
On the instability of hypersonic flow past a pointed cone: Comparison of theoretical and experimental results at Mach 8 p 12 N94-10453
Boundary layer transition: Prediction and wind tunnel simulation p 198 N94-11498
An experimental investigation of attachment-line transition on the slat of a combat aircraft model p 56 N94-18432
Viscous phenomena affecting high-lift systems and suggestions for future CFD development p 16 N94-18433
Special Course on Progress in Transition Modelling [AD-A283337] p 205 N94-33884
Physical description of boundary-layer transition: Experimental evidence p 205 N94-33885
Boundary layer transition: Predictions based on linear theory p 205 N94-33886
Asymptotic approaches to transition modelling p 205 N94-33887
Direct numerical simulation of transition: The spatial approach p 206 N94-33889
Modeling the transition region p 206 N94-33890
Wind tunnel test on a 65 deg delta wing with a sharp or rounded leading edge: The international vortex flow experiment p 25 N95-17872
Application of Direct and Large Eddy Simulation to Transition and Turbulence [AGARD-CP-551] p 212 N95-21061
Numerical study of realistic perturbations in three-dimensional boundary layers p 217 N95-21091
Spatial direct numerical simulation of boundary layer transition under strong adverse pressure gradient p 217 N95-21093
Investigation of shear layer transition using various turbulence models p 218 N95-21096

BOUNDARY LAYERS
The eddy structures in bounded shear flows p 3 N92-27712
AGARD WG13 aerodynamics of high speed air intakes: Assessment of CFD results p 194 N93-13220
Heat transfer with moderate free stream turbulence p 195 N93-29936
Unsteady phenomena in shock wave/boundary layer interaction p 199 N94-15200
Hypersonic shock wave boundary layer interactions over simplified deflected control surface configurations p 200 N94-15203
Unsteady wake structures in transverse jets p 200 N94-28006
Parabolized stability equations p 205 N94-33888
Experimental and computational results from a large low-speed centrifugal impeller p 96 N94-34446
The influence of the inlet boundary layers on the secondary losses of turbine stages p 97 N94-34457
Aerodynamic shape optimization p 71 N95-16572
2-D airfoil tests including side wall boundary layer measurements p 208 N95-17847
Low-speed surface pressure and boundary layer measurement data for the NLR 7301 airfoil section with trailing edge flap p 22 N95-17855
Measurements of the flow over a low aspect-ratio wing in the Mach number range 0.6 to 0.87 for the purpose of validation of computational methods. Part 1: Wing design, model construction, surface flow. Part 2: Mean flow in the boundary layer and wake, 4 test cases p 23 N95-17860
Numerical simulation of supersonic boundary layer transition p 214 N95-21074
Direct numerical simulations of leading-edge receptivity for freestream sound p 217 N95-21090
Spatial direct numerical simulation of boundary layer transition under strong adverse pressure gradient p 217 N95-21093

BOUNDARY VALUE PROBLEMS
Parabolized stability equations p 205 N94-33888

BRAIN DAMAGE
The effectiveness of airbags in reducing the severity of head injury from gunsight strikes in attack helicopters p 34 N93-19691
The musculoskeletal and vestibular effects of long term repeated exposure to sustained high-G [AGARD-AR-317] p 281 N95-14263

BRANCHING (MATHEMATICS)
Stability analysis through bifurcation theory, 1 p 308 N94-18238
Stability analysis through bifurcation theory, 2 p 308 N94-18239
Non-linear flight dynamics p 56 N94-18240
Direct simulation of tridimensional wake of NACA 0012 profile p 216 N95-21086

BRAZING
Braze repair possibilities for hot section gas turbine parts p 103 N95-19677

BREATHING APPARATUS
Emergency underwater breathing aids for helicopter passengers and crew p 277 N94-28437

BRIGHTNESS DISTRIBUTION
Engineering the visibility of small features on electronic flight displays p 263 N93-19758

BRITTLE MATERIALS
Synergism between layer cracking and delaminations in MD-laminates of CFRE p 130 N93-21520

BRITTLENESS
Micromechanical failure modes in brittle matrix composites p 145 N94-24232

BROADBAND
A wideband propagation simulator for high speed mobile radio communications p 179 N95-20934
Line-of-sight multipath propagation measurements at 15 GHz over 500 MHz bandwidth p 181 N95-20944

BROADCASTING
Passive monitoring for automated MMPP communication systems p 177 N95-20927

BROMIDES
Toxicological investigations of flight accidetns: Findings and methods p 243 N93-19695

BRONCHI
Chronic obstructive pulmonary disease p 247 N94-23324
Asthma in aircrew p 248 N94-23327

BROWNIAN MOVEMENTS
Chaos, entropy, and reversibility: A simple example p 296 N94-11495

BUBBLES
Low-speed surface pressure and boundary layer measurement data for the NLR 7301 airfoil section with trailing edge flap p 22 N95-17855
Direct numerical simulation of 2-D and 3-D instability waves in a laminar separation bubble p 218 N95-21095

BUCKLING
Propagation of a delamination in a composite panel subjected to a compression load p 126 N92-33041
Buckling and post-buckling behavior of a delamination in a carbon-epoxy laminated structure: Experiments and modelling p 129 N93-21514
Delamination damage and its effect on buckling of laminated cylindrical shells p 130 N93-21516

BUFFETING
Design of a fighter aircraft vertical tail enhanced buffet environment survivability p 48 N92-23235
A combined approach to buffet response analyses and fatigue life prediction p 228 N94-34587
Damage tolerance management of the X-29 vertical tail p 62 N94-34595

BUILDINGS
ELF/VLF spectrum measurements p 168 N93-30745

BUOYANCY
Turbulent flow and heat transfer in idealized blade cooling passages p 85 N93-29938

BURN-IN
Assuring Known Good Die (KGD) for reliable, cost effective MCMs p 185 N95-20644

BURNS (INJURIES)
Mechanisms of immune failure in burn injury p 235 N93-11285

BUTANES
Effects of hydrogen addition on pollutant emissions in a gas turbine combustor p 141 N94-29275

BYPASS RATIO
Investigation of the flowfield around an isolated bypass engine with fan and core jet p 195 N93-13227

BYPASSES
Simulations of bypass transition for spatially evolving disturbances p 215 N95-21079
Direct numerical determination of the minimum bypass Reynolds number in boundary layers p 215 N95-21080

C

C BAND
Sensing propagation events and fade statistics at C-band for two over-water, line-of-sight propagation paths over a one year period p 152 N92-22792
Review of spaceborne and airborne SAR systems p 156 N93-13060
Evaluation of dual polarization attenuation of millimeter frequencies through a meteorological radar p 170 N94-30496

C-130 AIRCRAFT
CC-130H(T) tactical aerial refuelling tanker development flight test programme p 69 N94-36347

C-135 AIRCRAFT
Future tanker considerations and requirements p 68 N94-36342

C-141 AIRCRAFT
Risk analysis of the C-141 WS405 inner-to-outer wing joint p 62 N94-34592

C-160 AIRCRAFT
RAMSES: Multi-spectral experimental radar station installed on board the Transall p 156 N93-19925

CAFFEINE
Effects of caffeine on mental performance and mood: Implications for aircrew members p 275 N93-32269
Biochemical enhancement of cold tolerance p 249 N94-28427

CALIBRATING
Radiometric calibration of SAR systems p 155 N93-13055
Calibration of 2D unstructured grid methods on propulsive flowfields p 194 N93-13225
CFD calibration for three-dimensional nozzle/afterbody configurations p 195 N93-13226
High precision navigation for flight testing (AERONAV) p 38 N93-19920
Use of a triaxial laser velocimeter for anemometric calibration on an A340 airbus p 222 N93-19926
An improved method of structural dynamic test design for ground flying and its application to the SH-2F and SH-2G helicopters p 54 N93-19928
VLF/LF propagation measurements p 165 N93-30732
Calibration and use of a non-nulling seven-hole pressure probe p 221 N95-19254
Applications of the five-hole probe technique for flow field surveys at the Institute for Aerospace Research p 221 N95-19255
Impact of propagation mechanisms on global navigation satellite system performance p 182 N95-20950
Sounder calibration with backscattering from Losquet Island in the presence of multipaths p 184 N95-20961

CALORIC REQUIREMENTS
Trial of emergency ration of the Spanish Air Force p 272 N93-32247
The effects of an antijet lag diet p 273 N93-32263
Nutrition and hydration status of aircrew members consuming an improved survival ration during a simulated survival scenario p 249 N94-28429

CAMBER
Improvement of endurance performance by periodic optimal control of variable camber p 110 N94-36329
Investigation of the flow over a series of 14 percent-thick supercritical aerofoils with significant rear camber p 21 N95-17849

CAMBERED WINGS
Control of leading-edge separation on a cambered delta wing p 109 N94-34616

CAMERAS
Two-axis camera platform for machine vision p 290 N94-36628
CAMOUFLAGE
Experimental evaluation of camouflage effectiveness in the thermal infrared p 306 N94-30502
Global approach towards the evaluation of thermal infrared countermeasures p 306 N94-30504
CANADA
VLF propagation measurements in the Canadian Arctic p 165 N93-30733
Paint removal activities in Canada p 149 N94-10615
Propagation measurements on a troposcatter link in the Canadian High Arctic p 180 N95-20940
CANARD CONFIGURATIONS
X-29: Longitudinal instability at high angle-of-attack p 108 N94-11504
Aerodynamic design of super maneuverable aircraft p 64 N94-34617
Wind tunnel test on a 65 deg delta wing with a sharp or rounded leading edge: The international vortex flow experiment p 25 N95-17872
Wind tunnel test on a 65 deg delta wing with rounded leading edges: The International Vortex Flow Experiment p 26 N95-17875
Investigation of the flow development on a highly swept canard/wing research model with segmented leading- and trailing-edge flaps p 26 N95-17876
Velocity measurements with hot-wires in a vortex-dominated flowfield p 28 N95-19261
CANCER
Clinical types of Hepatitis B p 235 N93-11286
CANTILEVER BEAMS
Edge delamination of composite laminates p 130 N93-21519
CARBOHYDRATE METABOLISM
Nutrition, Metabolic Disorders and Lifestyle of Aircrew [AGARD-CP-533] p 270 N93-32240
CARBOHYDRATES
Correlation of life-style and dietary concomitants of Greek pilots with serum analytes p 272 N93-32256
Fuelling shivering in humans during cold water immersion p 249 N94-28426
CARBON FIBER REINFORCED PLASTICS
GARTEUR compression behaviour of advanced CFRP --- carbon fiber reinforced plastics p 127 N92-33042
CFRP stiffened panels under compression p 127 N92-33044
Debonding/Delamination of Composites [AGARD-CP-530] p 128 N93-21507
GARTEUR damage mechanics for composite materials: Analytical/experimental research on delaminations p 129 N93-21513
Synergism between layer cracking and delaminations in MD-laminates of CFRE p 130 N93-21520
Delamination development under fatigue loading p 131 N93-21521
Mode 2 damage development in carbon fibre reinforced plastics p 131 N93-21523
Allowable compression strength for CFRP-components of fighter aircraft determined by CAI-test p 132 N93-21531
Effect of impacts on CFRP structures, results of a comprehensive test program for practical use p 132 N93-21534
Acoustic fatigue of carbon fibre structures p 303 N95-19158
Brite-Euram programme: ACOUFAT acoustic fatigue and related damage tolerance of advanced composite and metallic structures p 303 N95-19159
CARBON FIBERS
Innovative constituents requirements to improve composites compressive strength p 127 N92-33043
Jet fuel absorption and dynamic mechanical analysis of carbon fibre composites p 128 N92-33050
Fracture surface characteristics of compressive failures in carbon fibre reinforced epoxy laminate subjected to hot/wet conditioning p 128 N92-33051
The effect of heat treatment on the properties of PEEK and APC-2 p 128 N92-33052
Strain measurement of carbon/epoxy composite with fibre optics white light quasi distributed polarimetric sensor p 133 N94-11328
CARBON MONOXIDE
Simulation of pollutant formation in turbulent combustors using an extended coherent flame model p 139 N94-29251
CARDIAC VENTRICLES
Echocardiographic findings in trained aircrew: The effect of +Gz on cardiac structure (working group 18) p 247 N94-23320
Left ventricular hypertrophy and athlete's heart p 247 N94-23321
The aeromedical implications of supraventricular tachycardia p 257 N95-19437
CARDIOLOGY
Cardiovascular and pulmonary disease in NATO aircrew: An overview p 246 N94-23314
Screening for asymptomatic coronary heart disease p 246 N94-23315
Left ventricular hypertrophy and athlete's heart p 247 N94-23321
CARDIOVASCULAR SYSTEM
The physiological limitations of man in the high G environment p 269 N93-28861
Lipodystrophies in the French military flight crew p 244 N93-32249
Blood lipids in aircrew recruits and in RAF aviators p 245 N93-32251
Cardiovascular risk factors in an Italian Air Force population: Preliminary report p 245 N93-32252
Cardiovascular Risk Factors (CVRF) in Spanish pilots with coronary artery disease demonstrated by angiographic studies p 245 N93-32253
Results and management of pathological lipoprotein concentrations and other cardiovascular risk factors in military pilots of the German Federal Armed Forces p 245 N93-32254
Biological parameters and cardiovascular risk factors with the flying personnel of the Belgian Armed Forces p 273 N93-32260
Cardiovascular and pulmonary disease in NATO aircrew: An overview p 246 N94-23314
Sarcoidosis and the aviator p 248 N94-23325
Arterial hypertension and the aviator p 248 N94-23328
Effects of three hydration beverages on exercise performance during 60 hours of simulated desert exposure p 250 N94-28448
CARRIER FREQUENCIES
Irregular media effects on radiowave signals used in navigation and positioning systems p 159 N93-23606
Passive monitoring for automated MMPP communication systems p 177 N95-20927
Development of a fast sampling system for estimation of impulse responses of mobile radio channels p 180 N95-20943
CARTESIAN COORDINATES
Multiple-inlet configuration for missiles with skid-to-turn control mode p 105 N93-17617
CASCADE FLOW
A computational study of tip leakage flow and losses in a linear turbine cascade p 186 N92-27453
Experimental verification of a 3D turbulent flow calculation in an axial turbine cascade p 187 N92-27457
Validation of a CANARI code by the computation of three dimensional turbulent flow in turbine valve p 78 N92-27462
Computation of the unsteady transonic 2D cascade flow by an Euler algorithm with interactive grid generation p 4 N92-27944
Overview on test cases for computation of internal flows in turbomachines p 193 N93-13209
Advanced methods for cascade testing [AGARD-AG-328] p 198 N94-15119
Design and analysis of a highly loaded transonic compressor cascade p 206 N94-34451
Development of a HP-turbine for a small helicopter engine p 97 N94-34456
The influence of the inlet boundary layers on the secondary losses of turbine stages p 97 N94-34457
Simulation of steady and unsteady viscous flows in turbomachinery p 99 N95-19023
CASE HISTORIES
AMDRS: A resource for intelligent aeromedical decision-making p 254 N95-19419
Think health not disease p 255 N95-19429
CASES (CONTAINERS)
Composite cases for airborne electronic equipment: A technology study and EMC p 138 N95-20655
CASTINGS
Simple and powerful turbojet with four stage axial compressor and axial flow turbine for the propulsion of subsonic missiles p 83 N93-17620
CASUALTIES
Aeromedical support for casualties in extremely hot climates p 277 N94-28443
CATALOGS (PUBLICATIONS)
Integrated access to distributed databases through intelligent interfaces p 313 N93-31218
CATHETERIZATION
The influence of dietary counseling and cardiac catheterization on lipid profiles in American military aviators p 273 N93-32259
CAUCHY PROBLEM
Multidimensional upwind methods for unstructured grids p 191 N92-27675
CAVITIES
Non-propulsive aerodynamic noise p 297 N93-10673
Aerothermic calculations of flows in interdisc cavities of turbines p 86 N93-29947
Study of flow structure in rotating cavities: Numerical predictions of laminar and turbulent, steady, and unsteady flows p 196 N93-29948
Experimental investigation of flow around a multielement airfoil p 14 N94-18417
Spontaneous pneumothorax, cysts and bullae p 248 N94-23326
Large eddy simulation of turbulent flow over a cavity p 213 N95-21069
CAVITY FLOW
Experimental investigation of flow around a multielement airfoil p 14 N94-18417
Weapons bay acoustic environment p 301 N95-19146
DNS of turbulent flow in a driven cavity and their analysis using proper orthogonal decomposition p 218 N95-21097
CENTRAL NERVOUS SYSTEM
The use of a tactile interface to convey position and motion perceptions p 281 N94-37281
CENTRIFUGAL COMPRESSORS
Dynamic control of aerodynamic instabilities in gas turbine engines p 80 N92-28466
Analysis of rig test data for an axial/centrifugal compressor in the 12 kg/sec p 94 N94-34437
Advanced small high pressure ratio centrifugal compressor p 95 N94-34444
The centrifugal compressor, an essential component of small and medium power engines p 95 N94-34445
Experimental and computational results from a large low-speed centrifugal impeller p 96 N94-34446
Flow field analysis in a high pressure ratio centrifugal compressor p 206 N94-34447
Compact diffusers for small transonic compressors p 96 N94-34449
CENTRIFUGAL FORCE
The centrifugal compressor, an essential component of small and medium power engines p 95 N94-34445
Experimental and computational results from a large low-speed centrifugal impeller p 96 N94-34446
CENTRIFUGAL PUMPS
Calculation by the finite element method of 3-D turbulent flow in a centrifugal pump p 187 N92-27465
CENTRIFUGES
Centrifuge tests of the medical condition of French fighter pilots p 254 N95-19424
CEPSTRAL ANALYSIS
A new passive SSL technique for HF radiolocation p 159 N93-23609
CERAMIC COATINGS
Design and production of insulated wind tunnel models of the Hermes shuttle for heat transfer measurements at hypersonic speeds p 116 N94-10431
Protective coatings for compressor gas path components p 102 N95-19675
Thermal testing of high performance thermal barrier coatings for turbine blades p 103 N95-19681
CERAMIC FIBERS
An overview on the main available ceramic composites and their processing routes p 145 N94-24229
CERAMIC MATRIX COMPOSITES
Introduction of Ceramics into Aerospace Structural Composites [AGARD-R-795] p 144 N94-24228
An overview on the main available ceramic composites and their processing routes p 145 N94-24229
Ceramic matrix composites: Challenges and opportunities p 145 N94-24230
Interface evaluation in ceramic composites p 145 N94-24231
Micromechanical failure modes in brittle matrix composites p 145 N94-24232
Micromechanical characterization of ceramic-matrix composites using the instrumented microindentation technique p 145 N94-24233
Role of interfaces on the cyclic fatigue behaviour of ceramic matrix composites p 145 N94-24234
Mechanical behavior of CMCs: Crack growth resistance and creep aspects p 146 N94-24235
Microstructure and micromechanical behaviour of CMCs p 146 N94-24236
Ceramic matrix composite parts design p 146 N94-24237
CMC design consequences p 146 N94-24238
Integrated approach in modelling, testing, and design of gradient-CVI derived CMC components p 146 N94-24239
Ultrasonic nondestructive evaluation as a tool for the development of aerospace structural ceramic composites p 146 N94-24240
CERAMICS
Introduction of Ceramics into Aerospace Structural Composites [AGARD-R-795] p 144 N94-24228
Integrated approach in modelling, testing, and design of gradient-CVI derived CMC components p 146 N94-24239
Resistance of silicon nitride turbine components to erosion and hot corrosion/oxidation attack p 104 N95-19683
Reliability assessment of Multichip Module technologies via the Triservice/NASA RELTECH program p 226 N95-20643

CERMETS
High velocity oxygen fuel spraying of erosion and wear resistant coatings on jet engine parts p 103 N95-19680

CERTIFICATION
Validation of simulation systems for aircraft acceptance testing p 50 N92-28531
Ada run time system certification for avionics applications p 75 N94-29332
Guide to the measurement of the transient performance of aircraft turbine engines and components [AD-280272] p 93 N94-33874
Flight test certification of a 480 gallon composite fuel tank on CF-18 p 68 N94-36340
CC-130H(T) tactical aerial refuelling tanker development flight test programme p 69 N94-36347
Aircraft and sub-system certification by piloted simulation [AGARD-AR-278] p 117 N95-17388

CHANNEL FLOW
Unsteady wake structures in transverse jets p 200 N94-28006
Aerodynamic investigation of the flow field in a 180 deg turn channel with sharp bend p 210 N95-19257
Large-eddy simulation of rotating channel flows using a localized dynamic model p 213 N95-21064
Direct numerical simulation of turbulent flow in a sudden pipe expansion p 213 N95-21067
Large-eddy simulation of separated flow in a ribbed duct p 214 N95-21070
A cheap DNS tool for turbulence models testing p 214 N95-21072
Large eddy simulation of channel flow using a vorticity transport subgrid model p 215 N95-21076
Simulations of bypass transition for spatially evolving disturbances p 215 N95-21079

CHANNELS (DATA TRANSMISSION)
Fiber optic data busses for aircraft p 72 N92-28093
Advanced cockpit-mission and image management p 264 N93-19760
T(lc2)acS(lc3)ats for Surveillance Verification and C3I [AGARD-CP-522] p 163 N93-29892
Tactical satellites p 119 N93-29893
TACSAT-spacecraft bus concept and design: Application of a multimission bus for TACSAT in LEO p 120 N93-29896
Basic principles of flight test instrumentation engineering, volume 1, issue 2 [AD-A282984] p 221 N94-33940
Optical backplane for modular avionics p 307 N95-20652
DAMSON: A system to measure multipath dispersion, Doppler spread and Doppler shift on multi-mechanism communications channels p 183 N95-20955

CHAOS
Stability in Aerospace Systems [AGARD-R-789] p 107 N94-11489
Chaotic time series analysis p 296 N94-11490
Chaos, entropy, and reversibility: A simple example p 296 N94-11495
Non Linear Dynamics and Chaos [AGARD-LS-191] p 307 N94-18236
Bifurcation theory: Chaos and patterns p 308 N94-18237

CHARACTER RECOGNITION
Automated input into databases: OCR and descriptive cataloguing p 309 N92-32189

CHARACTERIZATION
Application of non-standard signal processing to ELF noise characterization for the TSS1-OESEE programme p 167 N93-30743
Multiple Mechanism Propagation Paths (MMPPs): Their Characterisation and Influence on System Design [AGARD-CP-543] p 176 N95-20921

CHARGE DISTRIBUTION
Antenna modeling and analysis for ELF/VLF/LF applications p 168 N93-30751

CHEMICAL ANALYSIS
TSH determination in subjects with medium-low levels of serum thyroxine p 254 N95-19421

CHEMICAL COMPOSITION
Analysis algorithms for processing ultraviolet fluorescence data p 221 N92-22823
Numerical analysis of converging-diverging nozzle flows in chemical non-equilibrium p 191 N92-27489
Thermodynamic model of air in chemical equilibrium p 307 N94-10448

CHEMICAL DEFENSE
Implications of climatic extremes in aircrew NBC operations p 278 N94-28446

CHEMICAL EQUILIBRIUM
The upgrading of the arc heated wind tunnel of the DLR (LBK) with respect to its effects on the material testing p 116 N94-10432
Thermodynamic model of air in chemical equilibrium p 307 N94-10448

CHEMICAL REACTIONS
Environmental degradation of high temperature composites p 127 N92-33047
Numerical simulation of the flow through a scramjet engine p 89 N94-10425
Thermodynamic model of air in chemical equilibrium p 307 N94-10448
Three-dimensional hypersonic rarefied flow calculations using direct simulation Monte Carlo method p 11 N94-10449

CHEMICAL TESTS
Relevance of laboratory tests in aeromedical decisions p 254 N95-19420

CHEMICAL VAPOR INFILTRATION
An overview on the main available ceramic composites and their processing routes p 145 N94-24229
CMC design consequences p 146 N94-24238
Integrated approach in modelling, testing, and design of gradient-CVI derived CMC components p 146 N94-24239

CHEMICAL WARFARE
Development of a new chemical warfare agent protective material p 276 N94-28432

CHEMOTHERAPY
Allergic, Immunological and Infectious Disease Problems in Aerospace Medicine [AGARD-CP-518] p 235 N93-11283
Early markers of HIV infection and subclinical disease progression p 237 N93-11296
Communicable diseases: A major burden of morbidity and mortality p 238 N93-11300
Recent lessons on the safety and effectiveness of malaria chemoprophylaxis in a non-immune population p 240 N93-11307
Future approaches to vaccine development single-dose vaccines using controlled-release delivery systems p 240 N93-11310
Epidemiologic view of allergic diseases in North America: Implications for aerospace medicine p 241 N93-11311
The screening of inhalant allergic diseases in the selection of candidates for aircraft piloting p 241 N93-11312
Asthma in aircrew: Assessment, treatment and disposition p 241 N93-11315

CHEST
Spontaneous pneumothorax, cysts and bullae p 248 N94-23326

CHIPS
Packaging the MAMA module p 184 N95-20639
MCMs for avionics: Technology selection and intermodule interconnection p 77 N95-20641
Reliability assessment of Multichip Module technologies via the Triservice/NASA RELTECH program p 226 N95-20643
Assuring Known Good Die (KGD) for reliable, cost effective MCMs p 185 N95-20644

CHIPS (ELECTRONICS)
What is an ASIC? p 73 N92-28377
The design and manufacturing development of an active silicon substrate MCM p 185 N95-20645

CHIRP
ROSE: A high resolution, amplitude coded, high frequency oblique ionosonde p 230 N92-22800
Adaptive remote sensing of the ionosphere to minimise spectral intrusion p 231 N92-22803

CHIRP SIGNALS
Measurements of the direction of arrival of an oblique chirp sounder signal p 160 N93-23616

CHOLERA
Immunization of personnel traveling to a destination in tropical countries: French position p 239 N93-11304

CHOLESTEROL
Lipodystrophies in the French military flight crew p 244 N93-32249
Lipidemic profile of Hellenic Airforce officers p 245 N93-32250
Correlation of life-style and dietary concomitants of Greek pilots with serum analytes p 272 N93-32256

CIRCADIAN RHYTHMS
Human factors and the safety of flights: The importance of the management of sleep p 274 N93-32267

CIRCULAR CYLINDERS
Wind tunnel investigations of the appearance of shocks in the windward region of bodies with circular cross section at angle of attack p 25 N95-17866
Force and pressure data of an ogive-nosed slender body at high angles of attack and different Reynolds numbers p 25 N95-17868

CIRCULAR TUBES
The effect of orthogonal-mode rotation on forced convection in a circular-sectioned tube fitted with full circumferential transverse ribs p 196 N93-29937

CIRCULATION
Three dimensional flow in sharp bends --- ducted flow p 190 N92-27481
Modelling the vaporiser and primary zone flows for a modern gas turbine combustion chamber p 79 N92-27484

CITIES
Propagation of high frequency waves in urban and road tunnel environments p 178 N95-20933

CIVIL AVIATION
Piloted Simulation Effectiveness [AGARD-CP-513] p 1 N92-28522
Flight simulation and digital flight controls p 111 N92-28526
Validation of simulation systems for aircraft acceptance testing p 50 N92-28531
A brief review of the source noise technology applicable to fixed-wing military aircraft p 298 N93-10678
Is axial loading a primary mechanism of injury to the lower limb in an impact aircraft accident? p 242 N93-19664
How to control the increase in the complexity of civil aircraft on-board systems p 74 N94-29316
Ada run time system certification for avionics applications p 75 N94-29332
Basic principles of flight test instrumentation engineering, volume 1, issue 2 [AD-A282984] p 221 N94-33940
Future supersonic commercial transport aircraft: A technological challenge for long haul traffic p 66 N94-36324

CLASSIFICATIONS
Methods of opto-electronic fusion of infrared and visible images p 304 N92-32444
Automatic detection, pursuit, and classification in infrared imagery p 304 N92-32445
Naval target classification and designation with the CL-227 Sea Sentinel p 74 N92-32449

CLEANING
Operational aspects of F.16 plastic media blasting, as carried out by Fokker Aircraft Services p 150 N94-10619
Use of robots for aircraft dry stripping via plastic media blasting p 150 N94-10620
German Air Forces experiences with plastic media blasting and future requirements p 150 N94-10621
Plastic media blasting activities at Hill Air Force Base p 150 N94-10622
Paint removal and surface cleaning using ice particles p 151 N94-10626

CLEARANCES
Effect of tip clearance on the performance of a highly loaded turbine stage p 97 N94-34458
Aircraft and sub-system certification by piloted simulation [AGARD-AR-278] p 117 N95-17388

CLIMATE
Prediction of survival times on land in a cold climate p 248 N94-28423
Aeromedical support for casualties in extremely hot climates p 277 N94-28443
Work conditions assessment in pilots and ground personnel under high weather temperatures p 277 N94-28444
Thermal strain generated by an enhanced anti-G protection system in a hot climate p 278 N94-28445
Implications of climatic extremes in aircrew NBC operations p 278 N94-28446

CLIMATE CHANGE
On the effect of emissions from aircraft engines on the state of the atmosphere p 229 N94-29247

CLINICAL MEDICINE
Hypertext and hypermedia systems in information retrieval p 309 N92-32188
Clinical types of Hepatitis B p 235 N93-11286
Viral hepatitis in the US Air Force, 1980 - 1989 p 235 N93-11287
Hepatitis A and Hepatitis B: Risks compared to other vaccine preventable diseases and immunization recommendations p 235 N93-11288
Silent HIV infection p 236 N93-11293
Early markers of HIV infection and subclinical disease progression p 237 N93-11296
Analysis of disease progression from clinical observations of US Air Force active duty members infected with the Human Immunodeficiency Virus: Distribution of AIDS survival time from interval censored observations p 237 N93-11297
Clinical and immunological response to vaccination with parenteral or oral vaccines in two groups of 30 recruits p 239 N93-11305
Studies of safety, infectivity, and immunogenicity of a new Temperature Sensitive (TS) 51-1 strain of S. typhi as a new live oral typhoid fever vaccine candidate p 239 N93-11306
Phadiatop: A screening test for inhalant allergy p 241 N93-11313
Arterial hypertension and the aviator p 248 N94-23328
The Clinical Basis for Aeromedical Decision Making [AGARD-CP-553] p 252 N95-19413
Aeromedical risk management for aircrew p 252 N95-19414
Neuropsychophysiologic sequelae of mild head injury p 256 N95-19430
Clinical basis for aeromedical decision-making: The EEG example p 256 N95-19433
Sarcoidosis in US military aviators p 257 N95-19438

CLOTHING
Deterioration of manual performance in cold and windy climates p 249 N94-28434
CLOUD COVER
Clear-air wind profilers as cloud monitors and hydrometeor identifiers p 233 N92-22819
CLOUD PHYSICS
Effects of hydrometeors and atmospheric gases at SHF/EHF p 176 N95-14835
CLOUDS
The effects of man-made smokes and battlefield-induced smokes on the propagation of electromagnetic radiation p 172 N94-30505
CLUTTER
Recently implemented weather radar data processing technique for rain cell modelling and ground clutter detection p 233 N92-22824
Infrared polarization signatures p 172 N94-30506
A hybrid electromagnetic-statistical approach for characterizing MMW scattering by terrain p 172 N94-30510
Radar cross sections of ground clutter at 95 GHz for summer and fall conditions p 173 N94-30512
Effects of hydrometeors and atmospheric gases at SHF/EHF p 176 N95-14835
Modelling of microwave propagation and clutter in a maritime environment p 179 N95-20938
Large bistatic angle clutter depolarization study p 180 N95-20941
The effects of multihop HF propagation on the performance of OTH backscatter radars p 183 N95-20953
COANDA EFFECT
Design, development, and flight evaluation of the Boeing YC-14 USB powered lift aircraft p 57 N94-18444
Theoretical and experimental investigation of a delta wing with turbulent leading-edge jets p 18 N94-28029
COATING
Properties of TMC processed by fibre coating and hiping p 135 N94-36656
Fibre-matrix interface properties in Ti-matrix composites: Chemical compatibility and micromechanical behaviour p 136 N94-36657
High velocity oxygen fuel spraying of erosion and wear resistant coatings on jet engine parts p 103 N95-19680
COCKPIT SIMULATORS
CVA, cockpit design and development tool p 267 N93-19780
The effects of cockpit heat on aviator sleep parameters p 274 N93-32266
COCKPITS
Knowledge-based planning for controlled airspace flight operation as part of a cockpit assistant p 37 N92-27895
Use of a virtual cockpit for the development of a future transport aircraft p 114 N92-28547
Advanced cockpit-mission and image management p 264 N93-19760
Aircrew acceptance of automation in the cockpit p 264 N93-19761
Developing virtual cockpits p 264 N93-19764
Panoramic cockpit displays p 264 N93-19765
Multimodal dialog system for future cockpits p 265 N93-19773
Management of avionics data in the cockpit p 266 N93-19777
The integration of advanced cockpit and systems design p 266 N93-19779
The active-matrix LC head-down display (AM-LCD): Operational experience and growth potential p 267 N93-19782
Equipment, more or less ready to be used in helicopters p 267 N93-19785
Oculo-motor responses and virtual image displays p 269 N93-28862
Cognitive interface considerations for intelligent cockpits p 270 N93-28865
Ergonomic development of digital map displays p 270 N93-28866
Overview of cockpit technology research and development programs for improvement of the man/machine interface: Review of the AGARD AVP Symposium held in Madrid, May 1992 p 270 N93-28872
Cockpit/NVG visual integration issues p 276 N94-23983
Thermal strain generated by an enhanced anti-G protection system in a hot climate p 278 N94-28445
Interactive large screen: A multi-mode dialogue tool for future cockpits p 280 N94-37266
The DRA Virtual Cockpit Research Program p 280 N94-37269
An overall approach of cockpit noise verification in a military aircraft p 303 N95-19163
CODING
ROSE: A high resolution, amplitude coded, high frequency oblique ionosonde p 230 N92-22800
Significance of histological postmortem findings in pilots killed in military and civil aircraft accidents in Germany (West): A 25-year-review p 243 N93-19697
Prediction of success from training p 35 N93-19702
COGNITION
Cognitive factors in the air events of the Air Force during the last decade p 259 N93-19682
Multi-sensoral approach to night flight: Perceptive and Cognitive limitations p 275 N94-23981
COGNITIVE PSYCHOLOGY
Relating cognitive function to military aviator performance in early HIV infection p 238 N93-11298
Accidents and errors: A review of recent UK Army Air Corps accidents p 34 N93-19701
Mental images p 260 N94-23980
Immersive virtual environments as trainer: System design from a cognitive stance p 280 N94-37267
COHERENT RADAR
SAR peculiarities, ambiguities and constraints p 155 N93-13051
COHERENT RADIATION
Coherent communications --- fiber optics applications p 154 N92-28086
COLD FLOW TESTS
Design and aerodynamic performance evaluation of a high-work mixed flow turbine stage p 97 N94-34459
COLD PLASMAS
Application of non-standard signal processing to ELF noise characterization for the TSS1-OESEE programme p 167 N93-30743
COLD TOLERANCE
Medical support for British operations in the Antarctic p 248 N94-28421
Prediction of survival times on land in a cold climate p 248 N94-28423
Fuelling shivering in humans during cold water immersion p 249 N94-28426
Biochemical enhancement of cold tolerance p 249 N94-28427
The potential of new textiles in improving survival prospects p 276 N94-28430
Deterioration of manual performance in cold and windy climates p 249 N94-28434
COLD WATER
Effect of seasickness on aircrew student survivor ability after ditching in cold water p 248 N94-28425
Advanced integrated cold protection for aircrew p 277 N94-28436
Emergency underwater breathing aids for helicopter passengers and crew p 277 N94-28437
A comparison of four methods of rewarming individuals cooled by immersion in cold water p 250 N94-28442
COLD WEATHER
Deterioration of manual performance in cold and windy climates p 249 N94-28434
Effectiveness of protection clothing for cold weather conditions after ejection over sea: A case report p 277 N94-28435
Thermoregulation in the extreme cold environment p 250 N94-28438
Physiological investigations of the isolated rat's liver in hypothermia and hypoxia and their relevance in aircraft incidents above the sea p 234 N94-28439
Rewarming methodologies in the field p 250 N94-28441
COLLISION AVOIDANCE
Use of high-fidelity simulation in the development of an F/A-18 active ground collision avoidance system p 30 N92-28530
Testing of an automatic, low altitude, all terrain ground collision avoidance system p 38 N93-19924
COLOR VISION
Color vision issues in modern military aviation or the search for the Abominable Coneman p 258 N95-19441
COMBAT
Airpower planning and battle management training at airbase level p 292 N92-27889
Situation assessment in the Paladin tactical decision generation system p 292 N92-27892
Optimal guidance anticipating missile performance p 118 N92-27902
ICAAS piloted simulation evaluation p 72 N92-27906
Full mission simulation for research and development of air combat flight and attack management systems p 112 N92-28538
Development and evaluation of an attack and maneuvering system with combat development simulators as main development tool p 113 N92-28541
An integrated multiple-sensor fire control system for air-to-air combat p 74 N92-32450
Combat aircraft operations: Training requirements for the German Air Force tactical flying units and the noise problem p 296 N93-10667
Air accidents in the French Air Force p 32 N93-19676
Helicopter night vision goggle testing in the United Kingdom p 267 N93-19917
Combat Automation for Airborne Weapon Systems: Man/Machine Interface Trends and Technologies [AGARD-CP-520] p 268 N93-28850
X-31 demonstration of integrated flight and propulsion control for effective combat at extreme angles of attack p 106 N93-28851
Planning for air to air combat p 293 N93-28852
Computer assisted evaluation for air close combat based on time interval characterization p 293 N93-28868
Thermal strain generated by an enhanced anti-G protection system in a hot climate p 278 N94-28445
COMBINED STRESS
Creation of a virtual world to study human spatial perception during sustained acceleration p 261 N94-37268
COMBUSTIBLE FLOW
Modelling the vaporiser and primary zone flows for a modern gas turbine combustion chamber p 79 N92-27484
Prediction of prompt NO(x) in hydrocarbon air flames p 139 N94-29250
Flowfield prediction of NO(x) and smoke production in aircraft engines p 140 N94-29252
Time-resolved measurements in a three dimensional model combustor p 204 N94-29283
Scramjet CFD methods and analysis. Part 1: Scramjet CFD methods. Numerical simulation of the flow in scramjet duct p 92 N94-29296
COMBUSTION
Numerical simulation of aerothermal characteristics in gas turbine combustors with complex geometries p 90 N94-29255
Recent CFD applications in small gas turbine combustion systems development p 90 N94-29257
Aerothermochemical calculations in afterburners p 90 N94-29258
COMBUSTION CHAMBERS
Flow computation in combustion chambers using zonal nonstaggered grids p 190 N92-27483
Modelling the vaporiser and primary zone flows for a modern gas turbine combustion chamber p 79 N92-27484
Three dimensional calculations of reactive flows within aircraft combustion chambers including some combustion models p 191 N92-27490
Combustion noise and combustion instabilities in propulsion systems p 299 N93-10682
The dual combustor ramjet: A versatile propulsion system for hypersonic tactical missile applications p 123 N93-17611
Combustion instabilities in a side-dump model ramjet combustor p 82 N93-17613
Experimental analysis of combustion oscillations with reference to ramjet propulsion p 138 N93-17614
Prediction of the performances in combustion of ramjets and stato-rockets by isothermal experiments and modeling p 83 N93-17622
Heat Transfer and Cooling in Gas Turbines [AGARD-CP-527] p 84 N93-29926
The effect of main stream flow angle on flame tube film cooling p 197 N93-29953
Impingement/effusion cooling p 197 N93-29954
Evaluation of multi-dimensional flux models for radiative transfer in cylindrical combustion chambers p 197 N93-29955
Calculations of reactive turbulent flows in aeronautical chambers p 197 N93-29956
Numerical modelling of turbine combustion chambers p 90 N94-29254
Numerical simulation of aerothermal characteristics in gas turbine combustors with complex geometries p 90 N94-29255
Application of CFD in combustor design technology p 90 N94-29256
Recent CFD applications in small gas turbine combustion systems development p 90 N94-29257
Aerothermochemical calculations in afterburners p 90 N94-29258
Fuel injector design for high temperature aircraft engine p 91 N94-29263
The effect of incomplete fuel-air mixing on the lean limit and emissions characteristics of a Lean Prevaporized Premixed (LPP) combustor p 140 N94-29265
Studies of lean blowout in a research combustor p 140 N94-29266
Ultra low NO(x) ultra lean gas turbine primary zones with liquid fuels p 91 N94-29267
Computational and experimental results in high pressure combustions of H2/air and H2/O2/H2O p 140 N94-29268
Evaluation of the transient operation of advanced gas turbine combustors p 91 N94-29269
Pollutant emissions from and within a model gas turbine combustor at elevated pressures and temperatures p 141 N94-29271
Reduction of NO(x) by fuel-staging in gas turbine engines: A commitment to the future p 141 N94-29272

Chambers of turboreactors with variable geometry: A response to the matrix of pollution in cycles at high temperature, high pressure p 141 N94-29273
The influence of air distribution on homogeneity and pollutant formation in the primary zone of a tubular combustor p 141 N94-29274
Effects of hydrogen addition on pollutant emissions in a gas turbine combustor p 141 N94-29275
Spray combustion experiments and numerical predictions p 142 N94-29277
Modeling of the phase liquidates in combustion chambers p 142 N94-29278
Investigation of the two-phase flow in a research combustor under reacting and non-reacting conditions p 204 N94-29282
Time-resolved measurements in a three dimensional model combustor p 204 N94-29283
Temperature and combustion analysis of combustor with acoustically controlled primary zone air-jet mixing p 143 N94-29284
Research and Development of Ram/Scramjets and Turboramjets in Russia
| AD-A275588 | p 92 N94-29291
Research and development of ramjets/ramrockets. Part 1: Integral solid propellant ramrockets p 92 N94-29294
CIAM experimental turboramjets p 93 N94-29299
Technology Requirements for Small Gas Turbines
| AD-280274 | p 93 N94-34431
Aerothermal design of 1600 K TET core engine hot-section components for high-technology compact propulsion systems p 94 N94-34435
Non-polluting gas turbine as a result of self-heating working fluid in a closed circuit p 94 N94-34436
Microturbo's experience in the field of APU for civil and military applications and our role in the face of the challenges of the future p 95 N94-34440
Combustor technology for future small gas turbine aircraft p 96 N94-34452
Combustor technology for small aircraft engines p 96 N94-34453
Low emission combustor technology for small aircraft gas turbines p 96 N94-34454
Reducing Temperature Distribution Factor (TDF) for advanced small gas turbine engines p 96 N94-34455

COMBUSTION CHEMISTRY
Evaluation of the effects of finite rate chemistry on nozzle performance p 190 N92-27488
Three dimensional calculations of reactive flows within aircraft combustion chambers including some combustion models p 191 N92-27490
Calculations of reactive turbulent flows in aeronautical chambers p 197 N93-29956
Fuels and Combustion Technology for Advanced Aircraft Engines
| AD-A275679 | p 138 N94-29246
Prediction of prompt NO(x) in hydrocarbon air flames p 139 N94-29250
Simulation of pollutant formation in turbulent combustors using an extended coherent flame model p 139 N94-29251
Flowfield prediction of NO(x) and smoke production in aircraft engines p 140 N94-29252
Numerical prediction of turbulent sooting diffusion flames p 140 N94-29253
The effect of incomplete fuel-air mixing on the lean limit and emissions characteristics of a Lean Prevaporized Premixed (LPP) combustor p 140 N94-29265
Computational and experimental results in high pressure combustions of H2/air and H2/O2/H2O p 140 N94-29268

COMBUSTION CONTROL
Evaluation of the transient operation of advanced gas turbine combustors p 91 N94-29269

COMBUSTION EFFICIENCY
The coherent flamelet model for propulsion applications p 138 N92-27486
Experimental and analytical methods for the determination of connected-pipe ramjet and ducted rocket internal performance
| AGARD-AR-323 | p 125 N95-17278

COMBUSTION PHYSICS
Numerical modelling of turbine combustion chambers p 90 N94-29254
Numerical simulation of aerothermal characteristics in gas turbine combustors with complex geometries p 90 N94-29255
Application of CFD in combustor design technology p 90 N94-29256
Temperature and combustion analysis of combustor with acoustically controlled primary zone air-jet mixing p 143 N94-29284
Microturbo's experience in the field of APU for civil and military applications and our role in the face of the challenges of the future p 95 N94-34440

COMBUSTION PRODUCTS
Rocket Motor Plume Technology
| AGARD-LS-188 | p 124 N94-15217
Plume primary smoke p 124 N94-15218
Secondary smoke p 125 N94-15220
Rocket motor plume flowfields: Phenomenology and simulation p 125 N94-15221
Fuels and Combustion Technology for Advanced Aircraft Engines
| AD-A275679 | p 138 N94-29246
Simulation of pollutant formation in, turbulent combustors using an extended coherent flame model p 139 N94-29251
Flowfield prediction of NO(x) and smoke production in aircraft engines p 140 N94-29252
Numerical prediction of turbulent sooting diffusion flames p 140 N94-29253
The effect of incomplete fuel-air mixing on the lean limit and emissions characteristics of a Lean Prevaporized Premixed (LPP) combustor p 140 N94-29265
Ultra low NO(x) ultra lean gas turbine primary zones with liquid fuels p 91 N94-29267
Technology rigs: A tool for afterburner development p 91 N94-29270
Pollutant emissions from and within a model gas turbine combustor at elevated pressures and temperatures p 141 N94-29271
Chambers of turboreactors with variable geometry: A response to the matrix of pollution in cycles at high temperature, high pressure p 141 N94-29273
The influence of air distribution on homogeneity and pollutant formation in the primary zone of a tubular combustor p 141 N94-29274
Research and development of ramjets/ramrockets. Part 1: Integral solid propellant ramrockets p 92 N94-29294
Non-polluting gas turbine as a result of self-heating working fluid in a closed circuit p 94 N94-34436
Low emission combustor technology for small aircraft gas turbines p 96 N94-34454

COMBUSTION STABILITY
Combustion noise and combustion instabilities in propulsion systems p 299 N93-10682
Combustion instabilities in a side-dump model ramjet combustor p 82 N93-17613
Experimental analysis of combustion oscillations with reference to ramjet propulsion p 138 N93-17614
Prediction of the performances in combustion of ramjets and stato-rockets by isothermal experiments and modeling p 83 N93-17622
Studies of lean blowout in a research combustor p 140 N94-29266
Chambers of turboreactors with variable geometry: A response to the matrix of pollution in cycles at high temperature, high pressure p 141 N94-29273
The influence of air distribution on homogeneity and pollutant formation in the primary zone of a tubular combustor p 141 N94-29274
Ducted kerosene spray flames p 142 N94-29276

COMBUSTION TEMPERATURE
Combustion for future supersonic transport propulsion p 139 N94-29249
Temperature and combustion analysis of combustor with acoustically controlled primary zone air-jet mixing p 143 N94-29284
Reducing Temperature Distribution Factor (TDF) for advanced small gas turbine engines p 96 N94-34455

COMFORT
The potential of new textiles in improving survival prospects p 276 N94-28430
Fire-resistant water vapour permeable buoyant insulation p 276 N94-28431

COMMAND AND CONTROL
Airpower planning and battle management training at airbase level p 292 N92-27889
Air situation establishment in a mobile multisensor environment p 292 N92-27891
Mission planning systems for tactical aircraft (pre-flight and in-flight)
| AGARD-AR-313 | p 35 N93-21187
T(Ic2)acS(Ic3)ats for Surveillance Verification and C3I
| AGARD-CP-522 | p 163 N93-29892
TACSAT ground control and data collection p 163 N93-29895
TACSAT-spacecraft bus concept and design: Application of a multimission bus for TACSAT in LEO p 120 N93-29896
Tactical satellites for air command and control p 120 N93-29898
VLF/LF propagation measurements p 165 N93-30732
Artificial intelligence technology program at Rome Laboratory p 290 N94-29328
ACCS Surveillance Exploratory Prototype (ASEP) p 170 N94-29566
Terrain and refractivity effects on non-optical paths p 178 N95-20931

COMMAND LANGUAGES
Integrated access to distributed databases through intelligent interfaces p 313 N93-31218

COMMERCE
End users: New products and services p 314 N93-31220
Advanced Standard Electronic Modules format-E (SEM-E) processes for rapid prototyping p 185 N95-20642

COMMERCIAL AIRCRAFT
Drag reduction: An industrial challenge p 2 N92-27708
Flight service environmental effects on composite materials and structures p 128 N92-33054
Detailed analysis of wing-nacelle interaction for commercial transport aircraft p 193 N93-13203
Ada run time system certification for avionics applications p 75 N94-29332
Future supersonic commercial transport aircraft: A technological challenge for long haul traffic p 66 N94-36324
DLR-F4 wing body configuration p 71 N95-17863

COMMUNICATION EQUIPMENT
DAMSON: A system to measure multipath dispersion, Doppler spread and Doppler shift on multi-mechanism communications channels p 183 N95-20955

COMMUNICATION NETWORKS
Documentation practices: The national scene (Greece) p 310 N93-10595
Technology for libraries and information centers: A seminar in Greece, Portugal, and Turkey p 311 N93-10601
Security considerations within military information systems p 311 N93-10603
T(Ic2)acS(Ic3)ats for Surveillance Verification and C3I
| AGARD-CP-522 | p 163 N93-29892
TACSAT-spacecraft bus concept and design: Application of a multimission bus for TACSAT in LEO p 120 N93-29896
ELF/VLF/LF Radio Propagation and Systems Aspects
| AGARD-CP-529 | p 164 N93-30727
VLF/LF propagation measurements p 165 N93-30732
Viability assessment for reliable long-wave communication links p 169 N93-30754
Orbiting transmitter and antenna for spaceborne communications at ELF/VLF to submerged submarines p 169 N93-30755
Integrated access to distributed databases through intelligent interfaces p 313 N93-31218
The modern research environment p 314 N93-31221
Electronic messaging for the 1990's
| AD-A267143 | p 314 N94-15437
DLR's ATM demonstration programme p 44 N94-29575
International High Speed Networks for Scientific and Technical Information
| AD-A278021 | p 314 N94-37333
Global information networks: How they work p 315 N94-37335

The virtual library: Coming of age p 315 N94-37338
Problems of international exchange of scientific and technical information for a Russian aerospace research institute p 316 N94-37339
Electronic document delivery: Towards the virtual library p 316 N94-37340
Bulletin boards, electronic mail, conferencing, current use by scientists and engineers: Effects on libraries and information centres: Do they have a role? p 316 N94-37343
Optical backplane for modular avionics p 307 N95-20652
Highly survivable communications: Complementary media packet switched networks p 176 N95-20922
Mitigation of effects of multiple path nulls at super-high frequencies through diversity and networking p 181 N95-20948

COMMUNICATION SATELLITES
T(Ic2)acS(Ic3)ats for Surveillance Verification and C3I
| AGARD-CP-522 | p 163 N93-29892
Tactical satellites p 119 N93-29893
Evolution or revolution: The Catch 22 of TACSATs p 118 N93-29894
TACSAT-spacecraft bus concept and design: Application of a multimission bus for TACSAT in LEO p 120 N93-29896
Tactical satellites for air command and control p 120 N93-29898
Considerations for NATO satellite communications in the post-2000 era p 164 N93-29899
Advanced technologies for lightweight EHF tactical communications satellites p 164 N93-29900
Synchronization techniques for medium data rate EHF MILSATCOM systems p 164 N93-29901
Terrain and coverage prediction analyses for non-geostationary orbit EHF satellite communications p 164 N93-29902
Launch vehicles for lightweight TACSAT deployment p 118 N93-29903
Spacecraft and launch systems for TACSAT applications p 120 N93-29904
Attitude- and Orbit Control Subsystem concepts for TACSATS p 120 N93-29906

Cost effective TacSats for military support
p 121 N93-29912
TacSats for NATO
[AD-A277710] p 122 N94-30350
QoS driven routing in packet switched networks of multiple transmission media p 176 N95-20923

COMPATIBILITY
Flight analysis of air intake/engine compatibility
p 51 N93-13212
Helicopter night vision goggle testing in the United Kingdom p 267 N93-19917
Fibre-matrix interface properties in Ti-matrix composites: Chemical compatibility and micromechanical behaviour p 136 N94-36657

COMPILERS
Parallel knowledge based systems architectures for in-flight mission management p 38 N92-27904
The silicon compiler for designing military VLSI ASIC's
p 73 N92-28378

COMPLEX SYSTEMS
Performing specifications for complex systems' software p 109 N94-29317
Potential software failures methodology analysis
p 285 N94-29329
Validation and test of complex weapon systems
p 75 N94-29336
Application of current departure resistance criteria to the post-stall manoeuvering envelope
p 64 N94-34622
Task-specific usability requirements for virtual information environments: Interface design and data representation for human operators of complex medical systems p 279 N94-37262
Aero design of turbomachinery components: CFD in complex systems p 208 N95-14136

COMPONENT RELIABILITY
Component performance requirements
p 79 N92-28462
The development of an auxiliary power unit for a fighter aircraft p 95 N94-34442

COMPOSITE MATERIALS
Smart structures: The relevance of fibre optics
p 304 N92-28091
Structural optimization of aircraft p 50 N92-28472
Mathematical optimization: A powerful tool for aircraft design p 50 N92-28474
The Utilization of Advanced Composites in Military Aircraft
[AGARD-R-785] p 125 N92-33033
Aspects of compression in aerospace composites: Future requirements p 126 N92-33036
A review of RAE sponsored work on the compressive behaviour of composite materials p 126 N92-33038
An overview of concerns relating to fluid effects on composites p 127 N92-33045
Evaluation of the effects of the environment on the behavior of the primary structures of composite material aircraft in service: Historic and current situation
p 127 N92-33048
Fluid effects: Thermoset and thermoplastic matrix composites p 128 N92-33049
Flight service environmental effects on composite materials and structures p 128 N92-33054
Initiation and prevention of edge delamination with and without residual stresses p 129 N93-21510
Modelisation and computation of composite materials
p 130 N93-21518
Damage detection by Acousto-Ultrasonic Location (AUL) p 224 N93-21529
The Satellite Attack Warning and Assessment Flight Experiment (SAWAFE) p 121 N94-11323
Optical fibre techniques for structural monitoring in composites p 132 N94-11324
Smart processing of composite materials for enhanced performance and properties
p 133 N94-11325
On the stability of shape memory materials and their properties in static and dynamic applications
p 133 N94-11329
Composite cases for airborne electronic equipment: A technology study and EMC p 138 N95-20655
Lightweight electronic enclosures using composite materials p 138 N95-20656

COMPOSITE PROPELLANTS
Development of a minimum smoke propellant based on glycidyl azide polymer and ammonium nitrate
p 147 N92-33243
Hazards reduction for tactical missiles
p 123 N92-33245

COMPOSITE STRUCTURES
The Utilization of Advanced Composites in Military Aircraft
[AGARD-R-785] p 125 N92-33033
Issues in compression loading of composite structures
p 125 N92-33034
A new test method to determine the compressive strength of fiber-reinforced composites
p 126 N92-33035
Aspects of compression in aerospace composites: Future requirements p 126 N92-33036
CFRP stiffened panels under compression
p 127 N92-33044
Evaluation of the effects of the environment on the behavior of the primary structures of composite material aircraft in service: Historic and current situation
p 127 N92-33048
Fluid effects: Thermoset and thermoplastic matrix composites p 128 N92-33049
Environmental resistance of amorphous bonded thermoplastic joints p 128 N92-33053
Flight service environmental effects on composite materials and structures p 128 N92-33054
Predicting failure by debonding/delamination
p 129 N93-21512
Progressive delamination in polymer matrix composite laminates: A new approach p 130 N93-21515
Delamination damage and its effect on buckling of laminated cylindrical shells p 130 N93-21516
Modelisation and computation of composite materials
p 130 N93-21518
Use of robots for aircraft dry stripping via plastic media blasting p 150 N94-10620
Fiber optic sensing for composite smart structures
p 133 N94-11327
Adaptive structure design employing shape memory actuators p 133 N94-11331
The process network in the design and manufacturing of aircraft p 59 N94-24319
Expendable gas turbine engine technology advances
p 94 N94-34438
Optimisation of composite aircraft structures by direct manufacturing approaches p 67 N94-36327
Applications of Titanium Matrix Composite to large airframe structure p 135 N94-36651
Impact of Acoustic Loads on Aircraft Structures
[AGARD-CP-549] p 301 N95-19142
Acoustic fatigue of carbon fibre structures
p 303 N95-19158

COMPRESSED AIR
ASTOVL model engine simulators for wind tunnel research p 115 N93-13213

COMPRESSIBILITY
Numerical determination of the residual strength of battle damaged composite plates p 132 N93-21533
Effect of impacts on CFRP structures, results of a comprehensive test program for practical use
p 132 N93-21534
Investigation of an NLF(1)-0416 airfoil in compressible subsonic flow p 22 N95-17852

COMPRESSIBILITY EFFECTS
Turbulence modelling for shock wave/boundary layer interactions specific issues and examples of applications
p 199 N94-15202

COMPRESSIBLE BOUNDARY LAYER
Numerical simulation of supersonic boundary layer transition p 214 N95-21074

COMPRESSIBLE FLOW
Computational techniques for solving the Navier-Stokes equations p 186 N92-27451
Presentation of a computational code for 3-D compressible flow in complex channels and cavities
p 189 N92-27475
The 3-D Navier-Stokes flow and temperature field computation for a forced mixer nozzle
p 190 N92-27482
Special Course on Unstructured Grid Methods for Advection Dominated Flows
[AGARD-R-787] p 191 N92-27671
Finite element methods for flow problems
p 191 N92-27672
Finite element methods for fluids p 191 N92-27673
Unstructured grid methods for compressible flows
p 192 N92-27676
Heat transfer and leakage in high-speed rotating stepped labyrinth seals p 86 N93-29951
Turbulence modelling for shock wave/boundary layer interactions specific issues and examples of applications
p 199 N94-15202
Viscous-inviscid calculation of high-lift separated compressible flows over airfoils and wings
p 17 N94-18440
Investigation of an NLF(1)-0416 airfoil in compressible subsonic flow p 22 N95-17852
Prediction of fluctuating pressure and power spectra in attached and separated compressible flow
p 209 N95-19153
Comparison of DNS and LES of transitional and turbulent compressible flow: Flat plate and mixing layer
p 213 N95-21066
Investigation of shear layer transition using various turbulence models p 218 N95-21096

COMPRESSION LOADS
Issues in compression loading of composite structures
p 125 N92-33034
A new test method to determine the compressive strength of fiber-reinforced composites
p 126 N92-33035
Aspects of compression in aerospace composites: Future requirements p 126 N92-33036
Damage progression under compressive loading in composite laminates containing an open hole
p 126 N92-33040
Propagation of a delamination in a composite panel subjected to a compression load p 126 N92-33041
Innovative constituents requirements to improve composites compressive strength p 127 N92-33043
CFRP stiffened panels under compression
p 127 N92-33044
Delamination development under fatigue loading
p 131 N93-21521

COMPRESSION RATIO
The centrifugal compressor, an essential component of small and medium power engines p 95 N94-34445

COMPRESSION TESTS
The Utilization of Advanced Composites in Military Aircraft
[AGARD-R-785] p 125 N92-33033
Issues in compression loading of composite structures
p 125 N92-33034
A new test method to determine the compressive strength of fiber-reinforced composites
p 126 N92-33035
Aspects of compression in aerospace composites: Future requirements p 126 N92-33036
A review of RAE sponsored work on the compressive behaviour of composite materials p 126 N92-33038
Influence of edge effect on compression-tension fatigue of toughened graphite/epoxy laminates
p 126 N92-33039
Damage progression under compressive loading in composite laminates containing an open hole
p 126 N92-33040
Propagation of a delamination in a composite panel subjected to a compression load p 126 N92-33041
GARTEUR compression behaviour of advanced CFRP --- carbon fiber reinforced plastics p 127 N92-33042
Innovative constituents requirements to improve composites compressive strength p 127 N92-33043
CFRP stiffened panels under compression
p 127 N92-33044
An overview of concerns relating to fluid effects on composites p 127 N92-33045
Fracture surface characteristics of compressive failures in carbon fibre reinforced epoxy laminate subjected to hot/wet conditioning p 128 N92-33051

COMPRESSIVE STRENGTH
The Utilization of Advanced Composites in Military Aircraft
[AGARD-R-785] p 125 N92-33033
Issues in compression loading of composite structures
p 125 N92-33034
A new test method to determine the compressive strength of fiber-reinforced composites
p 126 N92-33035
Aspects of compression in aerospace composites: Future requirements p 126 N92-33036
A review of RAE sponsored work on the compressive behaviour of composite materials p 126 N92-33038
Innovative constituents requirements to improve composites compressive strength p 127 N92-33043
Fracture surface characteristics of compressive failures in carbon fibre reinforced epoxy laminate subjected to hot/wet conditioning p 128 N92-33051
Allowable compression strength for CFRP-components of fighter aircraft determined by CAI-test p 132 N93-21531
Numerical determination of the residual strength of battle damaged composite plates p 132 N93-21533

COMPRESSOR BLADES
Application of S1BYL2 to the AGARD WG18 compressor test cases p 186 N92-27452
Design and analysis of a highly loaded transonic compressor cascade p 206 N94-34451
Elements of a modern turbomachinery design system
p 223 N95-14129
Designing in three dimensions p 223 N95-14130
The industrial use of CFD in the design of turbomachinery p 207 N95-14133
New methods, new methodology: Advanced CFD in the Snecma turbomachinery design process
p 207 N95-14134
Performance deterioration of axial compressors due to blade defects p 101 N95-19665
Erosion of T56 5th stage rotor blades due to bleed hole overtip flow p 101 N95-19666
High velocity oxygen fuel spraying of erosion and wear resistant coatings on jet engine parts
p 103 N95-19680

COMPRESSOR EFFICIENCY
Steady and transient performance calculation method for prediction, analysis, and identification
p 79 N92-28461
Flight analysis of air intake/engine compatibility
p 51 N93-13212
Performance deterioration of axial compressors due to blade defects p 101 N95-19665

COMPRESSOR ROTORS
Application of CFD in the design of gas turbine engine components p 78 N92-27461

Propulsion and Energetics Panel Working Group 20 on Test Cases for Engine Life Assessment Technology
[AGARD-AR-308] p 81 N93-14890
Introduction to test cases for engine life assessment technology p 81 N93-14891
CF6-6 high pressure compressor stage 5 locking slot crack propagation spin pit test p 81 N93-14894
F100 second stage fan disk bolthole crack propagation ferris wheel test p 82 N93-14897
Simple and powerful turbojet with four stage axial compressor and axial flow turbine for the propulsion of subsonic missiles p 83 N93-17620
Transient thermal behaviour of a compressor rotor with axial cooling air flow and co-rotating or contra-rotating shaft p 86 N93-29946
Flow and heat transfer between gas-turbine discs p 86 N93-29950
Development of mechanical testing methods for titanium matrix composites (traction-ogligo-cyclic fatigue) p 137 N94-36669
The calculation of erosion in a gas turbine compressor rotor p 101 N95-19664

COMPRESSORS

Computation of the unsteady transonic 2D cascade flow by an Euler algorithm with interactive grid generation p 4 N92-27944
Calculation of installation effects within performance computer programs p 80 N92-28465
The influence of intake swirl distortion on the steady-state performance of a low bypass, twin-spool engine p 194 N93-13211
A novel-high-performance system for recording and analysing instantaneous total pressure distortion in air intakes p 219 N93-13215
RB 199 high pressure compressor stage 3 spin pit tests p 81 N93-14893
Engine life assessment test case TF41 LP compressor shaft torsional fatigue p 82 N93-14896
Simple and powerful turbojet with four stage axial compressor and axial flow turbine for the propulsion of subsonic missiles p 83 N93-17620
Technology Requirements for Small Gas Turbines
[AD-280274] p 93 N94-34431
Advanced concepts for next generation small gas turbine engine compressors p 95 N94-34443
Aerodynamic design and investigation of a mixed flow compressor stage p 206 N94-34450
Damage of high temperature components by dust-laden air p 102 N95-19673
Protective coatings for compressor gas path components p 102 N95-19675
Gas turbine compressor corrosion and erosion in Western Europe p 103 N95-19678
Multilayer anti-erosion coatings p 103 N95-19679

COMPUTATION

Special Course on Engineering Methods in Aerodynamic Analysis and Design of Aircraft
[AGARD-R-783] p 48 N92-23950
Computational procedures for preliminary design p 48 N92-23952
Overview of the NASA Dryden Flight Research Facility aeronautical flight projects testing p 54 N93-19916
Visual autonomous automatic landing of airplanes p 40 N93-22791
Computing techniques in mission planning p 294 N94-25012

COMPUTATIONAL CHEMISTRY

Comparison of computation and experiment for a high enthalpy, heated-driver, shock-tube environment p 11 N94-10447

COMPUTATIONAL FLUID DYNAMICS

CFD Techniques for Propulsion Applications
[AGARD-CP-510] p 186 N92-27450
Computational techniques for solving the Navier-Stokes equations p 186 N92-27451
Steady and unsteady 3D flow computation through a transonic turbine stage p 78 N92-27469
Three dimensional flow in sharp bends --- ducted flow p 190 N92-27481
The 3-D Navier-Stokes flow and temperature field computation for a forced mixer nozzle p 190 N92-27482
Flow computation in combustion chambers using zonal nonstaggered grids p 190 N92-27483
Modelling the vaporiser and primary zone flows for a modern gas turbine combustion chamber p 79 N92-27484
Nonequilibrium 3D flows of air through inlets p 190 N92-27487
Three dimensional calculations of reactive flows within aircraft combustion chambers including some combustion models p 191 N92-27490
Finite element methods for flow problems p 191 N92-27672
Multidimensional upwind methods for unstructured grids p 191 N92-27675
Unstructured grid methods for compressible flows p 192 N92-27676
Aspects of unstructured grids and finite-volume solvers for the Euler and Navier-Stokes equations p 192 N92-27677
Finite element methods in CFD: Grid generation, adaptivity, and parallelization p 192 N92-27679
A frontal approach for node generation in Delaunay triangulations p 192 N92-27680
Transonic Unsteady Aerodynamics and Aeroelasticity
[AGARD-CP-507] p 3 N92-27936
Computation of the unsteady transonic 2D cascade flow by an Euler algorithm with interactive grid generation p 4 N92-27944
Computation of viscous phenomena in unsteady transonic flow p 5 N92-27949
The benchmark aeroelastic models program: Description and highlights of initial results p 6 N92-27960
Numeric simulation of the aerodynamic flows around nacelles p 193 N93-13202
Investigation of interference phenomena of modern wing-mounted high-bypass-ratio engines by the solution of the Euler-equations p 193 N93-13204
Aerodynamic analysis of slipstream/wing/nacelle interference for preliminary design of aircraft configurations p 7 N93-13205
Euler analysis of turbofan/superfan integration for a transport aircraft p 193 N93-13206
The PEP Symposium on CFD Techniques for Propulsion Applications p 194 N93-13210
AGARD WG13 aerodynamics of high speed air intakes: Assessment of CFD results p 194 N93-13220
Calibration of 2D unstructured grid methods on propulsive flowfields p 194 N93-13225
CFD calibration for three-dimensional nozzle/afterbody configurations p 195 N93-13226
Aerothermic calculations of flows in interdisc cavities of turbines p 86 N93-29947
Study of flow structure in rotating cavities: Numerical predictions of laminar and turbulent, steady, and unsteady flows p 196 N93-29948
Modelling thermal behaviour of turbomachinery discs and casings p 86 N93-29949
Flow and heat transfer between gas-turbine discs p 86 N93-29950
Aero-thermal design of a cooled transonic NGV and comparison with experimental results p 87 N93-29957
The aerodynamic effect of coolant ejection in the leading edge region of a film-cooled turbine blade p 87 N93-29958
Coupling of 3D-Navier-Stokes external flow calculations and internal 3D-heat conduction calculations for cooled turbine blades p 87 N93-29961
A Navier-Stokes solver with different turbulence models applied to film-cooled turbine cascades p 87 N93-29962
Navier-Stokes analysis of three-dimensional flow and heat transfer inside turbine blade rows p 87 N93-29963
Theoretical and Experimental Methods in Hypersonic Flows
[AGARD-CP-514] p 8 N94-10421
CFD analysis of hypersonic, chemically reacting flow fields p 8 N94-10422
Numerical simulation of the flow through a scramjet engine p 89 N94-10425
In-flight evaluation of aerodynamic predictions of an air-launched space booster p 9 N94-10427
A CFD validation roadmap for hypersonic flows p 198 N94-10439
Synthesis of the Workshop on Hypersonic Flows for ReEntry Problems p 9 N94-10440
Problems in the validation of CFD codes through comparison with experiment p 198 N94-10441
Experimental and computational comparisons of Mach 6 high Reynolds number heat transfer and skin friction p 10 N94-10443
Joint computational and experimental aerodynamic research on a hypersonic vehicle p 10 N94-10445
Issues and approach to develop validated analysis tools for hypersonic flows: One perspective p 11 N94-10446
Comparison of computation and experiment for a high enthalpy, heated-driver, shock-tube environment p 11 N94-10447
On the instability of hypersonic flow past a pointed cone: Comparison of theoretical and experimental results at Mach 8 p 12 N94-10453
Studies of hypersonic viscous flows p 12 N94-10454
Calculations of viscous nonequilibrium flows in nozzles p 12 N94-10455
Nonequilibrium hypersonic flow in a wind-tunnel nozzle p 12 N94-10456
Some experimental study and numerical simulation in wind tunnel flow p 12 N94-10457
A CFD-based aerodynamic design procedure for hypersonic wind-tunnel nozzles p 116 N94-10458
Numerical methods for aerothermodynamic design of hypersonic space transport vehicles p 119 N94-10459
Hypersonic flow computations around re-entry vehicles p 13 N94-10461
On the accuracy and efficiency of CFD methods in real gas hypersonics p 13 N94-10462
A comparison of high resolution upwind solvers on 3-D inviscid hypersonic flows p 13 N94-10463
Local aerothermal problems during Hermes re-entry p 13 N94-10464
Thermal and chemical non equilibrium hypersonic flow computations p 13 N94-10465
Swept shock wave/laminar boundary layer interactions, experimental, and numerical results p 199 N94-15198
Numerical simulation of 3-D shock wave turbulent boundary layer interactions p 199 N94-15199
Unsteady phenomena in shock wave/boundary layer interaction p 199 N94-15200
Hypersonic shock wave boundary layer interactions over simplified deflected control surface configurations p 200 N94-15203
Rocket motor plume flowfields: Phenomenology and simulation p 125 N94-15221
High-Lift System Aerodynamics
[AGARD-CP-515] p 1 N94-18415
Calculation of maximum and high lift characteristics of multi element aerofoils p 14 N94-18419
Navier-Stokes computations of turbulent flow around high-lift configurations p 14 N94-18420
Efficient simulation of incompressible viscous flow over multi-element airfoils p 14 N94-18421
Navier-Stokes calculations on multi-element airfoils using a chimera-based solver p 14 N94-18422
Numerical solution of the Navier-Stokes equations for high-lift configurations on structured composite grids p 14 N94-18423
A viscous-inviscid solver for high-lift incompressible flows over multi-element airfoils at deep separation conditions p 15 N94-18425
High-lift system analysis method using unstructured meshes p 15 N94-18426
Prediction of the high-lift performance of multi-element aerofoils using an unstructured Navier-Stokes solver p 15 N94-18427
Numerical calculations of high lift flows using structured and unstructured methods p 15 N94-18428
Navier-Stokes simulation of flow field around a blown-flap high-lift system p 16 N94-18429
Viscous phenomena affecting high-lift systems and suggestions for future CFD development p 16 N94-18433
A fast computing method for the flow over high-lift wings p 16 N94-18437
Calculation of multielement airfoils and wings at high lift p 17 N94-18438
Wake structure and aerodynamic behavior of high lift aircraft configurations during unsteady maneuvers in ground effect p 17 N94-18439
Viscous-inviscid calculation of high-lift separated compressible flows over airfoils and wings p 17 N94-18440
High-lift research: Application to the design of the ATR72 flap p 57 N94-18442
The aero-mechanical design of a novel Fowler flap mechanism p 57 N94-18443
Integrated Airframe Design Technology
[AGARD-R-794] p 58 N94-24313
Applications of CFD codes and supercomputers to aircraft design activities p 58 N94-24316
Computational and Experimental Assessment of Jets in Cross Flow
[AGARD-CP-534] p 200 N94-28003
Fifty years of jet in cross flow research p 200 N94-28004
Numerical investigation of thrust vectoring by injection of secondary air into nozzle flows p 202 N94-28013
Transitional flight characteristics of a geometrically simplified STOVL model p 61 N94-28035
Analysis of cooling jets near the leading edge of turbine blades p 90 N94-28037
Prediction of prompt NO(x) in hydrocarbon air flames p 139 N94-29250
Flowfield prediction of NO(x) and smoke production in aircraft engines p 140 N94-29252
Numerical prediction of turbulent sooting diffusion flames p 140 N94-29253
Application of CFD in combustor design technology p 90 N94-29256
Development of global/chemistry model for jet-fuel thermal stability based on observations from static and flowing experiments p 148 N94-29262
Spray combustion experiments and numerical predictions p 142 N94-29277
Modeling of the phase liquidates in combustion chambers p 142 N94-29278
A new Eulerian model for turbulent evaporating sprays in recirculating flows p 142 N94-29279
Scramjet CFD methods and analysis. Part 1: Scramjet CFD methods. Numerical simulation of the flow in scramjet duct p 92 N94-29296
Scramjet CFD methods and analysis. Part 2: Scramjet CFD analysis. Numerical simulation of supersonic mixing and combustion applied to scramjet combustor p 93 N94-29300

COMPUTER VISION
Machine Perception
| AGARD-LS-185 | p 288 N93-13238
Sensing and interpretation of 3-D shape and motion p 288 N93-13240
Building and using scene representations in image understanding p 289 N93-13241
Silicon vision: Elementary functions to be implemented on electronic retinas p 289 N93-13242
3-D computer vision for navigation/control of mobile robots p 289 N93-13243
Machine perception exploiting high-level spatio-temporal models p 289 N93-13244
The 3-D computer vision techniques for object following and obstacle avoidance p 289 N93-13245
Multi-sensoral approach to night flight: Perceptive and Cognitive limitations p 275 N94-23981
Airside ground movements surveillance p 46 N94-29585
Two-axis camera platform for machine vision p 290 N94-36628

COMPUTERIZED SIMULATION
Application of analytical and design tools for fighter wing aeroelastic tailoring p 47 N92-23231
Introduction to Special Course on Engineering Methods in Aerodynamic Analysis and Design of Aircraft p 48 N92-23951
Application of S1BYL2 to the AGARD WG18 compressor test cases p 186 N92-27452
A mathematical constraint placed upon inter-blade row boundary conditions used in the simulation of multistage turbomachinery flows p 187 N92-27458
Three dimensional flow in sharp bends --- ducted flow p 190 N92-27481
Application of Monte Carlo simulation for three-dimensional flows p 190 N92-27485
The coherent flamelet model for propulsion applications p 138 N92-27486
Evaluation of the effects of finite rate chemistry on nozzle performance p 190 N92-27488
Finite element methods in CFD: Grid generation, adaptivity, and parallelization p 192 N92-27679
Turbulent skin-friction drag reduction by active and passive means, part 1 p 3 N92-27714
Fuzzy guidance system evaluation p 282 N92-27903
ICAAS piloted simulation evaluation p 72 N92-27906
A time-linearization approach for unsteady transonic flows p 4 N92-27941
Dynamic simulation of compressor and gas turbine performance p 79 N92-28463
Aircraft ship operations
| AGARD-AR-312 | p 49 N92-28468
Interest in real-time simulations for the development terrain following function of radar systems p 154 N92-28529
Fundamentals and Special Problems of Synthetic Aperture Radar (SAR)
| AGARD-LS-182 | p 154 N93-13049
SAR simulation p 156 N93-13056
Propulsion and Energetics Panel Working Group 20 on Test Cases for Engine Life Assessment Technology
| AGARD-AR-308 | p 81 N93-14890
Introduction to test cases for engine life assessment technology p 81 N93-14891
Occupant kinematics simulation of the Kegworth air accident p 261 N93-19662
Computer aided methods for simulating occupant response to impact using OASYS DYNA3D p 262 N93-19666
Improving manikin biofidelity p 262 N93-19668
Use of microprocessor-based simulator technology and MEG/EEG measurement techniques in pilot emergency-manoeuver training p 115 N93-19706
Flight above a virtual world p 264 N93-19766
Method for developing the RAFALE flight control system p 54 N93-19912
Progressive delamination in polymer matrix composite laminates: A new approach p 130 N93-21515
System evaluation of a fiber optic guided missile with a simple guidance addition to improve system effectiveness p 305 N93-22025
Bearing determination and bearing quality indication from a goniometric HF DF system p 161 N93-23617
Multiple emitter direction finding from a circular array by single snapshot processing p 162 N93-23627
Theoretical and Experimental Methods in Hypersonic Flows
| AGARD-CP-514 | p 8 N94-10421
Synthesis of the Workshop on Hypersonic Flows for ReEntry Problems p 9 N94-10440
Joint computational and experimental aerodynamic research on a hypersonic vehicle p 10 N94-10445
Three-dimensional hypersonic rarefied flow calculations using direct simulation Monte Carlo method p 11 N94-10449
Hypersonic multi block flow simulations around space vehicles including non-equilibrium chemistry p 12 N94-10460
Probabilistic simulation of concurrent engineering of propulsion systems p 58 N94-24317
Multi-disciplinary coupling for integrated design of propulsion systems p 89 N94-24326
Navier-Stokes simulation of two and three dimensional jets in crossflow, effects of grid, and boundary conditions p 203 N94-28026
Recent developments in the simulation of steady and transient transverse jet interactions for missile, rotorcraft, and propulsive applications p 203 N94-28030
Technology rigs: A tool for afterburner development p 91 N94-29270
Pollutant emissions from and within a model gas turbine combustor at elevated pressures and temperatures p 141 N94-29271
Scramjet CFD methods and analysis. Part 2: Scramjet CFD analysis. Numerical simulation of supersonic mixing and combustion applied to scramjet combustor p 93 N94-29300
Testing Operational Flight Programs (OFPs) p 285 N94-29337
A distributed object-based environment in Ada p 287 N94-29347
Simulation of fully automated air traffic control concepts p 43 N94-29569
Numerical simulation of airfoil film cooling: A jet in crossflow p 206 N94-34462
Virtual Interfaces: Research and Applications
| AGARD-CP-541 | p 260 N94-37261
The role of CFD in the design process p 208 N95-14135
Propagation Modelling and Decision Aids for Communications, Radar and Navigation Systems
| AGARD-LS-196 | p 174 N95-14825
Electro-optics: Propagation from IR to UV and sensor considerations. Part B: Tools for exploitation of propagation conditions and system range performance p 176 N95-14834
Low-speed surface pressure and boundary layer measurement data for the NLR 7301 airfoil section with trailing edge flap p 22 N95-17855
Data from the GARTEur (AD) Action Group 02 airfoil CAST 7/DOA1 experiments p 22 N95-17856
OAT15A airfoil data p 23 N95-17857
A supercritical airfoil experiment p 23 N95-17858
Two-dimensional high-lift airfoil data for CFD code validation p 23 N95-17859

Perspective problems of gas turbine engines simulation p 99 N95-19026
Design of fan blades subjected to bird impact p 102 N95-19669
Ice-impact analysis of blades p 102 N95-19672
Modelling and simulation of HF/VHF MMPPs p 177 N95-20925
Application of Direct and Large Eddy Simulation to Transition and Turbulence
[AGARD-CP-551] p 212 N95-21061
Developments and applications of dynamic models for large eddy simulation of complex flows p 212 N95-21062
Subgrid scale models in finite difference simulations of complex wall bounded flows p 212 N95-21063
Large-eddy simulation of rotating channel flows using a localized dynamic model p 213 N95-21064
The asymptotic state of rotating homogeneous turbulence at high Reynolds numbers p 213 N95-21065
Comparison of DNS and LES of transitional and turbulent compressible flow: Flat plate and mixing layer p 213 N95-21066
Direct numerical simulation of turbulent flow in a sudden pipe expansion p 213 N95-21067
Simulation of separated flows p 213 N95-21068
Simulation of large scale transitional flows p 215 N95-21075
Simulation of pipe flow p 215 N95-21078
Simulations of bypass transition for spatially evolving disturbances p 215 N95-21079
Direct numerical simulation for premixed turbulent combustion modelling p 143 N95-21082
Entrainment in a shear-free turbulent mixing layer p 216 N95-21083
The effect of initial conditions on the development of temporally evolving planar three dimensional incompressible wakes p 216 N95-21085
Spatial direct numerical simulation of boundary layer transition under strong adverse pressure gradient p 217 N95-21093
Direct simulation and graphics post-processing of three-dimensional turbulent flows p 218 N95-21098

COMPUTERS
Use of a virtual cockpit for the development of a future transport aircraft p 114 N92-28547
The demise of plastic encapsulated microcircuit myths p 185 N95-20640

CONCATENATED CODES
Adaptive error-control scheme for 2-200 MHz Multiple-Mechanism Propagation Paths p 177 N95-20926

CONCRETES
Contributions of DLR to air traffic capacity enhancement within a terminal area p 42 N94-29567

CONCURRENT ENGINEERING
Probabilistic simulation of concurrent engineering of propulsion systems p 58 N94-24317
Application of concurrent engineering principles to aircraft structural design p 59 N94-24321

CONDENSING
Non-polluting gas turbine as a result of self-heating working fluid in a closed circuit p 94 N94-34436

CONDUCTING POLYMERS
Smart polymeric system for electromechanical transduction p 144 N94-11330

CONDUCTIVE HEAT TRANSFER
Computation of 3D-viscous flow and heat transfer for the application to film cooled gas turbine blades p 187 N92-27456
Modelling thermal behaviour of turbomachinery discs and casings p 86 N93-29949

CONFERENCES
Remote Sensing of the Propagation Environment
[AGARD-CP-502] p 230 N92-22790
Integrated Design Analysis and Optimisation of Aircraft Structures

CONFIGURATION MANAGEMENT
Acquisition 2: Procurement, acquisition, and maintenance of configuration management documentation in support of a CIS system p 311 N93-10599

CONFORMAL MAPPING
Optimum aerodynamic design via boundary control p 70 N95-16565

CONGENITAL ANOMALIES
Echocardiographic screening of aircrew candidates p 247 N94-23319

CONICAL BODIES
On the instability of hypersonic flow past a pointed cone: Comparison of theoretical and experimental results at Mach 8 p 12 N94-10453
Techniques for aerodynamic characterization and performance evaluation at high angle of attack p 63 N94-34614

CONNECTORS
A technique for increasing the bandwidth of high performance electrical backplanes p 185 N95-20651

CONSERVATION EQUATIONS
Higher order upwind finite volume schemes with ENO-properties for general unstructured meshes p 192 N92-27678

CONSERVATION LAWS
Multidimensional upwind methods for unstructured grids p 191 N92-27675

CONSISTENCY
The Lorentz reciprocity theorem as a consistency test for propagation models p 179 N95-20937

CONSTITUTIVE EQUATIONS
Modelling and testing fibre reinforced titanium for design purposes p 138 N94-36670

CONSTRAINTS
Application of an automated multidisciplinary analysis and optimisation system to the design of aircraft structures p 47 N92-23233
A fin optimisation study p 48 N92-23237

CONSTRUCTION MATERIALS
Computerized property data for engineering materials: An overview p 310 N92-32191

CONTACT LENSES
Operational use of contact lenses by military aircrew
[AGARD-AG-334] p 242 N93-15824

CONTAMINANTS
Simulation of pollutant formation in turbulent combustors using an extended coherent flame model p 139 N94-29251
Future directions in helicopter protection system configuration p 100 N95-19657

CONTAMINATION
Out of area experiences with the RB199 in Toronto p 99 N95-19654

CONTINUOUS RADIATION
Irregular media effects on radiowave signals used in navigation and positioning systems p 159 N93-23606

CONTRACTS
A guide to tenders and contracts alerting services
[AGARD-R-799] p 308 N94-37447

CONTROL
Automated software generation approaches for the design and development of guidance and control systems software
[AGARD-AR-292] p 282 N92-25980

CONTROL BOARDS
Integrated and Multi-Function Navigation
[AGARD-CP-525] p 39 N93-22780
On-line handling of air traffic: Management, guidance and control
[AGARD-AG-321] p 46 N95-18927

CONTROL EQUIPMENT
Decoupling of aircraft responses p 107 N94-11497
Utilizing quantitative feedback theory design technique for flight control system p 108 N94-11501
Interactive large screen: A multi-mode dialogue tool for future cockpits p 280 N94-37266
A non-intrusive way to measure point-of-gaze p 280 N94-37272

CONTROL SIMULATION
Utility of ground simulation in flight control problem identification, solution development, and verification p 111 N92-28525
Use of high-fidelity simulation in the development of an F/A-18 active ground collision avoidance system p 30 N92-28530
Virtual interface applications for airborne weapons systems p 268 N93-28858
Simulation of fully automated air traffic control concepts p 43 N94-29569

CONTROL STABILITY
Stability in Aerospace Systems
[AGARD-R-789] p 107 N94-11489
Stability analysis and aerospace vehicle dynamics p 107 N94-11491
On non-linear longitudinal stability of an aircraft in a dive in the presence of atmospheric disturbances p 107 N94-11492
The development procedures and tools applied for the attitude control software of the Italian satellite SAX p 122 N94-29324

CONTROL SURFACES
Control jets in interaction with hypersonic rarefied flow p 122 N94-28020
Damage tolerance management of the X-29 vertical tail p 62 N94-34595
High incidence flow analysis over the Rafale A p 18 N94-34612

CONTROL SYSTEMS DESIGN
Air Vehicle Mission Control and Management
[AGARD-CP-504] p 1 N92-27887
Overview on basis and use of performance prediction methods p 79 N92-28459
Use of a research simulator for the development of new concepts of flight control p 113 N92-28543
Advances in Guidance and Control of Precision Guided Weapons
[AGARD-CP-524] p 149 N93-22018

On possible applications of smart structures to control of space systems p 121 N94-11342
Stability analysis through bifurcation theory, 2 p 308 N94-18239
Introduction to Quantitative Feedback Theory (QFT) technique p 290 N94-18241
Air traffic management as principled negotiation between intelligent agents p 42 N94-29562
X-31A control law design p 109 N94-34618
Optimum aerodynamic design via boundary control p 70 N95-16565

CONTROLLABILITY
The use of ground based simulation for handling qualities research: A new assessment p 114 N92-28545
Initial validation of a R/D simulator with large amplitude motion p 114 N92-28546
Application of piloted simulation to high-angle-of-attack flight-dynamics research for fighter aircraft p 114 N92-28551
On automated analysis of flight test data p 54 N93-19913
X-31A system identification applied to post-stall flight: Aerodynamics and thrust vectoring p 110 N94-34619
Study findings on the influence of maneuverability and agility on helicopter handling qualities p 64 N94-34624
The influence of flying qualities on operational agility p 65 N94-34628

CONTROLLERS
Fuzzy guidance system evaluation p 282 N92-27903
Thrust vector aided maneuvering of the YF-22 Advanced Tactical Fighter prototype p 63 N94-34610
High accuracy control algorithm application to a tracking turret p 287 N94-36626
Two-axis camera platform for machine vision p 290 N94-36628
Manual tracking performance using a virtual hand controller: A comparison study p 280 N94-37271

CONVECTION-DIFFUSION EQUATION
Finite element methods for flow problems p 191 N92-27672

CONVECTIVE HEAT TRANSFER
Thermal effects of a coolant film along the suction side of a high pressure turbine nozzle guide vane p 84 N93-29930
Modelling thermal behaviour of turbomachinery discs and casings p 86 N93-29949
Verification of multidisciplinary models for turbomachines p 99 N95-19025

CONVERGENT NOZZLES
Transient flow features of a supersonic jet in a low speed cross flow p 200 N94-28005
Single-engine tail interference model p 26 N95-17879

CONVERGENT-DIVERGENT NOZZLES
Numerical analysis of converging-diverging nozzle flows in chemical non-equilibrium p 191 N92-27489
Cooling predictions in turbofan engine components p 88 N93-29964
Nonequilibrium hypersonic flow in a wind-tunnel nozzle p 12 N94-10456
Transient flow features of a supersonic jet in a low speed cross flow p 200 N94-28005

COOLANTS
Thermal effects of a coolant film along the suction side of a high pressure turbine nozzle guide vane p 84 N93-29930
Analysis of cooling jets near the leading edge of turbine blades p 90 N94-28037
Research and development of high thermal stability fuels p 148 N94-29261
Immersion/two phase cooling p 212 N95-20648

COOLING
Further investigation of the effect of model cooling on periodic transonic flow p 7 N92-27961
Heat Transfer and Cooling in Gas Turbines [AGARD-CP-527] p 84 N93-29926
Turbulent flow and heat transfer in idealized blade cooling passages p 85 N93-29938
Cooling geometry optimization using liquid crystal technique p 85 N93-29939
Fundamental studies of impingement cooling thermal boundary conditions p 196 N93-29940
Prediction of jet impingement cooling scheme characteristics (airfoil leading edge application) p 196 N93-29941
An L2F-measurement device with image rotator prism for flow velocity analysis in rotating coolant channels p 220 N93-29942
Local heat transfer measurement with liquid crystals on rotating surfaces including non-axisymmetric cases p 85 N93-29943
Alleviation of thermal strain in the CF: Keeping our cool during the Gulf conflict p 251 N94-28449
FASTPACK: Optimized solutions for modular avionics derived from a parametric study. Part 2: Avionics p 76 N95-20635
Immersion/two phase cooling p 212 N95-20648
Time behavior and frequency response of the microwave propagation channel during multipath propagation p 180 N95-20942

COOLING SYSTEMS
Numerical representation of heat transfer into turbine blade cooling ducts p 188 N92-27474
Presentation of a computational code for 3-D compressible flow in complex channels and cavities p 189 N92-27475
The effect of orthogonal-mode rotation on forced convection in a circular-sectioned tube fitted with full circumferential transverse ribs p 196 N93-29937
The effect of main stream flow angle on flame tube film cooling p 197 N93-29953
Impingement/effusion cooling p 197 N93-29954
Recent Canadian advances in active thermal protection p 278 N94-28451
Endothermic fuels for hypersonic aviation p 148 N94-29285
Aerothermal design of 1600 K TET core engine hot-section components for high-technology compact propulsion systems p 94 N94-34435
Application of multidisciplinary models to the cooled turbine rotor design p 99 N95-19024

COOPERATION
A teamwork model of pilot aiding: Psychological principles for mission management systems design p 292 N92-27893

COORDINATES
Scene correlation for INS aiding in flight-test systems: Runway-referenced flight-tests with on-board sensors only p 40 N93-22792

COPPER ALLOYS
Growth of artificially and naturally initiating notch root cracks under FALSTAFF spectrum loading p 228 N94-34589

CORIOLIS EFFECT
Numerical representation of heat transfer into turbine blade cooling ducts p 188 N92-27474
The effect of orthogonal-mode rotation on forced convection in a circular-sectioned tube fitted with full circumferential transverse ribs p 196 N93-29937
Turbulent flow and heat transfer in idealized blade cooling passages p 85 N93-29938
Vestibular examination in pilots susceptible to motion sickness p 255 N95-19427

CORNER FLOW
Control jets in interaction with hypersonic rarefied flow p 122 N94-28020

CORNERS
Fractographic investigation of IMI 685 crack propagation specimens for SMP SC33 p 88 N93-31743
Crack growth predictions using a crack closure model p 228 N94-34584

CORONARY ARTERY DISEASE
Cardiovascular Risk Factors (CVRF) in Spanish pilots with coronary artery disease demonstrated by angiographic studies p 245 N93-32253
Results and management of pathological lipoprotein concentrations and other cardiovascular risk factors in military pilots of the German Federal Armed Forces p 245 N93-32254
Cardiopulmonary Aspects in Aerospace Medicine [AGARD-LS-189] p 246 N94-23313
Aeromedical disposition for coronary artery disease p 246 N94-23316
Primary prevention of coronary heart disease p 246 N94-23317

COROTATION
Transient thermal behaviour of a compressor rotor with axial cooling air flow and co-rotating or contra-rotating shaft p 86 N93-29946

CORRECTION
Boundary-flow measurement methods for wall interference assessment and correction: Classification and review p 210 N95-19262
Wall correction method with measured boundary conditions for low speed wind tunnels p 210 N95-19263
Adaptive wind tunnel walls versus wall interference correction methods in 2D flows at high blockage ratios p 117 N95-19267
Transonic wind tunnel boundary interference correction p 117 N95-19271
Calculation of wall effects of flow on a perforated wall with a code of surface singularities p 211 N95-19277
Interference corrections for a centre-line plate mount in a porous-walled transonic wind tunnel p 29 N95-19280
Correction of support influences on measurements with sting mounted wind tunnel models p 29 N95-19281

CORRELATION
Correlation of serum alpha sub 1 antitrypsin with cigarette smoking and pulmonary function status in Greek pilots, for a ten year period p 242 N93-11318
Correlations between engineering, medical and behavioural aspects in fire-related aircraft accidents p 34 N93-19693
Computational methods for preliminary design and geometry definition in turbomachinery p 223 N95-14128
Analysis of subgrid models using direct and large-eddy simulations of isotropic turbulence p 214 N95-21071

CORROSION
Erosion, Corrosion and Foreign Object Damage Effects in Gas Turbines [AGARD-CP-558] p 99 N95-19653
Out of area experiences with the RB199 in Toronto p 99 N95-19654
Gas turbine compressor corrosion and erosion in Western Europe p 103 N95-19678
Testing considerations for military aircraft engines in corrosive environments (a Navy perspective) p 104 N95-19684

CORROSION PREVENTION
Future directions in helicopter protection system configuration p 100 N95-19657

CORROSION RESISTANCE
Resistance of silicon nitride turbine components to erosion and hot corrosion/oxidation attack p 104 N95-19683

CORROSION TESTS
Testing considerations for military aircraft engines in corrosive environments (a Navy perspective) p 104 N95-19684

COST ANALYSIS
Susceptibility in USAF recruits to vaccine preventable diseases p 238 N93-11301

COST EFFECTIVENESS
Special Course on Engineering Methods in Aerodynamic Analysis and Design of Aircraft [AGARD-R-783] p 48 N92-23950
A Research Agenda for Scientific and Technical Information [AGARD-AR-316] p 312 N93-19796

Spacecraft and launch systems for TACSAT applications p 120 N93-29904

CREEP STRENGTH
Substantiating powder metal life methodologies for engines p 225 N94-37330

CREEP TESTS
Metal matrix composites: Analysis of simple specimens and model components under creep and fatigue loading p 136 N94-36661

CREW WORKSTATIONS
Human factors problems for aircrew-aircraft interfaces: Where should we focus our efforts? p 263 N93-19759
Advanced helmet tracking technology developments for Naval aviation p 279 N94-36623

CRITICAL VELOCITY
Numerical investigation of thrust vectoring by injection of secondary air into nozzle flows p 202 N94-28013

CROSS FLOW
Experimental study of heat transfer close to a plane wall heated in the presence of multiple injections (subsonic flow) p 84 N93-29931
Computational and Experimental Assessment of Jets in Cross Flow [AGARD-CP-534] p 200 N94-28003
Fifty years of jet in cross flow research p 200 N94-28004
Transient flow features of a supersonic jet in a low speed cross flow p 200 N94-28005
Separated flow generated by a vectored jet in a crossflow p 201 N94-28007
Scalar mixing in the subsonic jet in crossflow p 201 N94-28008
The interaction region associated with twin jets and a normal crossflow p 201 N94-28009
Experimental data for CFD validation of impinging jets in crossflow with application to ASTOVL flow problems p 201 N94-28010
Topological structure of a jet in a cross flow p 202 N94-28014
An experimental study of siphonal jets in a turbulent boundary layer crossflow p 202 N94-28015
Experiments on the ground vortex formed by an impinging jet in cross flow p 202 N94-28016
Comparison of the interactions of two and three dimensional transverse jets with a hypersonic free stream p 17 N94-28021
Experiments on interaction force of jets in hypervelocity cross-flow in a shock tunnel p 17 N94-28022
A numerical investigation of a subsonic jet in a crossflow p 202 N94-28023
Calculation of single and multiple jets in cross-flow with and without impingement using Reynolds-stress-transport closure p 203 N94-28024
Predictions of momentum and scalar fields in a jet in cross-flow using first and second order turbulence closures p 203 N94-28025
Navier-Stokes simulation of two and three dimensional jets in crossflow, effects of grid, and boundary conditions p 203 N94-28026
Effects, limits, and limitations of spanwise blowing p 18 N94-28027
Theoretical and experimental investigation of a delta wing with turbulent leading-edge jets p 18 N94-28029
Recent developments in the simulation of steady and transient transverse jet interactions for missile, rotorcraft, and propulsive applications p 203 N94-28030
Effects of free-stream turbulence on a jet in a cross flow p 203 N94-28036
Navier-Stokes analysis of a swirling jet in crossflow p 204 N94-28038
The mixing process in the quenching zone of the rich-lean-combustion concept p 142 N94-29281
Numerical simulation of airfoil film cooling: A jet in crossflow p 206 N94-34462
Numerical study of realistic perturbations in three-dimensional boundary layers p 217 N95-21091

CROSS POLARIZATION
Basic equations of radar polarimetry and solutions the sensing of propagation path polarization state changes p 153 N92-22821

Large bistatic angle clutter depolarization study p 180 N95-20941

CROSSTALK
A comparison of two examples of magnetic tracker systems p 281 N94-37275

CRUISE MISSILES
Development and qualification of the US Cruise Missile Propulsion System p 124 N93-17619

CRYSTALLINITY
The effect of heat treatment on the properties of PEEK and APC-2 p 128 N92-33052

CUBIC LATTICES
Analysis of the erosion of cubic centered and face centered metallic materials p 144 N95-19674

CUES
Initial validation of a R/D simulator with large amplitude motion p 114 N92-28546
Effective cueing during approach and touchdown: Comparison with flight p 115 N92-28552
Target cuing: A heterogeneous neural network approach p 288 N92-32442
Pilot decision aiding for weapon delivery: A novel approach to fire control cueing using parallel computing p 268 N93-28853

CULTURE (SOCIAL SCIENCES)
The Impact of Changing International Relations on the Scientific and Technical Community [AGARD-CP-523] p 313 N93-31215

CUMULATIVE DAMAGE
Reduction of fatigue load experience as part of the fatigue management program for F-16 aircraft of the RNLAF p 62 N94-34598

CURING
Smart processing of composite materials for enhanced performance and properties p 133 N94-11325

CYCLIC LOADS
RB211-524B disc and drive cones hot cyclic spinning test p 82 N93-14895
Synergism between layer cracking and delaminations in MD-laminates of CFRE p 130 N93-21520
Low cycle fatigue behaviour of titanium disc alloys p 88 N93-31745
Role of interfaces on the cyclic fatigue behaviour of ceramic matrix composites p 145 N94-24234
Crack growth under cycle loading in fibre reinforced titanium metal matrix composites p 137 N94-36665
Prediction of thermal and mechanical stress-strain responses of TMC's subjected to complex TMF histories p 137 N94-36666
Damage of high temperature components by dust-laden air p 102 N95-19673

CYLINDERS
Vortex structure and mass transfer near the base of a cylinder and a turbine blade p 84 N93-29929

CYLINDRICAL BODIES
Numerical representation of heat transfer into turbine blade cooling ducts p 188 N92-27474
Comparison of performances of different circular intakes p 83 N93-17616
Wind tunnel investigations of the appearance of shocks in the windward region of bodies with circular cross section at angle of attack p 25 N95-17866
Force and pressure data of an ogive-nosed slender body at high angles of attack and different Reynolds numbers p 25 N95-17868
Supersonic vortex flow around a missile body p 25 N95-17870

CYLINDRICAL CHAMBERS
Evaluation of multi-dimensional flux models for radiative transfer in cylindrical combustion chambers p 197 N93-29955

CYLINDRICAL SHELLS
Delamination damage and its effect on buckling of laminated cylindrical shells p 130 N93-21516

CYSTS
Spontaneous pneumothorax, cysts and bullae p 248 N94-23326

CYTOLOGY
Clinical and immunological response to vaccination with parenteral or oral vaccines in two groups of 30 recruits p 239 N93-11305
Use of novel adjuvants and delivery systems to improve the humoral and cellular immune response to malaria vaccine candidate antigens p 240 N93-11308

CYTOMETRY
Early markers of HIV infection and subclinical disease progression p 237 N93-11296

D

D REGION
Sensing of ELF signatures arising from space vehicle disturbances of the ionosphere p 232 N92-22809
Investigations of equatorial ionosphere nighttime mode conversion at VLF p 166 N93-30735

DAMAGE
Numerical finite element analysis of damage using Monte Carlo techniques p 291 N93-21522
Damage detection by Acousto-Ultrasonic Location (AUL) p 224 N93-21529
Numerical determination of the residual strength of battle damaged composite plates p 132 N93-21533
Assessment of in-service aircraft fatigue monitoring process p 62 N94-34593
Damage tolerance management of the X-29 vertical tail p 62 N94-34595
Turbine disks: Lifing against defects and materials development p 225 N94-37329
Brite-Euram programme: ACOUFAT acoustic fatigue and related damage tolerance of advanced composite and metallic structures p 303 N95-19159
Navy foreign object damage and its impact on future gas turbine engine low pressure compression systems p 100 N95-19658
Scandinavian Airlines Systems experience on erosion, corrosion and foreign object damage effects on gas turbines p 100 N95-19659
Experimental and numerical simulations of the effects of ingested particles in gas turbine engines p 101 N95-19662
Damage of high temperature components by dust-laden air p 102 N95-19673

DAMAGE ASSESSMENT
Smart structures: The relevance of fibre optics p 304 N92-28091
Damage progression under compressive loading in composite laminates containing an open hole p 126 N92-33040
Propagation of a delamination in a composite panel subjected to a compression load p 126 N92-33041
GARTEUR compression behaviour of advanced CFRP --- carbon fiber reinforced plastics p 127 N92-33042
Effects of fuel on Hercules AS-4/8552 composite material p 127 N92-33046
The application of Hybrid 3 dummy to the impact assessment of a free-fall lifeboat p 262 N93-19671
Progressive delamination in polymer matrix composite laminates: A new approach p 130 N93-21515
Delamination damage and its effect on buckling of laminated cylindrical shells p 130 N93-21516
Synergism between layer cracking and delaminations in MD-laminates of CFRE p 130 N93-21520
Delamination development under fatigue loading p 131 N93-21521
An Assessment of Fatigue Damage and Crack Growth Prediction Techniques [AD-280273] p 227 N94-34581
Miner's rule revisited p 227 N94-34582
A combined approach to buffet response analyses and fatigue life prediction p 228 N94-34587

DASSAULT AIRCRAFT
The role of simulation for the study of APIS (piloting support by synthetic imagery) p 113 N92-28544
In-flight refueling: Dassault Aviation research on the Rafale aircraft p 68 N94-36341

DATA ACQUISITION
AGARD flight test techniques series. Volume 10: Weapon delivery analysis and ballistic flight testing [AGARD-AG-300-VOL-10] p 293 N93-11711
Multi-frequency multi-polarization processing for spaceborne SAR p 156 N93-13057
An improved anthropometric test device p 262 N93-19670
The application of Hybrid 3 dummy to the impact assessment of a free-fall lifeboat p 262 N93-19671
TACSAT ground control and data collection p 163 N93-29895
Guide to the measurement of the transient performance of aircraft turbine engines and components [AD-280272] p 93 N94-33874
Basic principles of flight test instrumentation engineering, volume 1, issue 2 [AD-A282984] p 221 N94-33940
A non-intrusive way to measure point-of-gaze p 280 N94-37272
Providing electronic documents in Europe: Experience of INIST p 316 N94-37341

DATA BASES
Local Area Networks (LAN) p 282 N92-32183
Intelligent gateways p 308 N92-32184
Use of expert systems as user interfaces in information retrieval p 309 N92-32185
Search strategies in natural language p 309 N92-32186
Automated input into databases: OCR and descriptive cataloguing p 309 N92-32189
Computerized property data for engineering materials: An overview p 310 N92-32191
Facilitating the transfer of scientific and technical information with scientific and technical numeric databases p 310 N92-32192
Seminar on Basic Documentation Practices [AGARD-R-788] p 310 N93-10593
Scientific and Technical Information (STI) towards technological and industrial development: The case of Portugal p 310 N93-10596
Document processing p 311 N93-10600
Technology for libraries and information centers: A seminar in Greece, Portugal, and Turkey p 311 N93-10601
Services: User services in defence and aerospace documentation centres p 311 N93-10602
Security considerations within military information systems p 311 N93-10603
Directory of factual and numeric databases of relevance to aerospace and defence R and D [AGARD-R-777] p 312 N93-11710
The human factor problem in the Canadian Forces aviation p 31 N93-19657
Significance of histological postmortem findings in pilots killed in military and civil aircraft accidents in Germany (West): A 25-year-review p 243 N93-19697
Aircraft accident injuries in the Hellenic Air Force in the last 20 years p 244 N93-19698
Medical evaluation of spatial disorientation mishaps p 260 N93-19703
Flight above a virtual world p 264 N93-19766
Radar seeker based autonomous navigation update system using topography feature matching techniques p 157 N93-22030
On the development of a film cooling layer p 197 N93-29959
Integrated access to distributed databases through intelligent interfaces p 313 N93-31218
End users: New products and services p 314 N93-31220
Crack growth prediction models p 89 N93-31747
Application of concurrent engineering principles to aircraft structural design p 59 N94-24321
Ground based mission planning systems p 295 N94-25014
Mission rehearsal in the SOF-ATS program p 295 N94-25016
The UNICON approach to through-life support and evolution of software-intensive systems p 286 N94-29340
Providing electronic documents in Europe: Experience of INIST p 316 N94-37341
A selection of experimental test cases for the validation of CFD codes, volume 1 [AGARD-AR-303-VOL-1] p 208 N95-14201
A supercritical airfoil experiment p 23 N95-17858
The waiver process and disqualifying medical conditions in US Naval aviation personnel p 253 N95-19416
AMDRS: A resource for intelligent aeromedical decision-making p 254 N95-19419
Direct simulation of turbulent flow in a square duct: Reynolds-stress budgets p 214 N95-21073

DATA COMPRESSION
Data compression techniques p 309 N92-32190

DATA CORRELATION
Data from the GARTEur (AD) Action Group 02 airfoil CAST 7/DOA1 experiments p 22 N95-17856

DATA INTEGRATION
ACCS Surveillance Exploratory Prototype (ASEP) p 170 N94-29566
Knowledge combination and data fusion with application to recognition systems p 287 N94-30513
Studies and simulations on sensor fusion and cueing for fighter application p 279 N94-36632
Sensor data fusion for air to air situation awareness beyond visual range p 295 N94-36633
Contact level fusion of radar and IRST contacts on almost electromagnetically silent platform p 174 N94-36634

DATA LINKS
Fiber optic data busses for aircraft p 72 N92-28093
An integrated multiple-sensor fire control system for air-to-air combat p 74 N92-32450
Linear payout systems for dispensing fiber-optic data links from precision-guided munitions or high-performance aircraft/missles p 305 N93-22026
Orbiting transmitter and antenna for spaceborne communications at ELF/VLF to submerged submarines p 169 N93-30755
New Advances in Mission Planning and Rehearsal Systems [AGARD-LS-192] p 293 N94-25008
Simulation of fully automated air traffic control concepts p 43 N94-29569

DATA MANAGEMENT
Advanced cockpit-mission and image management p 264 N93-19760
Management of avionics data in the cockpit p 266 N93-19777
The Clinical Basis for Aeromedical Decision Making [AGARD-CP-553] p 252 N95-19413

DATA PROCESSING
Facilitating the transfer of scientific and technical information with scientific and technical numeric databases p 310 N92-32192
Integrated Target Acquisition and Fire Control Systems [AGARD-CP-500] p 73 N92-32437
SAR peculiarities, ambiguities and constraints p 155 N93-13051

Multi-frequency multi-polarization processing for spaceborne SAR p 156 N93-13057
Model-based reasoning applied to cockpit warning systems p 266 N93-19778
On automated analysis of flight test data p 54 N93-19913
Visual autonomous automatic landing of airplanes p 40 N93-22791
The influence of propagation on high frequency radiogoniometry and single station location p 159 N93-23607
An automated processing system for food frequency and nutrition knowledge questionnaire p 271 N93-32241
Integrated stress and strength analysis of airplane structures using the data processing tool ISSY p 59 N94-24320
New Advances in Mission Planning and Rehearsal Systems
| AGARD-LS-192 | p 293 N94-25008
Designing and maintaining decision-making processes p 283 N94-29318
Guide to the measurement of the transient performance of aircraft turbine engines and components
| AD-280272 | p 93 N94-33874
Basic principles of flight test instrumentation engineering, volume 1, issue 2
| AD-A282984 | p 221 N94-33940
OAT15A airfoil data p 23 N95-17857
Development of a fast sampling system for estimation of impulse responses of mobile radio channels p 180 N95-20943
Superresolution direction finding algorithms for the characterisation of multi-moded HF signals p 184 N95-20958

DATA PROCESSING EQUIPMENT
Multi-frequency multi-polarization processing for spaceborne SAR p 156 N93-13057
The impact of advanced packaging technology on modular avionics architectures p 76 N95-20632

DATA RECORDING
A novel-high-performance system for recording and analysing instantaneous total pressure distortion in air intakes p 219 N93-13215

DATA REDUCTION
A method for investigating human factor aspects of military aircraft accidents p 30 N93-19656
On automated analysis of flight test data p 54 N93-19913
System identification for X-31A project support: Lessons learned so far p 54 N93-19914

DATA SIMULATION
SAR simulation p 156 N93-13056

DATA SMOOTHING
New methods, new methodology: Advanced CFD in the Snecma turbomachinery design process p 207 N95-14134

DATA STORAGE
SAR peculiarities, ambiguities and constraints p 155 N93-13051

DATA SYSTEMS
Crack growth prediction models p 89 N93-31747
A non-intrusive way to measure point-of-gaze p 280 N94-37272

DATA TRANSFER (COMPUTERS)
Electronic messaging for the 1990's
| AD-A267143 | p 314 N94-15437
Standards for data and document interchange p 315 N94-37337

DATA TRANSMISSION
High speed local area networks p 154 N92-28087
Fiber optic data busses for aircraft p 72 N92-28093
Bringing Down the Barriers to Information Transfer
| AGARD-CP-505 | p 308 N92-32182
Data compression techniques p 309 N92-32190
Electronic messaging for the 1990's
| AD-A267143 | p 314 N94-15437
Standards for data and document interchange p 315 N94-37337
Electronic document delivery: Towards the virtual library p 316 N94-37340
A technique for increasing the bandwidth of high performance electrical backplanes p 185 N95-20651
Electromagnetic compatibility effects of advanced packaging configurations p 176 N95-20658

DC 10 AIRCRAFT
The KDC-10 programme of the Royal Netherlands Air Force p 69 N94-36346

DEATH
Aeropathological diagnosis of lethal hypothermia p 250 N94-28440

DEBONDING (MATERIALS)
Debonding/Delamination of Composites
| AGARD-CP-530 | p 128 N93-21507
Predicting failure by debonding/delamination p 129 N93-21512
The influence of particle/matrix debonding on the stress-strain behavior of particulate composites p 131 N93-21525
Interface evaluation in ceramic composites p 145 N94-24231
Fibre-matrix interface properties in Ti-matrix composites: Chemical compatibility and micromechanical behaviour p 136 N94-36657
Micromechanical modeling of damage growth in titanium based metal-matrix composites p 137 N94-36664

DEBRIS
Scandinavian Airlines Systems experience on erosion, corrosion and foreign object damage effects on gas turbines p 100 N95-19659

DECAMETRIC WAVES
New method of modelling the mesoscale structure of the ionosphere with a single sensor. Impact on HF radio-location p 158 N93-23603

DECISION MAKING
Situation assessment in the Paladin tactical decision generation system p 292 N92-27892
Knowledge-based planning for controlled airspace flight operation as part of a cockpit assistant p 37 N92-27895
Underlying causes of accidents: Casual networks p 31 N93-19658
Information access: A research agenda p 312 N93-19798
Pilot decision aiding for weapon delivery: A novel approach to fire control cueing using parallel computing p 268 N93-28853
A new class of mission support for combat air-crew p 293 N93-28854
Human factors of mission planning systems: Theory and concepts p 294 N94-25010
Designing and maintaining decision-making processes p 283 N94-29318
Advances in development capabilities for intelligent air traffic management systems p 41 N94-29559
Air traffic management as principled negotiation between intelligent agents p 42 N94-29562
Decision Making Aids (DMA) in on-line ATC systems p 43 N94-29570
Cognitive approach to specifications on air traffic controllers' decision assistance systems p 43 N94-29571
DAISY: A decision aid for an air situation interpretation system p 44 N94-29574
Propagation in the ionosphere, A p 174 N95-14826
Propagation in the ionosphere, B p 175 N95-14827
On-line handling of air traffic: Management, guidance and control
| AGARD-AG-321 | p 46 N95-18927
The Clinical Basis for Aeromedical Decision Making
| AGARD-CP-553 | p 252 N95-19413
Fit to fly: Analysis of the aeromedical disposition in aircrewmembers of the Spanish Armed Forces p 253 N95-19418
AMDRS: A resource for intelligent aeromedical decision-making p 254 N95-19419
Relevance of laboratory tests in aeromedical decisions p 254 N95-19420
EKG in flight: Usefulness and limits for aircrew rehabilitation p 254 N95-19422
The NAMI syncope test battery and clinical decision-making in aviators with syncope p 255 N95-19428
Think health not disease p 255 N95-19429
Neurological decision making in aviation medicine based on electrophysiological methods p 256 N95-19431
Clinical basis for aeromedical decision-making: The EEG example p 256 N95-19433

DECOMPOSITION
Computing techniques in mission planning p 294 N94-25012
Single-pass method for the solution of inverse potential and rotational problems. Part 1: 2-D and quasi 3-D theory and application p 20 N95-16563
DNS of turbulent flow in a driven cavity and their analysis using proper orthogonal decomposition p 218 N95-21097

DECONGESTANTS
Biochemical enhancement of cold tolerance p 249 N94-28427

DECOUPLING
Decoupling of aircraft responses p 107 N94-11497

DEEP WATER
ELF propagation in deep and shallow sea water p 166 N93-30739

DEFECTS
Defect analysis using advanced interpretation of the reflected wave during ultrasonic scanning p 224 N93-21528
Damage detection by Acousto-Ultrasonic Location (AUL) p 224 N93-21529
Impact of Materials Defects on Engine Structures Integrity
| AD-A267718 | p 225 N94-37321
History and prognosis of material discontinuity effects on engine components structural integrity p 225 N94-37322
Alternate melting and refining routes p 143 N94-37323
Process enhancements of superalloy material p 143 N94-37324
Defects and their effects on the integrity of nickel based aeroengine discs p 144 N94-37328
Turbine disks: Lifing against defects and materials development p 225 N94-37329
Predicting defect behaviour p 225 N94-37331
Performance deterioration of axial compressors due to blade defects p 101 N95-19665

DEFENSE INDUSTRY
Frameworks for integrated airframe design p 58 N94-24318

DEFENSE PROGRAM
Facilitating the transfer of scientific and technical information with scientific and technical numeric databases p 310 N92-32192
Test and evaluation challenges in the nineties p 52 N93-19902
Frameworks for integrated airframe design p 58 N94-24318
Artificial intelligence technology program at Rome Laboratory p 290 N94-29328

DEFLECTION
Estimating wind tunnel interference due to vectored jet flows p 210 N95-19265

DEFORMATION
Unsteady transonic aerodynamics of pointed bodies of revolution in supersonic freestream p 5 N92-27946
Transonic aeroelastic computations on wings using Navier-Stokes equations p 6 N92-27957

DEGRADATION
Far-infrared characterization of horizontal path image degradation p 153 N92-22814
Environmental degradation of high temperature composites p 127 N92-33047
Jet fuel absorption and dynamic mechanical analysis of carbon fibre composites p 128 N92-33050
Progressive delamination in polymer matrix composite laminates: A new approach p 130 N93-21515
Identification of delamination by eigenfrequency degradation: An inverse problem p 131 N93-21526
Protective coatings for compressor gas path components p 102 N95-19675
Multilayer anti-erosion coatings p 103 N95-19679
Electromagnetic wave reflection from irregular plasma layers p 182 N95-20952

DEGREES OF FREEDOM
Use of simulation in the USAF Test Pilot School curriculum p 112 N92-28535

DEHYDRATION
Aeromedical support for casualties in extremely hot climates p 277 N94-28443
Work conditions assessment in pilots and ground personnel under high weather temperatures p 277 N94-28444

DEHYDROGENATION
Endothermic fuels for hypersonic aviation p 148 N94-29285

DEICING
Icing: Accretion, detection, protection p 36 N95-14897

DELAMINATING
Propagation of a delamination in a composite panel subjected to a compression load p 126 N92-33041
Debonding/Delamination of Composites
| AGARD-CP-530 | p 128 N93-21507
Free edge delamination prevention in composite laminates p 129 N93-21508
Delamination and fatigue of composite materials: A review p 129 N93-21509
Initiation and prevention of edge delamination with and without residual stresses p 129 N93-21510
Predicting failure by debonding/delamination p 129 N93-21512
GARTEUR damage mechanics for composite materials: Analytical/experimental research on delaminations p 129 N93-21513
Buckling and post-buckling behavior of a delamination in a carbon-epoxy laminated structure: Experiments and modelling p 129 N93-21514
Progressive delamination in polymer matrix composite laminates: A new approach p 130 N93-21515
Delamination damage and its effect on buckling of laminated cylindrical shells p 130 N93-21516
Fracture analysis of BMI system in presence of moisture p 130 N93-21517
Edge delamination of composite laminates p 130 N93-21519
Synergism between layer cracking and delaminations in MD-laminates of CFRE p 130 N93-21520
Delamination development under fatigue loading p 131 N93-21521
Identification of delamination by eigenfrequency degradation: An inverse problem p 131 N93-21526
Prediction of delamination in tapered unidirectional glass fibre epoxy with dropped plies under static tension and compression p 131 N93-21530
Repairing delaminations with low viscosity epoxy resins p 132 N93-21532
Numerical determination of the residual strength of battle damaged composite plates p 132 N93-21533

DELETION
Mitigation of effects of multiple path nulls at super-high frequencies through diversity and networking p 181 N95-20948

DELTA WINGS
The influence of intake swirl distortion on the steady-state performance of a low bypass, twin-spool engine p 194 N93-13211
Control effectiveness at hypersonic speeds p 106 N94-10426
A comparison of high resolution upwind solvers on 3-D inviscid hypersonic flows p 13 N94-10463
Modeling nonlinear aerodynamic loads for aircraft stability and control analysis p 108 N94-11499
Control jets in interaction with hypersonic rarefied flow p 122 N94-28020
Theoretical and experimental investigation of a delta wing with turbulent leading-edge jets p 18 N94-28029
Control of leading-edge separation on a cambered delta wing p 109 N94-34616
A selection of experimental test cases for the validation of CFD codes, volume 1 [AGARD-AR-303-VOL-1] p 208 N95-14201
Detailed study at supersonic speeds of the flow around delta wings p 24 N95-17861
Wind tunnel test on a 65 deg delta wing with a sharp or rounded leading edge: The international vortex flow experiment p 25 N95-17872
Delta-wing model p 25 N95-17873
Experimental investigation of the vortex flow over a 76/60-deg double delta wing p 26 N95-17874
Wind tunnel test on a 65 deg delta wing with rounded leading edges: The International Vortex Flow Experiment p 26 N95-17875
STOVL CFD model test case p 27 N95-17881
The utilization of a high speed reflective visualization system in the study of transonic flow over a delta wing p 28 N95-19259
Velocity measurements with hot-wires in a vortex-dominated flowfield p 28 N95-19261

DENSITY DISTRIBUTION
A review of various techniques for computerized tomographic imaging of the ionosphere p 231 N92-22804

DEPENDENT VARIABLES
Single-pass method for the solution of inverse potential and rotational problems. Part 2: Fully 3-D potential theory and applications p 20 N95-16564

DEPOLARIZATION
Large bistatic angle clutter depolarization study p 180 N95-20941

DEPOSITION
Development of global/chemistry model for jet-fuel thermal stability based on observations from static and flowing experiments p 148 N94-29262
Erosion, Corrosion and Foreign Object Damage Effects in Gas Turbines [AGARD-CP-558] p 99 N95-19653
Particle deposition in gas turbine blade film cooling holes p 101 N95-19661

DEPOSITS
Gas turbine compressor corrosion and erosion in Western Europe p 103 N95-19678

DEPTH
A methodology and tool for the prediction of depth of reception in the sea for a VLF/LF communications system p 167 N93-30741

DEPTH MEASUREMENT
Defect analysis using advanced interpretation of the reflected wave during ultrasonic scanning p 224 N93-21528

DESCENT TRAJECTORIES
Advanced air traffic control and flight management system concepts p 44 N94-29576

DESERTS
Effects of three hydration beverages on exercise performance during 60 hours of simulated desert exposure p 250 N94-28448

DESIGN ANALYSIS
Integrated Design Analysis and Optimisation of Aircraft Structures [AGARD-R-784] p 47 N92-23227
Application of multidisciplinary optimization methods to the design of a supersonic transport p 47 N92-23230
Application of analytical and design tools for fighter wing aeroelastic tailoring p 47 N92-23231
The structural optimization system OPTSYS: Current status and applications p 47 N92-23232
First approach to an integrated fin design p 48 N92-23236
Structural optimization of aircraft practice and trends p 48 N92-23239
Special Course on Engineering Methods in Aerodynamic Analysis and Design of Aircraft [AGARD-R-783] p 48 N92-23950
Introduction to Special Course on Engineering Methods in Aerodynamic Analysis and Design of Aircraft p 48 N92-23951
Computational procedures for preliminary design p 48 N92-23952
Panel methods for aerodynamic analysis and design p 49 N92-23955
Aircraft drag analysis methods p 49 N92-23957
Integrated Design Analysis and Optimisation of Aircraft Structures [AGARD-LS-186] p 50 N92-28469
Fundamentals of structural optimisation p 50 N92-28470
Practical architecture of design optimisation software for aircraft structures taking the MBB-Lagrange code as an example p 50 N92-28471
Structural optimization of aircraft p 50 N92-28472
Multidisciplinary design and optimization [AGARD-PAPER-2] p 50 N92-28473
Mathematical optimization: A powerful tool for aircraft design p 50 N92-28474
Crash experience of the US Army Black Hawk helicopter p 33 N93-19688
Investigation of the bond strength of a discrete skin-stiffener interface p 131 N93-21527
System concept for an advanced stand-off weapon p 149 N93-22029
Integrated and Multi-Function Navigation [AGARD-CP-525] p 39 N93-22780
Hemispherical resonator gyro: Principle, design, and performance p 220 N93-22784
Ergonomic development of digital map displays p 270 N93-28866
SAR sensors on TACSATS: A feasibility assessment p 122 N93-29909
In-flight evaluation of aerodynamic predictions of an air-launched space booster p 9 N94-10427
CMC design consequences p 146 N94-24238
Integrated Airframe Design Technology [AGARD-R-794] p 58 N94-24313
New computing systems, future computing environment, and their implications on structural analysis and design p 58 N94-24314

The industrial use of CFD in the design of turbomachinery p 207 N95-14133
The role of CFD in the design process p 208 N95-14135
Aero design of turbomachinery components: CFD in complex systems p 208 N95-14136
Mission, technologies and design of planetary mobile vehicle p 223 N95-14947
Optimum Design Methods for Aerodynamics [AGARD-R-803] p 70 N95-16562
Airfoil optimization by the one-shot method p 70 N95-16569
Design limit loads based upon statistical discrete gust methodology p 72 N95-18603
Improving Multichip Module (MCM) design and reliability using the Intelligent MCM Analyzer p 225 N95-20637

DESIGN TO COST
Operational requirements for helicopter engines for UK services p 93 N94-34432

DESYNCHRONIZATION (BIOLOGY)
Some solutions to reduce the human effects of extended operation times p 251 N94-36339

DETECTION
Sensing the ionospheric reflection channel with a sounder p 231 N92-22802
Mapping electron content and electron density in the sub-auroral ionosphere p 231 N92-22805
Ionosphere and troposphere seen through a radio interferometer p 231 N92-22806
Target detection using co-occurrence matrix segmentation and its hardware implementation p 283 N92-32443
Automatic detection, pursuit, and classification in infrared imagery p 304 N92-32445
The German anti tank helicopter PAH 2: An example of a future sensor platform p 73 N92-32448
Damage detection by Acousto-Ultrasonic Location (AUL) p 224 N93-21529
Multi-window registration algorithm for automatic detection and tracking of moving targets p 283 N93-22022
Screening for asymptomatic coronary heart disease p 246 N94-23315
Granulometry in environments with very small particle concentrations p 173 N94-30511
Modelling of microwave propagation and clutter in a maritime environment p 179 N95-20938

DETERIORATION
Design aspects in small aircraft gas turbine fuel injectors p 91 N94-29264

DEVELOPING NATIONS
Communicable diseases: A major burden of morbidity and mortality p 238 N93-11300

DIAGNOSIS
Phadiatop: A screening test for inhalant allergy p 241 N93-11313
In vivo and in vitro diagnosis of allergic respiratory disease during screening procedures in the Italian Navy: Comparative evaluation of a recent quantitative automatized enzyme immunoassay method to dose specific IgE p 241 N93-11314
Allergy screening and follow-up in student pilots of the Belgian Air Force (BAF) p 241 N93-11316
Allergic and nonallergic rhinitis in Greek pilots p 242 N93-11317
Aeropathological diagnosis of lethal hypothermia p 250 N94-28440
On the feasibility of virtual environments in medicine p 279 N94-37264
The waiver process and disqualifying medical conditions in US Naval aviation personnel p 253 N95-19416
Clinical practice, diagnosis and therapy of intervertebral disk lesion: Importance to fitness for military flying duties p 257 N95-19435
Spinal nerve syndromes: The need to confirm the diagnosis with neurophysiological examinations p 257 N95-19436

DICHOTOMIES
Profile analysis of after-effects experienced during exposure to several virtual reality environments p 252 N94-37263

DIELECTRICS
Reliability assessment of Multichip Module technologies via the Triservice/NASA RELTECH program p 226 N95-20643

DIETS
An automated processing system for food frequency and nutrition knowledge questionnaire p 271 N93-32241
Nutritional assessment of United States tactical air command pilots p 271 N93-32242
Protein requirements in hypoxia or hypokinesia p 271 N93-32244
Correlation of life-style and dietary concomitants of Greek pilots with serum analytes p 272 N93-32256
The lifestyle and dietary consumption patterns of United States Air Force aviators within air training command at Randolph Air Force Base, Texas p 272 N93-32257
Objective improvements obtained by control of diet and physical training in Spanish Air Force fighter pilots p 273 N93-32258
The influence of dietary counseling and cardiac catheterization on lipid profiles in American military aviators p 273 N93-32259
The effects of an antijet lag diet p 273 N93-32263
Work conditions assessment in pilots and ground personnel under high weather temperatures p 277 N94-28444

DIFFERENTIAL EQUATIONS
Dynamics and control of coherent structures in the turbulent wall layer: An overview p 107 N94-11494
Nonlinear and dynamic analysis of flight p 107 N94-11496
Computational aerodynamics based on the Euler equations [AGARD-AG-325] p 19 N95-14264
Single-pass method for the solution of inverse potential and rotational problems. Part 2: Fully 3-D potential theory and applications p 20 N95-16564
Optimum aerodynamic design via boundary control p 70 N95-16565

DIFFERENTIAL GEOMETRY
Single-pass method for the solution of inverse potential and rotational problems. Part 1: 2-D and quasi 3-D theory and application p 20 N95-16563

DIFFRACTION
Lateral deviation of VLF radio waves due to diffraction and scattering from coast-lines, mountain ranges, and polar ice caps p 157 N93-23599

DIFFRACTION PATTERNS
The swollen polymer technique and its use for heat transfer investigations on film cooled surfaces p 196 N93-29944

DIFFUSION FLAMES
The coherent flamelet model for propulsion applications p 138 N92-27486
Numerical prediction of turbulent sooting diffusion flames p 140 N94-29253
A flamelet model for turbulent unpremixed combustion p 143 N95-21081

DIFFUSIVITY
Calculation of single and multiple jets in cross-flow with and without impingement using Reynolds-stress-transport closure p 203 N94-28024
DIGITAL DATA
Automated target tracking and location techniques applied to optical payloads on remotely piloted vehicles p 49 N92-27890
An efficient method for three-dimensional route planning with different strategies and constraints p 38 N92-27901
Data compression techniques p 309 N92-32190
A novel-high-performance system for recording and analysing instantaneous total pressure distortion in air intakes p 219 N93-13215
DIGITAL ELECTRONICS
Advanced Packaging Concepts for Digital Avionics [AGARD-CP-562] p 75 N95-20631
High density monolithic packaging technology for digital/microwave avionics p 119 N95-20646
Modular supplies for a distributed architecture --- avionics packaging p 77 N95-20657
DIGITAL FILTERS
Adaptive algorithms for use with digital filters in vibration control p 283 N94-11338
DIGITAL NAVIGATION
Automatic control steps for aircraft taxi guidance p 46 N94-29584
DIGITAL SYSTEMS
Digital channel sounder for remote sensing of scatterers in mobile radio environment p 153 N92-22820
Flight simulation and digital flight controls p 111 N92-28526
Fundamentals and Special Problems of Synthetic Aperture Radar (SAR) [AGARD-LS-182] p 154 N93-13049
ELF/VLF spectrum measurements p 168 N93-30745
How to control the increase in the complexity of civil aircraft on-board systems p 74 N94-29316
On ground system integration and testing: A modern approach p 75 N94-29334
The development of an auxiliary power unit for a fighter aircraft p 95 N94-34442
Dynamic tests to demonstrate lateral control using forebody suction on large scale models in the DRA 24 foot wind tunnel p 109 N94-34613
Ultra-Reliable Digital Avionics (URDA) processor p 226 N95-20638
Propagation measurements on a troposcatter link in the Canadian High Arctic p 180 N95-20940
DIGITAL TECHNIQUES
An efficient method for three-dimensional route planning with different strategies and constraints p 38 N92-27901
DIPHTHERIA
Absence of protective immunity against diphtheria in a large proportion of young adults p 238 N93-11302
Immunization of personnel traveling to a destination in tropical countries: French position p 239 N93-11304
DIPOLE ANTENNAS
Radio location through high resolution eigenstructure processing techniques that yield accurate multipath AOA and differential time delay estimates p 162 N93-23626
Orbiting transmitter and antenna for spaceborne communications at ELF/VLF to submerged submarines p 169 N93-30755
DIRECT CURRENT
A comparison of two examples of magnetic tracker systems p 281 N94-37275
DIRECTION FINDING
Radiolocation Techniques [AGARD-CP-528] p 157 N93-23598
The effects of multipath scatter from wind driven gravity waves on lines of bearing serving as direction finders p 158 N93-23601
Propagation effects on HF direction finding p 158 N93-23602
New method of modelling the mesoscale structure of the ionosphere with a single sensor. Impact on HF radio-location p 158 N93-23603
A new passive SSL technique for HF radiolocation p 159 N93-23609
Procedures for determining the location of an HF radio transmitter p 159 N93-23610
High resolution sampled aperture array direction finding at HF p 160 N93-23611
Measurements of the direction of arrival of an oblique chirp sounder signal p 160 N93-23616
Communication interference/jamming and propagation analysis system and its application to radio location p 161 N93-23621
Airborne system for detection and location of radio interference sources p 161 N93-23622
Location of emissions by evasion of frequency and gusts by sequential analysis sensor in fast scanning p 162 N93-23625
Radio location through high resolution eigenstructure processing techniques that yield accurate multipath AOA and differential time delay estimates p 162 N93-23626
Multiple emitter direction finding from a circular array by single snapshot processing p 162 N93-23627
Radiolocation in the lower ELF frequency band p 163 N93-23630
Superresolution direction finding algorithms for the characterisation of multi-moded HF signals p 184 N95-20958
DIRECTIONAL CONTROL
Fuzzy guidance system evaluation p 282 N92-27903
Pneumatic management of blunted-forebody flow asymmetry for high-angle-of-attack directional control p 109 N94-28028
DIRECTIONAL SOLIDIFICATION (CRYSTALS)
Process enhancements of superalloy material p 143 N94-37324
DIRECTIONAL STABILITY
Aerodynamic integration of thrust reversers on the Fokker 100 p 51 N93-13208
Dynamic tests to demonstrate lateral control using forebody suction on large scale models in the DRA 24 foot wind tunnel p 109 N94-34613
DIRECTIVITY
Combat aircraft jet engine noise studies p 298 N93-10679
DIRECTORIES
Directory of factual and numeric databases of relevance to aerospace and defence R and D [AGARD-R-777] p 312 N93-11710
DISCRETE FUNCTIONS
CFD methodology and validation for turbomachinery flows p 207 N95-14131
Computational aerodynamics based on the Euler equations [AGARD-AG-325] p 19 N95-14264
Design limit loads based upon statistical discrete gust methodology p 72 N95-18603
DISEASES
Survey of smoking habits in the Spanish Air Force . p 273 N93-32262
Sarcoidosis and the aviator p 248 N94-23325
TSH determination in subjects with medium-low levels of serum thyroxine p 254 N95-19421
DISKS
Defects and their effects on the integrity of nickel based aeroengine discs p 144 N94-37328
Turbine disks: Lifing against defects and materials development p 225 N94-37329
DISORIENTATION
G-tolerance and spatial disorientation: Can simulation help us? p 234 N92-28534
Epidemiology of United States Air Force spatial disorientation accidents: 1990-1991 p 259 N93-19679
Disorientation and flight safety: A survey of UK Army aircrew p 259 N93-19680
Royal Naval helicopter ditching experience p 32 N93-19684
Medical evaluation of spatial disorientation mishaps p 260 N93-19703
Attenuating the disorienting effects of head movement during whole-body rotation using a visual reference: Further tests of a predictive hypothesis p 252 N94-37276
The use of a tactile interface to convey position and motion perceptions p 281 N94-37281
DISPENSERS
The avionic system of the experimental standoff dispenser ADW p 74 N93-22028
DISPLACEMENT
Direct coupling of fluid structure in transonic aeroelasticity p 6 N92-27954
DISPLAY DEVICES
A teamwork model of pilot aiding: Psychological principles for mission management systems design p 292 N92-27893
Knowledge-based planning for controlled airspace flight operation as part of a cockpit assistant p 37 N92-27895
Initial validation of a R/D simulator with large amplitude motion p 114 N92-28546
An integrated multiple-sensor fire control system for air-to-air combat p 74 N92-32450
Engineering the visibility of small features on electronic flight displays p 263 N93-19758
Multimodal dialog system for future cockpits p 265 N93-19773
The active-matrix LC head-down display (AM-LCD): Operational experience and growth potential p 267 N93-19782
Liquid crystal displays replacing the CRT and CLE of future cockpits p 74 N93-19783
Combat Automation for Airborne Weapon Systems: Man/Machine Interface Trends and Technologies [AGARD-CP-520] p 268 N93-28850
Pilot intent and error recognition as part of a knowledge based cockpit assistant p 268 N93-28855
The design and development of the new RAF standard HUD format p 268 N93-28856
Symbology for head up and head down applications for highly agile fighter aircraft: To improve spatial awareness, trajectory control, and unusual attitude recovery, part 1 p 268 N93-28857
Head-steered sensor flight test results and implications p 269 N93-28859
Oculo-motor responses and virtual image displays p 269 N93-28862
Ergonomic development of digital map displays p 270 N93-28866
Night operations p 275 N94-23977
Mission planning and mission rehearsal systems: Displays and other interactive techniques p 294 N94-25013
Virtual Interfaces: Research and Applications [AGARD-CP-541] p 260 N94-37261
Creation of a virtual world to study human spatial perception during sustained acceleration p 261 N94-37268
The DRA Virtual Cockpit Research Program p 280 N94-37269
Visual accommodation to virtual image displays when knowledge of object distance conflicts with optical distance p 261 N94-37278
Low cost software-based rendering and stereoscopic interfaces for teleoperation and virtual reality p 287 N94-37279
The impact of advanced packaging technology on modular avionics architectures p 76 N95-20632
DISSIPATION
Wake turbulence p 20 N95-14894
A cheap DNS tool for turbulence models testing p 214 N95-21072
DISTRIBUTED PROCESSING
An integrated multiple-sensor fire control system for air-to-air combat p 74 N92-32450
A distributed object-based environment in Ada p 287 N94-29347
DITCHING (LANDING)
Royal Naval helicopter ditching experience p 32 N93-19684
Canadian Forces helicopter ditchings: 1952-1990 p 32 N93-19685
Helicopter accidents over water in the national navy: Epidemiological study over the period 1980-1991 p 32 N93-19686
DIURNAL VARIATIONS
Sensing propagation events and fade statistics at C-band for two over-water, line-of-sight propagation paths over a one year period p 152 N92-22792
Optical refraction in the atmospheric surface layer p 233 N92-22817
Irregular media effects on radiowave signals used in navigation and positioning systems p 159 N93-23606
ELF/VLF spectrum measurements p 168 N93-30745
DIVERGENT NOZZLES
Single-engine tail interference model p 26 N95-17879
DMSP SATELLITES
TACSAT meteorological payloads p 234 N93-29913
DOCUMENT STORAGE
Seminar on Basic Documentation Practices [AGARD-R-788] p 310 N93-10593
Document processing p 311 N93-10600
Security considerations within military information systems p 311 N93-10603
DOCUMENTATION
Seminar on Basic Documentation Practices [AGARD-R-788] p 310 N93-10593
Documentation practices: The national scene (Greece) p 310 N93-10595
Establishing a scientific and technical information program: Planning and resource management p 310 N93-10597
Acquisition 1: Stock acquisition processes in defence and aerospace documentation centres p 311 N93-10598
Document processing p 311 N93-10600
The discipline of defining the software product p 286 N94-29343
DOCUMENTS
Use of expert systems as user interfaces in information retrieval p 309 N92-32185
Non Boolean search methods in information retrieval p 309 N92-32187
Data compression techniques p 309 N92-32190
Seminar on Basic Documentation Practices [AGARD-R-788] p 310 N93-10593
National scene in information and documentation activities and recent developments in the Documentation Center of TUBITAK (TURDOK) p 310 N93-10594
Documentation practices: The national scene (Greece) p 310 N93-10595
Acquisition 1: Stock acquisition processes in defence and aerospace documentation centres p 311 N93-10598
Document processing p 311 N93-10600

Services: User services in defence and aerospace documentation centres p 311 N93-10602
The management of change: Implications for the information professional p 314 N93-31222
Electronic document delivery: Towards the virtual library p 316 N94-37340

DOPPLER EFFECT
Adaptive remote sensing of the ionosphere to minimise spectral intrusion p 231 N92-22803
DAMSON: A system to measure multipath dispersion, Doppler spread and Doppler shift on multi-mechanism communications channels p 183 N95-20955

DOSAGE
Future approaches to vaccine development single-dose vaccines using controlled-release delivery systems p 240 N93-11310
Superresolution direction finding algorithms for the characterisation of multi-moded HF signals p 184 N95-20958

DOWN-CONVERTERS
Test results of the advanced translator processing system p 161 N93-23620

DOWNTIME
Navy foreign object damage and its impact on future gas turbine engine low pressure compression systems p 100 N95-19658

DRAG
Recent developments in low-speed TPS-testing for engine integration drag and installed thrust reversr simulation p 51 N93-13207
High Reynolds number configuration development of a high-lift airfoil p 15 N94-18424
Experimental investigation of the interaction of a thrust reverser jet with an external subsonic flow p 201 N94-28011
Control of leading-edge separation on a cambered delta wing p 109 N94-34616
Investigation of the influence of pylons and stores on the wing lower surface flow p 28 N95-17885

DRAG MEASUREMENT
Surface pressure and wake drag measurements on the Boeing A4 airfoil in the IAR 1.5X1.5m Wind Tunnel Facility p 21 N95-17850
Interference corrections for a centre-line plate mount in a porous-walled transonic wind tunnel p 29 N95-19280

DRAG REDUCTION
Special Course on Skin Friction Drag Reduction [AGARD-R-786] p 2 N92-27706
Basic concepts on boundary layers p 2 N92-27707
Drag reduction: An industrial challenge p 2 N92-27708
Aircraft drag reduction p 2 N92-27709
Boundary layer transition: Prediction, application to drag reduction p 2 N92-27711
Study of turbulence structure through numerical simulations: The perspective of drag and reduction p 3 N92-27713
Turbulent skin-friction drag reduction by active and passive means, part 1 p 3 N92-27714

DRONE VEHICLES
Radar seeker based autonomous navigation update system using topography feature matching techniques p 157 N93-22030
Landing of an unmanned helicopter on a moving platform. High accuracy navigation and tracking p 69 N94-36618

DROOPED AIRFOILS
Wind tunnel test on a 65 deg delta wing with a sharp or rounded leading edge: The international vortex flow experiment p 25 N95-17872

DROP SIZE
Clear-air wind profilers as cloud monitors and hydrometeor identifiers p 233 N92-22819

DROPS (LIQUIDS)
Numerical simulation of aerothermal characteristics in gas turbine combustors with complex geometries p 90 N94-29255

DRUGS
Recent lessons on the safety and effectiveness of malaria chemoprophylaxis in a non-immune population p 240 N93-11307
Future approaches to vaccine development single-dose vaccines using controlled-release delivery systems p 240 N93-11310
Epidemiologic view of allergic diseases in North America: Implications for aerospace medicine p 241 N93-11311
The screening of inhalant allergic diseases in the selection of candidates for aircraft piloting p 241 N93-11312
Some solutions to reduce the human effects of extended operation times p 251 N94-36339
Medication in the course of active flying duty p 258 N95-19443

DUCT GEOMETRY
Computational modelling of turbulent flow in S-bends p 189 N92-27480
Inlet distortion effects in aircraft propulsion system integration p 80 N92-28464

DUCTED FLOW
CFD Techniques for Propulsion Applications [AGARD-CP-510] p 186 N92-27450
Time-marching methods for secondary flow analysis in curved ducts p 186 N92-27454
Computational modelling of turbulent flow in S-bends p 189 N92-27480
Three dimensional flow in sharp bends --- ducted flow p 190 N92-27481
Ducted kerosene spray flames p 142 N94-29276
Scramjet CFD methods and analysis. Part 1: Scramjet CFD methods. Numerical simulation of the flow in scramjet duct p 92 N94-29296
Solution of Navier-Stokes equations using high accuracy monotone schemes p 209 N95-19019

DUCTED ROCKET ENGINES
Development testing of throttleable ducted rockets p 123 N93-17610
Semi-propellants for ducted rockets p 147 N93-17612
Experimental and analytical methods for the determination of connected-pipe ramjet and ducted rocket internal performance [AGARD-AR-323] p 125 N95-17278

DUCTILITY
Multilayer anti-erosion coatings p 103 N95-19679

DUCTS
Remote sensing of the evaporation duct using an X-band radar p 230 N92-22793
A theoretical study of a radiowave characterization method of the evaporation duct p 152 N92-22795
Radio refractivity profiles deduced from aerosol lidar measurements [AD-A249074] p 152 N92-22796
Refractive assessments from satellite observations p 153 N92-22798
Unsteady Euler calculations in 3D internal aerodynamics p 188 N92-27470
Numerical representation of heat transfer into turbine blade cooling ducts p 188 N92-27474
Validation of non-orthogonal three-dimensional laminar flow predictions p 189 N92-27476
Finite element solution of viscous compressible flows in gas turbine ducts and diffusers p 189 N92-27477
Computational modelling of turbulent flow in S-bends p 189 N92-27480
Turbulent flow and heat transfer in idealized blade cooling passages p 85 N93-29938
An L2F-measurement device with image rotator prism for flow velocity analysis in rotating coolant channels p 220 N93-29942
Introduction and overview of research and development of solid propellant ramrockets, liquid fuel ramjets and experimental hydrogen ram combustors p 92 N94-29292
Refractive effects from VHF to EHF. Part A: Propagation Mechanisms p 175 N95-14831
Refractive effects from VHF to EHF. Part B: Propagation models p 175 N95-14832
Modelling and simulation of HF/VHF MMPPs p 177 N95-20925
Modeling tropospheric ducting effects on satellite-to-ground paths p 179 N95-20936
Large-eddy simulation of separated flow in a ribbed duct p 214 N95-21070
Direct simulation of turbulent flow in a square duct: Reynolds-stress budgets p 214 N95-21073

DUMMIES
Design/development of an enhanced biodynamic manikin p 262 N93-19667
Improving manikin biofidelity p 262 N93-19668
The design and use of automotive crash test dummies p 262 N93-19669
The application of Hybrid 3 dummy to the impact assessment of a free-fall lifeboat p 262 N93-19671

DUST
Out of area experiences with the RB199 in Toronto p 99 N95-19654
The operation of gas turbine engines in hot and sandy conditions: Royal Air Force experiences in the Gulf conflict p 100 N95-19655
US Army rotorcraft turboshaft engines sand and dust erosion considerations p 100 N95-19656
Future directions in helicopter protection system configuration p 100 N95-19657
Damage of high temperature components by dust-laden air p 102 N95-19673

DUST COLLECTORS
Particle trajectories in gas turbine engines p 101 N95-19663

DYNAMIC CHARACTERISTICS
Remote sensing of aerosol extinction using single-ended lidars p 232 N92-22811
Time behavior and frequency response of the microwave propagation channel during multipath propagation p 180 N95-20942

DYNAMIC CONTROL
Dynamic control of aerodynamic instabilities in gas turbine engines p 80 N92-28466
Dynamics and control of coherent structures in the turbulent wall layer: An overview p 107 N94-11494

DYNAMIC LOADS
Role of interfaces on the cyclic fatigue behaviour of ceramic matrix composites p 145 N94-24234
Engine static structures behaviour under impact load using 3D modelling p 227 N94-34464
Gyroscopic and propeller aerodynamic effects on engine mounts dynamic loads in turbulence conditions p 71 N95-18599
Impact of dynamic loads on propulsion integration p 302 N95-19148

DYNAMIC MODELS
Dynamic simulation of compressor and gas turbine performance p 79 N92-28463
A review of gust load calculation methods at de Havilland p 28 N95-18604
Developments and applications of dynamic models for large eddy simulation of complex flows p 212 N95-21062
Subgrid scale models in finite difference simulations of complex wall bounded flows p 212 N95-21063
Large-eddy simulation of rotating channel flows using a localized dynamic model p 213 N95-21064
Comparison of DNS and LES of transitional and turbulent compressible flow: Flat plate and mixing layer p 213 N95-21066
Rib vortices in round jets: Direct and large eddy simulation p 217 N95-21088

DYNAMIC PROGRAMMING
An efficient method for three-dimensional route planning with different strategies and constraints p 38 N92-27901

DYNAMIC RANGE
ELF/VLF spectrum measurements p 168 N93-30745

DYNAMIC RESPONSE
Sensitivity analysis of dynamic aeroelastic responses p 104 N92-23229
Improving manikin biofidelity p 262 N93-19668
A new instrumentation system for measuring the dynamic response of the human head/neck during impact acceleration p 263 N93-19672
Dynamic tests on the NASA Langley CSI evolutionary model p 121 N94-11320
Vibrations of structures with cyclic symmetry: Application to the case of turbine engines p 227 N94-34463
Study findings on the influence of maneuverability and agility on helicopter handling qualities p 64 N94-34624
Turbulence: Engineering models, aircraft response p 110 N95-14900
A review of gust load calculation methods at de Havilland p 28 N95-18604
Special effects of gust loads on military aircraft p 72 N95-18605
Current and future problems in structural acoustic fatigue p 301 N95-19143
Nonlinear dynamic response of aircraft structures to acoustic excitation p 72 N95-19151
Acoustics of space structures p 302 N95-19152

DYNAMIC STABILITY
Aeroservoelastic stabilization considerations for pointing and tracking systems p 223 N94-36627

DYNAMIC STRUCTURAL ANALYSIS
The benchmark aeroelastic models program: Description and highlights of initial results p 6 N92-27960
The impact of active controls technology on the structural integrity of aeronautical vehicles p 56 N94-11341
Turbine blade dynamics and blade-vane interaction in a radial inflow turbine p 97 N94-34461
Crack growth predictions using a crack closure model p 228 N94-34584
Acoustics of space structures p 302 N95-19152
Application of the PSD technique to acoustic fatigue stress calculations in complex substructures p 302 N95-19155
Advanced statistical energy analysis p 229 N95-19165

DYNAMIC TESTS
Occupant simulation as an aspect of flight safety research p 262 N93-19665
US Army helicopter inertia reel locking failures p 33 N93-19689
An improved method of structural dynamic test design for ground flying and its application to the SH-2F and SH-2G helicopters p 54 N93-19928
Dynamic tests on the NASA Langley CSI evolutionary model p 121 N94-11320
Dynamic tests to demonstrate lateral control using forebody suction on large scale models in the DRA 24 foot wind tunnel p 109 N94-34613
Calculation of support interference in dynamic wind-tunnel tests p 30 N95-19282

DYNAMICAL SYSTEMS
Stability analysis and aerospace vehicle dynamics p 107 N94-11491
Stability analysis through bifurcation theory, 1 p 308 N94-18238

Identification of dynamic systems. Volume 3: Applications to aircraft. Part 2: Nonlinear analysis and manoeuvre design
[AGARD-AG-300-VOL-3-PT-2] p 69 N95-14102

DYNAMOMETERS
Deterioration of manual performance in cold and windy climates p 249 N94-28434

E

E REGION
The relative importance of meteor burst and other distance polar cap propagation modes in the low VHF band p 177 N95-20928

EARTH GRAVITATION
The use of a tactile interface to convey position and motion perceptions p 281 N94-37281

EARTH IONOSPHERE
Remote Sensing of the Propagation Environment
[AGARD-CP-502] p 230 N92-22790
Lateral deviation of VLF radio waves due to diffraction and scattering from coast-lines, mountain ranges, and polar ice caps p 157 N93-23599
Irregular media effects on radiowave signals used in navigation and positioning systems p 159 N93-23606
Radiolocation of a satellite-borne LOVHF beacon p 160 N93-23613
The cone structure and focusing of the electric field of VLF and LF waves at high altitudes of the ionosphere p 165 N93-30731
Transient (approximately equals 10 s) VLF amplitude and phase perturbations due to lightning-induced electron precipitation into the ionosphere (the Trimpi effect) p 166 N93-30736
Studies of the propagation of Low Frequency (LF) radio waves p 166 N93-30738
Propagation in the ionosphere, A p 174 N95-14826

EARTH OBSERVATIONS (FROM SPACE)
Evolution or revolution: The Catch 22 of TACSATs p 118 N93-29894

EARTH SURFACE
Active remote sensing of the ionosphere and the Earth surface irregularities p 232 N92-22808

EARTH TERMINALS
Terrain and coverage prediction analyses for non-geostationary orbit EHF satellite communications p 164 N93-29902

EARTH-IONOSPHERE WAVEGUIDE
A long wave TE/TM noise prediction model p 167 N93-30742

EARTHQUAKES
Sensing of seismo-electromagnetic earthquake precursor radiation signatures along Southern California fault zones: Evidence of long distance precursor ULF signals observed before a moderate Southern California earthquake episode p 232 N92-22810

EATING
Nutrition and hydration status of aircrew members consuming an improved survival ration during a simulated survival scenario p 249 N94-28429

ECHOCARDIOGRAPHY
Echocardiographic screening of aircrew candidates p 247 N94-23319
Echocardiographic findings in trained aircrew: The effect of +Gz on cardiac structure (working group 18) p 247 N94-23320

ECONOMIC ANALYSIS
Viability assessment for reliable long-wave communication links p 169 N93-30754

ECONOMICS
The Impact of Changing International Relations on the Scientific and Technical Community
[AGARD-CP-523] p 313 N93-31215
The effect of changes in markets and trade barriers on the exchange of scientific and technical information p 313 N93-31216

EDDY VISCOSITY
The application of a Navier-Stokes CFD method to civil engine intake flows p 188 N92-27471
Calculation of single and multiple jets in cross-flow with and without impingement using Reynolds-stress-transport closure p 203 N94-28024
Comparison of DNS and LES of transitional and turbulent compressible flow: Flat plate and mixing layer p 213 N95-21066
Modelling anisotropy and backscatter effects in the subgrid scale stress tensor p 215 N95-21077

EDGE DETECTION
A frontal approach for node generation in Delaunay triangulations p 192 N92-27680

EDGE DISLOCATIONS
Influence of edge effect on compression-tension fatigue of toughened graphite/epoxy laminates p 126 N92-33039

EDGES
Edge delamination of composite laminates p 130 N93-21519

EDUCATION
Lessons learned from an historical look at flight testing p 52 N93-19904
MB-339: The role of flight testing in the evolution phase of a proven aircraft p 53 N93-19907
Assistance in instruction and training of air traffic controllers p 261 N94-37265
Training and operations support system (TOPS) p 317 N94-37344

EFFECTIVENESS
Piloted Simulation Effectiveness
[AGARD-CP-513] p 1 N92-28522
Opportunities for flight simulation to improve operational effectiveness p 111 N92-28523
Piloted simulation effectiveness development applications and limitations p 111 N92-28524
Utility of ground simulation in flight control problem identification, solution development, and verification p 111 N92-28525
Experience with piloted simulation in the development of helicopters p 112 N92-28528

EFFECTS
Effects of fuel on Hercules AS-4/8552 composite material p 127 N92-33046
The effect of special boards of flight surgeons on the evolution of US Naval flight standards p 253 N95-19417

EGRESS
Spine injuries: Up to date evaluation in aircraft ejections p 256 N95-19434

EIGENVALUES
Boundary layer transition: Predictions based on linear theory p 205 N94-33886

EJECTION
An epidemiological study in SAF's pilots ejections p 263 N93-19699
Effectiveness of protection clothing for cold weather conditions after ejection over sea: A case report p 277 N94-28435

EJECTION INJURIES
Clinical practice, diagnosis and therapy of intervertebral disk lesion: Importance to fitness for military flying duties p 257 N95-19435

EJECTION SEATS
Improving manikin biofidelity p 262 N93-19668
An epidemiological study in SAF's pilots ejections p 263 N93-19699
Spine injuries: Up to date evaluation in aircraft ejections p 256 N95-19434

ELASTIC BUCKLING
Three-dimensional elasticity analysis of buckling of laminated plates p 126 N92-33037

ELASTIC DEFORMATION
Three-dimensional elasticity analysis of buckling of laminated plates p 126 N92-33037
Impact loading of compressor stator vanes by hailstone ingestion p 102 N95-19670

ELASTIC PROPERTIES
Three-dimensional elasticity analysis of buckling of laminated plates p 126 N92-33037

ELECTRIC CONNECTORS
The ROC optical connector p 307 N95-20654

ELECTRIC DIPOLES
The cone structure and focusing of the electric field of VLF and LF waves at high altitudes of the ionosphere p 165 N93-30731
ELF propagation in deep and shallow sea water p 166 N93-30739
Comparative study of undersea fields produced by various dipoles p 167 N93-30740

ELECTRIC DISCHARGES
ESD traits of bulk propellant under pressure p 147 N92-33242
ESD and lightning interactions on aircraft p 36 N95-14896

ELECTRIC FIELDS
The cone structure and focusing of the electric field of VLF and LF waves at high altitudes of the ionosphere p 165 N93-30731
Antenna modeling and analysis for ELF/VLF/LF applications p 168 N93-30751
A comparison of two examples of magnetic tracker systems p 281 N94-37275

ELECTRIC PROPULSION
Electric propulsion for lightsats: A review of applications and advantages p 124 N93-29907

ELECTRO-OPTICS
Methods of opto-electronic fusion of infrared and visible images p 304 N92-32444
Advances in automatic electro-optical tracking systems p 305 N93-22020
The quest for an integrated flying helmet p 269 N93-28860
Multiple target track-while-scan in the airborne EO environment p 173 N94-36629
Gaze orientation under G(z)-load. Methodological aspects: Preliminary results p 281 N94-37274
Electro-optics: Propagation from IR to UV and sensor considerations. Part A: Propagation theory p 175 N95-14833
Electro-optics: Propagation from IR to UV and sensor considerations. Part B: Tools for exploitation of propagation conditions and system range performance p 176 N95-14834

ELECTROCARDIOGRAPHY
Aeromedical disposition of Arrhythmias and electrocardiographic findings in aircrew p 246 N94-23318
Echocardiographic screening of aircrew candidates p 247 N94-23319
Left ventricular hypertrophy and athlete's heart p 247 N94-23321
EKG in flight: Usefulness and limits for aircrew rehabilitation p 254 N95-19422
Evaluation of the EKG's isoelectric T wave in Air Force pilots p 254 N95-19423

ELECTROCHEMICAL CORROSION
Environmental degradation of high temperature composites p 127 N92-33047

ELECTROENCEPHALOGRAPHY
Contribution of the analysis of ocular activity (complementary to the electroencephalographic analysis) to the detection of low vigilance in instances of piloting a vehicle p 244 N93-19708
Neurological decision making in aviation medicine based on electrophysiological methods p 256 N95-19431
The EEG in the evaluation of applicants to aircrew members p 256 N95-19432
Clinical basis for aeromedical decision-making: The EEG example p 256 N95-19433

ELECTROMAGNETIC COMPATIBILITY
FASTPACK: Optimized solutions for modular avionics derived from a parametric study. Part 2: Avionics p 76 N95-20635
Composite cases for airborne electronic equipment: A technology study and EMC p 138 N95-20655
Electromagnetic compatibility effects of advanced packaging configurations p 176 N95-20658

ELECTROMAGNETIC INTERFERENCE
Propagation Modelling and Decision Aids for Communications, Radar and Navigation Systems
[AGARD-LS-196] p 174 N95-14825
Propagation in the ionosphere, A p 174 N95-14826
Ground wave and diffraction, A p 175 N95-14828
Ground wave and diffraction, B p 175 N95-14829
Refractive effects from VHF to EHF. Part A: Propagation Mechanisms p 175 N95-14831
Refractive effects from VHF to EHF. Part B: Propagation models p 175 N95-14832
Effects of hydrometeors and atmospheric gases at SHF/EHF p 176 N95-14835

ELECTROMAGNETIC NOISE
Radiolocation in the lower ELF frequency band p 163 N93-23630
ELF/VLF/LF Radio Propagation and Systems Aspects
[AGARD-CP-529] p 164 N93-30727
A long wave TE/TM noise prediction model p 167 N93-30742
Application of non-standard signal processing to ELF noise characterization for the TSS1-OESEE programme p 167 N93-30743
ELF/VLF radio noise measurements at high latitudes during solar particle events p 167 N93-30744
The effect of enhanced backscattering on target detection p 172 N94-30508

ELECTROMAGNETIC PULSES
Nonlinear effects in optical fibers p 304 N92-28088

ELECTROMAGNETIC RADIATION
Electromagnetic radiating source elimination (ERASE) program p 157 N93-22019
Plume radiation p 169 N94-15223
The effects of man-made smokes and battlefield-induced smokes on the propagation of electromagnetic radiation p 172 N94-30505

ELECTROMAGNETIC SHIELDING
Composite cases for airborne electronic equipment: A technology study and EMC p 138 N95-20655
Lightweight electronic enclosures using composite materials p 138 N95-20656

ELECTROMAGNETIC SPECTRA
ELF/VLF spectrum measurements p 168 N93-30745

ELECTROMAGNETIC WAVE TRANSMISSION
Remote Sensing of the Propagation Environment
[AGARD-CP-502] p 230 N92-22790
Sensing propagation events and fade statistics at C-band for two over-water, line-of-sight propagation paths over a one year period p 152 N92-22792
Refractive assessments from satellite observations p 153 N92-22798
Angle of arrival characteristics of ionospheric skywave signals p 161 N93-23618
ELF/VLF/LF Radio Propagation and Systems Aspects
[AGARD-CP-529] p 164 N93-30727
Introduction p 164 N93-30728
ELF propagation in deep and shallow sea water p 166 N93-30739
Comparative study of undersea fields produced by various dipoles p 167 N93-30740
Atmospheric Propagation Effects Through Natural and Man-Made Obscurants for Visible to MM-Wave Radiation
[AD-A276919] p 170 N94-30495

The effects of man-made smokes and battlefield-induced smokes on the propagation of electromagnetic radiation p 172 N94-30505
The Lorentz reciprocity theorem as a consistency test for propagation models p 179 N95-20937
Temporal and spatial comportment of multiple paths in ionospheric propagation in oblique incidence: Fractal measures of perturbations p 183 N95-20954

ELECTROMECHANICS
Smart polymeric system for electromechanical transduction p 144 N94-11330
Recent developments in piezoelectric and electrostrictive sensors and actuators for smart structures p 220 N94-11332
High density monolithic packaging technology for digital/microwave avionics p 119 N95-20646

ELECTROMYOGRAPHY
Neurological decision making in aviation medicine based on electrophysiological methods p 256 N95-19431

ELECTRON DENSITY (CONCENTRATION)
A review of various techniques for computerized tomographic imaging of the ionosphere p 231 N92-22804
Mapping electron content and electron density in the sub-auroral ionosphere p 231 N92-22805

ELECTRON DENSITY PROFILES
The new portable digisonde for vertical and oblique sounding p 230 N92-22801

ELECTRON PRECIPITATION
Transient (approximately equals 10 s) VLF amplitude and phase perturbations due to lightning-induced electron precipitation into the ionosphere (the Trimpi effect) p 166 N93-30736
Lightning-induced effects on VLF/LF radio propagation p 166 N93-30737

ELECTRONIC BULLETIN BOARDS
Bulletin boards, electronic mail, conferencing, current use by scientists and engineers: Effects on libraries and information centres: Do they have a role? p 316 N94-37343

ELECTRONIC COUNTERMEASURES
Advances in Guidance and Control of Precision Guided Weapons
[AGARD-CP-524] p 149 N93-22018
Electromagnetic radiating source elimination (ERASE) program p 157 N93-22019
Versatile attack weapon p 149 N93-22027
Challenge of Future EW System Design
[AGARD-CP-546] p 174 N95-14200

ELECTRONIC EQUIPMENT
Composite cases for airborne electronic equipment: A technology study and EMC p 138 N95-20655
Lightweight electronic enclosures using composite materials p 138 N95-20656

ELECTRONIC EQUIPMENT TESTS
Time stress measurement devices for enhancement of onboard bit performance p 264 N93-19762

ELECTRONIC MAIL
Technology for libraries and information centers: A seminar in Greece, Portugal, and Turkey p 311 N93-10601
Electronic messaging for the 1990's
[AD-A267143] p 314 N94-15437
An introduction to the Internet and its services p 315 N94-37334
Bulletin boards, electronic mail, conferencing, current use by scientists and engineers: Effects on libraries and information centres: Do they have a role? p 316 N94-37343

ELECTRONIC MODULES
Applications of silicon hybrid multi-chip modules to avionics p 73 N92-28379
MCMs for avionics: Technology selection and intermodule interconnection p 77 N95-20641
Advanced Standard Electronic Modules format-E (SEM-E) processes for rapid prototyping p 185 N95-20642
Liquid flow-through cooling of electronic modules p 212 N95-20647
Immersion/two phase cooling p 212 N95-20648

ELECTRONIC PACKAGING
High density monolithic packaging technology for digital/microwave avionics p 119 N95-20646
Liquid flow-through cooling of electronic modules p 212 N95-20647
Electromagnetic compatibility effects of advanced packaging configurations p 176 N95-20658

ELECTRONIC WARFARE
Advances in Guidance and Control of Precision Guided Weapons
[AGARD-CP-524] p 149 N93-22018
Electromagnetic radiating source elimination (ERASE) program p 157 N93-22019
Radiolocation Techniques
[AGARD-CP-528] p 157 N93-23598
Detection of active emitters using triangulation and trilateration techniques: Theory and practice p 160 N93-23612
Challenge of Future EW System Design
[AGARD-CP-546] p 174 N95-14200

ELECTROPHYSIOLOGY
Neurological decision making in aviation medicine based on electrophysiological methods p 256 N95-19431

ELECTROSTATIC CHARGE
ESD and lightning interactions on aircraft p 36 N95-14896

ELECTROSTATICS
ESD traits of bulk propellant under pressure p 147 N92-33242
Antenna modeling and analysis for ELF/VLF/LF applications p 168 N93-30751

ELEVATION
Optical refraction in the atmospheric surface layer p 233 N92-22817

ELEVATION ANGLE
Modeling tropospheric ducting effects on satellite-to-ground paths p 179 N95-20936

ELLIPTICAL CYLINDERS
Ellipsoid-cylinder model p 208 N95-17869

ELLIPTICAL POLARIZATION
Infrared polarization signatures p 172 N94-30506

EMBEDDED COMPUTER SYSTEMS
Embedded expert system: From the mock-up to the real world p 284 N94-29319
Experiences with the HOOD design method on avionics software development p 284 N94-29325
Rome Laboratory software engineering technology program p 285 N94-29330
Design of a thinwire real-time multiprocessor operating system p 288 N94-29333
Software testing practices and their evolution for the 1990's p 285 N94-29335
Integrated formal verification and validation of safety critical software p 285 N94-29338
A common approach for an aerospace software environment p 287 N94-29346

EMBEDDING
Virtual interface applications for airborne weapons systems p 268 N93-28858
Factors affecting the embedding of optical fibre sensors in advanced composite structures p 134 N94-11336

EMERGENCIES
Pre-flight risk assessment in Emergency Medical Service (EMS) helicopters p 34 N93-19692
Correlations between engineering, medical and behavioural aspects in fire-related aircraft accidents p 34 N93-19693
QoS driven routing in packet switched networks of multiple transmission media p 176 N95-20923

EMERGENCY LIFE SUSTAINING SYSTEMS
Helicopter accidents over water in the national navy: Epidemiological study over the period 1980-1991 p 32 N93-19686
Emergency underwater breathing aids for helicopter passengers and crew p 277 N94-28437

EMITTANCE
An experimental and comprehensive method to measure emission characteristics p 171 N94-30501

EMITTERS
Propagation effects on HF direction finding p 158 N93-23602
The influence of propagation on high frequency radiogoniometry and single station location p 159 N93-23607
A current assessment of single site locating technology p 159 N93-23608
Detection of active emitters using triangulation and trilateration techniques: Theory and practice p 160 N93-23612
Multiple emitter direction finding from a circular array by single snapshot processing p 162 N93-23627

EMOTIONAL FACTORS
Effectiveness of birthdate biorhythm theory on flight accidents p 244 N93-19710
Subjective mood and fatigue of C-141 crew during Desert Storm p 274 N93-32264
Is the pilot fit for flying after an accident? p 255 N95-19425

EMPHYSEMA
Correlation of serum alpha sub 1 antitrypsin with cigarette smoking and pulmonary function status in Greek pilots, for a ten year period p 242 N93-11318
Chronic obstructive pulmonary disease p 247 N94-23324

ENCEPHALITIS
Immunization of personnel traveling to a destination in tropical countries: French position p 239 N93-11304

END-TO-END DATA SYSTEMS
Multi-frequency multi-polarization processing for spaceborne SAR p 156 N93-13057

ENDOTHERMIC FUELS
Endothermic fuels for hypersonic aviation p 148 N94-29285

ENERGY CONSUMPTION
Nutritional assessment of United States tactical air command pilots p 271 N93-32242

ENERGY CONVERSION EFFICIENCY
Application of CFD in the design of gas turbine engine components p 78 N92-27461

ENERGY METHODS
Advanced statistical energy analysis p 229 N95-19165

ENERGY REQUIREMENTS
Portable equipment developed to estimate energy expenditure by simultaneous recording of heart rate and body position p 271 N93-32243

ENERGY TRANSFER
Presentation of a computational code for 3-D compressible flow in complex channels and cavities p 189 N92-27475
Turboramjet engines: Types and performances p 92 N94-29293
Impact loading of compressor stator vanes by hailstone ingestion p 102 N95-19670

ENGINE AIRFRAME INTEGRATION
The application of flight simulation models in support of rotorcraft design and development p 111 N92-28527
Aerodynamic Engine/Airframe Integration for High Performance Aircraft and Missiles
[AGARD-CP-498] p 192 N93-13199
Test techniques for engine/airframe integration p 192 N93-13200
Investigation of interference phenomena of modern wing-mounted high-bypass-ratio engines by the solution of the Euler-equations p 193 N93-13204
Aerodynamic analysis of slipstream/wing/nacelle interference for preliminary design of aircraft configurations p 7 N93-13205
Euler analysis of turbofan/superfan integration for a transport aircraft p 193 N93-13206
Recent developments in low-speed TPS-testing for engine integration drag and installed thrust reversr simulation p 51 N93-13207
Aerodynamic integration of thrust reversers on the Fokker 100 p 51 N93-13208
The PEP Symposium on CFD Techniques for Propulsion Applications p 194 N93-13210
Flight analysis of air intake/engine compatibility p 51 N93-13212
Water tunnel studies of inlet/airframe interference phenomena p 194 N93-13216
Some aspects of intake design, performance and integration with the airframe p 51 N93-13219
Application of subsonic first-order panel methods for prediction of inlet and nozzle aerodynamic interactions with airframe p 8 N93-13223
Survey on techniques used in aerodynamic nozzle/airframe integration p 51 N93-13224
Hypersonic propulsion system force accounting p 80 N93-13229
Integration of turbo-ramjet engines for hypersonic aircraft p 81 N93-13230
Aerodynamic engine/airframe integration for high performance aircraft and missiles p 52 N93-17618
Helicopter engine/airframe integration: The way ahead p 61 N94-34433
Impact of dynamic loads on propulsion integration p 302 N95-19148

ENGINE CONTROL
Research and development of ramjets/ramrockets. Part 2: Integral liquid fuel ramjets p 93 N94-29297
Guide to the measurement of the transient performance of aircraft turbine engines and components
[AD-280272] p 93 N94-33874
Improvement of endurance performance by periodic optimal control of variable camber p 110 N94-36329

ENGINE COOLANTS
Endothermic fuels for hypersonic aviation p 148 N94-29285

ENGINE DESIGN
Application of CFD in the design of gas turbine engine components p 78 N92-27461
Steady and Transient Performance Prediction of Gas Turbine Engines
[AGARD-LS-183] p 79 N92-28458
Overview on basis and use of performance prediction methods p 79 N92-28459
Practical considerations in designing the engine cycle p 79 N92-28460
Component performance requirements p 79 N92-28462
Dynamic simulation of compressor and gas turbine performance p 79 N92-28463
Development and qualification of the US Cruise Missile Propulsion System p 124 N93-17619
Prediction of the performances in combustion of ramjets and stato-rockets by isothermal experiments and modeling p 83 N93-17622
Delamination damage and its effect on buckling of laminated cylindrical shells p 130 N93-21516
Heat transfer and aerodynamics of a 3D design nozzle guide vane tested in the Pyestock Isentropic Light Piston Facility p 84 N93-29928
Aero-thermal design of a cooled transonic NGV and comparison with experimental results p 87 N93-29957
Fuels and Combustion Technology for Advanced Aircraft Engines
[AD-A275679] p 138 N94-29246

Combustion technology needs for advanced high pressure cycle engines p 139 N94-29248
High temperature fuel requirements and payoffs p 148 N94-29259
Design aspects in small aircraft gas turbine fuel injectors p 91 N94-29264

Experimental and numerical simulations of the effects of ingested particles in gas turbine engines p 101 N95-19662

Particle trajectories in gas turbine engines p 101 N95-19663

The calculation of erosion in a gas turbine compressor rotor p 101 N95-19664

Erosion of T56 5th stage rotor blades due to bleed hole overtip flow p 101 N95-19666

Investigation of mechanical erosion in fuel pipelines p 224 N95-19667

An airborne monitoring system for FOD and erosion faults p 102 N95-19668

Analysis of the erosion of cubic centered and face centered metallic materials p 144 N95-19674

Gas turbine compressor corrosion and erosion in Western Europe p 103 N95-19678

High velocity oxygen fuel spraying of erosion and wear resistant coatings on jet engine parts p 103 N95-19680

Resistance of silicon nitride turbine components to erosion and hot corrosion/oxidation attack p 104 N95-19683

ERROR ANALYSIS

The human factor problem in the Canadian Forces aviation p 31 N93-19657

The effect of enhanced backscattering on target detection p 172 N94-30508

Quality assessment for wind tunnel testing [AGARD-AR-304] p 19 N95-14197

Calibration and use of a non-nulling seven-hole pressure probe p 221 N95-19254

Optical surface pressure measurements: Accuracy and application field evaluation p 307 N95-19274

Geographical diversity combining to exploit multi-mechanism propagation p 183 N95-20957

ERRORS

Motion errors and compensation possibilities p 155 N93-13052

Accidents and errors: A review of recent UK Army Air Corps accidents p 34 N93-19701

Propagation effects on HF direction finding p 158 N93-23602

Systematic bearing errors of HF signals observed over a North-South propagation path p 160 N93-23614

Development of pneumatic test techniques for subsonic high-lift and in-ground-effect wind tunnel investigations p 29 N95-19268

Multipath impact on ground-based global positioning system range measurements: Aspects of measurement, modeling, and mitigation p 182 N95-20949

Impact of propagation mechanisms on global navigation satellite system performance p 182 N95-20950

Geographical diversity combining to exploit multi-mechanism propagation p 183 N95-20957

ESCAPE SYSTEMS

An epidemiological study in SAF's pilots ejections p 263 N93-19699

Spine injuries: Up to date evaluation in aircraft ejections p 256 N95-19434

ESSENTIALLY NON-OSCILLATORY SCHEMES

Higher order upwind finite volume schemes with ENO-properties for general unstructured meshes p 192 N92-27678

ESTERS

The swollen polymer technique and its use for heat transfer investigations on film cooled surfaces p 196 N93-29944

ESTIMATES

Current status of computational methods for transonic unsteady aerodynamics and aeroelastic applications p 3 N92-27937

Development of a fast sampling system for estimation of impulse responses of mobile radio channels p 180 N95-20943

ESTIMATING

Search route planning p 38 N92-27900

Prediction of success from training p 35 N93-19702

Chronic obstructive pulmonary disease p 247 N94-23324

Estimating wind tunnel interference due to vectored jet flows p 210 N95-19265

ESTUARIES

An experimental study of siphonal jets in a turbulent boundary layer crossflow p 202 N94-28015

ETIOLOGY

The screening of inhalant allergic diseases in the selection of candidates for aircraft piloting p 241 N93-11312

In vivo and in vitro diagnosis of allergic respiratory disease during screening procedures in the Italian Navy: Comparative evaluation of a recent quantitative automatized enzyme immunoassay method to dose specific IgE p 241 N93-11314

Sarcoidosis and the aviator p 248 N94-23325

Centrifuge tests of the medical condition of French fighter pilots p 254 N95-19424

EUCLIDEAN GEOMETRY

Single-pass method for the solution of inverse potential and rotational problems. Part 2: Fully 3-D potential theory and applications p 20 N95-16564

EULER EQUATIONS OF MOTION

On the computation of unsteady turbomachinery flows. Part 1: Euler equations in vibrating cascades p 187 N92-27460

Unsteady Euler calculations in 3D internal aerodynamics p 188 N92-27470

Nonequilibrium 3D flows of air through inlets p 190 N92-27487

Unstructured grid methods for compressible flows p 192 N92-27676

Aspects of unstructured grids and finite-volume solvers for the Euler and Navier-Stokes equations p 192 N92-27677

Evaluation of an unsteady implicit Euler code against two and three-dimensional standard configurations p 4 N92-27945

Numeric simulation of the aerodynamic flows around nacelles p 193 N93-13202

Investigation of interference phenomena of modern wing-mounted high-bypass-ratio engines by the solution of the Euler-equations p 193 N93-13204

Euler analysis of turbofan/superfan integration for a transport aircraft p 193 N93-13206

Hypersonic flow computations around re-entry vehicles p 13 N94-10461

A comparison of high resolution upwind solvers on 3-D inviscid hypersonic flows p 13 N94-10463

High-lift system analysis method using unstructured meshes p 15 N94-18426

Numerical assessment of aerodynamic interactions on missiles with transverse jets control p 18 N94-28031

A new Eulerian model for turbulent evaporating sprays in recirculating flows p 142 N94-29279

High incidence flow analysis over the Rafale A p 18 N94-34612

The role of CFD in the design process p 208 N95-14135

Computational aerodynamics based on the Euler equations [AGARD-AG-325] p 19 N95-14264

The mathematical models of flow passage for gas turbine engines and their components p 98 N95-19020

EUROPE

System of navigation by satellites with European coverage p 120 N93-29897

The effect of changes in markets and trade barriers on the exchange of scientific and technical information p 313 N93-31216

Automating multilingual communication p 313 N93-31219

| AGARD-AG-300-VOL-10 | p 293 N93-11711

EXTERNAL STORES
AGARD flight test techniques series. Volume 10: Weapon delivery analysis and ballistic flight testing
| AGARD-AG-300-VOL-10 | p 293 N93-11711
Reduction of fatigue load experience as part of the fatigue management program for F-16 aircraft of the RNLAF p 62 N94-34598
Flight test certification of a 480 gallon composite fuel tank on CF-18 p 68 N94-36340
A study of the effect of store unsteady aerodynamics on gust and turbulence loads p 71 N95-18601

EXTERNAL TANKS
Flight test certification of a 480 gallon composite fuel tank on CF-18 p 68 N94-36340

EXTERNALLY BLOWN FLAPS
Navier-Stokes simulation of flow field around a blown-flap high-lift system p 16 N94-18429

EXTINCTION
Remote sensing of aerosol extinction using single-ended lidars p 232 N92-22811
Sensing of radio refractivity and aerosol extinction p 175 N95-14830
Electro-optics: Propagation from IR to UV and sensor considerations. Part A: Propagation theory p 175 N95-14833
Electro-optics: Propagation from IR to UV and sensor considerations. Part B: Tools for exploitation of propagation conditions and system range performance p 176 N95-14834

EXTREMELY HIGH FREQUENCIES
Advanced technologies for lightweight EHF tactical communications satellites p 164 N93-29900
Synchronization techniques for medium data rate EHF MILSATCOM systems p 164 N93-29901
Terrain and coverage prediction analyses for non-geostationary orbit EHF satellite communications p 164 N93-29902
Radar cross sections of ground clutter at 95 GHz for summer and fall conditions p 173 N94-30512
Refractive effects from VHF to EHF. Part A: Propagation Mechanisms p 175 N95-14831
Refractive effects from VHF to EHF. Part B: Propagation models p 175 N95-14832
Effects of hydrometeors and atmospheric gases at SHF/EHF p 176 N95-14835

EXTREMELY LOW FREQUENCIES
Sensing of ELF signatures arising from space vehicle disturbances of the ionosphere p 232 N92-22809
Sensing of seismo-electromagnetic earthquake precursor radiation signatures along Southern California fault zones: Evidence of long distance precursor ULF signals observed before a moderate Southern California earthquake episode p 232 N92-22810
Radiolocation in the lower ELF frequency band p 163 N93-23630
ELF/VLF/LF Radio Propagation and Systems Aspects
| AGARD-CP-529 | p 164 N93-30727
ELF propagation highlights p 165 N93-30730
ELF propagation in deep and shallow sea water p 166 N93-30739
A long wave TE/TM noise prediction model p 167 N93-30742
Application of non-standard signal processing to ELF noise characterization for the TSS1-OESEE programme p 167 N93-30743
Application of non-standard signal processing to ELF noise characterization for the TSS1-OESEE programme p 167 N93-30743
ELF/VLF radio noise measurements at high latitudes during solar particle events p 167 N93-30744
ELF/VLF spectrum measurements p 168 N93-30745
Results of the joint HIPAS/NUWC campaigns to investigate ELF generated by auroral electrojet modulation p 168 N93-30746
Results of the joint HIPAS/NUWC campaigns to investigate ELF generated by auroral electrojet modulation p 168 N93-30746
Pattern measurements of US Navy ELF antennas p 169 N93-30752
Pattern measurements of US Navy ELF antennas p 169 N93-30752
Orbiting transmitter and antenna for spaceborne communications at ELF/VLF to submerged submarines p 169 N93-30755

EYE MOVEMENTS
Gaze orientation under G(z)-load. Methodological aspects: Preliminary results p 281 N94-37274
A comparison of two examples of magnetic tracker systems p 281 N94-37275

EYE PROTECTION
Multi-function visor p 265 N93-19770
Color vision issues in modern military aviation or the search for the Abominable Coneman p 258 N95-19441

F

F REGION
The spatial and temporal characteristics of high frequency auroral backscatter p 158 N93-23604
The longitudinal occurrence of equatorial F layer irregularities p 158 N93-23605
Mitigation of the effects of F layer regularities by using multiple paths p 182 N95-20951

F-15 AIRCRAFT
Aeroelastic calculations for fighter aircraft using the transonic small disturbance equation p 5 N92-27951
Decoupling of aircraft responses p 107 N94-11497

F-16 AIRCRAFT
Human factors causes and management strategies in US Air Force F-16 mishaps 1984-present p 31 N93-19673

F-16 accidents: The Norwegian experience p 31 N93-19674
Category A F-16 accidents in the Belgian Air Force p 32 N93-19675
Combat and training aircraft class A mishaps in the Belgian Air Force 1970-1990 p 32 N93-19677
Head-steered sensor flight test results and implications p 269 N93-28859
Decoupling of aircraft responses p 107 N94-11497
Reduction of fatigue load experience as part of the fatigue management program for F-16 aircraft of the RNLAF p 62 N94-34598
An overview of the F-16 service life approach p 63 N94-34599

F-18 AIRCRAFT
Use of high-fidelity simulation in the development of an F/A-18 active ground collision avoidance system p 30 N92-28530
Flight test certification of a 480 gallon composite fuel tank on CF-18 p 68 N94-36340

F-22 AIRCRAFT
A disciplined approach to software test and evaluation p 286 N94-29339
Thrust vector aided maneuvering of the YF-22 Advanced Tactical Fighter prototype p 63 N94-34610

F-4 AIRCRAFT
Human factors causes and management strategies in US Air Force F-16 mishaps 1984-present p 31 N93-19673

FABRICATION
Packaging the MAMA module p 184 N95-20639

FABRICS
The potential of new textiles in improving survival prospects p 276 N94-28430
Development of a new chemical warfare agent protective material p 276 N94-28432

FACSIMILE COMMUNICATION
Technology for libraries and information centers: A seminar in Greece, Portugal, and Turkey p 311 N93-10601

FACTOR ANALYSIS
The Environmental Symptoms Questionnaire: Assessing reactions to environmental extremes in military operations p 278 N94-28447

FADING
Angle diversity on digital microwave links: Antenna design and experimental results p 181 N95-20947
Mitigation of the effects of F layer regularities by using multiple paths p 182 N95-20951

FAILURE
US Army helicopter inertia reel locking failures p 33 N93-19689
Debonding/Delamination of Composites [AGARD-CP-530] p 128 N93-21507
Prediction of delamination in tapered unidirectional glass fibre epoxy with dropped plies under static tension and compression p 131 N93-21530
Effect of impacts on CFRP structures, results of a comprehensive test program for practical use p 132 N93-21534
Ceramic matrix composites: Challenges and opportunities p 145 N94-24230

FAILURE ANALYSIS
Issues in compression loading of composite structures p 125 N92-33034
Damage progression under compressive loading in composite laminates containing an open hole p 126 N92-33040
GARTEUR compression behaviour of advanced CFRP --- carbon fiber reinforced plastics p 127 N92-33042
Fracture analysis of BMI system in presence of moisture p 130 N93-21517
Micromechanical failure modes in brittle matrix composites p 145 N94-24232
Role of interfaces on the cyclic fatigue behaviour of ceramic matrix composites p 145 N94-24234
Potential software failures methodology analysis p 285 N94-29329
Engine static structures behaviour under impact load using 3D modelling p 227 N94-34464
An air bearing system for small high speed gas turbines p 223 N94-34466
An Assessment of Fatigue Damage and Crack Growth Prediction Techniques [AD-280273] p 227 N94-34581
Statistical characterization of rare events p 291 N94-37327

FAILURE MODES
The Utilization of Advanced Composites in Military Aircraft [AGARD-R-785] p 125 N92-33033
Issues in compression loading of composite structures p 125 N92-33034
A new test method to determine the compressive strength of fiber-reinforced composites p 126 N92-33035
Three-dimensional elasticity analysis of buckling of laminated plates p 126 N92-33037
A review of RAE sponsored work on the compressive behaviour of composite materials p 126 N92-33038
Fracture surface characteristics of compressive failures in carbon fibre reinforced epoxy laminate subjected to hot/wet conditioning p 128 N92-33051
Debonding/Delamination of Composites [AGARD-CP-530] p 128 N93-21507
Predicting failure by debonding/delamination p 129 N93-21512
Micromechanical failure modes in brittle matrix composites p 145 N94-24232
Soft body impact on titanium fan blades p 102 N95-19671
Damage of high temperature components by dust-laden air p 102 N95-19673
Advanced Packaging Concepts for Digital Avionics [AGARD-CP-562] p 75 N95-20631

FAN BLADES
Design of fan blades subjected to bird impact p 102 N95-19669
Soft body impact on titanium fan blades p 102 N95-19671

FAR FIELDS
Comparative study of undersea fields produced by various dipoles p 167 N93-30740
Application of the Fourier transform to short antennas p 168 N93-30750
Correction of support influences on measurements with sting mounted wind tunnel models p 29 N95-19281

FAR INFRARED RADIATION
Far-infrared characterization of horizontal path image degradation p 153 N92-22814

FATIGUE (BIOLOGY)
Subjective mood and fatigue of C-141 crew during Desert Storm p 274 N93-32264
Digital flight data as a measure of pilot performance associated with fatigue from continuous operations during the Persian Gulf conflict p 275 N93-32268

FATIGUE (MATERIALS)
LARZAC HP turbine disk crack initiation and propagation spin pit test p 81 N93-14892
In-service considerations affecting component life p 82 N93-14898
MB-339: The role of flight testing in the evolution phase of a proven aircraft p 53 N93-19907
Delamination and fatigue of composite materials: A review p 129 N93-21509
Delamination development under fatigue loading p 131 N93-21521
Material characterization and fractographic examination of Ti-17 fatigue crack growth specimens for SMP SC33 p 88 N93-31744
Fatigue crack growth results for Ti-6Al-4V, IMI 685, and Ti-17 p 88 N93-31746
Conclusions and recommendations p 226 N93-31749
Introduction of Ceramics into Aerospace Structural Composites [AGARD-R-795] p 144 N94-24228
An Assessment of Fatigue Damage and Crack Growth Prediction Techniques [AD-280273] p 227 N94-34581
Fatigue life and crack growth prediction methodology p 227 N94-34583
An assessment of fatigue crack growth prediction models for aerospace structures p 228 N94-34586
Notch fatigue assessment of aircraft components using a fracture mechanics based parameter p 228 N94-34588
Growth of artificially and naturally initiating notch root cracks under FALSTAFF spectrum loading p 228 N94-34589
Rotorcraft fatigue life-prediction: Past, present, and future p 228 N94-34590
Fatigue management and verification of airframes p 61 N94-34591
Assessment of in-service aircraft fatigue monitoring process p 62 N94-34593
Harrier 2: A comparison of US and UK approaches to fatigue clearance p 62 N94-34596
Metal matrix composites: Analysis of simple specimens and model components under creep and fatigue loading p 136 N94-36661
Residual strength and life prediction techniques for Ti MMC p 136 N94-36662
Pre-standardisation work on fatigue and fracture testing of titanium matrix composites p 137 N94-36667

FATIGUE LIFE
Engine life assessment test case TF41 LP compressor shaft torsional fatigue p 82 N93-14896
Debonding/Delamination of Composites [AGARD-CP-530] p 128 N93-21507
Structural health monitoring using embedded fibre optic sensors p 35 N94-11334
The impact of active controls technology on the structural integrity of aeronautical vehicles p 56 N94-11341
Miner's rule revisited p 227 N94-34582
Fatigue life and crack growth prediction methodology p 227 N94-34583
A combined approach to buffet response analyses and fatigue life prediction p 228 N94-34587
Notch fatigue assessment of aircraft components using a fracture mechanics based parameter p 228 N94-34588
Rotorcraft fatigue life-prediction: Past, present, and future p 228 N94-34590
The role of fatigue analysis for design of military aircraft p 62 N94-34594
Fatigue design, test and in-service experience of the BAe Hawk p 62 N94-34597
Reduction of fatigue load experience as part of the fatigue management program for F-16 aircraft of the RNLAF p 62 N94-34598
An overview of the F-16 service life approach p 63 N94-34599
Process/composite concurrent tailoring of SiC/Ti composites p 136 N94-36663
Development of mechanical testing methods for titanium matrix composites (traction-ogligo-cyclic fatigue) p 137 N94-36669
Defects and their effects on the integrity of nickel based aeroengine discs p 144 N94-37328
Substantiating powder metal life methodologies for engines p 225 N94-37330
Predicting defect behaviour p 225 N94-37331
Current and future problems in structural acoustic fatigue p 301 N95-19143
Brite-Euram programme: ACOUFAT acoustic fatigue and related damage tolerance of advanced composite and metallic structures p 303 N95-19159

FATIGUE TESTS
Influence of edge effect on compression-tension fatigue of toughened graphite/epoxy laminates p 126 N92-33039
An improved method of structural dynamic test design for ground flying and its application to the SH-2F and SH-2G helicopters p 54 N93-19928
GARTEUR damage mechanics for composite materials: Analytical/experimental research on delaminations p 129 N93-21513
AGARD Engine Disc Cooperative Test Programme [AGARD-R-766-ADD] p 88 N93-31741
Fractographic and microstructural analysis of fatigue crack growth in Ti-6Al-4V fan disc forgings p 88 N93-31742
Low cycle fatigue behaviour of titanium disc alloys p 88 N93-31745
Crack growth prediction results p 226 N93-31748
Fiber-optic sensor systems for measuring strain and the detection of acoustic emissions in smart structures p 134 N94-11337
Harrier 2: A comparison of US and UK approaches to fatigue clearance p 62 N94-34596
Fatigue design, test and in-service experience of the BAe Hawk p 62 N94-34597
Metal matrix composites: Analysis of simple specimens and model components under creep and fatigue loading p 136 N94-36661
Residual strength and life prediction techniques for Ti MMC p 136 N94-36662
Prediction of thermal and mechanical stress-strain responses of TMC's subjected to complex TMF histories p 137 N94-36666
Pre-standardisation work on fatigue and fracture testing of titanium matrix composites p 137 N94-36667
ASTM and VAMAS activities in titanium matrix composites test methods development p 137 N94-36668
Development of mechanical testing methods for titanium matrix composites (traction-ogligo-cyclic fatigue) p 137 N94-36669
High temperature cyclic behaviour of aerospace materials: Room temperature validation tests of Ti-6Al-4V [AGARD-AR-328] p 229 N95-14198
High-temperature acoustic test facilities and methods p 302 N95-19149
Acoustic fatigue testing on different materials and skin-stringer elements p 302 N95-19156
Acoustic fatigue of carbon fibre structures p 303 N95-19158
Brite-Euram programme: ACOUFAT acoustic fatigue and related damage tolerance of advanced composite and metallic structures p 303 N95-19159
Acoustic fatigue behaviour of GLARE composites p 303 N95-19160

FAULT DETECTION
Fault location in structures using neural networks p 224 N94-11335
An airborne monitoring system for FOD and erosion faults p 102 N95-19668

FAULT TOLERANCE
An hierarchic alliance of filters for fault tolerant navigation using two inertial systems with aiding sensors p 40 N93-22793
Potential software failures methodology analysis p 285 N94-29329
Rome Laboratory software engineering technology program p 285 N94-29330

Distributed applications and failure tolerance programs using a reconfigurable parallel architecture p 286 N94-29345
The Advanced Avionics Subsystem Technology Demonstration Program p 77 N95-20636

FEASIBILITY ANALYSIS
ASTOVL model engine simulators for wind tunnel research p 115 N93-13213
SAR sensors on TACSATS: A feasibility assessment p 122 N93-29909
The KDC-10 programme of the Royal Netherlands Air Force p 69 N94-36346
On the feasibility of virtual environments in medicine p 279 N94-37264

FEEDBACK
X-31A control law design p 109 N94-34618

FEEDBACK CONTROL
Dynamic control of aerodynamic instabilities in gas turbine engines p 80 N92-28466
Decoupling of aircraft responses p 107 N94-11497
Utilizing quantitative feedback theory design technique for flight control system p 108 N94-11501
Introduction to Quantitative Feedback Theory (QFT) technique p 290 N94-18241
Application of current departure resistance criteria to the post-stall manoeuvering envelope p 64 N94-34622
Visual accommodation to virtual image displays when knowledge of object distance conflicts with optical distance p 261 N94-37278

FEEDFORWARD CONTROL
X-31A control law design p 109 N94-34618

FEMALES
The next generation female in cockpit: Do we need a new approach to cockpit resource management (CRM)? p 263 N93-19704

FEVER
Studies of safety, infectivity, and immunogenicity of a new Temperature Sensitive (TS) 51-1 strain of S. typhi as a new live oral typhoid fever vaccine candidate p 239 N93-11306

FIBER COMPOSITES
A new test method to determine the compressive strength of fiber-reinforced composites p 126 N92-33035
Innovative constituents requirements to improve composites compressive strength p 127 N92-33043
Environmental degradation of high temperature composites p 127 N92-33047
Jet fuel absorption and dynamic mechanical analysis of carbon fibre composites p 128 N92-33050
Fracture surface characteristics of compressive failures in carbon fibre reinforced epoxy laminate subjected to hot/wet conditioning p 128 N92-33051
The effect of heat treatment on the properties of PEEK and APC-2 p 128 N92-33052
Factors affecting the embedding of optical fibre sensors in advanced composite structures p 134 N94-11336
Micromechanical characterization of ceramic-matrix composites using the instrumented microindentation technique p 145 N94-24233
Role of interfaces on the cyclic fatigue behaviour of ceramic matrix composites p 145 N94-24234
Characterisation of Fibre Reinforced Titanium Matrix Composites [AD-A277520] p 134 N94-36649
SCS-6 (tm) fiber reinforced titanium p 135 N94-36652
Manufacture and properties of sigma fibre reinforced titanium p 135 N94-36655
Properties of TMC processed by fibre coating and hiping p 135 N94-36656
Fibre-matrix interface properties in Ti-matrix composites: Chemical compatibility and micromechanical behaviour p 136 N94-36657
Micromechanical modeling of damage growth in titanium based metal-matrix composites p 137 N94-36664
Crack growth under cycle loading in fibre reinforced titanium metal matrix composites p 137 N94-36665
Prediction of thermal and mechanical stress-strain responses of TMC's subjected to complex TMF histories p 137 N94-36666
Pre-standardisation work on fatigue and fracture testing of titanium matrix composites p 137 N94-36667
ASTM and VAMAS activities in titanium matrix composites test methods development p 137 N94-36668
Development of mechanical testing methods for titanium matrix composites (traction-ogligo-cyclic fatigue) p 137 N94-36669
Modelling and testing fibre reinforced titanium for design purposes p 138 N94-36670

FIBER OPTICS
Advances in Fibre-Optic Technology in Communications and for Guidance and Control [AGARD-LS-184] p 154 N92-28084
Semiconductor lasers and fiber lasers for fiber-optic telecommunications p 154 N92-28085
Coherent communications --- fiber optics applications p 154 N92-28086
High speed local area networks p 154 N92-28087
Nonlinear effects in optical fibers p 304 N92-28088
Active fibres and optical amplifiers p 304 N92-28089
Optical fiber sensors p 304 N92-28090
Smart structures: The relevance of fibre optics p 304 N92-28091
Fiber-optic gyroscope p 219 N92-28092
Fiber optic data busses for aircraft p 72 N92-28093
Advances in Guidance and Control of Precision Guided Weapons [AGARD-CP-524] p 149 N93-22018
System evaluation of a fiber optic guided missile with a simple guidance addition to improve system effectiveness p 305 N93-22025
Linear payout systems for dispensing fiber-optic data links from precision-guided munitions or high-performance aircraft/missles p 305 N93-22026
An overview of optical gyroscopes for navigation p 219 N93-22783
Fiber optic gyros and systems p 220 N93-22785
Optical fibre techniques for structural monitoring in composites p 132 N94-11324
Fiber optic sensing for composite smart structures p 133 N94-11327
Fiber-optic sensor systems for measuring strain and the detection of acoustic emissions in smart structures p 134 N94-11337
Fiber-optic interferometric strain gauge for smart structures applications: First flight tests p 220 N94-11340
Optical backplane for modular avionics p 307 N95-20652
High performance backplane components for modular avionics p 186 N95-20653

FIELD OF VIEW
Night vision devices and characteristics p 276 N94-23982

FIELD STRENGTH
ELF propagation highlights p 165 N93-30730
VLF/LF propagation measurements p 165 N93-30732
Theoretical and experimental coverage analysis of a VLF transmitter p 165 N93-30734

FIGHTER AIRCRAFT
Application of analytical and design tools for fighter wing aeroelastic tailoring p 47 N92-23231
Design of a fighter aircraft vertical tail enhanced buffet environment survivability p 48 N92-23235
ICAAS piloted simulation evaluation p 72 N92-27906
Unsteady aerodynamics for aeroelasticity at the Flight Dynamics Directorate p 3 N92-27939
Aeroelastic calculations for fighter aircraft using the transonic small disturbance equation p 5 N92-27951
Development of a method to predict transonic limit cycle oscillation characteristics of fighter aircraft p 105 N92-27958
Transonic wind tunnel investigation of limit cycle oscillations on fighter type wings p 6 N92-27959
Development and evaluation of an attack and maneuvering system with combat development simulators as main development tool p 113 N92-28541
The role of simulation for the study of APIS (piloting support by synthetic imagery) p 113 N92-28544
Application of piloted simulation to high-angle-of-attack flight-dynamics research for fighter aircraft p 114 N92-28551
An integrated multiple-sensor fire control system for air-to-air combat p 74 N92-32450
Aspects of compression in aerospace composites: Future requirements p 126 N92-33036
Combat Aircraft Noise [AGARD-CP-512] p 296 N93-10666
Combat aircraft noise: The operator's perspective p 296 N93-10669
Combat aircraft jet engine noise studies p 298 N93-10679
Supersonic acoustic source mechanisms for free jets of various geometries p 298 N93-10680
Identifying the principal noise sources of fixed-wing combat aircraft in high-speed flight p 299 N93-10686
Measurement and prediction of noise from low-altitude military aircraft operations p 300 N93-10687
Combat aircraft noise reduction by technical measures p 300 N93-10689
Technical measures for the attenuation of aircraft noise and their applicability to GAF combat aircraft p 300 N93-10690
Study results on combat aircraft source noise reduction p 300 N93-10691
The PEP Symposium on CFD Techniques for Propulsion Applications p 194 N93-13210
Mass flow effects on the low speed characteristics of an advanced combat aircraft p 7 N93-13214
Some aspects of intake design, performance and integration with the airframe p 51 N93-13219
CFD calibration for three-dimensional nozzle/afterbody configurations p 195 N93-13226
Propulsion integration results of the STOL and Maneuver Technology Demonstrator p 52 N93-13228
Aerodynamic engine/airframe integration for high performance aircraft and missiles p 52 N93-17618
Air accidents in the French Air Force p 32 N93-19676
Combat and training aircraft class A mishaps in the Belgian Air Force 1970-1990 p 32 N93-19677
Human factors problems for aircrew-aircraft interfaces: Where should we focus our efforts? p 263 N93-19759
Flight above a virtual world p 264 N93-19766
Management of avionics data in the cockpit p 266 N93-19777
The integration of advanced cockpit and systems design p 266 N93-19779
YF-22A prototype advanced tactical fighter demonstration/validation flight test program overview p 53 N93-19906
In-flight structural mode excitation system for flutter testing p 105 N93-19915
Testing of an automatic, low altitude, all terrain ground collision avoidance system p 38 N93-19924
Allowable compression strength for CFRP-components of fighter aircraft determined by CAI-test p 132 N93-21531
X-31 demonstration of integrated flight and propulsion control for effective combat at extreme angles of attack p 106 N93-28851
Planning for air to air combat p 293 N93-28852
A new class of mission support for combat air-crew p 293 N93-28854
Symbology for head up and head down applications for highly agile fighter aircraft: To improve spatial awareness, trajectory control, and unusual attitude recovery, part 1 p 268 N93-28857
The physiological limitations of man in the high G environment p 269 N93-28861
Requirements for pilot assistance in a thrust-vectoring combat aircraft p 270 N93-28870
Design considerations for a night, air-to-surface attack capability on a dual role fighter p 74 N93-28871
An experimental investigation of the optimum slat setting on a combat aircraft model p 56 N94-18431
An experimental investigation of attachment-line transition on the slat of a combat aircraft model p 56 N94-18432
Echocardiographic findings in trained aircrew: The effect of +Gz on cardiac structure (working group 18) p 247 N94-23320
Operational agility [AD-A283336] p 61 N94-33875
The development of an auxiliary power unit for a fighter aircraft p 95 N94-34442

EFA flying qualities specification and its utilisation p 64 N94-34621
Application of current departure resistance criteria to the post-stall manoeuvering envelope p 64 N94-34622
Operational agility: An overview of AGARD Working Group 19 p 65 N94-34625
Optimal tactics for agile aircraft technology: A differential game methodology p 295 N94-34631
In-flight refueling: Dassault Aviation research on the Rafale aircraft p 68 N94-36341
ICAAS piloted simulation results p 173 N94-36617
Aeroservoelastic stabilization considerations for pointing and tracking systems p 223 N94-36627
Studies and simulations on sensor fusion and cueing for fighter application p 279 N94-36632
Sensor data fusion for air to air situation awareness beyond visual range p 295 N94-36633
Investigation into the aerodynamic characteristics of a combat aircraft research model fitted with a forward swept wing p 27 N95-17884

FILAMENT WINDING
Manufacture and properties of sigma fibre reinforced titanium p 135 N94-36655

FILM COOLING
Computation of 3D-viscous flow and heat transfer for the application to film cooled gas turbine blades p 187 N92-27456
Determination of surface heat transfer and film cooling effectiveness in unsteady wake flow conditions p 85 N93-29933
The effect of main stream flow angle on flame tube film cooling p 197 N93-29953
Impingement/effusion cooling p 197 N93-29954

The aerodynamic effect of coolant ejection in the leading edge region of a film-cooled turbine blade p 87 N93-29958
On the development of a film cooling layer p 197 N93-29959
Modeling of a turbulent flow in the presence of discrete parietal cooling jets p 87 N93-29960
A Navier-Stokes solver with different turbulence models applied to film-cooled turbine cascades p 87 N93-29962
Cooling predictions in turbofan engine components p 88 N93-29964
Analysis of cooling jets near the leading edge of turbine blades p 90 N94-28037
Numerical simulation of airfoil film cooling: A jet in crossflow p 206 N94-34462
Particle deposition in gas turbine blade film cooling holes p 101 N95-19661

FINGERS
Deterioration of manual performance in cold and windy climates p 249 N94-28434

FINITE DIFFERENCE THEORY
Time-marching methods for secondary flow analysis in curved ducts p 186 N92-27454
Turbine internal fluid flow analysis and Stokes' hypothesis p 186 N92-27455
Unsteady Euler calculations in 3D internal aerodynamics p 188 N92-27470
Application of Monte Carlo simulation for three-dimensional flows p 190 N92-27485
Special Course on Unstructured Grid Methods for Advection Dominated Flows [AGARD-R-787] p 191 N92-27671
A boundary integral formulation for unsteady transonic potential flows p 4 N92-27942
Transonic aeroelastic computations on wings using Navier-Stokes equations p 6 N92-27957
Numerical simulation of airfoil film cooling: A jet in crossflow p 206 N94-34462
Subgrid scale models in finite difference simulations of complex wall bounded flows p 212 N95-21063
Simulation of separated flows p 213 N95-21068
Analysis of subgrid models using direct and large-eddy simulations of isotropic turbulence p 214 N95-21071

FINITE ELEMENT METHOD
Calculation by the finite element method of 3-D turbulent flow in a centrifugal pump p 187 N92-27465
Finite element solution of viscous compressible flows in gas turbine ducts and diffusers p 189 N92-27477
Application of finite element method to hypersonic nozzle flow computations p 189 N92-27479
Special Course on Unstructured Grid Methods for Advection Dominated Flows [AGARD-R-787] p 191 N92-27671
Finite element methods for flow problems p 191 N92-27672
Finite element methods for fluids p 191 N92-27673
Finite element computation of unsteady incompressible flows involving moving boundaries and interfaces and iterative solution strategies p 191 N92-27674
Multidimensional upwind methods for unstructured grids p 191 N92-27675
Unstructured grid methods for compressible flows p 192 N92-27676
Finite element methods in CFD: Grid generation, adaptivity, and parallelization p 192 N92-27679
Analysis of unsteady aerodynamic and flutter characteristics of an aeroelastic model in transonic flow p 6 N92-27953
Practical architecture of design optimisation software for aircraft structures taking the MBB-Lagrange code as an example p 50 N92-28471
Propagation of a delamination in a composite panel subjected to a compression load p 126 N92-33041
GARTEUR damage mechanics for composite materials: Analytical/experimental research on delaminations p 129 N93-21513
Buckling and post-buckling behavior of a delamination in a carbon-epoxy laminated structure: Experiments and modelling p 129 N93-21514
Progressive delamination in polymer matrix composite laminates: A new approach p 130 N93-21515
Edge delamination of composite laminates p 130 N93-21519
Numerical finite element analysis of damage using Monte Carlo techniques p 291 N93-21522
Fault location in structures using neural networks p 224 N94-11335
Structural analysis and optimization of adaptive structures by use of the finite element method p 227 N94-11339
Stability of viscoelastic flow: Physical and numerical considerations p 198 N94-11493
Engine static structures behaviour under impact load using 3D modelling p 227 N94-34464
A combined approach to buffet response analyses and fatigue life prediction p 228 N94-34587
High incidence flow analysis over the Rafale A p 18 N94-34612
A review of gust load calculation methods at de Havilland p 28 N95-18604
Simulation of multidisciplinary problems for the thermostress state of cooled high temperature turbines p 99 N95-19021
Acoustics of space structures p 302 N95-19152
Application of the PSD technique to acoustic fatigue stress calculations in complex substructures p 302 N95-19155
Soft body impact on titanium fan blades p 102 N95-19671
Ice-impact analysis of blades p 102 N95-19672
Simulation of separated flows p 213 N95-21068

FINITE VOLUME METHOD
Time-marching methods for secondary flow analysis in curved ducts p 186 N92-27454
Three dimensional solution of internal flows using a cell vertex finite volume method p 188 N92-27473
Application of Monte Carlo simulation for three-dimensional flows p 190 N92-27485
Aspects of unstructured grids and finite-volume solvers for the Euler and Navier-Stokes equations p 192 N92-27677
Higher order upwind finite volume schemes with ENO-properties for general unstructured meshes p 192 N92-27678
Numeric simulation of the aerodynamic flows around nacelles p 193 N93-13202
Study of flow structure in rotating cavities: Numerical predictions of laminar and turbulent, steady, and unsteady flows p 196 N93-29948
Calculations of viscous nonequilibrium flows in nozzles p 12 N94-10455
Hypersonic multi block flow simulations around space vehicles including non-equilibrium chemistry p 12 N94-10460
Navier-Stokes computations of turbulent flow around high-lift configurations p 14 N94-18420
Prediction of the high-lift performance of multi-element aerofoils using an unstructured Navier-Stokes solver p 15 N94-18427
Numerical calculations of high lift flows using structured and unstructured methods p 15 N94-18428

FINNED BODIES
The effect of orthogonal-mode rotation on forced convection in a circular-sectioned tube fitted with full circumferential transverse ribs p 196 N93-29937

FINS
First approach to an integrated fin design p 48 N92-23236
A fin optimisation study p 48 N92-23237

FIRE CONTROL
Use of high-fidelity simulation in the development of an F/A-18 active ground collision avoidance system p 30 N92-28530
Integrated Target Acquisition and Fire Control Systems [AGARD-CP-500] p 73 N92-32437
Operational needs for an unmanned air vehicle p 293 N92-32438
Airborne experimental FLIR program p 73 N92-32447
The German anti tank helicopter PAH 2: An example of a future sensor platform p 73 N92-32448
An integrated multiple-sensor fire control system for air-to-air combat p 74 N92-32450
Pilot decision aiding for weapon delivery: A novel approach to fire control cueing using parallel computing p 268 N93-28853
Head-steered sensor flight test results and implications p 269 N93-28859
Design considerations for a night, air-to-surface attack capability on a dual role fighter p 74 N93-28871
ICAAS piloted simulation results p 173 N94-36617
Aeroservoelastic stabilization considerations for pointing and tracking systems p 223 N94-36627

FIRES
The design features of rocket motors relating to insensitive munition response to thermo-mechanical stimuli p 147 N92-33244
Correlations between engineering, medical and behavioural aspects in fire-related aircraft accidents p 34 N93-19693
Fires on board aircraft: Toxicological risk in flight p 243 N93-19694

FIRING (IGNITING)
The design features of rocket motors relating to insensitive munition response to thermo-mechanical stimuli p 147 N92-33244

FIXED WINGS
A brief review of the source noise technology applicable to fixed-wing military aircraft p 298 N93-10678
The testing of fixed wing tanker and receiver aircraft to establish their air-to-air refuelling capabilities [AGARD-AG-300-VOL-11] p 55 N93-21305

FLAME RETARDANTS
Fire-resistant water vapour permeable buoyant insulation p 276 N94-28431
Thermal protective performance and instrumented mannequin evaluation of multi-layer garment systems p 277 N94-28433

FLAME STABILITY
Ultra low NO(x) ultra lean gas turbine primary zones with liquid fuels p 91 N94-29267

FLAMMABILITY
Thermal protective performance and instrumented mannequin evaluation of multi-layer garment systems p 277 N94-28433

FLAT PLATES
Vortex structure and mass transfer near the base of a cylinder and a turbine blade p 84 N93-29929
Fundamental studies of impingement cooling thermal boundary conditions p 196 N93-29940
Modeling of a turbulent flow in the presence of discrete parietal cooling jets p 87 N93-29960
Comparison of the interactions of two and three dimensional transverse jets with a hypersonic free stream p 17 N94-28021
Experiments on interaction force of jets in hypervelocity cross-flow in a shock tunnel p 17 N94-28022
A numerical investigation of a subsonic jet in a crossflow p 202 N94-28023
Comparison of DNS and LES of transitional and turbulent compressible flow: Flat plate and mixing layer p 213 N95-21066
Numerical simulation of supersonic boundary layer transition p 214 N95-21074
Navier-Stokes simulations of the effects of suction holes on a flat plate boundary layer p 218 N95-21094
Direct numerical simulation of 2-D and 3-D instability waves in a laminar separation bubble p 218 N95-21095

FLEXIBILITY
System concept for an advanced stand-off weapon p 149 N93-22029

FLEXIBLE WINGS
Investigation of the aeroelastic stability of the AFW wind-tunnel model using CAP-TSD p 6 N92-27955
Multidimensional intelligent control for superlight air vehicles p 56 N94-11347

FLIGHT CHARACTERISTICS
Flight simulation and digital flight controls p 111 N92-28526
Technical evaluation report on the Flight Mechanics Panel Symposium on Piloted Simulation Effectiveness [AGARD-AR-315] p 115 N92-30769
Potential missile flight performance gains from improvements to the propulsion system p 123 N93-17609
Lessons learned from an historical look at flight testing p 52 N93-19904
Decoupling of aircraft responses p 107 N94-11497
A study of jet effect and ground effect interference on a STOL fighter p 60 N94-28034
Transitional flight characteristics of a geometrically simplified STOVL model p 61 N94-28035
Operational agility [AD-A283336] p 61 N94-33875
Technologies for Highly Manoeuvrable Aircraft [AD-280271] p 63 N94-34605
Engine characteristics for agile aircraft p 98 N94-34608
Control of leading-edge separation on a cambered delta wing p 109 N94-34616
EFA flying qualities specification and its utilisation p 64 N94-34621
Application of current departure resistance criteria to the post-stall manoeuvering envelope p 64 N94-34622
Flying qualities evaluation maneuvers p 64 N94-34623
The influence of flying qualities on operational agility p 65 N94-34628
Recent Advances in Long Range and Long Endurance Operation of Aircraft [AGARD-CP-547] p 66 N94-36321
In-flight refueling: Dassault Aviation research on the Rafale aircraft p 68 N94-36341
Aerial refueling interoperability from a receiver flying qualities perspective p 68 N94-36343
Flight in an Adverse Environment [AGARD-LS-197] p 36 N95-14893
Turbulence: Engineering models, aircraft response p 110 N95-14900
STOVL CFD model test case p 27 N95-17881

FLIGHT CLOTHING
Advanced integrated cold protection for aircrew p 277 N94-28436
Emergency underwater breathing aids for helicopter passengers and crew p 277 N94-28437
Implications of climatic extremes in aircrew NBC operations p 278 N94-28446

FLIGHT CONDITIONS
Practical considerations in designing the engine cycle p 79 N92-28460
The dual combustor ramjet: A versatile propulsion system for hypersonic tactical missile applications p 123 N93-17611

Fiber-optic interferometric strain gauge for smart structures applications: First flight tests p 220 N94-11340
Flight in an Adverse Environment [AGARD-LS-197] p 36 N95-14893
Winter storms research in Canada p 234 N95-14895
ESD and lightning interactions on aircraft p 36 N95-14896
Icing: Accretion, detection, protection p 36 N95-14897
Wind shear and its effects on aircraft p 36 N95-14898

FLIGHT CONTROL

Technical evaluation report on the Flight Mechanics Panel Symposium on Flying Qualities [AGARD-AR-311] p 49 N92-27870
Air Vehicle Mission Control and Management [AGARD-CP-504] p 1 N92-27887
Knowledge-based planning for controlled airspace flight operation as part of a cockpit assistant p 37 N92-27895
Fuzzy guidance system evaluation p 282 N92-27903
Parallel knowledge based systems architectures for in-flight mission management p 38 N92-27904
Utility of ground simulation in flight control problem identification, solution development, and verification p 111 N92-28525
Flight simulation and digital flight controls p 111 N92-28526
The application of flight simulation models in support of rotorcraft design and development p 111 N92-28527
Use of high-fidelity simulation in the development of an F/A-18 active ground collision avoidance system p 30 N92-28530
Use of simulation in the USAF Test Pilot School curriculum p 112 N92-28535
Full mission simulation: A view into the future p 112 N92-28537
Development and evaluation of an attack and maneuvering system with combat development simulators as main development tool p 113 N92-28541
Use of a research simulator for the development of new concepts of flight control p 113 N92-28543
The role of systems simulation for the development and qualification of ATTAS p 114 N92-28548

Perception in flight: Shape and motion perception, space perception, spatial orientation, and visual vestibular interaction p 260 N94-23979
Flight in an Adverse Environment
[AGARD-LS-197] p 36 N95-14893
Wake turbulence p 20 N95-14894
Winter storms research in Canada
p 234 N95-14895
ESD and lightning interactions on aircraft
p 36 N95-14896
Icing: Accretion, detection, protection
p 36 N95-14897
Heavy rain effects p 36 N95-14899
FLIGHT INSTRUMENTS
The active-matrix LC head-down display (AM-LCD): Operational experience and growth potential
p 267 N93-19782
Pilot intent and error recognition as part of a knowledge based cockpit assistant p 268 N93-28855
FLIGHT MANAGEMENT SYSTEMS
On board planning of 4D-trajectories
p 37 N92-27897
ICAAS piloted simulation evaluation
p 72 N92-27906
Machine Intelligence in Air Traffic Management
[AD-A275680] p 41 N94-29558
Advances in development capabilities for intelligent air traffic management systems p 41 N94-29559
Intelligent systems for air space control and management p 41 N94-29560
Use of advanced technologies in ATM (air traffic management) domain p 41 N94-29561
Air traffic management as principled negotiation between intelligent agents p 42 N94-29562
GPS/GNSS for ATM p 42 N94-29565
Contributions of DLR to air traffic capacity enhancement within a terminal area p 42 N94-29567
Design of Center-TRACON Automation System
p 43 N94-29568
Advanced air traffic control and flight management system concepts p 44 N94-29576
Opportunities for integrating the aircraft FMS, aeronautical operational control centers, and future air traffic management systems in oceanic airspace
p 44 N94-29577
Profile negotiation: An air/ground automation integration concept for managing arrival traffic
p 45 N94-29578
Air-ground integration of the ATM system in PHARE
p 45 N94-29579
Experimental flight management system
p 45 N94-29580
The PHARE advanced tools p 45 N94-29581
The principles of flight test assessment of flight-safety-critical systems in helicopters
[AGARD-AG-300-VOL-12] p 35 N95-14199
FLIGHT MECHANICS
Technical evaluation report on the Flight Mechanics Panel Symposium on Flying Qualities
[AGARD-AR-311] p 49 N92-27870
Technical evaluation report on the Flight Mechanics Panel Symposium on Piloted Simulation Effectiveness
[AGARD-AR-315] p 115 N92-30769
Flight Testing
[AGARD-CP-519] p 52 N93-19901
Test and evaluation challenges in the nineties
p 52 N93-19902
The testing of fixed wing tanker and receiver aircraft to establish their air-to-air refuelling capabilities
[AGARD-AG-300-VOL-11] p 55 N93-21305
Operational agility
[AD-A283336] p 61 N94-33875
An agility metric structure for operational agility
p 65 N94-34629
FLIGHT OPERATIONS
Knowledge-based planning for controlled airspace flight operation as part of a cockpit assistant
p 37 N92-27895
Aircraft ship operations
[AGARD-AR-312] p 49 N92-28468
The evaluation of simulator effectiveness for the training of high speed, low level, tactical flight operations
p 113 N92-28539
Combat aircraft operations: Training requirements for the German Air Force tactical flying units and the noise problem p 296 N93-10667
Measurement and prediction of noise from low-altitude military aircraft operations p 300 N93-10687
Effects of medium blood alcohol levels on pilots' performance in the Sea King Simulator MK-41
p 243 N93-19683
Pre-flight risk assessment in Emergency Medical Service (EMS) helicopters p 34 N93-19692
FLIGHT PATHS
Status of automatic guidance systems for rotorcraft in low altitude flight p 37 N92-27894
Search route planning p 38 N92-27900
An efficient method for three-dimensional route planning with different strategies and constraints
p 38 N92-27901
Symbology for head up and head down applications for highly agile fighter aircraft: To improve spatial awareness, trajectory control, and unusual attitude recovery, part 1 p 268 N93-28857
Decision Making Aids (DMA) in on-line ATC systems
p 43 N94-29570
Advanced air traffic control and flight management system concepts p 44 N94-29576
Profile negotiation: An air/ground automation integration concept for managing arrival traffic
p 45 N94-29578
Air-ground integration of the ATM system in PHARE
p 45 N94-29579
The PHARE advanced tools p 45 N94-29581
Identification of dynamic systems. Volume 3: Applications to aircraft. Part 2: Nonlinear analysis and manoeuvre design
[AGARD-AG-300-VOL-3-PT-2] p 69 N95-14102
FLIGHT PLANS
Status of automatic guidance systems for rotorcraft in low altitude flight p 37 N92-27894
Knowledge-based planning for controlled airspace flight operation as part of a cockpit assistant
p 37 N92-27895
Technology and standards for a common air mission planner p 293 N92-27899
Pilot intent and error recognition as part of a knowledge based cockpit assistant p 268 N93-28855
In flight mission planning in the Copilote Electronique
p 295 N94-25015
ACCS Surveillance Exploratory Prototype (ASEP)
p 170 N94-29566
Opportunities for integrating the aircraft FMS, aeronautical operational control centers, and future air traffic management systems in oceanic airspace
p 44 N94-29577
FLIGHT RECORDERS
Digital flight data as a measure of pilot performance associated with fatigue from continuous operations during the Persian Gulf conflict p 275 N93-32268
Reduction of fatigue load experience as part of the fatigue management program for F-16 aircraft of the RNLAF p 62 N94-34598
FLIGHT SAFETY
How do we investigate the human factor in aircraft accidents? p 30 N93-19655
737-400 at Kegworth, 8 January 1989: The AAIB investigation p 31 N93-19661
Can injury scoring techniques provide additional information for crash investigators? p 242 N93-19663
Occupant simulation as an aspect of flight safety research p 262 N93-19665
Disorientation and flight safety: A survey of UK Army aircrew p 259 N93-19680
Significance of histological postmortem findings in pilots killed in military and civil aircraft accidents in Germany (West): A 25-year-review p 243 N93-19697
Aircraft accident injuries in the Hellenic Air Force in the last 20 years p 244 N93-19698
Towards an integrated approach to proactive monitoring and accident prevention p 34 N93-19700
Prediction of success from training p 35 N93-19702
Study of the spectrum of power of cardiac rhythm during tasks relating to the safety of the control of an apparatus p 244 N93-19707
Gremlins: A dozen hazardous thought and behavior patterns as risk factors p 260 N93-19709
Human factors and the safety of flights: The importance of the management of sleep
p 274 N93-32267
Aircraft flight safety: A bibliography
[AGARD-R-805] p 35 N94-24091
Integrated formal verification and validation of safety critical software p 285 N94-29338
Interactive analysis and planning tools for air traffic and airspace management p 43 N94-29573
DAISY: A decision aid for an air situation interpretation system p 44 N94-29574
Development of precision runway monitor system for increasing capacity of parallel runway operations
p 46 N94-29587
Extended range operations: A review of recent developments p 295 N94-36337
The principles of flight test assessment of flight-safety-critical systems in helicopters
[AGARD-AG-300-VOL-12] p 35 N95-14199
Flight in an Adverse Environment
[AGARD-LS-197] p 36 N95-14893
Winter storms research in Canada
p 234 N95-14895
Wind shear and its effects on aircraft
p 36 N95-14898
A study of the effect of store unsteady aerodynamics on gust and turbulence loads p 71 N95-18601
On-line handling of air traffic: Management, guidance and control
[AGARD-AG-321] p 46 N95-18927
The concept of aeronautical adaptability as developed by the US Navy p 255 N95-19426
The NAMI syncope test battery and clinical decision-making in aviators with syncope
p 255 N95-19428
Spinal nerve syndromes: The need to confirm the diagnosis with neurophysiological examinations
p 257 N95-19436
The aeromedical risk associated with asymptomatic cholelithiasis in USAF pilots and navigators
p 258 N95-19439
Clinical basis for aeromedical decisions in aircrew HIV positive p 258 N95-19440
Color vision issues in modern military aviation or the search for the Abominable Coneman
p 258 N95-19441
Medication in the course of active flying duty
p 258 N95-19443
FLIGHT SIMULATION
Knowledge-based planning for controlled airspace flight operation as part of a cockpit assistant
p 37 N92-27895
Piloted Simulation Effectiveness
[AGARD-CP-513] p 1 N92-28522
Opportunities for flight simulation to improve operational effectiveness p 111 N92-28523
Piloted simulation effectiveness development applications and limitations p 111 N92-28524
Utility of ground simulation in flight control problem identification, solution development, and verification
p 111 N92-28525
Flight simulation and digital flight controls
p 111 N92-28526
The application of flight simulation models in support of rotorcraft design and development
p 111 N92-28527
Experience with piloted simulation in the development of helicopters p 112 N92-28528
Validation of simulation systems for aircraft acceptance testing p 50 N92-28531
Aircraft simulation and pilot proficiency: From surrogate flying towards effective training
p 112 N92-28532
The use of a dedicated testbed to evaluate simulator training effectiveness p 112 N92-28533
G-tolerance and spatial disorientation: Can simulation help us? p 234 N92-28534
Use of simulation in the USAF Test Pilot School curriculum p 112 N92-28535
AM-X flight simulator from engineering tool to training device p 112 N92-28536
Full mission simulation for research and development of air combat flight and attack management systems
p 112 N92-28538
The role of simulation for the study of APIS (pilotng support by synthetic imagery) p 113 N92-28544
The use of ground based simulation for handling qualities research: A new assessment
p 114 N92-28545
Initial validation of a R/D simulator with large amplitude motion p 114 N92-28546
The use and effectiveness of piloted simulation in transport aircraft research and development
p 114 N92-28549
Application of piloted simulation to high-angle-of-attack flight-dynamics research for fighter aircraft p 114 N92-28551
Effective cueing during approach and touchdown: Comparison with flight p 115 N92-28552
Technical evaluation report on the Flight Mechanics Panel Symposium on Piloted Simulation Effectiveness
[AGARD-AR-315] p 115 N92-30769
Possibilities and limitations of flying training in the German Air Force p 115 N93-10668
Otolithic illusions on takeoff and visual information: Reflections in connection with an air accident case
p 259 N93-19681
Use of microprocessor-based simulator technology and MEG/EEG measurement techniques in pilot emergency-manoeuver training p 115 N93-19706
Generation of helicopter roll axis bandwidth data through ground-based and in-flight simulation
p 53 N93-19909
Method for developing the RAFALE flight control system p 54 N93-19912
On-line aircraft state and parameter estimation
p 55 N93-19929
The flight test and data analysis program for the development of a Boeing/De Havilland Dash 8 simulator model p 55 N93-19930
Mission requirements and applications of integrated and multi-function navigation systems
p 39 N93-22781
Virtual interface applications for airborne weapons systems p 268 N93-28858
Requirements for pilot assistance in a thrust-vectoring combat aircraft p 270 N93-28870
Fractographic and microstructural analysis of fatigue crack growth in Ti-6Al-4V fan disc forgings
p 88 N93-31742
Boundary layer transition: Prediction and wind tunnel simulation p 198 N94-11498

Mission rehearsal in the SOF-ATS program
p 295 N94-25016
USAF/AEDC aerodynamic and propulsion ground test and evaluation techniques for highly maneuverable aircraft: Capabilities and challenges p 63 N94-34606
Operational agility assessment with the AM-X aircraft
p 65 N94-34626
Application of centrifuge based dynamic flight simulation to enhanced maneuverability RDT/E
p 116 N94-34630
Optimal tactics for agile aircraft technology: A differential game methodology p 295 N94-34631
ICAAS piloted simulation results p 173 N94-36617
Attenuating the disorienting effects of head movement during whole-body rotation using a visual reference: Further tests of a predictive hypothesis
p 252 N94-37276
Turbulence: Engineering models, aircraft response
p 110 N95-14900

FLIGHT SIMULATORS
Piloted Simulation Effectiveness
[AGARD-CP-513] p 1 N92-28522
Opportunities for flight simulation to improve operational effectiveness p 111 N92-28523
Piloted simulation effectiveness development applications and limitations p 111 N92-28524
Utility of ground simulation in flight control problem identification, solution development, and verification
p 111 N92-28525
Flight simulation and digital flight controls
p 111 N92-28526
The application of flight simulation models in support of rotorcraft design and development
p 111 N92-28527
Experience with piloted simulation in the development of helicopters p 112 N92-28528
Use of simulation in the USAF Test Pilot School curriculum p 112 N92-28535
AM-X flight simulator from engineering tool to training device p 112 N92-28536
Full mission simulation: A view into the future
p 112 N92-28537
Full mission simulation for research and development of air combat flight and attack management systems
p 112 N92-28538
The evaluation of simulator effectiveness for the training of high speed, low level, tactical flight operations
p 113 N92-28539
Harrier GR MK 5/7 mission simulators for the Royal Air Force p 113 N92-28540
Development and evaluation of an attack and maneuvering system with combat development simulators as main development tool
p 113 N92-28541
Use of a research simulator for the development of new concepts of flight control p 113 N92-28543
The use of ground based simulation for handling qualities research: A new assessment
p 114 N92-28545
Initial validation of a R/D simulator with large amplitude motion p 114 N92-28546
The use and effectiveness of piloted simulation in transport aircraft research and development
p 114 N92-28549
An evaluation of IFR approach techniques: Generic helicopter simulation compared with actual flight
p 114 N92-28550
Effective cueing during approach and touchdown: Comparison with flight p 115 N92-28552
Technical evaluation report on the Flight Mechanics Panel Symposium on Piloted Simulation Effectiveness
[AGARD-AR-315] p 115 N92-30769
Effects of medium blood alcohol levels on pilots' performance in the Sea King Simulator MK-41
p 243 N93-19683
Pilot intent and error recognition as part of a knowledge based cockpit assistant p 268 N93-28855
Mission rehearsal in the SOF-ATS program
p 295 N94-25016
Virtual Interfaces: Research and Applications
[AGARD-CP-541] p 260 N94-37261
Profile analysis of after-effects experienced during exposure to several virtual reality environments
p 252 N94-37263
Immersive virtual environments as trainer: System design from a cognitive stance p 280 N94-37267
Attenuating the disorienting effects of head movement during whole-body rotation using a visual reference: Further tests of a predictive hypothesis
p 252 N94-37276
Some side-effects of immersion virtual reality
p 252 N94-37277
Visual accommodation to virtual image displays when knowledge of object distance conflicts with optical distance p 261 N94-37278
Aircraft and sub-system certification by piloted simulation
[AGARD-AR-278] p 117 N95-17388

FLIGHT STRESS (BIOLOGY)
Subjective mood and fatigue of C-141 crew during Desert Storm p 274 N93-32264
Extended range operations: A review of recent developments p 295 N94-36337
Determinants of subjective fatigue for C-141 crews during Operation Desert Storm p 251 N94-36338

FLIGHT SURGEONS
Cardiopulmonary Aspects in Aerospace Medicine
[AGARD-LS-189] p 246 N94-23313
Cardiovascular and pulmonary disease in NATO aircrew: An overview p 246 N94-23314
Aeromedical disposition of Arrhythmias and electrocardiographic findings in aircrew
p 246 N94-23318
Aeromedical risk management for aircrew
p 252 N95-19414
The way to waivers in the BAF p 253 N95-19415
The effect of special boards of flight surgeons on the evolution of US Naval flight standards
p 253 N95-19417
Fit to fly: Analysis of the aeromedical disposition in aircrewmembers of the Spanish Armed Forces
p 253 N95-19418

FLIGHT TEST INSTRUMENTS
Flight Testing
[AGARD-CP-519] p 52 N93-19901
Basic principles of flight test instrumentation engineering, volume 1, issue 2
[AD-A282984] p 221 N94-33940
Identification of dynamic systems. Volume 3: Applications to aircraft. Part 2: Nonlinear analysis and manoeuvre design
[AGARD-AG-300-VOL-3-PT-2] p 69 N95-14102

FLIGHT TEST VEHICLES
The role of systems simulation for the development and qualification of ATTAS p 114 N92-28548

FLIGHT TESTS
From an automated flight-test management system to a flight-test engineer's workstation p 282 N92-27907
Aircraft ship operations
[AGARD-AR-312] p 49 N92-28468
Use of high-fidelity simulation in the development of an F/A-18 active ground collision avoidance system
p 30 N92-28530
Validation of simulation systems for aircraft acceptance testing p 50 N92-28531
Use of simulation in the USAF Test Pilot School curriculum p 112 N92-28535
An evaluation of IFR approach techniques: Generic helicopter simulation compared with actual flight
p 114 N92-28550
Flight service environmental effects on composite materials and structures p 128 N92-33054
Identifying the principal noise sources of fixed-wing combat aircraft in high-speed flight p 299 N93-10686
AGARD flight test techniques series. Volume 10: Weapon delivery analysis and ballistic flight testing
[AGARD-AG-300-VOL-10] p 293 N93-11711
Flight analysis of air intake/engine compatibility
p 51 N93-13212
Development and qualification of the US Cruise Missile Propulsion System p 124 N93-17619
Flight above a virtual world p 264 N93-19766
Flight Testing
[AGARD-CP-519] p 52 N93-19901
Test and evaluation challenges in the nineties
p 52 N93-19902
Flight tests of the transport aircraft viewed from the industrial standpoint p 52 N93-19903
Lessons learned from an historical look at flight testing p 52 N93-19904
YF-22A prototype advanced tactical fighter demonstration/validation flight test program overview
p 53 N93-19906
MB-339: The role of flight testing in the evolution phase of a proven aircraft p 53 N93-19907
Generation of helicopter roll axis bandwidth data through ground-based and in-flight simulation
p 53 N93-19909
AM-X high angle of attack flight test experience (single and two seat versions) p 53 N93-19910
X-31A high angle of attack and initial post stall flight testing p 54 N93-19911
Method for developing the RAFALE flight control system p 54 N93-19912
On automated analysis of flight test data
p 54 N93-19913
System identification for X-31A project support: Lessons learned so far p 54 N93-19914
Overview of the NASA Dryden Flight Research Facility aeronautical flight projects testing p 54 N93-19916
Flight testing of GPS and GPS-aided systems
p 54 N93-19919
High precision navigation for flight testing (AERONAV)
p 38 N93-19920
A technique for predicting aircraft flow-field effects upon an unguided bomb ballistic trajectory and comparison with flight test results p 8 N93-19922
Development and flight testing of the multi-source integration algorithms in the F/A-18 mission computer software p 283 N93-19923
Testing of an automatic, low altitude, all terrain ground collision avoidance system p 38 N93-19924
RAMSES: Multi-spectral experimental radar station installed on board the Transall p 156 N93-19925
Development and flight testing of a surface pressure measurement installation on the EAP demonstrator aircraft p 219 N93-19927
The flight test and data analysis program for the development of a Boeing/De Havilland Dash 8 simulator model p 55 N93-19930
The testing of fixed wing tanker and receiver aircraft to establish their air-to-air refuelling capabilities
[AGARD-AG-300-VOL-11] p 55 N93-21305
The avionic system of the experimental standoff dispenser ADW p 74 N93-22028
Radar seeker based autonomous navigation update system using topography feature matching techniques
p 157 N93-22030
Mission requirements and applications of integrated and multi-function navigation systems
p 39 N93-22781
Optimization of the integration of inertia and GPS
p 39 N93-22787
Integrated precision navigation system
p 39 N93-22789
Flight evaluation of differential GPS aided inertial navigation systems p 40 N93-22790
Visual autonomous automatic landing of airplanes
p 40 N93-22791
Scene correlation for INS aiding in flight-test systems: Runway-referenced flight-tests with on-board sensors only p 40 N93-22792
X-31 demonstration of integrated flight and propulsion control for effective combat at extreme angles of attack
p 106 N93-28851
Head-steered sensor flight test results and implications p 269 N93-28859
Flight evaluation of a computer aided low-altitude helicopter flight guidance system p 106 N93-28869
Fiber-optic interferometric strain gauge for smart structures applications: First flight tests
p 220 N94-11340
On non-linear longitudinal stability of an aircraft in a dive in the presence of atmospheric disturbances
p 107 N94-11492
X-29: Longitudinal instability at high angle-of-attack
p 108 N94-11504
In-flight pressure distributions and skin-friction measurements on a subsonic transport high-lift wing section p 16 N94-18435
Design, development, and flight evaluation of the Boeing YC-14 USB powered lift aircraft
p 57 N94-18444
Trends of design methodology of airframe
p 60 N94-24327
Some problems of scramjet propulsion for aerospace planes. Part 2: Scramjet: Development and test problems p 93 N94-29301
Testing Operational Flight Programs (OFPs)
p 285 N94-29337
Basic principles of flight test instrumentation engineering, volume 1, issue 2
[AD-A282984] p 221 N94-33940
A combined approach to buffet response analyses and fatigue life prediction p 228 N94-34587
Damage tolerance management of the X-29 vertical tail p 62 N94-34595
Fatigue design, test and in-service experience of the BAe Hawk p 62 N94-34597
Results from the STOL and Maneuver Technology Demonstration program p 63 N94-34611
Techniques for aerodynamic characterization and performance evaluation at high angle of attack
p 63 N94-34614
X-31A system identification applied to post-stall flight: Aerodynamics and thrust vectoring p 110 N94-34619
X-31 tactical utility: Initial results p 64 N94-34620
Flying qualities evaluation maneuvers
p 64 N94-34623
Operational agility assessment with the AM-X aircraft
p 65 N94-34626
Laminar flow studies at Dassault Aviation: Calculations and flight tests p 207 N94-36328
Flight test certification of a 480 gallon composite fuel tank on CF-18 p 68 N94-36340
CC-130H(T) tactical aerial refuelling tanker development flight test programme p 69 N94-36347
Identification of dynamic systems. Volume 3: Applications to aircraft. Part 2: Nonlinear analysis and manoeuvre design
[AGARD-AG-300-VOL-3-PT-2] p 69 N95-14102
The principles of flight test assessment of flight-safety-critical systems in helicopters
[AGARD-AG-300-VOL-12] p 35 N95-14199
Flight in an Adverse Environment
[AGARD-LS-197] p 36 N95-14893

FLIGHT TIME
Technological challenges of High Altitude Long Endurance unmanned configurations p 66 N94-36323
Future supersonic commercial transport aircraft: A technological challenge for long haul traffic
p 66 N94-36324

Review of human factors problems related to long distance and long endurance operation of aircraft p 279 N94-36336
Extended range operations: A review of recent developments p 295 N94-36337
Determinants of subjective fatigue for C-141 crews during Operation Desert Storm p 251 N94-36338

FLIGHT TRAINING

Piloted Simulation Effectiveness [AGARD-CP-513] p 1 N92-28522
Opportunities for flight simulation to improve operational effectiveness p 111 N92-28523
Piloted simulation effectiveness development applications and limitations p 111 N92-28524
Utility of ground simulation in flight control problem identification, solution development, and verification p 111 N92-28525
Aircraft simulation and pilot proficiency: From surrogate flying towards effective training p 112 N92-28532
Technical evaluation report on the Flight Mechanics Panel Symposium on Piloted Simulation Effectiveness [AGARD-AR-315] p 115 N92-30769
Combat aircraft operations: Training requirements for the German Air Force tactical flying units and the noise problem p 296 N93-10667
Possibilities and limitations of flying training in the German Air Force p 115 N93-10668
Combat aircraft noise: The operator's perspective p 296 N93-10669
Human noise exposure criteria for combat aircraft training areas p 297 N93-10670
Prediction of success from training p 35 N93-19702
The next generation female in cockpit: Do we need a new approach to cockpit resource management (CRM)? p 263 N93-19704
Mission rehearsal in the SOF-ATS program p 295 N94-25016
Operational agility assessment with the AM-X aircraft p 65 N94-34626
Vestibular examination in pilots susceptible to motion sickness p 255 N95-19427

FLIR DETECTORS

Infrared Targeting System (IRTS) demonstration p 305 N92-32446
Airborne experimental FLIR program p 73 N92-32447
The design and development of the new RAF standard HUD format p 268 N93-28856
Head-steered sensor flight test results and implications p 269 N93-28859
Design considerations for a night, air-to-surface attack capability on a dual role fighter p 74 N93-28871

FLOW CHARACTERISTICS

Numeric simulation of the aerodynamic flows around nacelles p 193 N93-13202
Overview on test cases for computation of internal flows in turbomachines p 193 N93-13209
Natural laminar flow test in-flight visualization p 8 N93-19921
Cooling geometry optimization using liquid crystal technique p 85 N93-29939
Flow and heat transfer between gas-turbine discs p 86 N93-29950
Experimental and computational comparisons of Mach 6 high Reynolds number heat transfer and skin friction p 10 N94-10443
Experimental investigation of flow around a multielement airfoil p 14 N94-18417
In-flight pressure distributions and skin-friction measurements on a subsonic transport high-lift wing section p 16 N94-18435
A fast computing method for the flow over high-lift wings p 16 N94-18437
Fifty years of jet in cross flow research p 200 N94-28004
Transitional flight characteristics of a geometrically simplified STOVL model p 61 N94-28035
Recent CFD applications in small gas turbine combustion systems development p 90 N94-29257
CFD methodology and validation for turbomachinery flows p 207 N95-14131
Unsteady flows in turbines: Impact on design procedure p 207 N95-14132
The industrial use of CFD in the design of turbomachinery p 207 N95-14133
A selection of experimental test cases for the validation of CFD codes, volume 2 [AGARD-AR-303-VOL-2] p 21 N95-17846
Experiments in the trailing edge flow of an NLR 7702 airfoil p 22 N95-17853
Delta-wing model p 25 N95-17873
STOVL CFD model test case p 27 N95-17881
Simulation of pipe flow p 215 N95-21078
Direct numerical determination of the minimum bypass Reynolds number in boundary layers p 215 N95-21080

FLOW DISTORTION

Inlet distortion effects in aircraft propulsion system integration p 80 N92-28464
Unsteady aspects of hot gas reingestion and statistical analysis p 89 N94-28019
The traditional and new methods of accounting for the factors distorting the flow over a model in large transonic wind tunnels p 211 N95-19275

FLOW DISTRIBUTION

Computation of 3D-viscous flow and heat transfer for the application to film cooled gas turbine blades p 187 N92-27456
A mathematical constraint placed upon inter-blade row boundary conditions used in the simulation of multistage turbomachinery flows p 187 N92-27458
On the computation of unsteady turbomachinery flows. Part 1: Euler equations in vibrating cascades p 187 N92-27460
Application of CFD in the design of gas turbine engine components p 78 N92-27461
Computation and visualization of specific flow phenomena in turbomachinery application p 78 N92-27463
An integrated CFD system for 3D turbomachinery applications p 78 N92-27464
Viscous three-dimensional calculations of transonic fan performance p 188 N92-27467
Navier-Stokes analysis of turbine blade heat transfer and performance p 188 N92-27468
Steady and unsteady 3D flow computation through a transonic turbine stage p 78 N92-27469
The 3-D Navier-Stokes flow and temperature field computation for a forced mixer nozzle p 190 N92-27482
Flow computation in combustion chambers using zonal nonstaggered grids p 190 N92-27483
Transonic Unsteady Aerodynamics and Aeroelasticity [AGARD-CP-507] p 3 N92-27936
Current status of computational methods for transonic unsteady aerodynamics and aeroelastic applications p 3 N92-27937
Unstructured-grid methods development for unsteady aerodynamic and aeroelastic analyses p 3 N92-27938
Computation of the unsteady transonic 2D cascade flow by an Euler algorithm with interactive grid generation p 4 N92-27944
Numerical simulation of shock-stall flutter of an airfoil using the Navier-Stokes equations p 105 N92-27956
Detailed analysis of wing-nacelle interaction for commercial transport aircraft p 193 N93-13203
Investigation of interference phenomena of modern wing-mounted high-bypass-ratio engines by the solution of the Euler-equations p 193 N93-13204
Euler analysis of turbofan/superfan integration for a transport aircraft p 193 N93-13206
Recent developments in low-speed TPS-testing for engine integration drag and installed thrust reversr simulation p 51 N93-13207
Experimental studies of the flowfields and their effects due to a pair of lift jets discharging in the ground effect region p 194 N93-13217
Calibration of 2D unstructured grid methods on propulsive flowfields p 194 N93-13225
Investigation of the flowfield around an isolated bypass engine with fan and core jet p 195 N93-13227
A technique for predicting aircraft flow-field effects upon an unguided bomb ballistic trajectory and comparison with flight test results p 8 N93-19922
Vortex structure and mass transfer near the base of a cylinder and a turbine blade p 84 N93-29929
Fluid flow and heat transfer in the entrance region of an annulus between independently rotating tubes with a turbulent axial flow p 196 N93-29952
The effect of main stream flow angle on flame tube film cooling p 197 N93-29953
The aerodynamic effect of coolant ejection in the leading edge region of a film-cooled turbine blade p 87 N93-29958
On the development of a film cooling layer p 197 N93-29959
CFD analysis of hypersonic, chemically reacting flow fields p 8 N94-10422
The upgrading of the arc heated wind tunnel of the DLR (LBK) with respect to its effects on the material testing p 116 N94-10432
Flow development in a circular pipe in the UTIAS/RPI M = 8.3 gun tunnel p 10 N94-10442
Issues and approach to develop validated analysis tools for hypersonic flows: One perspective p 11 N94-10446
Stability of hypersonic flow over a blunt body p 11 N94-10450
Nonequilibrium hypersonic flow in a wind-tunnel nozzle p 12 N94-10456
A CFD-based aerodynamic design procedure for hypersonic wind-tunnel nozzles p 116 N94-10458
On the accuracy and efficiency of CFD methods in real gas hypersonics p 13 N94-10462
Swept shock/boundary-layer interactions: Scaling laws, flowfield structure, and experimental methods p 198 N94-15197
Swept shock wave/laminar boundary layer interactions; experimental, and numerical results p 199 N94-15198
Numerical simulation of 3-D shock wave turbulent boundary layer interactions p 199 N94-15199
Unsteady phenomena in shock wave/boundary layer interaction p 199 N94-15200
Rocket motor plume flowfields: Phenomenology and simulation p 125 N94-15221
Efficient simulation of incompressible viscous flow over multi-element airfoils p 14 N94-18421
Navier-Stokes simulation of flow field around a blown-flap high-lift system p 16 N94-18429
Fifty years of jet in cross flow research p 200 N94-28004
Topological structure of a jet in a cross flow p 202 N94-28014
Experiments into the scaling parameters required for exhaust gas ingestion testing of vertical landing aircraft p 60 N94-28017
A numerical investigation of a subsonic jet in a crossflow p 202 N94-28023
Navier-Stokes simulation of two and three dimensional jets in crossflow, effects of grid, and boundary conditions p 203 N94-28026
Pneumatic management of blunted-forebody flow asymmetry for high-angle-of-attack directional control p 109 N94-28028
Theoretical and experimental investigation of a delta wing with turbulent leading-edge jets p 18 N94-28029
Numerical assessment of aerodynamic interactions on missiles with transverse jets control p 18 N94-28031
First experimental assessment of RCS plume-flow field interaction on Hermes leading edge thruster configuration p 125 N94-28032
Numerical simulation of a powered-lift landing p 60 N94-28033
Flowfield prediction of NO(x) and smoke production in aircraft engines p 140 N94-29252
Numerical modelling of turbine combustion chambers p 90 N94-29254
Pollutant emissions from and within a model gas turbine combustor at elevated pressures and temperatures p 141 N94-29271
The influence of air distribution on homogeneity and pollutant formation in the primary zone of a tubular combustor p 141 N94-29274
Time-resolved measurements in a three dimensional model combustor p 204 N94-29283
Flow field analysis in a high pressure ratio centrifugal compressor p 206 N94-34447
Numerical simulation of airfoil film cooling: A jet in crossflow p 206 N94-34462
High incidence flow analysis over the Rafale A p 18 N94-34612
Yaw control by tangential forebody blowing p 109 N94-34615
The industrial use of CFD in the design of turbomachinery p 207 N95-14133
Computation of supersonic air-intakes p 20 N95-14452
Residual-correction type and related computational methods for aerodynamic design. Part 1: Airfoil and wing design p 70 N95-16566
Airfoil optimization by the one-shot method p 70 N95-16569
Three-dimensional boundary layer and flow field data of an inclined prolate spheroid p 208 N95-17867
Force and pressure data of an ogive-nosed slender body at high angles of attack and different Reynolds numbers p 25 N95-17868
Pressure distribution measurements on an isolated TPS 441 nacelle p 26 N95-17878
Low speed propeller slipstream aerodynamic effects p 27 N95-17882
The crucial role of wall interference, support interference and flow field measurements in the development of advanced aircraft configurations p 209 N95-19252
Applications of the five-hole probe technique for flow field surveys at the Institute for Aerospace Research p 221 N95-19255
Improvement and validation of an LDV system to perform measurements in laminar supersonic flows p 221 N95-19256
Aerodynamic investigation of the flow field in a 180 deg turn channel with sharp bend p 210 N95-19257
The utilization of a high speed reflective visualization system in the study of transonic flow over a delta wing p 28 N95-19259
Transonic and supersonic flowfield measurements about axisymmetric afterbodies for validation of advanced CFD codes p 28 N95-19260
Velocity measurements with hot-wires in a vortex-dominated flowfield p 28 N95-19261
Determination of solid/porous wall boundary conditions from wind tunnel data for computational fluid dynamics codes p 211 N95-19266
Calculation of low speed wind tunnel wall interference from static pressure pipe measurements p 211 N95-19273
Evaluation of the EKG's isoelectric T wave in Air Force pilots p 254 N95-19423

Large-eddy simulation of separated flow in a ribbed duct p 214 N95-21070
Numerical simulation of spatially-developing planar jets p 217 N95-21087
Rib vortices in round jets: Direct and large eddy simulation p 217 N95-21088

FLOW EQUATIONS
Unstructured-grid methods development for unsteady aerodynamic and aeroelastic analyses p 3 N92-27938
Computation of viscous phenomena in unsteady transonic flow p 5 N92-27949
Transonic aeroelastic computations on wings using Navier-Stokes equations p 6 N92-27957

FLOW GEOMETRY
Calculation by the finite element method of 3-D turbulent flow in a centrifugal pump p 187 N92-27465
Three dimensional solution of internal flows using a cell vertex finite volume method p 188 N92-27473
Presentation of a computational code for 3-D compressible flow in complex channels and cavities p 189 N92-27475
Validation of non-orthogonal three-dimensional laminar flow predictions p 189 N92-27476
Elements of a modern turbomachinery design system p 223 N95-14129
Application of multicomponent models to flow passage simulation in multistage turbomachines and whole gas turbine engines p 99 N95-19022

FLOW MEASUREMENT
The jet behaviour of an actual high-bypass engine as determined by LDA-measurements in ground tests p 80 N93-13218
Experimental study of heat transfer close to a plane wall heated in the presence of multiple injections (subsonic flow) p 84 N93-29931
Pressure and force measurements on models set in hypersonic flows: A review p 9 N94-10435
Problems in the validation of CFD codes through comparison with experiment p 198 N94-10441
Experimental, analytical, and computational methods applied to hypersonic compression ramp flows p 10 N94-10444
Studies of hypersonic viscous flows p 12 N94-10454
Contribution of laser Doppler velocimetry to the physical description of shock wave/turbulent boundary layer interactions with incidence on turbulence modelling p 199 N94-15201
In-flight pressure distributions and skin-friction measurements on a subsonic transport high-lift wing section p 16 N94-18435
Quality assessment for wind tunnel testing | AGARD-AR-304 | p 19 N95-14197
Detailed study at supersonic speeds of the flow around delta wings p 24 N95-17861
Wall Interference, Support Interference and Flow Field Measurements | AGARD-CP-535 | p 209 N95-19251
The crucial role of wall interference, support interference and flow field measurements in the development of advanced aircraft configurations p 209 N95-19252
Particle Image Velocimetry: Principles, current applications and future prospects p 306 N95-19253
Calibration and use of a non-nulling seven-hole pressure probe p 221 N95-19254
Applications of the five-hole probe technique for flow field surveys at the Institute for Aerospace Research p 221 N95-19255
Improvement and validation of an LDV system to perform measurements in laminar supersonic flows p 221 N95-19256
Aerodynamic investigation of the flow field in a 180 deg turn channel with sharp bend p 210 N95-19257
Experimental techniques for measuring transonic flow with a three dimensional laser velocimetry system. Application to determining the drag of a fuselage p 222 N95-19258
Transonic and supersonic flowfield measurements about axisymmetric afterbodies for validation of advanced CFD codes p 28 N95-19260

FLOW STABILITY
Stability of hypersonic flow over a blunt body p 11 N94-10450
Stability of hypersonic boundary-layer flows with chemistry p 11 N94-10451
On the instability of hypersonic flow past a pointed cone: Comparison of theoretical and experimental results at Mach 8 p 12 N94-10453
Stability in Aerospace Systems | AGARD-R-789 | p 107 N94-11489
Stability of viscoelastic flow: Physical and numerical considerations p 198 N94-11493
Boundary layer transition: Prediction and wind tunnel simulation p 198 N94-11498
Stability model of the atmosphere p 233 N94-11500
Physical description of boundary-layer transition: Experimental evidence p 205 N94-33885
Numerical study of realistic perturbations in three-dimensional boundary layers p 217 N95-21091
Direct numerical simulation of 2-D and 3-D instability waves in a laminar separation bubble p 218 N95-21095

FLOW VELOCITY
Compact laser Doppler anemometer p 219 N92-22815
The jet behaviour of an actual high-bypass engine as determined by LDA-measurements in ground tests p 80 N93-13218
An L2F-measurement device with image rotator prism for flow velocity analysis in rotating coolant channels p 220 N93-29942
Simulation of pipe flow p 215 N95-21078
Entrainment in a shear-free turbulent mixing layer p 216 N95-21083
The effect of initial conditions on the development of temporally evolving planar three dimensional incompressible wakes p 216 N95-21085
Direct simulation of tridimensional wake of NACA 0012 profile p 216 N95-21086
Direct numerical simulation of 2-D and 3-D instability waves in a laminar separation bubble p 218 N95-21095

FLOW VISUALIZATION
Computation and visualization of specific flow phenomena in turbomachinery application p 78 N92-27463
An integrated CFD system for 3D turbomachinery applications p 78 N92-27464
Special Course on Unstructured Grid Methods for Advection Dominated Flows | AGARD-R-787 | p 191 N92-27671
Combustion instabilities in a side-dump model ramjet combustor p 82 N93-17613
Natural laminar flow test in-flight visualization p 8 N93-19921
Vortex structure and mass transfer near the base of a cylinder and a turbine blade p 84 N93-29929
The aerodynamic effect of coolant ejection in the leading edge region of a film-cooled turbine blade p 87 N93-29958
Control effectiveness at hypersonic speeds p 106 N94-10426
Flow visualization and spectroscopy in hypersonic flows: New trends p 305 N94-10437
Joint computational and experimental aerodynamic research on a hypersonic vehicle p 10 N94-10445
Swept shock/boundary-layer interactions: Scaling laws, flowfield structure, and experimental methods p 198 N94-15197
Unsteady wake structures in transverse jets p 200 N94-28006
First experimental assessment of RCS plume-flow field interaction on Hermes leading edge thruster configuration p 125 N94-28032
Effects of free-stream turbulence on a jet in a cross flow p 203 N94-28036
Subsonic flow around US-orbiter model FALKE in the DNW p 26 N95-17877
The crucial role of wall interference, support interference and flow field measurements in the development of advanced aircraft configurations p 209 N95-19252
The utilization of a high speed reflective visualization system in the study of transonic flow over a delta wing p 28 N95-19259

FLUID DYNAMICS
Panel methods for aerodynamic analysis and design p 49 N92-23955
A mathematical constraint placed upon inter-blade row boundary conditions used in the simulation of multistage turbomachinery flows p 187 N92-27458
Special Course on Skin Friction Drag Reduction | AGARD-R-786 | p 2 N92-27706
Measurement of turbulent spots and intermittency modelling at gas-turbine conditions p 85 N93-29934
Dynamics and control of coherent structures in the turbulent wall layer: An overview p 107 N94-11494
Stability model of the atmosphere p 233 N94-11500
Special course on Shock-Wave/Boundary-Layer Interactions in Supersonic and Hypersonic Flows | AGARD-R-792 | p 198 N94-15196
Special Course on Progress in Transition Modelling | AD-A283337 | p 205 N94-33884
Investigation of mechanical erosion in fuel pipelines p 224 N95-19667

FLUID FLOW
Turbine internal fluid flow analysis and Stokes' hypothesis p 186 N92-27455
Computation and visualization of specific flow phenomena in turbomachinery application p 78 N92-27463
Fluid flow and heat transfer in the entrance region of an annulus between independently rotating tubes with a turbulent axial flow p 196 N93-29952
Application of Direct and Large Eddy Simulation to Transition and Turbulence | AGARD-CP-551 | p 212 N95-21061
Large-eddy simulation of rotating channel flows using a localized dynamic model p 213 N95-21064
The asymptotic state of rotating homogeneous turbulence at high Reynolds numbers p 213 N95-21065

FLUID INJECTION
Modeling of a turbulent flow in the presence of discrete parietal cooling jets p 87 N93-29960
A Navier-Stokes solver with different turbulence models applied to film-cooled turbine cascades p 87 N93-29962

FLUID MECHANICS
Physical description of boundary-layer transition: Experimental evidence p 205 N94-33885

FLUID-SOLID INTERACTIONS
The Utilization of Advanced Composites in Military Aircraft | AGARD-R-785 | p 125 N92-33033
An overview of concerns relating to fluid effects on composites p 127 N92-33045
Effects of fuel on Hercules AS-4/8552 composite material p 127 N92-33046
Jet fuel absorption and dynamic mechanical analysis of carbon fibre composites p 128 N92-33050
Investigation of mechanical erosion in fuel pipelines p 224 N95-19667

FLUTTER
Transonic Unsteady Aerodynamics and Aeroelasticity | AGARD-CP-507 | p 3 N92-27936
A time-linearization approach for unsteady transonic flows p 4 N92-27941
Aeroelastic calculations for fighter aircraft using the transonic small disturbance equation p 5 N92-27951
Computation of flutter boundaries in the time and frequency domain p 5 N92-27952
Analysis of unsteady aerodynamic and flutter characteristics of an aeroelastic model in transonic flow p 6 N92-27953
Direct coupling of fluid structure in transonic aeroelasticity p 6 N92-27954
Investigation of the aeroelastic stability of the AFW wind-tunnel model using CAP-TSD p 6 N92-27955
Numerical simulation of shock-stall flutter of an airfoil using the Navier-Stokes equations p 105 N92-27956
The benchmark aeroelastic models program: Description and highlights of initial results p 6 N92-27960
In-flight structural mode excitation system for flutter testing p 105 N93-19915

FLUTTER ANALYSIS
Sensitivity analysis of dynamic aeroelastic responses p 104 N92-23229
Multidisciplinary optimization studies using ASTROS p 104 N92-23234
Simultaneous stress and flutter optimization for the wing of a transport aircraft equipped with four engines p 105 N92-23238
A time-linearization approach for unsteady transonic flows p 4 N92-27941
Transonic aeroelastic calculations in both the time and frequency domains p 5 N92-27950
Analysis of unsteady aerodynamic and flutter characteristics of an aeroelastic model in transonic flow p 6 N92-27953
Investigation of the aeroelastic stability of the AFW wind-tunnel model using CAP-TSD p 6 N92-27955

FLUX DENSITY
Evaluation of multi-dimensional flux models for radiative transfer in cylindrical combustion chambers p 197 N93-29955

FLUX VECTOR SPLITTING
Multidimensional upwind methods for unstructured grids p 191 N92-27675
On the accuracy and efficiency of CFD methods in real gas hypersonics p 13 N94-10462

FLY BY WIRE CONTROL
Design of integrated flight and powerplant control systems p 63 N94-34609

FLYING PERSONNEL
Epidemiologic view of allergic diseases in North America: Implications for aerospace medicine p 241 N93-11311
Biological parameters and cardiovascular risk factors with the flying personnel of the Belgian Armed Forces p 273 N93-32260
The waiver process and disqualifying medical conditions in US Naval aviation personnel p 253 N95-19416
AMDRS: A resource for intelligent aeromedical decision-making p 254 N95-19419

FLYING PLATFORMS
The real aperture antenna of SAR, a key element for performance p 155 N93-13053
The case for surface effect research, platform applications and technology development opportunities p 66 N94-36325

FOCAL PLANE DEVICES
Image enhancement of infrared uncooled focal plane array imagery p 304 N92-32441

FOG
Multispectral transmittance measurements through man-made water fogs p 171 N94-30499

FOKKER AIRCRAFT
Aerodynamic integration of thrust reversers on the Fokker 100 p 51 N93-13208
Forty years of high-lift R/D: An aircraft manufacturer's experience p 1 N94-18441
FOOD
Evaluation of life support equipment during an unsupported North Pole expedition p 276 N94-28422
FOOD INTAKE
Nutrition for a typical MAC crew during Desert Storm p 271 N93-32245
Changes in food and energy intake in military aircrew p 271 N93-32246
Idiopathic Reactive Hypoglycemia in a population of healthy trainees of an Italian Air Force military school p 272 N93-32248
Objective improvements obtained by control of diet and physical training in Spanish Air Force fighter pilots p 273 N93-32258
The effects of an antijet lag diet p 273 N93-32263
FOOD PROCESSING
Evaluation of life support equipment during an unsupported North Pole expedition p 276 N94-28422
FOOTPRINTS
A virtual sensor for evaporation ducts: The impact of data uncertainties p 229 N92-22799
FORCE DISTRIBUTION
Unsteady transonic aerodynamics of pointed bodies of revolution in supersonic freestream p 5 N92-27946
Hypersonic propulsion system force accounting p 80 N93-13229
2-D aileron effectiveness study p 21 N95-17851
FORCED CONVECTION
The effect of orthogonal-mode rotation on forced convection in a circular-sectioned tube fitted with full circumferential transverse ribs p 196 N93-29937
Turbulent flow and heat transfer in idealized blade cooling passages p 85 N93-29938
FOREBODIES
Dynamic tests to demonstrate lateral control using forebody suction on large scale models in the DRA 24 foot wind tunnel p 109 N94-34613
Yaw control by tangential forebody blowing p 109 N94-34615
FORECASTING
Propagation in the ionosphere, B p 175 N95-14827
FOREIGN BODIES
Erosion, Corrosion and Foreign Object Damage Effects in Gas Turbines [AGARD-CP-558] p 99 N95-19653
FORESTS
Large bistatic angle clutter depolarization study p 180 N95-20941
FORGING
Maintaining constant standards during the forging process p 144 N94-37326
FORM FACTORS
Ultra-Reliable Digital Avionics (URDA) processor p 226 N95-20638
FORMALISM
Flight command software development: RAFALE studies p 284 N94-29320
FORMAT
FASTPACK: Optimized solutions for modular avionics derived from a parametric study. Part 2: Avionics p 76 N95-20635
FOURIER ANALYSIS
Analysis of subgrid models using direct and large-eddy simulations of isotropic turbulence p 214 N95-21071
FOURIER TRANSFORMATION
Application of the Fourier transform to short antennas p 168 N93-30750
FRACTALS
Fractal theory for large lacunar antenna arrays p 162 N93-23624
Highly survivable communications: Complementary media packet switched networks p 176 N95-20922
Temporal and spatial comportment of multiple paths in ionospheric propagation in oblique incidence: Fractal measures of perturbations p 183 N95-20954
FRACTOGRAPHY
AGARD Engine Disc Cooperative Test Programme [AGARD-R-766-ADD] p 88 N93-31741
Fractographic and microstructural analysis of fatigue crack growth in Ti-6Al-4V fan disc forgings p 88 N93-31742
Fractographic investigation of IMI 685 crack propagation specimens for SMP SC33 p 88 N93-31743
Material characterization and fractographic examination of Ti-17 fatigue crack growth specimens for SMP SC33 p 88 N93-31744
Conclusions and recommendations p 226 N93-31749
FRACTURE MECHANICS
Buckling and post-buckling behavior of a delamination in a carbon-epoxy laminated structure: Experiments and modelling p 129 N93-21514
Edge delamination of composite laminates p 130 N93-21519
Numerical determination of the residual strength of battle damaged composite plates p 132 N93-21533
Fractographic and microstructural analysis of fatigue crack growth in Ti-6Al-4V fan disc forgings p 88 N93-31742
Fractographic investigation of IMI 685 crack propagation specimens for SMP SC33 p 88 N93-31743
Crack growth prediction results p 226 N93-31748
Micromechanical failure modes in brittle matrix composites p 145 N94-24232
Role of interfaces on the cyclic fatigue behaviour of ceramic matrix composites p 145 N94-24234
An Assessment of Fatigue Damage and Crack Growth Prediction Techniques [AD-280273] p 227 N94-34581
Crack growth predictions using a crack closure model p 228 N94-34584
The crack severity index of monitored load spectra p 228 N94-34585
An assessment of fatigue crack growth prediction models for aerospace structures p 228 N94-34586
Notch fatigue assessment of aircraft components using a fracture mechanics based parameter p 228 N94-34588
Rotorcraft fatigue life-prediction: Past, present, and future p 228 N94-34590
Fatigue management and verification of airframes p 61 N94-34591
Crack growth under cycle loading in fibre reinforced titanium metal matrix composites p 137 N94-36665
Defects and their effects on the integrity of nickel based aeroengine discs p 144 N94-37328
Predicting defect behaviour p 225 N94-37331
FRACTURE STRENGTH
Progressive delamination in polymer matrix composite laminates: A new approach p 130 N93-21515
Mode 2 damage development in carbon fibre reinforced plastics p 131 N93-21523
Mechanical behavior of CMCs: Crack growth resistance and creep aspects p 146 N94-24235
Ceramic matrix composite parts design p 146 N94-24237
Residual strength and life prediction techniques for Ti MMC p 136 N94-36662
Pre-standardisation work on fatigue and fracture testing of titanium matrix composites p 137 N94-36667
Substantiating powder metal life methodologies for engines p 225 N94-37330
FRACTURING
Fracture surface characteristics of compressive failures in carbon fibre reinforced epoxy laminate subjected to hot/wet conditioning p 128 N92-33051
Is axial loading a primary mechanism of injury to the lower limb in an impact aircraft accident? p 242 N93-19664
Fracture analysis of BMI system in presence of moisture p 130 N93-21517
FRANCE
Information retrieval services on wide area networks: A vision of the future p 317 N94-37346
FREE FALL
The application of Hybrid 3 dummy to the impact assessment of a free-fall lifeboat p 262 N93-19671
FREE FLIGHT
Boundary layer transition: Prediction and wind tunnel simulation p 198 N94-11498
Experiments on interaction force of jets in hypervelocity cross-flow in a shock tunnel p 17 N94-28022
FREE FLOW
Unsteady transonic aerodynamics of pointed bodies of revolution in supersonic freestream p 5 N92-27946
Heat transfer with moderate free stream turbulence p 195 N93-29936
Boundary layer transition: Prediction and wind tunnel simulation p 198 N94-11498
Comparison of the interactions of two and three dimensional transverse jets with a hypersonic free stream p 17 N94-28021
A numerical investigation of a subsonic jet in a crossflow p 202 N94-28023
Effects of free-stream turbulence on a jet in a cross flow p 203 N94-28036
Physical description of boundary-layer transition: Experimental evidence p 205 N94-33885
Investigation of the flow over a series of 14 percent-thick supercritical aerofoils with significant rear camber p 21 N95-17849
OAT15A airfoil data p 23 N95-17857
Two-dimensional high-lift airfoil data for CFD code validation p 23 N95-17859
Direct numerical simulation of 2-D and 3-D instability waves in a laminar separation bubble p 218 N95-21095
FREE JETS
Supersonic acoustic source mechanisms for free jets of various geometries p 298 N93-10680
Calculation of single and multiple jets in cross-flow with and without impingement using Reynolds-stress-transport closure p 203 N94-28024
FREE VIBRATION
Identification of delamination by eigenfrequency degradation: An inverse problem p 131 N93-21526
FREEZE DRYING
Evaluation of life support equipment during an unsupported North Pole expedition p 276 N94-28422
FREQUENCIES
Irregular media effects on radiowave signals used in navigation and positioning systems p 159 N93-23606
Passive monitoring for automated MMPP communication systems p 177 N95-20927
Line-of-sight multipath propagation measurements at 15 GHz over 500 MHz bandwidth p 181 N95-20944
Experimental study of the helicopter-mobile radioelectrical channel and possible extension to the satellite-mobile channel p 181 N95-20945
The effects of multihop HF propagation on the performance of OTH backscatter radars p 183 N95-20953
FREQUENCY ASSIGNMENT
Airborne system for detection and location of radio interference sources p 161 N93-23622
FREQUENCY DIVISION MULTIPLE ACCESS
Coherent communications --- fiber optics applications p 154 N92-28086
FREQUENCY HOPPING
A wideband propagation simulator for high speed mobile radio communications p 179 N95-20934
FREQUENCY MODULATION
A current assessment of single site locating technology p 159 N93-23608
FREQUENCY RANGES
Inverse Synthetic Aperture Radar p 156 N93-13058
Propagation characteristics of the ionospheric transmission window relating to long wave radio location issues p 157 N93-23600
Comparative study of undersea fields produced by various dipoles p 167 N93-30740
Tethered aerostat VLF/LF transmitter system design considerations p 169 N93-30753
A MMPP communications system for the frequency range 2-200MHz p 177 N95-20924
Modelling and simulation of HF/VHF MMPPs p 177 N95-20925
FREQUENCY RESPONSE
Comparison of stochastic and deterministic nonlinear gust analysis methods to meet continuous turbulence criteria p 71 N95-18602
Time behavior and frequency response of the microwave propagation channel during multipath propagation p 180 N95-20942
FREQUENCY SHIFT KEYING
A dynamic bandwidth and phase linearity measurement technique for 4-channel MSK VLF antenna systems p 168 N93-30748
FREQUENCY STABILITY
Digital processing for positioning with one satellite p 163 N93-23629
FREQUENCY SYNTHESIZERS
Advanced technologies for lightweight EHF tactical communications satellites p 164 N93-29900
FRICTION REDUCTION
Special Course on Skin Friction Drag Reduction [AGARD-R-786] p 2 N92-27706
Basic concepts on boundary layers p 2 N92-27707
FROZEN EQUILIBRIUM FLOW
Application of finite element method to hypersonic nozzle flow computations p 189 N92-27479
FUEL CELLS
Propulsion system selection for a High Altitude Long Endurance aircraft p 98 N94-36333
FUEL COMBUSTION
Fuels and Combustion Technology for Advanced Aircraft Engines [AD-A275679] p 138 N94-29246
Combustion technology needs for advanced high pressure cycle engines p 139 N94-29248
Studies of lean blowout in a research combustor p 140 N94-29266
Computational and experimental results in high pressure combustions of H2/air and H2/O2/H2O p 140 N94-29268
Ducted kerosene spray flames p 142 N94-29276
Spray combustion experiments and numerical predictions p 142 N94-29277
Time-resolved measurements in a three dimensional model combustor p 204 N94-29283
Temperature and combustion analysis of combustor with acoustically controlled primary zone air-jet mixing p 143 N94-29284
Endothermic fuels for hypersonic aviation p 148 N94-29285
Research and development of ramjets/ramrockets. Part 1: Integral solid propellant ramrockets p 92 N94-29294
FUEL CONSUMPTION
Drag reduction: An industrial challenge p 2 N92-27708

Practical considerations in designing the engine cycle p 79 N92-28460
Protective coatings for compressor gas path components p 102 N95-19675

FUEL CONTROL
Chambers of turboreactors with variable geometry: A response to the matrix of pollution in cycles at high temperature, high pressure p 141 N94-29273

FUEL FLOW
Fuel injector design for high temperature aircraft engine p 91 N94-29263
The effect of incomplete fuel-air mixing on the lean limit and emissions characteristics of a Lean Prevaporized Premixed (LPP) combustor p 140 N94-29265
Evaluation of the transient operation of advanced gas turbine combustors p 91 N94-29269

FUEL INJECTION
Recent developments in the simulation of steady and transient transverse jet interactions for missile, rotorcraft, and propulsive applications p 203 N94-28030
Fuel injector design for high temperature aircraft engine p 91 N94-29263
Design aspects in small aircraft gas turbine fuel injectors p 91 N94-29264
Chambers of turboreactors with variable geometry: A response to the matrix of pollution in cycles at high temperature, high pressure p 141 N94-29273
Effects of hydrogen addition on pollutant emissions in a gas turbine combustor p 141 N94-29275
Ducted kerosene spray flames p 142 N94-29276
A new Eulerian model for turbulent evaporating sprays in recirculating flows p 142 N94-29279
Experimental studies on effervescent atomizers with wide spray angles p 204 N94-29280
Investigation of the two-phase flow in a research combustor under reacting and non-reacting conditions p 204 N94-29282
Combustor technology for future small gas turbine aircraft p 96 N94-34452
Reducing Temperature Distribution Factor (TDF) for advanced small gas turbine engines p 96 N94-34455

FUEL SPRAYS
Ducted kerosene spray flames p 142 N94-29276
Spray combustion experiments and numerical predictions p 142 N94-29277
Modeling of the phase liquidates in combustion chambers p 142 N94-29278
A new Eulerian model for turbulent evaporating sprays in recirculating flows p 142 N94-29279
Experimental studies on effervescent atomizers with wide spray angles p 204 N94-29280
Reducing Temperature Distribution Factor (TDF) for advanced small gas turbine engines p 96 N94-34455

FUEL SYSTEMS
High temperature fuel requirements and payoffs p 148 N94-29259
Research and development of high thermal stability fuels p 148 N94-29261
Reduction of NO(x) by fuel-staging in gas turbine engines: A commitment to the future p 141 N94-29272

FUEL TESTS
Effects of fuel on Hercules AS-4/8552 composite material p 127 N92-33046
The design features of rocket motors relating to insensitive munition response to thermo-mechanical stimuli p 147 N92-33244

FUELS
Investigation of mechanical erosion in fuel pipelines p 224 N95-19667

FULL SCALE TESTS
Aerodynamic integration of thrust reversers on the Fokker 100 p 51 N93-13208
The GARTEUR high lift research programme p 16 N94-18430
Design and aerodynamic performance evaluation of a high-work mixed flow turbine stage p 97 N94-34459
An Assessment of Fatigue Damage and Crack Growth Prediction Techniques [AD-280273] p 227 N94-34581
Fatigue design, test and in-service experience of the BAe Hawk p 62 N94-34597
Wall interaction effects for a full-scale helicopter rotor in the NASA Ames 80- by 120-foot wind tunnel p 29 N95-19270
Testing considerations for military aircraft engines in corrosive environments (a Navy perspective) p 104 N95-19684

FUNCTIONAL DESIGN SPECIFICATIONS
US Army helicopter inertia reel locking failures p 33 N93-19689
How to control the increase in the complexity of civil aircraft on-board systems p 74 N94-29316
The impact of non-linear flight control systems on the prediction of aircraft loads due to turbulence p 110 N95-18598
Design limit loads based upon statistical discrete gust methodology p 72 N95-18603

FUNCTIONAL INTEGRATION
The quest for an integrated flying helmet p 269 N93-28860

FUSELAGES
CFRP stiffened panels under compression p 127 N92-33044
Wind tunnel investigations of the appearance of shocks in the windward region of bodies with circular cross section at angle of attack p 25 N95-17866
STOVL CFD model test case p 27 N95-17881
Investigation of the influence of pylons and stores on the wing lower surface flow p 28 N95-17885
Experimental techniques for measuring transonic flow with a three dimensional laser velocimetry system. Application to determining the drag of a fuselage p 222 N95-19258

FUZZY SYSTEMS
Fuzzy guidance system evaluation p 282 N92-27903
Adaptive autonomous target cuer p 267 N93-19784
Knowledge combination and data fusion with application to recognition systems p 287 N94-30513

G

GALERKIN METHOD
Finite element methods for flow problems p 191 N92-27672
Finite element methods for fluids p 191 N92-27673
Finite element computation of unsteady incompressible flows involving moving boundaries and interfaces and iterative solution strategies p 191 N92-27674
Dynamics and control of coherent structures in the turbulent wall layer: An overview p 107 N94-11494
DNS of turbulent flow in a driven cavity and their analysis using proper orthogonal decomposition p 218 N95-21097

GARMENTS
Thermal protective performance and instrumented mannequin evaluation of multi-layer garment systems p 277 N94-28433

GAS ANALYSIS
Experiments on interaction force of jets in hypervelocity cross-flow in a shock tunnel p 17 N94-28022

GAS BEARINGS
An air bearing system for small high speed gas turbines p 223 N94-34466

GAS COOLING
Coupling of 3D-Navier-Stokes external flow calculations and internal 3D-heat conduction calculations for cooled turbine blades p 87 N93-29961

GAS DISSOCIATION
The high enthalpy facilities HEG and TH 2 in Germany p 116 N94-10430
Comparison of computation and experiment for a high enthalpy, heated-driver, shock-tube environment p 11 N94-10447

GAS DYNAMICS
Evaluation of the effects of finite rate chemistry on nozzle performance p 190 N92-27488
Issues and approach to develop validated analysis tools for hypersonic flows: One perspective p 11 N94-10446
Simulation of multidisciplinary problems for the thermostress state of cooled high temperature turbines p 99 N95-19021
Application of multidisciplinary models to the cooled turbine rotor design p 99 N95-19024

GAS FLOW
Heat transfer with moderate free stream turbulence p 195 N93-29936
Mathematical Models of Gas Turbine Engines and their Components [AGARD-LS-198] p 98 N95-19017
The mathematical models of flow passage for gas turbine engines and their components p 98 N95-19020
Application of multicomponent models to flow passage simulation in multistage turbomachines and whole gas turbine engines p 99 N95-19022
Application of multidisciplinary models to the cooled turbine rotor design p 99 N95-19024

GAS GENERATORS
Research and development of ramjets/ramrockets. Part 1: Integral solid propellant ramrockets p 92 N94-29294

GAS INJECTION
Numerical investigation of thrust vectoring by injection of secondary air into nozzle flows p 202 N94-28013
Effects of hydrogen addition on pollutant emissions in a gas turbine combustor p 141 N94-29275
The mixing process in the quenching zone of the rich-lean-combustion concept p 142 N94-29281

GAS JETS
Mechanisms of sound generation in subsonic jets p 300 N93-10688
Experimental studies of the flowfields and their effects due to a pair of lift jets discharging in the ground effect region p 194 N93-13217
Scalar mixing in the subsonic jet in crossflow p 201 N94-28008
A numerical investigation of a subsonic jet in a crossflow p 202 N94-28023
Navier-Stokes simulation of two and three dimensional jets in crossflow, effects of grid, and boundary conditions p 203 N94-28026

GAS MIXTURES
Thermodynamic model of air in chemical equilibrium p 307 N94-10448

GAS STREAMS
Comparison of the interactions of two and three dimensional transverse jets with a hypersonic free stream p 17 N94-28021

GAS TURBINE ENGINES
Application of CFD in the design of gas turbine engine components p 78 N92-27461
Steady and Transient Performance Prediction of Gas Turbine Engines [AGARD-LS-183] p 79 N92-28458
Practical considerations in designing the engine cycle p 79 N92-28460
Steady and transient performance calculation method for prediction, analysis, and identification p 79 N92-28461
Component performance requirements p 79 N92-28462
Dynamic simulation of compressor and gas turbine performance p 79 N92-28463
Calculation of installation effects within performance computer programs p 80 N92-28465
Dynamic control of aerodynamic instabilities in gas turbine engines p 80 N92-28466
Engine performance and health monitoring models using steady state and transient prediction methods p 80 N92-28467
Noise studies for environmental impact assessment of an outdoor engine test facility p 297 N93-10672
Overview on test cases for computation of internal flows in turbomachines p 193 N93-13209
Propulsion and Energetics Panel Working Group 20 on Test Cases for Engine Life Assessment Technology [AGARD-AR-308] p 81 N93-14890
Introduction to test cases for engine life assessment technology p 81 N93-14891
LARZAC HP turbine disk crack initiation and propagation spin pit test p 81 N93-14892
RB 199 high pressure compressor stage 3 spin pit tests p 81 N93-14893
CF6-6 high pressure compressor stage 5 locking slot crack propagation spin pit test p 81 N93-14894
RB211-524B disc and drive cones hot cyclic spinning test p 82 N93-14895
F100 second stage fan disk bolthole crack propagation ferris wheel test p 82 N93-14897
In-service considerations affecting component life p 82 N93-14898
Development and qualification of the US Cruise Missile Propulsion System p 124 N93-17619
Keynote address: Unsteady, multimode transition in gas turbine engines p 84 N93-29927
Heat transfer and aerodynamics of a 3D design nozzle guide vane tested in the Pyestock Isentropic Light Piston Facility p 84 N93-29928
Thermal effects of a coolant film along the suction side of a high pressure turbine nozzle guide vane p 84 N93-29930
The influence of non-uniform spanwise inlet temperature on turbine rotor heat transfer p 84 N93-29932
Measurement of turbulent spots and intermittency modelling at gas-turbine conditions p 85 N93-29934

Use of microprocessor-based simulator technology and MEG/EEG measurement techniques in pilot emergency-manoeuver training p 115 N93-19706

GENETIC ALGORITHMS
Review of the EUROPT Project AERO-0026 p 71 N95-16573

GEODETIC SURVEYS
Multipath impact on ground-based global positioning system range measurements: Aspects of measurement, modeling, and mitigation p 182 N95-20949

GEOLOGICAL FAULTS
Sensing of seismo-electromagnetic earthquake precursor radiation signatures along Southern California fault zones: Evidence of long distance precursor ULF signals observed before a moderate Southern California earthquake episode p 232 N92-22810

GEOMAGNETIC PULSATIONS
Sensing of seismo-electromagnetic earthquake precursor radiation signatures along Southern California fault zones: Evidence of long distance precursor ULF signals observed before a moderate Southern California earthquake episode p 232 N92-22810

GEOMAGNETISM
The cone structure and focusing of the electric field of VLF and LF waves at high altitudes of the ionosphere p 165 N93-30731
Propagation in the ionosphere, B p 175 N95-14827

GERMANY
Electro-optics: Propagation from IR to UV and sensor considerations. Part A: Propagation theory p 175 N95-14833

GLASS
Micromechanical failure modes in brittle matrix composites p 145 N94-24232

GLASS FIBER REINFORCED PLASTICS
Prediction of delamination in tapered unidirectional glass fibre epoxy with dropped plies under static tension and compression p 131 N93-21530
Acoustic fatigue behaviour of GLARE composites p 303 N95-19160

GLIDE PATHS
Scene correlation for INS aiding in flight-test systems: Runway-referenced flight-tests with on-board sensors only p 40 N93-22792
On non-linear longitudinal stability of an aircraft in a dive in the presence of atmospheric disturbances p 107 N94-11492

GLOBAL POSITIONING SYSTEM
Mapping electron content and electron density in the sub-auroral ionosphere p 231 N92-22805
Flight testing of GPS and GPS-aided systems p 54 N93-19919
The avionic system of the experimental standoff dispenser ADW p 74 N93-22028
Optimization of the integration of inertia and GPS p 39 N93-22787
Retrofitting of GPS into existing navigation suites p 39 N93-22788
Flight evaluation of differential GPS aided inertial navigation systems p 40 N93-22790
Toward achieving global sole means radionavigation systems p 40 N93-22794
Test results of the advanced translator processing system p 161 N93-23620
Flight evaluation of a computer aided low-altitude helicopter flight guidance system p 106 N93-28869
Use of GPS in automated air traffic control p 42 N94-29563
GPS/GNSS for ATM p 42 N94-29565
Multipath impact on ground-based global positioning system range measurements: Aspects of measurement, modeling, and mitigation p 182 N95-20949
Impact of propagation mechanisms on global navigation satellite system performance p 182 N95-20950

GLONASS
Impact of propagation mechanisms on global navigation satellite system performance p 182 N95-20950

GLOVES
Interactive large screen: A multi-mode dialogue tool for future cockpits p 280 N94-37266
Manual tracking performance using a virtual hand controller: A comparison study p 280 N94-37271

GLOW DISCHARGES
First experimental assessment of RCS plume-flow field interaction on Hermes leading edge thruster configuration p 125 N94-28032

GLUCOSE
Idiopathic Reactive Hypoglycemia in a population of healthy trainees of an Italian Air Force military school p 272 N93-32248

GLYCIDYL AZIDE POLYMER
Development of a minimum smoke propellant based on glycidyl azide polymer and ammonium nitrate p 147 N92-33243

GOERTLER INSTABILITY
Boundary layer transition: Predictions based on linear theory p 205 N94-33886

GOGGLES
Helicopter night vision goggle testing in the United Kingdom p 267 N93-19917
Night operations p 275 N94-23977
Night vision devices and characteristics p 276 N94-23982
Cockpit/NVG visual integration issues p 276 N94-23983

Night vision goggle illusions and visual training
p 276 N94-23984
Visual accommodation to virtual image displays when knowledge of object distance conflicts with optical distance p 261 N94-37278

GONIOMETERS
Bearing determination and bearing quality indication from a goniometric HF DF system p 161 N93-23617
Location of emissions by evasion of frequency and gusts by sequential analysis sensor in fast scanning
p 162 N93-23625

GOVERNMENTS
National scene in information and documentation activities and recent developments in the Documentation Center of TUBITAK (TURDOK) p 310 N93-10594
The Impact of Changing International Relations on the Scientific and Technical Community
| AGARD-CP-523 | p 313 N93-31215

GRADIENTS
New method of modelling the mesoscale structure of the ionosphere with a single sensor. Impact on HF radio-location p 158 N93-23603

GRAPHICAL USER INTERFACE
A new class of mission support for combat air-crew
p 293 N93-28854
Considerations on graphical user interfaces for intelligent ATM support systems p 43 N94-29572

GRAPHITE
Barely visible damage threshold in a BMI
p 131 N93-21524

GRAPHITE-EPOXY COMPOSITES
Influence of edge effect on compression-tension fatigue of toughened graphite/epoxy laminates
p 126 N92-33039
Effects of fuel on Hercules AS-4/8552 composite material p 127 N92-33046

GRAVITATION
The physiological limitations of man in the high G environment p 269 N93-28861

GRAVITATIONAL EFFECTS
Echocardiographic findings in trained aircrew: The effect of +Gz on cardiac structure (working group 18)
p 247 N94-23320
Spinal nerve syndromes: The need to confirm the diagnosis with neurophysiological examinations
p 257 N95-19436

GRAVITATIONAL PHYSIOLOGY
Space flight and immune system p 235 N93-11284
Asthma in aircrew: Assessment, treatment and disposition p 241 N93-11315
The physiological limitations of man in the high G environment p 269 N93-28861
Echocardiographic findings in trained aircrew: The effect of +Gz on cardiac structure (working group 18)
p 247 N94-23320

GRAVITY WAVES
The effects of multipath scatter from wind driven gravity waves on lines of bearing serving as direction finders p 158 N93-23601

GREAT CIRCLES
Large bearing errors observed at a high latitude DF site p 160 N93-23615
The effects of multihop HF propagation on the performance of OTH backscatter radars
p 183 N95-20953

GREECE
Documentation practices: The national scene (Greece)
p 310 N93-10595

GREEN'S FUNCTIONS
Acoustics of space structures p 302 N95-19152

GRID GENERATION (MATHEMATICS)
An integrated CFD system for 3D turbomachinery applications p 78 N92-27464
Validation of non-orthogonal three-dimensional laminar flow predictions p 189 N92-27476
Unstructured grid methods for compressible flows
p 192 N92-27676
Aspects of unstructured grids and finite-volume solvers for the Euler and Navier-Stokes equations
p 192 N92-27677
Higher order upwind finite volume schemes with ENO-properties for general unstructured meshes
p 192 N92-27678
Finite element methods in CFD: Grid generation, adaptivity, and parallelization p 192 N92-27679
A frontal approach for node generation in Delaunay triangulations p 192 N92-27680
Computation of the unsteady transonic 2D cascade flow by an Euler algorithm with interactive grid generation p 4 N92-27944
Calibration of 2D unstructured grid methods on propulsive flowfields p 194 N93-13225
Numerical methods for aerothermodynamic design of hypersonic space transport vehicles
p 119 N94-10459
Calculation of maximum and high lift characteristics of multi element aerofoils p 14 N94-18419
Navier-Stokes calculations on multi-element airfoils using a chimera-based solver p 14 N94-18422
High-lift system analysis method using unstructured meshes p 15 N94-18426
The role of CFD in the design process
p 208 N95-14135
Computational aerodynamics based on the Euler equations
| AGARD-AG-325 | p 19 N95-14264
Simulation of multidisciplinary problems for the thermostress state of cooled high temperature turbines
p 99 N95-19021
Simulations of bypass transition for spatially evolving disturbances p 215 N95-21079

GROUND BASED CONTROL
Mission planning systems for tactical aircraft (pre-flight and in-flight)
| AGARD-AR-313 | p 35 N93-21187
TACSAT ground control and data collection
p 163 N93-29895
Design of Center-TRACON Automation System
p 43 N94-29568
ARC2000: Automatic radar control p 45 N94-29583

GROUND CREWS
Lipidemic profile of Hellenic Airforce officers
p 245 N93-32250

GROUND EFFECT (AERODYNAMICS)
Experimental studies of the flowfields and their effects due to a pair of lift jets discharging in the ground effect region p 194 N93-13217
Wake structure and aerodynamic behavior of high lift aircraft configurations during unsteady maneuvers in ground effect p 17 N94-18439
Experimental data for CFD validation of impinging jets in crossflow with application to ASTOVL flow problems
p 201 N94-28010
Experiments on the ground vortex formed by an impinging jet in cross flow p 202 N94-28016
Numerical simulation of a powered-lift landing
p 60 N94-28033
A study of jet effect and ground effect interference on a STOL fighter p 60 N94-28034
The case for surface effect research, platform applications and technology development opportunities
p 66 N94-36325
Development of pneumatic test techniques for subsonic high-lift and in-ground-effect wind tunnel investigations p 29 N95-19268

GROUND OPERATIONAL SUPPORT SYSTEM
TACSAT ground control and data collection
p 163 N93-29895

GROUND STATIONS
QuickStar: System design, capabilities, and tactical applications of a small, smart space system
p 120 N93-29905
VLF/LF propagation measurements
p 165 N93-30732

GROUND TESTS
Flight service environmental effects on composite materials and structures p 128 N92-33054
The jet behaviour of an actual high-bypass engine as determined by LDA-measurements in ground tests
p 80 N93-13218
Flight Testing
| AGARD-CP-519 | p 52 N93-19901
High precision navigation for flight testing (AERONAV)
p 38 N93-19920
TACSAT ground control and data collection
p 163 N93-29895
On ground system integration and testing: A modern approach p 75 N94-29334
USAF/AEDC aerodynamic and propulsion ground test and evaluation techniques for highly maneuverable aircraft: Capabilities and challenges p 63 N94-34606

GROUND TRUTH
Radiometric calibration of SAR systems
p 155 N93-13055

GROUP DYNAMICS
A teamwork model of pilot aiding: Psychological principles for mission management systems design
p 292 N92-27893

GUIDANCE (MOTION)
Automated software generation approaches for the design and development of guidance and control systems software
| AGARD-AR-292 | p 282 N92-25980
Optimal guidance anticipating missile performance
p 118 N92-27902
Advances in Guidance and Control of Precision Guided Weapons
| AGARD-CP-524 | p 149 N93-22018
Linear payout systems for dispensing fiber-optic data links from precision-guided munitions or high-performance aircraft/missles p 305 N93-22026
Advanced Guidance and Control Aspects in Robotics
| AGARD-LS-193 | p 290 N95-14942
Machine intelligence: The key to guidance and control in robotics p 290 N95-14944
Guidance and control for unmanned ground vehicles
p 224 N95-14948

GUIDE VANES
Predictions and measurements of 3D viscous flow in a transonic turbine nozzle guide vane row
p 78 N92-27466
Heat transfer and aerodynamics of a 3D design nozzle guide vane tested in the Pyestock Isentropic Light Piston Facility p 84 N93-29928
Thermal effects of a coolant film along the suction side of a high pressure turbine nozzle guide vane
p 84 N93-29930
Aero-thermal design of a cooled transonic NGV and comparison with experimental results
p 87 N93-29957
Coupling of 3D-Navier-Stokes external flow calculations and internal 3D-heat conduction calculations for cooled turbine blades p 87 N93-29961
Nozzle guide vane flow in radial inflow turbines
p 97 N94-34460
Turbine blade dynamics and blade-vane interaction in a radial inflow turbine p 97 N94-34461

GUST LOADS
The impact of non-linear flight control systems on the prediction of aircraft loads due to turbulence
p 110 N95-18598
A study of the effect of store unsteady aerodynamics on gust and turbulence loads p 71 N95-18601
Comparison of stochastic and deterministic nonlinear gust analysis methods to meet continuous turbulence criteria p 71 N95-18602
A review of gust load calculation methods at de Havilland p 28 N95-18604
Special effects of gust loads on military aircraft
p 72 N95-18605

GUSTS
Treatment of non-linear systems by timeplane-transformed CT methods: The spectral gust method p 111 N95-18600
Design limit loads based upon statistical discrete gust methodology p 72 N95-18603
A review of gust load calculation methods at de Havilland p 28 N95-18604
Special effects of gust loads on military aircraft
p 72 N95-18605

GYROSCOPES
Initial trials results for image stabilisation using a rugged low noise gyroscope p 219 N93-22021
Hemispherical resonator gyro: Principle, design, and performance p 220 N93-22784
Visual autonomous automatic landing of airplanes
p 40 N93-22791

GYROSCOPIC STABILITY
Gyroscopic and propeller aerodynamic effects on engine mounts dynamic loads in turbulence conditions
p 71 N95-18599

GYROSTABILIZERS
The use of a tactile interface to convey position and motion perceptions p 281 N94-37281

H

HABITS
The lifestyle and dietary consumption patterns of United States Air Force aviators within air training command at Randolph Air Force Base, Texas
p 272 N93-32257

HAIL
Impact loading of compressor stator vanes by hailstone ingestion p 102 N95-19670

HANDBOOKS
Acquisition 2: Procurement, acquisition, and maintenance of configuration management documentation in support of a CIS system
p 311 N93-10599

HARDNESS
Analysis of the erosion of cubic centered and face centered metallic materials p 144 N95-19674

HARMONIC EXCITATION
Computation of flutter boundaries in the time and frequency domain p 5 N92-27952

HARMONIC OSCILLATION
Computation of the unsteady transonic 2D cascade flow by an Euler algorithm with interactive grid generation p 4 N92-27944

HARMONICS
Comparison of Euler and full potential methods for unsteady transonic flow calculations p 4 N92-27943
Computation of the unsteady transonic 2D cascade flow by an Euler algorithm with interactive grid generation p 4 N92-27944

HARRIER AIRCRAFT
Harrier GR MK 5/7 mission simulators for the Royal Air Force p 113 N92-28540
Harrier 2: A comparison of US and UK approaches to fatigue clearance p 62 N94-34596

HAZARDS
Insensitive Munitions
| AGARD-CP-511 | p 147 N92-33240
The United States Air Force explosives hazards reduction program p 147 N92-33241
Hazards reduction for tactical missiles
p 123 N92-33245
A brief review of the source noise technology applicable to fixed-wing military aircraft
p 298 N93-10678

Medical support for British operations in the Antarctic p 248 N94-28421
Assuring Known Good Die (KGD) for reliable, cost effective MCMs p 185 N95-20644
Highly survivable communications: Complementary media packet switched networks p 176 N95-20922

HEAD (ANATOMY)
A new instrumentation system for measuring the dynamic response of the human head/neck during impact acceleration p 263 N93-19672
The effectiveness of airbags in reducing the severity of head injury from gunsight strikes in attack helicopters p 34 N93-19691
Neuropsychophysiologic sequelae of mild head injury p 256 N95-19430

HEAD MOVEMENT
Advances in helmet trackers p 279 N94-36624
Operator gaze position control interfaces: Investigation of psychophysical and operational parameters p 281 N94-37273
Gaze orientation under G(z)-load. Methodological aspects: Preliminary results p 281 N94-37274
Attenuating the disorienting effects of head movement during whole-body rotation using a visual reference: Further tests of a predictive hypothesis p 252 N94-37276

HEAD-UP DISPLAYS
Panoramic cockpit displays p 264 N93-19765
Oculo-motor responses and virtual image displays p 269 N93-28862
Cockpit/NVG visual integration issues p 276 N94-23983

HEADACHE
Some side-effects of immersion virtual reality p 252 N94-37277

HEALTH
Think health not disease p 255 N95-19429
The EEG in the evaluation of applicants to aircrew members p 256 N95-19432
Medication in the course of active flying duty p 258 N95-19443

HEALTH PHYSICS
Aeromedical risk management for aircrew p 252 N95-19414

HEART
Primary prevention of coronary heart disease p 246 N94-23317
Echocardiographic screening of aircrew candidates p 247 N94-23319
Echocardiographic findings in trained aircrew: The effect of + Gz on cardiac structure (working group 18) p 247 N94-23320
Left ventricular hypertrophy and athlete's heart p 247 N94-23321
Aortic valve disease p 247 N94-23322
Aeromedical implications of mitral valve prolapse p 247 N94-23323
Sarcoidosis and the aviator p 248 N94-23325

HEART DISEASES
Correlation of life-style and dietary concomitants of Greek pilots with serum analytes p 272 N93-32256
Cardiopulmonary Aspects in Aerospace Medicine [AGARD-LS-189] p 246 N94-23313
Cardiovascular and pulmonary disease in NATO aircrew: An overview p 246 N94-23314
Screening for asymptomatic coronary heart disease p 246 N94-23315
Aeromedical disposition of Arrhythmias and electrocardiographic findings in aircrew p 246 N94-23318
Aortic valve disease p 247 N94-23322
The aeromedical implications of supraventricular tachycardia p 257 N95-19437
Sarcoidosis in US military aviators p 257 N95-19438

HEART FUNCTION
Cardiopulmonary Aspects in Aerospace Medicine [AGARD-LS-189] p 246 N94-23313
Echocardiographic screening of aircrew candidates p 247 N94-23319
Aeromedical implications of mitral valve prolapse p 247 N94-23323
Effects of three hydration beverages on exercise performance during 60 hours of simulated desert exposure p 250 N94-28448

HEART RATE
Portable equipment developed to estimate energy expenditure by simultaneous recording of heart rate and body position p 271 N93-32243

HEART VALVES
Aortic valve disease p 247 N94-23322
Aeromedical implications of mitral valve prolapse p 247 N94-23323

HEAT EXCHANGERS
Microchannel heat pipe cooling of modules p 212 N95-20649

HEAT FLUX
Thermal flux measurements in hypersonic flows: A review p 220 N94-10438
Prediction of survival times on land in a cold climate p 248 N94-28423

HEAT MEASUREMENT
The swollen polymer technique and its use for heat transfer investigations on film cooled surfaces p 196 N93-29944
Methodologies for thermal and mechanical testing of TMC materials p 136 N94-36659

HEAT PIPES
Microchannel heat pipe cooling of modules p 212 N95-20649

HEAT RESISTANT ALLOYS
Alternate melting and refining routes p 143 N94-37323
Process enhancements of superalloy material p 143 N94-37324
Maintaining constant standards during the forging process p 144 N94-37326
Substantiating powder metal life methodologies for engines p 225 N94-37330
High temperature cyclic behaviour of aerospace materials: Room temperature validation tests of Ti-6Al-4V [AGARD-AR-328] p 229 N95-14198
New Trends in coatings developments for turbine blades: Materials processing and repair p 103 N95-19676

HEAT STROKE
Aeromedical support for casualties in extremely hot climates p 277 N94-28443

HEAT TOLERANCE
The potential of new textiles in improving survival prospects p 276 N94-28430
Aeromedical support for casualties in extremely hot climates p 277 N94-28443
Implications of climatic extremes in aircrew NBC operations p 278 N94-28446
Effects of three hydration beverages on exercise performance during 60 hours of simulated desert exposure p 250 N94-28448
The use of liquid and air microclimate conditioning systems to alleviate heat stress in helicopter NBC operations p 278 N94-28453

HEAT TRANSFER
Turbine internal fluid flow analysis and Stokes' hypothesis p 186 N92-27455
Computation of 3D-viscous flow and heat transfer for the application to film cooled gas turbine blades p 187 N92-27456
Navier-Stokes analysis of turbine blade heat transfer and performance p 188 N92-27468
Numerical representation of heat transfer into turbine blade cooling ducts p 188 N92-27474
Practical considerations in designing the engine cycle p 79 N92-28460
Heat Transfer and Cooling in Gas Turbines [AGARD-CP-527] p 84 N93-29926
Heat transfer and aerodynamics of a 3D design nozzle guide vane tested in the Pyestock Isentropic Light Piston Facility p 84 N93-29928
Experimental study of heat transfer close to a plane wall heated in the presence of multiple injections (subsonic flow) p 84 N93-29931
The influence of non-uniform spanwise inlet temperature on turbine rotor heat transfer p 84 N93-29932
Determination of surface heat transfer and film cooling effectiveness in unsteady wake flow conditions p 85 N93-29933
Measurement of turbulent spots and intermittency modelling at gas-turbine conditions p 85 N93-29934
Heat transfer in high turbulence flows: A 2-D planar wall jet p 195 N93-29935
Heat transfer with moderate free stream turbulence p 195 N93-29936
Cooling geometry optimization using liquid crystal technique p 85 N93-29939
Fundamental studies of impingement cooling thermal boundary conditions p 196 N93-29940
Prediction of jet impingement cooling scheme characteristics (airfoil leading edge application) p 196 N93-29941
An L2F-measurement device with image rotator prism for flow velocity analysis in rotating coolant channels p 220 N93-29942
Local heat transfer measurement with liquid crystals on rotating surfaces including non-axisymmetric cases p 85 N93-29943
The swollen polymer technique and its use for heat transfer investigations on film cooled surfaces p 196 N93-29944
Transient thermal behaviour of a compressor rotor with axial cooling air flow and co-rotating or contra-rotating shaft p 86 N93-29946
Flow and heat transfer between gas-turbine discs p 86 N93-29950
Heat transfer and leakage in high-speed rotating stepped labyrinth seals p 86 N93-29951
Fluid flow and heat transfer in the entrance region of an annulus between independently rotating tubes with a turbulent axial flow p 196 N93-29952
Impingement/effusion cooling p 197 N93-29954
Coupling of 3D-Navier-Stokes external flow calculations and internal 3D-heat conduction calculations for cooled turbine blades p 87 N93-29961
Navier-Stokes analysis of three-dimensional flow and heat transfer inside turbine blade rows p 87 N93-29963
Control effectiveness at hypersonic speeds p 106 N94-10426
Experimental and computational comparisons of Mach 6 high Reynolds number heat transfer and skin friction p 10 N94-10443
Real gas and surface transpiration effects upon swept leading edge high speed flow including transition p 11 N94-10452
Studies of hypersonic viscous flows p 12 N94-10454
Hypersonic shock wave boundary layer interactions over simplified deflected control surface configurations p 200 N94-15203
Comparison of the interactions of two and three dimensional transverse jets with a hypersonic free stream p 17 N94-28021
Treatment of mild immersion hypothermia by body-to-body and forced-air warming p 249 N94-28428
Application of multidisciplinary models to the cooled turbine rotor design p 99 N95-19024
Microchannel heat pipe cooling of modules p 212 N95-20649

HEAT TRANSFER COEFFICIENTS
Thermal effects of a coolant film along the suction side of a high pressure turbine nozzle guide vane p 84 N93-29930
Cooling geometry optimization using liquid crystal technique p 85 N93-29939
Prediction of jet impingement cooling scheme characteristics (airfoil leading edge application) p 196 N93-29941
The swollen polymer technique and its use for heat transfer investigations on film cooled surfaces p 196 N93-29944

HEAT TREATMENT
The effect of heat treatment on the properties of PEEK and APC-2 p 128 N92-33052
Fractographic investigation of IMI 685 crack propagation specimens for SMP SC33 p 88 N93-31743

HEATING
Rewarming methodologies in the field p 250 N94-28441

HELICOPTER CONTROL
Generation of helicopter roll axis bandwidth data through ground-based and in-flight simulation p 53 N93-19909
Study findings on the influence of maneuverability and agility on helicopter handling qualities p 64 N94-34624
Landing of an unmanned helicopter on a moving platform. High accuracy navigation and tracking p 69 N94-36618

HELICOPTER DESIGN
The application of flight simulation models in support of rotorcraft design and development p 111 N92-28527
EH101: A new helicopter capable of long range missions p 67 N94-36330

HELICOPTER ENGINES
Operational requirements for helicopter engines for UK services p 93 N94-34432
Helicopter engine/airframe integration: The way ahead p 61 N94-34433
MTR390, the new generation turboshaft engine p 94 N94-34434
Advanced small high pressure ratio centrifugal compressor p 95 N94-34444
The centrifugal compressor, an essential component of small and medium power engines p 95 N94-34445
Development of a HP-turbine for a small helicopter engine p 97 N94-34456
US Army rotorcraft turboshaft engines sand and dust erosion considerations p 100 N95-19656
Future directions in helicopter protection system configuration p 100 N95-19657

HELICOPTER PERFORMANCE
Study findings on the influence of maneuverability and agility on helicopter handling qualities p 64 N94-34624
The influence of flying qualities on operational agility p 65 N94-34628

HELICOPTERS
Aircraft ship operations [AGARD-AR-312] p 49 N92-28468
Experience with piloted simulation in the development of helicopters p 112 N92-28528
Full mission simulation: A view into the future p 112 N92-28537
An evaluation of IFR approach techniques: Generic helicopter simulation compared with actual flight p 114 N92-28550
The German anti tank helicopter PAH 2: An example of a future sensor platform p 73 N92-32448

Flight service environmental effects on composite materials and structures p 128 N92-33054
Royal Naval helicopter ditching experience p 32 N93-19684
Canadian Forces helicopter ditchings: 1952-1990 p 32 N93-19685
Helicopter accidents over water in the national navy: Epidemiological study over the period 1980-1991 p 32 N93-19686
Helicopter crash survival at sea: United States Navy/Marine Corps experience 1977-1990 p 33 N93-19687
US Army helicopter inertia reel locking failures p 33 N93-19689
Pre-flight risk assessment in Emergency Medical Service (EMS) helicopters p 34 N93-19692
The use of voice processing for some aspects of the pilot-vehicle-interface in an aircraft p 265 N93-19772
CVA, cockpit design and development tool p 267 N93-19780
Equipment, more or less ready to be used in helicopters p 267 N93-19785
Generation of helicopter roll axis bandwidth data through ground-based and in-flight simulation p 53 N93-19909
Helicopter night vision goggle testing in the United Kingdom p 267 N93-19917
Fly-by voice, a technology demonstration p 105 N93-19918
An improved method of structural dynamic test design for ground flying and its application to the SH-2F and SH-2G helicopters p 54 N93-19928
Flight evaluation of a computer aided low-altitude helicopter flight guidance system p 106 N93-28869
EH101: A new helicopter capable of long range missions p 67 N94-36330
The principles of flight test assessment of flight-safety-critical systems in helicopters [AGARD-AG-300-VOL-12] p 35 N95-14199
Experimental data on the aerodynamic interactions between a helicopter rotor and an airframe p 27 N95-17883
Helicopter internal noise p 301 N95-19144
Particle trajectories in gas turbine engines p 101 N95-19663
The calculation of erosion in a gas turbine compressor rotor p 101 N95-19664
Multilayer anti-erosion coatings p 103 N95-19679
Experimental study of the helicopter-mobile radioelectrical channel and possible extension to the satellite-mobile channel p 181 N95-20945

HELMET MOUNTED DISPLAYS
The evaluation of simulator effectiveness for the training of high speed, low level, tactical flight operations p 113 N92-28539
Developing virtual cockpits p 264 N93-19764
Panoramic cockpit displays p 264 N93-19765
A new concept for helmet mounted vision p 265 N93-19767
A visual of the helmet for the piloting and the day/night navigation of the combat aircraft: Requirements and technical approaches p 38 N93-19768
The MOD (UK) integrated helmet technical demonstrator programme p 265 N93-19769
Head-steered sensor flight test results and implications p 269 N93-28859
The quest for an integrated flying helmet p 269 N93-28860
Oculo-motor responses and virtual image displays p 269 N93-28862
Advanced helmet tracking technology developments for Naval aviation p 279 N94-36623
Advances in helmet trackers p 279 N94-36624
Creation of a virtual world to study human spatial perception during sustained acceleration p 261 N94-37268
The DRA Virtual Cockpit Research Program p 280 N94-37269
Some side-effects of immersion virtual reality p 252 N94-37277
Low cost software-based rendering and stereoscopic interfaces for teleoperation and virtual reality p 287 N94-37279

HELMETS
The MOD (UK) integrated helmet technical demonstrator programme p 265 N93-19769
Multi-function visor p 265 N93-19770
The quest for an integrated flying helmet p 269 N93-28860
3D sound experimental approach: Methodology and preliminary results p 301 N94-37280

HEPATITIS
Clinical types of Hepatitis B p 235 N93-11286
Viral hepatitis in the US Air Force, 1980 - 1989 p 235 N93-11287
Hepatitis A and Hepatitis B: Risks compared to other vaccine preventable diseases and immunization recommendations p 235 N93-11288
Vaccination against Hepatitis B: The Italian strategy p 236 N93-11289
Communicable diseases: A major burden of morbidity and mortality p 238 N93-11300
Immunization of personnel traveling to a destination in tropical countries: French position p 239 N93-11304

HERMES MANNED SPACEPLANE
First experimental assessment of RCS plume-flow field interaction on Hermes leading edge thruster configuration p 125 N94-28032
Software engineering methods in the Hermes on-board software p 284 N94-29326
Aeroacoustic qualification of HERMES shingles p 301 N95-19145

HERMETIC SEALS
The demise of plastic encapsulated microcircuit myths p 185 N95-20640

HETEROGENEITY
QoS driven routing in packet switched networks of multiple transmission media p 176 N95-20923

HEURISTIC METHODS
Search route planning p 38 N92-27900
Computing techniques in mission planning p 294 N94-25012
Knowledge combination and data fusion with application to recognition systems p 287 N94-30513
Improving Multichip Module (MCM) design and reliability using the Intelligent MCM Analyzer p 225 N95-20637

HIERARCHIES
Computing techniques in mission planning p 294 N94-25012
Hierarchical Object Oriented Design (HOOD): Possibilities, limitations, and challenges p 284 N94-29322

HIGH ALTITUDE
High Altitude Long Endurance aircraft design studies p 66 N94-36322
Technological challenges of High Altitude Long Endurance unmanned configurations p 66 N94-36323
Highly survivable communications: Complementary media packet switched networks p 176 N95-20922

HIGH ENERGY PROPELLANTS
Semi-propellants for ducted rockets p 147 N93-17612

HIGH FREQUENCIES
Propagation effects on HF direction finding p 158 N93-23602
New method of modelling the mesoscale structure of the ionosphere with a single sensor. Impact on HF radio-location p 158 N93-23603
The spatial and temporal characteristics of high frequency auroral backscatter p 158 N93-23604
The relative importance of meteor burst and other distance polar cap propagation modes in the low VHF band p 177 N95-20928
Propagation of high frequency waves in urban and road tunnel environments p 178 N95-20933
DAMSON: A system to measure multipath dispersion, Doppler spread and Doppler shift on multi-mechanism communications channels p 183 N95-20955
Identification of the propagation modes and paths on HF links using a goniopolarimeter p 183 N95-20956
Geographical diversity combining to exploit multi-mechanism propagation p 183 N95-20957
Measurements of angles of elevation of HF by a high resolution method using polarization diversity p 184 N95-20959

HIGH POWER LASERS
Pointing and tracking concept for a high energy laser weapon application p 222 N94-36619

HIGH PRESSURE
CF6-6 high pressure compressor stage 5 locking slot crack propagation spin pit test p 81 N93-14894
Heat transfer and aerodynamics of a 3D design nozzle guide vane tested in the Pyestock Isentropic Light Piston Facility p 84 N93-29928
Combustion technology needs for advanced high pressure cycle engines p 139 N94-29248
Computational and experimental results in high pressure combustions of H2/air and H2/O2/H2O p 140 N94-29268
Pollutant emissions from and within a model gas turbine combustor at elevated pressures and temperatures p 141 N94-29271
Chambers of turboreactors with variable geometry: A response to the matrix of pollution in cycles at high temperature, high pressure p 141 N94-29273
Advanced concepts for next generation small gas turbine engine compressors p 95 N94-34443
Advanced small high pressure ratio centrifugal compressor p 95 N94-34444
Flow field analysis in a high pressure ratio centrifugal compressor p 206 N94-34447
Twin engine afterbody model p 27 N95-17880

HIGH RESOLUTION
ROSE: A high resolution, amplitude coded, high frequency oblique ionosonde p 230 N92-22800
Higher order upwind finite volume schemes with ENO-properties for general unstructured meshes p 192 N92-27678
Motion errors and compensation possibilities p 155 N93-13052
A current assessment of single site locating technology p 159 N93-23608
High resolution sampled aperture array direction finding at HF p 160 N93-23611
Radio location through high resolution eigenstructure processing techniques that yield accurate multipath AOA and differential time delay estimates p 162 N93-23626

HIGH REYNOLDS NUMBER
Experimental and computational comparisons of Mach 6 high Reynolds number heat transfer and skin friction p 10 N94-10443
High Reynolds number configuration development of a high-lift airfoil p 15 N94-18424
Asymptotic approaches to transition modelling p 205 N94-33887
Detailed study at supersonic speeds of the flow around delta wings p 24 N95-17861
Subgrid scale models in finite difference simulations of complex wall bounded flows p 212 N95-21063
The asymptotic state of rotating homogeneous turbulence at high Reynolds numbers p 213 N95-21065

HIGH SPEED
High speed local area networks p 154 N92-28087
Identifying the principal noise sources of fixed-wing combat aircraft in high-speed flight p 299 N93-10686
Two-dimensional 16.5 percent thick supercritical airfoil NLR 7301 p 22 N95-17854
A wideband propagation simulator for high speed mobile radio communications p 179 N95-20934

HIGH STRENGTH
Innovative constituents requirements to improve composites compressive strength p 127 N92-33043

HIGH STRENGTH ALLOYS
Substantiating powder metal life methodologies for engines p 225 N94-37330

HIGH TEMPERATURE
High temperature fuel requirements and payoffs p 148 N94-29259
Fuel injector design for high temperature aircraft engine p 91 N94-29263
Pollutant emissions from and within a model gas turbine combustor at elevated pressures and temperatures p 141 N94-29271
Chambers of turboreactors with variable geometry: A response to the matrix of pollution in cycles at high temperature, high pressure p 141 N94-29273
Damage of high temperature components by dust-laden air p 102 N95-19673
New Trends in coatings developments for turbine blades: Materials processing and repair p 103 N95-19676
X-ray absorption spectroscopy in high temperature oxidation of metals and alloys p 144 N95-19682

HIGH TEMPERATURE AIR
Experimental study of heat transfer close to a plane wall heated in the presence of multiple injections (subsonic flow) p 84 N93-29931

HIGH TEMPERATURE ENVIRONMENTS
RB211-524B disc and drive cones hot cyclic spinning test p 82 N93-14895
The effects of cockpit heat on aviator sleep parameters p 274 N93-32266
The Support of Air Operations under Extreme Hot and Cold Weather Conditions [AGARD-CP-540] p 234 N94-28420
The concept of Royal Navy air operations under extreme environmental conditions p 295 N94-28424
Experimental evaluation of two systems of individual air-conditioning p 251 N94-28450
Recent Canadian advances in active thermal protection p 278 N94-28451

HIGH TEMPERATURE GASES
Experiments into the scaling parameters required for exhaust gas ingestion testing of vertical landing aircraft p 60 N94-28017
Influence of headwind on hot gas reingestion and consideration of pressure ratio scaling p 89 N94-28018
Unsteady aspects of hot gas reingestion and statistical analysis p 89 N94-28019

HIGH TEMPERATURE TESTS
Environmental degradation of high temperature composites p 127 N92-33047
Comparison of computation and experiment for a high enthalpy, heated-driver, shock-tube environment p 11 N94-10447
Metal matrix composites: Analysis of simple specimens and model components under creep and fatigue loading p 136 N94-36661
High-temperature acoustic test facilities and methods p 302 N95-19149
Design and operation of a thermoacoustic test facility p 117 N95-19150

HIGHLY MANEUVERABLE AIRCRAFT
Technologies for Highly Manoeuvrable Aircraft [AD-280271] p 63 N94-34605
USAF/AEDC aerodynamic and propulsion ground test and evaluation techniques for highly maneuverable aircraft: Capabilities and challenges p 63 N94-34606

Aerodynamic design of super maneuverable aircraft p 64 N94-34617
Flying qualities evaluation maneuvers p 64 N94-34623
Operational agility: An overview of AGARD Working Group 19 p 65 N94-34625
Optimal tactics for agile aircraft technology: A differential game methodology p 295 N94-34631

HISTOLOGY
27 years armed forces aerospace pathology and toxicology in the Federal Republic of Germany: Development, current status, trends and challenges p 243 N93-19696
Significance of histological postmortem findings in pilots killed in military and civil aircraft accidents in Germany (West): A 25-year-review p 243 N93-19697

HOLE GEOMETRY (MECHANICS)
RB211-524B disc and drive cones hot cyclic spinning test p 82 N93-14895

HOLES
Erosion of T56 5th stage rotor blades due to bleed hole overtip flow p 101 N95-19666

HOLES (MECHANICS)
Damage progression under compressive loading in composite laminates containing an open hole p 126 N92-33040
RB 199 high pressure compressor stage 3 spin pit tests p 81 N93-14893
F100 second stage fan disk bolthole crack propagation ferris wheel test p 82 N93-14897
Particle deposition in gas turbine blade film cooling holes p 101 N95-19661
Navier-Stokes simulations of the effects of suction holes on a flat plate boundary layer p 218 N95-21094

HOLOGRAPHIC INTERFEROMETRY
The swollen polymer technique and its use for heat transfer investigations on film cooled surfaces p 196 N93-29944

HOLOGRAPHY
A new concept for helmet mounted vision p 265 N93-19767

HOMING DEVICES
A radar signal processing ASIC and a VME interface circuit p 73 N92-28380
The Missle-Borne Integrated Network Demonstration Program p 289 N93-22023

HOMOGENEITY
A virtual sensor for evaporation ducts: The impact of data uncertainties p 229 N92-22799

HOMOGENEOUS TURBULENCE
The asymptotic state of rotating homogeneous turbulence at high Reynolds numbers p 213 N95-21065

HONEYCOMB STRUCTURES
Fracture analysis of BMI system in presence of moisture p 130 N93-21517

HORIZON
Comparative study of C- and K-band propagation mechanisms beyond the horizon p 181 N95-20946

HORSESHOE VORTICES
Separated flow generated by a vectored jet in a crossflow p 201 N94-28007

HOT CORROSION
New Trends in coatings developments for turbine blades: Materials processing and repair p 103 N95-19676
X-ray absorption spectroscopy in high temperature oxidation of metals and alloys p 144 N95-19682
Resistance of silicon nitride turbine components to erosion and hot corrosion/oxidation attack p 104 N95-19683

HOT ISOSTATIC PRESSING
Manufacture and properties of sigma fibre reinforced titanium p 135 N94-36655
Properties of TMC processed by fibre coating and hiping p 135 N94-36656

HOT-WIRE ANEMOMETERS
Effects of free-stream turbulence on a jet in a cross flow p 203 N94-28036

HTPB PROPELLANTS
ESD traits of bulk propellant under pressure p 147 N92-33242
Development of a minimum smoke propellant based on glycidyl azide polymer and ammonium nitrate p 147 N92-33243

HUMAN BEHAVIOR
The next generation female in cockpit: Do we need a new approach to cockpit resource management (CRM)? p 263 N93-19704
Gremlins: A dozen hazardous thought and behavior patterns as risk factors p 260 N93-19709
Nutritional and lifestyle status of 50 pilots of the Portugese Air Force p 272 N93-32255

HUMAN BEINGS
Absence of protective immunity against diphtheria in a large proportion of young adults p 238 N93-11302

HUMAN BODY
Is axial loading a primary mechanism of injury to the lower limb in an impact aircraft accident? p 242 N93-19664
Design/development of an enhanced biodynamic manikin p 262 N93-19667
Improving manikin biofidelity p 262 N93-19668
The design and use of automotive crash test dummies p 262 N93-19669
A new instrumentation system for measuring the dynamic response of the human head/neck during impact acceleration p 263 N93-19672

HUMAN CENTRIFUGES
G-tolerance and spatial disorientation: Can simulation help us? p 234 N92-28534
Application of centrifuge based dynamic flight simulation to enhanced maneuverability RDT/E p 116 N94-34630
Attenuating the disorienting effects of head movement during whole-body rotation using a visual reference: Further tests of a predictive hypothesis p 252 N94-37276

HUMAN FACTORS ENGINEERING
A teamwork model of pilot aiding: Psychological principles for mission management systems design p 292 N92-27893
Status of automatic guidance systems for rotorcraft in low altitude flight p 37 N92-27894
Aircraft Accidents: Trends in Aerospace Medical Investigation Techniques
[AGARD-CP-532] p 30 N93-19653
Human factors in aircraft accident investigation p 30 N93-19654
How do we investigate the human factor in aircraft accidents? p 30 N93-19655
A method for investigating human factor aspects of military aircraft accidents p 30 N93-19656
The human factor problem in the Canadian Forces aviation p 31 N93-19657
Underlying causes of accidents: Casual networks p 31 N93-19658
Aid in investigation by figure animation p 31 N93-19659
Assessment of morale in Turkish Air Force pilots with two clinical psychological tests p 259 N93-19660
Occupant simulation as an aspect of flight safety research p 262 N93-19665
Computer aided methods for simulating occupant response to impact using OASYS DYNA3D p 262 N93-19666
Design/development of an enhanced biodynamic manikin p 262 N93-19667
Improving manikin biofidelity p 262 N93-19668
The design and use of automotive crash test dummies p 262 N93-19669
An improved anthropometric test device p 262 N93-19670
The application of Hybrid 3 dummy to the impact assessment of a free-fall lifeboat p 262 N93-19671
A new instrumentation system for measuring the dynamic response of the human head/neck during impact acceleration p 263 N93-19672
Human factors causes and management strategies in US Air Force F-16 mishaps 1984-present p 31 N93-19673
F-16 accidents: The Norwegian experience p 31 N93-19674
Category A F-16 accidents in the Belgian Air Force p 32 N93-19675
Air accidents in the French Air Force p 32 N93-19676
Combat and training aircraft class A mishaps in the Belgian Air Force 1970-1990 p 32 N93-19677
Underlying causes of human error in US Army rotary wind accidents p 32 N93-19678
Epidemiology of United States Air Force spatial disorientation accidents: 1990-1991 p 259 N93-19679
Disorientation and flight safety: A survey of UK Army aircrew p 259 N93-19680
Otolithic illusions on takeoff and visual information: Reflections in connection with an air accident case p 259 N93-19681
Cognitive factors in the air events of the Air Force during the last decade p 259 N93-19682
Effects of medium blood alcohol levels on pilots' performance in the Sea King Simulator MK-41 p 243 N93-19683
Accidents and errors: A review of recent UK Army Air Corps accidents p 34 N93-19701
Gremlins: A dozen hazardous thought and behavior patterns as risk factors p 260 N93-19709
Advanced Aircraft Interfaces: The Machine Side of the Man-Machine Interface

New Advances in Mission Planning and Rehearsal Systems
[AGARD-LS-192] p 293 N94-25008
Human factors of mission planning systems: Theory and concepts p 294 N94-25010
Human factors of mission planning systems: Applications and implementation p 294 N94-25011
Test of a new protection suit in a climatic chamber p 278 N94-28452
Expanding the pilot's envelope p 278 N94-34627
Review of human factors problems related to long distance and long endurance operation of aircraft p 279 N94-36336
Virtual Interfaces: Research and Applications
[AGARD-CP-541] p 260 N94-37261
Task-specific usability requirements for virtual information environments: Interface design and data representation for human operators of complex medical systems p 279 N94-37262
Human factors considerations for remote manipulation p 282 N95-14949
An overall approach of cockpit noise verification in a military aircraft p 303 N95-19163
The concept of aeronautical adaptability as developed by the US Navy p 255 N95-19426

HUMAN IMMUNODEFICIENCY VIRUS
HIV infection in the nineties p 236 N93-11290
AIDS/HIV in the US Military p 236 N93-11291
Estimates of Human Immunodeficiency Virus (HIV) incidence and trends in the US Air Force p 236 N93-11292
Silent HIV infection p 236 N93-11293
HIV variability and perspectives of a vaccine p 237 N93-11294
Immunological parameters in current and former US Air Force personnel p 237 N93-11295
Early markers of HIV infection and subclinical disease progression p 237 N93-11296
Analysis of disease progression from clinical observations of US Air Force active duty members infected with the Human Immunodeficiency Virus: Distribution of AIDS survival time from interval censored observations p 237 N93-11297
Relating cognitive function to military aviator performance in early HIV infection p 238 N93-11298

Neuropsychiatric morbidity in early HIV disease: Implications for military occupational function p 238 N93-11299
Clinical basis for aeromedical decisions in aircrew HIV positive p 258 N95-19440

HUMAN PATHOLOGY
Allergic, Immunological and Infectious Disease Problems in Aerospace Medicine [AGARD-CP-518] p 235 N93-11283
Aeropathological diagnosis of lethal hypothermia p 250 N94-28440

HUMAN PERFORMANCE
Neuropsychiatric morbidity in early HIV disease: Implications for military occupational function p 238 N93-11299
Underlying causes of human error in US Army rotary wind accidents p 32 N93-19678
Cognitive factors in the air events of the Air Force during the last decade p 259 N93-19682
Effects of medium blood alcohol levels on pilots' performance in the Sea King Simulator MK-41 p 243 N93-19683
Helicopter accidents over water in the national navy: Epidemiological study over the period 1980-1991 p 32 N93-19686
Accidents and errors: A review of recent UK Army Air Corps accidents p 34 N93-19701
The influence of individual sensivity to stress on the behavior (attitude and performance) of avoidance of an accident p 260 N93-19705
Human factors problems for aircrew-aircraft interfaces: Where should we focus our efforts? p 263 N93-19759
Human capabilities and limitations in situation awareness p 269 N93-28863
Human factors of mission planning systems: Theory and concepts p 294 N94-25010
Deterioration of manual performance in cold and windy climates p 249 N94-28434
Cognitive approach to specifications on air traffic controllers' decision assistance systems p 43 N94-29571
Virtual Interfaces: Research and Applications [AGARD-CP-541] p 260 N94-37261
3D sound experimental approach: Methodology and preliminary results p 301 N94-37280

HUMAN REACTIONS
Human noise exposure criteria for combat aircraft training areas p 297 N93-10670
Noise emission of low flying military airplanes p 297 N93-10675
Boom and the problems related to the supersonic flights of military aircraft p 298 N93-10677
Occupant simulation as an aspect of flight safety research p 262 N93-19665
Human factors problems for aircrew-aircraft interfaces: Where should we focus our efforts? p 263 N93-19759
Is the pilot fit for flying after an accident? p 255 N95-19425

HUMAN TOLERANCES
Human noise exposure criteria for combat aircraft training areas p 297 N93-10670
Noise of combat aircraft in proximity to air bases: Review of the possibilities of noise reduction at the source p 297 N93-10671
Noise emission of low flying military airplanes p 297 N93-10675
Medical support for British operations in the Antarctic p 248 N94-28421
Biochemical enhancement of cold tolerance p 249 N94-28427

HUMAN-COMPUTER INTERFACE
Air Vehicle Mission Control and Management [AGARD-CP-504] p 1 N92-27887
A teamwork model of pilot aiding: Psychological principles for mission management systems design p 292 N92-27893
Status of automatic guidance systems for rotorcraft in low altitude flight p 37 N92-27894
Knowledge-based planning for controlled airspace flight operation as part of a cockpit assistant p 37 N92-27895
Parallel knowledge based systems architectures for in-flight mission management p 38 N92-27904
Implementation and operational experience with a new arrival traffic management system at the Frankfurt ATC-Center p 38 N92-27905
Intelligent gateways p 308 N92-32184
Hypertext and hypermedia systems in information retrieval p 309 N92-32188
Principles for integrating voice I/O in a complex interface p 265 N93-19774
A systems approach to the advanced aircraft man-machine interface p 266 N93-19776
Combat Automation for Airborne Weapon Systems: Man/Machine Interface Trends and Technologies [AGARD-CP-520] p 268 N93-28850
A new class of mission support for combat air-crew p 293 N93-28854
The design and development of the new RAF standard HUD format p 268 N93-28856
Advances in development capabilities for intelligent air traffic management systems p 41 N94-29559
Intelligent systems for air space control and management p 41 N94-29560
Use of advanced technologies in ATM (air traffic management) domain p 41 N94-29561
ACCS Surveillance Exploratory Prototype (ASEP) p 170 N94-29566
Decision Making Aids (DMA) in on-line ATC systems p 43 N94-29570
Considerations on graphical user interfaces for intelligent ATM support systems p 43 N94-29572
Virtual Interfaces: Research and Applications [AGARD-CP-541] p 260 N94-37261
Task-specific usability requirements for virtual information environments: Interface design and data representation for human operators of complex medical systems p 279 N94-37262
On the feasibility of virtual environments in medicine p 279 N94-37264
Interactive large screen: A multi-mode dialogue tool for future cockpits p 280 N94-37266
Virtual reality evolution or revolution p 280 N94-37270
A non-intrusive way to measure point-of-gaze p 280 N94-37272
Operator gaze position control interfaces: Investigation of psychophysical and operational parameters p 281 N94-37273
Visual accommodation to virtual image displays when knowledge of object distance conflicts with optical distance p 261 N94-37278
Low cost software-based rendering and stereoscopic interfaces for teleoperation and virtual reality p 287 N94-37279

HYBRID NAVIGATION SYSTEMS
Silicon accelerometer for AHRS and hybrid navigation systems p 220 N93-22786

HYDRATION
Nutrition and hydration status of aircrew members consuming an improved survival ration during a simulated survival scenario p 249 N94-28429
Effects of three hydration beverages on exercise performance during 60 hours of simulated desert exposure p 250 N94-28448

HYDRAULIC ANALOGIES
Verification of multidisciplinary models for turbomachines p 99 N95-19025

HYDRAULIC EQUIPMENT
The industrial use of CFD in the design of turbomachinery p 207 N95-14133

HYDRAULIC JETS
Large Aircraft Robotic Paint Stripping (LARPS) system and the high pressure water process p 151 N94-10623
Aquastrip (tm): An innovative paint removal technology p 151 N94-10625

HYDROCARBON COMBUSTION
Prediction of prompt NO(x) in hydrocarbon air flames p 139 N94-29250
Simulation of pollutant formation in turbulent combustors using an extended coherent flame model p 139 N94-29251
Numerical prediction of turbulent sooting diffusion flames p 140 N94-29253
Time-resolved measurements in a three dimensional model combustor p 204 N94-29283
A flamelet model for turbulent unpremixed combustion p 143 N95-21081

HYDROCARBONS
A flamelet model for turbulent unpremixed combustion p 143 N95-21081

HYDRODYNAMICS
Combustion instabilities in a side-dump model ramjet combustor p 82 N93-17613
A flamelet model for turbulent unpremixed combustion p 143 N95-21081

HYDROGEN
Effects of hydrogen addition on pollutant emissions in a gas turbine combustor p 141 N94-29275

HYDROGEN FUELS
Computational and experimental results in high pressure combustions of H2/air and H2/O2/H2O p 140 N94-29268
Research and development of ramjets/ramrockets. Part 3: The study of gaseous hydrogen ram combustors p 93 N94-29298

HYDROLOGY
Radiometric calibration of SAR systems p 155 N93-13055

HYDROMETEORS
Clear-air wind profilers as cloud monitors and hydrometeor identifiers p 233 N92-22819
Effects of hydrometeors and atmospheric gases at SHF/EHF p 176 N95-14835

HYGROSCOPICITY
Gas turbine compressor corrosion and erosion in Western Europe p 103 N95-19678

HYPERBOLIC DIFFERENTIAL EQUATIONS
Higher order upwind finite volume schemes with ENO-properties for general unstructured meshes p 192 N92-27678

HYPERSONIC AIRCRAFT
Trajectory optimization for hypersonic aircraft guidance p 37 N92-27898
Integration of turbo-ramjet engines for hypersonic aircraft p 81 N93-13230
Numerical investigation of thrust vectoring by injection of secondary air into nozzle flows p 202 N94-28013

HYPERSONIC BOUNDARY LAYER
Stability of hypersonic boundary-layer flows with chemistry p 11 N94-10451

HYPERSONIC FLIGHT
Aerothermodynamics of nozzle flows for advanced hypersonic propulsion systems p 189 N92-27478
Application of finite element method to hypersonic nozzle flow computations p 189 N92-27479
Hypersonic propulsion system force accounting p 80 N93-13229
In-flight evaluation of aerodynamic predictions of an air-launched space booster p 9 N94-10427
Experiments on interaction force of jets in hypervelocity cross-flow in a shock tunnel p 17 N94-28022
Introduction and overview of research and development of solid propellant ramrockets, liquid fuel ramjets and experimental hydrogen ram combustors p 92 N94-29292
Turboramjet engines: Types and performances p 92 N94-29293

HYPERSONIC FLOW
CFD contributions during hypersonic airplane intake design p 188 N92-27472
Nonequilibrium 3D flows of air through inlets p 190 N92-27487
Numerical analysis of converging-diverging nozzle flows in chemical non-equilibrium p 191 N92-27489
Special Course on Unstructured Grid Methods for Advection Dominated Flows [AGARD-R-787] p 191 N92-27671
Theoretical and Experimental Methods in Hypersonic Flows [AGARD-CP-514] p 8 N94-10421
CFD analysis of hypersonic, chemically reacting flow fields p 8 N94-10422
Numerical simulation of the flow through a scramjet engine p 89 N94-10425
New hypersonic test methods developed at ONERA: The R5 and F4 wind tunnels p 55 N94-10429
The high enthalpy facilities HEG and TH 2 in Germany p 116 N94-10430
Local measurement of temperatures and concentrations: A review for hypersonic flows p 9 N94-10434
Velocity measurements in hypersonic flows: A review p 9 N94-10436
Flow visualization and spectroscopy in hypersonic flows: New trends p 305 N94-10437
Thermal flux measurements in hypersonic flows: A review p 220 N94-10438
A CFD validation roadmap for hypersonic flows p 198 N94-10439
Synthesis of the Workshop on Hypersonic Flows for ReEntry Problems p 9 N94-10440
Problems in the validation of CFD codes through comparison with experiment p 198 N94-10441
Flow development in a circular pipe in the UTIAS/RPI M = 8.3 gun tunnel p 10 N94-10442
Experimental and computational comparisons of Mach 6 high Reynolds number heat transfer and skin friction p 10 N94-10443
Experimental, analytical, and computational methods applied to hypersonic compression ramp flows p 10 N94-10444
Issues and approach to develop validated analysis tools for hypersonic flows: One perspective p 11 N94-10446
Three-dimensional hypersonic rarefied flow calculations using direct simulation Monte Carlo method p 11 N94-10449
Stability of hypersonic flow over a blunt body p 11 N94-10450
On the instability of hypersonic flow past a pointed cone: Comparison of theoretical and experimental results at Mach 8 p 12 N94-10453
Studies of hypersonic viscous flows p 12 N94-10454
Nonequilibrium hypersonic flow in a wind-tunnel nozzle p 12 N94-10456
Some experimental study and numerical simulation in wind tunnel flow p 12 N94-10457
Hypersonic multi block flow simulations around space vehicles including non-equilibrium chemistry p 12 N94-10460
Hypersonic flow computations around re-entry vehicles p 13 N94-10461
On the accuracy and efficiency of CFD methods in real gas hypersonics p 13 N94-10462

A comparison of high resolution upwind solvers on 3-D inviscid hypersonic flows p 13 N94-10463
Thermal and chemical non equilibrium hypersonic flow computations p 13 N94-10465
Special course on Shock-Wave/Boundary-Layer Interactions in Supersonic and Hypersonic Flows [AGARD-R-792] p 198 N94-15196
Swept shock wave/laminar boundary layer interactions, experimental, and numerical results p 199 N94-15198
Unsteady phenomena in shock wave/boundary layer interaction p 199 N94-15200
Computational and Experimental Assessment of Jets in Cross Flow [AGARD-CP-534] p 200 N94-28003
Control jets in interaction with hypersonic rarefied flow p 122 N94-28020
Comparison of the interactions of two and three dimensional transverse jets with a hypersonic free stream p 17 N94-28021

HYPERSONIC FORCES
Hypersonic propulsion system force accounting p 80 N93-13229

HYPERSONIC NOZZLES
Application of finite element method to hypersonic nozzle flow computations p 189 N92-27479
Theoretical and Experimental Methods in Hypersonic Flows [AGARD-CP-514] p 8 N94-10421
A CFD-based aerodynamic design procedure for hypersonic wind-tunnel nozzles p 116 N94-10458

HYPERSONIC REENTRY
Synthesis of the Workshop on Hypersonic Flows for ReEntry Problems p 9 N94-10440
Local aerothermal problems during Hermes re-entry p 13 N94-10464

HYPERSONIC SHOCK
Hypersonic shock wave boundary layer interactions over simplified deflected control surface configurations p 200 N94-15203

HYPERSONIC SPEED
Experimental results in aerodynamic stability and control of a TSTO configuration p 106 N94-10424
Control effectiveness at hypersonic speeds p 106 N94-10426

HYPERSONIC TEST APPARATUS
Recommendations for future research in hypersonic instrumentation p 9 N94-10433
Velocity measurements in hypersonic flows: A review p 9 N94-10436
Flow visualization and spectroscopy in hypersonic flows: New trends p 305 N94-10437

HYPERSONIC VEHICLES
CFD contributions during hypersonic airplane intake design p 188 N92-27472
Trajectory optimization for hypersonic aircraft guidance p 37 N92-27898
The dual combustor ramjet: A versatile propulsion system for hypersonic tactical missile applications p 123 N93-17611
Problems in the validation of CFD codes through comparison with experiment p 198 N94-10441
Joint computational and experimental aerodynamic research on a hypersonic vehicle p 10 N94-10445
Numerical methods for aerothermodynamic design of hypersonic space transport vehicles p 119 N94-10459
Applications of Titanium Matrix Composite to large airframe structure p 135 N94-36651
Methodologies for thermal and mechanical testing of TMC materials p 136 N94-36659
Thermo-acoustic fatigue design for hypersonic vehicle skin panels p 229 N95-19161

HYPERSONIC WIND TUNNELS
Experimental results in aerodynamic stability and control of a TSTO configuration p 106 N94-10424
New hypersonic test methods developed at ONERA: The R5 and F4 wind tunnels p 55 N94-10429
Pressure and force measurements on models set in hypersonic flows: A review p 9 N94-10435
Calculations of viscous nonequilibrium flows in nozzles p 12 N94-10455
Some experimental study and numerical simulation in wind tunnel flow p 12 N94-10457

HYPERSONICS
Recommendations for future research in hypersonic instrumentation p 9 N94-10433
Some problems of scramjet propulsion for aerospace planes. Part 2: Scramjet: Development and test problems p 93 N94-29301

HYPERTENSION
Arterial hypertension and the aviator p 248 N94-23328

HYPERTHERMIA
The Support of Air Operations under Extreme Hot and Cold Weather Conditions [AGARD-CP-540] p 234 N94-28420
Thermoregulation in the extreme cold environment p 250 N94-28438

HYPERVELOCITY FLOW
Real gas and surface transpiration effects upon swept leading edge high speed flow including transition p 11 N94-10452
Experiments on interaction force of jets in hypervelocity cross-flow in a shock tunnel p 17 N94-28022

HYPERVENTILATION
Emergency underwater breathing aids for helicopter passengers and crew p 277 N94-28437

HYPOGLYCEMIA
Idiopathic Reactive Hypoglycemia in a population of healthy trainees of an Italian Air Force military school p 272 N93-32248

HYPOKINESIA
Protein requirements in hypoxia or hypokinesia p 271 N93-32244

HYPOTHERMIA
The Support of Air Operations under Extreme Hot and Cold Weather Conditions [AGARD-CP-540] p 234 N94-28420
Fuelling shivering in humans during cold water immersion p 249 N94-28426
Biochemical enhancement of cold tolerance p 249 N94-28427
Treatment of mild immersion hypothermia by body-to-body and forced-air warming p 249 N94-28428
Advanced integrated cold protection for aircrew p 277 N94-28436
Emergency underwater breathing aids for helicopter passengers and crew p 277 N94-28437
Thermoregulation in the extreme cold environment p 250 N94-28438
Physiological investigations of the isolated rat's liver in hypothermia and hypoxia and their relevance in aircraft incidents above the sea p 234 N94-28439
Aeropathological diagnosis of lethal hypothermia p 250 N94-28440
Rewarming methodologies in the field p 250 N94-28441
A comparison of four methods of rewarming individuals cooled by immersion in cold water p 250 N94-28442

HYPOXIA
Protein requirements in hypoxia or hypokinesia p 271 N93-32244
Physiological investigations of the isolated rat's liver in hypothermia and hypoxia and their relevance in aircraft incidents above the sea p 234 N94-28439

I

ICE
Clear-air wind profilers as cloud monitors and hydrometeor identifiers p 233 N92-22819
Paint removal and surface cleaning using ice particles p 151 N94-10626
Propagation modeling of moist air and suspended water/ice particles at frequencies below 1000 GHz p 170 N94-30497
Ice-impact analysis of blades p 102 N95-19672

ICE ENVIRONMENTS
Evaluation of life support equipment during an unsupported North Pole expedition p 276 N94-28422
Thermoregulation in the extreme cold environment p 250 N94-28438

ICE PREVENTION
Icing: Accretion, detection, protection p 36 N95-14897

IDENTIFYING
Naval target classification and designation with the CL-227 Sea Sentinel p 74 N92-32449
RAFALE: Progress of the program p 52 N93-19905

ILLUSIONS
Otolithic illusions on takeoff and visual information: Reflections in connection with an air accident case p 259 N93-19681
Night vision goggle illusions and visual training p 276 N94-23984

IMAGE ANALYSIS
Target cuing: A heterogeneous neural network approach p 288 N92-32442
Sensing and interpretation of 3-D shape and motion p 288 N93-13240
Building and using scene representations in image understanding p 289 N93-13241
The 3-D computer vision techniques for object following and obstacle avoidance p 289 N93-13245
The interaction region associated with twin jets and a normal crossflow p 201 N94-28009

IMAGE ENHANCEMENT
Image enhancement of infrared uncooled focal plane array imagery p 304 N92-32441

IMAGE INTENSIFIERS
Helicopter night vision goggle testing in the United Kingdom p 267 N93-19917
Night vision devices and characteristics p 276 N94-23982
Night vision goggle illusions and visual training p 276 N94-23984

IMAGE MOTION COMPENSATION
Multi-window registration algorithm for automatic detection and tracking of moving targets p 283 N93-22022

IMAGE PROCESSING
Target detection using co-occurrence matrix segmentation and its hardware implementation p 283 N92-32443
Methods of opto-electronic fusion of infrared and visible images p 304 N92-32444
Automatic detection, pursuit, and classification in infrared imagery p 304 N92-32445
Fundamentals and Special Problems of Synthetic Aperture Radar (SAR) [AGARD-LS-182] p 154 N93-13049
SAR peculiarities, ambiguities and constraints p 155 N93-13051
Special SAR techniques and applications p 156 N93-13059
Advanced cockpit-mission and image management p 264 N93-19760
Adaptive autonomous target cuer p 267 N93-19784
Advances in automatic electro-optical tracking systems p 305 N93-22020
System evaluation of a fiber optic guided missile with a simple guidance addition to improve system effectiveness p 305 N93-22025
Localization system based on data merging of images and inertia p 162 N93-23623
Airside ground movements surveillance p 46 N94-29585
On the feasibility of virtual environments in medicine p 279 N94-37264

IMAGE RESOLUTION
Motion errors and compensation possibilities p 155 N93-13052
Night vision devices and characteristics p 276 N94-23982
Visual accommodation to virtual image displays when knowledge of object distance conflicts with optical distance p 261 N94-37278

IMAGERY
The role of simulation for the study of APIS (piloting support by synthetic imagery) p 113 N92-28544
Image enhancement of infrared uncooled focal plane array imagery p 304 N92-32441
Target detection using co-occurrence matrix segmentation and its hardware implementation p 283 N92-32443

IMAGES
Mental images p 260 N94-23980

IMAGING RADAR
Polarization effects and multipolarization SAR p 155 N93-13054

IMAGING TECHNIQUES
A review of various techniques for computerized tomographic imaging of the ionosphere p 231 N92-22804
Radar interferometric techniques for investigating field-aligned ionospheric plasma irregularities p 231 N92-22807
Generic modular imaging IR signal processor p 282 N92-32440
Multi-frequency multi-polarization processing for spaceborne SAR p 156 N93-13057
Inverse Synthetic Aperture Radar p 156 N93-13058
Silicon vision: Elementary functions to be implemented on electronic retinas p 289 N93-13242
The 3-D computer vision techniques for object following and obstacle avoidance p 289 N93-13245
A new concept for helmet mounted vision p 265 N93-19767
Calculation of turbulence degraded point spread function of an imaging system p 173 N94-30514
Electronic document delivery: Towards the virtual library p 316 N94-37340

IMMUNE SYSTEMS
Use of novel adjuvants and delivery systems to improve the humoral and cellular immune response to malaria vaccine candidate antigens p 240 N93-11308

IMMUNITY
Mechanisms of immune failure in burn injury p 235 N93-11285
Silent HIV infection p 236 N93-11293
Immunological parameters in current and former US Air Force personnel p 237 N93-11295
Susceptibility in USAF recruits to vaccine preventable diseases p 238 N93-11301
Absence of protective immunity against diphtheria in a large proportion of young adults p 238 N93-11302
Studies of safety, infectivity, and immunogenicity of a new Temperature Sensitive (TS) 51-1 strain of S. typhi as a new live oral typhoid fever vaccine candidate p 239 N93-11306
Recent lessons on the safety and effectiveness of malaria chemoprophylaxis in a non-immune population p 240 N93-11307

Use of novel adjuvants and delivery systems to improve the humoral and cellular immune response to malaria vaccine candidate antigens p 240 N93-11308
Cytokines as vaccine adjuvants: Interleukin 1 and its synthetic peptide 163-171 p 240 N93-11309

IMMUNOASSAY
Early markers of HIV infection and subclinical disease progression p 237 N93-11296
Absence of protective immunity against diphtheria in a large proportion of young adults p 238 N93-11302
The screening of inhalant allergic diseases in the selection of candidates for aircraft piloting p 241 N93-11312
Phadiatop: A screening test for inhalant allergy p 241 N93-11313
In vivo and in vitro diagnosis of allergic respiratory disease during screening procedures in the Italian Navy: Comparative evaluation of a recent quantitative automatized enzyme immunoassay method to dose specific IgE p 241 N93-11314
Allergy screening and follow-up in student pilots of the Belgian Air Force (BAF) p 241 N93-11316

IMMUNOLOGY
Allergic, Immunological and Infectious Disease Problems in Aerospace Medicine [AGARD-CP-518] p 235 N93-11283
Space flight and immune system p 235 N93-11284
Mechanisms of immune failure in burn injury p 235 N93-11285
Clinical types of Hepatitis B p 235 N93-11286
Hepatitis A and Hepatitis B: Risks compared to other vaccine preventable diseases and immunization recommendations p 235 N93-11288
Vaccination against Hepatitis B: The Italian strategy p 236 N93-11289
Silent HIV infection p 236 N93-11293
Immunological parameters in current and former US Air Force personnel p 237 N93-11295
Early markers of HIV infection and subclinical disease progression p 237 N93-11296
Analysis of disease progression from clinical observations of US Air Force active duty members infected with the Human Immunodeficiency Virus: Distribution of AIDS survival time from interval censored observations p 237 N93-11297
Dramatic reduction of meningococcal meningitis among military recruits in Italy after introduction of specific vaccination p 239 N93-11303
Immunization of personnel traveling to a destination in tropical countries: French position p 239 N93-11304
Clinical and immunological response to vaccination with parenteral or oral vaccines in two groups of 30 recruits p 239 N93-11305
Studies of safety, infectivity, and immunogenicity of a new Temperature Sensitive (TS) 51-1 strain of S. typhi as a new live oral typhoid fever vaccine candidate p 239 N93-11306
Recent lessons on the safety and effectiveness of malaria chemoprophylaxis in a non-immune population p 240 N93-11307
Use of novel adjuvants and delivery systems to improve the humoral and cellular immune response to malaria vaccine candidate antigens p 240 N93-11308
Future approaches to vaccine development single-dose vaccines using controlled-release delivery systems p 240 N93-11310

IMPACT
Particle deposition in gas turbine blade film cooling holes p 101 N95-19661

IMPACT ACCELERATION
A new instrumentation system for measuring the dynamic response of the human head/neck during impact acceleration p 263 N93-19672

IMPACT DAMAGE
GARTEUR compression behaviour of advanced CFRP --- carbon fiber reinforced plastics p 127 N92-33042
CFRP stiffened panels under compression p 127 N92-33044
Insensitive Munitions [AGARD-CP-511] p 147 N92-33240
The design features of rocket motors relating to insensitive munition response to thermo-mechanical stimuli p 147 N92-33244
GARTEUR damage mechanics for composite materials: Analytical/experimental research on delaminations p 129 N93-21513
Mode 2 damage development in carbon fibre reinforced plastics p 131 N93-21523
Barely visible damage threshold in a BMI p 131 N93-21524
Repairing delaminations with low viscosity epoxy resins p 132 N93-21532
Numerical determination of the residual strength of battle damaged composite plates p 132 N93-21533
Engine static structures behaviour under impact load using 3D modelling p 227 N94-34464
An airborne monitoring system for FOD and erosion faults p 102 N95-19668
Design of fan blades subjected to bird impact p 102 N95-19669
Impact loading of compressor stator vanes by hailstone ingestion p 102 N95-19670
Soft body impact on titanium fan blades p 102 N95-19671
Ice-impact analysis of blades p 102 N95-19672

IMPACT LOADS
Engine static structures behaviour under impact load using 3D modelling p 227 N94-34464
Impact loading of compressor stator vanes by hailstone ingestion p 102 N95-19670

IMPACT RESISTANCE
Barely visible damage threshold in a BMI p 131 N93-21524

IMPACT TESTS
Design/development of an enhanced biodynamic manikin p 262 N93-19667
Improving manikin biofidelity p 262 N93-19668
The design and use of automotive crash test dummies p 262 N93-19669
The application of Hybrid 3 dummy to the impact assessment of a free-fall lifeboat p 262 N93-19671
A new instrumentation system for measuring the dynamic response of the human head/neck during impact acceleration p 263 N93-19672
Soft body impact on titanium fan blades p 102 N95-19671

IMPELLERS
Advanced concepts for next generation small gas turbine engine compressors p 95 N94-34443
Advanced small high pressure ratio centrifugal compressor p 95 N94-34444
Experimental and computational results from a large low-speed centrifugal impeller p 96 N94-34446
Inverse design of radial flow impellers with prescribed velocity at hub and shroud p 206 N94-34448
Aerodynamic design and investigation of a mixed flow compressor stage p 206 N94-34450
Vibrations of structures with cyclic symmetry: Application to the case of turbine engines p 227 N94-34463

IMPINGEMENT
Local heat transfer measurement with liquid crystals on rotating surfaces including non-axisymmetric cases p 85 N93-29943

IMPULSES
Development of a fast sampling system for estimation of impulse responses of mobile radio channels p 180 N95-20943

IN-FLIGHT MONITORING
Model-based reasoning applied to cockpit warning systems p 266 N93-19778
High precision navigation for flight testing (AERONAV) p 38 N93-19920
In-flight evaluation of aerodynamic predictions of an air-launched space booster p 9 N94-10427
Smart structures: A technology for next generation aircraft p 55 N94-11318
Smart materials for helicopter rotor active control p 55 N94-11321
The Satellite Attack Warning and Assessment Flight Experiment (SAWAFE) p 121 N94-11323
In-flight aircraft structure health monitoring based on smart structures technology p 35 N94-11333
Structural health monitoring using embedded fibre optic sensors p 35 N94-11334
Factors affecting the embedding of optical fibre sensors in advanced composite structures p 134 N94-11336
Aircraft smart structures research in the USAF Wright Laboratory p 134 N94-11343
In-flight pressure distributions and skin-friction measurements on a subsonic transport high-lift wing section p 16 N94-18435
EKG in flight: Usefulness and limits for aircrew rehabilitation p 254 N95-19422

INCLUSIONS
The control of cleanness in powder metallurgy materials for turbine disks p 144 N94-37325

INCOMPRESSIBLE BOUNDARY LAYER
On subcritical instability of the attachment line boundary layer p 217 N95-21092

INCOMPRESSIBLE FLOW
Special Course on Unstructured Grid Methods for Advection Dominated Flows [AGARD-R-787] p 191 N92-27671
Finite element methods for flow problems p 191 N92-27672
Finite element methods for fluids p 191 N92-27673
Finite element computation of unsteady incompressible flows involving moving boundaries and interfaces and iterative solution strategies p 191 N92-27674
Efficient simulation of incompressible viscous flow over multi-element airfoils p 14 N94-18421
A viscous-inviscid solver for high-lift incompressible flows over multi-element airfoils at deep separation conditions p 15 N94-18425
Asymptotic approaches to transition modelling p 205 N94-33887
Parabolized stability equations p 205 N94-33888
Large-eddy simulation of rotating channel flows using a localized dynamic model p 213 N95-21064
The asymptotic state of rotating homogeneous turbulence at high Reynolds numbers p 213 N95-21065
Simulation of separated flows p 213 N95-21068
Simulation of pipe flow p 215 N95-21078
Spatial direct numerical simulation of boundary layer transition under strong adverse pressure gradient p 217 N95-21093

INCOMPRESSIBLE FLUIDS
Subgrid scale models in finite difference simulations of complex wall bounded flows p 212 N95-21063
The asymptotic state of rotating homogeneous turbulence at high Reynolds numbers p 213 N95-21065

INDEXES (DOCUMENTATION)
Document processing p 311 N93-10600
AGARD index of publications, 1989-1991 [AGARD-INDEX-89-91] p 312 N93-10610

INDUSTRIES
Pre-flight risk assessment in Emergency Medical Service (EMS) helicopters p 34 N93-19692
End users: New products and services p 314 N93-31220
Standard Hardware Acquisition and Reliability Program (SHARP) advanced SEM-E packaging p 76 N95-20633

INERTIA
US Army helicopter inertia reel locking failures p 33 N93-19689

INERTIAL GUIDANCE
Localization system based on data merging of images and inertia p 162 N93-23623

INERTIAL NAVIGATION
Flight testing of GPS and GPS-aided systems p 54 N93-19919
The avionic system of the experimental standoff dispenser ADW p 74 N93-22028
Optimization of the integration of inertia and GPS p 39 N93-22787
Integrated precision navigation system p 39 N93-22789
Flight evaluation of differential GPS aided inertial navigation systems p 40 N93-22790
An hierarchic alliance of filters for fault tolerant navigation using two inertial systems with aiding sensors p 40 N93-22793
Flight evaluation of a computer aided low-altitude helicopter flight guidance system p 106 N93-28869
Landing of an unmanned helicopter on a moving platform. High accuracy navigation and tracking p 69 N94-36618

INERTIAL PLATFORMS
Inertial pseudo star reference unit p 306 N94-36625

INERTIAL REFERENCE SYSTEMS
Inertial pseudo star reference unit p 306 N94-36625

INFECTIOUS DISEASES
Allergic, Immunological and Infectious Disease Problems in Aerospace Medicine [AGARD-CP-518] p 235 N93-11283
Communicable diseases: A major burden of morbidity and mortality p 238 N93-11300
Susceptibility in USAF recruits to vaccine preventable diseases p 238 N93-11301
Absence of protective immunity against diphtheria in a large proportion of young adults p 238 N93-11302
Cytokines as vaccine adjuvants: Interleukin 1 and its synthetic peptide 163-171 p 240 N93-11309
Allergic and nonallergic rhinitis in Greek pilots p 242 N93-11317

INFORMATION
Mission planning and mission rehearsal systems: Displays and other interactive techniques p 294 N94-25013

INFORMATION DISSEMINATION
Seminar on Basic Documentation Practices [AGARD-R-788] p 310 N93-10593
National scene in information and documentation activities and recent developments in the Documentation Center of TUBITAK (TURDOK) p 310 N93-10594
Documentation practices: The national scene (Greece) p 310 N93-10595
Scientific and Technical Information (STI) towards technological and industrial development: The case of Portugal p 310 N93-10596
Establishing a scientific and technical information program: Planning and resource management p 310 N93-10597
Acquisition 1: Stock acquisition processes in defence and aerospace documentation centres p 311 N93-10598
Services: User services in defence and aerospace documentation centres p 311 N93-10602
The effect of changes in markets and trade barriers on the exchange of scientific and technical information p 313 N93-31216

Newly available technologies present expanding opportunities for scientific and technical information exchange p 313 N93-31217
Automating multilingual communication p 313 N93-31219
The modern research environment p 314 N93-31221
The management of change: Implications for the information professional p 314 N93-31222
Marketing tools for increasing proactivity in technical information centers
[AGARD-AR-326] p 308 N94-30934
International High Speed Networks for Scientific and Technical Information
[AD-A278021] p 314 N94-37333
Problems of international exchange of scientific and technical information for a Russian aerospace research institute p 316 N94-37339
Providing electronic documents in Europe: Experience of INIST p 316 N94-37341
Electronic journals p 316 N94-37342

INFORMATION FLOW
Management of avionics data in the cockpit p 266 N93-19777
Electronic messaging for the 1990's
[AD-A267143] p 314 N94-15437
Human factors of mission planning systems: Applications and implementation p 294 N94-25011
Mission planning and mission rehearsal systems: Displays and other interactive techniques p 294 N94-25013
The IEEE scalable coherent interface: An approach for a unified avionics network p 77 N95-20650

INFORMATION MANAGEMENT
Airpower planning and battle management training at airbase level p 292 N92-27889
Hypertext and hypermedia systems in information retrieval p 309 N92-32188
Seminar on Basic Documentation Practices
[AGARD-R-788] p 310 N93-10593
National scene in information and documentation activities and recent developments in the Documentation Center of TUBITAK (TURDOK) p 310 N93-10594
Documentation practices: The national scene (Greece) p 310 N93-10595
Scientific and Technical Information (STI) towards technological and industrial development: The case of Portugal p 310 N93-10596
Establishing a scientific and technical information program: Planning and resource management p 310 N93-10597
Acquisition 1: Stock acquisition processes in defence and aerospace documentation centres p 311 N93-10598
Acquisition 2: Procurement, acquisition, and maintenance of configuration management documentation in support of a CIS system p 311 N93-10599
Document processing p 311 N93-10600
Technology for libraries and information centers: A seminar in Greece, Portugal, and Turkey p 311 N93-10601
Services: User services in defence and aerospace documentation centres p 311 N93-10602
Security considerations within military information systems p 311 N93-10603
Information access: A research agenda p 312 N93-19798
The organization and transfer of information p 312 N93-19799
The AGARD tip research agenda for Scientific and Technical Information (STI) p 312 N93-19800
Application of information management methodologies for project quality improvement in a changing environment p 314 N94-29342

INFORMATION RETRIEVAL
Bringing Down the Barriers to Information Transfer
[AGARD-CP-505] p 308 N92-32182
Local Area Networks (LAN) p 282 N92-32183
Intelligent gateways p 308 N92-32184
Use of expert systems as user interfaces in information retrieval p 309 N92-32185
Search strategies in natural language p 309 N92-32186
Non Boolean search methods in information retrieval p 309 N92-32187
Hypertext and hypermedia systems in information retrieval p 309 N92-32188
Seminar on Basic Documentation Practices
[AGARD-R-788] p 310 N93-10593
Document processing p 311 N93-10600
Technology for libraries and information centers: A seminar in Greece, Portugal, and Turkey p 311 N93-10601
A Research Agenda for Scientific and Technical Information
[AGARD-AR-316] p 312 N93-19796
Establishing a research agenda for Scientific and Technical Information (STI): Focus on the user p 312 N93-19797
Information access: A research agenda p 312 N93-19798
The AGARD tip research agenda for Scientific and Technical Information (STI) p 312 N93-19800
End users: New products and services p 314 N93-31220
The modern research environment p 314 N93-31221
Wide area information servers: An executive information system for unstructured files p 317 N94-37345
Information retrieval services on wide area networks: A vision of the future p 317 N94-37346

INFORMATION SYSTEMS
Airpower planning and battle management training at airbase level p 292 N92-27889
Bringing Down the Barriers to Information Transfer
[AGARD-CP-505] p 308 N92-32182
Local Area Networks (LAN) p 282 N92-32183

Standards for data and document interchange p 315 N94-37337
Problems of international exchange of scientific and technical information for a Russian aerospace research institute p 316 N94-37339
Electronic document delivery: Towards the virtual library p 316 N94-37340
Providing electronic documents in Europe: Experience of INIST p 316 N94-37341
Bulletin boards, electronic mail, conferencing, current use by scientists and engineers: Effects on libraries and information centres: Do they have a role? p 316 N94-37343

INFRARED DETECTORS
Infrared Targeting System (IRTS) demonstration p 305 N92-32446

INFRARED IMAGERY
Refractive assessments from satellite observations p 153 N92-22798
Far-infrared characterization of horizontal path image degradation p 153 N92-22814
Methods of opto-electronic fusion of infrared and visible images p 304 N92-32444
Automatic detection, pursuit, and classification in infrared imagery p 304 N92-32445
Automatic feature extraction and localization using data fusion of radar and infrared images p 162 N93-23628
Infrared search and track demonstrator programme p 306 N94-36622

INFRARED RADIATION
Image enhancement of infrared uncooled focal plane array imagery p 304 N92-32441
Target detection using co-occurrence matrix segmentation and its hardware implementation p 283 N92-32443
The influence of the evaporation duct on the angle of arrival and amplitude of the backscattered signal from targets low above the sea p 170 N94-30498
Multispectral transmittance measurements through man-made water fogs p 171 N94-30499
Global approach towards the evaluation of thermal infrared countermeasures p 306 N94-30504
Missile infrared radiation analysis p 306 N95-14449

INFRARED SIGNATURES
An experimental and comprehensive method to measure emission characteristics p 171 N94-30501
Experimental evaluation of camouflage effectiveness in the thermal infrared p 306 N94-30502
Infrared polarization signatures p 172 N94-30506
Missile infrared radiation analysis p 306 N95-14449

INFRARED SPECTROSCOPY
Far-infrared characterization of horizontal path image degradation p 153 N92-22814

INFRARED TRACKING
Pointing and Tracking Systems
[AD-A282573] p 122 N94-36616
Pointing and tracking concept for a high energy laser weapon application p 222 N94-36619
Infrared search and track demonstrator programme p 306 N94-36622
Contact level fusion of radar and IRST contacts on almost electromagnetically silent platform p 174 N94-36634

INGESTION (ENGINES)
Modern transport engine experience with environmental ingestion effects p 100 N95-19660

Experimental and numerical simulations of the effects of ingested particles in gas turbine engines p 101 N95-19662

INHOMOGENEITY
Radar interferometric techniques for investigating field-aligned ionospheric plasma irregularities p 231 N92-22807

INJECTION
Repairing delaminations with low viscosity epoxy resins p 132 N93-21532
Experimental study of heat transfer close to a plane wall heated in the presence of multiple injections (subsonic flow) p 84 N93-29931

INJECTORS
Ducted kerosene spray flames p 142 N94-29276

INJURIES
737-400 at Kegworth, 8 January 1989: The AAIB investigation p 31 N93-19661
Occupant kinematics simulation of the Kegworth air accident p 261 N93-19662
Can injury scoring techniques provide additional information for crash investigators? p 242 N93-19663
Is axial loading a primary mechanism of injury to the lower limb in an impact aircraft accident? p 242 N93-19664
The design and use of automotive crash test dummies p 262 N93-19669
An improved anthropometric test device p 262 N93-19670
The application of Hybrid 3 dummy to the impact assessment of a free-fall lifeboat p 262 N93-19671
US Army's aviation life support equipment retrieval program real world design successes from proactive investigation p 33 N93-19690
An epidemiological study in SAF's pilots ejections p 263 N93-19699
Neuropsychophysiologic sequelae of mild head injury p 256 N95-19430

INLET AIRFRAME CONFIGURATIONS
Aerodynamic Engine/Airframe Integration for High Performance Aircraft and Missiles | AGARD-CP-498 | p 192 N93-13199
Aerodynamic studies of supersonic air intakes p 8 N93-13222

INLET FLOW
Inlet distortion effects in aircraft propulsion system integration p 80 N92-28464
Some aspects of intake design, performance and integration with the airframe p 51 N93-13219
Comparative performance tests of a pitot-inlet in several European wind-tunnels at subsonic and supersonic speeds p 7 N93-13221
Scramjet CFD methods and analysis. Part 1: Scramjet CFD methods. Numerical simulation of the flow in scramjet duct p 92 N94-29296
Flow field analysis in a high pressure ratio centrifugal compressor p 206 N94-34447
The influence of the inlet boundary layers on the secondary losses of turbine stages p 97 N94-34457
Numerical simulation of airfoil film cooling: A jet in crossflow p 206 N94-34462

INLET NOZZLES
ASTOVL model engine simulators for wind tunnel research p 115 N93-13213
Application of subsonic first-order panel methods for prediction of inlet and nozzle aerodynamic interactions with airframe p 8 N93-13223

INLET PRESSURE
Calculation of installation effects within performance computer programs p 80 N92-28465
A novel-high-performance system for recording and analysing instantaneous total pressure distortion in air intakes p 219 N93-13215

INLET TEMPERATURE
The influence of non-uniform spanwise inlet temperature on turbine rotor heat transfer p 84 N93-29932

INSPECTION
Damage detection by Acousto-Ultrasonic Location (AUL) p 224 N93-21529
A Recommended Methodology for Quantifying NDE/NDI Based on Aircraft Engine Experience | AGARD-LS-190 | p 89 N94-11022
Assessment of in-service aircraft fatigue monitoring process p 62 N94-34593
The role of fatigue analysis for design of military aircraft p 62 N94-34594

INSTALLING
Fires on board aircraft: Toxicological risk in flight p 243 N93-19694
Development and flight testing of a surface pressure measurement installation on the EAP demonstrator aircraft p 219 N93-19927
Retrofitting of GPS into existing navigation suites p 39 N93-22788
Calculations used to optimize the installation of civil aircraft engines p 67 N94-36332

INSTRUMENT FLIGHT RULES
Knowledge-based planning for controlled airspace flight operation as part of a cockpit assistant p 37 N92-27895
Pilot intent and error recognition as part of a knowledge based cockpit assistant p 268 N93-28855

INSTRUMENT LANDING SYSTEMS
Ground independent landing system p 42 N94-29564

INSULATION
Design and production of insulated wind tunnel models of the Hermes shuttle for heat transfer measurements at hypersonic speeds p 116 N94-10431

INTAKE SYSTEMS
CFD Techniques for Propulsion Applications | AGARD-CP-510 | p 186 N92-27450
Nonequilibrium 3D flows of air through inlets p 190 N92-27487
Helicopter engine/airframe integration: The way ahead p 61 N94-34433

INTEGRAL ROCKET RAMJETS
Research and development of ramjets/ramrockets. Part 2: Integral liquid fuel ramjets p 93 N94-29297
Research and development of ramjets/ramrockets. Part 3: The study of gaseous hydrogen ram combustors p 93 N94-29298

INTEGRATED CIRCUITS
Applications of silicon hybrid multi-chip modules to avionics p 73 N92-28379
Ultra-Reliable Digital Avionics (URDA) processor p 226 N95-20638
Assuring Known Good Die (KGD) for reliable, cost effective MCMs p 185 N95-20644
Liquid flow-through cooling of electronic modules p 212 N95-20647

INTEGRATED OPTICS
Fiber-optic gyroscope p 219 N92-28092

INTERACTIONAL AERODYNAMICS
Aerodynamic Engine/Airframe Integration for High Performance Aircraft and Missiles | AGARD-CP-498 | p 192 N93-13199
Detailed analysis of wing-nacelle interaction for commercial transport aircraft p 193 N93-13203
Recent developments in low-speed TPS-testing for engine integration drag and installed thrust reversr simulation p 51 N93-13207
Aerodynamic integration of thrust reversers on the Fokker 100 p 51 N93-13208
Water tunnel studies of inlet/airframe interference phenomena p 194 N93-13216
AGARD WG13 aerodynamics of high speed air intakes: Assessment of CFD results p 194 N93-13220
Numerical assessment of aerodynamic interactions on missiles with transverse jets control p 18 N94-28031
First experimental assessment of RCS plume-flow field interaction on Hermes leading edge thruster configuration p 125 N94-28032
Single-engine tail interference model p 26 N95-17879

INTERFERENCE DRAG
Aircraft drag reduction p 2 N92-27709
Single-engine tail interference model p 26 N95-17879

INTERFEROMETERS
A current assessment of single site locating technology p 159 N93-23608

INTERFEROMETRY
Radar interferometric techniques for investigating field-aligned ionospheric plasma irregularities p 231 N92-22807
Fiber-optic gyroscope p 219 N92-28092
The influence of propagation on high frequency radiogoniometry and single station location p 159 N93-23607
Fiber-optic interferometric strain gauge for smart structures applications: First flight tests p 220 N94-11340

INTERLAMINAR STRESS
Three-dimensional elasticity analysis of buckling of laminated plates p 126 N92-33037
Influence of edge effect on compression-tension fatigue of toughened graphite/epoxy laminates p 126 N92-33039
Debonding/Delamination of Composites | AGARD-CP-530 | p 128 N93-21507
Delamination and fatigue of composite materials: A review p 129 N93-21509
Initiation and prevention of edge delamination with and without residual stresses p 129 N93-21510
Edge delamination of composite laminates p 130 N93-21519

INTERLAYERS
Development of a new chemical warfare agent protective material p 276 N94-28432

INTERMETALLICS
Process/composite concurrent tailoring of SiC/Ti composites p 136 N94-36663
Braze repair possibilities for hot section gas turbine parts p 103 N95-19677

INTERMITTENCY
Measurement of turbulent spots and intermittency modelling at gas-turbine conditions p 85 N93-29934

INTERNAL COMBUSTION ENGINES
Propulsion system selection for a High Altitude Long Endurance aircraft p 98 N94-36333

INTERNAL FLOW
Determination of solid/porous wall boundary conditions from wind tunnel data for computational fluid dynamics codes p 211 N95-19266

INTERNAL PRESSURE
Experimental and analytical methods for the determination of connected-pipe ramjet and ducted rocket internal performance | AGARD-AR-323 | p 125 N95-17278

INTERNATIONAL COOPERATION
The Impact of Changing International Relations on the Scientific and Technical Community | AGARD-CP-523 | p 313 N93-31215
The effect of changes in markets and trade barriers on the exchange of scientific and technical information p 313 N93-31216
Problems of international exchange of scientific and technical information for a Russian aerospace research institute p 316 N94-37339
Aircraft and sub-system certification by piloted simulation | AGARD-AR-278 | p 117 N95-17388

INTERNATIONAL RELATIONS
The Impact of Changing International Relations on the Scientific and Technical Community | AGARD-CP-523 | p 313 N93-31215
The effect of changes in markets and trade barriers on the exchange of scientific and technical information p 313 N93-31216

INTERNETS
An introduction to the Internet and its services p 315 N94-37334
Bulletin boards, electronic mail, conferencing, current use by scientists and engineers: Effects on libraries and information centres: Do they have a role? p 316 N94-37343
Wide area information servers: An executive information system for unstructured files p 317 N94-37345
Information retrieval services on wide area networks: A vision of the future p 317 N94-37346

INTERPROCESSOR COMMUNICATION
The IEEE scalable coherent interface: An approach for a unified avionics network p 77 N95-20650

INTERVERTEBRAL DISKS
Clinical practice, diagnosis and therapy of intervertebral disk lesion: Importance to fitness for military flying duties p 257 N95-19435
Spinal nerve syndromes: The need to confirm the diagnosis with neurophysiological examinations p 257 N95-19436

INTOXICATION
Fires on board aircraft: Toxicological risk in flight p 243 N93-19694

INVERSIONS
Identification of delamination by eigenfrequency degradation: An inverse problem p 131 N93-21526

INVISCID FLOW
NLR inviscid transonic unsteady loads prediction methods in aeroelasticity p 5 N92-27947
Calibration of 2D unstructured grid methods on propulsive flowfields p 194 N93-13225
Investigation of the flowfield around an isolated bypass engine with fan and core jet p 195 N93-13227
Numerical simulation of the flow through a scramjet engine p 89 N94-10425
On the accuracy and efficiency of CFD methods in real gas hypersonics p 13 N94-10462
A comparison of high resolution upwind solvers on 3-D inviscid hypersonic flows p 13 N94-10463
The aero-mechanical design of a novel Fowler flap mechanism p 57 N94-18443
Design and aerodynamic performance evaluation of a high-work mixed flow turbine stage p 97 N94-34459
High incidence flow analysis over the Rafale A p 18 N94-34612

ION PLATING
Processing of titanium matrix composites p 135 N94-36653

IONOGRAMS
ROSE: A high resolution, amplitude coded, high frequency oblique ionosonde p 230 N92-22800
The new portable digisonde for vertical and oblique sounding p 230 N92-22801
The effects of multihop HF propagation on the performance of OTH backscatter radars p 183 N95-20953

IONOSONDES
ROSE: A high resolution, amplitude coded, high frequency oblique ionosonde p 230 N92-22800
The new portable digisonde for vertical and oblique sounding p 230 N92-22801
Mapping electron content and electron density in the sub-auroral ionosphere p 231 N92-22805

IONOSPHERIC CONDUCTIVITY
Radiolocation of a satellite-borne LOVHF beacon p 160 N93-23613
ELF propagation highlights p 165 N93-30730

Studies of the propagation of Low Frequency (LF) radio waves p 166 N93-30738

IONOSPHERIC DISTURBANCES

Radar interferometric techniques for investigating field-aligned ionospheric plasma irregularities p 231 N92-22807

Sensing of seismo-electromagnetic earthquake precursor radiation signatures along Southern California fault zones: Evidence of long distance precursor ULF signals observed before a moderate Southern California earthquake episode p 232 N92-22810

The spatial and temporal characteristics of high frequency auroral backscatter p 158 N93-23604

Numerical modeling of the propagation medium at VLF/LF p 164 N93-30729

A long wave TE/TM noise prediction model p 167 N93-30742

IONOSPHERIC ELECTRON DENSITY

A review of various techniques for computerized tomographic imaging of the ionosphere p 231 N92-22804

Radiolocation of a satellite-borne LOVHF beacon p 160 N93-23613

Systematic bearing errors of HF signals observed over a North-South propagation path p 160 N93-23614

Large bearing errors observed at a high latitude DF site p 160 N93-23615

Measurements of the direction of arrival of an oblique chirp sounder signal p 160 N93-23616

Propagation in the ionosphere, B p 175 N95-14827

IONOSPHERIC HEATING

Results of the joint HIPAS/NUWC campaigns to investigate ELF generated by auroral electrojet modulation p 168 N93-30746

IONOSPHERIC PROPAGATION

Remote Sensing of the Propagation Environment | AGARD-CP-502 | p 230 N92-22790

Sensing the ionospheric reflection channel with a sounder p 231 N92-22802

Active remote sensing of the ionosphere and the Earth surface irregularities p 232 N92-22808

Propagation characteristics of the ionospheric transmission window relating to long wave radio location issues p 157 N93-23600

Propagation effects on HF direction finding p 158 N93-23602

New method of modelling the mesoscale structure of the ionosphere with a single sensor. Impact on HF radio-location p 158 N93-23603

The spatial and temporal characteristics of high frequency auroral backscatter p 158 N93-23604

Irregular media effects on radiowave signals used in navigation and positioning systems p 159 N93-23606

Numerical modeling of the propagation medium at VLF/LF p 164 N93-30729

Theoretical and experimental coverage analysis of a VLF transmitter p 165 N93-30734

Studies of the propagation of Low Frequency (LF) radio waves p 166 N93-30738

A long wave TE/TM noise prediction model p 167 N93-30742

Propagation Modelling and Decision Aids for Communications, Radar and Navigation Systems | AGARD-LS-196 | p 174 N95-14825

Propagation in the ionosphere, A p 174 N95-14826

Propagation in the ionosphere, B p 175 N95-14827

Ground wave and diffraction, A p 175 N95-14828

Ground wave and diffraction, B p 175 N95-14829

Sensing of radio refractivity and aerosol extinction p 175 N95-14830

Refractive effects from VHF to EHF. Part A: Propagation Mechanisms p 175 N95-14831

Refractive effects from VHF to EHF. Part B: Propagation models p 175 N95-14832

Temporal and spatial comportment of multiple paths in ionospheric propagation in oblique incidence: Fractal measures of perturbations p 183 N95-20954

Measurements of angles of elevation of HF by a high resolution method using polarization diversity p 184 N95-20959

IONOSPHERIC SOUNDING

Sensing the ionospheric reflection channel with a sounder p 231 N92-22802

Measurements of the direction of arrival of an oblique chirp sounder signal p 160 N93-23616

Angle of arrival characteristics of ionospheric skywave signals p 161 N93-23618

Sensing of radio refractivity and aerosol extinction p 175 N95-14830

IONOSPHERIC TILTS

Propagation effects on HF direction finding p 158 N93-23602

IRREGULARITIES

Ionosphere and troposphere seen through a radio interferometer p 231 N92-22806

The longitudinal occurrence of equatorial F layer irregularities p 158 N93-23605

Mitigation of the effects of F layer regularities by using multiple paths p 182 N95-20951

IRREVERSIBLE PROCESSES

Non Linear Dynamics and Chaos | AGARD-LS-191 | p 307 N94-18236

ISOTROPIC TURBULENCE

Application of Direct and Large Eddy Simulation to Transition and Turbulence | AGARD-CP-551 | p 212 N95-21061

Developments and applications of dynamic models for large eddy simulation of complex flows p 212 N95-21062

The asymptotic state of rotating homogeneous turbulence at high Reynolds numbers p 213 N95-21065

Analysis of subgrid models using direct and large-eddy simulations of isotropic turbulence p 214 N95-21071

Entrainment in a shear-free turbulent mixing layer p 216 N95-21083

ITALY

Vaccination against Hepatitis B: The Italian strategy p 236 N93-11289

Dramatic reduction of meningococcal meningitis among military recruits in Italy after introduction of specific vaccination p 239 N93-11303

ITERATIVE SOLUTION

Finite element computation of unsteady incompressible flows involving moving boundaries and interfaces and iterative solution strategies p 191 N92-27674

J

JAMMERS

Detection of active emitters using triangulation and trilateration techniques: Theory and practice p 160 N93-23612

JAMMING

Communication interference/jamming and propagation analysis system and its application to radio location p 161 N93-23621

Highly survivable communications: Complementary media packet switched networks p 176 N95-20922

A wideband propagation simulator for high speed mobile radio communications p 179 N95-20934

JET AIRCRAFT

Effective cueing during approach and touchdown: Comparison with flight p 115 N92-28552

Experiments into the scaling parameters required for exhaust gas ingestion testing of vertical landing aircraft p 60 N94-28017

Fatigue design, test and in-service experience of the BAe Hawk p 62 N94-34597

JET AIRCRAFT NOISE

Combat Aircraft Noise | AGARD-CP-512 | p 296 N93-10666

Human noise exposure criteria for combat aircraft training areas p 297 N93-10670

Noise of combat aircraft in proximity to air bases: Review of the possibilities of noise reduction at the source p 297 N93-10671

Comparison of flyover noise data from aircraft at high subsonic speeds with prediction p 297 N93-10674

Noise emission of low flying military airplanes p 297 N93-10675

Combat aircraft noise p 298 N93-10676

Boom and the problems related to the supersonic flights of military aircraft p 298 N93-10677

Combat aircraft jet engine noise studies p 298 N93-10679

Supersonic acoustic source mechanisms for free jets of various geometries p 298 N93-10680

Nozzle installation effects on the noise from supersonic exhaust plumes p 299 N93-10681

Combustion noise and combustion instabilities in propulsion systems p 299 N93-10682

Audibility-based annoyance prediction modeling p 299 N93-10683

The prediction of noise radiation from supersonic elliptic jets p 299 N93-10684

Prediction of jet mixing noise for high subsonic flight speeds p 299 N93-10685

Identifying the principal noise sources of fixed-wing combat aircraft in high-speed flight p 299 N93-10686

Measurement and prediction of noise from low-altitude military aircraft operations p 300 N93-10687

Mechanisms of sound generation in subsonic jets p 300 N93-10688

Combat aircraft noise reduction by technical measures p 300 N93-10689

Technical measures for the attenuation of aircraft noise and their applicability to GAF combat aircraft p 300 N93-10690

Study results on combat aircraft source noise reduction p 300 N93-10691

JET BOUNDARIES

A numerical investigation of a subsonic jet in a crossflow p 202 N94-28023

JET CONTROL

Control jets in interaction with hypersonic rarefied flow p 122 N94-28020

Recent developments in the simulation of steady and transient transverse jet interactions for missile, rotorcraft, and propulsive applications p 203 N94-28030

Numerical simulation of airfoil film cooling: A jet in crossflow p 206 N94-34462

Lateral jet control for tactical missiles p 110 N95-14448

JET ENGINE FUELS

Jet fuel absorption and dynamic mechanical analysis of carbon fibre composites p 128 N92-33050

High temperature fuel requirements and payoffs p 148 N94-29259

High temperature resistant jet fuels p 148 N94-29260

Research and development of high thermal stability fuels p 148 N94-29261

Development of global/chemistry model for jet-fuel thermal stability based on observations from static and flowing experiments p 148 N94-29262

The effect of incomplete fuel-air mixing on the lean limit and emissions characteristics of a Lean Prevaporized Premixed (LPP) combustor p 140 N94-29265

Endothermic fuels for hypersonic aviation p 148 N94-29285

JET ENGINES

Combustion for future supersonic transport propulsion p 139 N94-29249

The centrifugal compressor, an essential component of small and medium power engines p 95 N94-34445

Impact of Materials Defects on Engine Structures Integrity | AD-A267718 | p 225 N94-37321

History and prognosis of material discontinuity effects on engine components structural integrity p 225 N94-37322

Pressure distribution measurements on an isolated TPS 441 nacelle p 26 N95-17878

JET EXHAUST

Experiments into the scaling parameters required for exhaust gas ingestion testing of vertical landing aircraft p 60 N94-28017

JET FLOW

Experimental study of heat transfer close to a plane wall heated in the presence of multiple injections (subsonic flow) p 84 N93-29931

Heat transfer in high turbulence flows: A 2-D planar wall jet p 195 N93-29935

Modeling of a turbulent flow in the presence of discrete parietal cooling jets p 87 N93-29960

Computational and Experimental Assessment of Jets in Cross Flow | AGARD-CP-534 | p 200 N94-28003

Fifty years of jet in cross flow research p 200 N94-28004

The interaction region associated with twin jets and a normal crossflow p 201 N94-28009

Experimental data for CFD validation of impinging jets in crossflow with application to ASTOVL flow problems p 201 N94-28010

Experimental investigation of the interaction of a thrust reverser jet with an external subsonic flow p 201 N94-28011

Vectored jets-induced interference on aircraft, prediction and verification p 202 N94-28012

Topological structure of a jet in a cross flow p 202 N94-28014

An experimental study of siphonal jets in a turbulent boundary layer crossflow p 202 N94-28015

Experiments on the ground vortex formed by an impinging jet in cross flow p 202 N94-28016

Predictions of momentum and scalar fields in a jet in cross-flow using first and second order turbulence closures p 203 N94-28025

Navier-Stokes simulation of two and three dimensional jets in crossflow, effects of grid, and boundary conditions p 203 N94-28026

Effects, limits, and limitations of spanwise blowing p 18 N94-28027

Pneumatic management of blunted-forebody flow asymmetry for high-angle-of-attack directional control p 109 N94-28028

Theoretical and experimental investigation of a delta wing with turbulent leading-edge jets p 18 N94-28029

Recent developments in the simulation of steady and transient transverse jet interactions for missile, rotorcraft, and propulsive applications p 203 N94-28030

Numerical assessment of aerodynamic interactions on missiles with transverse jets control p 18 N94-28031

Effects of free-stream turbulence on a jet in a cross flow p 203 N94-28036

Navier-Stokes analysis of a swirling jet in crossflow p 204 N94-28038

Numerical simulation of airfoil film cooling: A jet in crossflow p 206 N94-34462

Lateral jet control for tactical missiles p 110 N95-14448

Numerical simulation of spatially-developing planar jets p 217 N95-21087

Rib vortices in round jets: Direct and large eddy simulation p 217 N95-21088

JET IMPINGEMENT

Nozzle installation effects on the noise from supersonic exhaust plumes p 299 N93-10681

Combustion instabilities in a side-dump model ramjet combustor p 82 N93-17613

Fundamental studies of impingement cooling thermal boundary conditions p 196 N93-29940

Prediction of jet impingement cooling scheme characteristics (airfoil leading edge application) p 196 N93-29941

Experimental data for CFD validation of impinging jets in crossflow with application to ASTOVL flow problems p 201 N94-28010

Experiments on the ground vortex formed by an impinging jet in cross flow p 202 N94-28016

Calculation of single and multiple jets in cross-flow with and without impingement using Reynolds-stress-transport closure p 203 N94-28024

Numerical simulation of spatially-developing planar jets p 217 N95-21087

JET LAG

The effects of an antijet lag diet p 273 N93-32263

Some solutions to reduce the human effects of extended operation times p 251 N94-36339

JET LIFT

Unsteady aspects of hot gas reingestion and statistical analysis p 89 N94-28019

Transitional flight characteristics of a geometrically simplified STOVL model p 61 N94-28035

JET MIXING FLOW

Application of Monte Carlo simulation for three-dimensional flows p 190 N92-27485

The prediction of noise radiation from supersonic elliptic jets p 299 N93-10684

Prediction of jet mixing noise for high subsonic flight speeds p 299 N93-10685

Identifying the principal noise sources of fixed-wing combat aircraft in high-speed flight p 299 N93-10686

Mechanisms of sound generation in subsonic jets p 300 N93-10688

Combat aircraft noise reduction by technical measures p 300 N93-10689

On the development of a film cooling layer p 197 N93-29959

The mixing process in the quenching zone of the rich-lean-combustion concept p 142 N94-29281

Temperature and combustion analysis of combustor with acoustically controlled primary zone air-jet mixing p 143 N94-29284

Scramjet CFD methods and analysis. Part 2: Scramjet CFD analysis. Numerical simulation of supersonic mixing and combustion applied to scramjet combustor p 93 N94-29300

JET NOZZLES

CFD Techniques for Propulsion Applications [AGARD-CP-510] p 186 N92-27450

JET PROPULSION

CFD Techniques for Propulsion Applications [AGARD-CP-510] p 186 N92-27450

Combustion for future supersonic transport propulsion p 139 N94-29249

Twin engine afterbody model p 27 N95-17880

JET THRUST

Experiments on interaction force of jets in hypervelocity cross-flow in a shock tunnel p 17 N94-28022

JOINTS (JUNCTIONS)

Environmental resistance of amorphous bonded thermoplastic joints p 128 N92-33053

Numerical finite element analysis of damage using Monte Carlo techniques p 291 N93-21522

Risk analysis of the C-141 WS405 inner-to-outer wing joint p 62 N94-34592

Reliability assessment of Multichip Module technologies via the Triservice/NASA RELTECH program p 226 N95-20643

JOURNAL BEARINGS

An air bearing system for small high speed gas turbines p 223 N94-34466

JP-4 JET FUEL

Fluid effects: Thermoset and thermoplastic matrix composites p 128 N92-33049

JP-8 JET FUEL

Research and development of high thermal stability fuels p 148 N94-29261

K

K-EPSILON TURBULENCE MODEL

Finite element solution of viscous compressible flows in gas turbine ducts and diffusers p 189 N92-27477

Three dimensional flow in sharp bends --- ducted flow p 190 N92-27481

The 3-D Navier-Stokes flow and temperature field computation for a forced mixer nozzle p 190 N92-27482

Modelling the vaporiser and primary zone flows for a modern gas turbine combustion chamber p 79 N92-27484

Turbulent flow and heat transfer in idealized blade cooling passages p 85 N93-29938

Modeling of a turbulent flow in the presence of discrete parietal cooling jets p 87 N93-29960

Predictions of momentum and scalar fields in a jet in cross-flow using first and second order turbulence closures p 203 N94-28025

Navier-Stokes simulation of two and three dimensional jets in crossflow, effects of grid, and boundary conditions p 203 N94-28026

Recent developments in the simulation of steady and transient transverse jet interactions for missile, rotorcraft, and propulsive applications p 203 N94-28030

Numerical simulation of aerothermal characteristics in gas turbine combustors with complex geometries p 90 N94-29255

Developments and applications of dynamic models for large eddy simulation of complex flows p 212 N95-21062

KALMAN FILTERS

Multivariable frequency response methods for optimal Kalman-Bucy filters with applications to radar tracking systems p 157 N93-22024

Optimization of the integration of inertia and GPS p 39 N93-22787

Flight evaluation of differential GPS aided inertial navigation systems p 40 N93-22790

An hierarchic alliance of filters for fault tolerant navigation using two inertial systems with aiding sensors p 40 N93-22793

Localization system based on data merging of images and inertia p 162 N93-23623

Contact level fusion of radar and IRST contacts on almost electromagnetically silent platform p 174 N94-36634

KENYA

Recent lessons on the safety and effectiveness of malaria chemoprophylaxis in a non-immune population p 240 N93-11307

KEROSENE

High temperature resistant jet fuels p 148 N94-29260

Ducted kerosene spray flames p 142 N94-29276

KINEMATICS

Development and flight testing of the multi-source integration algorithms in the F/A-18 mission computer software p 283 N93-19923

KINETIC ENERGY

The asymptotic state of rotating homogeneous turbulence at high Reynolds numbers p 213 N95-21065

Large-eddy simulation of separated flow in a ribbed duct p 214 N95-21070

Analysis of subgrid models using direct and large-eddy simulations of isotropic turbulence p 214 N95-21071

A cheap DNS tool for turbulence models testing p 214 N95-21072

KINETIC HEATING

Studies of hypersonic viscous flows p 12 N94-10454

KINETICS

Occupant kinematics simulation of the Kegworth air accident p 261 N93-19662

KNOWLEDGE BASED SYSTEMS

Pilot intent and error recognition as part of a knowledge based cockpit assistant p 268 N93-28855

Cognitive interface considerations for intelligent cockpits p 270 N93-28865

Designing and maintaining decision-making processes p 283 N94-29318

Embedded expert system: From the mock-up to the real world p 284 N94-29319

Object oriented design of the autonomous fixtaking management system p 41 N94-29323

Artificial intelligence technology program at Rome Laboratory p 290 N94-29328

Advances in development capabilities for intelligent air traffic management systems p 41 N94-29559

Airside ground movements surveillance p 46 N94-29585

KNOWLEDGE BASES (ARTIFICIAL INTELLIGENCE)

Knowledge-based planning for controlled airspace flight operation as part of a cockpit assistant p 37 N92-27895

Parallel knowledge based systems architectures for in-flight mission management p 38 N92-27904

In flight mission planning in the Copilote Electronique p 295 N94-25015

KNOWLEDGE REPRESENTATION

Knowledge-based planning for controlled airspace flight operation as part of a cockpit assistant p 37 N92-27895

Hypertext and hypermedia systems in information retrieval p 309 N92-32188

L

LABORATORIES

Newly available technologies present expanding opportunities for scientific and technical information exchange p 313 N93-31217

Artificial intelligence technology program at Rome Laboratory p 290 N94-29328

LABYRINTH SEALS

Heat Transfer and Cooling in Gas Turbines [AGARD-CP-527] p 84 N93-29926

Heat transfer and leakage in high-speed rotating stepped labyrinth seals p 86 N93-29951

LAMINAR BOUNDARY LAYER

Aircraft drag reduction p 2 N92-27709

Keynote address: Unsteady, multimode transition in gas turbine engines p 84 N93-29927

Measurement of turbulent spots and intermittency modelling at gas-turbine conditions p 85 N93-29934

Joint computational and experimental aerodynamic research on a hypersonic vehicle p 10 N94-10445

Swept shock wave/laminar boundary layer interactions, experimental, and numerical results p 199 N94-15198

Three-dimensional boundary layer and flow field data of an inclined prolate spheroid p 208 N95-17867

Navier-Stokes simulations of the effects of suction holes on a flat plate boundary layer p 218 N95-21094

Direct numerical simulation of 2-D and 3-D instability waves in a laminar separation bubble p 218 N95-21095

LAMINAR FLOW

Validation of non-orthogonal three-dimensional laminar flow predictions p 189 N92-27476

Special Course on Skin Friction Drag Reduction [AGARD-R-786] p 2 N92-27706

Basic concepts on boundary layers p 2 N92-27707

Laminar-turbulent transition: Fundamentals p 2 N92-27710

Natural laminar flow test in-flight visualization p 8 N93-19921

Study of flow structure in rotating cavities: Numerical predictions of laminar and turbulent, steady, and unsteady flows p 196 N93-29948

Pneumatic management of blunted-forebody flow asymmetry for high-angle-of-attack directional control p 109 N94-28028

Modeling the transition region p 206 N94-33890

Laminar flow studies at Dassault Aviation: Calculations and flight tests p 207 N94-36328

Improvement and validation of an LDV system to perform measurements in laminar supersonic flows p 221 N95-19256

Simulations of bypass transition for spatially evolving disturbances p 215 N95-21079

Direct numerical determination of the minimum bypass Reynolds number in boundary layers p 215 N95-21080

LAMINAR FLOW AIRFOILS

Natural laminar flow test in-flight visualization p 8 N93-19921

LAMINATES

Issues in compression loading of composite structures p 125 N92-33034

A new test method to determine the compressive strength of fiber-reinforced composites p 126 N92-33035

Three-dimensional elasticity analysis of buckling of laminated plates p 126 N92-33037

Influence of edge effect on compression-tension fatigue of toughened graphite/epoxy laminates p 126 N92-33039

Damage progression under compressive loading in composite laminates containing an open hole p 126 N92-33040

Propagation of a delamination in a composite panel subjected to a compression load p 126 N92-33041

CFRP stiffened panels under compression p 127 N92-33044

Fracture surface characteristics of compressive failures in carbon fibre reinforced epoxy laminate subjected to hot/wet conditioning p 128 N92-33051

Debonding/Delamination of Composites [AGARD-CP-530] p 128 N93-21507

Free edge delamination prevention in composite laminates p 129 N93-21508

Initiation and prevention of edge delamination with and without residual stresses p 129 N93-21510

Numerical analysis of the thermoelastic effects in laminated structures and its use in the identification of defects p 129 N93-21511

Predicting failure by debonding/delamination p 129 N93-21512

Progressive delamination in polymer matrix composite laminates: A new approach p 130 N93-21515

Delamination damage and its effect on buckling of laminated cylindrical shells p 130 N93-21516

Fracture analysis of BMI system in presence of moisture p 130 N93-21517

Edge delamination of composite laminates p 130 N93-21519

Synergism between layer cracking and delaminations in MD-laminates of CFRE p 130 N93-21520
Identification of delamination by eigenfrequency degradation: An inverse problem p 131 N93-21526
Investigation of the bond strength of a discrete skin-stiffener interface p 131 N93-21527
Defect analysis using advanced interpretation of the reflected wave during ultrasonic scanning p 224 N93-21528
Damage detection by Acousto-Ultrasonic Location (AUL) p 224 N93-21529
Effect of impacts on CFRP structures, results of a comprehensive test program for practical use p 132 N93-21534
Development of a new chemical warfare agent protective material p 276 N94-28432
Applications of Titanium Matrix Composite to large airframe structure p 135 N94-36651
Residual strength and life prediction techniques for Ti MMC p 136 N94-36662
Prediction of thermal and mechanical stress-strain responses of TMC's subjected to complex TMF histories p 137 N94-36666
Pre-standardisation work on fatigue and fracture testing of titanium matrix composites p 137 N94-36667
ASTM and VAMAS activities in titanium matrix composites test methods development p 137 N94-36668
Acoustic fatigue behaviour of GLARE composites p 303 N95-19160
Reliability assessment of Multichip Module technologies via the Triservice/NASA RELTECH program p 226 N95-20643

LANDING
Integrated and Multi-Function Navigation [AGARD-CP-525] p 39 N93-22780
Visual autonomous automatic landing of airplanes p 40 N93-22791

LANDING AIDS
Scene correlation for INS aiding in flight-test systems: Runway-referenced flight-tests with on-board sensors only p 40 N93-22792

LANDING GEAR
Active landing gear control for improved ride quality during ground roll p 56 N94-11345

LAP JOINTS
Numerical finite element analysis of damage using Monte Carlo techniques p 291 N93-21522

LARGE SPACE STRUCTURES
Adaptive structures for spacecraft: A USAF perspective p 121 N94-11319
Dynamic tests on the NASA Langley CSI evolutionary model p 121 N94-11320
Smart structures at Aastra Corporation p 133 N94-11326
Active damping augmentation of elastomechanical systems using piezoelectric sensors and actuators p 134 N94-11346

LASER ANEMOMETERS
Compact laser Doppler anemometer p 219 N92-22815
The jet behaviour of an actual high-bypass engine as determined by LDA-measurements in ground tests p 80 N93-13218
Experimental and computational results from a large low-speed centrifugal impeller p 96 N94-34446
Transonic and supersonic flowfield measurements about axisymmetric afterbodies for validation of advanced CFD codes p 28 N95-19260

LASER APPLICATIONS
Paint removal activities in the US Navy p 149 N94-10614
Paint removal activities in Canada p 149 N94-10615
Automated Laser Paint Stripping (ALPS) update p 151 N94-10624

LASER BEAMS
Radio refractivity profiles deduced from aerosol lidar measurements [AD-A249074] p 152 N92-22796
Pointing and tracking concept for a high energy laser weapon application p 222 N94-36619
Adaptive optics for laser beamforming in the atmosphere p 222 N94-36621
Propagation Modelling and Decision Aids for Communications, Radar and Navigation Systems [AGARD-LS-196] p 174 N95-14825
Electro-optics: Propagation from IR to UV and sensor considerations. Part A: Propagation theory p 175 N95-14833
Electro-optics: Propagation from IR to UV and sensor considerations. Part B: Tools for exploitation of propagation conditions and system range performance p 176 N95-14834

LASER DOPPLER VELOCIMETERS
Compact laser Doppler anemometer p 219 N92-22815
The jet behaviour of an actual high-bypass engine as determined by LDA-measurements in ground tests p 80 N93-13218
Use of a triaxial laser velocimeter for anemometric calibration on an A340 airbus p 222 N93-19926
Contribution of laser Doppler velocimetry to the physical description of shock wave/turbulent boundary layer interactions with incidence on turbulence modelling p 199 N94-15201
Improvement and validation of an LDV system to perform measurements in laminar supersonic flows p 221 N95-19256
Aerodynamic investigation of the flow field in a 180 deg turn channel with sharp bend p 210 N95-19257
Experimental techniques for measuring transonic flow with a three dimensional laser velocimetry system. Application to determining the drag of a fuselage p 222 N95-19258
Transonic and supersonic flowfield measurements about axisymmetric afterbodies for validation of advanced CFD codes p 28 N95-19260

LASER GUIDANCE
Laser designation pods optimized concept for day/night operations p 222 N94-36620

LASER GYROSCOPES
An overview of optical gyroscopes for navigation p 219 N93-22783

LASER INDUCED FLUORESCENCE
Analysis algorithms for processing ultraviolet fluorescence data p 221 N92-22823
Scalar mixing in the subsonic jet in crossflow p 201 N94-28008

LASER RANGER/TRACKER
Landing of an unmanned helicopter on a moving platform. High accuracy navigation and tracking p 69 N94-36618

LASER TARGET DESIGNATORS
Laser designation pods optimized concept for day/night operations p 222 N94-36620

LASER WEAPONS
Pointing and tracking concept for a high energy laser weapon application p 222 N94-36619

LATERAL CONTROL
Initial validation of a R/D simulator with large amplitude motion p 114 N92-28546
Theoretical and experimental investigation of a delta wing with turbulent leading-edge jets p 18 N94-28029
Numerical assessment of aerodynamic interactions on missiles with transverse jets control p 18 N94-28031
Dynamic tests to demonstrate lateral control using forebody suction on large scale models in the DRA 24 foot wind tunnel p 109 N94-34613
Lateral jet control for tactical missiles p 110 N95-14448

LAUNCH VEHICLES
Air inlet with variable intake section: Application to air breathing launch vehicles p 195 N93-13231
Launch vehicles for lightweight TACSAT deployment p 118 N93-29903
An overview of DARPA's advanced space technology program p 118 N93-29908

LAUNCHERS
Fuzzy guidance system evaluation p 282 N92-27903

LAUNCHING
Potential missile flight performance gains from improvements to the propulsion system p 123 N93-17609
The application of Hybrid 3 dummy to the impact assessment of a free-fall lifeboat p 262 N93-19671

LAY-UP
Manufacture and properties of sigma fibre reinforced titanium p 135 N94-36655

LEAD ZIRCONATE TITANATES
Recent developments in piezoelectric and electrostrictive sensors and actuators for smart structures p 220 N94-11332

LEADING EDGE FLAPS
High-lift design for large civil aircraft p 57 N94-18445
Investigation of the flow development on a highly swept canard/wing research model with segmented leading- and trailing-edge flaps p 26 N95-17876

LEADING EDGE SLATS
Where is high-lift today? A review of past UK research programmes p 1 N94-18416
Experimental investigation of flow around a multielement airfoil p 14 N94-18417
Numerical solution of the Navier-Stokes equations for high-lift configurations on structured composite grids p 14 N94-18423
High Reynolds number configuration development of a high-lift airfoil p 15 N94-18424
A viscous-inviscid solver for high-lift incompressible flows over multi-element airfoils at deep separation conditions p 15 N94-18425
Navier-Stokes simulation of flow field around a blown-flap high-lift system p 16 N94-18429
An experimental investigation of the optimum slat setting on a combat aircraft model p 56 N94-18431
An experimental investigation of attachment-line transition on the slat of a combat aircraft model p 56 N94-18432
Viscous phenomena affecting high-lift systems and suggestions for future CFD development p 16 N94-18433
Forty years of high-lift R/D: An aircraft manufacturer's experience p 1 N94-18441
High-lift design for large civil aircraft p 57 N94-18445
High lift systems for transport aircraft with advanced airfoils p 57 N94-18446

LEADING EDGE SWEEP
Real gas and surface transpiration effects upon swept leading edge high speed flow including transition p 11 N94-10452
Control of leading-edge separation on a cambered delta wing p 109 N94-34616

LEADING EDGE THRUST
Control of leading-edge separation on a cambered delta wing p 109 N94-34616

LEADING EDGES
Prediction of jet impingement cooling scheme characteristics (airfoil leading edge application) p 196 N93-29941
Calculation of maximum and high lift characteristics of multi element aerofoils p 14 N94-18419
Effects, limits, and limitations of spanwise blowing p 18 N94-28027
Theoretical and experimental investigation of a delta wing with turbulent leading-edge jets p 18 N94-28029
First experimental assessment of RCS plume-flow field interaction on Hermes leading edge thruster configuration p 125 N94-28032
Control of leading-edge separation on a cambered delta wing p 109 N94-34616
Two-dimensional high-lift airfoil data for CFD code validation p 23 N95-17859
Wind tunnel test on a 65 deg delta wing with a sharp or rounded leading edge: The international vortex flow experiment p 25 N95-17872
Wind tunnel test on a 65 deg delta wing with rounded leading edges: The International Vortex Flow Experiment p 26 N95-17875
Impact loading of compressor stator vanes by hailstone ingestion p 102 N95-19670
Soft body impact on titanium fan blades p 102 N95-19671
Ice-impact analysis of blades p 102 N95-19672
Direct numerical simulations of leading-edge receptivity for freestream sound p 217 N95-21090

LEAKAGE
A computational study of tip leakage flow and losses in a linear turbine cascade p 186 N92-27453
Heat transfer and leakage in high-speed rotating stepped labyrinth seals p 86 N93-29951

LEAST SQUARES METHOD
Finite element computation of unsteady incompressible flows involving moving boundaries and interfaces and iterative solution strategies p 191 N92-27674
High resolution sampled aperture array direction finding at HF p 160 N93-23611

LECTURES
Cardiopulmonary Aspects in Aerospace Medicine [AGARD-LS-189] p 246 N94-23313
Visual Problems in Night Operations [AGARD-LS-187] p 275 N94-23976
Research and Development of Ram/Scramjets and Turboramjets in Russia [AD-A275588] p 92 N94-29291
Introduction and overview of research and development of solid propellant ramrockets, liquid fuel ramjets and experimental hydrogen ram combustors p 92 N94-29292

LENTICULAR BODIES
Test data on a non-circular body for subsonic, transonic and supersonic Mach numbers p 209 N95-17871

LESIONS
Clinical practice, diagnosis and therapy of intervertebral disk lesion: Importance to fitness for military flying duties p 257 N95-19435
Spinal nerve syndromes: The need to confirm the diagnosis with neurophysiological examinations p 257 N95-19436
Sarcoidosis in US military aviators p 257 N95-19438

LIBRARIES
Seminar on Basic Documentation Practices [AGARD-R-788] p 310 N93-10593
Documentation practices: The national scene (Greece) p 310 N93-10595
Scientific and Technical Information (STI) towards technological and industrial development: The case of Portugal p 310 N93-10596
Acquisition 1: Stock acquisition processes in defence and aerospace documentation centres p 311 N93-10598
Technology for libraries and information centers: A seminar in Greece, Portugal, and Turkey p 311 N93-10601
Services: User services in defence and aerospace documentation centres p 311 N93-10602

Establishing a research agenda for Scientific and Technical Information (STI): Focus on the user p 312 N93-19797
Integrated access to distributed databases through intelligent interfaces p 313 N93-31218
End users: New products and services p 314 N93-31220
The management of change: Implications for the information professional p 314 N93-31222
Marketing tools for increasing proactivity in technical information centers
| AGARD-AR-326 | p 308 N94-30934
International High Speed Networks for Scientific and Technical Information
| AD-A278021 | p 314 N94-37333
An introduction to the Internet and its services p 315 N94-37334
The virtual library: Coming of age p 315 N94-37338
Electronic document delivery: Towards the virtual library p 316 N94-37340
Bulletin boards, electronic mail, conferencing, current use by scientists and engineers: Effects on libraries and information centres: Do they have a role? p 316 N94-37343

LIFE (DURABILITY)
Propulsion and Energetics Panel Working Group 20 on Test Cases for Engine Life Assessment Technology
| AGARD-AR-308 | p 81 N93-14890
Introduction to test cases for engine life assessment technology p 81 N93-14891
LARZAC HP turbine disk crack initiation and propagation spin pit test p 81 N93-14892
RB 199 high pressure compressor stage 3 spin pit tests p 81 N93-14893
CF6-6 high pressure compressor stage 5 locking slot crack propagation spin pit test p 81 N93-14894
F100 second stage fan disk bolthole crack propagation ferris wheel test p 82 N93-14897
In-service considerations affecting component life p 82 N93-14898
The development of an auxiliary power unit for a fighter aircraft p 95 N94-34442
Rotorcraft fatigue life-prediction: Past, present, and future p 228 N94-34590
Damage tolerance management of the X-29 vertical tail p 62 N94-34595
Propulsion system technologies for long range and long endurance aircraft p 98 N94-36334
Characterisation of Fibre Reinforced Titanium Matrix Composites
| AD-A277520 | p 134 N94-36649

LIFE CYCLE COSTS
TICAMS: Telefunken Integrated Computer-Aided Maintenance System p 283 N93-19763
In-flight aircraft structure health monitoring based on smart structures technology p 35 N94-11333
The development of an auxiliary power unit for a fighter aircraft p 95 N94-34442
Aerodynamic shape optimization p 71 N95-16572

LIFE SUPPORT SYSTEMS
US Army's aviation life support equipment retrieval program real world design successes from proactive investigation p 33 N93-19690
Evaluation of life support equipment during an unsupported North Pole expedition p 276 N94-28422

LIFEBOATS
The application of Hybrid 3 dummy to the impact assessment of a free-fall lifeboat p 262 N93-19671

LIFT
Computation of the unsteady transonic 2D cascade flow by an Euler algorithm with interactive grid generation p 4 N92-27944
Investigation of interference phenomena of modern wing-mounted high-bypass-ratio engines by the solution of the Euler-equations p 193 N93-13204
High-Lift System Aerodynamics
| AGARD-CP-515 | p 1 N94-18415
Calculation of maximum and high lift characteristics of multi element aerofoils p 14 N94-18419
Navier-Stokes computations of turbulent flow around high-lift configurations p 14 N94-18420
Efficient simulation of incompressible viscous flow over multi-element airfoils p 14 N94-18421
High Reynolds number configuration development of a high-lift airfoil p 15 N94-18424
Numerical calculations of high lift flows using structured and unstructured methods p 15 N94-18428
Navier-Stokes simulation of flow field around a blown-flap high-lift system p 16 N94-18429
An experimental investigation of the optimum slat setting on a combat aircraft model p 56 N94-18431
Viscous phenomena affecting high-lift systems and suggestions for future CFD development p 16 N94-18433
A study of the use of half-models in high-lift wind-tunnel testing p 16 N94-18434
High lift and the forward swept wing p 57 N94-18436
Wake structure and aerodynamic behavior of high lift aircraft configurations during unsteady maneuvers in ground effect p 17 N94-18439
Viscous-inviscid calculation of high-lift separated compressible flows over airfoils and wings p 17 N94-18440
Forty years of high-lift R/D: An aircraft manufacturer's experience p 1 N94-18441
High-lift research: Application to the design of the ATR72 flap p 57 N94-18442
High-lift design for large civil aircraft p 57 N94-18445
High lift systems for transport aircraft with advanced airfoils p 57 N94-18446
Numerical simulation of a powered-lift landing p 60 N94-28033
Scale effects on aircraft and weapon aerodynamics
| AGARD-AG-323 | p 19 N95-14103
Measurements on a two-dimensional aerofoil with high-lift devices p 21 N95-17848

LIFT DEVICES
High-Lift System Aerodynamics
| AGARD-CP-515 | p 1 N94-18415
Where is high-lift today? A review of past UK research programmes p 1 N94-18416
A design procedure for slotted flaps p 56 N94-18418
Navier-Stokes computations of turbulent flow around high-lift configurations p 14 N94-18420
Navier-Stokes calculations on multi-element airfoils using a chimera-based solver p 14 N94-18422
Numerical solution of the Navier-Stokes equations for high-lift configurations on structured composite grids p 14 N94-18423
High Reynolds number configuration development of a high-lift airfoil p 15 N94-18424
A viscous-inviscid solver for high-lift incompressible flows over multi-element airfoils at deep separation conditions p 15 N94-18425
High-lift system analysis method using unstructured meshes p 15 N94-18426
Prediction of the high-lift performance of multi-element aerofoils using an unstructured Navier-Stokes solver p 15 N94-18427
Numerical calculations of high lift flows using structured and unstructured methods p 15 N94-18428
Navier-Stokes simulation of flow field around a blown-flap high-lift system p 16 N94-18429
The GARTEUR high lift research programme p 16 N94-18430
An experimental investigation of the optimum slat setting on a combat aircraft model p 56 N94-18431
An experimental investigation of attachment-line transition on the slat of a combat aircraft model p 56 N94-18432
Viscous phenomena affecting high-lift systems and suggestions for future CFD development p 16 N94-18433
In-flight pressure distributions and skin-friction measurements on a subsonic transport high-lift wing section p 16 N94-18435
High lift and the forward swept wing p 57 N94-18436
A fast computing method for the flow over high-lift wings p 16 N94-18437
Calculation of multielement airfoils and wings at high lift p 17 N94-18438
Wake structure and aerodynamic behavior of high lift aircraft configurations during unsteady maneuvers in ground effect p 17 N94-18439
Forty years of high-lift R/D: An aircraft manufacturer's experience p 1 N94-18441
High-lift research: Application to the design of the ATR72 flap p 57 N94-18442
The aero-mechanical design of a novel Fowler flap mechanism p 57 N94-18443
High-lift design for large civil aircraft p 57 N94-18445
High lift systems for transport aircraft with advanced airfoils p 57 N94-18446
Choice and optimization of a high-lift system for an advanced amphibious aircraft p 58 N94-18447

LIFT DRAG RATIO
Aircraft drag reduction p 2 N92-27709
Improvement of endurance performance by periodic optimal control of variable camber p 110 N94-36329
Residual-correction type and related computational methods for aerodynamic design. Part 2: Multi-point airfoil design p 70 N95-16567
The global aircraft shape p 70 N95-16571
Aerodynamic shape optimization p 71 N95-16572

LIGHT (VISIBLE RADIATION)
Methods of opto-electronic fusion of infrared and visible images p 304 N92-32444

LIGHT AIRCRAFT
High Altitude Long Endurance aircraft design studies p 66 N94-36322

LIGHT AMPLIFIERS
Active fibres and optical amplifiers p 304 N92-28089

LIGHT BEAMS
Plume primary smoke p 124 N94-15218

LIGHT SCATTERING
Secondary smoke p 125 N94-15220

LIGHT SCATTERING METERS
Granulometry in environments with very small particle concentrations p 173 N94-30511

LIGHT TRANSMISSION
Estimation of transmittance from satellite imagery p 171 N94-30500
Calculation of turbulence degraded point spread function of an imaging system p 173 N94-30514

LIGHT VALVES
The active-matrix LC head-down display (AM-LCD): Operational experience and growth potential p 267 N93-19782

LIGHTING EQUIPMENT
Cockpit/NVG visual integration issues p 276 N94-23983

LIGHTNING
Radiolocation in the lower ELF frequency band p 163 N93-23630
Lightning-induced effects on VLF/LF radio propagation p 166 N93-30737
A long wave TE/TM noise prediction model p 167 N93-30742
ESD and lightning interactions on aircraft p 36 N95-14896

LINE OF SIGHT
Sensing propagation events and fade statistics at C-band for two over-water, line-of-sight propagation paths over a one year period p 152 N92-22792
Design considerations for a night, air-to-surface attack capability on a dual role fighter p 74 N93-28871
Gaze orientation under G(z)-load. Methodological aspects: Preliminary results p 281 N94-37274
Line-of-sight multipath propagation measurements at 15 GHz over 500 MHz bandwidth p 181 N95-20944

LINE OF SIGHT COMMUNICATION
Simulation of the impact of atmospheric turbulences on millimeter-wave communications systems p 179 N95-20939

LINE SPECTRA
Analysis algorithms for processing ultraviolet fluorescence data p 221 N92-22823

LINEAR ARRAYS
The spatial and temporal characteristics of high frequency auroral backscatter p 158 N93-23604

LINEAR EQUATIONS
Boundary layer transition: Predictions based on linear theory p 205 N94-33886

LINEAR FILTERS
Contact level fusion of radar and IRST contacts on almost electromagnetically silent platform p 174 N94-36634

LINEAR POLARIZATION
Infrared polarization signatures p 172 N94-30506

LINEAR SYSTEMS
Finite element methods for fluids p 191 N92-27673

LINEARITY
A dynamic bandwidth and phase linearity measurement technique for 4-channel MSK VLF antenna systems p 168 N93-30748

LINGUISTICS
Perception-based and machine-oriented signal processing within speech understanding systems p 288 N93-13239
Automating multilingual communication p 313 N93-31219

LININGS
Evaluation of life support equipment during an unsupported North Pole expedition p 276 N94-28422
Combustor technology for future small gas turbine aircraft p 96 N94-34452

LIPID METABOLISM
Lipodystrophies in the French military flight crew p 244 N93-32249

LIPIDS
Blood lipids in aircrew recruits and in RAF aviators p 245 N93-32251
Objective improvements obtained by control of diet and physical training in Spanish Air Force fighter pilots p 273 N93-32258
The influence of dietary counseling and cardiac catheterization on lipid profiles in American military aviators p 273 N93-32259
Primary prevention of coronary heart disease p 246 N94-23317

LIPOPROTEINS
Results and management of pathological lipoprotein concentrations and other cardiovascular risk factors in military pilots of the German Federal Armed Forces p 245 N93-32254

LIQUID ATOMIZATION
Modeling of the phase liquidates in combustion chambers p 142 N94-29278
Investigation of the two-phase flow in a research combustor under reacting and non-reacting conditions p 204 N94-29282

LIQUID COOLING
The use of liquid and air microclimate conditioning systems to alleviate heat stress in helicopter NBC operations p 278 N94-28453
Liquid flow-through cooling of electronic modules p 212 N95-20647

Microchannel heat pipe cooling of modules p 212 N95-20649

LIQUID CRYSTALS
The active-matrix LC head-down display (AM-LCD): Operational experience and growth potential p 267 N93-19782
Liquid crystal displays replacing the CRT and CLE of future cockpits p 74 N93-19783
Cooling geometry optimization using liquid crystal technique p 85 N93-29939
Local heat transfer measurement with liquid crystals on rotating surfaces including non-axisymmetric cases p 85 N93-29943

LIQUID FUELS
Ultra low NO(x) ultra lean gas turbine primary zones with liquid fuels p 91 N94-29267
Research and development of ramjets/ramrockets. Part 1: Integral solid propellant ramrockets p 92 N94-29294

LIQUID INJECTION
Investigation of the two-phase flow in a research combustor under reacting and non-reacting conditions p 204 N94-29282

LIQUID PHASES
Modeling of the phase liquidates in combustion chambers p 142 N94-29278

LIQUID ROCKET PROPELLANTS
Introduction and overview of research and development of solid propellant ramrockets, liquid fuel ramjets and experimental hydrogen ram combustors p 92 N94-29292
Research and development of ramjets/ramrockets. Part 2: Integral liquid fuel ramjets p 93 N94-29297

LIVER
Physiological investigations of the isolated rat's liver in hypothermia and hypoxia and their relevance in aircraft incidents above the sea p 234 N94-28439

LOAD TESTS
Initiation and prevention of edge delamination with and without residual stresses p 129 N93-21510
Synergism between layer cracking and delaminations in MD-laminates of CFRE p 130 N93-21520
Delamination development under fatigue loading p 131 N93-21521
Conclusions and recommendations p 226 N93-31749
Crack growth predictions using a crack closure model p 228 N94-34584

LOADS (FORCES)
AGARD Engine Disc Cooperative Test Programme [AGARD-R-766-ADD] p 88 N93-31741
Fatigue crack growth results for Ti-6Al-4V, IMI 685, and Ti-17 p 88 N93-31746
The crack severity index of monitored load spectra p 228 N94-34585
Predicting defect behaviour p 225 N94-37331

LOCAL AREA NETWORKS
Coherent communications --- fiber optics applications p 154 N92-28086
High speed local area networks p 154 N92-28087
Local Area Networks (LAN) p 282 N92-32183
Ground based mission planning systems p 295 N94-25014

LOCKING
US Army helicopter inertia reel locking failures p 33 N93-19689

LOGISTICS MANAGEMENT
TICAMS: Telefunken Integrated Computer-Aided Maintenance System p 283 N93-19763

LONG WAVE RADIATION
Propagation characteristics of the ionospheric transmission window relating to long wave radio location issues p 157 N93-23600

LONGITUDE
The longitudinal occurrence of equatorial F layer irregularities p 158 N93-23605

LONGITUDINAL STABILITY
Aerodynamic integration of thrust reversers on the Fokker 100 p 51 N93-13208
On non-linear longitudinal stability of an aircraft in a dive in the presence of atmospheric disturbances p 107 N94-11492
Aerodynamic design of super maneuverable aircraft p 64 N94-34617

LOSSES
The Lorentz reciprocity theorem as a consistency test for propagation models p 179 N95-20937

LOW ALTITUDE
Remote sensing of the evaporation duct using an X-band radar p 230 N92-22793
Interest in real-time simulations for the development terrain following function of radar systems p 154 N92-28529
Combat aircraft operations: Training requirements for the German Air Force tactical flying units and the noise problem p 296 N93-10667
Combat aircraft noise: The operator's perspective p 296 N93-10669
Noise emission of low flying military airplanes p 297 N93-10675
Measurement and prediction of noise from low-altitude military aircraft operations p 300 N93-10687
Testing of an automatic, low altitude, all terrain ground collision avoidance system p 38 N93-19924
Multilayer anti-erosion coatings p 103 N95-19679
Modelling of microwave propagation and clutter in a maritime environment p 179 N95-20938

LOW ASPECT RATIO
A critical evaluation of a three-dimensional Navier-Stokes method as a tool to calculate transonic flows inside a low-aspect-ratio compressor p 187 N92-27459

LOW ASPECT RATIO WINGS
An experimental investigation of the optimum slat setting on a combat aircraft model p 56 N94-18431
Low aspect ratio wing experiment p 24 N95-17865

LOW CONCENTRATIONS
Granulometry in environments with very small particle concentrations p 173 N94-30511

LOW COST
The new portable digisonde for vertical and oblique sounding p 230 N92-22801
Ramjet propulsion for advanced projectiles p 82 N93-17615
Simple and powerful turbojet with four stage axial compressor and axial flow turbine for the propulsion of subsonic missiles p 83 N93-17620
QuickStar: System design, capabilities, and tactical applications of a small, smart space system p 120 N93-29905

LOW FREQUENCIES
The cone structure and focusing of the electric field of VLF and LF waves at high altitudes of the ionosphere p 165 N93-30731
Studies of the propagation of Low Frequency (LF) radio waves p 166 N93-30738
Comparative study of undersea fields produced by various dipoles p 167 N93-30740
A comparison of two examples of magnetic tracker systems p 281 N94-37275

LOW NOISE
Initial trials results for image stabilisation using a rugged low noise gyroscope p 219 N93-22021

LOW PRESSURE
The influence of intake swirl distortion on the steady-state performance of a low bypass, twin-spool engine p 194 N93-13211

LOW REYNOLDS NUMBER
Direct numerical simulation of turbulent flow in a sudden pipe expansion p 213 N95-21067

LOW SPEED
Mass flow effects on the low speed characteristics of an advanced combat aircraft p 7 N93-13214
Two-dimensional 16.5 percent thick supercritical airfoil NLR 7301 p 22 N95-17854
Low-speed surface pressure and boundary layer measurement data for the NLR 7301 airfoil section with trailing edge flap p 22 N95-17855
Force and pressure data of an ogive-nosed slender body at high angles of attack and different Reynolds numbers p 25 N95-17868
Low speed propeller slipstream aerodynamic effects p 27 N95-17882
Velocity measurements with hot-wires in a vortex-dominated flowfield p 28 N95-19261

LOW SPEED WIND TUNNELS
Tests of models equipped with TPS in low speed ONERA F1 pressurized wind tunnel p 193 N93-13201
Determination of surface heat transfer and film cooling effectiveness in unsteady wake flow conditions p 85 N93-29933
On the development of a film cooling layer p 197 N93-29959
Transient flow features of a supersonic jet in a low speed cross flow p 200 N94-28005
Low speed propeller slipstream aerodynamic effects p 27 N95-17882
Wall correction method with measured boundary conditions for low speed wind tunnels p 210 N95-19263
Calculation of low speed wind tunnel wall interference from static pressure pipe measurements p 211 N95-19273

LOW TEMPERATURE
High density monolithic packaging technology for digital/microwave avionics p 119 N95-20646

LOW TEMPERATURE ENVIRONMENTS
The Support of Air Operations under Extreme Hot and Cold Weather Conditions [AGARD-CP-540] p 234 N94-28420
Medical support for British operations in the Antarctic p 248 N94-28421
The concept of Royal Navy air operations under extreme environmental conditions p 295 N94-28424

LOWER ATMOSPHERE
Remote Sensing of the Propagation Environment [AGARD-CP-502] p 230 N92-22790

LOWER IONOSPHERE
Propagation characteristics of the ionospheric transmission window relating to long wave radio location issues p 157 N93-23600
Lightning-induced effects on VLF/LF radio propagation p 166 N93-30737

LUMBAR REGION
The musculoskeletal and vestibular effects of long term repeated exposure to sustained high-G [AGARD-AR-317] p 281 N95-14263

LUMINANCE
Night vision devices and characteristics p 276 N94-23982

LUMINESCENCE
Optical surface pressure measurements: Accuracy and application field evaluation p 307 N95-19274

LUNGS
Correlation of serum alpha sub 1 antitrypsin with cigarette smoking and pulmonary function status in Greek pilots, for a ten year period p 242 N93-11318
Spontaneous pneumothorax, cysts and bullae p 248 N94-23326

LYMPHOCYTES
Space flight and immune system p 235 N93-11284
Mechanisms of immune failure in burn injury p 235 N93-11285
Immunological parameters in current and former US Air Force personnel p 237 N93-11295

M

MACH NUMBER
Ramjet propulsion for missiles in the Mach 3 to 4.5 range p 123 N93-17608
Comparison of performances of different circular intakes p 83 N93-17616
Measurement of turbulent spots and intermittency modelling at gas-turbine conditions p 85 N93-29934
Transient flow features of a supersonic jet in a low speed cross flow p 200 N94-28005
2-D aileron effectiveness study p 21 N95-17851
Investigation of an NLF(1)-0416 airfoil in compressible subsonic flow p 22 N95-17852
OAT15A airfoil data p 23 N95-17857
Measurements of the flow over a low aspect-ratio wing in the Mach number range 0.6 to 0.87 for the purpose of validation of computational methods. Part 1: Wing design, model construction, surface flow. Part 2: Mean flow in the boundary layer and wake, 4 test cases p 23 N95-17860
Pressure distributions on research wing W4 mounted on an axisymmetric body p 24 N95-17862
DLR-F4 wing body configuration p 71 N95-17863
Low aspect ratio wing experiment p 24 N95-17865

MACHINE LEARNING
Toward intelligent flight control p 108 N94-11503

MACHINE TRANSLATION
Automating multilingual communication p 313 N93-31219

MACROSCOPIC EQUATIONS
Geographical diversity combining to exploit multi-mechanism propagation p 183 N95-20957

MAGNESIUM CHLORIDES
Gas turbine compressor corrosion and erosion in Western Europe p 103 N95-19678

MAGNETIC DIPOLES
Comparative study of undersea fields produced by various dipoles p 167 N93-30740
Results of the joint HIPAS/NUWC campaigns to investigate ELF generated by auroral electrojet modulation p 168 N93-30746

MAGNETIC EQUATOR
The longitudinal occurrence of equatorial F layer irregularities p 158 N93-23605
Mitigation of the effects of F layer regularities by using multiple paths p 182 N95-20951

MAGNETIC FIELDS
Pattern measurements of US Navy ELF antennas p 169 N93-30752
A comparison of two examples of magnetic tracker systems p 281 N94-37275

MAGNETOHYDRODYNAMIC WAVES
Sensing of ELF signatures arising from space vehicle disturbances of the ionosphere p 232 N92-22809

MAINTAINABILITY
Navy foreign object damage and its impact on future gas turbine engine low pressure compression systems p 100 N95-19658
New Trends in coatings developments for turbine blades: Materials processing and repair p 103 N95-19676

MAINTENANCE
Acquisition 2: Procurement, acquisition, and maintenance of configuration management documentation in support of a CIS system p 311 N93-10599
Simple and powerful turbojet with four stage axial compressor and axial flow turbine for the propulsion of subsonic missiles p 83 N93-17620
TICAMS: Telefunken Integrated Computer-Aided Maintenance System p 283 N93-19763
Repairing delaminations with low viscosity epoxy resins p 132 N93-21532

Performance deterioration of axial compressors due to blade defects p 101 N95-19665
An airborne monitoring system for FOD and erosion faults p 102 N95-19668
Braze repair possibilities for hot section gas turbine parts p 103 N95-19677

MALES
Clinical and immunological response to vaccination with parenteral or oral vaccines in two groups of 30 recruits p 239 N93-11305
Aeromedical disposition for coronary artery disease p 246 N94-23316
Aeromedical implications of mitral valve prolapse p 247 N94-23323
Spontaneous pneumothorax, cysts and bullae p 248 N94-23326

MAN MACHINE SYSTEMS
The role of simulation for the study of APIS (piloting support by synthetic imagery) p 113 N92-28544
Local Area Networks (LAN) p 282 N92-32183
Advanced Aircraft Interfaces: The Machine Side of the Man-Machine Interface
[AGARD-CP-521] p 263 N93-19757
Engineering the visibility of small features on electronic flight displays p 263 N93-19758
Human factors problems for aircrew-aircraft interfaces: Where should we focus our efforts? p 263 N93-19759
Advanced cockpit-mission and image management p 264 N93-19760
Aircrew acceptance of automation in the cockpit p 264 N93-19761
Time stress measurement devices for enhancement of onboard bit performance p 264 N93-19762
Developing virtual cockpits p 264 N93-19764
Panoramic cockpit displays p 264 N93-19765
A new concept for helmet mounted vision p 265 N93-19767
A visual of the helmet for the piloting and the day/night navigation of the combat aircraft: Requirements and technical approaches p 38 N93-19768
The MOD (UK) integrated helmet technical demonstrator programme p 265 N93-19769
Multi-function visor p 265 N93-19770
The use of voice processing for some aspects of the pilot-vehicle-interface in an aircraft p 265 N93-19772
Multimodal dialog system for future cockpits p 265 N93-19773
A systems approach to the advanced aircraft man-machine interface p 266 N93-19776
Management of avionics data in the cockpit p 266 N93-19777
Model-based reasoning applied to cockpit warning systems p 266 N93-19778
The integration of advanced cockpit and systems design p 266 N93-19779
CVA, cockpit design and development tool p 267 N93-19780
Man-machine interface with simulated automatic target recognition systems p 267 N93-19781
The active-matrix LC head-down display (AM-LCD): Operational experience and growth potential p 267 N93-19782
Liquid crystal displays replacing the CRT and CLE of future cockpits p 74 N93-19783
Equipment, more or less ready to be used in helicopters p 267 N93-19785
Mission planning systems for tactical aircraft (pre-flight and in-flight)
[AGARD-AR-313] p 35 N93-21187
Combat Automation for Airborne Weapon Systems: Man/Machine Interface Trends and Technologies
[AGARD-CP-520] p 268 N93-28850
Pilot decision aiding for weapon delivery: A novel approach to fire control cueing using parallel computing p 268 N93-28853
A new class of mission support for combat air-crew p 293 N93-28854
Pilot intent and error recognition as part of a knowledge based cockpit assistant p 268 N93-28855
The design and development of the new RAF standard HUD format p 268 N93-28856
Virtual interface applications for airborne weapons systems p 268 N93-28858
Operator and automation capability analysis: Picking the right team p 269 N93-28864
System automation and pilot-vehicle-interface for unconstrained low-altitude night attack p 270 N93-28867
Computer assisted evaluation for air close combat based on time interval characterization p 293 N93-28868
Overview of cockpit technology research and development programs for improvement of the man/machine interface: Review of the AGARD AVP Symposium held in Madrid, May 1992 p 270 N93-28872
Human factors of mission planning systems: Theory and concepts p 294 N94-25010
Mission planning and mission rehearsal systems: Displays and other interactive techniques p 294 N94-25013
Cognitive approach to specifications on air traffic controllers' decision assistance systems p 43 N94-29571
Expanding the pilot's envelope p 278 N94-34627
Virtual Interfaces: Research and Applications
[AGARD-CP-541] p 260 N94-37261
Task-specific usability requirements for virtual information environments: Interface design and data representation for human operators of complex medical systems p 279 N94-37262
On the feasibility of virtual environments in medicine p 279 N94-37264
Interactive large screen: A multi-mode dialogue tool for future cockpits p 280 N94-37266
The DRA Virtual Cockpit Research Program p 280 N94-37269
Virtual reality evolution or revolution p 280 N94-37270
A non-intrusive way to measure point-of-gaze p 280 N94-37272
Operator gaze position control interfaces: Investigation of psychophysical and operational parameters p 281 N94-37273
Visual accommodation to virtual image displays when knowledge of object distance conflicts with optical distance p 261 N94-37278
Human factors considerations for remote manipulation p 282 N95-14949

MANAGEMENT
Human factors causes and management strategies in US Air Force F-16 mishaps 1984-present p 31 N93-19673

MANAGEMENT INFORMATION SYSTEMS
Towards an integrated approach to proactive monitoring and accident prevention p 34 N93-19700
The AGARD tip research agenda for Scientific and Technical Information (STI) p 312 N93-19800
AMDRS: A resource for intelligent aeromedical decision-making p 254 N95-19419

MANAGEMENT METHODS
The MOD (UK) integrated helmet technical demonstrator programme p 265 N93-19769
The management of change: Implications for the information professional p 314 N93-31222
Early manufacturing considerations in design p 58 N94-24315
A generalization of the software engineering maturity model p 286 N94-29341
Application of information management methodologies for project quality improvement in a changing environment p 314 N94-29342
The Clinical Basis for Aeromedical Decision Making
[AGARD-CP-553] p 252 N95-19413

MANAGEMENT PLANNING
An efficient method for three-dimensional route planning with different strategies and constraints p 38 N92-27901

MANAGEMENT SYSTEMS
Air Vehicle Mission Control and Management
[AGARD-CP-504] p 1 N92-27887
Airpower planning and battle management training at airbase level p 292 N92-27889
A teamwork model of pilot aiding: Psychological principles for mission management systems design p 292 N92-27893
From an automated flight-test management system to a flight-test engineer's workstation p 282 N92-27907
Full mission simulation for research and development of air combat flight and attack management systems p 112 N92-28538
Object oriented design of the autonomous fixtaking management system p 41 N94-29323
A common Ada run-time system for avionics software p 75 N94-29331
DLR's ATM demonstration programme p 44 N94-29575
ARC2000: Automatic radar control p 45 N94-29583
On-line handling of air traffic: Management, guidance and control
[AGARD-AG-321] p 46 N95-18927
Aeromedical risk management for aircrew p 252 N95-19414

MANEUVERABILITY
Technical evaluation report on the Flight Mechanics Panel Symposium on Flying Qualities
[AGARD-AR-311] p 49 N92-27870
Adaptive reconfigurable flight controls for high angle of attack aircraft agility p 108 N94-11502
Technologies for Highly Manoeuvrable Aircraft
[AD-280271] p 63 N94-34605
Engine characteristics for agile aircraft p 98 N94-34608
Thrust vector aided maneuvering of the YF-22 Advanced Tactical Fighter prototype p 63 N94-34610
Aerodynamic design of super maneuverable aircraft p 64 N94-34617
Application of current departure resistance criteria to the post-stall manoeuvering envelope p 64 N94-34622
Study findings on the influence of maneuverability and agility on helicopter handling qualities p 64 N94-34624
Operational agility: An overview of AGARD Working Group 19 p 65 N94-34625
Operational agility assessment with the AM-X aircraft p 65 N94-34626
The influence of flying qualities on operational agility p 65 N94-34628
An agility metric structure for operational agility p 65 N94-34629
Application of centrifuge based dynamic flight simulation to enhanced maneuverability RDT/E p 116 N94-34630
Optimal tactics for agile aircraft technology: A differential game methodology p 295 N94-34631

MANEUVERS
The use of ground based simulation for handling qualities research: A new assessment p 114 N92-28545

MANIPULATORS
Advanced Guidance and Control Aspects in Robotics
[AGARD-LS-193] p 290 N95-14942
Robotics technology developments in the United States space telerobotics program p 290 N95-14943
Control of remotely operated manipulation systems p 291 N95-14945
Human factors considerations for remote manipulation p 282 N95-14949

MANUAL CONTROL
Manual tracking performance using a virtual hand controller: A comparison study p 280 N94-37271

MANUFACTURING
YF-22A prototype advanced tactical fighter demonstration/validation flight test program overview p 53 N93-19906
Integrated Airframe Design Technology
[AGARD-R-794] p 58 N94-24313
Early manufacturing considerations in design p 58 N94-24315
Applications of CFD codes and supercomputers to aircraft design activities p 58 N94-24316
Frameworks for integrated airframe design p 58 N94-24318
Optimisation of composite aircraft structures by direct manufacturing approaches p 67 N94-36327
Manufacture and properties of sigma fibre reinforced titanium p 135 N94-36655
The control of cleanness in powder metallurgy materials for turbine disks p 144 N94-37325
Maintaining constant standards during the forging process p 144 N94-37326
The design and manufacturing development of an active silicon substrate MCM p 185 N95-20645
High density monolithic packaging technology for digital/microwave avionics p 119 N95-20646

MAPPING
Mapping electron content and electron density in the sub-auroral ionosphere p 231 N92-22805

MAPS
Use of mesoscale models for refractivity forecasting p 153 N92-22797
An efficient method for three-dimensional route planning with different strategies and constraints p 38 N92-27901

MARINE ENVIRONMENTS
Over the horizon propagation in a marine environment: Modelling and recent experimental results p 152 N92-22794

MARINE METEOROLOGY
Refractive assessments from satellite observations p 153 N92-22798

MARKET RESEARCH
Marketing tools for increasing proactivity in technical information centers
[AGARD-AR-326] p 308 N94-30934
The demise of plastic encapsulated microcircuit myths p 185 N95-20640

MARKETING
Marketing tools for increasing proactivity in technical information centers

The calculation of erosion in a gas turbine compressor rotor p 101 N95-19664

Design of fan blades subjected to bird impact p 102 N95-19669

Soft body impact on titanium fan blades p 102 N95-19671

Ice-impact analysis of blades p 102 N95-19672

Damage of high temperature components by dust-laden air p 102 N95-19673

Analysis of the erosion of cubic centered and face centered metallic materials p 144 N95-19674

MATHEMATICAL PROGRAMMING

The structural optimization system OPTSYS: Current status and applications p 47 N92-23232

Mathematical optimization: A powerful tool for aircraft design p 50 N92-28474

MATRICES (MATHEMATICS)

An improved method of structural dynamic test design for ground flying and its application to the SH-2F and SH-2G helicopters p 54 N93-19928

MATRIX MATERIALS

Synergism between layer cracking and delaminations in MD-laminates of CFRE p 130 N93-21520

Properties of TMC processed by fibre coating and hiping p 135 N94-36656

Oxidation behavior of titanium aluminide matrix materials p 136 N94-36658

MAXIMUM LIKELIHOOD ESTIMATES

The flight test and data analysis program for the development of a Boeing/De Havilland Dash 8 simulator model p 55 N93-19930

Digital processing for positioning with one satellite p 163 N93-23629

Radar tracking in multipath: Techniques for improved performance p 174 N94-36631

Geographical diversity combining to exploit multi-mechanism propagation p 183 N95-20957

Superresolution direction finding algorithms for the characterisation of multi-moded HF signals p 184 N95-20958

MAXIMUM USABLE FREQUENCY

Adaptive remote sensing of the ionosphere to minimise spectral intrusion p 231 N92-22803

A current assessment of single site locating technology p 159 N93-23608

MAXWELL FLUIDS

Stability of viscoelastic flow: Physical and numerical considerations p 198 N94-11493

MD 80 AIRCRAFT

Special Course on Engineering Methods in Aerodynamic Analysis and Design of Aircraft [AGARD-R-783] p 48 N92-23950

MEASURING INSTRUMENTS

VLF propagation measurements in the Canadian Arctic p 165 N93-30733

Recommendations for future research in hypersonic instrumentation p 9 N94-10433

Pressure and force measurements on models set in hypersonic flows: A review p 9 N94-10435

Velocity measurements in hypersonic flows: A review p 9 N94-10436

Thermal flux measurements in hypersonic flows: A review p 220 N94-10438

A non-intrusive way to measure point-of-gaze p 280 N94-37272

MECHANICAL PROPERTIES

Computerized property data for engineering materials: An overview p 310 N92-32191

Effects of fuel on Hercules AS-4/8552 composite material p 127 N92-33046

Fluid effects: Thermoset and thermoplastic matrix composites p 128 N92-33049

Jet fuel absorption and dynamic mechanical analysis of carbon fibre composites p 128 N92-33050

Environmental resistance of amorphous bonded thermoplastic joints p 128 N92-33053

Characterisation of Fibre Reinforced Titanium Matrix Composites [AD-A277520] p 134 N94-36649

Possibilities and pitfalls in aerospace applications of titanium matrix composites p 135 N94-36650

Manufacture and properties of sigma fibre reinforced titanium p 135 N94-36655

Fibre-matrix interface properties in Ti-matrix composites: Chemical compatibility and micromechanical behaviour p 136 N94-36657

Methodologies for thermal and mechanical testing of TMC materials p 136 N94-36659

MECHANICAL SHOCK

Insensitive Munitions [AGARD-CP-511] p 147 N92-33240

The design features of rocket motors relating to insensitive munition response to thermo-mechanical stimuli p 147 N92-33244

MEDICAL ELECTRONICS

On the feasibility of virtual environments in medicine p 279 N94-37264

MEDICAL EQUIPMENT
On the feasibility of virtual environments in medicine p 279 N94-37264
MEDICAL PERSONNEL
Aeromedical support for casualties in extremely hot climates p 277 N94-28443
MEDICAL SCIENCE
Task-specific usability requirements for virtual information environments: Interface design and data representation for human operators of complex medical systems p 279 N94-37262
MEDICAL SERVICES
Mechanisms of immune failure in burn injury p 235 N93-11285
Pre-flight risk assessment in Emergency Medical Service (EMS) helicopters p 34 N93-19692
Study of the spectrum of power of cardiac rhythm during tasks relating to the safety of the control of an apparatus p 244 N93-19707
MELTING
Alternate melting and refining routes p 143 N94-37323
Process enhancements of superalloy material p 143 N94-37324
MEMORY (COMPUTERS)
A common Ada run-time system for avionics software p 75 N94-29331
MENINGITIS
Dramatic reduction of meningococcal meningitis among military recruits in Italy after introduction of specific vaccination p 239 N93-11303
Immunization of personnel traveling to a destination in tropical countries: French position p 239 N93-11304
MENTAL HEALTH
Neuropsychiatric morbidity in early HIV disease: Implications for military occupational function p 238 N93-11299
MENTAL PERFORMANCE
Relating cognitive function to military aviator performance in early HIV infection p 238 N93-11298
Study of the spectrum of power of cardiac rhythm during tasks relating to the safety of the control of an apparatus p 244 N93-19707
Effects of caffeine on mental performance and mood: Implications for aircrew members p 275 N93-32269
Mental images p 260 N94-23980
Human factors of mission planning systems: Theory and concepts p 294 N94-25010
Immersive virtual environments as trainer: System design from a cognitive stance p 280 N94-37267
Neuropsychophysiologic sequelae of mild head injury p 256 N95-19430
MESOSCALE PHENOMENA
Use of mesoscale models for refractivity forecasting p 153 N92-22797
Refractive assessments from satellite observations p 153 N92-22798
New method of modelling the mesoscale structure of the ionosphere with a single sensor. Impact on HF radio-location p 158 N93-23603
METABOLISM
Allergic and nonallergic rhinitis in Greek pilots p 242 N93-11317
Trial of emergency ration of the Spanish Air Force p 272 N93-32247
Prediction of survival times on land in a cold climate p 248 N94-28423
Physiological investigations of the isolated rat's liver in hypothermia and hypoxia and their relevance in aircraft incidents above the sea p 234 N94-28439
METAL BONDING
Application of superplastically formed and diffusion bonded structures in high intensity noise environments p 303 N95-19162
METAL FATIGUE
Risk analysis of the C-141 WS405 inner-to-outer wing joint p 62 N94-34592
The role of fatigue analysis for design of military aircraft p 62 N94-34594
An overview of the F-16 service life approach p 63 N94-34599
High temperature cyclic behaviour of aerospace materials: Room temperature validation tests of Ti-6Al-4V
| AGARD-AR-328 | p 229 N95-14198
METAL IONS
Active fibres and optical amplifiers p 304 N92-28089
METAL MATRIX COMPOSITES
Free edge delamination prevention in composite laminates p 129 N93-21508
Characterisation of Fibre Reinforced Titanium Matrix Composites
| AD-A277520 | p 134 N94-36649
Possibilities and pitfalls in aerospace applications of titanium matrix composites p 135 N94-36650
Applications of Titanium Matrix Composite to large airframe structure p 135 N94-36651
SCS-6 (tm) fiber reinforced titanium p 135 N94-36652
Processing of titanium matrix composites p 135 N94-36653
Composites based on titanium with external and internal reinforcement p 135 N94-36654
Manufacture and properties of sigma fibre reinforced titanium p 135 N94-36655
Properties of TMC processed by fibre coating and hiping p 135 N94-36656
Oxidation behavior of titanium aluminide matrix materials p 136 N94-36658
Methodologies for thermal and mechanical testing of TMC materials p 136 N94-36659
Ultrasonic nondestructive characterization methods for the development and life prediction of titanium matrix composites p 136 N94-36660
Metal matrix composites: Analysis of simple specimens and model components under creep and fatigue loading p 136 N94-36661
Residual strength and life prediction techniques for Ti MMC p 136 N94-36662
Process/composite concurrent tailoring of SiC/Ti composites p 136 N94-36663
Micromechanical modeling of damage growth in titanium based metal-matrix composites p 137 N94-36664
Crack growth under cycle loading in fibre reinforced titanium metal matrix composites p 137 N94-36665
Prediction of thermal and mechanical stress-strain responses of TMC's subjected to complex TMF histories p 137 N94-36666
Pre-standardisation work on fatigue and fracture testing of titanium matrix composites p 137 N94-36667
ASTM and VAMAS activities in titanium matrix composites test methods development p 137 N94-36668
Development of mechanical testing methods for titanium matrix composites (traction-ogligo-cyclic fatigue) p 137 N94-36669
Modelling and testing fibre reinforced titanium for design purposes p 138 N94-36670
METAL PLATES
Barely visible damage threshold in a BMI p 131 N93-21524
METAL POWDER
Substantiating powder metal life methodologies for engines p 225 N94-37330
METAL PROPELLANTS
Semi-propellants for ducted rockets p 147 N93-17612
METAL SURFACES
X-ray absorption spectroscopy in high temperature oxidation of metals and alloys p 144 N95-19682
METEOROID SHOWERS
Propagation in the ionosphere, B p 175 N95-14827
The relative importance of meteor burst and other distance polar cap propagation modes in the low VHF band p 177 N95-20928
METEOROIDS
The relative importance of meteor burst and other distance polar cap propagation modes in the low VHF band p 177 N95-20928
METEOROLOGICAL PARAMETERS
Sensing propagation events and fade statistics at C-band for two over-water, line-of-sight propagation paths over a one year period p 152 N92-22792
Probing of the atmosphere with lidar p 232 N92-22812
TACSAT meteorological payloads p 234 N93-29913
Atmospheric Propagation Effects Through Natural and Man-Made Obscurants for Visible to MM-Wave Radiation
| AD-A276919 | p 170 N94-30495
Propagation modeling of moist air and suspended water/ice particles at frequencies below 1000 GHz p 170 N94-30497
Line-of-sight multipath propagation measurements at 15 GHz over 500 MHz bandwidth p 181 N95-20944
METEOROLOGICAL RADAR
Recently implemented weather radar data processing technique for rain cell modelling and ground clutter detection p 233 N92-22824
Evaluation of dual polarization attenuation of millimeter frequencies through a meteorological radar p 170 N94-30496
METEOROLOGICAL SATELLITES
TacSats for NATO
| AD-A277710 | p 122 N94-30350
METHANE
Prediction of prompt NO(x) in hydrocarbon air flames p 139 N94-29250
METHOD OF MOMENTS
Antenna modeling and analysis for ELF/VLF/LF applications p 168 N93-30751
MICROCHANNELS
Microchannel heat pipe cooling of modules p 212 N95-20649
MICROCLIMATOLOGY
The use of liquid and air microclimate conditioning systems to alleviate heat stress in helicopter NBC operations p 278 N94-28453
MICROCOMPUTERS
High speed local area networks p 154 N92-28087
MICROCRACKS
Micromechanical failure modes in brittle matrix composites p 145 N94-24232
Impact loading of compressor stator vanes by hailstone ingestion p 102 N95-19670
MICROELECTRONICS
The demise of plastic encapsulated microcircuit myths p 185 N95-20640
Lightweight electronic enclosures using composite materials p 138 N95-20656
MICROGRAVITY
Space Station Freedom microgravity environment requirements and assessment methods p 148 N92-28450
Space flight and immune system p 235 N93-11284
MICROGRAVITY APPLICATIONS
Space Station Freedom microgravity environment requirements and assessment methods p 148 N92-28450
MICROMECHANICS
Micromechanical failure modes in brittle matrix composites p 145 N94-24232
Micromechanical characterization of ceramic-matrix composites using the instrumented microindentation technique p 145 N94-24233
Role of interfaces on the cyclic fatigue behaviour of ceramic matrix composites p 145 N94-24234
Microstructure and micromechanical behaviour of CMCs p 146 N94-24236
Fibre-matrix interface properties in Ti-matrix composites: Chemical compatibility and micromechanical behaviour p 136 N94-36657
Metal matrix composites: Analysis of simple specimens and model components under creep and fatigue loading p 136 N94-36661
Micromechanical modeling of damage growth in titanium based metal-matrix composites p 137 N94-36664
Modelling and testing fibre reinforced titanium for design purposes p 138 N94-36670
MICROPROCESSORS
Use of microprocessor-based simulator technology and MEG/EEG measurement techniques in pilot emergency-manoeuver training p 115 N93-19706
On ground system integration and testing: A modern approach p 75 N94-29334
MICROSTRUCTURE
In-service considerations affecting component life p 82 N93-14898
Modelisation and computation of composite materials p 130 N93-21518
Material characterization and fractographic examination of Ti-17 fatigue crack growth specimens for SMP SC33 p 88 N93-31744
Microstructure and micromechanical behaviour of CMCs p 146 N94-24236
Properties of TMC processed by fibre coating and hiping p 135 N94-36656
Analysis of the erosion of cubic centered and face centered metallic materials p 144 N95-19674
MICROWAVE ATTENUATION
Evaluation of dual polarization attenuation of millimeter frequencies through a meteorological radar p 170 N94-30496
MICROWAVE IMAGERY
Model for the simulation of atmospheric effects on targets to background passive signatures p 172 N94-30507
Polarimetric backscatter measurements of natural surfaces at millimeter wavelengths p 172 N94-30509
MICROWAVE LANDING SYSTEMS
Ground independent landing system p 42 N94-29564
MICROWAVE RADIOMETERS
Remote sensing of the atmosphere by multi-channel radiometers p 232 N92-22816
Inverting radiometric measurements with a neural network p 233 N92-22818
Model for the simulation of atmospheric effects on targets to background passive signatures p 172 N94-30507
MICROWAVE SCATTERING
A hybrid electromagnetic-statistical approach for characterizing MMW scattering by terrain p 172 N94-30510
MICROWAVE SIGNATURES
Microwave properties and systems overview p 169 N94-15222
Model for the simulation of atmospheric effects on targets to background passive signatures p 172 N94-30507
MICROWAVE TRANSMISSION
Propagation modeling of moist air and suspended water/ice particles at frequencies below 1000 GHz p 170 N94-30497

The influence of the evaporation duct on the angle of arrival and amplitude of the backscattered signal from targets low above the sea p 170 N94-30498

MICROWAVES

Modelling of microwave propagation and clutter in a maritime environment p 179 N95-20938

Time behavior and frequency response of the microwave propagation channel during multipath propagation p 180 N95-20942

Angle diversity on digital microwave links: Antenna design and experimental results p 181 N95-20947

MIDAIR COLLISIONS

Effectiveness of protection clothing for cold weather conditions after ejection over sea: A case report p 277 N94-28435

MILITARY AIRCRAFT

The Utilization of Advanced Composites in Military Aircraft
[AGARD-R-785] p 125 N92-33033

Mission planning systems for tactical aircraft (pre-flight and in-flight)
[AGARD-AR-313] p 35 N93-21187

MILITARY AVIATION

RAFALE: Progress of the program p 52 N93-19905

The waiver process and disqualifying medical conditions in US Naval aviation personnel p 253 N95-19416

The effect of special boards of flight surgeons on the evolution of US Naval flight standards p 253 N95-19417

MILITARY HELICOPTERS

The effectiveness of airbags in reducing the severity of head injury from gunsight strikes in attack helicopters p 34 N93-19691

Night operations p 275 N94-23977

Study findings on the influence of maneuverability and agility on helicopter handling qualities p 64 N94-34624

US Army rotorcraft turboshaft engines sand and dust erosion considerations p 100 N95-19656

MILITARY OPERATIONS

Opportunities for flight simulation to improve operational effectiveness p 111 N92-28523

Combat aircraft operations: Training requirements for the German Air Force tactical flying units and the noise problem p 296 N93-10667

Possibilities and limitations of flying training in the German Air Force p 115 N93-10668

Human noise exposure criteria for combat aircraft training areas p 297 N93-10670

Noise of combat aircraft in proximity to air bases: Review of the possibilities of noise reduction at the source p 297 N93-10671

Noise emission of low flying military airplanes p 297 N93-10675

Combat aircraft noise p 298 N93-10676

Boom and the problems related to the supersonic flights of military aircraft p 298 N93-10677

A brief review of the source noise technology applicable to fixed-wing military aircraft p 298 N93-10678

Audibility-based annoyance prediction modeling p 299 N93-10683

Mechanisms of immune failure in burn injury p 235 N93-11285

AIDS/HIV in the US Military p 236 N93-11291

Estimates of Human Immunodeficiency Virus (HIV) incidence and trends in the US Air Force p 236 N93-11292

Mission planning systems for tactical aircraft (pre-flight and in-flight)
[AGARD-AR-313] p 35 N93-21187

T(lc2)acS(lc3)ats for Surveillance Verification and C3I
[AGARD-CP-522] p 163 N93-29892

Tactical satellites p 119 N93-29893

Evolution or revolution: The Catch 22 of TACSATs p 118 N93-29894

TACSAT ground control and data collection p 163 N93-29895

TACSAT meteorological payloads p 234 N93-29913

C-141 aircrew sleep and fatigue during the Persian Gulf conflict p 274 N93-32265

Digital flight data as a measure of pilot performance associated with fatigue from continuous operations during the Persian Gulf conflict p 275 N93-32268

Night operations p 275 N94-23977

Overall system concepts in mission planning p 294 N94-25009

Human factors of mission planning systems: Applications and implementation p 294 N94-25011

Ground based mission planning systems p 295 N94-25014

In flight mission planning in the Copilote Electronique p 295 N94-25015

Mission rehearsal in the SOF-ATS program p 295 N94-25016

The Support of Air Operations under Extreme Hot and Cold Weather Conditions
[AGARD-CP-540] p 234 N94-28420

The concept of Royal Navy air operations under extreme environmental conditions p 295 N94-28424

The Environmental Symptoms Questionnaire: Assessing reactions to environmental extremes in military operations p 278 N94-28447

TacSats for NATO
[AD-A277710] p 122 N94-30350

Future tanker considerations and requirements p 68 N94-36342

Hose-drogue versus boom receptacle air refueling p 68 N94-36345

Highly survivable communications: Complementary media packet switched networks p 176 N95-20922

Mitigation of the effects of F layer regularities by using multiple paths p 182 N95-20951

MILITARY PSYCHOLOGY

Relating cognitive function to military aviator performance in early HIV infection p 238 N93-11298

Neuropsychiatric morbidity in early HIV disease: Implications for military occupational function p 238 N93-11299

MILITARY SPACECRAFT

Tactical satellites p 119 N93-29893

Evolution or revolution: The Catch 22 of TACSATs p 118 N93-29894

TACSAT ground control and data collection p 163 N93-29895

TACSAT-spacecraft bus concept and design: Application of a multimission bus for TACSAT in LEO p 120 N93-29896

Tactical satellites for air command and control p 120 N93-29898

Considerations for NATO satellite communications in the post-2000 era p 164 N93-29899

Advanced technologies for lightweight EHF tactical communications satellites p 164 N93-29900

Synchronization techniques for medium data rate EHF MILSATCOM systems p 164 N93-29901

SAR sensors on TACSATS: A feasibility assessment p 122 N93-29909

A TACSAT SAR concept p 122 N93-29910

Cost effective TacSats for military support p 121 N93-29912

TacSats for NATO
[AD-A277710] p 122 N94-30350

MILITARY TECHNOLOGY

Advances in Fibre-Optic Technology in Communications and for Guidance and Control
[AGARD-LS-184] p 154 N92-28084

Acquisition 1: Stock acquisition processes in defence and aerospace documentation centres p 311 N93-10598

Security considerations within military information systems p 311 N93-10603

A systems approach to the advanced aircraft man-machine interface p 266 N93-19776

Cognitive interface considerations for intelligent cockpits p 270 N93-28865

System automation and pilot-vehicle-interface for unconstrained low-altitude night attack p 270 N93-28867

Computer assisted evaluation for air close combat based on time interval characterization p 293 N93-28868

An overview of DARPA's advanced space technology program p 118 N93-29908

Low cost TACSAT for NATO surveillance p 120 N93-29911

Cost effective TacSats for military support p 121 N93-29912

TACSAT meteorological payloads p 234 N93-29913

Tethered aerostat VLF/LF transmitter system design considerations p 169 N93-30753

Overall system concepts in mission planning p 294 N94-25009

Software testing practices and their evolution for the 1990's p 285 N94-29335

A disciplined approach to software test and evaluation p 286 N94-29339

Challenge of Future EW System Design
[AGARD-CP-546] p 174 N95-14200

Standard Hardware Acquisition and Reliability Program (SHARP) advanced SEM-E packaging p 76 N95-20633

MILLIMETER WAVES

Remote sensing of the atmosphere by multi-channel radiometers p 232 N92-22816

Evaluation of dual polarization attenuation of millimeter frequencies through a meteorological radar p 170 N94-30496

Propagation modeling of moist air and suspended water/ice particles at frequencies below 1000 GHz p 170 N94-30497

Model for the simulation of atmospheric effects on targets to background passive signatures p 172 N94-30507

Polarimetric backscatter measurements of natural surfaces at millimeter wavelengths p 172 N94-30509

A hybrid electromagnetic-statistical approach for characterizing MMW scattering by terrain p 172 N94-30510

Simulation of the impact of atmospheric turbulences on millimeter-wave communications systems p 179 N95-20939

Measurements of radar backscatter from the ocean surface at 94 GHz as a function of wind speed, direction and the modulation by the ocean waves during the SAXON-FPN experiment p 184 N95-20960

MIMD (COMPUTERS)

Direct simulation and graphics post-processing of three-dimensional turbulent flows p 218 N95-21098

MIMO (CONTROL SYSTEMS)

Utilizing quantitative feedback theory design technique for flight control system p 108 N94-11501

MIRAGE AIRCRAFT

Flight analysis of air intake/engine compatibility p 51 N93-13212

MIRRORS

Adaptive optics for laser beamforming in the atmosphere p 222 N94-36621

MISS DISTANCE

A current assessment of single site locating technology p 159 N93-23608

MISSILE BODIES

Numerical assessment of aerodynamic interactions on missiles with transverse jets control p 18 N94-28031

Supersonic vortex flow around a missile body p 25 N95-17870

MISSILE COMPONENTS

Advances in Guidance and Control of Precision Guided Weapons
[AGARD-CP-524] p 149 N93-22018

MISSILE CONFIGURATIONS

Aerodynamic studies of supersonic air intakes p 8 N93-13222

Numerical assessment of aerodynamic interactions on missiles with transverse jets control p 18 N94-28031

A selection of experimental test cases for the validation of CFD codes, volume 1
[AGARD-AR-303-VOL-1] p 208 N95-14201

Missile Aerodynamics
[AGARD-R-804] p 19 N95-14445

Engineering Codes for aeroprediction: State-of-the-art and new methods p 19 N95-14447

Navier-Stokes predictions of missile aerodynamics p 20 N95-14451

A selection of experimental test cases for the validation of CFD codes, volume 2
[AGARD-AR-303-VOL-2] p 21 N95-17846

MISSILE CONTROL

The German anti tank helicopter PAH 2: An example of a future sensor platform p 73 N92-32448

Multiple-inlet configuration for missiles with skid-to-turn control mode p 105 N93-17617

Advances in Guidance and Control of Precision Guided Weapons
[AGARD-CP-524] p 149 N93-22018

System evaluation of a fiber optic guided missile with a simple guidance addition to improve system effectiveness p 305 N93-22025

Linear payout systems for dispensing fiber-optic data links from precision-guided munitions or high-performance aircraft/missles p 305 N93-22026

Localization system based on data merging of images and inertia p 162 N93-23623

Pilot decision aiding for weapon delivery: A novel approach to fire control cueing using parallel computing p 268 N93-28853

Recent developments in the simulation of steady and transient transverse jet interactions for missile, rotorcraft, and propulsive applications p 203 N94-28030

Numerical assessment of aerodynamic interactions on missiles with transverse jets control p 18 N94-28031

Lateral jet control for tactical missiles p 110 N95-14448

MISSILE DEFENSE

Plume radiation p 169 N94-15223

MISSILE DESIGN

Aerodynamic Engine/Airframe Integration for High Performance Aircraft and Missiles
[AGARD-CP-498] p 192 N93-13199

Simple and powerful turbojet with four stage axial compressor and axial flow turbine for the propulsion of subsonic missiles p 83 N93-17620

Versatile attack weapon p 149 N93-22027

Aeromechanical design of modern missiles p 19 N95-14446

MISSILE DETECTION

Rocket Motor Plume Technology
[AGARD-LS-188] p 124 N94-15217

Plume primary smoke p 124 N94-15218

Microwave properties and systems overview p 169 N94-15222

Missile infrared radiation analysis p 306 N95-14449

MISSILE SIGNATURES

Propulsion p 124 N94-15219

Microwave properties and systems overview p 169 N94-15222

Missile infrared radiation analysis p 306 N95-14449

MISSILE SYSTEMS
Development testing of throttleable ducted rockets p 123 N93-17610
Propulsion p 124 N94-15219

MISSILE TESTS
Development and qualification of the US Cruise Missile Propulsion System p 124 N93-17619

MISSILE TRACKING
Test results of the advanced translator processing system p 161 N93-23620

MISSILES
Optimal guidance anticipating missile performance p 118 N92-27902
The United States Air Force explosives hazards reduction program p 147 N92-33241
Hazards reduction for tactical missiles p 123 N92-33245
The PEP Symposium on CFD Techniques for Propulsion Applications p 194 N93-13210
Some aspects of intake design, performance and integration with the airframe p 51 N93-13219
Aerodynamic studies of supersonic air intakes p 8 N93-13222
Airbreathing Propulsion for Missiles and Projectiles [AGARD-CP-526] p 123 N93-17607
Ramjet propulsion for missiles in the Mach 3 to 4.5 range p 123 N93-17608
The dual combustor ramjet: A versatile propulsion system for hypersonic tactical missile applications p 123 N93-17611
Multiple-inlet configuration for missiles with skid-to-turn control mode p 105 N93-17617
Aerodynamic engine/airframe integration for high performance aircraft and missiles p 52 N93-17618
Smaller expendable turbojets p 83 N93-17621
The avionic system of the experimental standoff dispenser ADW p 74 N93-22028
System concept for an advanced stand-off weapon p 149 N93-22029
Tactical satellites p 119 N93-29893
An overview on the main available ceramic composites and their processing routes p 145 N94-24229
Numerical assessment of aerodynamic interactions on missiles with transverse jets control p 18 N94-28031
Compact diffusers for small transonic compressors p 96 N94-34449
Missile Aerodynamics [AGARD-R-804] p 19 N95-14445
Aeromechanical design of modern missiles p 19 N95-14446
Engineering Codes for aeroprediction: State-of-the-art and new methods p 19 N95-14447
Missile infrared radiation analysis p 306 N95-14449
High angle of attack aerodynamics p 20 N95-14450
Navier-Stokes predictions of missile aerodynamics p 20 N95-14451

MISSION PLANNING
Air Vehicle Mission Control and Management [AGARD-CP-504] p 1 N92-27887
Interdiction mission planning and co-ordination during the Gulf conflict 17 January - 27 February 1991 p 292 N92-27888
Airpower planning and battle management training at airbase level p 292 N92-27889
Technology and standards for a common air mission planner p 293 N92-27899
A systems approach to the advanced aircraft man-machine interface p 266 N93-19776
Mission planning systems for tactical aircraft (pre-flight and in-flight) [AGARD-AR-313] p 35 N93-21187
Mission requirements and applications of integrated and multi-function navigation systems p 39 N93-22781
Planning for air to air combat p 293 N93-28852
A new class of mission support for combat air-crew p 293 N93-28854
Pilot intent and error recognition as part of a knowledge based cockpit assistant p 268 N93-28855
Launch vehicles for lightweight TACSAT deployment p 118 N93-29903
Aerodynamic and aerothermal challenges for the design of the Hermes spaceplane p 119 N94-10423
New Advances in Mission Planning and Rehearsal Systems [AGARD-LS-192] p 293 N94-25008
Overall system concepts in mission planning p 294 N94-25009
Human factors of mission planning systems: Theory and concepts p 294 N94-25010
Human factors of mission planning systems: Applications and implementation p 294 N94-25011
Computing techniques in mission planning p 294 N94-25012
Mission planning and mission rehearsal systems: Displays and other interactive techniques p 294 N94-25013
Ground based mission planning systems p 295 N94-25014
In flight mission planning in the Copilote Electronique p 295 N94-25015
Mission, technologies and design of planetary mobile vehicle p 223 N95-14947

MIXING LAYERS (FLUIDS)
Scalar mixing in the subsonic jet in crossflow p 201 N94-28008
Comparison of DNS and LES of transitional and turbulent compressible flow: Flat plate and mixing layer p 213 N95-21066
Direct numerical simulation of turbulent flow in a sudden pipe expansion p 213 N95-21067
Entrainment in a shear-free turbulent mixing layer p 216 N95-21083

MIXING LENGTH FLOW THEORY
Experimental verification of a 3D turbulent flow calculation in an axial turbine cascade p 187 N92-27457
The application of a Navier-Stokes CFD method to civil engine intake flows p 188 N92-27471
Modeling of a turbulent flow in the presence of discrete parietal cooling jets p 87 N93-29960

MOBILE COMMUNICATION SYSTEMS
A wideband propagation simulator for high speed mobile radio communications p 179 N95-20934
Experimental study of the helicopter-mobile radioelectrical channel and possible extension to the satellite-mobile channel p 181 N95-20945

MOBILITY
Air situation establishment in a mobile multisensor environment p 292 N92-27891

MODAL RESPONSE
Dynamic tests on the NASA Langley CSI evolutionary model p 121 N94-11320

MODELS
Model-based reasoning applied to cockpit warning systems p 266 N93-19778

MODEMS
DAMSON: A system to measure multipath dispersion, Doppler spread and Doppler shift on multi-mechanism communications channels p 183 N95-20955

MODULARITY
System concept for an advanced stand-off weapon p 149 N93-22029

MODULATION
Problems of coding in multipath channels p 178 N95-20930
Development of a fast sampling system for estimation of impulse responses of mobile radio channels p 180 N95-20943
Measurements of radar backscatter from the ocean surface at 94 GHz as a function of wind speed, direction and the modulation by the ocean waves during the SAXON-FPN experiment p 184 N95-20960

MODULATION TRANSFER FUNCTION
Far-infrared characterization of horizontal path image degradation p 153 N92-22814

MODULES
FASTPACK: Optimized solutions for modular avionics derived from a parametric study. Part 2: Avionics p 76 N95-20635
Ultra-Reliable Digital Avionics (URDA) processor p 226 N95-20638
Assuring Known Good Die (KGD) for reliable, cost effective MCMs p 185 N95-20644
Modular supplies for a distributed architecture --- avionics packaging p 77 N95-20657

MOISTURE
Fracture analysis of BMI system in presence of moisture p 130 N93-21517
Acoustic fatigue of carbon fibre structures p 303 N95-19158

MOLECULAR PHYSICS
Chaos, entropy, and reversibility: A simple example p 296 N94-11495

MOLLUSKS
An experimental study of siphonal jets in a turbulent boundary layer crossflow p 202 N94-28015

MOLNIYA SATELLITES
Terrain and coverage prediction analyses for non-geostationary orbit EHF satellite communications p 164 N93-29902

MOMENT DISTRIBUTION
Computation of the unsteady transonic 2D cascade flow by an Euler algorithm with interactive grid generation p 4 N92-27944

MOMENTUM
Predictions of momentum and scalar fields in a jet in cross-flow using first and second order turbulence closures p 203 N94-28025
Large eddy simulation of channel flow using a vorticity transport subgrid model p 215 N95-21076

MONITORS
Adaptive remote sensing of the ionosphere to minimise spectral intrusion p 231 N92-22803

MONOPULSE RADAR
Radar cross sections of ground clutter at 95 GHz for summer and fall conditions p 173 N94-30512

MONOTONE FUNCTIONS
On the CFD monotone high accuracy methods p 209 N95-19018

MONTE CARLO METHOD
Application of Monte Carlo simulation for three-dimensional flows p 190 N92-27485
Numerical finite element analysis of damage using Monte Carlo techniques p 291 N93-21522
Three-dimensional hypersonic rarefied flow calculations using direct simulation Monte Carlo method p 11 N94-10449
Statistical characterization of rare events p 291 N94-37327

MOODS
Effects of caffeine on mental performance and mood: Implications for aircrew members p 275 N93-32269
Determinants of subjective fatigue for C-141 crews during Operation Desert Storm p 251 N94-36338

MORALE
Assessment of morale in Turkish Air Force pilots with two clinical psychological tests p 259 N93-19660

MORTALITY
Communicable diseases: A major burden of morbidity and mortality p 238 N93-11300

MOTION PERCEPTION
Perception in flight: Shape and motion perception, space perception, spatial orientation, and visual vestibular interaction p 260 N94-23979
The use of a tactile interface to convey position and motion perceptions p 281 N94-37281

MOTION SICKNESS
Perception in flight: Shape and motion perception, space perception, spatial orientation, and visual vestibular interaction p 260 N94-23979
Effect of seasickness on aircrew student survivor ability after ditching in cold water p 248 N94-28425
Profile analysis of after-effects experienced during exposure to several virtual reality environments p 252 N94-37263
Vestibular examination in pilots susceptible to motion sickness p 255 N95-19427

MOTION SIMULATION
Application of centrifuge based dynamic flight simulation to enhanced maneuverability RDT/E p 116 N94-34630

MOTIVATION
Assessment of morale in Turkish Air Force pilots with two clinical psychological tests p 259 N93-19660

MOUNTAINS
Lateral deviation of VLF radio waves due to diffraction and scattering from coast-lines, mountain ranges, and polar ice caps p 157 N93-23599

MOVING TARGET INDICATORS
The Missle-Borne Integrated Network Demonstration Program p 289 N93-22023

MRCA AIRCRAFT
Interdiction mission planning and co-ordination during the Gulf conflict 17 January - 27 February 1991 p 292 N92-27888
The evaluation of simulator effectiveness for the training of high speed, low level, tactical flight operations p 113 N92-28539
Airborne experimental FLIR program p 73 N92-32447
Identifying the principal noise sources of fixed-wing combat aircraft in high-speed flight p 299 N93-10686
Out of area experiences with the RB199 in Toronto p 99 N95-19654

MULTIDISCIPLINARY DESIGN OPTIMIZATION
Application of multidisciplinary optimization methods to the design of a supersonic transport p 47 N92-23230
Multidisciplinary optimization studies using ASTROS p 104 N92-23234

MULTIGRID METHODS
Computational techniques for solving the Navier-Stokes equations p 186 N92-27451
Hypersonic flow computations around re-entry vehicles p 13 N94-10461
Numerical calculations of high lift flows using structured and unstructured methods p 15 N94-18428
CFD methodology and validation for turbomachinery flows p 207 N95-14131

MULTIMEDIA
Newly available technologies present expanding opportunities for scientific and technical information exchange p 313 N93-31217
End users: New products and services p 314 N93-31220
Low cost software-based rendering and stereoscopic interfaces for teleoperation and virtual reality p 287 N94-37279
The Canadian network for the advancement of research, industry and education (CANARIE) p 315 N94-37336

MULTIPATH TRANSMISSION
Radiolocation Techniques [AGARD-CP-528] p 157 N93-23598
The effects of multipath scatter from wind driven gravity waves on lines of bearing serving as direction finders p 158 N93-23601
A new passive SSL technique for HF radiolocation p 159 N93-23609

Radio location through high resolution eigenstructure processing techniques that yield accurate multipath AOA and differential time delay estimates
p 162 N93-23626
Radar tracking in multipath: Techniques for improved performance p 174 N94-36631
Ground wave and diffraction, B p 175 N95-14829
Multiple Mechanism Propagation Paths (MMPPs): Their Characterisation and Influence on System Design [AGARD-CP-543] p 176 N95-20921
Adaptive error-control scheme for 2-200 MHz Multiple-Mechanism Propagation Paths
p 177 N95-20926
Problems of coding in multipath channels
p 178 N95-20930
A wideband propagation simulator for high speed mobile radio communications p 179 N95-20934
Time behavior and frequency response of the microwave propagation channel during multipath propagation p 180 N95-20942
Line-of-sight multipath propagation measurements at 15 GHz over 500 MHz bandwidth p 181 N95-20944
Angle diversity on digital microwave links: Antenna design and experimental results p 181 N95-20947
Mitigation of effects of multiple path nulls at super-high frequencies through diversity and networking
p 181 N95-20948
Multipath impact on ground-based global positioning system range measurements: Aspects of measurement, modeling, and mitigation p 182 N95-20949
Temporal and spatial comportment of multiple paths in ionospheric propagation in oblique incidence: Fractal measures of perturbations p 183 N95-20954
DAMSON: A system to measure multipath dispersion, Doppler spread and Doppler shift on multi-mechanism communications channels p 183 N95-20955
Sounder calibration with backscattering from Losquet Island in the presence of multipaths
p 184 N95-20961

MULTIPHASE FLOW
Aerodynamic design and investigation of a mixed flow compressor stage p 206 N94-34450
Design and aerodynamic performance evaluation of a high-work mixed flow turbine stage p 97 N94-34459

MULTIPLE TARGET TRACKING
Multiple target track-while-scan in the airborne EO environment p 173 N94-36629
Multitarget track initiation using a modified Hough transform p 174 N94-36630

MULTIPLEXING
Optical fiber sensors p 304 N92-28090

MULTIPOLAR FIELDS
Polarization effects and multipolarization SAR
p 155 N93-13054
Radiometric calibration of SAR systems
p 155 N93-13055

MULTIPROCESSING (COMPUTERS)
Design of a thinwire real-time multiprocessor operating system p 288 N94-29333
Packaging the MAMA module p 184 N95-20639

MULTISENSOR APPLICATIONS
Multi-sensoral approach to night flight: Perceptive and Cognitive limitations p 275 N94-23981
ACCS Surveillance Exploratory Prototype (ASEP)
p 170 N94-29566
Studies and simulations on sensor fusion and cueing for fighter application p 279 N94-36632
Sensor data fusion for air to air situation awareness beyond visual range p 295 N94-36633
Contact level fusion of radar and IRST contacts on almost electromagnetically silent platform
p 174 N94-36634

MULTISPECTRAL LINEAR ARRAYS
Line-of-sight multipath propagation measurements at 15 GHz over 500 MHz bandwidth p 181 N95-20944

MULTISPECTRAL RADAR
RAMSES: Multi-spectral experimental radar station installed on board the Transall p 156 N93-19925

MULTISTATIC RADAR
Large bistatic angle clutter depolarization study
p 180 N95-20941

MULTIVARIATE STATISTICAL ANALYSIS
Full mission simulation: A view into the future
p 112 N92-28537
G-load effects and efficient acoustic parameters for robust speaker recognition p 266 N93-19775

MUSCLES
Left ventricular hypertrophy and athlete's heart
p 247 N94-23321

MUSCULAR FUNCTION
Protein requirements in hypoxia or hypokinesia
p 271 N93-32244

MUSCULOSKELETAL SYSTEM
The physiological limitations of man in the high G environment p 269 N93-28861
The musculoskeletal and vestibular effects of long term repeated exposure to sustained high-G [AGARD-AR-317] p 281 N95-14263

MYOCARDIUM
Sarcoidosis in US military aviators
p 257 N95-19438

N

NACELLES
Numeric simulation of the aerodynamic flows around nacelles p 193 N93-13202
Pressure distribution measurements on an isolated TPS 441 nacelle p 26 N95-17878
Low speed propeller slipstream aerodynamic effects
p 27 N95-17882
Impact of noise environment on engine nacelle design
p 302 N95-19147

NAP-OF-THE-EARTH NAVIGATION
Status of automatic guidance systems for rotorcraft in low altitude flight p 37 N92-27894
Testing of an automatic, low altitude, all terrain ground collision avoidance system p 38 N93-19924
Flight evaluation of a computer aided low-altitude helicopter flight guidance system p 106 N93-28869

NAPHTHALENE
Vortex structure and mass transfer near the base of a cylinder and a turbine blade p 84 N93-29929

NARROWBAND
QoS driven routing in packet switched networks of multiple transmission media p 176 N95-20923

NASA PROGRAMS
Newly available technologies present expanding opportunities for scientific and technical information exchange p 313 N93-31217

NASA SPACE PROGRAMS
Robotics technology developments in the United States space telerobotics program p 290 N95-14943

NATIONAL AEROSPACE PLANE PROGRAM
The National Aero-Space Plane program: A revolutionary concept p 53 N93-19908
CFD analysis of hypersonic, chemically reacting flow fields p 8 N94-10422

NATURAL LANGUAGE (COMPUTERS)
Use of expert systems as user interfaces in information retrieval p 309 N92-32185
Search strategies in natural language
p 309 N92-32186
Automating multilingual communication
p 313 N93-31219

NAUSEA
Profile analysis of after-effects experienced during exposure to several virtual reality environments
p 252 N94-37263
Some side-effects of immersion virtual reality
p 252 N94-37277

NAVIER-STOKES EQUATION
Computational techniques for solving the Navier-Stokes equations p 186 N92-27451
Turbine internal fluid flow analysis and Stokes' hypothesis p 186 N92-27455
Computation of 3D-viscous flow and heat transfer for the application to film cooled gas turbine blades
p 187 N92-27456
Experimental verification of a 3D turbulent flow calculation in an axial turbine cascade
p 187 N92-27457
A critical evaluation of a three-dimensional Navier-Stokes method as a tool to calculate transonic flows inside a low-aspect-ratio compressor
p 187 N92-27459
Navier-Stokes analysis of turbine blade heat transfer and performance p 188 N92-27468
The application of a Navier-Stokes CFD method to civil engine intake flows p 188 N92-27471
Three dimensional flow in sharp bends --- ducted flow
p 190 N92-27481
The 3-D Navier-Stokes flow and temperature field computation for a forced mixer nozzle
p 190 N92-27482
Flow computation in combustion chambers using zonal nonstaggered grids p 190 N92-27483
Finite element methods for fluids p 191 N92-27673
Aspects of unstructured grids and finite-volume solvers for the Euler and Navier-Stokes equations
p 192 N92-27677
Current status of computational methods for transonic unsteady aerodynamics and aeroelastic applications
p 3 N92-27937
Computations of unsteady flows around airfoil sections by explicit and implicit methods solving the Euler and Navier-Stokes equations p 5 N92-27948
Numerical simulation of shock-stall flutter of an airfoil using the Navier-Stokes equations p 105 N92-27956
Transonic aeroelastic computations on wings using Navier-Stokes equations p 6 N92-27957
The PEP Symposium on CFD Techniques for Propulsion Applications p 194 N93-13210
Aerothermic calculations of flows in interdisc cavities of turbines p 86 N93-29947
The aerodynamic effect of coolant ejection in the leading edge region of a film-cooled turbine blade
p 87 N93-29958
Coupling of 3D-Navier-Stokes external flow calculations and internal 3D-heat conduction calculations for cooled turbine blades p 87 N93-29961
Navier-Stokes analysis of three-dimensional flow and heat transfer inside turbine blade rows
p 87 N93-29963
Experimental, analytical, and computational methods applied to hypersonic compression ramp flows
p 10 N94-10444
A CFD-based aerodynamic design procedure for hypersonic wind-tunnel nozzles p 116 N94-10458
Hypersonic multi block flow simulations around space vehicles including non-equilibrium chemistry
p 12 N94-10460
Rocket motor plume flowfields: Phenomenology and simulation p 125 N94-15221
Navier-Stokes computations of turbulent flow around high-lift configurations p 14 N94-18420
Efficient simulation of incompressible viscous flow over multi-element airfoils p 14 N94-18421
Navier-Stokes calculations on multi-element airfoils using a chimera-based solver p 14 N94-18422
Numerical solution of the Navier-Stokes equations for high-lift configurations on structured composite grids
p 14 N94-18423
Prediction of the high-lift performance of multi-element aerofoils using an unstructured Navier-Stokes solver
p 15 N94-18427
Numerical calculations of high lift flows using structured and unstructured methods p 15 N94-18428
Navier-Stokes simulation of flow field around a blown-flap high-lift system p 16 N94-18429
Navier-Stokes simulation of two and three dimensional jets in crossflow, effects of grid, and boundary conditions p 203 N94-28026
Theoretical and experimental investigation of a delta wing with turbulent leading-edge jets p 18 N94-28029
Recent developments in the simulation of steady and transient transverse jet interactions for missile, rotorcraft, and propulsive applications
p 203 N94-28030
Numerical assessment of aerodynamic interactions on missiles with transverse jets control p 18 N94-28031
Navier-Stokes analysis of a swirling jet in crossflow
p 204 N94-28038
Special Course on Progress in Transition Modelling [AD-A283337] p 205 N94-33884
CFD methodology and validation for turbomachinery flows p 207 N95-14131
The role of CFD in the design process
p 208 N95-14135
Navier-Stokes predictions of missile aerodynamics
p 20 N95-14451
Solution of Navier-Stokes equations using high accuracy monotone schemes p 209 N95-19019
Simulation of steady and unsteady viscous flows in turbomachinery p 99 N95-19023
Simulation of separated flows p 213 N95-21068
Large eddy simulation of channel flow using a vorticity transport subgrid model p 215 N95-21076
Spatial direct numerical simulation of boundary layer transition under strong adverse pressure gradient
p 217 N95-21093
Navier-Stokes simulations of the effects of suction holes on a flat plate boundary layer p 218 N95-21094
DNS of turbulent flow in a driven cavity and their analysis using proper orthogonal decomposition
p 218 N95-21097
Direct simulation and graphics post-processing of three-dimensional turbulent flows p 218 N95-21098

NAVIGATION
Trajectory optimization for hypersonic aircraft guidance p 37 N92-27898
Airborne experimental FLIR program
p 73 N92-32447
A visual of the helmet for the piloting and the day/night navigation of the combat aircraft: Requirements and technical approaches
p 38 N93-19768
High precision navigation for flight testing (AERONAV)
p 38 N93-19920
Integrated and Multi-Function Navigation [AGARD-CP-525] p 39 N93-22780
Mission requirements and applications of integrated and multi-function navigation systems
p 39 N93-22781
An overview of optical gyroscopes for navigation
p 219 N93-22783
Hemispherical resonator gyro: Principle, design, and performance p 220 N93-22784
Fiber optic gyros and systems p 220 N93-22785
Silicon accelerometer for AHRS and hybrid navigation systems p 220 N93-22786
Retrofitting of GPS into existing navigation suites
p 39 N93-22788

NAVIGATION AIDS
An overview of optical gyroscopes for navigation
p 219 N93-22783
Hemispherical resonator gyro: Principle, design, and performance p 220 N93-22784
Fiber optic gyros and systems p 220 N93-22785
Silicon accelerometer for AHRS and hybrid navigation systems p 220 N93-22786

The Missle-Borne Integrated Network Demonstration Program p 289 N93-22023
Fault location in structures using neural networks p 224 N94-11335
Adaptive reconfigurable flight controls for high angle of attack aircraft agility p 108 N94-11502
Toward intelligent flight control p 108 N94-11503
A combined approach to buffet response analyses and fatigue life prediction p 228 N94-34587

NEUROLOGY
Neurological decision making in aviation medicine based on electrophysiological methods p 256 N95-19431

NEUROPHYSIOLOGY
Neuropsychiatric morbidity in early HIV disease: Implications for military occupational function p 238 N93-11299
Neuropsychophysiologic sequelae of mild head injury p 256 N95-19430
Spinal nerve syndromes: The need to confirm the diagnosis with neurophysiological examinations p 257 N95-19436

NEWTON METHODS
Evaluation of an unsteady implicit Euler code against two and three-dimensional standard configurations p 4 N92-27945

NICKEL ALLOYS
Process enhancements of superalloy material p 143 N94-37324
Maintaining constant standards during the forging process p 144 N94-37326
Defects and their effects on the integrity of nickel based aeroengine discs p 144 N94-37328
Substantiating powder metal life methodologies for engines p 225 N94-37330

NIGHT
Helicopter crash survival at sea: United States Navy/Marine Corps experience 1977-1990 p 33 N93-19687
Laser designation pods optimized concept for day/night operations p 222 N94-36620

NIGHT FLIGHTS (AIRCRAFT)
Visual Problems in Night Operations [AGARD-LS-187] p 275 N94-23976

NIGHT VISION
A new concept for helmet mounted vision p 265 N93-19767
Helicopter night vision goggle testing in the United Kingdom p 267 N93-19917
Head-steered sensor flight test results and implications p 269 N93-28859
System automation and pilot-vehicle-interface for unconstrained low-altitude night attack p 270 N93-28867
Design considerations for a night, air-to-surface attack capability on a dual role fighter p 74 N93-28871
Visual Problems in Night Operations [AGARD-LS-187] p 275 N94-23976
Night operations p 275 N94-23977
Physical aspects of the visual stimulus p 275 N94-23978
Perception in flight: Shape and motion perception, space perception, spatial orientation, and visual vestibular interaction p 260 N94-23979
Mental images p 260 N94-23980
Multi-sensoral approach to night flight: Perceptive and Cognitive limitations p 275 N94-23981
Night vision devices and characteristics p 276 N94-23982
Cockpit/NVG visual integration issues p 276 N94-23983
Night vision goggle illusions and visual training p 276 N94-23984
Visual accommodation to virtual image displays when knowledge of object distance conflicts with optical distance p 261 N94-37278
Ultra-Reliable Digital Avionics (URDA) processor p 226 N95-20638

NITRIC OXIDE
Simulation of pollutant formation in turbulent combustors using an extended coherent flame model p 139 N94-29251
Flowfield prediction of NO(x) and smoke production in aircraft engines p 140 N94-29252

NITROGEN OXIDES
Fuels and Combustion Technology for Advanced Aircraft Engines [AD-A275679] p 138 N94-29246
On the effect of emissions from aircraft engines on the state of the atmosphere p 229 N94-29247
Prediction of prompt NO(x) in hydrocarbon air flames p 139 N94-29250
Ultra low NO(x) ultra lean gas turbine primary zones with liquid fuels p 91 N94-29267
Reduction of NO(x) by fuel-staging in gas turbine engines: A commitment to the future p 141 N94-29272
Chambers of turboreactors with variable geometry: A response to the matrix of pollution in cycles at high temperature, high pressure p 141 N94-29273
The influence of air distribution on homogeneity and pollutant formation in the primary zone of a tubular combustor p 141 N94-29274
Effects of hydrogen addition on pollutant emissions in a gas turbine combustor p 141 N94-29275
Combustor technology for future small gas turbine aircraft p 96 N94-34452

NODULES
Sarcoidosis and the aviator p 248 N94-23325

NOISE (SOUND)
Identification and analysis of air- and structure-borne noise and vibration paths p 303 N95-19166

NOISE GENERATORS
Combat Aircraft Noise [AGARD-CP-512] p 296 N93-10666

NOISE INTENSITY
Semiconductor lasers and fiber lasers for fiber-optic telecommunications p 154 N92-28085
Coherent communications --- fiber optics applications p 154 N92-28086
Noise of combat aircraft in proximity to air bases: Review of the possibilities of noise reduction at the source p 297 N93-10671
Noise studies for environmental impact assessment of an outdoor engine test facility p 297 N93-10672
Noise emission of low flying military airplanes p 297 N93-10675
Combat aircraft noise p 298 N93-10676
Boom and the problems related to the supersonic flights of military aircraft p 298 N93-10677
A brief review of the source noise technology applicable to fixed-wing military aircraft p 298 N93-10678
Supersonic acoustic source mechanisms for free jets of various geometries p 298 N93-10680
Audibility-based annoyance prediction modeling p 299 N93-10683
Identifying the principal noise sources of fixed-wing combat aircraft in high-speed flight p 299 N93-10686
Measurement and prediction of noise from low-altitude military aircraft operations p 300 N93-10687
An overall approach of cockpit noise verification in a military aircraft p 303 N95-19163

NOISE MEASUREMENT
Combat Aircraft Noise [AGARD-CP-512] p 296 N93-10666
Human noise exposure criteria for combat aircraft training areas p 297 N93-10670
Comparison of flyover noise data from aircraft at high subsonic speeds with prediction p 297 N93-10674
Noise emission of low flying military airplanes p 297 N93-10675
Measurement and prediction of noise from low-altitude military aircraft operations p 300 N93-10687
Application of non-standard signal processing to ELF noise characterization for the TSS1-OESEE programme p 167 N93-30743
ELF/VLF radio noise measurements at high latitudes during solar particle events p 167 N93-30744

NOISE POLLUTION
Audibility-based annoyance prediction modeling p 299 N93-10683

NOISE PREDICTION
A long wave TE/TM noise prediction model p 167 N93-30742

NOISE PREDICTION (AIRCRAFT)
Noise studies for environmental impact assessment of an outdoor engine test facility p 297 N93-10672
Non-propulsive aerodynamic noise p 297 N93-10673
Comparison of flyover noise data from aircraft at high subsonic speeds with prediction p 297 N93-10674
Boom and the problems related to the supersonic flights of military aircraft p 298 N93-10677
Combat aircraft jet engine noise studies p 298 N93-10679
Combustion noise and combustion instabilities in propulsion systems p 299 N93-10682
Audibility-based annoyance prediction modeling p 299 N93-10683
The prediction of noise radiation from supersonic elliptic jets p 299 N93-10684
Prediction of jet mixing noise for high subsonic flight speeds p 299 N93-10685
Measurement and prediction of noise from low-altitude military aircraft operations p 300 N93-10687
Modelling structurally damaging twin-jet screech p 72 N95-19154

NOISE PROPAGATION
Noise transmission and reduction in turboprop aircraft p 303 N95-19164
Advanced statistical energy analysis p 229 N95-19165

NOISE REDUCTION
Combat Aircraft Noise [AGARD-CP-512] p 296 N93-10666
Combat aircraft noise: The operator's perspective p 296 N93-10669
Noise of combat aircraft in proximity to air bases: Review of the possibilities of noise reduction at the source p 297 N93-10671
Non-propulsive aerodynamic noise p 297 N93-10673
Combat aircraft noise p 298 N93-10676
Boom and the problems related to the supersonic flights of military aircraft p 298 N93-10677
Combat aircraft jet engine noise studies p 298 N93-10679
Supersonic acoustic source mechanisms for free jets of various geometries p 298 N93-10680
Combat aircraft noise reduction by technical measures p 300 N93-10689
Technical measures for the attenuation of aircraft noise and their applicability to GAF combat aircraft p 300 N93-10690
Study results on combat aircraft source noise reduction p 300 N93-10691
Reduction of propeller noise by active noise control p 300 N93-10692
VLF propagation measurements in the Canadian Arctic p 165 N93-30733
Helicopter internal noise p 301 N95-19144
Impact of noise environment on engine nacelle design p 302 N95-19147
An overall approach of cockpit noise verification in a military aircraft p 303 N95-19163
Noise transmission and reduction in turboprop aircraft p 303 N95-19164

NOISE TOLERANCE
Human noise exposure criteria for combat aircraft training areas p 297 N93-10670

Noise of combat aircraft in proximity to air bases: Review of the possibilities of noise reduction at the source p 297 N93-10671
Audibility-based annoyance prediction modeling p 299 N93-10683

NONADIABATIC CONDITIONS
Numerical analysis of the thermoelastic effects in laminated structures and its use in the identification of defects p 129 N93-21511

NONDESTRUCTIVE TESTS
A Recommended Methodology for Quantifying NDE/NDI Based on Aircraft Engine Experience [AGARD-LS-190] p 89 N94-11022
Ultrasonic nondestructive evaluation as a tool for the development of aerospace structural ceramic composites p 146 N94-24240
Characterisation of Fibre Reinforced Titanium Matrix Composites [AD-A277520] p 134 N94-36649
Ultrasonic nondestructive characterization methods for the development and life prediction of titanium matrix composites p 136 N94-36660
Process enhancements of superalloy material p 143 N94-37324

NONEQUILIBRIUM FLOW
Nonequilibrium 3D flows of air through inlets p 190 N92-27487
Evaluation of the effects of finite rate chemistry on nozzle performance p 190 N92-27488
Numerical analysis of converging-diverging nozzle flows in chemical non-equilibrium p 191 N92-27489
Calculations of viscous nonequilibrium flows in nozzles p 12 N94-10455
Nonequilibrium hypersonic flow in a wind-tunnel nozzle p 12 N94-10456

NONEQUILIBRIUM THERMODYNAMICS
Nonequilibrium hypersonic flow in a wind-tunnel nozzle p 12 N94-10456
Hypersonic multi block flow simulations around space vehicles including non-equilibrium chemistry p 12 N94-10460
Thermal and chemical non equilibrium hypersonic flow computations p 13 N94-10465

NONINTRUSIVE MEASUREMENT
Local measurement of temperatures and concentrations: A review for hypersonic flows p 9 N94-10434
A non-intrusive way to measure point-of-gaze p 280 N94-37272
Wall Interference, Support Interference and Flow Field Measurements [AGARD-CP-535] p 209 N95-19251
The crucial role of wall interference, support interference and flow field measurements in the development of advanced aircraft configurations p 209 N95-19252
Particle Image Velocimetry: Principles, current applications and future prospects p 306 N95-19253

NONLINEAR EQUATIONS
Aspects of unstructured grids and finite-volume solvers for the Euler and Navier-Stokes equations p 192 N92-27677
Nonlinear effects in optical fibers p 304 N92-28088
Dynamics and control of coherent structures in the turbulent wall layer: An overview p 107 N94-11494
Nonlinear and dynamic analysis of flight p 107 N94-11496

NONLINEAR PROGRAMMING
Optimal guidance anticipating missile performance p 118 N92-27902

NONLINEAR SYSTEMS
Combustion noise and combustion instabilities in propulsion systems p 299 N93-10682
Stability in Aerospace Systems [AGARD-R-789] p 107 N94-11489
Chaotic time series analysis p 296 N94-11490
On non-linear longitudinal stability of an aircraft in a dive in the presence of atmospheric disturbances p 107 N94-11492
Modeling nonlinear aerodynamic loads for aircraft stability and control analysis p 108 N94-11499
Non Linear Dynamics and Chaos [AGARD-LS-191] p 307 N94-18236
Stability analysis through bifurcation theory, 1 p 308 N94-18238
Non-linear flight dynamics p 56 N94-18240
Techniques for aerodynamic characterization and performance evaluation at high angle of attack p 63 N94-34614
Identification of dynamic systems. Volume 3: Applications to aircraft. Part 2: Nonlinear analysis and manoeuvre design [AGARD-AG-300-VOL-3-PT-2] p 69 N95-14102
2-D aileron effectiveness study p 21 N95-17851
The impact of non-linear flight control systems on the prediction of aircraft loads due to turbulence p 110 N95-18598
Treatment of non-linear systems by timeplane-transformed CT methods: The spectral gust method p 111 N95-18600
Nonlinear dynamic response of aircraft structures to acoustic excitation p 72 N95-19151

NONLINEARITY
Recent applications of linear and nonlinear unsteady aerodynamics for aeroelastic analysis p 4 N92-27940
Asymptotic approaches to transition modelling p 205 N94-33887
Comparison of stochastic and deterministic nonlinear gust analysis methods to meet continuous turbulence criteria p 71 N95-18602

NONUNIFORMITY
The influence of non-uniform spanwise inlet temperature on turbine rotor heat transfer p 84 N93-29932

NORMAL SHOCK WAVES
AGARD WG13 aerodynamics of high speed air intakes: Assessment of CFD results p 194 N93-13220

NORTH ATLANTIC TREATY ORGANIZATION (NATO)
T(Ic2)acS(Ic3)ats for Surveillance Verification and C3I [AGARD-CP-522] p 163 N93-29892
Considerations for NATO satellite communications in the post-2000 era p 164 N93-29899
Cardiovascular and pulmonary disease in NATO aircrew: An overview p 246 N94-23314

NOSE (ANATOMY)
Allergic and nonallergic rhinitis in Greek pilots p 242 N93-11317

NOSES (FOREBODIES)
Pneumatic management of blunted-forebody flow asymmetry for high-angle-of-attack directional control p 109 N94-28028

NOTCH TESTS
Edge delamination of composite laminates p 130 N93-21519
Micromechanical characterization of ceramic-matrix composites using the instrumented microindentation technique p 145 N94-24233

NOTCHES
Growth of artificially and naturally initiating notch root cracks under FALSTAFF spectrum loading p 228 N94-34589

NOZZLE DESIGN
Supersonic acoustic source mechanisms for free jets of various geometries p 298 N93-10680
Nozzle installation effects on the noise from supersonic exhaust plumes p 299 N93-10681
Study results on combat aircraft source noise reduction p 300 N93-10691
Survey on techniques used in aerodynamic nozzle/airframe integration p 51 N93-13224
Heat transfer and aerodynamics of a 3D design nozzle guide vane tested in the Pyestock Isentropic Light Piston Facility p 84 N93-29928
A CFD-based aerodynamic design procedure for hypersonic wind-tunnel nozzles p 116 N94-10458
The interaction region associated with twin jets and a normal crossflow p 201 N94-28009
Fuel injector design for high temperature aircraft engine p 91 N94-29263

NOZZLE EFFICIENCY
Evaluation of the effects of finite rate chemistry on nozzle performance p 190 N92-27488

NOZZLE FLOW
CFD Techniques for Propulsion Applications [AGARD-CP-510] p 186 N92-27450
Predictions and measurements of 3D viscous flow in a transonic turbine nozzle guide vane row p 78 N92-27466
Aerothermodynamics of nozzle flows for advanced hypersonic propulsion systems p 189 N92-27478
Application of finite element method to hypersonic nozzle flow computations p 189 N92-27479
The 3-D Navier-Stokes flow and temperature field computation for a forced mixer nozzle p 190 N92-27482
Evaluation of the effects of finite rate chemistry on nozzle performance p 190 N92-27488
Numerical analysis of converging-diverging nozzle flows in chemical non-equilibrium p 191 N92-27489
The jet behaviour of an actual high-bypass engine as determined by LDA-measurements in ground tests p 80 N93-13218
Numerical simulation of the flow through a scramjet engine p 89 N94-10425
Calculations of viscous nonequilibrium flows in nozzles p 12 N94-10455
Numerical investigation of thrust vectoring by injection of secondary air into nozzle flows p 202 N94-28013
Experiments on interaction force of jets in hypervelocity cross-flow in a shock tunnel p 17 N94-28022
A study of jet effect and ground effect interference on a STOL fighter p 60 N94-28034
Fuel injector design for high temperature aircraft engine p 91 N94-29263
Scramjet CFD methods and analysis. Part 1: Scramjet CFD methods. Numerical simulation of the flow in scramjet duct p 92 N94-29296
Nozzle guide vane flow in radial inflow turbines p 97 N94-34460

NOZZLE GEOMETRY
Numerical analysis of converging-diverging nozzle flows in chemical non-equilibrium p 191 N92-27489
Supersonic acoustic source mechanisms for free jets of various geometries p 298 N93-10680
Nozzle installation effects on the noise from supersonic exhaust plumes p 299 N93-10681
Combat aircraft noise reduction by technical measures p 300 N93-10689

NOZZLE WALLS
Aerothermodynamics of nozzle flows for advanced hypersonic propulsion systems p 189 N92-27478

NOZZLES
Thermal effects of a coolant film along the suction side of a high pressure turbine nozzle guide vane p 84 N93-29930

NUCLEAR WARFARE
Tethered aerostat VLF/LF transmitter system design considerations p 169 N93-30753

NUMERICAL ANALYSIS
Introduction to Special Course on Engineering Methods in Aerodynamic Analysis and Design of Aircraft p 48 N92-23951
Numerical analysis of converging-diverging nozzle flows in chemical non-equilibrium p 191 N92-27489
Study of turbulence structure through numerical simulations: The perspective of drag and reduction p 3 N92-27713
Numerical analysis of the thermoelastic effects in laminated structures and its use in the identification of defects p 129 N93-21511
Numerical finite element analysis of damage using Monte Carlo techniques p 291 N93-21522
Multivariable frequency response methods for optimal Kalman-Bucy filters with applications to radar tracking systems p 157 N93-22024
Optimum Design Methods for Aerodynamics [AGARD-R-803] p 70 N95-16562
Optimal shape design for aerodynamics p 70 N95-16568
Review of the EUROPT Project AERO-0026 p 71 N95-16573

NUMERICAL CONTROL
Reactive system software concept with automation using the LDS language p 285 N94-29327
Creation of a virtual world to study human spatial perception during sustained acceleration p 261 N94-37268
Operator gaze position control interfaces: Investigation of psychophysical and operational parameters p 281 N94-37273

NUMERICAL WEATHER FORECASTING
Use of mesoscale models for refractivity forecasting p 153 N92-22797
A virtual sensor for evaporation ducts: The impact of data uncertainties p 229 N92-22799

NUSSELT NUMBER
Transient thermal behaviour of a compressor rotor with axial cooling air flow and co-rotating or contra-rotating shaft p 86 N93-29946

NUTRITION
Nutrition, Metabolic Disorders and Lifestyle of Aircrew [AGARD-CP-533] p 270 N93-32240
An automated processing system for food frequency and nutrition knowledge questionnaire p 271 N93-32241
Nutritional assessment of United States tactical air command pilots p 271 N93-32242
Nutrition for a typical MAC crew during Desert Storm p 271 N93-32245
Nutritional and lifestyle status of 50 pilots of the Portugese Air Force p 272 N93-32255
The influence of dietary counseling and cardiac catheterization on lipid profiles in American military aviators p 273 N93-32259
Biological parameters and cardiovascular risk factors with the flying personnel of the Belgian Armed Forces p 273 N93-32260
Nutrition and hydration status of aircrew members consuming an improved survival ration during a simulated survival scenario p 249 N94-28429

NUTRITIONAL REQUIREMENTS
Nutrition for a typical MAC crew during Desert Storm p 271 N93-32245
Changes in food and energy intake in military aircrew p 271 N93-32246
Trial of emergency ration of the Spanish Air Force p 272 N93-32247
Nutritional and lifestyle status of 50 pilots of the Portugese Air Force p 272 N93-32255
Nutrition and hydration status of aircrew members consuming an improved survival ration during a simulated survival scenario p 249 N94-28429

NYSTAGMUS
Vestibular examination in pilots susceptible to motion sickness p 255 N95-19427

O

OBJECT-ORIENTED PROGRAMMING
Aerospace Software Engineering for Advanced Systems Architectures
| AD-A277101 | p 283 N94-29315
Object versus functional oriented design
p 284 N94-29321
Hierarchical Object Oriented Design (HOOD): Possibilities, limitations, and challenges
p 284 N94-29322
Object oriented design of the autonomous fixtaking management system p 41 N94-29323
A distributed object-based environment in Ada
p 287 N94-29347

OBLIQUE SHOCK WAVES
Flow development in a circular pipe in the UTIAS/RPI M 8.3 gun tunnel p 10 N94-10442
Improvement and validation of an LDV system to perform measurements in laminar supersonic flows
p 221 N95-19256
Direct numerical simulation of 2-D and 3-D instability waves in a laminar separation bubble
p 218 N95-21095

OBSTACLE AVOIDANCE
Comparison of the event-step algorithm to other path planning methods to avoid dynamic 3D obstacles
p 37 N92-27896
3-D computer vision for navigation/control of mobile robots p 289 N93-13243
The 3-D computer vision techniques for object following and obstacle avoidance p 289 N93-13245

OCCUPATION
Disorientation and flight safety: A survey of UK Army aircrew p 259 N93-19680

OCEAN SURFACE
A virtual sensor for evaporation ducts: The impact of data uncertainties p 229 N92-22799
The effects of multipath scatter from wind driven gravity waves on lines of bearing serving as direction finders p 158 N93-23601
The influence of the evaporation duct on the angle of arrival and amplitude of the backscattered signal from targets low above the sea p 170 N94-30498
Methods for evaluating the effects of conduits at the surface of the sea p 178 N95-20932
Modelling of microwave propagation and clutter in a maritime environment p 179 N95-20938
Measurements of radar backscatter from the ocean surface at 94 GHz as a function of wind speed, direction and the modulation by the ocean waves during the SAXON-FPN experiment p 184 N95-20960

OCEANS
Terrain and refractivity effects on non-optical paths
p 178 N95-20931

OCULAR CIRCULATION
Contribution of the analysis of ocular activity (complementary to the electroencephalographic analysis) to the detection of low vigilance in instances of piloting a vehicle p 244 N93-19708

OCULOMETERS
Interactive large screen: A multi-mode dialogue tool for future cockpits p 280 N94-37266
Gaze orientation under G(z)-load. Methodological aspects: Preliminary results p 281 N94-37274

OFFICE AUTOMATION
Automated input into databases: OCR and descriptive cataloguing p 309 N92-32189

OGIVES
Pneumatic management of blunted-forebody flow asymmetry for high-angle-of-attack directional control
p 109 N94-28028

OMEGA NAVIGATION SYSTEM
Investigations of equatorial ionosphere nighttime mode conversion at VLF p 166 N93-30735

ON-LINE SYSTEMS

High performance backplane components for modular avionics p 186 N95-20653

OPTICAL COUNTERMEASURES
Atmospheric Propagation Effects Through Natural and Man-Made Obscurants for Visible to MM-Wave Radiation
| AD-A276919 | p 170 N94-30495
Experimental evaluation of camouflage effectiveness in the thermal infrared p 306 N94-30502
NATO SOCMET trials p 171 N94-30503
Global approach towards the evaluation of thermal infrared countermeasures p 306 N94-30504
The effects of man-made smokes and battlefield-induced smokes on the propagation of electromagnetic radiation p 172 N94-30505

OPTICAL DATA PROCESSING
Automated input into databases: OCR and descriptive cataloguing p 309 N92-32189
A new concept for helmet mounted vision
p 265 N93-19767

OPTICAL FIBERS
Coherent communications --- fiber optics applications
p 154 N92-28086
High speed local area networks p 154 N92-28087
Nonlinear effects in optical fibers p 304 N92-28088
Active fibres and optical amplifiers
p 304 N92-28089
Optical fiber sensors p 304 N92-28090
Smart structures: The relevance of fibre optics
p 304 N92-28091
Fiber optic data busses for aircraft p 72 N92-28093
Factors affecting the embedding of optical fibre sensors in advanced composite structures
p 134 N94-11336

OPTICAL GYROSCOPES
Fiber-optic gyroscope p 219 N92-28092
An overview of optical gyroscopes for navigation
p 219 N93-22783
Fiber optic gyros and systems p 220 N93-22785

OPTICAL MEASUREMENT
Pressure and force measurements on models set in hypersonic flows: A review p 9 N94-10435
Flow visualization and spectroscopy in hypersonic flows: New trends p 305 N94-10437
An experimental and comprehensive method to measure emission characteristics p 171 N94-30501
Particle Image Velocimetry: Principles, current applications and future prospects p 306 N95-19253
Optical surface pressure measurements: Accuracy and application field evaluation p 307 N95-19274

OPTICAL MEASURING INSTRUMENTS
Optical fiber sensors p 304 N92-28090
Fiber-optic gyroscope p 219 N92-28092
Local measurement of temperatures and concentrations: A review for hypersonic flows
p 9 N94-10434
Optical fibre techniques for structural monitoring in composites p 132 N94-11324
Strain measurement of carbon/epoxy composite with fibre optics white light quasi distributed polarimetric sensor p 133 N94-11328

OPTICAL PROPERTIES
Semi-propellants for ducted rockets
p 147 N93-17612
Plume primary smoke p 124 N94-15218
Night vision devices and characteristics
p 276 N94-23982
Cockpit/NVG visual integration issues
p 276 N94-23983

OPTICAL PUMPING
Active fibres and optical amplifiers
p 304 N92-28089

OPTICAL RADAR
Radio refractivity profiles deduced from aerosol lidar measurements
| AD-A249074 | p 152 N92-22796
Remote sensing of aerosol extinction using single-ended lidars p 232 N92-22811
Probing of the atmosphere with lidar
p 232 N92-22812
Lidar remote sensing techniques for developing and evaluating atmospheric aerosol models
p 232 N92-22813
Analysis algorithms for processing ultraviolet fluorescence data p 221 N92-22823
Infrared Targeting System (IRTS) demonstration
p 305 N92-32446
Propagation Modelling and Decision Aids for Communications, Radar and Navigation Systems
| AGARD-LS-196 | p 174 N95-14825
Sensing of radio refractivity and aerosol extinction
p 175 N95-14830

OPTICAL TRACKING
Pointing and Tracking Systems
| AD-A282573 | p 122 N94-36616
Pointing and tracking concept for a high energy laser weapon application p 222 N94-36619

OPTICAL TRANSFER FUNCTION
Calculation of turbulence degraded point spread function of an imaging system p 173 N94-30514

OPTIMAL CONTROL
Improvement of endurance performance by periodic optimal control of variable camber p 110 N94-36329

OPTIMIZATION
Basic equations of radar polarimetry and solutions the sensing of propagation path polarization state changes
p 153 N92-22821
Integrated Design Analysis and Optimisation of Aircraft Structures
| AGARD-R-784 | p 47 N92-23227
A system approach to aircraft optimization
p 47 N92-23228
Application of multidisciplinary optimization methods to the design of a supersonic transport p 47 N92-23230
Application of an automated multidisciplinary analysis and optimisation system to the design of aircraft structures p 47 N92-23233
Multidisciplinary optimization studies using ASTROS
p 104 N92-23234
A fin optimisation study p 48 N92-23237
Structural optimization of aircraft practice and trends
p 48 N92-23239
Integrated Design Analysis and Optimisation of Aircraft Structures
| AGARD-LS-186 | p 50 N92-28469
Fundamentals of structural optimisation
p 50 N92-28470
Practical architecture of design optimisation software for aircraft structures taking the MBB-Lagrange code as an example p 50 N92-28471
Structural optimization of aircraft p 50 N92-28472
Multidisciplinary design and optimization
| AGARD-PAPER-2 | p 50 N92-28473
Mathematical optimization: A powerful tool for aircraft design p 50 N92-28474
Optimization of the integration of inertia and GPS
p 39 N93-22787
Application of concurrent engineering principles to aircraft structural design p 59 N94-24321

Current and future design methods for large transport aircraft p 60 N94-24324
Trends of design methodology of airframe p 60 N94-24327
Computing techniques in mission planning p 294 N94-25012
Optimisation of composite aircraft structures by direct manufacturing approaches p 67 N94-36327
Turbomachinery Design Using CFD [AGARD-LS-195] p 207 N95-14127
Computational methods for preliminary design and geometry definition in turbomachinery p 223 N95-14128
Elements of a modern turbomachinery design system p 223 N95-14129
Optimum Design Methods for Aerodynamics [AGARD-R-803] p 70 N95-16562
Optimum aerodynamic design via boundary control p 70 N95-16565
Optimal shape design for aerodynamics p 70 N95-16568
Airfoil optimization by the one-shot method p 70 N95-16569
Tools for applied engineering optimization p 70 N95-16570
The global aircraft shape p 70 N95-16571
Aerodynamic shape optimization p 71 N95-16572
Review of the EUROPT Project AERO-0026 p 71 N95-16573

OPTOELECTRONIC DEVICES
Silicon vision: Elementary functions to be implemented on electronic retinas p 289 N93-13242
Advances in Guidance and Control of Precision Guided Weapons [AGARD-CP-524] p 149 N93-22018
Visual Problems in Night Operations [AGARD-LS-187] p 275 N94-23976
High performance backplane components for modular avionics p 186 N95-20653
The ROC optical connector p 307 N95-20654

ORDNANCE
The design features of rocket motors relating to insensitive munition response to thermo-mechanical stimuli p 147 N92-33244

ORGANIZATIONS
The management of change: Implications for the information professional p 314 N93-31222
Forecasting and planning for changing patterns of Scientific and Technical Communication (STC) p 314 N93-31223

OSCILLATING FLOW
Finite element computation of unsteady incompressible flows involving moving boundaries and interfaces and iterative solution strategies p 191 N92-27674
Comparison of Euler and full potential methods for unsteady transonic flow calculations p 4 N92-27943
NLR inviscid transonic unsteady loads prediction methods in aeroelasticity p 5 N92-27947
Transonic aeroelastic computations on wings using Navier-Stokes equations p 6 N92-27957

OSCILLATIONS
Comparison of Euler and full potential methods for unsteady transonic flow calculations p 4 N92-27943
Evaluation of an unsteady implicit Euler code against two and three-dimensional standard configurations p 4 N92-27945
Unsteady transonic aerodynamics of pointed bodies of revolution in supersonic freestream p 5 N92-27946
Development of a method to predict transonic limit cycle oscillation characteristics of fighter aircraft p 105 N92-27958
Transonic wind tunnel investigation of limit cycle oscillations on fighter type wings p 6 N92-27959
A review of scale effects on surfaces in unsteady motion p 7 N92-27962
Techniques for aerodynamic characterization and performance evaluation at high angle of attack p 63 N94-34614
Direct simulation of tridimensional wake of NACA 0012 profile p 216 N95-21086

OSCILLATORS
Optimization of the integration of inertia and GPS p 39 N93-22787

OTOLITH ORGANS
The musculoskeletal and vestibular effects of long term repeated exposure to sustained high-G [AGARD-AR-317] p 281 N95-14263

OVER-THE-HORIZON RADAR
The effects of multihop HF propagation on the performance of OTH backscatter radars p 183 N95-20953

OXIDATION
Simulation of pollutant formation in turbulent combustors using an extended coherent flame model p 139 N94-29251
Oxidation behavior of titanium aluminide matrix materials p 136 N94-36658
X-ray absorption spectroscopy in high temperature oxidation of metals and alloys p 144 N95-19682
Resistance of silicon nitride turbine components to erosion and hot corrosion/oxidation attack p 104 N95-19683

P

PACKAGING
Insensitive Munitions [AGARD-CP-511] p 147 N92-33240
The United States Air Force explosives hazards reduction program p 147 N92-33241
Advanced Packaging Concepts for Digital Avionics [AGARD-CP-562] p 75 N95-20631
The impact of advanced packaging technology on modular avionics architectures p 76 N95-20632
Standard Hardware Acquisition and Reliability Program (SHARP) advanced SEM-E packaging p 76 N95-20633
FASTPACK: Optimized solutions for modular avionics derived from a parametric study. Part 2: Avionics p 76 N95-20635
Ultra-Reliable Digital Avionics (URDA) processor p 226 N95-20638
Packaging the MAMA module p 184 N95-20639

PACKET TRANSMISSION
A current assessment of single site locating technology p 159 N93-23608

PAINTS
Environmentally Safe and Effective Processes for Paint Removal [AGARD-R-791] p 149 N94-10613
Paint removal activities in the US Navy p 149 N94-10614
Paint removal activities in Canada p 149 N94-10615
Procedures without danger to the environment and efficiency (PSDEE) for the removal of paint. Point on the French activities concerning the removal of paint p 150 N94-10616
Paint removal activities in Germany p 150 N94-10617
The development of alternative paint removal techniques in the RAF p 150 N94-10618
Operational aspects of F.16 plastic media blasting, as carried out by Fokker Aircraft Services p 150 N94-10619
Use of robots for aircraft dry stripping via plastic media blasting p 150 N94-10620
German Air Forces experiences with plastic media blasting and future requirements p 150 N94-10621
Plastic media blasting activities at Hill Air Force Base p 150 N94-10622
Large Aircraft Robotic Paint Stripping (LARPS) system and the high pressure water process p 151 N94-10623
Automated Laser Paint Stripping (ALPS) update p 151 N94-10624
Aquastrip (tm): An innovative paint removal technology p 151 N94-10625
Paint removal and surface cleaning using ice particles p 151 N94-10626
Paint removal using wheat starch blast media p 151 N94-10627
IATA taskforce: Paintstripping p 151 N94-10628
Selectively strippable paint schemes p 152 N94-10629

PANEL METHOD (FLUID DYNAMICS)
Panel methods for aerodynamic analysis and design p 49 N92-23955
Aerodynamic analysis of slipstream/wing/nacelle interference for preliminary design of aircraft configurations p 7 N93-13205
Application of subsonic first-order panel methods for prediction of inlet and nozzle aerodynamic interactions with airframe p 8 N93-13223
Calculation of support interference in dynamic wind-tunnel tests p 30 N95-19282

PANELS
Liquid crystal displays replacing the CRT and CLE of future cockpits p 74 N93-19783
Progressive delamination in polymer matrix composite laminates: A new approach p 130 N93-21515
Thermo-acoustic fatigue design for hypersonic vehicle skin panels p 229 N95-19161
Soft body impact on titanium fan blades p 102 N95-19671

PARABOLIC BODIES
Experimental study of the helicopter-mobile radioelectrical channel and possible extension to the satellite-mobile channel p 181 N95-20945

PARABOLIC DIFFERENTIAL EQUATIONS
Parabolized stability equations p 205 N94-33888

PARABOLIC REFLECTORS
Propagation measurements on a troposcatter link in the Canadian High Arctic p 180 N95-20940

PARALLAX
Gaze orientation under G(z)-load. Methodological aspects: Preliminary results p 281 N94-37274

PARALLEL COMPUTERS
Rome Laboratory software engineering technology program p 285 N94-29330

PARALLEL PROCESSING (COMPUTERS)
ICAAS piloted simulation evaluation p 72 N92-27906
Combat Automation for Airborne Weapon Systems: Man/Machine Interface Trends and Technologies [AGARD-CP-520] p 268 N93-28850
Pilot decision aiding for weapon delivery: A novel approach to fire control cueing using parallel computing p 268 N93-28853
Tactical satellites p 119 N93-29893
CFD analysis of hypersonic, chemically reacting flow fields p 8 N94-10422
Rome Laboratory software engineering technology program p 285 N94-29330
Distributed applications and failure tolerance programs using a reconfigurable parallel architecture p 286 N94-29345
Direct simulation and graphics post-processing of three-dimensional turbulent flows p 218 N95-21098

PARAMETER IDENTIFICATION
Identification of dynamic systems. Volume 3: Applications to aircraft. Part 2: Nonlinear analysis and manoeuvre design [AGARD-AG-300-VOL-3-PT-2] p 69 N95-14102

PARAMETERIZATION
Fundamentals of structural optimisation p 50 N92-28470

PARASITIC DISEASES
Allergic, Immunological and Infectious Disease Problems in Aerospace Medicine [AGARD-CP-518] p 235 N93-11283
Communicable diseases: A major burden of morbidity and mortality p 238 N93-11300
Immunization of personnel traveling to a destination in tropical countries: French position p 239 N93-11304
Recent lessons on the safety and effectiveness of malaria chemoprophylaxis in a non-immune population p 240 N93-11307
Use of novel adjuvants and delivery systems to improve the humoral and cellular immune response to malaria vaccine candidate antigens p 240 N93-11308

PARTICLE IMAGE VELOCIMETRY
Particle Image Velocimetry: Principles, current applications and future prospects p 306 N95-19253

PARTICLE SIZE DISTRIBUTION
Lidar remote sensing techniques for developing and evaluating atmospheric aerosol models p 232 N92-22813
The calculation of erosion in a gas turbine compressor rotor p 101 N95-19664

PARTICLE TRAJECTORIES
Particle deposition in gas turbine blade film cooling holes p 101 N95-19661
Experimental and numerical simulations of the effects of ingested particles in gas turbine engines p 101 N95-19662
Particle trajectories in gas turbine engines p 101 N95-19663
The calculation of erosion in a gas turbine compressor rotor p 101 N95-19664

PARTICULATE REINFORCED COMPOSITES
The influence of particle/matrix debonding on the stress-strain behavior of particulate composites p 131 N93-21525

PARTICULATES
The influence of particle/matrix debonding on the stress-strain behavior of particulate composites p 131 N93-21525

PATHOGENESIS
Viral hepatitis in the US Air Force, 1980 - 1989 p 235 N93-11287
HIV variability and perspectives of a vaccine p 237 N93-11294
Analysis of disease progression from clinical observations of US Air Force active duty members infected with the Human Immunodeficiency Virus: Distribution of AIDS survival time from interval censored observations p 237 N93-11297
In vivo and in vitro diagnosis of allergic respiratory disease during screening procedures in the Italian Navy: Comparative evaluation of a recent quantitative automatized enzyme immunoassay method to dose specific IgE p 241 N93-11314
Asthma in aircrew p 248 N94-23327

PATHOLOGY
27 years armed forces aerospace pathology and toxicology in the Federal Republic of Germany: Development, current status, trends and challenges p 243 N93-19696
Aircraft accident injuries in the Hellenic Air Force in the last 20 years p 244 N93-19698

PATIENTS
Aeromedical support for casualties in extremely hot climates p 277 N94-28443

PATTERN RECOGNITION
Machine Perception [AGARD-LS-185] p 288 N93-13238
Advances in speech processing p 156 N93-19771

G-load effects and efficient acoustic parameters for robust speaker recognition p 266 N93-19775
Automatic feature extraction and localization using data fusion of radar and infrared images p 162 N93-23628

PAYLOADS
Automated target tracking and location techniques applied to optical payloads on remotely piloted vehicles p 49 N92-27890

PEEK
A new test method to determine the compressive strength of fiber-reinforced composites p 126 N92-33035
The effect of heat treatment on the properties of PEEK and APC-2 p 128 N92-33052

PEGASUS AIR-LAUNCHED BOOSTER
Spacecraft and launch systems for TACSAT applications p 120 N93-29904
In-flight evaluation of aerodynamic predictions of an air-launched space booster p 9 N94-10427

PEPTIDES
Cytokines as vaccine adjuvants: Interleukin 1 and its synthetic peptide 163-171 p 240 N93-11309

PERCEPTION
Machine Perception
| AGARD-LS-185 | p 288 N93-13238
Machine perception exploiting high-level spatio-temporal models p 289 N93-13244

PERCEPTUAL ERRORS
Perception in flight: Shape and motion perception, space perception, spatial orientation, and visual vestibular interaction p 260 N94-23979
Night vision goggle illusions and visual training p 276 N94-23984

PERFORMANCE PREDICTION
Special Course on Engineering Methods in Aerodynamic Analysis and Design of Aircraft
| AGARD-R-783 | p 48 N92-23950
Introduction to Special Course on Engineering Methods in Aerodynamic Analysis and Design of Aircraft p 48 N92-23951
Survey of experimental techniques for performance prediction p 49 N92-23954
Aircraft drag analysis methods p 49 N92-23957
Evaluation of the effects of finite rate chemistry on nozzle performance p 190 N92-27488
Steady and Transient Performance Prediction of Gas Turbine Engines
| AGARD-LS-183 | p 79 N92-28458
Overview on basis and use of performance prediction methods p 79 N92-28459
Steady and transient performance calculation method for prediction, analysis, and identification p 79 N92-28461
Component performance requirements p 79 N92-28462
Dynamic simulation of compressor and gas turbine performance p 79 N92-28463
Calculation of installation effects within performance computer programs p 80 N92-28465
A methodology and tool for the prediction of depth of reception in the sea for a VLF/LF communications system p 167 N93-30741
Prediction of the high-lift performance of multi-element aerofoils using an unstructured Navier-Stokes solver p 15 N94-18427
The industrial use of CFD in the design of turbomachinery p 207 N95-14133
Electro-optics: Propagation from IR to UV and sensor considerations. Part B: Tools for exploitation of propagation conditions and system range performance p 176 N95-14834

PERFORMANCE TESTS
Application of S1BYL2 to the AGARD WG18 compressor test cases p 186 N92-27452
Semiconductor lasers and fiber lasers for fiber-optic telecommunications p 154 N92-28085
Comparative performance tests of a pitot-inlet in several European wind-tunnels at subsonic and supersonic speeds p 7 N93-13221
In-flight structural mode excitation system for flutter testing p 105 N93-19915
Testing of an automatic, low altitude, all terrain ground collision avoidance system p 38 N93-19924
Hemispherical resonator gyro: Principle, design, and performance p 220 N93-22784
Thermal protective performance and instrumented mannequin evaluation of multi-layer garment systems p 277 N94-28433
Rewarming methodologies in the field p 250 N94-28441
Some problems of scramjet propulsion for aerospace planes. Part 2: Scramjet: Development and test problems p 93 N94-29301
Software testing practices and their evolution for the 1990's p 285 N94-29335
A disciplined approach to software test and evaluation p 286 N94-29339
NATO SOCMET trials p 171 N94-30503
Design and aerodynamic performance evaluation of a high-work mixed flow turbine stage p 97 N94-34459
Techniques for aerodynamic characterization and performance evaluation at high angle of attack p 63 N94-34614
Flight test certification of a 480 gallon composite fuel tank on CF-18 p 68 N94-36340
In-flight refueling: Dassault Aviation research on the Rafale aircraft p 68 N94-36341
CC-130H(T) tactical aerial refuelling tanker development flight test programme p 69 N94-36347
Impact of propagation mechanisms on global navigation satellite system performance p 182 N95-20950

PERIOD DOUBLING
Bifurcation theory: Chaos and patterns p 308 N94-18237

PERIODIC FUNCTIONS
The WG sequences: Quasi perfect binary sequences p 163 N93-23631

PERIODICALS
The management of change: Implications for the information professional p 314 N93-31222
Electronic journals p 316 N94-37342

PERMEABILITY
Fire-resistant water vapour permeable buoyant insulation p 276 N94-28431

PERSONALITY
Gremlins: A dozen hazardous thought and behavior patterns as risk factors p 260 N93-19709

PERSONNEL
Viral hepatitis in the US Air Force, 1980 - 1989 p 235 N93-11287
Estimates of Human Immunodeficiency Virus (HIV) incidence and trends in the US Air Force p 236 N93-11292
Immunological parameters in current and former US Air Force personnel p 237 N93-11295
Neuropsychiatric morbidity in early HIV disease: Implications for military occupational function p 238 N93-11299
Susceptibility in USAF recruits to vaccine preventable diseases p 238 N93-11301
Cardiovascular risk factors in an Italian Air Force population: Preliminary report p 245 N93-32252
Recent Canadian advances in active thermal protection p 278 N94-28451

PERSONNEL SELECTION
The Clinical Basis for Aeromedical Decision Making
| AGARD-CP-553 | p 252 N95-19413
Think health not disease p 255 N95-19429
Neurological decision making in aviation medicine based on electrophysiological methods p 256 N95-19431
The EEG in the evaluation of applicants to aircrew members p 256 N95-19432
Clinical basis for aeromedical decision-making: The EEG example p 256 N95-19433

PERTURBATION
A boundary integral formulation for unsteady transonic potential flows p 4 N92-27942
Unsteady transonic aerodynamics of pointed bodies of revolution in supersonic freestream p 5 N92-27946
Computation of viscous phenomena in unsteady transonic flow p 5 N92-27949
Transonic aeroelastic calculations in both the time and frequency domains p 5 N92-27950
Computation of flutter boundaries in the time and frequency domain p 5 N92-27952
Analysis of unsteady aerodynamic and flutter characteristics of an aeroelastic model in transonic flow p 6 N92-27953
Direct coupling of fluid structure in transonic aeroelasticity p 6 N92-27954
Investigation of the aeroelastic stability of the AFW wind-tunnel model using CAP-TSD p 6 N92-27955
Transient (approximately equals 10 s) VLF amplitude and phase perturbations due to lightning-induced electron precipitation into the ionosphere (the Trimpi effect) p 166 N93-30736
ELF propagation in deep and shallow sea water p 166 N93-30739
Airfoil optimization by the one-shot method p 70 N95-16569
Numerical study of realistic perturbations in three-dimensional boundary layers p 217 N95-21091

PERTURBATION THEORY
Electromagnetic wave reflection from irregular plasma layers p 182 N95-20952

PHASE ERROR
Study of a VLF distributed antenna array p 168 N93-30749

PHASE MODULATION
Comparative study of C- and K-band propagation mechanisms beyond the horizon p 181 N95-20946

PHONETICS
Perception-based and machine-oriented signal processing within speech understanding systems p 288 N93-13239

PHYSICAL EXAMINATIONS
Estimates of Human Immunodeficiency Virus (HIV) incidence and trends in the US Air Force p 236 N93-11292
Biological parameters and cardiovascular risk factors with the flying personnel of the Belgian Armed Forces p 273 N93-32260
Changes in some lifestyle parametres in Norwegian pilots as students, and after 6 and 12 years of service p 273 N93-32261
Echocardiographic screening of aircrew candidates p 247 N94-23319
The waiver process and disqualifying medical conditions in US Naval aviation personnel p 253 N95-19416
Fit to fly: Analysis of the aeromedical disposition in aircrewmembers of the Spanish Armed Forces p 253 N95-19418
Relevance of laboratory tests in aeromedical decisions p 254 N95-19420
Centrifuge tests of the medical condition of French fighter pilots p 254 N95-19424
Think health not disease p 255 N95-19429
Neurological decision making in aviation medicine based on electrophysiological methods p 256 N95-19431

PHYSICAL EXERCISE
The lifestyle and dietary consumption patterns of United States Air Force aviators within air training command at Randolph Air Force Base, Texas p 272 N93-32257
Objective improvements obtained by control of diet and physical training in Spanish Air Force fighter pilots p 273 N93-32258
Effects of three hydration beverages on exercise performance during 60 hours of simulated desert exposure p 250 N94-28448

PHYSICAL FITNESS
Changes in some lifestyle parametres in Norwegian pilots as students, and after 6 and 12 years of service p 273 N93-32261

PHYSICAL OPTICS
Remote sensing of refractivity structure by direct radio measurements at UHF p 230 N92-22791

PHYSICAL PROPERTIES
Computerized property data for engineering materials: An overview p 310 N92-32191

PHYSIOCHEMISTRY
Fires on board aircraft: Toxicological risk in flight p 243 N93-19694

PHYSIOLOGICAL EFFECTS
Boom and the problems related to the supersonic flights of military aircraft p 298 N93-10677
Survey of smoking habits in the Spanish Air Force p 273 N93-32262
Human factors and the safety of flights: The importance of the management of sleep p 274 N93-32267
Aeromedical disposition for coronary artery disease p 246 N94-23316
Physiological investigations of the isolated rat's liver in hypothermia and hypoxia and their relevance in aircraft incidents above the sea p 234 N94-28439
The musculoskeletal and vestibular effects of long term repeated exposure to sustained high-G
| AGARD-AR-317 | p 281 N95-14263

PHYSIOLOGICAL FACTORS
Cognitive factors in the air events of the Air Force during the last decade p 259 N93-19682
Cardiovascular risk factors in an Italian Air Force population: Preliminary report p 245 N93-32252
Nutritional and lifestyle status of 50 pilots of the Portugese Air Force p 272 N93-32255
Biological parameters and cardiovascular risk factors with the flying personnel of the Belgian Armed Forces p 273 N93-32260
Extended range operations: A review of recent developments p 295 N94-36337
Determinants of subjective fatigue for C-141 crews during Operation Desert Storm p 251 N94-36338
Neuropsychophysiologic sequelae of mild head injury p 256 N95-19430

PHYSIOLOGICAL RESPONSES
Mechanisms of immune failure in burn injury p 235 N93-11285
Use of novel adjuvants and delivery systems to improve the humoral and cellular immune response to malaria vaccine candidate antigens p 240 N93-11308
Trial of emergency ration of the Spanish Air Force p 272 N93-32247
Prediction of survival times on land in a cold climate p 248 N94-28423
Treatment of mild immersion hypothermia by body-to-body and forced-air warming p 249 N94-28428
Thermoregulation in the extreme cold environment p 250 N94-28438
Rewarming methodologies in the field p 250 N94-28441
A comparison of four methods of rewarming individuals cooled by immersion in cold water p 250 N94-28442
Work conditions assessment in pilots and ground personnel under high weather temperatures p 277 N94-28444

Effects of three hydration beverages on exercise performance during 60 hours of simulated desert exposure p 250 N94-28448
Alleviation of thermal strain in the CF: Keeping our cool during the Gulf conflict p 251 N94-28449
Extended range operations: A review of recent developments p 295 N94-36337
The musculoskeletal and vestibular effects of long term repeated exposure to sustained high-G [AGARD-AR-317] p 281 N95-14263

PHYSIOLOGICAL TESTS
Cardiopulmonary Aspects in Aerospace Medicine [AGARD-LS-189] p 246 N94-23313
Aortic valve disease p 247 N94-23322
Aeromedical implications of mitral valve prolapse p 247 N94-23323
EKG in flight: Usefulness and limits for aircrew rehabilitation p 254 N95-19422

PHYSIOLOGY
Mechanisms of immune failure in burn injury p 235 N93-11285
A method for investigating human factor aspects of military aircraft accidents p 30 N93-19656
Toxicological investigations of flight accidetns: Findings and methods p 243 N93-19695
Aircraft accident injuries in the Hellenic Air Force in the last 20 years p 244 N93-19698
The influence of individual sensivity to stress on the behavior (attitude and performance) of avoidance of an accident p 260 N93-19705
Contribution of the analysis of ocular activity (complementary to the electroencephalographic analysis) to the detection of low vigilance in instances of piloting a vehicle p 244 N93-19708
Visual Problems in Night Operations [AGARD-LS-187] p 275 N94-23976
Thermoregulation in the extreme cold environment p 250 N94-28438
Physiological investigations of the isolated rat's liver in hypothermia and hypoxia and their relevance in aircraft incidents above the sea p 234 N94-28439
Psychophysiological assessment methods (including a register of psychophysiologists on microfiches) [AGARD-AR-324] p 261 N95-12133
TSH determination in subjects with medium-low levels of serum thyroxine p 254 N95-19421

PIEZOELECTRIC CERAMICS
Smart structures at Aastra Corporation p 133 N94-11326
Recent developments in piezoelectric and electrostrictive sensors and actuators for smart structures p 220 N94-11332

PIEZOELECTRICITY
Recent developments in piezoelectric and electrostrictive sensors and actuators for smart structures p 220 N94-11332
Structural analysis and optimization of adaptive structures by use of the finite element method p 227 N94-11339
Active damping augmentation of elastomechanical systems using piezoelectric sensors and actuators p 134 N94-11346

PILOT ERROR
Effects of medium blood alcohol levels on pilots' performance in the Sea King Simulator MK-41 p 243 N93-19683
Pilot intent and error recognition as part of a knowledge based cockpit assistant p 268 N93-28855

PILOT INDUCED OSCILLATION
Aircraft and sub-system certification by piloted simulation [AGARD-AR-278] p 117 N95-17388

PILOT PERFORMANCE
Relating cognitive function to military aviator performance in early HIV infection p 238 N93-11298
Combat Automation for Airborne Weapon Systems: Man/Machine Interface Trends and Technologies [AGARD-CP-520] p 268 N93-28850
Pilot decision aiding for weapon delivery: A novel approach to fire control cueing using parallel computing p 268 N93-28853
A new class of mission support for combat air-crew p 293 N93-28854
Pilot intent and error recognition as part of a knowledge based cockpit assistant p 268 N93-28855
The design and development of the new RAF standard HUD format p 268 N93-28856
Symbology for head up and head down applications for highly agile fighter aircraft: To improve spatial awareness, trajectory control, and unusual attitude recovery, part 1 p 268 N93-28857
The quest for an integrated flying helmet p 269 N93-28860
The physiological limitations of man in the high G environment p 269 N93-28861
Oculo-motor responses and virtual image displays p 269 N93-28862
Human capabilities and limitations in situation awareness p 269 N93-28863
Nutrition, Metabolic Disorders and Lifestyle of Aircrew [AGARD-CP-533] p 270 N93-32240
Nutritional assessment of United States tactical air command pilots p 271 N93-32242
Changes in food and energy intake in military aircrew p 271 N93-32246
Idiopathic Reactive Hypoglycemia in a population of healthy trainees of an Italian Air Force military school p 272 N93-32248
Cardiovascular Risk Factors (CVRF) in Spanish pilots with coronary artery disease demonstrated by angiographic studies p 245 N93-32253
Results and management of pathological lipoprotein concentrations and other cardiovascular risk factors in military pilots of the German Federal Armed Forces p 245 N93-32254
Nutritional and lifestyle status of 50 pilots of the Portugese Air Force p 272 N93-32255
The lifestyle and dietary consumption patterns of United States Air Force aviators within air training command at Randolph Air Force Base, Texas p 272 N93-32257
Objective improvements obtained by control of diet and physical training in Spanish Air Force fighter pilots p 273 N93-32258
Survey of smoking habits in the Spanish Air Force p 273 N93-32262
The effects of an antijet lag diet p 273 N93-32263
Subjective mood and fatigue of C-141 crew during Desert Storm p 274 N93-32264
C-141 aircrew sleep and fatigue during the Persian Gulf conflict p 274 N93-32265
Digital flight data as a measure of pilot performance associated with fatigue from continuous operations during the Persian Gulf conflict p 275 N93-32268
Effects of caffeine on mental performance and mood: Implications for aircrew members p 275 N93-32269
Expanding the pilot's envelope p 278 N94-34627
Review of human factors problems related to long distance and long endurance operation of aircraft p 279 N94-36336
The use of a tactile interface to convey position and motion perceptions p 281 N94-37281
Aircraft and sub-system certification by piloted simulation [AGARD-AR-278] p 117 N95-17388
The NAMI syncope test battery and clinical decision-making in aviators with syncope p 255 N95-19428

PILOT SELECTION
The screening of inhalant allergic diseases in the selection of candidates for aircraft piloting p 241 N93-11312
Asthma in aircrew: Assessment, treatment and disposition p 241 N93-11315
Cardiopulmonary Aspects in Aerospace Medicine [AGARD-LS-189] p 246 N94-23313
Screening for asymptomatic coronary heart disease p 246 N94-23315
Aeromedical disposition for coronary artery disease p 246 N94-23316
Echocardiographic screening of aircrew candidates p 247 N94-23319
Aortic valve disease p 247 N94-23322
Asthma in aircrew p 248 N94-23327

PILOT TRAINING
Piloted Simulation Effectiveness [AGARD-CP-513] p 1 N92-28522
Opportunities for flight simulation to improve operational effectiveness p 111 N92-28523
Utility of ground simulation in flight control problem identification, solution development, and verification p 111 N92-28525
Experience with piloted simulation in the development of helicopters p 112 N92-28528
Harrier GR MK 5/7 mission simulators for the Royal Air Force p 113 N92-28540
Shipboard mission training effectiveness of the Naval Air Test Center's V-22 government test pilot trainer p 113 N92-28542
Technical evaluation report on the Flight Mechanics Panel Symposium on Piloted Simulation Effectiveness [AGARD-AR-315] p 115 N92-30769
Combat aircraft operations: Training requirements for the German Air Force tactical flying units and the noise problem p 296 N93-10667
Possibilities and limitations of flying training in the German Air Force p 115 N93-10668
Combat aircraft noise: The operator's perspective p 296 N93-10669
Human noise exposure criteria for combat aircraft training areas p 297 N93-10670
Combat and training aircraft class A mishaps in the Belgian Air Force 1970-1990 p 32 N93-19677
Underlying causes of human error in US Army rotary wind accidents p 32 N93-19678
Prediction of success from training p 35 N93-19702
The next generation female in cockpit: Do we need a new approach to cockpit resource management (CRM)? p 263 N93-19704
Use of microprocessor-based simulator technology and MEG/EEG measurement techniques in pilot emergency-manoeuver training p 115 N93-19706
Operational agility assessment with the AM-X aircraft p 65 N94-34626
Vestibular examination in pilots susceptible to motion sickness p 255 N95-19427

PILOTLESS AIRCRAFT
Operational needs for an unmanned air vehicle p 293 N92-32438
Naval target classification and designation with the CL-227 Sea Sentinel p 74 N92-32449
Technological challenges of High Altitude Long Endurance unmanned configurations p 66 N94-36323

PILOTS
Centrifuge tests of the medical condition of French fighter pilots p 254 N95-19424
The aeromedical risk associated with asymptomatic cholelithiasis in USAF pilots and navigators p 258 N95-19439

PILOTS (PERSONNEL)
Study of the spectrum of power of cardiac rhythm during tasks relating to the safety of the control of an apparatus p 244 N93-19707
Work conditions assessment in pilots and ground personnel under high weather temperatures p 277 N94-28444
The way to waivers in the BAF p 253 N95-19415

PIPE FLOW
Flow development in a circular pipe in the UTIAS/RPI M = 8.3 gun tunnel p 10 N94-10442
Direct numerical simulation of turbulent flow in a sudden pipe expansion p 213 N95-21067
Simulation of pipe flow p 215 N95-21078

PIPELINES
Investigation of mechanical erosion in fuel pipelines p 224 N95-19667

PISTON ENGINES
The STRATO 2C propulsion system: A low cost approach for a High Altitude Long Endurance aircraft p 98 N94-36335

PITCH
On non-linear longitudinal stability of an aircraft in a dive in the presence of atmospheric disturbances p 107 N94-11492

PITCHING MOMENTS
Measurements on a two-dimensional aerofoil with high-lift devices p 21 N95-17848

PITOT TUBES
Comparative performance tests of a pitot-inlet in several European wind-tunnels at subsonic and supersonic speeds p 7 N93-13221

PIXELS
Polarization effects and multipolarization SAR p 155 N93-13054

PLANNING
Search route planning p 38 N92-27900
Interactive analysis and planning tools for air traffic and airspace management p 43 N94-29573

PLASMA LAYERS
Electromagnetic wave reflection from irregular plasma layers p 182 N95-20952

PLASMAS (PHYSICS)
Radar interferometric techniques for investigating field-aligned ionospheric plasma irregularities p 231 N92-22807

PLASTIC DEFORMATION
Impact loading of compressor stator vanes by hailstone ingestion p 102 N95-19670
Soft body impact on titanium fan blades p 102 N95-19671

PLATE THEORY
Edge delamination of composite laminates p 130 N93-21519

PLATES (STRUCTURAL MEMBERS)
Edge delamination of composite laminates p 130 N93-21519
Numerical determination of the residual strength of battle damaged composite plates p 132 N93-21533

PLENUM CHAMBERS
Unsteady flow testing in a passive low-correction wind tunnel p 118 N95-19272

PLUG NOZZLES
Application of finite element method to hypersonic nozzle flow computations p 189 N92-27479

PLUMES
Nozzle installation effects on the noise from supersonic exhaust plumes p 299 N93-10681
Semi-propellants for ducted rockets p 147 N93-17612
Rocket Motor Plume Technology [AGARD-LS-188] p 124 N94-15217
Propulsion p 124 N94-15219
First experimental assessment of RCS plume-flow field interaction on Hermes leading edge thruster configuration p 125 N94-28032
Impact of dynamic loads on propulsion integration p 302 N95-19148
Estimating wind tunnel interference due to vectored jet flows p 210 N95-19265

PLY ORIENTATION
Synergism between layer cracking and delaminations in MD-laminates of CFRE p 130 N93-21520

PNEUMATIC CONTROL
Pneumatic management of blunted-forebody flow asymmetry for high-angle-of-attack directional control p 109 N94-28028

PNEUMATICS
Pneumatic management of blunted-forebody flow asymmetry for high-angle-of-attack directional control p 109 N94-28028
Development of pneumatic test techniques for subsonic high-lift and in-ground-effect wind tunnel investigations p 29 N95-19268

PNEUMOTHORAX
Spontaneous pneumothorax, cysts and bullae p 248 N94-23326

PODS (EXTERNAL STORES)
Aerial refueling interoperability from a receiver flying qualities perspective p 68 N94-36343

POINCARE PROBLEM
Chaos, entropy, and reversibility: A simple example p 296 N94-11495

POINCARE SPHERES
Adaptive communications polarimetry: Sensing of propagation path changes and adaptation to optimal performance in cellular communications p 153 N92-22822

POINT SPREAD FUNCTIONS
Calculation of turbulence degraded point spread function of an imaging system p 173 N94-30514

POINTING CONTROL SYSTEMS
Pointing and Tracking Systems | AD-A282573 | p 122 N94-36616
Pointing and tracking concept for a high energy laser weapon application p 222 N94-36619
Inertial pseudo star reference unit p 306 N94-36625
Aeroservoelastic stabilization considerations for pointing and tracking systems p 223 N94-36627

POLAR CAP ABSORPTION
ELF/VLF radio noise measurements at high latitudes during solar particle events p 167 N93-30744

POLAR CAPS
Lateral deviation of VLF radio waves due to diffraction and scattering from coast-lines, mountain ranges, and polar ice caps p 157 N93-23599
The relative importance of meteor burst and other distance polar cap propagation modes in the low VHF band p 177 N95-20928

POLAR REGIONS
ELF/VLF radio noise measurements at high latitudes during solar particle events p 167 N93-30744
Mitigation of the effects of F layer regularities by using multiple paths p 182 N95-20951
DAMSON: A system to measure multipath dispersion, Doppler spread and Doppler shift on multi-mechanism communications channels p 183 N95-20955

POLARIMETERS
Polarization effects and multipolarization SAR p 155 N93-13054

POLARIMETRY
Basic equations of radar polarimetry and solutions the sensing of propagation path polarization state changes p 153 N92-22821
Adaptive communications polarimetry: Sensing of propagation path changes and adaptation to optimal performance in cellular communications p 153 N92-22822
Polarization effects and multipolarization SAR p 155 N93-13054
Polarimetric backscatter measurements of natural surfaces at millimeter wavelengths p 172 N94-30509
Identification of the propagation modes and paths on HF links using a goniopolarimeter p 183 N95-20956

POLARIZATION (WAVES)
Adaptive communications polarimetry: Sensing of propagation path changes and adaptation to optimal performance in cellular communications p 153 N92-22822
Evaluation of dual polarization attenuation of millimeter frequencies through a meteorological radar p 170 N94-30496
Measurements of angles of elevation of HF by a high resolution method using polarization diversity p 184 N95-20959

POLARIZATION CHARACTERISTICS
Polarization effects and multipolarization SAR p 155 N93-13054

POLARIZED ELECTROMAGNETIC RADIATION
Radar cross sections of ground clutter at 95 GHz for summer and fall conditions p 173 N94-30512

POLARIZED RADIATION
Ground wave and diffraction, A p 175 N95-14828

POLIOMYELITIS
Immunization of personnel traveling to a destination in tropical countries: French position p 239 N93-11304

POLLUTION CONTROL
Reduction of NO(x) by fuel-staging in gas turbine engines: A commitment to the future p 141 N94-29272
Chambers of turboreactors with variable geometry: A response to the matrix of pollution in cycles at high temperature, high pressure p 141 N94-29273
Low emission combustor technology for small aircraft gas turbines p 96 N94-34454

POLLUTION MONITORING
Granulometry in environments with very small particle concentrations p 173 N94-30511

POLYBUTADIENE
ESD traits of bulk propellant under pressure p 147 N92-33242

POLYCHLORINATED BIPHENYLS
The impact of advanced packaging technology on modular avionics architectures p 76 N95-20632

POLYMER MATRIX COMPOSITES
Free edge delamination prevention in composite laminates p 129 N93-21508
Delamination and fatigue of composite materials: A review p 129 N93-21509
Progressive delamination in polymer matrix composite laminates: A new approach p 130 N93-21515

POLYMERS
The swollen polymer technique and its use for heat transfer investigations on film cooled surfaces p 196 N93-29944

POLYNOMIALS
Higher order upwind finite volume schemes with ENO-properties for general unstructured meshes p 192 N92-27678

POPULATIONS
Noise of combat aircraft in proximity to air bases: Review of the possibilities of noise reduction at the source p 297 N93-10671
Aeromedical disposition for coronary artery disease p 246 N94-23316
Primary prevention of coronary heart disease p 246 N94-23317
Aeromedical implications of mitral valve prolapse p 247 N94-23323
Sarcoidosis and the aviator p 248 N94-23325

POROUS WALLS
Determination of solid/porous wall boundary conditions from wind tunnel data for computational fluid dynamics codes p 211 N95-19266
Calculation of wall effects of flow on a perforated wall with a code of surface singularities p 211 N95-19277

PORTABLE EQUIPMENT
The new portable digisonde for vertical and oblique sounding p 230 N92-22801
Portable equipment developed to estimate energy expenditure by simultaneous recording of heart rate and body position p 271 N93-32243

PORTUGAL
Scientific and Technical Information (STI) towards technological and industrial development: The case of Portugal p 310 N93-10596

POSITION (LOCATION)
Automated target tracking and location techniques applied to optical payloads on remotely piloted vehicles p 49 N92-27890
Aerial refueling interoperability from a receiver flying qualities perspective p 68 N94-36343

POSITION ERRORS
Large bearing errors observed at a high latitude DF site p 160 N93-23615
Operator gaze position control interfaces: Investigation of psychophysical and operational parameters p 281 N94-37273

POSITION INDICATORS
A current assessment of single site locating technology p 159 N93-23608
A new passive SSL technique for HF radiolocation p 159 N93-23609
Procedures for determining the location of an HF radio transmitter p 159 N93-23610
Test results of the advanced translator processing system p 161 N93-23620
Communication interference/jamming and propagation analysis system and its application to radio location p 161 N93-23621
Location of emissions by evasion of frequency and gusts by sequential analysis sensor in fast scanning p 162 N93-23625
A comparison of two examples of magnetic tracker systems p 281 N94-37275

POSITIONING
Integrated precision navigation system p 39 N93-22789
Digital processing for positioning with one satellite p 163 N93-23629
Impact of propagation mechanisms on global navigation satellite system performance p 182 N95-20950

POTENTIAL FLOW
A boundary integral formulation for unsteady transonic potential flows p 4 N92-27942
Single-pass method for the solution of inverse potential and rotational problems. Part 1: 2-D and quasi 3-D theory and application p 20 N95-16563

POTENTIAL THEORY
Recent applications of linear and nonlinear unsteady aerodynamics for aeroelastic analysis p 4 N92-27940
Single-pass method for the solution of inverse potential and rotational problems. Part 2: Fully 3-D potential theory and applications p 20 N95-16564

POWDER METALLURGY
The control of cleanness in powder metallurgy materials for turbine disks p 144 N94-37325
Defects and their effects on the integrity of nickel based aeroengine discs p 144 N94-37328
Substantiating powder metal life methodologies for engines p 225 N94-37330

POWER SPECTRA
Prediction of fluctuating pressure and power spectra in attached and separated compressible flow p 209 N95-19153
Application of the PSD technique to acoustic fatigue stress calculations in complex substructures p 302 N95-19155

POWERED LIFT AIRCRAFT
Design, development, and flight evaluation of the Boeing YC-14 USB powered lift aircraft p 57 N94-18444
STOVL CFD model test case p 27 N95-17881

POWERED MODELS
Tests of models equipped with TPS in low speed ONERA F1 pressurized wind tunnel p 193 N93-13201
Recent developments in low-speed TPS-testing for engine integration drag and installed thrust reversr simulation p 51 N93-13207

PRECIPITATION HARDENING
Substantiating powder metal life methodologies for engines p 225 N94-37330

PRECISION
High precision navigation for flight testing (AERONAV) p 38 N93-19920
Integrated precision navigation system p 39 N93-22789

PRECISION GUIDED PROJECTILES
Initial trials results for image stabilisation using a rugged low noise gyroscope p 219 N93-22021

PRECONDITIONING
Finite element computation of unsteady incompressible flows involving moving boundaries and interfaces and iterative solution strategies p 191 N92-27674

PREDICTION ANALYSIS TECHNIQUES
Refractive assessments from satellite observations p 153 N92-22798
A virtual sensor for evaporation ducts: The impact of data uncertainties p 229 N92-22799
Transonic Unsteady Aerodynamics and Aeroelasticity | AGARD-CP-507 | p 3 N92-27936
NLR inviscid transonic unsteady loads prediction methods in aeroelasticity p 5 N92-27947
Development of a method to predict transonic limit cycle oscillation characteristics of fighter aircraft p 105 N92-27958
Steady and Transient Performance Prediction of Gas Turbine Engines | AGARD-LS-183 | p 79 N92-28458
Overview on basis and use of performance prediction methods p 79 N92-28459
Engine performance and health monitoring models using steady state and transient prediction methods p 80 N92-28467
A review of RAE sponsored work on the compressive behaviour of composite materials p 126 N92-33038
LARZAC HP turbine disk crack initiation and propagation spin pit test p 81 N93-14892
Multiple emitter direction finding from a circular array by single snapshot processing p 162 N93-23627
Heat Transfer and Cooling in Gas Turbines | AGARD-CP-527 | p 84 N93-29926
Chaotic time series analysis p 296 N94-11490
Boundary layer transition: Prediction and wind tunnel simulation p 198 N94-11498
Predictions of momentum and scalar fields in a jet in cross-flow using first and second order turbulence closures p 203 N94-28025
Spray combustion experiments and numerical predictions p 142 N94-29277
An Assessment of Fatigue Damage and Crack Growth Prediction Techniques | AD-280273 | p 227 N94-34581
Miner's rule revisited p 227 N94-34582
Fatigue life and crack growth prediction methodology p 227 N94-34583
Crack growth predictions using a crack closure model p 228 N94-34584
An assessment of fatigue crack growth prediction models for aerospace structures p 228 N94-34586
A combined approach to buffet response analyses and fatigue life prediction p 228 N94-34587
Characterisation of Fibre Reinforced Titanium Matrix Composites | AD-A277520 | p 134 N94-36649
Substantiating powder metal life methodologies for engines p 225 N94-37330
Predicting defect behaviour p 225 N94-37331
Propagation Modelling and Decision Aids for Communications, Radar and Navigation Systems | AGARD-LS-196 | p 174 N95-14825

Propagation in the ionosphere, B p 175 N95-14827

PREDICTIONS

Analysis of unsteady aerodynamic and flutter characteristics of an aeroelastic model in transonic flow p 6 N92-27953

Prediction of success from training p 35 N93-19702

A technique for predicting aircraft flow-field effects upon an unguided bomb ballistic trajectory and comparison with flight test results p 8 N93-19922

Screening for asymptomatic coronary heart disease p 246 N94-23315

Process/composite concurrent tailoring of SiC/Ti composites p 136 N94-36663

Wind shear and its effects on aircraft p 36 N95-14898

PREFORMS

SCS-6 (tm) fiber reinforced titanium p 135 N94-36652

PREMIXED FLAMES

The coherent flamelet model for propulsion applications p 138 N92-27486

Prediction of prompt NO(x) in hydrocarbon air flames p 139 N94-29250

Simulation of pollutant formation in turbulent combustors using an extended coherent flame model p 139 N94-29251

Ducted kerosene spray flames p 142 N94-29276

Direct numerical simulation for premixed turbulent combustion modelling p 143 N95-21082

PREMIXING

The effect of incomplete fuel-air mixing on the lean limit and emissions characteristics of a Lean Prevaporized Premixed (LPP) combustor p 140 N94-29265

Effects of hydrogen addition on pollutant emissions in a gas turbine combustor p 141 N94-29275

PRESSURE

Hypersonic shock wave boundary layer interactions over simplified deflected control surface configurations p 200 N94-15203

Investigation of the influence of pylons and stores on the wing lower surface flow p 28 N95-17885

PRESSURE DISTRIBUTION

A time-linearization approach for unsteady transonic flows p 4 N92-27941

Comparison of Euler and full potential methods for unsteady transonic flow calculations p 4 N92-27943

Analysis of unsteady aerodynamic and flutter characteristics of an aeroelastic model in transonic flow p 6 N92-27953

Numerical simulation of shock-stall flutter of an airfoil using the Navier-Stokes equations p 105 N92-27956

Calculation of installation effects within performance computer programs p 80 N92-28465

Experimental studies of the flowfields and their effects due to a pair of lift jets discharging in the ground effect region p 194 N93-13217

Determination of surface heat transfer and film cooling effectiveness in unsteady wake flow conditions p 85 N93-29933

The aerodynamic effect of coolant ejection in the leading edge region of a film-cooled turbine blade p 87 N93-29958

In-flight pressure distributions and skin-friction measurements on a subsonic transport high-lift wing section p 16 N94-18435

Inverse design of radial flow impellers with prescribed velocity at hub and shroud p 206 N94-34448

Control of leading-edge separation on a cambered delta wing p 109 N94-34616

Residual-correction type and related computational methods for aerodynamic design. Part 1: Airfoil and wing design p 70 N95-16566

Aerodynamic shape optimization p 71 N95-16572

Review of the EUROPT Project AERO-0026 p 71 N95-16573

2-D airfoil tests including side wall boundary layer measurements p 208 N95-17847

Measurements on a two-dimensional aerofoil with high-lift devices p 21 N95-17848

2-D aileron effectiveness study p 21 N95-17851

Two-dimensional 16.5 percent thick supercritical airfoil NLR 7301 p 22 N95-17854

Low-speed surface pressure and boundary layer measurement data for the NLR 7301 airfoil section with trailing edge flap p 22 N95-17855

Measurements of the flow over a low aspect-ratio wing in the Mach number range 0.6 to 0.87 for the purpose of validation of computational methods. Part 1: Wing design, model construction, surface flow. Part 2: Mean flow in the boundary layer and wake, 4 test cases p 23 N95-17860

Detailed study at supersonic speeds of the flow around delta wings p 24 N95-17861

Pressure distributions on research wing W4 mounted on an axisymmetric body p 24 N95-17862

DLR-F5: Test wing for CFD and applied aerodynamics p 24 N95-17864

Wind tunnel investigations of the appearance of shocks in the windward region of bodies with circular cross section at angle of attack p 25 N95-17866

Force and pressure data of an ogive-nosed slender body at high angles of attack and different Reynolds numbers p 25 N95-17868

Pressure distribution measurements on an isolated TPS 441 nacelle p 26 N95-17878

Analysis of test section sidewall effects on a two dimensional airfoil: Experimental and numerical investigations p 211 N95-19276

PRESSURE EFFECTS

Flow computation in combustion chambers using zonal nonstaggered grids p 190 N92-27483

A novel-high-performance system for recording and analysing instantaneous total pressure distortion in air intakes p 219 N93-13215

Pollutant emissions from and within a model gas turbine combustor at elevated pressures and temperatures p 141 N94-29271

PRESSURE GRADIENTS

Time-marching methods for secondary flow analysis in curved ducts p 186 N92-27454

Heat transfer with moderate free stream turbulence p 195 N93-29936

Airfoil optimization by the one-shot method p 70 N95-16569

Tools for applied engineering optimization p 70 N95-16570

Investigation of the flow over a series of 14 percent-thick supercritical aerofoils with significant rear camber p 21 N95-17849

Numerical study of realistic perturbations in three-dimensional boundary layers p 217 N95-21091

Spatial direct numerical simulation of boundary layer transition under strong adverse pressure gradient p 217 N95-21093

PRESSURE MEASUREMENT

The benchmark aeroelastic models program: Description and highlights of initial results p 6 N92-27960

A review of scale effects on surfaces in unsteady motion p 7 N92-27962

Development and flight testing of a surface pressure measurement installation on the EAP demonstrator aircraft p 219 N93-19927

Pressure and force measurements on models set in hypersonic flows: A review p 9 N94-10435

Flow development in a circular pipe in the UTIAS/RPI M = 8.3 gun tunnel p 10 N94-10442

Experimental and computational comparisons of Mach 6 high Reynolds number heat transfer and skin friction p 10 N94-10443

Some experimental study and numerical simulation in wind tunnel flow p 12 N94-10457

Guide to the measurement of the transient performance of aircraft turbine engines and components [AD-280272] p 93 N94-33874

Measurements on a two-dimensional aerofoil with high-lift devices p 21 N95-17848

Surface pressure and wake drag measurements on the Boeing A4 airfoil in the IAR 1.5X1.5m Wind Tunnel Facility p 21 N95-17850

Pressure distribution measurements on an isolated TPS 441 nacelle p 26 N95-17878

Calibration and use of a non-nulling seven-hole pressure probe p 221 N95-19254

Applications of the five-hole probe technique for flow field surveys at the Institute for Aerospace Research p 221 N95-19255

Calculation of low speed wind tunnel wall interference from static pressure pipe measurements p 211 N95-19273

Optical surface pressure measurements: Accuracy and application field evaluation p 307 N95-19274

PRESSURE OSCILLATIONS

Experimental analysis of combustion oscillations with reference to ramjet propulsion p 138 N93-17614

Vibrations of structures with cyclic symmetry: Application to the case of turbine engines p 227 N94-34463

Prediction of fluctuating pressure and power spectra in attached and separated compressible flow p 209 N95-19153

PRESSURE RATIO

Investigation of the flowfield around an isolated bypass engine with fan and core jet p 195 N93-13227

Influence of headwind on hot gas reingestion and consideration of pressure ratio scaling p 89 N94-28018

Transitional flight characteristics of a geometrically simplified STOVL model p 61 N94-28035

Advanced concepts for next generation small gas turbine engine compressors p 95 N94-34443

Advanced small high pressure ratio centrifugal compressor p 95 N94-34444

The centrifugal compressor, an essential component of small and medium power engines p 95 N94-34445

Flow field analysis in a high pressure ratio centrifugal compressor p 206 N94-34447

PRESSURE RECOVERY

Comparison of performances of different circular intakes p 83 N93-17616

PRESSURE REDUCTION

Erosion of T56 5th stage rotor blades due to bleed hole overtip flow p 101 N95-19666

PRESSURE SENSORS

A novel-high-performance system for recording and analysing instantaneous total pressure distortion in air intakes p 219 N93-13215

Single-engine tail interference model p 26 N95-17879

Calibration and use of a non-nulling seven-hole pressure probe p 221 N95-19254

Applications of the five-hole probe technique for flow field surveys at the Institute for Aerospace Research p 221 N95-19255

Optical surface pressure measurements: Accuracy and application field evaluation p 307 N95-19274

PREVENTION

Primary prevention of coronary heart disease p 246 N94-23317

PRINTED CIRCUITS

Ultra-Reliable Digital Avionics (URDA) processor p 226 N95-20638

PRIORITIES

Standards for data and document interchange p 315 N94-37337

PRISMS

An L2F-measurement device with image rotator prism for flow velocity analysis in rotating coolant channels p 220 N93-29942

PROBABILITY DENSITY FUNCTIONS

Application of Monte Carlo simulation for three-dimensional flows p 190 N92-27485

PROBABILITY THEORY

Methods of opto-electronic fusion of infrared and visible images p 304 N92-32444

Study of the spectrum of power of cardiac rhythm during tasks relating to the safety of the control of an apparatus p 244 N93-19707

Probabilistic simulation of concurrent engineering of propulsion systems p 58 N94-24317

Assessment of in-service aircraft fatigue monitoring process p 62 N94-34593

Statistical characterization of rare events p 291 N94-37327

Modelling of microwave propagation and clutter in a maritime environment p 179 N95-20938

PROBLEM SOLVING

Optimum Design Methods for Aerodynamics [AGARD-R-803] p 70 N95-16562

Review of the EUROPT Project AERO-0026 p 71 N95-16573

PROCEDURES

The way to waivers in the BAF p 253 N95-19415

PROCESS CONTROL (INDUSTRY)

Maintaining constant standards during the forging process p 144 N94-37326

PROCUREMENT

Acquisition 2: Procurement, acquisition, and maintenance of configuration management documentation in support of a CIS system p 311 N93-10599

A guide to tenders and contracts alerting services [AGARD-R-799] p 308 N94-37447

The Advanced Avionics Subsystem Technology Demonstration Program p 77 N95-20636

PRODUCT DEVELOPMENT

Piloted Simulation Effectiveness [AGARD-CP-513] p 1 N92-28522

Flight simulation and digital flight controls p 111 N92-28526

The application of flight simulation models in support of rotorcraft design and development p 111 N92-28527

Experience with piloted simulation in the development of helicopters p 112 N92-28528

Technical evaluation report on the Flight Mechanics Panel Symposium on Piloted Simulation Effectiveness [AGARD-AR-315] p 115 N92-30769

YF-22A prototype advanced tactical fighter demonstration/validation flight test program overview p 53 N93-19906

Early manufacturing considerations in design p 58 N94-24315

Frameworks for integrated airframe design p 58 N94-24318

The UNICON approach to through-life support and evolution of software-intensive systems p 286 N94-29340

The discipline of defining the software product p 286 N94-29343

A common approach for an aerospace software environment p 287 N94-29346

PRODUCTION MANAGEMENT

The integration of design and manufacturing processes at Alenia DVD p 60 N94-24325

PRODUCTIVITY

The global aircraft shape p 70 N95-16571

PROGRAM VERIFICATION (COMPUTERS)

Validation of a CANARI code by the computation of three dimensional turbulent flow in turbine valve p 78 N92-27462

Object versus functional oriented design
p 284 N94-29321
Software testing practices and their evolution for the 1990's p 285 N94-29335
Validation and test of complex weapon systems
p 75 N94-29336
Integrated formal verification and validation of safety critical software p 285 N94-29338

PROGRAMMING ENVIRONMENTS
SDE's for the year 2000 and beyond: An EF perspective p 286 N94-29344
A common approach for an aerospace software environment p 287 N94-29346
A distributed object-based environment in Ada
p 287 N94-29347
DSSA-ADAGE: An environment for architecture-based avionics development p 75 N94-29348
Entreprise 2: A PCTE integrated project support environment p 287 N94-29349
Considerations on graphical user interfaces for intelligent ATM support systems p 43 N94-29572
Standards for data and document interchange
p 315 N94-37337

PROJECT MANAGEMENT
Computational procedures for preliminary design
p 48 N92-23952
Establishing a scientific and technical information program: Planning and resource management
p 310 N93-10597
Advanced cockpit-mission and image management
p 264 N93-19760
The MOD (UK) integrated helmet technical demonstrator programme p 265 N93-19769
Frameworks for integrated airframe design
p 58 N94-24318
Application of information management methodologies for project quality improvement in a changing environment p 314 N94-29342
SDE's for the year 2000 and beyond: An EF perspective p 286 N94-29344
Review of the EUROPT Project AERO-0026
p 71 N95-16573

PROJECT PLANNING
Establishing a scientific and technical information program: Planning and resource management
p 310 N93-10597
Artificial intelligence technology program at Rome Laboratory p 290 N94-29328

PROJECTILES
Airbreathing Propulsion for Missiles and Projectiles | AGARD-CP-526 | p 123 N93-17607
Ramjet propulsion for advanced projectiles
p 82 N93-17615
Numerical determination of the residual strength of battle damaged composite plates p 132 N93-21533

PROLATE SPHEROIDS
Three-dimensional boundary layer and flow field data of an inclined prolate spheroid p 208 N95-17867

PROPAGATION MODES
The influence of propagation on high frequency radiogoniometry and single station location
p 159 N93-23607
Studies of the propagation of Low Frequency (LF) radio waves p 166 N93-30738
Passive monitoring for automated MMPP communication systems p 177 N95-20927
The relative importance of meteor burst and other distance polar cap propagation modes in the low VHF band p 177 N95-20928
Study of the fast and slow variations of the power received at VHF links by tropospheric diffusion
p 178 N95-20929
Methods for evaluating the effects of conduits at the surface of the sea p 178 N95-20932
Identification of the propagation modes and paths on HF links using a goniopolarimeter p 183 N95-20956

PROPAGATION VELOCITY
Numerical study of realistic perturbations in three-dimensional boundary layers p 217 N95-21091

PROPELLANT SENSITIVITY
Insensitive Munitions
| AGARD-CP-511 | p 147 N92-33240
ESD traits of bulk propellant under pressure
p 147 N92-33242
Hazards reduction for tactical missiles
p 123 N92-33245

PROPELLANTS
Insensitive Munitions
| AGARD-CP-511 | p 147 N92-33240
Development of a minimum smoke propellant based on glycidyl azide polymer and ammonium nitrate
p 147 N92-33243
Potential missile flight performance gains from improvements to the propulsion system
p 123 N93-17609

PROPELLER BLADES
Ice-impact analysis of blades p 102 N95-19672

PROPELLER FANS
Ice-impact analysis of blades p 102 N95-19672

PROPELLER NOISE
Reduction of propeller noise by active noise control
p 300 N93-10692
Noise transmission and reduction in turboprop aircraft
p 303 N95-19164

PROPELLER SLIPSTREAMS
Aerodynamic analysis of slipstream/wing/nacelle interference for preliminary design of aircraft configurations p 7 N93-13205
Low speed propeller slipstream aerodynamic effects
p 27 N95-17882

PROPELLERS
Gyroscopic and propeller aerodynamic effects on engine mounts dynamic loads in turbulence conditions
p 71 N95-18599

PROPHYLAXIS
Recent lessons on the safety and effectiveness of malaria chemoprophylaxis in a non-immune population
p 240 N93-11307

PROPULSION
Nonequilibrium 3D flows of air through inlets
p 190 N92-27487
The PEP Symposium on CFD Techniques for Propulsion Applications p 194 N93-13210
Propulsion p 124 N94-15219

PROPULSION SYSTEM CONFIGURATIONS
Configuration development --- preliminary aircraft design p 48 N92-23953
Aerothermodynamics of nozzle flows for advanced hypersonic propulsion systems p 189 N92-27478
Application of finite element method to hypersonic nozzle flow computations p 189 N92-27479
Aerodynamic Engine/Airframe Integration for High Performance Aircraft and Missiles
| AGARD-CP-498 | p 192 N93-13199
Euler analysis of turbofan/superfan integration for a transport aircraft p 193 N93-13206
Propulsion integration results of the STOL and Maneuver Technology Demonstrator p 52 N93-13228
Integration of turbo-ramjet engines for hypersonic aircraft p 81 N93-13230
Airbreathing Propulsion for Missiles and Projectiles | AGARD-CP-526 | p 123 N93-17607
Ramjet propulsion for missiles in the Mach 3 to 4.5 range p 123 N93-17608
Development testing of throttleable ducted rockets
p 123 N93-17610
The dual combustor ramjet: A versatile propulsion system for hypersonic tactical missile applications
p 123 N93-17611
Ramjet propulsion for advanced projectiles
p 82 N93-17615

Advanced Standard Electronic Modules format-E (SEM-E) processes for rapid prototyping p 185 N95-20642
QUALITY CONTROL
A Research Agenda for Scientific and Technical Information [AGARD-AR-316] p 312 N93-19796
Application of information management methodologies for project quality improvement in a changing environment p 314 N94-29342
The discipline of defining the software product p 286 N94-29343
Impact of Materials Defects on Engine Structures Integrity [AD-A267718] p 225 N94-37321
The control of cleanness in powder metallurgy materials for turbine disks p 144 N94-37325
Maintaining constant standards during the forging process p 144 N94-37326
Relevance of laboratory tests in aeromedical decisions p 254 N95-19420
QUERY LANGUAGES
Non Boolean search methods in information retrieval p 309 N92-32187

R

RADAR
The spatial and temporal characteristics of high frequency auroral backscatter p 158 N93-23604
RADAR ANTENNAS
Adaptive communications polarimetry: Sensing of propagation path changes and adaptation to optimal performance in cellular communications p 153 N92-22822
RADAR APPROACH CONTROL
Design of Center-TRACON Automation System p 43 N94-29568
Development of precision runway monitor system for increasing capacity of parallel runway operations p 46 N94-29587
RADAR CLUTTER MAPS
Effects of hydrometeors and atmospheric gases at SHF/EHF p 176 N95-14835
RADAR CROSS SECTIONS
The influence of the evaporation duct on the angle of arrival and amplitude of the backscattered signal from targets low above the sea p 170 N94-30498
Polarimetric backscatter measurements of natural surfaces at millimeter wavelengths p 172 N94-30509
Radar cross sections of ground clutter at 95 GHz for summer and fall conditions p 173 N94-30512
RADAR DATA
Remote sensing of the evaporation duct using an X-band radar p 230 N92-22793
Recently implemented weather radar data processing technique for rain cell modelling and ground clutter detection p 233 N92-22824
Multi-frequency multi-polarization processing for spaceborne SAR p 156 N93-13057
RADAR DETECTION
Remote sensing of the evaporation duct using an X-band radar p 230 N92-22793
A TACSAT SAR concept p 122 N93-29910
RADAR ECHOES
A calibration technique for the CNET HF backscatter radar p 154 N92-22825
RADAR IMAGERY
Interest in real-time simulations for the development terrain following function of radar systems p 154 N92-28529
Fundamentals and Special Problems of Synthetic Aperture Radar (SAR) [AGARD-LS-182] p 154 N93-13049
Special SAR techniques and applications p 156 N93-13059
Automatic feature extraction and localization using data fusion of radar and infrared images p 162 N93-23628
A TACSAT SAR concept p 122 N93-29910
RADAR MEASUREMENT
Remote sensing of the evaporation duct using an X-band radar p 230 N92-22793
Radio refractivity profiles deduced from aerosol lidar measurements [AD-A249074] p 152 N92-22796
Measurements of radar backscatter from the ocean surface at 94 GHz as a function of wind speed, direction and the modulation by the ocean waves during the SAXON-FPN experiment p 184 N95-20960
RADAR NAVIGATION
Interest in real-time simulations for the development terrain following function of radar systems p 154 N92-28529
Radar seeker based autonomous navigation update system using topography feature matching techniques p 157 N93-22030
Ground independent landing system p 42 N94-29564
ARC2000: Automatic radar control p 45 N94-29583
RADAR NETWORKS
A novel near-range radar network for airport surface control p 46 N94-29586
RADAR RECEIVERS
Ground independent landing system p 42 N94-29564
RADAR SCATTERING
A calibration technique for the CNET HF backscatter radar p 154 N92-22825
The spatial and temporal characteristics of high frequency auroral backscatter p 158 N93-23604
Sounder calibration with backscattering from Losquet Island in the presence of multipaths p 184 N95-20961
RADAR TARGETS
Basic equations of radar polarimetry and solutions the sensing of propagation path polarization state changes p 153 N92-22821
Recently implemented weather radar data processing technique for rain cell modelling and ground clutter detection p 233 N92-22824
Motion errors and compensation possibilities p 155 N93-13052
The real aperture antenna of SAR, a key element for performance p 155 N93-13053
Polarization effects and multipolarization SAR p 155 N93-13054
SAR simulation p 156 N93-13056
Inverse Synthetic Aperture Radar p 156 N93-13058
Special SAR techniques and applications p 156 N93-13059
RADAR TRACKING
Advances in Guidance and Control of Precision Guided Weapons [AGARD-CP-524] p 149 N93-22018
Multivariable frequency response methods for optimal Kalman-Bucy filters with applications to radar tracking systems p 157 N93-22024
Simulation of fully automated air traffic control concepts p 43 N94-29569
Pointing and Tracking Systems [AD-A282573] p 122 N94-36616
Multitarget track initiation using a modified Hough transform p 174 N94-36630
Radar tracking in multipath: Techniques for improved performance p 174 N94-36631
Contact level fusion of radar and IRST contacts on almost electromagnetically silent platform p 174 N94-36634
RADAR TRANSMISSION
Advances in Guidance and Control of Precision Guided Weapons [AGARD-CP-524] p 149 N93-22018
Electromagnetic radiating source elimination (ERASE) program p 157 N93-22019
Atmospheric Propagation Effects Through Natural and Man-Made Obscurants for Visible to MM-Wave Radiation [AD-A276919] p 170 N94-30495
The influence of the evaporation duct on the angle of arrival and amplitude of the backscattered signal from targets low above the sea p 170 N94-30498
RADAR TRANSMITTERS
Ground independent landing system p 42 N94-29564
RADARSAT
Review of spaceborne and airborne SAR systems p 156 N93-13060
RADIAL FLOW
Inverse design of radial flow impellers with prescribed velocity at hub and shroud p 206 N94-34448
Turbine blade dynamics and blade-vane interaction in a radial inflow turbine p 97 N94-34461
An air bearing system for small high speed gas turbines p 223 N94-34466
RADIANT FLUX DENSITY
Physical aspects of the visual stimulus p 275 N94-23978
RADIATION BELTS
Lightning-induced effects on VLF/LF radio propagation p 166 N93-30737
RADIATION DISTRIBUTION
Evaluation of multi-dimensional flux models for radiative transfer in cylindrical combustion chambers p 197 N93-29955
RADIATION EFFECTS
Plume radiation p 169 N94-15223

RADIATION PROTECTION
Multi-function visor p 265 N93-19770
RADIATION SOURCES
Electromagnetic radiating source elimination (ERASE) program p 157 N93-22019
ELF propagation in deep and shallow sea water p 166 N93-30739
RADIATIVE HEAT TRANSFER
Evaluation of multi-dimensional flux models for radiative transfer in cylindrical combustion chambers p 197 N93-29955
Missile infrared radiation analysis p 306 N95-14449
RADIO ANTENNAS
High resolution sampled aperture array direction finding at HF p 160 N93-23611
VLF/LF transmitting antennas p 168 N93-30747
Tethered aerostat VLF/LF transmitter system design considerations p 169 N93-30753
RADIO ATTENUATION
Ground wave and diffraction, A p 175 N95-14828
RADIO COMMUNICATION
A theoretical study of a radiowave characterization method of the evaporation duct p 152 N92-22795
Adaptive communications polarimetry: Sensing of propagation path changes and adaptation to optimal performance in cellular communications p 153 N92-22822
Communication interference/jamming and propagation analysis system and its application to radio location p 161 N93-23621
Airborne system for detection and location of radio interference sources p 161 N93-23622
Introduction p 164 N93-30728
Numerical modeling of the propagation medium at VLF/LF p 164 N93-30729
VLF/LF propagation measurements p 165 N93-30732
Theoretical and experimental coverage analysis of a VLF transmitter p 165 N93-30734
VLF/LF transmitting antennas p 168 N93-30747
Study of a VLF distributed antenna array p 168 N93-30749
Pattern measurements of US Navy ELF antennas p 169 N93-30752
Viability assessment for reliable long-wave communication links p 169 N93-30754
Modular CNI avionics system p 77 N95-20659
A wideband propagation simulator for high speed mobile radio communications p 179 N95-20934
Simulation of the impact of atmospheric turbulences on millimeter-wave communications systems p 179 N95-20939
RADIO DIRECTION FINDERS
High resolution sampled aperture array direction finding at HF p 160 N93-23611
Bearing determination and bearing quality indication from a goniometric HF DF system p 161 N93-23617
Angle of arrival characteristics of ionospheric skywave signals p 161 N93-23618
RADIO FREQUENCIES
Airborne system for detection and location of radio interference sources p 161 N93-23622
Propagation Modelling and Decision Aids for Communications, Radar and Navigation Systems [AGARD-LS-196] p 174 N95-14825
Propagation in the ionosphere, A p 174 N95-14826
Propagation in the ionosphere, B p 175 N95-14827
Ground wave and diffraction, B p 175 N95-14829
Sensing of radio refractivity and aerosol extinction p 175 N95-14830
The impact of advanced packaging technology on modular avionics architectures p 76 N95-20632
High density monolithic packaging technology for digital/microwave avionics p 119 N95-20646
Development of a fast sampling system for estimation of impulse responses of mobile radio channels p 180 N95-20943
RADIO FREQUENCY INTERFERENCE
Communication interference/jamming and propagation analysis system and its application to radio location p 161 N93-23621
Airborne system for detection and location of radio interference sources p 161 N93-23622
ELF/VLF/LF Radio Propagation and Systems Aspects [AGARD-CP-529] p 164 N93-30727
RADIO HORIZONS
Remote sensing of the evaporation duct using an X-band radar p 230 N92-22793
RADIO INTERFEROMETERS
Ionosphere and troposphere seen through a radio interferometer p 231 N92-22806
RADIO METEOROLOGY
Recently implemented weather radar data processing technique for rain cell modelling and ground clutter detection p 233 N92-22824
RADIO RECEPTION
Utilization of a reception network of the Losquet Island retrodiffusion probe in radiogoniometry p 161 N93-23619
RADIO SIGNALS
Radiolocation Techniques [AGARD-CP-528] p 157 N93-23598
Irregular media effects on radiowave signals used in navigation and positioning systems p 159 N93-23606
The influence of propagation on high frequency radiogoniometry and single station location p 159 N93-23607
A new passive SSL technique for HF radiolocation p 159 N93-23609
Procedures for determining the location of an HF radio transmitter p 159 N93-23610
High resolution sampled aperture array direction finding at HF p 160 N93-23611
Large bearing errors observed at a high latitude DF site p 160 N93-23615
Communication interference/jamming and propagation analysis system and its application to radio location p 161 N93-23621
Numerical modeling of the propagation medium at VLF/LF p 164 N93-30729
Ground wave and diffraction, A p 175 N95-14828
Passive monitoring for automated MMPP communication systems p 177 N95-20927
RADIO SPECTRA
Passive monitoring for automated MMPP communication systems p 177 N95-20927
RADIO TRACKING
Test results of the advanced translator processing system p 161 N93-23620
RADIO TRANSMISSION
Remote sensing of refractivity structure by direct radio measurements at UHF p 230 N92-22791
Over the horizon propagation in a marine environment: Modelling and recent experimental results p 152 N92-22794
A theoretical study of a radiowave characterization method of the evaporation duct p 152 N92-22795
Digital channel sounder for remote sensing of scatterers in mobile radio environment p 153 N92-22820
Lateral deviation of VLF radio waves due to diffraction and scattering from coast-lines, mountain ranges, and polar ice caps p 157 N93-23599
A new passive SSL technique for HF radiolocation p 159 N93-23609
Utilization of a reception network of the Losquet Island retrodiffusion probe in radiogoniometry p 161 N93-23619
ELF/VLF/LF Radio Propagation and Systems Aspects [AGARD-CP-529] p 164 N93-30727
Introduction p 164 N93-30728
Theoretical and experimental coverage analysis of a VLF transmitter p 165 N93-30734
Investigations of equatorial ionosphere nighttime mode conversion at VLF p 166 N93-30735
Lightning-induced effects on VLF/LF radio propagation p 166 N93-30737
VLF/LF transmitting antennas p 168 N93-30747
Study of a VLF distributed antenna array p 168 N93-30749
Pattern measurements of US Navy ELF antennas p 169 N93-30752
Tethered aerostat VLF/LF transmitter system design considerations p 169 N93-30753
Orbiting transmitter and antenna for spaceborne communications at ELF/VLF to submerged submarines p 169 N93-30755
Sensing of radio refractivity and aerosol extinction p 175 N95-14830
Refractive effects from VHF to EHF. Part B: Propagation models p 175 N95-14832
Adaptive error-control scheme for 2-200 MHz Multiple-Mechanism Propagation Paths p 177 N95-20926
Study of the fast and slow variations of the power received at VHF links by tropospheric diffusion p 178 N95-20929
Problems of coding in multipath channels p 178 N95-20930
Methods for evaluating the effects of conduits at the surface of the sea p 178 N95-20932
Propagation of high frequency waves in urban and road tunnel environments p 178 N95-20933
Combined effects of atmosphere and terrain on UHF/microwave paths p 179 N95-20935
Propagation measurements on a troposcatter link in the Canadian High Arctic p 180 N95-20940
The effects of multihop HF propagation on the performance of OTH backscatter radars p 183 N95-20953
Identification of the propagation modes and paths on HF links using a goniopolarimeter p 183 N95-20956
Measurements of angles of elevation of HF by a high resolution method using polarization diversity p 184 N95-20959
RADIO TRANSMITTERS
Propagation characteristics of the ionospheric transmission window relating to long wave radio location issues p 157 N93-23600
Propagation effects on HF direction finding p 158 N93-23602
The influence of propagation on high frequency radiogoniometry and single station location p 159 N93-23607
A new passive SSL technique for HF radiolocation p 159 N93-23609
Procedures for determining the location of an HF radio transmitter p 159 N93-23610
A dynamic bandwidth and phase linearity measurement technique for 4-channel MSK VLF antenna systems p 168 N93-30748
Study of a VLF distributed antenna array p 168 N93-30749
Tethered aerostat VLF/LF transmitter system design considerations p 169 N93-30753
Orbiting transmitter and antenna for spaceborne communications at ELF/VLF to submerged submarines p 169 N93-30755
RADIO WAVES
Radio refractivity profiles deduced from aerosol lidar measurements [AD-A249074] p 152 N92-22796
Mapping electron content and electron density in the sub-auroral ionosphere p 231 N92-22805
Active remote sensing of the ionosphere and the Earth surface irregularities p 232 N92-22808
Lateral deviation of VLF radio waves due to diffraction and scattering from coast-lines, mountain ranges, and polar ice caps p 157 N93-23599
Investigations of equatorial ionosphere nighttime mode conversion at VLF p 166 N93-30735
Lightning-induced effects on VLF/LF radio propagation p 166 N93-30737
Studies of the propagation of Low Frequency (LF) radio waves p 166 N93-30738
A methodology and tool for the prediction of depth of reception in the sea for a VLF/LF communications system p 167 N93-30741
Refractive effects from VHF to EHF. Part A: Propagation Mechanisms p 175 N95-14831
Combined effects of atmosphere and terrain on UHF/microwave paths p 179 N95-20935
The effects of multihop HF propagation on the performance of OTH backscatter radars p 183 N95-20953
RADIOGONIOMETERS
The influence of propagation on high frequency radiogoniometry and single station location p 159 N93-23607
Utilization of a reception network of the Losquet Island retrodiffusion probe in radiogoniometry p 161 N93-23619
Identification of the propagation modes and paths on HF links using a goniopolarimeter p 183 N95-20956
RADIOIMMUNOASSAY
Phadiatop: A screening test for inhalant allergy p 241 N93-11313
RADIOMETERS
Radiometric calibration of SAR systems p 155 N93-13055
Automatic feature extraction and localization using data fusion of radar and infrared images p 162 N93-23628
RADIOMETRIC RESOLUTION
Basic principles of SAR p 155 N93-13050
RADIOSONDES
Inverting radiometric measurements with a neural network p 233 N92-22818
RAIN
Clear-air wind profilers as cloud monitors and hydrometeor identifiers p 233 N92-22819
Recently implemented weather radar data processing technique for rain cell modelling and ground clutter detection p 233 N92-22824
Evaluation of dual polarization attenuation of millimeter frequencies through a meteorological radar p 170 N94-30496
Effects of hydrometeors and atmospheric gases at SHF/EHF p 176 N95-14835
Heavy rain effects p 36 N95-14899
RAMJET ENGINES
Aerodynamic studies of supersonic air intakes p 8 N93-13222
Airbreathing Propulsion for Missiles and Projectiles [AGARD-CP-526] p 123 N93-17607
Ramjet propulsion for missiles in the Mach 3 to 4.5 range p 123 N93-17608
The dual combustor ramjet: A versatile propulsion system for hypersonic tactical missile applications p 123 N93-17611
Combustion instabilities in a side-dump model ramjet combustor p 82 N93-17613
Experimental analysis of combustion oscillations with reference to ramjet propulsion p 138 N93-17614
Ramjet propulsion for advanced projectiles p 82 N93-17615
Multiple-inlet configuration for missiles with skid-to-turn control mode p 105 N93-17617

Prediction of the performances in combustion of ramjets and stato-rockets by isothermal experiments and modeling p 83 N93-17622
Research and development of ramjets/ramrockets. Part 1: Integral solid propellant ramrockets p 92 N94-29294
Research and development of ramjets/ramrockets. Part 2: Integral liquid fuel ramjets p 93 N94-29297
Research and development of ramjets/ramrockets. Part 3: The study of gaseous hydrogen ram combustors p 93 N94-29298
CIAM experimental turboramjets p 93 N94-29299
Experimental and analytical methods for the determination of connected-pipe ramjet and ducted rocket internal performance
[AGARD-AR-323] p 125 N95-17278

RAMJET MISSILES
Potential missile flight performance gains from improvements to the propulsion system p 123 N93-17609
Computation of supersonic air-intakes p 20 N95-14452

RANDOM ERRORS
A virtual sensor for evaporation ducts: The impact of data uncertainties p 229 N92-22799

RANDOM PROCESSES
Non Linear Dynamics and Chaos
[AGARD-LS-191] p 307 N94-18236

RANGEFINDING
Sensing the ionospheric reflection channel with a sounder p 231 N92-22802
Radar seeker based autonomous navigation update system using topography feature matching techniques p 157 N93-22030
Simulation of fully automated air traffic control concepts p 43 N94-29569
Multipath impact on ground-based global positioning system range measurements: Aspects of measurement, modeling, and mitigation p 182 N95-20949

RARE EARTH ELEMENTS
Active fibres and optical amplifiers p 304 N92-28089

RAREFACTION
Control jets in interaction with hypersonic rarefied flow p 122 N94-28020

RAREFIED GAS DYNAMICS
Three-dimensional hypersonic rarefied flow calculations using direct simulation Monte Carlo method p 11 N94-10449
Control jets in interaction with hypersonic rarefied flow p 122 N94-28020

RATIONS
Trial of emergency ration of the Spanish Air Force p 272 N93-32247
Nutrition and hydration status of aircrew members consuming an improved survival ration during a simulated survival scenario p 249 N94-28429

RATS
Physiological investigations of the isolated rat's liver in hypothermia and hypoxia and their relevance in aircraft incidents above the sea p 234 N94-28439

RAY TRACING
Propagation in the ionosphere, A p 174 N95-14826
Time behavior and frequency response of the microwave propagation channel during multipath propagation p 180 N95-20942

REACTING FLOW
CFD Techniques for Propulsion Applications
[AGARD-CP-510] p 186 N92-27450
Three dimensional calculations of reactive flows within aircraft combustion chambers including some combustion models p 191 N92-27490
Combustion instabilities in a side-dump model ramjet combustor p 82 N93-17613
CFD analysis of hypersonic, chemically reacting flow fields p 8 N94-10422
Stability of hypersonic boundary-layer flows with chemistry p 11 N94-10451
Nonequilibrium hypersonic flow in a wind-tunnel nozzle p 12 N94-10456
Some experimental study and numerical simulation in wind tunnel flow p 12 N94-10457
Hypersonic multi block flow simulations around space vehicles including non-equilibrium chemistry p 12 N94-10460
Thermal and chemical non equilibrium hypersonic flow computations p 13 N94-10465

REACTION CONTROL
First experimental assessment of RCS plume-flow field interaction on Hermes leading edge thruster configuration p 125 N94-28032

REACTION KINETICS
The coherent flamelet model for propulsion applications p 138 N92-27486
Prediction of the performances in combustion of ramjets and stato-rockets by isothermal experiments and modeling p 83 N93-17622
Calculations of reactive turbulent flows in aeronautical chambers p 197 N93-29956
Comparison of computation and experiment for a high enthalpy, heated-driver, shock-tube environment p 11 N94-10447
High temperature resistant jet fuels p 148 N94-29260
Development of global/chemistry model for jet-fuel thermal stability based on observations from static and flowing experiments p 148 N94-29262
Direct numerical simulation for premixed turbulent combustion modelling p 143 N95-21082

READ-ONLY MEMORY DEVICES
Scientific and Technical Information (STI) towards technological and industrial development: The case of Portugal p 310 N93-10596
Technology for libraries and information centers: A seminar in Greece, Portugal, and Turkey p 311 N93-10601
Services: User services in defence and aerospace documentation centres p 311 N93-10602

REAL GASES
Issues and approach to develop validated analysis tools for hypersonic flows: One perspective p 11 N94-10446
Real gas and surface transpiration effects upon swept leading edge high speed flow including transition p 11 N94-10452
On the accuracy and efficiency of CFD methods in real gas hypersonics p 13 N94-10462

REAL TIME OPERATION
Situation assessment in the Paladin tactical decision generation system p 292 N92-27892
Status of automatic guidance systems for rotorcraft in low altitude flight p 37 N92-27894
Trajectory optimization for hypersonic aircraft guidance p 37 N92-27898
Parallel knowledge based systems architectures for in-flight mission management p 38 N92-27904
A radar signal processing ASIC and a VME interface circuit p 73 N92-28380
Interest in real-time simulations for the development terrain following function of radar systems p 154 N92-28529
The role of simulation for the study of APIS (piloting support by synthetic imagery) p 113 N92-28544
Generic modular imaging IR signal processor p 282 N92-32440
Aid in investigation by figure animation p 31 N93-19659
Contribution of the analysis of ocular activity (complementary to the electroencephalographic analysis) to the detection of low vigilance in instances of piloting a vehicle p 244 N93-19708
Advances in automatic electro-optical tracking systems p 305 N93-22020
Multi-window registration algorithm for automatic detection and tracking of moving targets p 283 N93-22022
The Missle-Borne Integrated Network Demonstration Program p 289 N93-22023
Opportunities and challenges in avionics integration, INS/GPS: A case study p 39 N93-22782
Flight evaluation of differential GPS aided inertial navigation systems p 40 N93-22790
A common Ada run-time system for avionics software p 75 N94-29331
Design of a thinwire real-time multiprocessor operating system p 288 N94-29333
Validation and test of complex weapon systems p 75 N94-29336
GPS/GNSS for ATM p 42 N94-29565
ACCS Surveillance Exploratory Prototype (ASEP) p 170 N94-29566
Interactive large screen: A multi-mode dialogue tool for future cockpits p 280 N94-37266
A non-intrusive way to measure point-of-gaze p 280 N94-37272
Operator gaze position control interfaces: Investigation of psychophysical and operational parameters p 281 N94-37273
Low cost software-based rendering and stereoscopic interfaces for teleoperation and virtual reality p 287 N94-37279
The impact of advanced packaging technology on modular avionics architectures p 76 N95-20632

RECEIVERS
Mapping electron content and electron density in the sub-auroral ionosphere p 231 N92-22805
Radar interferometric techniques for investigating field-aligned ionospheric plasma irregularities p 231 N92-22807
A long wave TE/TM noise prediction model p 167 N93-30742
Geographical diversity combining to exploit multi-mechanism propagation p 183 N95-20957

RECIPROCITY THEOREM
The Lorentz reciprocity theorem as a consistency test for propagation models p 179 N95-20937

RECIRCULATIVE FLUID FLOW
Experiments into the scaling parameters required for exhaust gas ingestion testing of vertical landing aircraft p 60 N94-28017
Influence of headwind on hot gas reingestion and consideration of pressure ratio scaling p 89 N94-28018
Unsteady aspects of hot gas reingestion and statistical analysis p 89 N94-28019
A new Eulerian model for turbulent evaporating sprays in recirculating flows p 142 N94-29279
Application of Direct and Large Eddy Simulation to Transition and Turbulence
[AGARD-CP-551] p 212 N95-21061

RECONNAISSANCE
Automatic detection, pursuit, and classification in infrared imagery p 304 N92-32445

RECTANGULAR WINGS
Viscous-inviscid calculation of high-lift separated compressible flows over airfoils and wings p 17 N94-18440

REDUNDANCY ENCODING
Software engineering methods in the Hermes on-board software p 284 N94-29326

REED-SOLOMON CODES
Adaptive error-control scheme for 2-200 MHz Multiple-Mechanism Propagation Paths p 177 N95-20926

REELS
US Army helicopter inertia reel locking failures p 33 N93-19689

REENTRY
First experimental assessment of RCS plume-flow field interaction on Hermes leading edge thruster configuration p 125 N94-28032

REENTRY TRAJECTORIES
Aerodynamic and aerothermal challenges for the design of the Hermes spaceplane p 119 N94-10423

REENTRY VEHICLES
Sensing of ELF signatures arising from space vehicle disturbances of the ionosphere p 232 N92-22809
Planetary entry vehicle design for planned and potential ESA missions to Titan, Mars, and Earth return (FGE TN 51/92) p 121 N94-10428
Synthesis of the Workshop on Hypersonic Flows for ReEntry Problems p 9 N94-10440
Local aerothermal problems during Hermes re-entry p 13 N94-10464

REFINING
Alternate melting and refining routes p 143 N94-37323

REFLECTANCE
Radar seeker based autonomous navigation update system using topography feature matching techniques p 157 N93-22030
Electromagnetic wave reflection from irregular plasma layers p 182 N95-20952

REFLECTED WAVES
Defect analysis using advanced interpretation of the reflected wave during ultrasonic scanning p 224 N93-21528

REFLECTORS
Electromagnetic wave reflection from irregular plasma layers p 182 N95-20952

REFLEXES
Gaze orientation under G(z)-load. Methodological aspects: Preliminary results p 281 N94-37274

REFRACTION
Refractive effects from VHF to EHF. Part A: Propagation Mechanisms p 175 N95-14831
Modeling tropospheric ducting effects on satellite-to-ground paths p 179 N95-20936

REFRACTIVITY
Remote Sensing of the Propagation Environment
[AGARD-CP-502] p 230 N92-22790
Remote sensing of refractivity structure by direct radio measurements at UHF p 230 N92-22791
A theoretical study of a radiowave characterization method of the evaporation duct p 152 N92-22795
Radio refractivity profiles deduced from aerosol lidar measurements
[AD-A249074] p 152 N92-22796
Use of mesoscale models for refractivity forecasting p 153 N92-22797
Refractive assessments from satellite observations p 153 N92-22798
A virtual sensor for evaporation ducts: The impact of data uncertainties p 229 N92-22799
Ionosphere and troposphere seen through a radio interferometer p 231 N92-22806
Clear-air wind profilers as cloud monitors and hydrometeor identifiers p 233 N92-22819
Radiolocation of a satellite-borne LOVHF beacon p 160 N93-23613
Propagation Modelling and Decision Aids for Communications, Radar and Navigation Systems
[AGARD-LS-196] p 174 N95-14825
Sensing of radio refractivity and aerosol extinction p 175 N95-14830
Refractive effects from VHF to EHF. Part A: Propagation Mechanisms p 175 N95-14831
Refractive effects from VHF to EHF. Part B: Propagation models p 175 N95-14832
Terrain and refractivity effects on non-optical paths p 178 N95-20931

REFRACTORY MATERIALS
Expendable gas turbine engine technology advances p 94 N94-34438
Possibilities and pitfalls in aerospace applications of titanium matrix composites p 135 N94-36650
REGULATIONS
Combat aircraft noise: The operator's perspective p 296 N93-10669
Relevance of laboratory tests in aeromedical decisions p 254 N95-19420
REINFORCING FIBERS
Interface evaluation in ceramic composites p 145 N94-24231
CMC design consequences p 146 N94-24238
SCS-6 (tm) fiber reinforced titanium p 135 N94-36652
Properties of TMC processed by fibre coating and hiping p 135 N94-36656
RELIABILITY
The development of an auxiliary power unit for a fighter aircraft p 95 N94-34442
Standard Hardware Acquisition and Reliability Program (SHARP) advanced SEM-E packaging p 76 N95-20633
Improving Multichip Module (MCM) design and reliability using the Intelligent MCM Analyzer p 225 N95-20637
The demise of plastic encapsulated microcircuit myths p 185 N95-20640
Advanced Standard Electronic Modules format-E (SEM-E) processes for rapid prototyping p 185 N95-20642
Reliability assessment of Multichip Module technologies via the Triservice/NASA RELTECH program - p 226 N95-20643
Assuring Known Good Die (KGD) for reliable, cost effective MCMs p 185 N95-20644
A cheap DNS tool for turbulence models testing p 214 N95-21072
RELIABILITY ANALYSIS
Aircraft Accidents: Trends in Aerospace Medical Investigation Techniques [AGARD-CP-532] p 30 N93-19653
Possibilities and pitfalls in aerospace applications of titanium matrix composites p 135 N94-36650
RELIABILITY ENGINEERING
A Recommended Methodology for Quantifying NDE/NDI Based on Aircraft Engine Experience [AGARD-LS-190] p 89 N94-11022
The principles of flight test assessment of flight-safety-critical systems in helicopters [AGARD-AG-300-VOL-12] p 35 N95-14199
RELUCTANCE
Mitigation of the effects of F layer regularities by using multiple paths p 182 N95-20951
REMOTE CONTROL
Control of remotely operated manipulation systems p 291 N95-14945
Human factors considerations for remote manipulation p 282 N95-14949
REMOTE MANIPULATOR SYSTEM
Control and operation of space manipulator systems p 291 N95-14946
REMOTE SENSING
Remote Sensing of the Propagation Environment [AGARD-CP-502] p 230 N92-22790
Remote sensing of refractivity structure by direct radio measurements at UHF p 230 N92-22791
Sensing propagation events and fade statistics at C-band for two over-water, line-of-sight propagation paths over a one year period p 152 N92-22792
Remote sensing of the evaporation duct using an X-band radar p 230 N92-22793
Adaptive remote sensing of the ionosphere to minimise spectral intrusion p 231 N92-22803
Active remote sensing of the ionosphere and the Earth surface irregularities p 232 N92-22808
Remote sensing of aerosol extinction using single-ended lidars p 232 N92-22811
Probing of the atmosphere with lidar p 232 N92-22812
Lidar remote sensing techniques for developing and evaluating atmospheric aerosol models p 232 N92-22813
Remote sensing of the atmosphere by multi-channel radiometers p 232 N92-22816
Optical refraction in the atmospheric surface layer p 233 N92-22817
Inverting radiometric measurements with a neural network p 233 N92-22818
Digital channel sounder for remote sensing of scatterers in mobile radio environment p 153 N92-22820
Radiometric calibration of SAR systems p 155 N93-13055
Low cost TACSAT for NATO surveillance p 120 N93-29911
Cost effective TacSats for military support p 121 N93-29912
Sensing of radio refractivity and aerosol extinction p 175 N95-14830
Measurements of radar backscatter from the ocean surface at 94 GHz as a function of wind speed, direction and the modulation by the ocean waves during the SAXON-FPN experiment p 184 N95-20960
REMOTELY PILOTED VEHICLES
Automated target tracking and location techniques applied to optical payloads on remotely piloted vehicles p 49 N92-27890
Overall system concepts in mission planning p 294 N94-25009
REMOVAL
Environmentally Safe and Effective Processes for Paint Removal [AGARD-R-791] p 149 N94-10613
Paint removal activities in the US Navy p 149 N94-10614
Paint removal activities in Canada p 149 N94-10615
Procedures without danger to the environment and efficiency (PSDEE) for the removal of paint. Point on the French activities concerning the removal of paint p 150 N94-10616
Paint removal activities in Germany p 150 N94-10617
The development of alternative paint removal techniques in the RAF p 150 N94-10618
Operational aspects of F.16 plastic media blasting, as carried out by Fokker Aircraft Services p 150 N94-10619
Use of robots for aircraft dry stripping via plastic media blasting p 150 N94-10620
German Air Forces experiences with plastic media blasting and future requirements p 150 N94-10621
Plastic media blasting activities at Hill Air Force Base p 150 N94-10622
Large Aircraft Robotic Paint Stripping (LARPS) system and the high pressure water process p 151 N94-10623
Automated Laser Paint Stripping (ALPS) update p 151 N94-10624
Aquastrip (tm): An innovative paint removal technology p 151 N94-10625
Paint removal and surface cleaning using ice particles p 151 N94-10626
Paint removal using wheat starch blast media p 151 N94-10627
IATA taskforce: Paintstripping p 151 N94-10628
Selectively strippable paint schemes p 152 N94-10629
RESCUE OPERATIONS
Effectiveness of protection clothing for cold weather conditions after ejection over sea: A case report p 277 N94-28435
EH101: A new helicopter capable of long range missions p 67 N94-36330
RESEARCH AIRCRAFT
X-31A high angle of attack and initial post stall flight testing p 54 N93-19911
System identification for X-31A project support: Lessons learned so far p 54 N93-19914
In-flight structural mode excitation system for flutter testing p 105 N93-19915
Development and flight testing of a surface pressure measurement installation on the EAP demonstrator aircraft p 219 N93-19927
X-31 demonstration of integrated flight and propulsion control for effective combat at extreme angles of attack p 106 N93-28851
RESEARCH AND DEVELOPMENT
Establishing a scientific and technical information program: Planning and resource management p 310 N93-10597
Establishing a research agenda for Scientific and Technical Information (STI): Focus on the user p 312 N93-19797
The National Aero-Space Plane program: A revolutionary concept p 53 N93-19908
An overview of DARPA's advanced space technology program p 118 N93-29908
End users: New products and services p 314 N93-31220
Recommendations for future research in hypersonic instrumentation p 9 N94-10433
The Canadian network for the advancement of research, industry and education (CANARIE) p 315 N94-37336
RESEARCH FACILITIES
Use of a research simulator for the development of new concepts of flight control p 113 N92-28543
Overview of the NASA Dryden Flight Research Facility aeronautical flight projects testing p 54 N93-19916
RESEARCH MANAGEMENT
A Research Agenda for Scientific and Technical Information [AGARD-AR-316] p 312 N93-19796
The organization and transfer of information p 312 N93-19799
RESEARCH PROJECTS
Where is high-lift today? A review of past UK research programmes p 1 N94-18416
The GARTEUR high lift research programme p 16 N94-18430
RESEARCH VEHICLES
Overview of the NASA Dryden Flight Research Facility aeronautical flight projects testing p 54 N93-19916
RESIDUAL STRENGTH
Influence of edge effect on compression-tension fatigue of toughened graphite/epoxy laminates p 126 N92-33039
Allowable compression strength for CFRP-components of fighter aircraft determined by CAI-test p 132 N93-21531
Numerical determination of the residual strength of battle damaged composite plates p 132 N93-21533
Effect of impacts on CFRP structures, results of a comprehensive test program for practical use p 132 N93-21534
Acoustic fatigue of carbon fibre structures p 303 N95-19158
RESIDUAL STRESS
F100 second stage fan disk bolthole crack propagation ferris wheel test p 82 N93-14897
Micromechanical modeling of damage growth in titanium based metal-matrix composites p 137 N94-36664
RESIN MATRIX COMPOSITES
Environmental degradation of high temperature composites p 127 N92-33047
Fracture analysis of BMI system in presence of moisture p 130 N93-21517
Edge delamination of composite laminates p 130 N93-21519
RESONANCE
Effects of hydrometeors and atmospheric gases at SHF/EHF p 176 N95-14835
RESONANT FREQUENCIES
A fin optimisation study p 48 N92-23237
RESONATORS
Hemispherical resonator gyro: Principle, design, and performance p 220 N93-22784
RESOURCES MANAGEMENT
The next generation female in cockpit: Do we need a new approach to cockpit resource management (CRM)? p 263 N93-19704
RESPIRATORY DISEASES
Allergic, Immunological and Infectious Disease Problems in Aerospace Medicine [AGARD-CP-518] p 235 N93-11283
Communicable diseases: A major burden of morbidity and mortality p 238 N93-11300
Epidemiologic view of allergic diseases in North America: Implications for aerospace medicine p 241 N93-11311
The screening of inhalant allergic diseases in the selection of candidates for aircraft piloting p 241 N93-11312
Phadiatop: A screening test for inhalant allergy p 241 N93-11313
In vivo and in vitro diagnosis of allergic respiratory disease during screening procedures in the Italian Navy: Comparative evaluation of a recent quantitative automatized enzyme immunoassay method to dose specific IgE p 241 N93-11314
Asthma in aircrew: Assessment, treatment and disposition p 241 N93-11315
Allergic and nonallergic rhinitis in Greek pilots p 242 N93-11317
RESPIRATORY PHYSIOLOGY
Asthma in aircrew: Assessment, treatment and disposition p 241 N93-11315
RESPIRATORY SYSTEM
Chronic obstructive pulmonary disease p 247 N94-23324
RETINA
Silicon vision: Elementary functions to be implemented on electronic retinas p 289 N93-13242
Physical aspects of the visual stimulus p 275 N94-23978
RETINAL IMAGES
Visual accommodation to virtual image displays when knowledge of object distance conflicts with optical distance p 261 N94-37278
RETROFITTING
Retrofitting of GPS into existing navigation suites p 39 N93-22788
REVERBERATION CHAMBERS
Design and operation of a thermoacoustic test facility p 117 N95-19150
REVERSE ENGINEERING
The UNICON approach to through-life support and evolution of software-intensive systems p 286 N94-29340
REVERSING
Propulsion integration results of the STOL and Maneuver Technology Demonstrator p 52 N93-13228
REVIEWING
Accidents and errors: A review of recent UK Army Air Corps accidents p 34 N93-19701
Boundary-flow measurement methods for wall interference assessment and correction: Classification and review p 210 N95-19262

REYNOLDS EQUATION
The application of a Navier-Stokes CFD method to civil engine intake flows p 188 N92-27471
Modelling anisotropy and backscatter effects in the subgrid scale stress tensor p 215 N95-21077
REYNOLDS NUMBER
The eddy structures in bounded shear flows p 3 N92-27712
A review of scale effects on surfaces in unsteady motion p 7 N92-27962
Comparative performance tests of a pitot-inlet in several European wind-tunnels at subsonic and supersonic speeds p 7 N93-13221
Determination of surface heat transfer and film cooling effectiveness in unsteady wake flow conditions p 85 N93-29933
Measurement of turbulent spots and intermittency modelling at gas-turbine conditions p 85 N93-29934
An experimental investigation of attachment-line transition on the slat of a combat aircraft model p 56 N94-18432
Scale effects on aircraft and weapon aerodynamics [AGARD-AG-323] p 19 N95-14103
2-D aileron effectiveness study p 21 N95-17851
Two-dimensional 16.5 percent thick supercritical airfoil NLR 7301 p 22 N95-17854
OAT15A airfoil data p 23 N95-17857
Pressure distributions on research wing W4 mounted on an axisymmetric body p 24 N95-17862
Three-dimensional boundary layer and flow field data of an inclined prolate spheroid p 208 N95-17867
Force and pressure data of an ogive-nosed slender body at high angles of attack and different Reynolds numbers p 25 N95-17868
Velocity measurements with hot-wires in a vortex-dominated flowfield p 28 N95-19261
Unsteady flow testing in a passive low-correction wind tunnel p 118 N95-19272
Simulation of separated flows p 213 N95-21068
Large eddy simulation of turbulent flow over a cavity p 213 N95-21069
A cheap DNS tool for turbulence models testing p 214 N95-21072
Direct simulation of turbulent flow in a square duct: Reynolds-stress budgets p 214 N95-21073
Simulation of pipe flow p 215 N95-21078
Direct numerical determination of the minimum bypass Reynolds number in boundary layers p 215 N95-21080
Direct simulation of a self-similar plane wake p 216 N95-21084
The effect of initial conditions on the development of temporally evolving planar three dimensional incompressible wakes p 216 N95-21085
Rib vortices in round jets: Direct and large eddy simulation p 217 N95-21088
REYNOLDS STRESS
Calculation of single and multiple jets in cross-flow with and without impingement using Reynolds-stress-transport closure p 203 N94-28024
Direct simulation of turbulent flow in a square duct: Reynolds-stress budgets p 214 N95-21073
Modelling anisotropy and backscatter effects in the subgrid scale stress tensor p 215 N95-21077
Direct simulation of a self-similar plane wake p 216 N95-21084
RHYTHM (BIOLOGY)
Effectiveness of birthdate biorhythm theory on flight accidents p 244 N93-19710
The effects of an antijet lag diet p 273 N93-32263
RIDING QUALITY
Active landing gear control for improved ride quality during ground roll p 56 N94-11345
RIEMANN WAVES
Computational aerodynamics based on the Euler equations [AGARD-AG-325] p 19 N95-14264
RIGID WINGS
Transonic aeroelastic computations on wings using Navier-Stokes equations p 6 N92-27957
RISK
Pre-flight risk assessment in Emergency Medical Service (EMS) helicopters p 34 N93-19692
Fires on board aircraft: Toxicological risk in flight p 243 N93-19694
Cardiovascular Risk Factors (CVRF) in Spanish pilots with coronary artery disease demonstrated by angiographic studies p 245 N93-32253
Results and management of pathological lipoprotein concentrations and other cardiovascular risk factors in military pilots of the German Federal Armed Forces p 245 N93-32254
Aeromedical disposition for coronary artery disease p 246 N94-23316
Arterial hypertension and the aviator p 248 N94-23328
Risk analysis of the C-141 WS405 inner-to-outer wing joint p 62 N94-34592
Aeromedical risk management for aircrew p 252 N95-19414
Fit to fly: Analysis of the aeromedical disposition in aircrewmembers of the Spanish Armed Forces p 253 N95-19418
The aeromedical implications of supraventricular tachycardia p 257 N95-19437
ROBOT CONTROL
3-D computer vision for navigation/control of mobile robots p 289 N93-13243
Advanced Guidance and Control Aspects in Robotics [AGARD-LS-193] p 290 N95-14942
Machine intelligence: The key to guidance and control in robotics p 290 N95-14944
Control of remotely operated manipulation systems p 291 N95-14945
Control and operation of space manipulator systems p 291 N95-14946
Guidance and control for unmanned ground vehicles p 224 N95-14948
ROBOT DYNAMICS
Comparison of the event-step algorithm to other path planning methods to avoid dynamic 3D obstacles p 37 N92-27896
ROBOT SENSORS
Sensing and interpretation of 3-D shape and motion p 288 N93-13240
Silicon vision: Elementary functions to be implemented on electronic retinas p 289 N93-13242
Machine perception exploiting high-level spatio-temporal models p 289 N93-13244
ROBOTICS
Machine Perception [AGARD-LS-185] p 288 N93-13238
Building and using scene representations in image understanding p 289 N93-13241
Machine perception exploiting high-level spatio-temporal models p 289 N93-13244
Advanced Guidance and Control Aspects in Robotics [AGARD-LS-193] p 290 N95-14942
Robotics technology developments in the United States space telerobotics program p 290 N95-14943
Machine intelligence: The key to guidance and control in robotics p 290 N95-14944
Control and operation of space manipulator systems p 291 N95-14946
ROBOTS
Comparison of the event-step algorithm to other path planning methods to avoid dynamic 3D obstacles p 37 N92-27896
3-D computer vision for navigation/control of mobile robots p 289 N93-13243
Operational aspects of F.16 plastic media blasting, as carried out by Fokker Aircraft Services p 150 N94-10619
Use of robots for aircraft dry stripping via plastic media blasting p 150 N94-10620
Plastic media blasting activities at Hill Air Force Base p 150 N94-10622
Large Aircraft Robotic Paint Stripping (LARPS) system and the high pressure water process p 151 N94-10623
Robotics technology developments in the United States space telerobotics program p 290 N95-14943
Control and operation of space manipulator systems p 291 N95-14946
Mission, technologies and design of planetary mobile vehicle p 223 N95-14947
ROBUSTNESS (MATHEMATICS)
The use of voice processing for some aspects of the pilot-vehicle-interface in an aircraft p 265 N93-19772
Multi-window registration algorithm for automatic detection and tracking of moving targets p 283 N93-22022
Non Linear Dynamics and Chaos [AGARD-LS-191] p 307 N94-18236
Tools for applied engineering optimization p 70 N95-16570
ROCKET ENGINES
An overview on the main available ceramic composites and their processing routes p 145 N94-24229
ROCKET EXHAUST
Terminology and assessment methods of solid propellant rocket exhaust signatures [AGARD-AR-287] p 124 N93-22998
Rocket Motor Plume Technology [AGARD-LS-188] p 124 N94-15217
Plume primary smoke p 124 N94-15218
Propulsion p 124 N94-15219
Secondary smoke p 125 N94-15220
Rocket motor plume flowfields: Phenomenology and simulation p 125 N94-15221
Microwave properties and systems overview p 169 N94-15222
Plume radiation p 169 N94-15223
ROCKET PROPELLANTS
Development of a minimum smoke propellant based on glycidyl azide polymer and ammonium nitrate p 147 N92-33243
ROCKET-BORNE INSTRUMENTS
The Missle-Borne Integrated Network Demonstration Program p 289 N93-22023
ROLL
Generation of helicopter roll axis bandwidth data through ground-based and in-flight simulation p 53 N93-19909
Study findings on the influence of maneuverability and agility on helicopter handling qualities p 64 N94-34624
ROLLING MOMENTS
Yaw control by tangential forebody blowing p 109 N94-34615
ROOM TEMPERATURE
High temperature cyclic behaviour of aerospace materials: Room temperature validation tests of Ti-6Al-4V [AGARD-AR-328] p 229 N95-14198
ROTARY STABILITY
AM-X high angle of attack flight test experience (single and two seat versions) p 53 N93-19910
ROTARY WING AIRCRAFT
Status of automatic guidance systems for rotorcraft in low altitude flight p 37 N92-27894
The application of flight simulation models in support of rotorcraft design and development p 111 N92-28527
Smart materials for helicopter rotor active control p 55 N94-11321
Rotorcraft fatigue life-prediction: Past, present, and future p 228 N94-34590
Experimental data on the aerodynamic interactions between a helicopter rotor and an airframe p 27 N95-17883
ROTARY WINGS
Smart materials for helicopter rotor active control p 55 N94-11321
Experimental data on the aerodynamic interactions between a helicopter rotor and an airframe p 27 N95-17883
Wall interaction effects for a full-scale helicopter rotor in the NASA Ames 80- by 120-foot wind tunnel p 29 N95-19270
ROTATING BODIES
Inverse Synthetic Aperture Radar p 156 N93-13058
Attenuating the disorienting effects of head movement during whole-body rotation using a visual reference: Further tests of a predictive hypothesis p 252 N94-37276
ROTATING DISKS
Heat Transfer and Cooling in Gas Turbines [AGARD-CP-527] p 84 N93-29926
Study of flow structure in rotating cavities: Numerical predictions of laminar and turbulent, steady, and unsteady flows p 196 N93-29948
Flow and heat transfer between gas-turbine discs p 86 N93-29950
ROTATING FLUIDS
Fluid flow and heat transfer in the entrance region of an annulus between independently rotating tubes with a turbulent axial flow p 196 N93-29952
ROTATING SHAFTS
Transient thermal behaviour of a compressor rotor with axial cooling air flow and co-rotating or contra-rotating shaft p 86 N93-29946
ROTATING STALLS
Dynamic control of aerodynamic instabilities in gas turbine engines p 80 N92-28466
ROTATION
The effect of orthogonal-mode rotation on forced convection in a circular-sectioned tube fitted with full circumferential transverse ribs p 196 N93-29937
Turbulent flow and heat transfer in idealized blade cooling passages p 85 N93-29938
An L2F-measurement device with image rotator prism for flow velocity analysis in rotating coolant channels p 220 N93-29942
Local heat transfer measurement with liquid crystals on rotating surfaces including non-axisymmetric cases p 85 N93-29943
Heat transfer and leakage in high-speed rotating stepped labyrinth seals p 86 N93-29951
ROTATIONAL STATES
Large-eddy simulation of rotating channel flows using a localized dynamic model p 213 N95-21064
The asymptotic state of rotating homogeneous turbulence at high Reynolds numbers p 213 N95-21065
ROTOR AERODYNAMICS
Overview on test cases for computation of internal flows in turbomachines p 193 N93-13209
Aerodynamic design and investigation of a mixed flow compressor stage p 206 N94-34450
ROTOR BLADES (TURBOMACHINERY)
Unsteady flows in turbines: Impact on design procedure p 207 N95-14132
Verification of multidisciplinary models for turbomachines p 99 N95-19025
ROTOR BODY INTERACTIONS
Experimental data on the aerodynamic interactions between a helicopter rotor and an airframe p 27 N95-17883

ROTORS
Viscous three-dimensional calculations of transonic fan performance p 188 N92-27467
Advanced concepts for next generation small gas turbine engine compressors p 95 N94-34443
ROUTES
Air Vehicle Mission Control and Management [AGARD-CP-504] p 1 N92-27887
Comparison of the event-step algorithm to other path planning methods to avoid dynamic 3D obstacles p 37 N92-27896
On board planning of 4D-trajectories p 37 N92-27897
Search route planning p 38 N92-27900
An efficient method for three-dimensional route planning with different strategies and constraints p 38 N92-27901
ROVING VEHICLES
Mission, technologies and design of planetary mobile vehicle p 223 N95-14947
Guidance and control for unmanned ground vehicles p 224 N95-14948
RUNGE-KUTTA METHOD
Computations of unsteady flows around airfoil sections by explicit and implicit methods solving the Euler and Navier-Stokes equations p 5 N92-27948
Numerical calculations of high lift flows using structured and unstructured methods p 15 N94-18428
The role of CFD in the design process p 208 N95-14135
Navier-Stokes simulations of the effects of suction holes on a flat plate boundary layer p 218 N95-21094
RUNWAYS
Scene correlation for INS aiding in flight-test systems: Runway-referenced flight-tests with on-board sensors only p 40 N93-22792
Contributions of DLR to air traffic capacity enhancement within a terminal area p 42 N94-29567
RUPTURING
Mechanical behavior of CMCs: Crack growth resistance and creep aspects p 146 N94-24235
Ceramic matrix composite parts design p 146 N94-24237
RUSSIAN FEDERATION
Research and Development of Ram/Scramjets and Turboramjets in Russia [AD-A275588] p 92 N94-29291
Problems of international exchange of scientific and technical information for a Russian aerospace research institute p 316 N94-37339

S

S MATRIX THEORY
Basic equations of radar polarimetry and solutions the sensing of propagation path polarization state changes p 153 N92-22821
S-N DIAGRAMS
Pre-standardisation work on fatigue and fracture testing of titanium matrix composites p 137 N94-36667
SAFETY
Insensitive Munitions [AGARD-CP-511] p 147 N92-33240
The United States Air Force explosives hazards reduction program p 147 N92-33241
SAFETY FACTORS
Studies of safety, infectivity, and immunogenicity of a new Temperature Sensitive (TS) 51-1 strain of S. typhi as a new live oral typhoid fever vaccine candidate p 239 N93-11306
Recent lessons on the safety and effectiveness of malaria chemoprophylaxis in a non-immune population p 240 N93-11307
Epidemiologic view of allergic diseases in North America: Implications for aerospace medicine p 241 N93-11311
Wake turbulence p 20 N95-14894
The global aircraft shape p 70 N95-16571
Aircraft and sub-system certification by piloted simulation [AGARD-AR-278] p 117 N95-17388
SAMPLING
Development of a fast sampling system for estimation of impulse responses of mobile radio channels p 180 N95-20943
SANDS
The operation of gas turbine engines in hot and sandy conditions: Royal Air Force experiences in the Gulf conflict p 100 N95-19655
US Army rotorcraft turboshaft engines sand and dust erosion considerations p 100 N95-19656
Future directions in helicopter protection system configuration p 100 N95-19657
Erosion of T56 5th stage rotor blades due to bleed hole overtip flow p 101 N95-19666
SANDWICH STRUCTURES
Fracture analysis of BMI system in presence of moisture p 130 N93-21517
Adaptive structure design employing shape memory actuators p 133 N94-11331
SARSAT
Digital processing for positioning with one satellite p 163 N93-23629
SATELLITE ATTITUDE CONTROL
Attitude- and Orbit Control Subsystem concepts for TACSATS p 120 N93-29906
The development procedures and tools applied for the attitude control software of the Italian satellite SAX p 122 N94-29324
SATELLITE COMMUNICATION
A theoretical study of a radiowave characterization method of the evaporation duct p 152 N92-22795
T(lc2)acS(lc3)ats for Surveillance Verification and C3I [AGARD-CP-522] p 163 N93-29892
Tactical satellites p 119 N93-29893
TACSAT ground control and data collection p 163 N93-29895
TACSAT-spacecraft bus concept and design: Application of a multimission bus for TACSAT in LEO p 120 N93-29896
Considerations for NATO satellite communications in the post-2000 era p 164 N93-29899
Terrain and coverage prediction analyses for non-geostationary orbit EHF satellite communications p 164 N93-29902
Launch vehicles for lightweight TACSAT deployment p 118 N93-29903
SATELLITE CONFIGURATIONS
QuickStar: System design, capabilities, and tactical applications of a small, smart space system p 120 N93-29905
SATELLITE CONTROL
System of navigation by satellites with European coverage p 120 N93-29897
SATELLITE DESIGN
An overview of DARPA's advanced space technology program p 118 N93-29908
SAR sensors on TACSATS: A feasibility assessment p 122 N93-29909
A TACSAT SAR concept p 122 N93-29910
SATELLITE IMAGERY
Estimation of transmittance from satellite imagery p 171 N94-30500
SATELLITE NAVIGATION SYSTEMS
T(lc2)acS(lc3)ats for Surveillance Verification and C3I [AGARD-CP-522] p 163 N93-29892
Use of GPS in automated air traffic control p 42 N94-29563
SATELLITE NETWORKS
T(lc2)acS(lc3)ats for Surveillance Verification and C3I [AGARD-CP-522] p 163 N93-29892
TACSAT-spacecraft bus concept and design: Application of a multimission bus for TACSAT in LEO p 120 N93-29896
System of navigation by satellites with European coverage p 120 N93-29897
SATELLITE OBSERVATION
Refractive assessments from satellite observations p 153 N92-22798
A virtual sensor for evaporation ducts: The impact of data uncertainties p 229 N92-22799
A TACSAT SAR concept p 122 N93-29910
Estimation of transmittance from satellite imagery p 171 N94-30500
SATELLITE ORBITS
Terrain and coverage prediction analyses for non-geostationary orbit EHF satellite communications p 164 N93-29902
Attitude- and Orbit Control Subsystem concepts for TACSATS p 120 N93-29906
SATELLITE-BORNE RADAR
SAR simulation p 156 N93-13056
SCALARS
Predictions of momentum and scalar fields in a jet in cross-flow using first and second order turbulence closures p 203 N94-28025
Numerical modelling of turbine combustion chambers p 90 N94-29254
SCALE EFFECT
A review of scale effects on surfaces in unsteady motion p 7 N92-27962
An experimental investigation of attachment-line transition on the slat of a combat aircraft model p 56 N94-18432
Scale effects on aircraft and weapon aerodynamics [AGARD-AG-323] p 19 N95-14103
SCALE HEIGHT
ELF propagation highlights p 165 N93-30730
SCALE MODELS
Survey of experimental techniques for performance prediction p 49 N92-23954
ASTOVL model engine simulators for wind tunnel research p 115 N93-13213
Prediction of the performances in combustion of ramjets and stato-rockets by isothermal experiments and modeling p 83 N93-17622
A study of the use of half-models in high-lift wind-tunnel testing p 16 N94-18434
Yaw control by tangential forebody blowing p 109 N94-34615
Particle deposition in gas turbine blade film cooling holes p 101 N95-19661
Subgrid scale models in finite difference simulations of complex wall bounded flows p 212 N95-21063
Comparison of DNS and LES of transitional and turbulent compressible flow: Flat plate and mixing layer p 213 N95-21066
Modelling anisotropy and backscatter effects in the subgrid scale stress tensor p 215 N95-21077
SCALING LAWS
Swept shock/boundary-layer interactions: Scaling laws, flowfield structure, and experimental methods p 198 N94-15197
SCANNING
Unsteady wake structures in transverse jets p 200 N94-28006
SCANNING ELECTRON MICROSCOPY
Material characterization and fractographic examination of Ti-17 fatigue crack growth specimens for SMP SC33 p 88 N93-31744
Advanced Standard Electronic Modules format-E (SEM-E) processes for rapid prototyping p 185 N95-20642
SCATTER PROPAGATION
Propagation Modelling and Decision Aids for Communications, Radar and Navigation Systems [AGARD-LS-196] p 174 N95-14825
SCATTERING
Lateral deviation of VLF radio waves due to diffraction and scattering from coast-lines, mountain ranges, and polar ice caps p 157 N93-23599
SCATTERING COEFFICIENTS
Propagation Modelling and Decision Aids for Communications, Radar and Navigation Systems [AGARD-LS-196] p 174 N95-14825
Electro-optics: Propagation from IR to UV and sensor considerations. Part B: Tools for exploitation of propagation conditions and system range performance p 176 N95-14834
Effects of hydrometeors and atmospheric gases at SHF/EHF p 176 N95-14835
SCATTERING FUNCTIONS
Electro-optics: Propagation from IR to UV and sensor considerations. Part A: Propagation theory p 175 N95-14833
SCATTEROMETERS
SAR peculiarities, ambiguities and constraints p 155 N93-13051
SCENE ANALYSIS
Sensing and interpretation of 3-D shape and motion p 288 N93-13240
Building and using scene representations in image understanding p 289 N93-13241
The 3-D computer vision techniques for object following and obstacle avoidance p 289 N93-13245
SCHEDULING
Noise studies for environmental impact assessment of an outdoor engine test facility p 297 N93-10672
Artificial intelligence technology program at Rome Laboratory p 290 N94-29328
SCHLIEREN PHOTOGRAPHY
Effects of free-stream turbulence on a jet in a cross flow p 203 N94-28036
Wind tunnel investigations of the appearance of shocks in the windward region of bodies with circular cross section at angle of attack p 25 N95-17866
SCHROEDINGER EQUATION
Nonlinear effects in optical fibers p 304 N92-28088
SCIENTIFIC SATELLITES
The development procedures and tools applied for the attitude control software of the Italian satellite SAX p 122 N94-29324
SCINTILLATION
Simulation of the impact of atmospheric turbulences on millimeter-wave communications systems p 179 N95-20939
SEA WATER
Comparative study of undersea fields produced by various dipoles p 167 N93-30740
SEARCH PROFILES
Non Boolean search methods in information retrieval p 309 N92-32187
Knowledge combination and data fusion with application to recognition systems p 287 N94-30513
SEARCHING
Search route planning p 38 N92-27900
Search strategies in natural language p 309 N92-32186
SEAS
Terrain and refractivity effects on non-optical paths p 178 N95-20931
SEASAT SATELLITES
Review of spaceborne and airborne SAR systems p 156 N93-13060
SEASONS
VLF/LF propagation measurements p 165 N93-30732

SEATS
AM-X high angle of attack flight test experience (single and two seat versions) p 53 N93-19910
SECONDARY FLOW
Time-marching methods for secondary flow analysis in curved ducts p 186 N92-27454
Experimental verification of a 3D turbulent flow calculation in an axial turbine cascade p 187 N92-27457
Viscous three-dimensional calculations of transonic fan performance p 188 N92-27467
Three dimensional solution of internal flows using a cell vertex finite volume method p 188 N92-27473
The influence of the inlet boundary layers on the secondary losses of turbine stages p 97 N94-34457
Elements of a modern turbomachinery design system p 223 N95-14129
Subgrid scale models in finite difference simulations of complex wall bounded flows p 212 N95-21063
Direct simulation of turbulent flow in a square duct: Reynolds-stress budgets p 214 N95-21073
Simulations of bypass transition for spatially evolving disturbances p 215 N95-21079
SEGMENTS
Target detection using co-occurrence matrix segmentation and its hardware implementation p 283 N92-32443
SEISMOLOGY
Sensing of seismo-electromagnetic earthquake precursor radiation signatures along Southern California fault zones: Evidence of long distance precursor ULF signals observed before a moderate Southern California earthquake episode p 232 N92-22810
SELECTION
MCMs for avionics: Technology selection and intermodule interconnection p 77 N95-20641
SELECTIVE DISSEMINATION OF INFORMATION
Security considerations within military information systems p 311 N93-10603
SELECTIVE FADING
Experimental study of the helicopter-mobile radioelectrical channel and possible extension to the satellite-mobile channel p 181 N95-20945
SELF TESTS
Time stress measurement devices for enhancement of onboard bit performance p 264 N93-19762
SEMICONDUCTOR LASERS
Semiconductor lasers and fiber lasers for fiber-optic telecommunications p 154 N92-28085
SENSITIVITY
Integrated Design Analysis and Optimisation of Aircraft Structures [AGARD-R-784] p 47 N92-23227
A system approach to aircraft optimization p 47 N92-23228
Sensitivity analysis of dynamic aeroelastic responses p 104 N92-23229
Studies of safety, infectivity, and immunogenicity of a new Temperature Sensitive (TS) 51-1 strain of S. typhi as a new live oral typhoid fever vaccine candidate p 239 N93-11306
SENSORIMOTOR PERFORMANCE
Human capabilities and limitations in situation awareness p 269 N93-28863
Deterioration of manual performance in cold and windy climates p 249 N94-28434
SENSORS
Optical fiber sensors p 304 N92-28090
Smart structures: The relevance of fibre optics p 304 N92-28091
Advances in Guidance and Control of Precision Guided Weapons [AGARD-CP-524] p 149 N93-22018
Integrated and Multi-Function Navigation [AGARD-CP-525] p 39 N93-22780
SENSORY PERCEPTION
Principles for integrating voice I/O in a complex interface p 265 N93-19774
On the feasibility of virtual environments in medicine p 279 N94-37264
The use of a tactile interface to convey position and motion perceptions p 281 N94-37281
SENSORY STIMULATION
Developing virtual cockpits p 264 N93-19764
SEPARATED FLOW
High angle of attack: Aerodynamics p 2 N92-23956
A computational study of tip leakage flow and losses in a linear turbine cascade p 186 N92-27453
Current status of computational methods for transonic unsteady aerodynamics and aeroelastic applications p 3 N92-27937
A review of scale effects on surfaces in unsteady motion p 7 N92-27962
Inlet distortion effects in aircraft propulsion system integration p 80 N92-28464
Vortex flow aerodynamics [AGARD-AR-299] p 7 N92-30947
Unsteady phenomena in shock wave/boundary layer interaction p 199 N94-15200
Hypersonic shock wave boundary layer interactions over simplified deflected control surface configurations p 200 N94-15203
Numerical solution of the Navier-Stokes equations for high-lift configurations on structured composite grids p 14 N94-18423
A viscous-inviscid solver for high-lift incompressible flows over multi-element airfoils at deep separation conditions p 15 N94-18425
Viscous-inviscid calculation of high-lift separated compressible flows over airfoils and wings p 17 N94-18440
Separated flow generated by a vectored jet in a crossflow p 201 N94-28007
A numerical investigation of a subsonic jet in a crossflow p 202 N94-28023
Theoretical and experimental investigation of a delta wing with turbulent leading-edge jets p 18 N94-28029
Control of leading-edge separation on a cambered delta wing p 109 N94-34616
Prediction of fluctuating pressure and power spectra in attached and separated compressible flow p 209 N95-19153
Simulation of separated flows p 213 N95-21068
Large-eddy simulation of separated flow in a ribbed duct p 214 N95-21070
SEPARATORS
Future directions in helicopter protection system configuration p 100 N95-19657
SEPTUM
Aortic valve disease p 247 N94-23322
SEQUENCING
The WG sequences: Quasi perfect binary sequences p 163 N93-23631
SERUMS
Correlation of serum alpha sub 1 antitrypsin with cigarette smoking and pulmonary function status in Greek pilots, for a ten year period p 242 N93-11318
Lipidemic profile of Hellenic Airforce officers p 245 N93-32250
Correlation of life-style and dietary concomitants of Greek pilots with serum analytes p 272 N93-32256
TSH determination in subjects with medium-low levels of serum thyroxine p 254 N95-19421
SERVICE LIFE
The role of fatigue analysis for design of military aircraft p 62 N94-34594
An overview of the F-16 service life approach p 63 N94-34599
Impact of Materials Defects on Engine Structures Integrity [AD-A267718] p 225 N94-37321
Alternate melting and refining routes p 143 N94-37323
SERVICES
Information retrieval services on wide area networks: A vision of the future p 317 N94-37346
SERVOMECHANISMS
High accuracy control algorithm application to a tracking turret p 287 N94-36626
SEXTANTS
Silicon accelerometer for AHRS and hybrid navigation systems p 220 N93-22786
SHAFTS (MACHINE ELEMENTS)
Engine life assessment test case TF41 LP compressor shaft torsional fatigue p 82 N93-14896
Experimental investigation and performance analysis of the turbojet engine T117 p 94 N94-34439
Wall interaction effects for a full-scale helicopter rotor in the NASA Ames 80- by 120-foot wind tunnel p 29 N95-19270
SHALLOW WATER
ELF propagation in deep and shallow sea water p 166 N93-30739
SHAPE MEMORY ALLOYS
On the stability of shape memory materials and their properties in static and dynamic applications p 133 N94-11329
Adaptive structure design employing shape memory actuators p 133 N94-11331
Structural analysis and optimization of adaptive structures by use of the finite element method p 227 N94-11339
SHAPES
Category A F-16 accidents in the Belgian Air Force p 32 N93-19675
Perception in flight: Shape and motion perception, space perception, spatial orientation, and visual vestibular interaction p 260 N94-23979
Optimum aerodynamic design via boundary control p 70 N95-16565
Residual-correction type and related computational methods for aerodynamic design. Part 1: Airfoil and wing design p 70 N95-16566
Optimal shape design for aerodynamics p 70 N95-16568
Airfoil optimization by the one-shot method p 70 N95-16569
The global aircraft shape p 70 N95-16571
Review of the EUROPT Project AERO-0026 p 71 N95-16573
SHARP LEADING EDGES
Wind tunnel test on a 65 deg delta wing with a sharp or rounded leading edge: The international vortex flow experiment p 25 N95-17872
Delta-wing model p 25 N95-17873
Experimental investigation of the vortex flow over a 76/60-deg double delta wing p 26 N95-17874
SHEAR FLOW
The eddy structures in bounded shear flows p 3 N92-27712
Direct simulation of a self-similar plane wake p 216 N95-21084
Investigation of shear layer transition using various turbulence models p 218 N95-21096
SHEAR LAYERS
The eddy structures in bounded shear flows p 3 N92-27712
Recent developments in the simulation of steady and transient transverse jet interactions for missile, rotorcraft, and propulsive applications p 203 N94-28030
Physical description of boundary-layer transition: Experimental evidence p 205 N94-33885
Asymptotic approaches to transition modelling p 205 N94-33887
Direct numerical simulation of turbulent flow in a sudden pipe expansion p 213 N95-21067
Spatial direct numerical simulation of boundary layer transition under strong adverse pressure gradient p 217 N95-21093
Investigation of shear layer transition using various turbulence models p 218 N95-21096
SHEAR STRESS
Role of interfaces on the cyclic fatigue behaviour of ceramic matrix composites p 145 N94-24234
Fibre-matrix interface properties in Ti-matrix composites: Chemical compatibility and micromechanical behaviour p 136 N94-36657
Direct simulation of turbulent flow in a square duct: Reynolds-stress budgets p 214 N95-21073
SHIPS
Naval target classification and designation with the CL-227 Sea Sentinel p 74 N92-32449
Landing of an unmanned helicopter on a moving platform. High accuracy navigation and tracking p 69 N94-36618
SHIVERING
Fuelling shivering in humans during cold water immersion p 249 N94-28426
SHOCK LAYERS
AGARD WG13 aerodynamics of high speed air intakes: Assessment of CFD results p 194 N93-13220
SHOCK TUBES
Comparison of computation and experiment for a high enthalpy, heated-driver, shock-tube environment p 11 N94-10447
SHOCK TUNNELS
The high enthalpy facilities HEG and TH 2 in Germany p 116 N94-10430
Experiments on interaction force of jets in hypervelocity cross-flow in a shock tunnel p 17 N94-28022
SHOCK WAVE INTERACTION
AGARD WG13 aerodynamics of high speed air intakes: Assessment of CFD results p 194 N93-13220
Experimental, analytical, and computational methods applied to hypersonic compression ramp flows p 10 N94-10444
Special course on Shock-Wave/Boundary-Layer Interactions in Supersonic and Hypersonic Flows [AGARD-R-792] p 198 N94-15196
Swept shock/boundary-layer interactions: Scaling laws, flowfield structure, and experimental methods p 198 N94-15197
Swept shock wave/laminar boundary layer interactions, experimental, and numerical results p 199 N94-15198
Numerical simulation of 3-D shock wave turbulent boundary layer interactions p 199 N94-15199
Unsteady phenomena in shock wave/boundary layer interaction p 199 N94-15200
Contribution of laser Doppler velocimetry to the physical description of shock wave/turbulent boundary layer interactions with incidence on turbulence modelling p 199 N94-15201
Turbulence modelling for shock wave/boundary layer interactions specific issues and examples of applications p 199 N94-15202
Hypersonic shock wave boundary layer interactions over simplified deflected control surface configurations p 200 N94-15203
Prediction of fluctuating pressure and power spectra in attached and separated compressible flow p 209 N95-19153
SHOCK WAVES
Problems in the validation of CFD codes through comparison with experiment p 198 N94-10441
Inclined air-jets used as vortex generators to suppress shock-induced separation p 18 N94-28040

Investigation of the flow over a series of 14 percent-thick supercritical aerofoils with significant rear camber p 21 N95-17849
Wind tunnel investigations of the appearance of shocks in the windward region of bodies with circular cross section at angle of attack p 25 N95-17866
Spectrogram diagnosis of aircraft disasters p 36 N95-19167

SHORT TAKEOFF AIRCRAFT
Propulsion integration results of the STOL and Maneuver Technology Demonstrator p 52 N93-13228
Design, development, and flight evaluation of the Boeing YC-14 USB powered lift aircraft p 57 N94-18444
A study of jet effect and ground effect interference on a STOL fighter p 60 N94-28034
Results from the STOL and Maneuver Technology Demonstration program p 63 N94-34611

SHROUDS
Inverse design of radial flow impellers with prescribed velocity at hub and shroud p 206 N94-34448

SHUTTLE IMAGING RADAR
Multi-frequency multi-polarization processing for spaceborne SAR p 156 N93-13057
Review of spaceborne and airborne SAR systems p 156 N93-13060

SICKNESSES
Chronic obstructive pulmonary disease p 247 N94-23324
Centrifuge tests of the medical condition of French fighter pilots p 254 N95-19424

SIGNAL ANALYSIS
Special SAR techniques and applications p 156 N93-13059
G-load effects and efficient acoustic parameters for robust speaker recognition p 266 N93-19775
Location of emissions by evasion of frequency and gusts by sequential analysis sensor in fast scanning p 162 N93-23625

SIGNAL ANALYZERS
Generic modular imaging IR signal processor p 282 N92-32440
The impact of advanced packaging technology on modular avionics architectures p 76 N95-20632
Propagation measurements on a troposcatter link in the Canadian High Arctic p 180 N95-20940

SIGNAL DETECTION
Systematic bearing errors of HF signals observed over a North-South propagation path p 160 N93-23614

SIGNAL DISTORTION
Night vision devices and characteristics p 276 N94-23982

SIGNAL ENCODING
Data compression techniques p 309 N92-32190
Problems of coding in multipath channels p 178 N95-20930

SIGNAL FADING
Sensing propagation events and fade statistics at C-band for two over-water, line-of-sight propagation paths over a one year period p 152 N92-22792
Problems of coding in multipath channels p 178 N95-20930

SIGNAL GENERATORS
Advanced technologies for lightweight EHF tactical communications satellites p 164 N93-29900

SIGNAL MEASUREMENT
The influence of propagation on high frequency radiogoniometry and single station location p 159 N93-23607
Measurements of the direction of arrival of an oblique chirp sounder signal p 160 N93-23616

SIGNAL PROCESSING
Digital channel sounder for remote sensing of scatterers in mobile radio environment p 153 N92-22820
Smart structures: The relevance of fibre optics p 304 N92-28091
A radar signal processing ASIC and a VME interface circuit p 73 N92-28380
Generic modular imaging IR signal processor p 282 N92-32440
Fundamentals and Special Problems of Synthetic Aperture Radar (SAR) [AGARD-LS-182] p 154 N93-13049
Special SAR techniques and applications p 156 N93-13059
A novel-high-performance system for recording and analysing instantaneous total pressure distortion in air intakes p 219 N93-13215
Perception-based and machine-oriented signal processing within speech understanding systems p 288 N93-13239
RAMSES: Multi-spectral experimental radar station installed on board the Transall p 156 N93-19925
Advances in Guidance and Control of Precision Guided Weapons [AGARD-CP-524] p 149 N93-22018
Radiolocation Techniques [AGARD-CP-528] p 157 N93-23598
Detection of active emitters using triangulation and trilateration techniques: Theory and practice p 160 N93-23612
Test results of the advanced translator processing system p 161 N93-23620
Advanced technologies for lightweight EHF tactical communications satellites p 164 N93-29900
Synchronization techniques for medium data rate EHF MILSATCOM systems p 164 N93-29901
Application of non-standard signal processing to ELF noise characterization for the TSS1-OESEE programme p 167 N93-30743
Application of the Fourier transform to short antennas p 168 N93-30750
Chaotic time series analysis p 296 N94-11490
Radar tracking in multipath: Techniques for improved performance p 174 N94-36631
Electro-optics: Propagation from IR to UV and sensor considerations. Part A: Propagation theory p 175 N95-14833
The impact of advanced packaging technology on modular avionics architectures p 76 N95-20632
Packaging the MAMA module p 184 N95-20639
Propagation measurements on a troposcatter link in the Canadian High Arctic p 180 N95-20940

SIGNAL TO NOISE RATIOS
Angle of arrival characteristics of ionospheric skywave signals p 161 N93-23618

SIGNAL TRANSMISSION
Electromagnetic radiating source elimination (ERASE) program p 157 N93-22019
Irregular media effects on radiowave signals used in navigation and positioning systems p 159 N93-23606
Procedures for determining the location of an HF radio transmitter p 159 N93-23610
High resolution sampled aperture array direction finding at HF p 160 N93-23611
Systematic bearing errors of HF signals observed over a North-South propagation path p 160 N93-23614
Large bearing errors observed at a high latitude DF site p 160 N93-23615
Adaptive algorithms for use with digital filters in vibration control p 283 N94-11338

SIGNATURES
Sensing of ELF signatures arising from space vehicle disturbances of the ionosphere p 232 N92-22809
Terminology and assessment methods of solid propellant rocket exhaust signatures [AGARD-AR-287] p 124 N93-22998

SIGNS AND SYMPTOMS
Early markers of HIV infection and subclinical disease progression p 237 N93-11296
The screening of inhalant allergic diseases in the selection of candidates for aircraft piloting p 241 N93-11312
Phadiatop: A screening test for inhalant allergy p 241 N93-11313
Allergic and nonallergic rhinitis in Greek pilots p 242 N93-11317
Screening for asymptomatic coronary heart disease p 246 N94-23315
The Environmental Symptoms Questionnaire: Assessing reactions to environmental extremes in military operations p 278 N94-28447
Profile analysis of after-effects experienced during exposure to several virtual reality environments p 252 N94-37263
Some side-effects of immersion virtual reality p 252 N94-37277

SILICON
The silicon compiler for designing military VLSI ASIC's p 73 N92-28378
Applications of silicon hybrid multi-chip modules to avionics p 73 N92-28379
Silicon accelerometer for AHRS and hybrid navigation systems p 220 N93-22786
The design and manufacturing development of an active silicon substrate MCM p 185 N95-20645

SILICON CARBIDES
An overview on the main available ceramic composites and their processing routes p 145 N94-24229
Ceramic matrix composites: Challenges and opportunities p 145 N94-24230
Properties of TMC processed by fibre coating and hiping p 135 N94-36656
Fibre-matrix interface properties in Ti-matrix composites: Chemical compatibility and micromechanical behaviour p 136 N94-36657
Prediction of thermal and mechanical stress-strain responses of TMC's subjected to complex TMF histories p 137 N94-36666
Development of mechanical testing methods for titanium matrix composites (traction-ogligo-cyclic fatigue) p 137 N94-36669

SILICON NITRIDES
Resistance of silicon nitride turbine components to erosion and hot corrosion/oxidation attack p 104 N95-19683

SIMULATION
Optimal guidance anticipating missile performance p 118 N92-27902
Full mission simulation: A view into the future p 112 N92-28537
ASTOVL model engine simulators for wind tunnel research p 115 N93-13213
The influence of individual sensivity to stress on the behavior (attitude and performance) of avoidance of an accident p 260 N93-19705
Opportunities and challenges in avionics integration, INS/GPS: A case study p 39 N93-22782
Simulation of multidisciplinary problems for the thermostress state of cooled high temperature turbines p 99 N95-19021
Simulation of steady and unsteady viscous flows in turbomachinery p 99 N95-19023
Computational simulations for some tests in transonic wind tunnels p 210 N95-19264
Determination of solid/porous wall boundary conditions from wind tunnel data for computational fluid dynamics codes p 211 N95-19266
Modelling and simulation of HF/VHF MMPPs p 177 N95-20925
Simulation of the impact of atmospheric turbulences on millimeter-wave communications systems p 179 N95-20939
Large eddy simulation of turbulent flow over a cavity p 213 N95-21069
Large-eddy simulation of separated flow in a ribbed duct p 214 N95-21070
Analysis of subgrid models using direct and large-eddy simulations of isotropic turbulence p 214 N95-21071
A cheap DNS tool for turbulence models testing p 214 N95-21072
Direct simulation of turbulent flow in a square duct: Reynolds-stress budgets p 214 N95-21073
Numerical simulation of supersonic boundary layer transition p 214 N95-21074
Large eddy simulation of channel flow using a vorticity transport subgrid model p 215 N95-21076
Direct simulation of a self-similar plane wake p 216 N95-21084
Navier-Stokes simulations of the effects of suction holes on a flat plate boundary layer p 218 N95-21094

SIMULATORS
Full mission simulation: A view into the future p 112 N92-28537
Use of a virtual cockpit for the development of a future transport aircraft p 114 N92-28547
The role of systems simulation for the development and qualification of ATTAS p 114 N92-28548
ASTOVL model engine simulators for wind tunnel research p 115 N93-13213
Simulation of fully automated air traffic control concepts p 43 N94-29569
The Common Modular Simulator (CMS): An architecture test bed for future advanced ATM systems p 45 N94-29582
Immersive virtual environments as trainer: System design from a cognitive stance p 280 N94-37267
A wideband propagation simulator for high speed mobile radio communications p 179 N95-20934

SINGLE CRYSTALS
In-service considerations affecting component life p 82 N93-14898
Recent developments in piezoelectric and electrostrictive sensors and actuators for smart structures p 220 N94-11332
Hot section materials for small turbines p 97 N94-34465

SINGLE SIDEBAND TRANSMISSION
A current assessment of single site locating technology p 159 N93-23608

SINGULARITY (MATHEMATICS)
Determination of solid/porous wall boundary conditions from wind tunnel data for computational fluid dynamics codes p 211 N95-19266

SIZE DISTRIBUTION
Clear-air wind profilers as cloud monitors and hydrometeor identifiers p 233 N92-22819

SKIN (STRUCTURAL MEMBER)
Acoustic fatigue testing on different materials and skin-stringer elements p 302 N95-19156
Thermo-acoustic fatigue design for hypersonic vehicle skin panels p 229 N95-19161

SKIN FRICTION
Special Course on Skin Friction Drag Reduction [AGARD-R-786] p 2 N92-27706
Basic concepts on boundary layers p 2 N92-27707
Aircraft drag reduction p 2 N92-27709
Boundary layer transition: Prediction, application to drag reduction p 2 N92-27711
Turbulent skin-friction drag reduction by active and passive means, part 1 p 3 N92-27714
Experimental and computational comparisons of Mach 6 high Reynolds number heat transfer and skin friction p 10 N94-10443
Real gas and surface transpiration effects upon swept leading edge high speed flow including transition p 11 N94-10452

In-flight pressure distributions and skin-friction measurements on a subsonic transport high-lift wing section p 16 N94-18435

SKIN TEMPERATURE (BIOLOGY)

A comparison of four methods of rewarming individuals cooled by immersion in cold water p 250 N94-28442

Thermal strain generated by an enhanced anti-G protection system in a hot climate p 278 N94-28445

SKY WAVES

The effects of multipath scatter from wind driven gravity waves on lines of bearing serving as direction finders p 158 N93-23601

Angle of arrival characteristics of ionospheric skywave signals p 161 N93-23618

SLEEP

C-141 aircrew sleep and fatigue during the Persian Gulf conflict p 274 N93-32265

The effects of cockpit heat on aviator sleep parameters p 274 N93-32266

Human factors and the safety of flights: The importance of the management of sleep p 274 N93-32267

SLEEP DEPRIVATION

Some solutions to reduce the human effects of extended operation times p 251 N94-36339

SLENDER BODIES

Stability of hypersonic flow over a blunt body p 11 N94-10450

A selection of experimental test cases for the validation of CFD codes, volume 1 [AGARD-AR-303-VOL-1] p 208 N95-14201

Force and pressure data of an ogive-nosed slender body at high angles of attack and different Reynolds numbers p 25 N95-17868

SLENDER CONES

Pneumatic management of blunted-forebody flow asymmetry for high-angle-of-attack directional control p 109 N94-28028

SLOTS

RB 199 high pressure compressor stage 3 spin pit tests p 81 N93-14893

CF6-6 high pressure compressor stage 5 locking slot crack propagation spin pit test p 81 N93-14894

High-Lift System Aerodynamics [AGARD-CP-515] p 1 N94-18415

Interference determination for wind tunnels with slotted walls p 117 N95-19269

SLOTTED WIND TUNNELS

Interference determination for wind tunnels with slotted walls p 117 N95-19269

SMART STRUCTURES

Smart structures: The relevance of fibre optics p 304 N92-28091

Smart Structures for Aircraft and Spacecraft [AGARD-CP-531] p 132 N94-11317

Smart structures: A technology for next generation aircraft p 55 N94-11318

Dynamic tests on the NASA Langley CSI evolutionary model p 121 N94-11320

Smart materials for helicopter rotor active control p 55 N94-11321

Intelligent structures: A technology overview and assessment p 132 N94-11322

The Satellite Attack Warning and Assessment Flight Experiment (SAWAFE) p 121 N94-11323

Optical fibre techniques for structural monitoring in composites p 132 N94-11324

Smart processing of composite materials for enhanced performance and properties p 133 N94-11325

Smart structures at Aastra Corporation p 133 N94-11326

Fiber optic sensing for composite smart structures p 133 N94-11327

On the stability of shape memory materials and their properties in static and dynamic applications p 133 N94-11329

Smart polymeric system for electromechanical transduction p 144 N94-11330

Recent developments in piezoelectric and electrostrictive sensors and actuators for smart structures p 220 N94-11332

In-flight aircraft structure health monitoring based on smart structures technology p 35 N94-11333

Structural health monitoring using embedded fibre optic sensors p 35 N94-11334

Fault location in structures using neural networks p 224 N94-11335

Factors affecting the embedding of optical fibre sensors in advanced composite structures p 134 N94-11336

Fiber-optic sensor systems for measuring strain and the detection of acoustic emissions in smart structures p 134 N94-11337

Structural analysis and optimization of adaptive structures by use of the finite element method p 227 N94-11339

Fiber-optic interferometric strain gauge for smart structures applications: First flight tests p 220 N94-11340

On possible applications of smart structures to control of space systems p 121 N94-11342

Aircraft smart structures research in the USAF Wright Laboratory p 134 N94-11343

Advances in adaptive structures at Jet Propulsion Laboratory p 134 N94-11344

Multidimensional intelligent control for superlight air vehicles p 56 N94-11347

SMOKE

Development of a minimum smoke propellant based on glycidyl azide polymer and ammonium nitrate p 147 N92-33243

Correlation of serum alpha sub 1 antitrypsin with cigarette smoking and pulmonary function status in Greek pilots, for a ten year period p 242 N93-11318

Semi-propellants for ducted rockets p 147 N93-17612

Survey of smoking habits in the Spanish Air Force p 273 N93-32262

Secondary smoke p 125 N94-15220

Chronic obstructive pulmonary disease p 247 N94-23324

Flowfield prediction of NO(x) and smoke production in aircraft engines p 140 N94-29252

The influence of air distribution on homogeneity and pollutant formation in the primary zone of a tubular combustor p 141 N94-29274

NATO SOCMET trials p 171 N94-30503

The effects of man-made smokes and battlefield-induced smokes on the propagation of electromagnetic radiation p 172 N94-30505

SMOKE ABATEMENT

Development of a minimum smoke propellant based on glycidyl azide polymer and ammonium nitrate p 147 N92-33243

SNELLS LAW

Refractive effects from VHF to EHF. Part A: Propagation Mechanisms p 175 N95-14831

SOCIAL FACTORS

Neuropsychiatric morbidity in early HIV disease: Implications for military occupational function p 238 N93-11299

Communicable diseases: A major burden of morbidity and mortality p 238 N93-11300

SODIUM CHLORIDES

Gas turbine compressor corrosion and erosion in Western Europe p 103 N95-19678

SOFTWARE ENGINEERING

Automated software generation approaches for the design and development of guidance and control systems software [AGARD-AR-292] p 282 N92-25980

From an automated flight-test management system to a flight-test engineer's workstation p 282 N92-27907

Flight above a virtual world p 264 N93-19766

Mission requirements and applications of integrated and multi-function navigation systems p 39 N93-22781

New computing systems, future computing environment, and their implications on structural analysis and design p 58 N94-24314

Aerospace Software Engineering for Advanced Systems Architectures [AD-A277101] p 283 N94-29315

Object versus functional oriented design p 284 N94-29321

Experiences with the HOOD design method on avionics software development p 284 N94-29325

Software engineering methods in the Hermes on-board software p 284 N94-29326

Rome Laboratory software engineering technology program p 285 N94-29330

A common Ada run-time system for avionics software p 75 N94-29331

Software testing practices and their evolution for the 1990's p 285 N94-29335

Validation and test of complex weapon systems p 75 N94-29336

Testing Operational Flight Programs (OFPs) p 285 N94-29337

Integrated formal verification and validation of safety critical software p 285 N94-29338

A disciplined approach to software test and evaluation p 286 N94-29339

The UNICON approach to through-life support and evolution of software-intensive systems p 286 N94-29340

Application of information management methodologies for project quality improvement in a changing environment p 314 N94-29342

The discipline of defining the software product p 286 N94-29343

SDE's for the year 2000 and beyond: An EF perspective p 286 N94-29344

A common approach for an aerospace software environment p 287 N94-29346

DSSA-ADAGE: An environment for architecture-based avionics development p 75 N94-29348

Entreprise 2: A PCTE integrated project support environment p 287 N94-29349

Machine intelligence: The key to guidance and control in robotics p 290 N95-14944

SOFTWARE RELIABILITY

Object versus functional oriented design p 284 N94-29321

The development procedures and tools applied for the attitude control software of the Italian satellite SAX p 122 N94-29324

Potential software failures methodology analysis p 285 N94-29329

SOFTWARE REUSE

A common Ada run-time system for avionics software p 75 N94-29331

DSSA-ADAGE: An environment for architecture-based avionics development p 75 N94-29348

SOFTWARE TOOLS

High angle of attack: Aerodynamics p 2 N92-23956

Automated software generation approaches for the design and development of guidance and control systems software [AGARD-AR-292] p 282 N92-25980

Hypertext and hypermedia systems in information retrieval p 309 N92-32188

SAR simulation p 156 N93-13056

The development procedures and tools applied for the attitude control software of the Italian satellite SAX p 122 N94-29324

Rome Laboratory software engineering technology program p 285 N94-29330

Design of a thinwire real-time multiprocessor operating system p 288 N94-29333

The UNICON approach to through-life support and evolution of software-intensive systems p 286 N94-29340

SDE's for the year 2000 and beyond: An EF perspective p 286 N94-29344

DSSA-ADAGE: An environment for architecture-based avionics development p 75 N94-29348

Entreprise 2: A PCTE integrated project support environment p 287 N94-29349

Propagation Modelling and Decision Aids for Communications, Radar and Navigation Systems [AGARD-LS-196] p 174 N95-14825

Ground wave and diffraction, B p 175 N95-14829

Tools for applied engineering optimization p 70 N95-16570

Improving Multichip Module (MCM) design and reliability using the Intelligent MCM Analyzer p 225 N95-20637

SOLAR CORPUSCULAR RADIATION

ELF/VLF radio noise measurements at high latitudes during solar particle events p 167 N93-30744

SOLAR FLARES

ELF/VLF radio noise measurements at high latitudes during solar particle events p 167 N93-30744

SOLAR STORMS

ELF/VLF radio noise measurements at high latitudes during solar particle events p 167 N93-30744

SOLID PROPELLANT COMBUSTION

Development testing of throttleable ducted rockets p 123 N93-17610

SOLID PROPELLANT ROCKET ENGINES

The design features of rocket motors relating to insensitive munition response to thermo-mechanical stimuli p 147 N92-33244

Semi-propellants for ducted rockets p 147 N93-17612

Terminology and assessment methods of solid propellant rocket exhaust signatures [AGARD-AR-287] p 124 N93-22998

Research and development of ramjets/ramrockets. Part 1: Integral solid propellant ramrockets p 92 N94-29294

SOLID PROPELLANTS

Terminology and assessment methods of solid propellant rocket exhaust signatures [AGARD-AR-287] p 124 N93-22998

SOLID ROCKET PROPELLANTS

Development testing of throttleable ducted rockets p 123 N93-17610

Introduction and overview of research and development of solid propellant ramrockets, liquid fuel ramjets and experimental hydrogen ram combustors p 92 N94-29292

Research and development of ramjets/ramrockets. Part 1: Integral solid propellant ramrockets p 92 N94-29294

SOLID SOLUTIONS

Multilayer anti-erosion coatings p 103 N95-19679

SOLID-SOLID INTERFACES

Interface evaluation in ceramic composites p 145 N94-24231

SOLITARY WAVES

Nonlinear effects in optical fibers p 304 N92-28088

Active fibres and optical amplifiers p 304 N92-28089

SONIC BOOMS

Boom and the problems related to the supersonic flights of military aircraft p 298 N93-10677

SONIC NOZZLES
Control jets in interaction with hypersonic rarefied flow p 122 N94-28020
SOOT
Numerical prediction of turbulent sooting diffusion flames p 140 N94-29253
SOUND GENERATORS
Combat aircraft jet engine noise studies p 298 N93-10679
SOUND LOCALIZATION
3D sound experimental approach: Methodology and preliminary results p 301 N94-37280
SOUND PRESSURE
Prediction of jet mixing noise for high subsonic flight speeds p 299 N93-10685
Weapons bay acoustic environment p 301 N95-19146
Modelling structurally damaging twin-jet screech p 72 N95-19154
SOUND PROPAGATION
Noise studies for environmental impact assessment of an outdoor engine test facility p 297 N93-10672
SOUND TRANSMISSION
Identification and analysis of air- and structure-borne noise and vibration paths p 303 N95-19166
SOUNDING
The new portable digisonde for vertical and oblique sounding p 230 N92-22801
Adaptive remote sensing of the ionosphere to minimise spectral intrusion p 231 N92-22803
SOVIET SATELLITES
Review of spaceborne and airborne SAR systems p 156 N93-13060
SPACE ADAPTATION SYNDROME
Profile analysis of after-effects experienced during exposure to several virtual reality environments p 252 N94-37263
SPACE BASED RADAR
Ground independent landing system p 42 N94-29564
SPACE ERECTABLE STRUCTURES
Advances in adaptive structures at Jet Propulsion Laboratory p 134 N94-11344
SPACE FLIGHT STRESS
Space flight and immune system p 235 N93-11284
SPACE PERCEPTION
Symbology for head up and head down applications for highly agile fighter aircraft: To improve spatial awareness, trajectory control, and unusual attitude recovery, part 1 p 268 N93-28857
Perception in flight: Shape and motion perception, space perception, spatial orientation, and visual vestibular interaction p 260 N94-23979
SPACE PLATFORMS
The real aperture antenna of SAR, a key element for performance p 155 N93-13053
SPACE STATION FREEDOM
Space Station Freedom microgravity environment requirements and assessment methods p 148 N92-28450
SPACE STATIONS
Control and operation of space manipulator systems p 291 N95-14946
SPACE TOOLS
Control of remotely operated manipulation systems p 291 N95-14945
SPACE-TIME FUNCTIONS
CFD methodology and validation for turbomachinery flows p 207 N95-14131
SPACEBORNE EXPERIMENTS
QuickStar: System design, capabilities, and tactical applications of a small, smart space system p 120 N93-29905
SPACECRAFT CONSTRUCTION MATERIALS
Possibilities and pitfalls in aerospace applications of titanium matrix composites p 135 N94-36650
Applications of Titanium Matrix Composite to large airframe structure p 135 N94-36651
Composites based on titanium with external and internal reinforcement p 135 N94-36654
Methodologies for thermal and mechanical testing of TMC materials p 136 N94-36659
SPACECRAFT CONTROL
Attitude- and Orbit Control Subsystem concepts for TACSATS p 120 N93-29906
Stability analysis and aerospace vehicle dynamics p 107 N94-11491
First experimental assessment of RCS plume-flow field interaction on Hermes leading edge thruster configuration p 125 N94-28032
Software engineering methods in the Hermes on-board software p 284 N94-29326
SPACECRAFT DESIGN
Planetary entry vehicle design for planned and potential ESA missions to Titan, Mars, and Earth return (FGE TN 51/92) p 121 N94-10428
A CFD validation roadmap for hypersonic flows p 198 N94-10439
SPACECRAFT LAUNCHING
TACSAT ground control and data collection p 163 N93-29895
Launch vehicles for lightweight TACSAT deployment p 118 N93-29903
Spacecraft and launch systems for TACSAT applications p 120 N93-29904
QuickStar: System design, capabilities, and tactical applications of a small, smart space system p 120 N93-29905
Electric propulsion for lightsats: A review of applications and advantages p 124 N93-29907
SPACECRAFT PROPULSION
Some problems of scramjet propulsion for aerospace planes. Part 1: Scramjet: Aims and features p 92 N94-29295
Research and development of ramjets/ramrockets. Part 2: Integral liquid fuel ramjets p 93 N94-29297
Research and development of ramjets/ramrockets. Part 3: The study of gaseous hydrogen ram combustors p 93 N94-29298
Some problems of scramjet propulsion for aerospace planes. Part 2: Scramjet: Development and test problems p 93 N94-29301
Possibilities and pitfalls in aerospace applications of titanium matrix composites p 135 N94-36650
SPACECRAFT REENTRY
New hypersonic test methods developed at ONERA: The R5 and F4 wind tunnels p 55 N94-10429
Local measurement of temperatures and concentrations: A review for hypersonic flows p 9 N94-10434
SPACECRAFT RELIABILITY
Possibilities and pitfalls in aerospace applications of titanium matrix composites p 135 N94-36650
SPACECRAFT STABILITY
Stability analysis and aerospace vehicle dynamics p 107 N94-11491
SPACECRAFT STRUCTURES
Smart Structures for Aircraft and Spacecraft [AGARD-CP-531] p 132 N94-11317
Aeroacoustic qualification of HERMES shingles p 301 N95-19145
Acoustics of space structures p 302 N95-19152
SPACECRAFT TRAJECTORIES
Software engineering methods in the Hermes on-board software p 284 N94-29326
SPACERS
In-service considerations affecting component life p 82 N93-14898
SPACING
Fundamental studies of impingement cooling thermal boundary conditions p 196 N93-29940
SPANWISE BLOWING
Effects, limits, and limitations of spanwise blowing p 18 N94-28027
SPATIAL DISTRIBUTION
Simulations of bypass transition for spatially evolving disturbances p 215 N95-21079
SPATIAL RESOLUTION
Motion errors and compensation possibilities p 155 N93-13052
SPECIFIC HEAT
Thermodynamic model of air in chemical equilibrium p 307 N94-10448
Endothermic fuels for hypersonic aviation p 148 N94-29285
SPECIFICATIONS
Ramjet propulsion for missiles in the Mach 3 to 4.5 range p 123 N93-17608
SPECIMEN GEOMETRY
A new test method to determine the compressive strength of fiber-reinforced composites p 126 N92-33035
SPECTRA
The crack severity index of monitored load spectra p 228 N94-34585
SPECTRAL EMISSION
Plume radiation p 169 N94-15223
SPECTRAL LINE WIDTH
Semiconductor lasers and fiber lasers for fiber-optic telecommunications p 154 N92-28085
SPECTRAL METHODS
Study of flow structure in rotating cavities: Numerical predictions of laminar and turbulent, steady, and unsteady flows p 196 N93-29948
Treatment of non-linear systems by timeplane-transformed CT methods: The spectral gust method p 111 N95-18600
Direct simulation of tridimensional wake of NACA 0012 profile p 216 N95-21086
Direct numerical simulation of transition to turbulence from a high-symmetry initial condition p 217 N95-21089
SPECTRUM ANALYSIS
ELF/VLF spectrum measurements p 168 N93-30745
The crack severity index of monitored load spectra p 228 N94-34585
A combined approach to buffet response analyses and fatigue life prediction p 228 N94-34587
Spectrogram diagnosis of aircraft disasters p 36 N95-19167
SPEECH BASEBAND COMPRESSION
Advances in speech processing p 156 N93-19771
SPEECH RECOGNITION
Machine Perception [AGARD-LS-185] p 288 N93-13238
Perception-based and machine-oriented signal processing within speech understanding systems p 288 N93-13239
Advances in speech processing p 156 N93-19771
The use of voice processing for some aspects of the pilot-vehicle-interface in an aircraft p 265 N93-19772
G-load effects and efficient acoustic parameters for robust speaker recognition p 266 N93-19775
Fly-by voice, a technology demonstration p 105 N93-19918
SPHERICAL COORDINATES
Contact level fusion of radar and IRST contacts on almost electromagnetically silent platform p 174 N94-36634
Single-pass method for the solution of inverse potential and rotational problems. Part 2: Fully 3-D potential theory and applications p 20 N95-16564
SPHERICAL HARMONICS
Evaluation of multi-dimensional flux models for radiative transfer in cylindrical combustion chambers p 197 N93-29955
SPIN TESTS
LARZAC HP turbine disk crack initiation and propagation spin pit test p 81 N93-14892
RB 199 high pressure compressor stage 3 spin pit tests p 81 N93-14893
CF6-6 high pressure compressor stage 5 locking slot crack propagation spin pit test p 81 N93-14894
RB211-524B disc and drive cones hot cyclic spinning test p 82 N93-14895
SPINAL CORD
The musculoskeletal and vestibular effects of long term repeated exposure to sustained high-G [AGARD-AR-317] p 281 N95-14263
Spinal nerve syndromes: The need to confirm the diagnosis with neurophysiological examinations p 257 N95-19436
SPINE
Spine injuries: Up to date evaluation in aircraft ejections p 256 N95-19434
SPOILERS
High Reynolds number configuration development of a high-lift airfoil p 15 N94-18424
SPORADIC E LAYER
Modelling and simulation of HF/VHF MMPPs p 177 N95-20925
The relative importance of meteor burst and other distance polar cap propagation modes in the low VHF band p 177 N95-20928
SPRAY CHARACTERISTICS
Experimental studies on effervescent atomizers with wide spray angles p 204 N94-29280
SPRAYED COATINGS
High velocity oxygen fuel spraying of erosion and wear resistant coatings on jet engine parts p 103 N95-19680
SPRAYERS
Ducted kerosene spray flames p 142 N94-29276
Spray combustion experiments and numerical predictions p 142 N94-29277
Experimental studies on effervescent atomizers with wide spray angles p 204 N94-29280
SPRAYING
Modeling of the phase liquidates in combustion chambers p 142 N94-29278
Experimental studies on effervescent atomizers with wide spray angles p 204 N94-29280
Investigation of the two-phase flow in a research combustor under reacting and non-reacting conditions p 204 N94-29282
High velocity oxygen fuel spraying of erosion and wear resistant coatings on jet engine parts p 103 N95-19680
Thermal testing of high performance thermal barrier coatings for turbine blades p 103 N95-19681
SPREAD F
The longitudinal occurrence of equatorial F layer irregularities p 158 N93-23605
SPREAD SPECTRUM TRANSMISSION
A wideband propagation simulator for high speed mobile radio communications p 179 N95-20934
SPUTTERING
Processing of titanium matrix composites p 135 N94-36653
STABILITY
Unsteady transonic aerodynamics of pointed bodies of revolution in supersonic freestream p 5 N92-27946
Multiple-inlet configuration for missiles with skid-to-turn control mode p 105 N93-17617
Unsteady aspects of hot gas reingestion and statistical analysis p 89 N94-28019
Numerical simulation of supersonic boundary layer transition p 214 N95-21074
STABILITY DERIVATIVES
A review of scale effects on surfaces in unsteady motion p 7 N92-27962

STABILITY TESTS
Stability analysis and aerospace vehicle dynamics p 107 N94-11491
Stability model of the atmosphere p 233 N94-11500
STABILIZATION
Initial trials results for image stabilisation using a rugged low noise gyroscope p 219 N93-22021
STABILIZED PLATFORMS
Inertial pseudo star reference unit p 306 N94-36625
STABILIZERS (FLUID DYNAMICS)
Twin engine afterbody model p 27 N95-17880
STANDARDIZATION
An overview of concerns relating to fluid effects on composites p 127 N92-33045
Standards for data and document interchange p 315 N94-37337
The effect of special boards of flight surgeons on the evolution of US Naval flight standards p 253 N95-19417
STANDARDS
Technology and standards for a common air mission planner p 293 N92-27899
Standards for data and document interchange p 315 N94-37337
Aircraft and sub-system certification by piloted simulation [AGARD-AR-278] p 117 N95-17388
STARCHES
Paint removal using wheat starch blast media p 151 N94-10627
STATE ESTIMATION
On-line aircraft state and parameter estimation p 55 N93-19929
STATE VECTORS
Nonlinear and dynamic analysis of flight p 107 N94-11496
Contact level fusion of radar and IRST contacts on almost electromagnetically silent platform p 174 N94-36634
STATIC AERODYNAMIC CHARACTERISTICS
Engineering Codes for aeroprediction: State-of-the-art and new methods p 19 N95-14447
STATIC LOADS
Synergism between layer cracking and delaminations in MD-laminates of CFRE p 130 N93-21520
STATIC MODELS
Verification of multidisciplinary models for turbomachines p 99 N95-19025
STATIC PRESSURE
Calculation of low speed wind tunnel wall interference from static pressure pipe measurements p 211 N95-19273
STATIC STABILITY
X-29: Longitudinal instability at high angle-of-attack p 108 N94-11504
STATIC TESTS
Prediction of delamination in tapered unidirectional glass fibre epoxy with dropped plies under static tension and compression p 131 N93-21530
Residual strength and life prediction techniques for Ti MMC p 136 N94-36662
STATIONKEEPING
System of navigation by satellites with European coverage p 120 N93-29897
STATISTICAL ANALYSIS
Sensing propagation events and fade statistics at C-band for two over-water, line-of-sight propagation paths over a one year period p 152 N92-22792
Analysis of disease progression from clinical observations of US Air Force active duty members infected with the Human Immunodeficiency Virus: Distribution of AIDS survival time from interval censored observations p 237 N93-11297
Digital processing for positioning with one satellite p 163 N93-23629
Low cycle fatigue behaviour of titanium disc alloys p 88 N93-31745
Unsteady aspects of hot gas reingestion and statistical analysis p 89 N94-28019
Statistical characterization of rare events p 291 N94-37327
Predicting defect behaviour p 225 N94-37331
Electro-optics: Propagation from IR to UV and sensor considerations. Part A: Propagation theory p 175 N95-14833
Advanced statistical energy analysis p 229 N95-19165
Large-eddy simulation of rotating channel flows using a localized dynamic model p 213 N95-21064
STATISTICAL CORRELATION
Chaos, entropy, and reversibility: A simple example p 296 N94-11495
STATISTICAL DISTRIBUTIONS
Noise emission of low flying military airplanes p 297 N93-10675
Statistical characterization of rare events p 291 N94-37327
STATORS
Simple and powerful turbojet with four stage axial compressor and axial flow turbine for the propulsion of subsonic missiles p 83 N93-17620
Impact loading of compressor stator vanes by hailstone ingestion p 102 N95-19670
STEADY FLOW
Steady and unsteady 3D flow computation through a transonic turbine stage p 78 N92-27469
Unstructured grid methods for compressible flows p 192 N92-27676
Study of flow structure in rotating cavities: Numerical predictions of laminar and turbulent, steady, and unsteady flows p 196 N93-29948
Simulation of steady and unsteady viscous flows in turbomachinery p 99 N95-19023
STEADY STATE
Engine performance and health monitoring models using steady state and transient prediction methods p 80 N92-28467
The influence of intake swirl distortion on the steady-state performance of a low bypass, twin-spool engine p 194 N93-13211
Analysis of rig test data for an axial/centrifugal compressor in the 12 kg/sec p 94 N94-34437
STEAM
Non-polluting gas turbine as a result of self-heating working fluid in a closed circuit p 94 N94-34436
STEELS
Alternate melting and refining routes p 143 N94-37323
STEERING
Immersive virtual environments as trainer: System design from a cognitive stance p 280 N94-37267
STEREOPHONICS
3D sound experimental approach: Methodology and preliminary results p 301 N94-37280
STEREOSCOPIC VISION
3-D computer vision for navigation/control of mobile robots p 289 N93-13243
Low cost software-based rendering and stereoscopic interfaces for teleoperation and virtual reality p 287 N94-37279
STIFFNESS
Investigation of the bond strength of a discrete skin-stiffener interface p 131 N93-21527
Ceramic matrix composite parts design p 146 N94-24237
Ultrasonic nondestructive evaluation as a tool for the development of aerospace structural ceramic composites p 146 N94-24240
STOCHASTIC PROCESSES
Comparison of stochastic and deterministic nonlinear gust analysis methods to meet continuous turbulence criteria p 71 N95-18602
Analysis of subgrid models using direct and large-eddy simulations of isotropic turbulence p 214 N95-21071
STOKES LAW (FLUID MECHANICS)
Turbine internal fluid flow analysis and Stokes' hypothesis p 186 N92-27455
STORMS
Winter storms research in Canada p 234 N95-14895
STOVL AIRCRAFT
Experiments into the scaling parameters required for exhaust gas ingestion testing of vertical landing aircraft p 60 N94-28017
Transitional flight characteristics of a geometrically simplified STOVL model p 61 N94-28035
STRAIN DISTRIBUTION
Ceramic matrix composites: Challenges and opportunities p 145 N94-24230
Notch fatigue assessment of aircraft components using a fracture mechanics based parameter p 228 N94-34588
STRAIN ENERGY RELEASE RATE
Delamination and fatigue of composite materials: A review p 129 N93-21509
Prediction of delamination in tapered unidirectional glass fibre epoxy with dropped plies under static tension and compression p 131 N93-21530
STRAIN GAGES
Fiber-optic interferometric strain gauge for smart structures applications: First flight tests p 220 N94-11340
STRAIN MEASUREMENT
Smart structures at Aastra Corporation p 133 N94-11326
Fiber optic sensing for composite smart structures p 133 N94-11327
Strain measurement of carbon/epoxy composite with fibre optics white light quasi distributed polarimetric sensor p 133 N94-11328
Structural health monitoring using embedded fibre optic sensors p 35 N94-11334
Factors affecting the embedding of optical fibre sensors in advanced composite structures p 134 N94-11336
Fiber-optic sensor systems for measuring strain and the detection of acoustic emissions in smart structures p 134 N94-11337
Fiber-optic interferometric strain gauge for smart structures applications: First flight tests p 220 N94-11340
Notch fatigue assessment of aircraft components using a fracture mechanics based parameter p 228 N94-34588
STRAKES
Experimental investigation of the vortex flow over a 76/60-deg double delta wing p 26 N95-17874
STRATEGY
Human factors causes and management strategies in US Air Force F-16 mishaps 1984-present p 31 N93-19673
STREAMLINING
Aero design of turbomachinery components: CFD in complex systems p 208 N95-14136
STRESS (PHYSIOLOGY)
Space flight and immune system p 235 N93-11284
Implications of climatic extremes in aircrew NBC operations p 278 N94-28446
The musculoskeletal and vestibular effects of long term repeated exposure to sustained high-G [AGARD-AR-317] p 281 N95-14263
STRESS (PSYCHOLOGY)
Space flight and immune system p 235 N93-11284
STRESS ANALYSIS
Simultaneous stress and flutter optimization for the wing of a transport aircraft equipped with four engines p 105 N92-23238
RB 199 high pressure compressor stage 3 spin pit tests p 81 N93-14893
CF6-6 high pressure compressor stage 5 locking slot crack propagation spin pit test p 81 N93-14894
RB211-524B disc and drive cones hot cyclic spinning test p 82 N93-14895
Edge delamination of composite laminates p 130 N93-21519
Integrated stress and strength analysis of airplane structures using the data processing tool ISSY p 59 N94-24320
Engine static structures behaviour under impact load using 3D modelling p 227 N94-34464
An Assessment of Fatigue Damage and Crack Growth Prediction Techniques [AD-280273] p 227 N94-34581
Miner's rule revisited p 227 N94-34582
The crack severity index of monitored load spectra p 228 N94-34585
Fatigue management and verification of airframes p 61 N94-34591
Metal matrix composites: Analysis of simple specimens and model components under creep and fatigue loading p 136 N94-36661
Application of the PSD technique to acoustic fatigue stress calculations in complex substructures p 302 N95-19155
Large-eddy simulation of rotating channel flows using a localized dynamic model p 213 N95-21064
STRESS CONCENTRATION
RB 199 high pressure compressor stage 3 spin pit tests p 81 N93-14893
Fatigue life and crack growth prediction methodology p 227 N94-34583
STRESS CORROSION CRACKING
Microstructure and micromechanical behaviour of CMCs p 146 N94-24236
STRESS DISTRIBUTION
Ceramic matrix composites: Challenges and opportunities p 145 N94-24230
Interface evaluation in ceramic composites p 145 N94-24231
STRESS INTENSITY FACTORS
Progressive delamination in polymer matrix composite laminates: A new approach p 130 N93-21515
Fatigue life and crack growth prediction methodology p 227 N94-34583
Defects and their effects on the integrity of nickel based aeroengine discs p 144 N94-37328
STRESS MEASUREMENT
Time stress measurement devices for enhancement of onboard bit performance p 264 N93-19762
STRESS TENSORS
Modelling anisotropy and backscatter effects in the subgrid scale stress tensor p 215 N95-21077
STRESS-STRAIN RELATIONSHIPS
The influence of particle/matrix debonding on the stress-strain behavior of particulate composites p 131 N93-21525
Microstructure and micromechanical behaviour of CMCs p 146 N94-24236
Micromechanical modeling of damage growth in titanium based metal-matrix composites p 137 N94-36664
Prediction of thermal and mechanical stress-strain responses of TMC's subjected to complex TMF histories p 137 N94-36666
STRINGERS
Acoustic fatigue testing on different materials and skin-stringer elements p 302 N95-19156

STRIPPING
Environmentally Safe and Effective Processes for Paint Removal
[AGARD-R-791] p 149 N94-10613
Paint removal activities in the US Navy p 149 N94-10614
Paint removal activities in Canada p 149 N94-10615
Procedures without danger to the environment and efficiency (PSDEE) for the removal of paint. Point on the French activities concerning the removal of paint p 150 N94-10616
Paint removal activities in Germany p 150 N94-10617
The development of alternative paint removal techniques in the RAF p 150 N94-10618
Operational aspects of F.16 plastic media blasting, as carried out by Fokker Aircraft Services p 150 N94-10619
Use of robots for aircraft dry stripping via plastic media blasting p 150 N94-10620
German Air Forces experiences with plastic media blasting and future requirements p 150 N94-10621
Plastic media blasting activities at Hill Air Force Base p 150 N94-10622
Large Aircraft Robotic Paint Stripping (LARPS) system and the high pressure water process p 151 N94-10623
Automated Laser Paint Stripping (ALPS) update p 151 N94-10624
Aquastrip (tm): An innovative paint removal technology p 151 N94-10625
Paint removal and surface cleaning using ice particles p 151 N94-10626
Paint removal using wheat starch blast media p 151 N94-10627
IATA taskforce: Paintstripping p 151 N94-10628
Selectively strippable paint schemes p 152 N94-10629

STROUHAL NUMBER
Determination of surface heat transfer and film cooling effectiveness in unsteady wake flow conditions p 85 N93-29933

STRUCTURAL ANALYSIS
Integrated Design Analysis and Optimisation of Aircraft Structures
[AGARD-R-784] p 47 N92-23227
The structural optimization system OPTSYS: Current status and applications p 47 N92-23232
Application of an automated multidisciplinary analysis and optimisation system to the design of aircraft structures p 47 N92-23233
Design of a fighter aircraft vertical tail enhanced buffet environment survivability p 48 N92-23235
First approach to an integrated fin design p 48 N92-23236
A fin optimisation study p 48 N92-23237
Structural optimization of aircraft practice and trends p 48 N92-23239
Unsteady aerodynamics for aeroelasticity at the Flight Dynamics Directorate p 3 N92-27939
Integrated Design Analysis and Optimisation of Aircraft Structures
[AGARD-LS-186] p 50 N92-28469
Fundamentals of structural optimisation p 50 N92-28470
Structural optimization of aircraft p 50 N92-28472
Multidisciplinary design and optimization
[AGARD-PAPER-2] p 50 N92-28473
Propulsion and Energetics Panel Working Group 20 on Test Cases for Engine Life Assessment Technology
[AGARD-AR-308] p 81 N93-14890
Introduction to test cases for engine life assessment technology p 81 N93-14891
Structural analysis and optimization of adaptive structures by use of the finite element method p 227 N94-11339
New computing systems, future computing environment, and their implications on structural analysis and design p 58 N94-24314
Integrated stress and strength analysis of airplane structures using the data processing tool ISSY p 59 N94-24320
Performing specifications for complex systems' software p 109 N94-29317
Notch fatigue assessment of aircraft components using a fracture mechanics based parameter p 228 N94-34588
Measurements on a two-dimensional aerofoil with high-lift devices p 21 N95-17848

STRUCTURAL DESIGN
Multidisciplinary optimization studies using ASTROS p 104 N92-23234
Design of a fighter aircraft vertical tail enhanced buffet environment survivability p 48 N92-23235
First approach to an integrated fin design p 48 N92-23236

Applications of Titanium Matrix Composite to large airframe structure p 135 N94-36651
Statistical characterization of rare events p 291 N94-37327
Impact of Acoustic Loads on Aircraft Structures
[AGARD-CP-549] p 301 N95-19142
Current and future problems in structural acoustic fatigue p 301 N95-19143
Aeroacoustic qualification of HERMES shingles p 301 N95-19145

STRUCTURAL DESIGN CRITERIA
Aircraft Loads due to Turbulence and their Impact on Design and Certification
[AGARD-R-798] p 110 N95-18597

STRUCTURAL ENGINEERING
Smart Structures for Aircraft and Spacecraft
[AGARD-CP-531] p 132 N94-11317
Frameworks for integrated airframe design p 58 N94-24318

STRUCTURAL FAILURE
Can injury scoring techniques provide additional information for crash investigators? p 242 N93-19663
Crash experience of the US Army Black Hawk helicopter p 33 N93-19688
Edge delamination of composite laminates p 130 N93-21519
Fiber optic sensing for composite smart structures p 133 N94-11327
Assessment of in-service aircraft fatigue monitoring process p 62 N94-34593
History and prognosis of material discontinuity effects on engine components structural integrity p 225 N94-37322
Turbine disks: Lifing against defects and materials development p 225 N94-37329

STRUCTURAL RELIABILITY
An Assessment of Fatigue Damage and Crack Growth Prediction Techniques
[AD-280273] p 227 N94-34581
Rotorcraft fatigue life-prediction: Past, present, and future p 228 N94-34590
Current and future problems in structural acoustic fatigue p 301 N95-19143

STRUCTURAL STABILITY
The impact of active controls technology on the structural integrity of aeronautical vehicles p 56 N94-11341
Application of superplastically formed and diffusion bonded structures in high intensity noise environments p 303 N95-19162

STRUCTURAL VIBRATION
Active landing gear control for improved ride quality during ground roll p 56 N94-11345
Vibrations of structures with cyclic symmetry: Application to the case of turbine engines p 227 N94-34463
Nonlinear dynamic response of aircraft structures to acoustic excitation p 72 N95-19151
Acoustics of space structures p 302 N95-19152
Advanced statistical energy analysis p 229 N95-19165
Identification and analysis of air- and structure-borne noise and vibration paths p 303 N95-19166
Spectrogram diagnosis of aircraft disasters p 36 N95-19167

STRUTS
Interaction of a three strut support on the aerodynamic characteristics of a civil aviation model p 29 N95-19279

SUBCRITICAL FLOW
On subcritical instability of the attachment line boundary layer p 217 N95-21092

SUBLIMATION
Natural laminar flow test in-flight visualization p 8 N93-19921
Vortex structure and mass transfer near the base of a cylinder and a turbine blade p 84 N93-29929

SUBMARINES
Orbiting transmitter and antenna for spaceborne communications at ELF/VLF to submerged submarines p 169 N93-30755

SUBMERGING
Immersion/two phase cooling p 212 N95-20648

SUBSONIC FLOW
Unsteady Euler calculations in 3D internal aerodynamics p 188 N92-27470
Validation of non-orthogonal three-dimensional laminar flow predictions p 189 N92-27476
Mechanisms of sound generation in subsonic jets p 300 N93-10688
Experimental studies of the flowfields and their effects due to a pair of lift jets discharging in the ground effect region p 194 N93-13217
Application of subsonic first-order panel methods for prediction of inlet and nozzle aerodynamic interactions with airframe p 8 N93-13223
Experimental study of heat transfer close to a plane wall heated in the presence of multiple injections (subsonic flow) p 84 N93-29931
A fast computing method for the flow over high-lift wings p 16 N94-18437
Separated flow generated by a vectored jet in a crossflow p 201 N94-28007
Scalar mixing in the subsonic jet in crossflow p 201 N94-28008
Experimental investigation of the interaction of a thrust reverser jet with an external subsonic flow p 201 N94-28011
A numerical investigation of a subsonic jet in a crossflow p 202 N94-28023
Navier-Stokes simulation of two and three dimensional jets in crossflow, effects of grid, and boundary conditions p 203 N94-28026
Investigation of an NLF(1)-0416 airfoil in compressible subsonic flow p 22 N95-17852
Measurements of the flow over a low aspect-ratio wing in the Mach number range 0.6 to 0.87 for the purpose of validation of computational methods. Part 1: Wing design, model construction, surface flow. Part 2: Mean flow in the boundary layer and wake, 4 test cases p 23 N95-17860
Pressure distributions on research wing W4 mounted on an axisymmetric body p 24 N95-17862
Three-dimensional boundary layer and flow field data of an inclined prolate spheroid p 208 N95-17867
Ellipsoid-cylinder model p 208 N95-17869
Delta-wing model p 25 N95-17873
Wind tunnel test on a 65 deg delta wing with rounded leading edges: The International Vortex Flow Experiment p 26 N95-17875
Investigation of the flow development on a highly swept canard/wing research model with segmented leading- and trailing-edge flaps p 26 N95-17876
Subsonic flow around US-orbiter model FALKE in the DNW p 26 N95-17877
Calculation of support interference in dynamic wind-tunnel tests p 30 N95-19282

SUBSONIC SPEED
Boundary layer transition: Prediction, application to drag reduction p 2 N92-27711
Non-propulsive aerodynamic noise p 297 N93-10673
Prediction of jet mixing noise for high subsonic flight speeds p 299 N93-10685
Comparative performance tests of a pitot-inlet in several European wind-tunnels at subsonic and supersonic speeds p 7 N93-13221
Linear payout systems for dispensing fiber-optic data links from precision-guided munitions or high-performance aircraft/missles p 305 N93-22026
Measurements of the flow over a low aspect-ratio wing in the Mach number range 0.6 to 0.87 for the purpose of validation of computational methods. Part 1: Wing design, model construction, surface flow. Part 2: Mean flow in the boundary layer and wake, 4 test cases p 23 N95-17860
DLR-F4 wing body configuration p 71 N95-17863
Low aspect ratio wing experiment p 24 N95-17865
Test data on a non-circular body for subsonic, transonic and supersonic Mach numbers p 209 N95-17871
Wind tunnel test on a 65 deg delta wing with a sharp or rounded leading edge: The international vortex flow experiment p 25 N95-17872

SUBSONIC WIND TUNNELS
Unsteady flow testing in a passive low-correction wind tunnel p 118 N95-19272
Evaluation of combined wall- and support-interference on wind tunnel models p 29 N95-19278

SUBSTRATES
The design and manufacturing development of an active silicon substrate MCM p 185 N95-20645

SUBSTRUCTURES
Application of the PSD technique to acoustic fatigue stress calculations in complex substructures p 302 N95-19155

SUCTION
Inverse design of radial flow impellers with prescribed velocity at hub and shroud p 206 N94-34448
Dynamic tests to demonstrate lateral control using forebody suction on large scale models in the DRA 24 foot wind tunnel p 109 N94-34613
Navier-Stokes simulations of the effects of suction holes on a flat plate boundary layer p 218 N95-21094

SULFUR DIOXIDES
Gas turbine compressor corrosion and erosion in Western Europe p 103 N95-19678

SUPERCHARGERS
Nozzle guide vane flow in radial inflow turbines p 97 N94-34460

SUPERCOMPUTERS
Finite element methods in CFD: Grid generation, adaptivity, and parallelization p 192 N92-27679
Applications of CFD codes and supercomputers to aircraft design activities p 58 N94-24316

SUPERCRITICAL AIRFOILS
Comparison of Euler and full potential methods for unsteady transonic flow calculations p 4 N92-27943
Navier-Stokes simulation of flow field around a blown-flap high-lift system p 16 N94-18429
A supercritical airfoil experiment p 23 N95-17858

SUPERCRITICAL WINGS
X-29: Longitudinal instability at high angle-of-attack p 108 N94-11504
High lift and the forward swept wing p 57 N94-18436

SUPERHIGH FREQUENCIES
Remote sensing of the evaporation duct using an X-band radar p 230 N92-22793
Review of spaceborne and airborne SAR systems p 156 N93-13060
Effects of hydrometeors and atmospheric gases at SHF/EHF p 176 N95-14835
Large bistatic angle clutter depolarization study p 180 N95-20941
Comparative study of C- and K-band propagation mechanisms beyond the horizon p 181 N95-20946
Mitigation of effects of multiple path nulls at super-high frequencies through diversity and networking p 181 N95-20948

SUPERPLASTIC FORMING
Application of superplastically formed and diffusion bonded structures in high intensity noise environments p 303 N95-19162

SUPERSONIC AIRCRAFT
The PEP Symposium on CFD Techniques for Propulsion Applications p 194 N93-13210
The influence of intake swirl distortion on the steady-state performance of a low bypass, twin-spool engine p 194 N93-13211
Aerodynamic engine/airframe integration for high performance aircraft and missiles p 52 N93-17618

SUPERSONIC BOUNDARY LAYERS
Prediction of fluctuating pressure and power spectra in attached and separated compressible flow p 209 N95-19153
Numerical simulation of supersonic boundary layer transition p 214 N95-21074

SUPERSONIC COMBUSTION
Scramjet CFD methods and analysis. Part 2: Scramjet CFD analysis. Numerical simulation of supersonic mixing and combustion applied to scramjet combustor p 93 N94-29300

SUPERSONIC COMBUSTION RAMJET ENGINES
The dual combustor ramjet: A versatile propulsion system for hypersonic tactical missile applications p 123 N93-17611
Numerical simulation of the flow through a scramjet engine p 89 N94-10425
Research and Development of Ram/Scramjets and Turboramjets in Russia [AD-A275588] p 92 N94-29291
Introduction and overview of research and development of solid propellant ramrockets, liquid fuel ramjets and experimental hydrogen ram combustors p 92 N94-29292
Some problems of scramjet propulsion for aerospace planes. Part 1: Scramjet: Aims and features p 92 N94-29295
Scramjet CFD methods and analysis. Part 1: Scramjet CFD methods. Numerical simulation of the flow in scramjet duct p 92 N94-29296
Scramjet CFD methods and analysis. Part 2: Scramjet CFD analysis. Numerical simulation of supersonic mixing and combustion applied to scramjet combustor p 93 N94-29300
Some problems of scramjet propulsion for aerospace planes. Part 2: Scramjet: Development and test problems p 93 N94-29301

SUPERSONIC FLIGHT
Boom and the problems related to the supersonic flights of military aircraft p 298 N93-10677

SUPERSONIC FLOW
Nonequilibrium 3D flows of air through inlets p 190 N92-27487
Advanced methods for cascade testing [AGARD-AG-328] p 198 N94-15119
Special course on Shock-Wave/Boundary-Layer Interactions in Supersonic and Hypersonic Flows [AGARD-R-792] p 198 N94-15196
Swept shock wave/laminar boundary layer interactions, experimental, and numerical results p 199 N94-15198
Unsteady phenomena in shock wave/boundary layer interaction p 199 N94-15200
Contribution of laser Doppler velocimetry to the physical description of shock wave/turbulent boundary layer interactions with incidence on turbulence modelling p 199 N94-15201
Experimental study on the interactions between a transverse heated supersonic jet and an external supersonic flow p 18 N94-28039
Scramjet CFD methods and analysis. Part 2: Scramjet CFD analysis. Numerical simulation of supersonic mixing and combustion applied to scramjet combustor p 93 N94-29300
Detailed study at supersonic speeds of the flow around delta wings p 24 N95-17861
Wind tunnel investigations of the appearance of shocks in the windward region of bodies with circular cross section at angle of attack p 25 N95-17866
Supersonic vortex flow around a missile body p 25 N95-17870
Improvement and validation of an LDV system to perform measurements in laminar supersonic flows p 221 N95-19256
Transonic and supersonic flowfield measurements about axisymmetric afterbodies for validation of advanced CFD codes p 28 N95-19260

SUPERSONIC INLETS
Aerodynamic studies of supersonic air intakes p 8 N93-13222
Computation of supersonic air-intakes p 20 N95-14452

SUPERSONIC JET FLOW
Supersonic acoustic source mechanisms for free jets of various geometries p 298 N93-10680
Nozzle installation effects on the noise from supersonic exhaust plumes p 299 N93-10681
The prediction of noise radiation from supersonic elliptic jets p 299 N93-10684
Transient flow features of a supersonic jet in a low speed cross flow p 200 N94-28005
Experimental study on the interactions between a transverse heated supersonic jet and an external supersonic flow p 18 N94-28039

SUPERSONIC SPEED
Comparative performance tests of a pitot-inlet in several European wind-tunnels at subsonic and supersonic speeds p 7 N93-13221
Ramjet propulsion for missiles in the Mach 3 to 4.5 range p 123 N93-17608
Comparison of performances of different circular intakes p 83 N93-17616
Detailed study at supersonic speeds of the flow around delta wings p 24 N95-17861
Test data on a non-circular body for subsonic, transonic and supersonic Mach numbers p 209 N95-17871
Wind tunnel test on a 65 deg delta wing with a sharp or rounded leading edge: The international vortex flow experiment p 25 N95-17872

SUPERSONIC TRANSPORTS
Application of multidisciplinary optimization methods to the design of a supersonic transport p 47 N92-23230
Combustion for future supersonic transport propulsion p 139 N94-29249
Future supersonic commercial transport aircraft: A technological challenge for long haul traffic p 66 N94-36324
Aerodynamic shape optimization p 71 N95-16572

SUPERSONIC TURBINES
Predictions and measurements of 3D viscous flow in a transonic turbine nozzle guide vane row p 78 N92-27466
Steady and unsteady 3D flow computation through a transonic turbine stage p 78 N92-27469
The influence of non-uniform spanwise inlet temperature on turbine rotor heat transfer p 84 N93-29932
Development of a HP-turbine for a small helicopter engine p 97 N94-34456

SUPPORT INTERFERENCE
Wall Interference, Support Interference and Flow Field Measurements [AGARD-CP-535] p 209 N95-19251
The crucial role of wall interference, support interference and flow field measurements in the development of advanced aircraft configurations p 209 N95-19252
Evaluation of combined wall- and support-interference on wind tunnel models p 29 N95-19278
Interaction of a three strut support on the aerodynamic characteristics of a civil aviation model p 29 N95-19279
Interference corrections for a centre-line plate mount in a porous-walled transonic wind tunnel p 29 N95-19280
Correction of support influences on measurements with sting mounted wind tunnel models p 29 N95-19281
Calculation of support interference in dynamic wind-tunnel tests p 30 N95-19282

SUPPORT SYSTEMS
The role of simulation for the study of APIS (piloting support by synthetic imagery) p 113 N92-28544
A new class of mission support for combat air-crew p 293 N93-28854
Multi-sensoral approach to night flight: Perceptive and Cognitive limitations p 275 N94-23981
Flight command software development: RAFALE studies p 284 N94-29320
Training and operations support system (TOPS) p 317 N94-37344

SURFACE NAVIGATION
Automatic control steps for aircraft taxi guidance p 46 N94-29584
Guidance and control for unmanned ground vehicles p 224 N95-14948

SURFACE PROPERTIES
Experimental and numerical simulations of the effects of ingested particles in gas turbine engines p 101 N95-19662

SURFACE REACTIONS
Experimental and numerical simulations of the effects of ingested particles in gas turbine engines p 101 N95-19662
Developments and applications of dynamic models for large eddy simulation of complex flows p 212 N95-21062

SURFACE ROUGHNESS
Interface evaluation in ceramic composites p 145 N94-24231

SURFACE TEMPERATURE
Fundamental studies of impingement cooling thermal boundary conditions p 196 N93-29940
Local heat transfer measurement with liquid crystals on rotating surfaces including non-axisymmetric cases p 85 N93-29943
Transient thermal behaviour of a compressor rotor with axial cooling air flow and co-rotating or contra-rotating shaft p 86 N93-29946
Design and production of insulated wind tunnel models of the Hermes shuttle for heat transfer measurements at hypersonic speeds p 116 N94-10431
Prediction of survival times on land in a cold climate p 248 N94-28423
Verification of multidisciplinary models for turbomachines p 99 N95-19025

SURFACE TREATMENT
Fuel injector design for high temperature aircraft engine p 91 N94-29263

SURFACE VEHICLES
Comparison of the event-step algorithm to other path planning methods to avoid dynamic 3D obstacles p 37 N92-27896

SURGERY
Task-specific usability requirements for virtual information environments: Interface design and data representation for human operators of complex medical systems p 279 N94-37262
On the feasibility of virtual environments in medicine p 279 N94-37264
Photorefractive Keratectomy (PRK) in the military aviator: An aeromedical expose p 258 N95-19442

SURGES
Dynamic control of aerodynamic instabilities in gas turbine engines p 80 N92-28466

SURVEILLANCE
Operational needs for an unmanned air vehicle p 293 N92-32438
Naval target classification and designation with the CL-227 Sea Sentinel p 74 N92-32449
Radiolocation Techniques [AGARD-CP-528] p 157 N93-23598
T(Ic2)acS(Ic3)ats for Surveillance Verification and C3I [AGARD-CP-522] p 163 N93-29892
TACSAT ground control and data collection p 163 N93-29895
Cost effective TacSats for military support p 121 N93-29912
ACCS Surveillance Exploratory Prototype (ASEP) p 170 N94-29566
Airside ground movements surveillance p 46 N94-29585
TacSats for NATO [AD-A277710] p 122 N94-30350

SURVEILLANCE RADAR
Low cost TACSAT for NATO surveillance p 120 N93-29911
GPS/GNSS for ATM p 42 N94-29565

Development of precision runway monitor system for increasing capacity of parallel runway operations p 46 N94-29587

SURVEYS
Survey on techniques used in aerodynamic nozzle/airframe integration p 51 N93-13224
Canadian Forces helicopter ditchings: 1952-1990 p 32 N93-19685
US Army's aviation life support equipment retrieval program real world design successes from proactive investigation p 33 N93-19690
Aircrew acceptance of automation in the cockpit p 264 N93-19761
Lessons learned from an historical look at flight testing p 52 N93-19904
The lifestyle and dietary consumption patterns of United States Air Force aviators within air training command at Randolph Air Force Base, Texas p 272 N93-32257

SURVIVAL
Mechanisms of immune failure in burn injury p 235 N93-11285
737-400 at Kegworth, 8 January 1989: The AAIB investigation p 31 N93-19661
Canadian Forces helicopter ditchings: 1952-1990 p 32 N93-19685
US Army's aviation life support equipment retrieval program real world design successes from proactive investigation p 33 N93-19690
Correlations between engineering, medical and behavioural aspects in fire-related aircraft accidents p 34 N93-19693
Prediction of survival times on land in a cold climate p 248 N94-28423
Effectiveness of protection clothing for cold weather conditions after ejection over sea: A case report p 277 N94-28435
Advanced integrated cold protection for aircrew p 277 N94-28436
Thermoregulation in the extreme cold environment p 250 N94-28438

SUSPENSION SYSTEMS (VEHICLES)
The structural optimization system OPTSYS: Current status and applications p 47 N92-23232

SWATH WIDTH
The real aperture antenna of SAR, a key element for performance p 155 N93-13053

SWEPT FORWARD WINGS
Numerical simulation of shock-stall flutter of an airfoil using the Navier-Stokes equations p 105 N92-27956
X-29: Longitudinal instability at high angle-of-attack p 108 N94-11504
High lift and the forward swept wing p 57 N94-18436
Investigation into the aerodynamic characteristics of a combat aircraft research model fitted with a forward swept wing p 27 N95-17884

SWEPT WINGS
Boundary layer transition: Prediction, application to drag reduction p 2 N92-27711
Comparison of Euler and full potential methods for unsteady transonic flow calculations p 4 N92-27943
Modeling nonlinear aerodynamic loads for aircraft stability and control analysis p 108 N94-11499
Special course on Shock-Wave/Boundary-Layer Interactions in Supersonic and Hypersonic Flows | AGARD-R-792 | p 198 N94-15196
Viscous-inviscid calculation of high-lift separated compressible flows over airfoils and wings p 17 N94-18440
Investigation of the flow development on a highly swept canard/wing research model with segmented leading- and trailing-edge flaps p 26 N95-17876
The utilization of a high speed reflective visualization system in the study of transonic flow over a delta wing p 28 N95-19259
Velocity measurements with hot-wires in a vortex-dominated flowfield p 28 N95-19261
Computational simulations for some tests in transonic wind tunnels p 210 N95-19264

SWEPTBACK WINGS
An experimental investigation of the optimum slat setting on a combat aircraft model p 56 N94-18431
An experimental investigation of attachment-line transition on the slat of a combat aircraft model p 56 N94-18432
Measurements of the flow over a low aspect-ratio wing in the Mach number range 0.6 to 0.87 for the purpose of validation of computational methods. Part 1: Wing design, model construction, surface flow. Part 2: Mean flow in the boundary layer and wake, 4 test cases p 23 N95-17860
Pressure distributions on research wing W4 mounted on an axisymmetric body p 24 N95-17862
DLR-F4 wing body configuration p 71 N95-17863
DLR-F5: Test wing for CFD and applied aerodynamics p 24 N95-17864
Delta-wing model p 25 N95-17873
Wind tunnel test on a 65 deg delta wing with rounded leading edges: The International Vortex Flow Experiment p 26 N95-17875

SWIRLING
Navier-Stokes analysis of a swirling jet in crossflow p 204 N94-28038

SWITCHING
Highly survivable communications: Complementary media packet switched networks p 176 N95-20922
QoS driven routing in packet switched networks of multiple transmission media p 176 N95-20923

SYMBOLS
Symbology for head up and head down applications for highly agile fighter aircraft: To improve spatial awareness, trajectory control, and unusual attitude recovery, part 1 p 268 N93-28857

SYMMETRY
Multiple-inlet configuration for missiles with skid-to-turn control mode p 105 N93-17617
Vibrations of structures with cyclic symmetry: Application to the case of turbine engines p 227 N94-34463

SYMPTOMOLOGY
The Environmental Symptoms Questionnaire: Assessing reactions to environmental extremes in military operations p 278 N94-28447

SYNCHRONISM
Digital processing for positioning with one satellite p 163 N93-23629
Synchronization techniques for medium data rate EHF MILSATCOM systems p 164 N93-29901

SYNCOPE
The NAMI syncope test battery and clinical decision-making in aviators with syncope p 255 N95-19428

SYNTHETIC APERTURE RADAR
Fundamentals and Special Problems of Synthetic Aperture Radar (SAR) | AGARD-LS-182 | p 154 N93-13049
Basic principles of SAR p 155 N93-13050
SAR peculiarities, ambiguities and constraints p 155 N93-13051
Motion errors and compensation possibilities p 155 N93-13052
Polarization effects and multipolarization SAR p 155 N93-13054
Radiometric calibration of SAR systems p 155 N93-13055
SAR simulation p 156 N93-13056
Multi-frequency multi-polarization processing for spaceborne SAR p 156 N93-13057
Inverse Synthetic Aperture Radar p 156 N93-13058
Special SAR techniques and applications p 156 N93-13059
Review of spaceborne and airborne SAR systems p 156 N93-13060
SAR sensors on TACSATS: A feasibility assessment p 122 N93-29909
A TACSAT SAR concept p 122 N93-29910
Low cost TACSAT for NATO surveillance p 120 N93-29911

SYNTHETIC APERTURES
SAR peculiarities, ambiguities and constraints p 155 N93-13051
The real aperture antenna of SAR, a key element for performance p 155 N93-13053

SYNTHETIC ARRAYS
Basic principles of SAR p 155 N93-13050

SYSTEM EFFECTIVENESS
Operational agility | AD-A283336 | p 61 N94-33875

SYSTEM FAILURES
Potential software failures methodology analysis p 285 N94-29329
Distributed applications and failure tolerance programs using a reconfigurable parallel architecture p 286 N94-29345
The principles of flight test assessment of flight-safety-critical systems in helicopters | AGARD-AG-300-VOL-12 | p 35 N95-14199

SYSTEM IDENTIFICATION
The role of systems simulation for the development and qualification of ATTAS p 114 N92-28548
System identification for X-31A project support: Lessons learned so far p 54 N93-19914
On-line aircraft state and parameter estimation p 55 N93-19929
X-31A system identification applied to post-stall flight: Aerodynamics and thrust vectoring p 110 N94-34619
Modular CNI avionics system p 77 N95-20659

SYSTEMS ANALYSIS
A system approach to aircraft optimization p 47 N92-23228
Fuzzy guidance system evaluation p 282 N92-27903
System evaluation of a fiber optic guided missile with a simple guidance addition to improve system effectiveness p 305 N93-22025
Rome Laboratory software engineering technology program p 285 N94-29330
Techniques for aerodynamic characterization and performance evaluation at high angle of attack p 63 N94-34614

SYSTEMS ENGINEERING
A system approach to aircraft optimization p 47 N92-23228
A teamwork model of pilot aiding: Psychological principles for mission management systems design p 292 N92-27893
ICAAS piloted simulation evaluation p 72 N92-27906
Integrated Design Analysis and Optimisation of Aircraft Structures | AGARD-LS-186 | p 50 N92-28469
Multidisciplinary design and optimization | AGARD-PAPER-2 | p 50 N92-28473
An integrated multiple-sensor fire control system for air-to-air combat p 74 N92-32450
Advanced Aircraft Interfaces: The Machine Side of the Man-Machine Interface | AGARD-CP-521 | p 263 N93-19757
The integration of advanced cockpit and systems design p 266 N93-19779
Fly-by voice, a technology demonstration p 105 N93-19918
System concept for an advanced stand-off weapon p 149 N93-22029
Opportunities and challenges in avionics integration, INS/GPS: A case study p 39 N93-22782
Operator and automation capability analysis: Picking the right team p 269 N93-28864
System automation and pilot-vehicle-interface for unconstrained low-altitude night attack p 270 N93-28867
Flight evaluation of a computer aided low-altitude helicopter flight guidance system p 106 N93-28869
Overview of cockpit technology research and development programs for improvement of the man/machine interface: Review of the AGARD AVP Symposium held in Madrid, May 1992 p 270 N93-28872
Artificial intelligence technology program at Rome Laboratory p 290 N94-29328
Rome Laboratory software engineering technology program p 285 N94-29330
On ground system integration and testing: A modern approach p 75 N94-29334
A disciplined approach to software test and evaluation p 286 N94-29339
A generalization of the software engineering maturity model p 286 N94-29341
A common approach for an aerospace software environment p 287 N94-29346
The Common Modular Simulator (CMS): An architecture test bed for future advanced ATM systems p 45 N94-29582

Cockpit/NVG visual integration issues p 276 N94-23983
Integrated Airframe Design Technology | AGARD-R-794 | p 58 N94-24313
Multi-disciplinary coupling for integrated design of propulsion systems p 89 N94-24326
On ground system integration and testing: A modern approach p 75 N94-29334
Air-ground integration of the ATM system in PHARE p 45 N94-29579
Specifications of auxiliary power units for conformity with helicopter turboshaft engines p 95 N94-34441
The use of a tactile interface to convey position and motion perceptions p 281 N94-37281
FASTPACK: Optimized solutions for modular avionics derived from a parametric study. Part 1: Platform features p 76 N95-20634

SYSTEMS MANAGEMENT
MB-339: The role of flight testing in the evolution phase of a proven aircraft p 53 N93-19907

SYSTEMS SIMULATION
Harrier GR MK 5/7 mission simulators for the Royal Air Force p 113 N92-28540
The role of systems simulation for the development and qualification of ATTAS p 114 N92-28548
The Common Modular Simulator (CMS): An architecture test bed for future advanced ATM systems p 45 N94-29582

T

TACHYCARDIA
The aeromedical implications of supraventricular tachycardia p 257 N95-19437

TACTICS
Interdiction mission planning and co-ordination during the Gulf conflict 17 January - 27 February 1991 p 292 N92-27888
Situation assessment in the Paladin tactical decision generation system p 292 N92-27892
Optimal tactics for agile aircraft technology: A differential game methodology p 295 N94-34631
Challenge of Future EW System Design | AGARD-CP-546 | p 174 N95-14200

TAIL ASSEMBLIES
Design of a fighter aircraft vertical tail enhanced buffet environment survivability p 48 N92-23235
A combined approach to buffet response analyses and fatigue life prediction p 228 N94-34587
Damage tolerance management of the X-29 vertical tail p 62 N94-34595
Aerodynamic design of super maneuverable aircraft p 64 N94-34617
Single-engine tail interference model p 26 N95-17879
Twin engine afterbody model p 27 N95-17880

TAKEOFF
Wake structure and aerodynamic behavior of high lift aircraft configurations during unsteady maneuvers in ground effect p 17 N94-18439
Influence of headwind on hot gas reingestion and consideration of pressure ratio scaling p 89 N94-28018
STOVL CFD model test case p 27 N95-17881

TANKER AIRCRAFT
The testing of fixed wing tanker and receiver aircraft to establish their air-to-air refuelling capabilities | AGARD-AG-300-VOL-11 | p 55 N93-21305
Effectiveness of protection clothing for cold weather conditions after ejection over sea: A case report p 277 N94-28435
Future tanker considerations and requirements p 68 N94-36342
Tanker system and technology requirements definition: A tanker technology road map p 68 N94-36344
Hose-drogue versus boom receptacle air refueling p 68 N94-36345
The KDC-10 programme of the Royal Netherlands Air Force p 69 N94-36346
CC-130H(T) tactical aerial refuelling tanker development flight test programme p 69 N94-36347

TARGET ACQUISITION
Automated target tracking and location techniques applied to optical payloads on remotely piloted vehicles p 49 N92-27890
Integrated Target Acquisition and Fire Control Systems | AGARD-CP-500 | p 73 N92-32437
Operational needs for an unmanned air vehicle p 293 N92-32438
Multisensor airborne target acquisition systems and their integration p 73 N92-32439
Generic modular imaging IR signal processor p 282 N92-32440
Target cuing: A heterogeneous neural network approach p 288 N92-32442
Target detection using co-occurrence matrix segmentation and its hardware implementation p 283 N92-32443
Automatic detection, pursuit, and classification in infrared imagery p 304 N92-32445
The German anti tank helicopter PAH 2: An example of a future sensor platform p 73 N92-32448
The Missle-Borne Integrated Network Demonstration Program p 289 N93-22023
A current assessment of single site locating technology p 159 N93-23608
Procedures for determining the location of an HF radio transmitter p 159 N93-23610
High resolution sampled aperture array direction finding at HF p 160 N93-23611
Localization system based on data merging of images and inertia p 162 N93-23623
ACCS Surveillance Exploratory Prototype (ASEP) p 170 N94-29566
Infrared polarization signatures p 172 N94-30506
Model for the simulation of atmospheric effects on targets to background passive signatures p 172 N94-30507
The effect of enhanced backscattering on target detection p 172 N94-30508
A hybrid electromagnetic-statistical approach for characterizing MMW scattering by terrain p 172 N94-30510
Radar cross sections of ground clutter at 95 GHz for summer and fall conditions p 173 N94-30512
Pointing and Tracking Systems | AD-A282573 | p 122 N94-36616
Laser designation pods optimized concept for day/night operations p 222 N94-36620
Infrared search and track demonstrator programme p 306 N94-36622
Multiple target track-while-scan in the airborne EO environment p 173 N94-36629

TARGET RECOGNITION
Infrared Targeting System (IRTS) demonstration p 305 N92-32446
Naval target classification and designation with the CL-227 Sea Sentinel p 74 N92-32449
Inverse Synthetic Aperture Radar p 156 N93-13058
Man-machine interface with simulated automatic target recognition systems p 267 N93-19781
Adaptive autonomous target cuer p 267 N93-19784
Localization system based on data merging of images and inertia p 162 N93-23623
ACCS Surveillance Exploratory Prototype (ASEP) p 170 N94-29566
Knowledge combination and data fusion with application to recognition systems p 287 N94-30513

TARGET SIMULATORS
Man-machine interface with simulated automatic target recognition systems p 267 N93-19781

TARGETS
Airpower planning and battle management training at airbase level p 292 N92-27889
Automated target tracking and location techniques applied to optical payloads on remotely piloted vehicles p 49 N92-27890
Search route planning p 38 N92-27900
Optimal guidance anticipating missile performance p 118 N92-27902
Target cuing: A heterogeneous neural network approach p 288 N92-32442
Target detection using co-occurrence matrix segmentation and its hardware implementation p 283 N92-32443
Automatic detection, pursuit, and classification in infrared imagery p 304 N92-32445
Infrared Targeting System (IRTS) demonstration p 305 N92-32446
The German anti tank helicopter PAH 2: An example of a future sensor platform p 73 N92-32448
Naval target classification and designation with the CL-227 Sea Sentinel p 74 N92-32449
An integrated multiple-sensor fire control system for air-to-air combat p 74 N92-32450
The effects of multipath scatter from wind driven gravity waves on lines of bearing serving as direction finders p 158 N93-23601
Experimental evaluation of camouflage effectiveness in the thermal infrared p 306 N94-30502

TASKS
Cognitive approach to specifications on air traffic controllers' decision assistance systems p 43 N94-29571
Considerations on graphical user interfaces for intelligent ATM support systems p 43 N94-29572

TAXIING
Automatic control steps for aircraft taxi guidance p 46 N94-29584
Airside ground movements surveillance p 46 N94-29585
A novel near-range radar network for airport surface control p 46 N94-29586

TECHNOLOGICAL FORECASTING
Forecasting and planning for changing patterns of Scientific and Technical Communication (STC) p 314 N93-31223

TECHNOLOGY ASSESSMENT
Technical evaluation report on the Flight Mechanics Panel Symposium on Flying Qualities | AGARD-AR-311 | p 49 N92-27870
Optical fiber sensors p 304 N92-28090
Smart structures: The relevance of fibre optics p 304 N92-28091
Fiber-optic gyroscope p 219 N92-28092
Fiber optic data busses for aircraft p 72 N92-28093
Piloted simulation effectiveness development applications and limitations p 111 N92-28524
Technical evaluation report on the Flight Mechanics Panel Symposium on Piloted Simulation Effectiveness | AGARD-AR-315 | p 115 N92-30769
Versatile attack weapon p 149 N93-22027
Intelligent structures: A technology overview and assessment p 132 N94-11322
Combustion technology needs for advanced high pressure cycle engines p 139 N94-29248
Combustor technology for small aircraft engines p 96 N94-34453
Tanker system and technology requirements definition: A tanker technology road map p 68 N94-36344
Challenge of Future EW System Design | AGARD-CP-546 | p 174 N95-14200
Robotics technology developments in the United States space telerobotics program p 290 N95-14943
Reliability assessment of Multichip Module technologies via the Triservice/NASA RELTECH program p 226 N95-20643
High density monolithic packaging technology for digital/microwave avionics p 119 N95-20646

TECHNOLOGY TRANSFER
Facilitating the transfer of scientific and technical information with scientific and technical numeric databases p 310 N92-32192
Information access: A research agenda p 312 N93-19798
The organization and transfer of information p 312 N93-19799
The AGARD tip research agenda for Scientific and Technical Information (STI) p 312 N93-19800
The effect of changes in markets and trade barriers on the exchange of scientific and technical information p 313 N93-31216
The modern research environment p 314 N93-31221

TELECOMMUNICATION
Adaptive remote sensing of the ionosphere to minimise spectral intrusion p 231 N92-22803
Advances in Fibre-Optic Technology in Communications and for Guidance and Control | AGARD-LS-184 | p 154 N92-28084
Semiconductor lasers and fiber lasers for fiber-optic telecommunications p 154 N92-28085
Acquisition 2: Procurement, acquisition, and maintenance of configuration management documentation in support of a CIS system p 311 N93-10599
New method of modelling the mesoscale structure of the ionosphere with a single sensor. Impact on HF radio-location p 158 N93-23603
Digital processing for positioning with one satellite p 163 N93-23629
Forecasting and planning for changing patterns of Scientific and Technical Communication (STC) p 314 N93-31223
The demise of plastic encapsulated microcircuit myths p 185 N95-20640
Passive monitoring for automated MMPP communication systems p 177 N95-20927
Simulation of the impact of atmospheric turbulences on millimeter-wave communications systems p 179 N95-20939
Experimental study of the helicopter-mobile radioelectrical channel and possible extension to the satellite-mobile channel p 181 N95-20945

TELEOPERATORS
The 3-D computer vision techniques for object following and obstacle avoidance p 289 N93-13245
Task-specific usability requirements for virtual information environments: Interface design and data representation for human operators of complex medical systems p 279 N94-37262
Operator gaze position control interfaces: Investigation of psychophysical and operational parameters p 281 N94-37273
Low cost software-based rendering and stereoscopic interfaces for teleoperation and virtual reality p 287 N94-37279
Human factors considerations for remote manipulation p 282 N95-14949

TELEROBOTICS
Virtual Interfaces: Research and Applications | AGARD-CP-541 | p 260 N94-37261

Control of remotely operated manipulation systems p 291 N95-14945
Guidance and control for unmanned ground vehicles p 224 N95-14948
Human factors considerations for remote manipulation p 282 N95-14949

TELEVISION SYSTEMS
Low cost software-based rendering and stereoscopic interfaces for teleoperation and virtual reality p 287 N94-37279

TEMPERATURE CONTROL
Liquid flow-through cooling of electronic modules p 212 N95-20647

TEMPERATURE DISTRIBUTION
The 3-D Navier-Stokes flow and temperature field computation for a forced mixer nozzle p 190 N92-27482
Experimental study of heat transfer close to a plane wall heated in the presence of multiple injections (subsonic flow) p 84 N93-29931
Local heat transfer measurement with liquid crystals on rotating surfaces including non-axisymmetric cases p 85 N93-29943
Fluid flow and heat transfer in the entrance region of an annulus between independently rotating tubes with a turbulent axial flow p 196 N93-29952
Cooling predictions in turbofan engine components p 88 N93-29964
The mixing process in the quenching zone of the rich-lean-combustion concept p 142 N94-29281
Reducing Temperature Distribution Factor (TDF) for advanced small gas turbine engines p 96 N94-34455
Simulation of multidisciplinary problems for the thermostress state of cooled high temperature turbines p 99 N95-19021
Verification of multidisciplinary models for turbomachines p 99 N95-19025

TEMPERATURE EFFECTS
Fracture surface characteristics of compressive failures in carbon fibre reinforced epoxy laminate subjected to hot/wet conditioning p 128 N92-33051
The effect of heat treatment on the properties of PEEK and APC-2 p 128 N92-33052
The design features of rocket motors relating to insensitive munition response to thermo-mechanical stimuli p 147 N92-33244
Studies of safety, infectivity, and immunogenicity of a new Temperature Sensitive (TS) 51-1 strain of S. typhi as a new live oral typhoid fever vaccine candidate p 239 N93-11306
Thermal effects of a coolant film along the suction side of a high pressure turbine nozzle guide vane p 84 N93-29930
The effects of cockpit heat on aviator sleep parameters p 274 N93-32266
Experimental study on the interactions between a transverse heated supersonic jet and an external supersonic flow p 18 N94-28039
Physiological investigations of the isolated rat's liver in hypothermia and hypoxia and their relevance in aircraft incidents above the sea p 234 N94-28439
Pollutant emissions from and within a model gas turbine combustor at elevated pressures and temperatures p 141 N94-29271

TEMPERATURE INVERSIONS
Remote sensing of refractivity structure by direct radio measurements at UHF p 230 N92-22791

TEMPERATURE MEASUREMENT
Inverting radiometric measurements with a neural network p 233 N92-22818
Cooling predictions in turbofan engine components p 88 N93-29964
Local measurement of temperatures and concentrations: A review for hypersonic flows p 9 N94-10434
Methodologies for thermal and mechanical testing of TMC materials p 136 N94-36659

TEMPERATURE PROFILES
Predictions of momentum and scalar fields in a jet in cross-flow using first and second order turbulence closures p 203 N94-28025

TEMPERATURE RATIO
Investigation of the flowfield around an isolated bypass engine with fan and core jet p 195 N93-13227

TEMPORAL RESOLUTION
Ionosphere and troposphere seen through a radio interferometer p 231 N92-22806

TENSILE PROPERTIES
Ceramic matrix composites: Challenges and opportunities p 145 N94-24230
Properties of TMC processed by fibre coating and hiping p 135 N94-36656
Metal matrix composites: Analysis of simple specimens and model components under creep and fatigue loading p 136 N94-36661

TENSILE TESTS
Influence of edge effect on compression-tension fatigue of toughened graphite/epoxy laminates p 126 N92-33039
Delamination development under fatigue loading p 131 N93-21521
Material characterization and fractographic examination of Ti-17 fatigue crack growth specimens for SMP SC33 p 88 N93-31744
Fatigue crack growth results for Ti-6Al-4V, IMI 685, and Ti-17 p 88 N93-31746
Metal matrix composites: Analysis of simple specimens and model components under creep and fatigue loading p 136 N94-36661
ASTM and VAMAS activities in titanium matrix composites test methods development p 137 N94-36668
Soft body impact on titanium fan blades p 102 N95-19671

TENSOR ANALYSIS
Investigation of the bond strength of a discrete skin-stiffener interface p 131 N93-21527
Single-pass method for the solution of inverse potential and rotational problems. Part 1: 2-D and quasi 3-D theory and application p 20 N95-16563

TENSORS
Large eddy simulation of channel flow using a vorticity transport subgrid model p 215 N95-21076

TERMINOLOGY
Terminology and assessment methods of solid propellant rocket exhaust signatures [AGARD-AR-287] p 124 N93-22998

TERRAIN
Automated target tracking and location techniques applied to optical payloads on remotely piloted vehicles p 49 N92-27890
An efficient method for three-dimensional route planning with different strategies and constraints p 38 N92-27901
Flight above a virtual world p 264 N93-19766
Radar seeker based autonomous navigation update system using topography feature matching techniques p 157 N93-22030
A hybrid electromagnetic-statistical approach for characterizing MMW scattering by terrain p 172 N94-30510
Terrain and refractivity effects on non-optical paths p 178 N95-20931
Combined effects of atmosphere and terrain on UHF/microwave paths p 179 N95-20935

TERRAIN ANALYSIS
Interest in real-time simulations for the development terrain following function of radar systems p 154 N92-28529
Testing of an automatic, low altitude, all terrain ground collision avoidance system p 38 N93-19924
Terrain and coverage prediction analyses for non-geostationary orbit EHF satellite communications p 164 N93-29902
Propagation Modelling and Decision Aids for Communications, Radar and Navigation Systems [AGARD-LS-196] p 174 N95-14825

TERRAIN FOLLOWING
Interest in real-time simulations for the development terrain following function of radar systems p 154 N92-28529

TEST CHAMBERS
High-temperature acoustic test facilities and methods p 302 N95-19149
Development of pneumatic test techniques for subsonic high-lift and in-ground-effect wind tunnel investigations p 29 N95-19268
Unsteady flow testing in a passive low-correction wind tunnel p 118 N95-19272

TEST EQUIPMENT
The USAF Advanced Turbine Aerothermal Research Rig (ATARR) p 116 N93-29945

TEST FACILITIES
Noise studies for environmental impact assessment of an outdoor engine test facility p 297 N93-10672
Flight Testing [AGARD-CP-519] p 52 N93-19901
Experimental data for CFD validation of impinging jets in crossflow with application to ASTOVL flow problems p 201 N94-28010
CIAM experimental turboramjets p 93 N94-29299
Experimental and analytical methods for the determination of connected-pipe ramjet and ducted rocket internal performance [AGARD-AR-323] p 125 N95-17278
High-temperature acoustic test facilities and methods p 302 N95-19149
Development of pneumatic test techniques for subsonic high-lift and in-ground-effect wind tunnel investigations p 29 N95-19268

TEST PILOTS
Use of simulation in the USAF Test Pilot School curriculum p 112 N92-28535
Aircrew acceptance of automation in the cockpit p 264 N93-19761

TEST STANDS
The USAF Advanced Turbine Aerothermal Research Rig (ATARR) p 116 N93-29945
Technology rigs: A tool for afterburner development p 91 N94-29270

TESTING TIME
Validation and test of complex weapon systems p 75 N94-29336

TETHERED SATELLITES
Application of non-standard signal processing to ELF noise characterization for the TSS1-OESEE programme p 167 N93-30743
Orbiting transmitter and antenna for spaceborne communications at ELF/VLF to submerged submarines p 169 N93-30755

TETHERING
Tethered aerostat VLF/LF transmitter system design considerations p 169 N93-30753

TEXTILES
The potential of new textiles in improving survival prospects p 276 N94-28430
Fire-resistant water vapour permeable buoyant insulation p 276 N94-28431

TEXTS
Use of expert systems as user interfaces in information retrieval p 309 N92-32185
Automated input into databases: OCR and descriptive cataloguing p 309 N92-32189
Automating multilingual communication p 313 N93-31219

THERAPY
On the feasibility of virtual environments in medicine p 279 N94-37264
Clinical practice, diagnosis and therapy of intervertebral disk lesion: Importance to fitness for military flying duties p 257 N95-19435

THERMAL ANALYSIS
Aero-thermal design of a cooled transonic NGV and comparison with experimental results p 87 N93-29957
Methodologies for thermal and mechanical testing of TMC materials p 136 N94-36659
Missile infrared radiation analysis p 306 N95-14449
Thermo-acoustic fatigue design for hypersonic vehicle skin panels p 229 N95-19161

THERMAL COMFORT
Thermal strain generated by an enhanced anti-G protection system in a hot climate p 278 N94-28445
Recent Canadian advances in active thermal protection p 278 N94-28451

THERMAL CONTROL COATINGS
Thermal testing of high performance thermal barrier coatings for turbine blades p 103 N95-19681

THERMAL CYCLING TESTS
Prediction of thermal and mechanical stress-strain responses of TMC's subjected to complex TMF histories p 137 N94-36666

THERMAL EMISSION
Global approach towards the evaluation of thermal infrared countermeasures p 306 N94-30504

THERMAL ENERGY
Development of global/chemistry model for jet-fuel thermal stability based on observations from static and flowing experiments p 148 N94-29262

THERMAL ENVIRONMENTS
MCMs for avionics: Technology selection and intermodule interconnection p 77 N95-20641

THERMAL FATIGUE
Prediction of thermal and mechanical stress-strain responses of TMC's subjected to complex TMF histories p 137 N94-36666
Thermal testing of high performance thermal barrier coatings for turbine blades p 103 N95-19681

THERMAL INSULATION
Fire-resistant water vapour permeable buoyant insulation p 276 N94-28431

THERMAL PROTECTION
Alleviation of thermal strain in the CF: Keeping our cool during the Gulf conflict p 251 N94-28449
Recent Canadian advances in active thermal protection p 278 N94-28451
Test of a new protection suit in a climatic chamber p 278 N94-28452
Fuel injector design for high temperature aircraft engine p 91 N94-29263

THERMAL RESISTANCE
Characterisation of Fibre Reinforced Titanium Matrix Composites [AD-A277520] p 134 N94-36649

THERMAL SHOCK
Thermal testing of high performance thermal barrier coatings for turbine blades p 103 N95-19681

THERMAL STABILITY
Hazards reduction for tactical missiles p 123 N92-33245
An overview on the main available ceramic composites and their processing routes p 145 N94-24229
CMC design consequences p 146 N94-24238
High temperature resistant jet fuels p 148 N94-29260
Research and development of high thermal stability fuels p 148 N94-29261
Development of global/chemistry model for jet-fuel thermal stability based on observations from static and flowing experiments p 148 N94-29262

THERMAL STRESSES
Thermal strain generated by an enhanced anti-G protection system in a hot climate p 278 N94-28445
Research and development of high thermal stability fuels p 148 N94-29261
Simulation of multidisciplinary problems for the thermostress state of cooled high temperature turbines p 99 N95-19021
Application of multidisciplinary models to the cooled turbine rotor design p 99 N95-19024

THERMOCHEMISTRY
Rocket motor plume flowfields: Phenomenology and simulation p 125 N94-15221

THERMOCOUPLES
Determination of surface heat transfer and film cooling effectiveness in unsteady wake flow conditions p 85 N93-29933
Effects of free-stream turbulence on a jet in a cross flow p 203 N94-28036

THERMODYNAMIC CYCLES
Practical considerations in designing the engine cycle p 79 N92-28460
Chambers of turboreactors with variable geometry: A response to the matrix of pollution in cycles at high temperature, high pressure p 141 N94-29273

THERMODYNAMIC PROPERTIES
Thermodynamic model of air in chemical equilibrium p 307 N94-10448
Single-pass method for the solution of inverse potential and rotational problems. Part 1: 2-D and quasi 3-D theory and application p 20 N95-16563
Single-pass method for the solution of inverse potential and rotational problems. Part 2: Fully 3-D potential theory and applications p 20 N95-16564

THERMODYNAMICS
Steady and transient performance calculation method for prediction, analysis, and identification p 79 N92-28461
Chaos, entropy, and reversibility: A simple example p 296 N94-11495

THERMOELASTICITY
Numerical analysis of the thermoelastic effects in laminated structures and its use in the identification of defects p 129 N93-21511

THERMOGRAPHY
Thermal flux measurements in hypersonic flows: A review p 220 N94-10438

THERMOMECHANICAL TREATMENT
Maintaining constant standards during the forging process p 144 N94-37326

THERMOPLASTIC RESINS
Fluid effects: Thermoset and thermoplastic matrix composites p 128 N92-33049
Jet fuel absorption and dynamic mechanical analysis of carbon fibre composites p 128 N92-33050
Environmental resistance of amorphous bonded thermoplastic joints p 128 N92-33053

THERMOPLASTICITY
Mode 2 damage development in carbon fibre reinforced plastics p 131 N93-21523
Micromechanical modeling of damage growth in titanium based metal-matrix composites p 137 N94-36664

THERMOREGULATION
Prediction of survival times on land in a cold climate p 248 N94-28423
Fuelling shivering in humans during cold water immersion p 249 N94-28426
Biochemical enhancement of cold tolerance p 249 N94-28427
Treatment of mild immersion hypothermia by body-to-body and forced-air warming p 249 N94-28428
The potential of new textiles in improving survival prospects p 276 N94-28430
Thermoregulation in the extreme cold environment p 250 N94-28438
Thermal strain generated by an enhanced anti-G protection system in a hot climate p 278 N94-28445
Alleviation of thermal strain in the CF: Keeping our cool during the Gulf conflict p 251 N94-28449

THERMOSETTING RESINS
CFRP stiffened panels under compression p 127 N92-33044

THESAURI
Search strategies in natural language p 309 N92-32186
Document processing p 311 N93-10600

THICK PLATES
Barely visible damage threshold in a BMI p 131 N93-21524

THICKNESS
Effect of impacts on CFRP structures, results of a comprehensive test program for practical use p 132 N93-21534
Echocardiographic findings in trained aircrew: The effect of - Gz on cardiac structure (working group 18) p 247 N94-23320
Left ventricular hypertrophy and athlete's heart p 247 N94-23321

THIN FILMS
Thermal effects of a coolant film along the suction side of a high pressure turbine nozzle guide vane p 84 N93-29930
Measurement of turbulent spots and intermittency modelling at gas-turbine conditions p 85 N93-29934
Reliability assessment of Multichip Module technologies via the Triservice/NASA RELTECH program p 226 N95-20643

THREAT EVALUATION
Sensor data fusion for air to air situation awareness beyond visual range p 295 N94-36633

THREE DIMENSIONAL BODIES
Sensing and interpretation of 3-D shape and motion p 288 N93-13240

THREE DIMENSIONAL BOUNDARY LAYER
Viscous-inviscid calculation of high-lift separated compressible flows over airfoils and wings p 17 N94-18440
Three-dimensional boundary layer and flow field data of an inclined prolate spheroid p 208 N95-17867
Numerical study of realistic perturbations in three-dimensional boundary layers p 217 N95-21091

THREE DIMENSIONAL FLOW
A computational study of tip leakage flow and losses in a linear turbine cascade p 186 N92-27453
A critical evaluation of a three-dimensional Navier-Stokes method as a tool to calculate transonic flows inside a low-aspect-ratio compressor p 187 N92-27459
Validation of a CANARI code by the computation of three dimensional turbulent flow in turbine valve p 78 N92-27462
Computation and visualization of specific flow phenomena in turbomachinery application p 78 N92-27463
Calculation by the finite element method of 3-D turbulent flow in a centrifugal pump p 187 N92-27465
Predictions and measurements of 3D viscous flow in a transonic turbine nozzle guide vane row p 78 N92-27466
Viscous three-dimensional calculations of transonic fan performance p 188 N92-27467
Three dimensional solution of internal flows using a cell vertex finite volume method p 188 N92-27473
Validation of non-orthogonal three-dimensional laminar flow predictions p 189 N92-27476
Three dimensional flow in sharp bends --- ducted flow p 190 N92-27481
The 3-D Navier-Stokes flow and temperature field computation for a forced mixer nozzle p 190 N92-27482
Application of Monte Carlo simulation for three-dimensional flows p 190 N92-27485
Nonequilibrium 3D flows of air through inlets p 190 N92-27487
Three dimensional calculations of reactive flows within aircraft combustion chambers including some combustion models p 191 N92-27490
Experimental studies of the flowfields and their effects due to a pair of lift jets discharging in the ground effect region p 194 N93-13217
Navier-Stokes analysis of three-dimensional flow and heat transfer inside turbine blade rows p 87 N93-29963
Three-dimensional hypersonic rarefied flow calculations using direct simulation Monte Carlo method p 11 N94-10449
Numerical simulation of 3-D shock wave turbulent boundary layer interactions p 199 N94-15199
Navier-Stokes simulation of two and three dimensional jets in crossflow, effects of grid, and boundary conditions p 203 N94-28026
Numerical simulation of aerothermal characteristics in gas turbine combustors with complex geometries p 90 N94-29255
Time-resolved measurements in a three dimensional model combustor p 204 N94-29283
Designing in three dimensions p 223 N95-14130
Unsteady flows in turbines: Impact on design procedure p 207 N95-14132
Aero design of turbomachinery components: CFD in complex systems p 208 N95-14136
Test data on a non-circular body for subsonic, transonic and supersonic Mach numbers p 209 N95-17871
Low speed propeller slipstream aerodynamic effects p 27 N95-17882
Application of Direct and Large Eddy Simulation to Transition and Turbulence | AGARD-CP-551 | p 212 N95-21061
Subgrid scale models in finite difference simulations of complex wall bounded flows p 212 N95-21063
The effect of initial conditions on the development of temporally evolving planar three dimensional incompressible wakes p 216 N95-21085
Direct simulation of tridimensional wake of NACA 0012 profile p 216 N95-21086
Spatial direct numerical simulation of boundary layer transition under strong adverse pressure gradient p 217 N95-21093
Direct numerical simulation of 2-D and 3-D instability waves in a laminar separation bubble p 218 N95-21095
DNS of turbulent flow in a driven cavity and their analysis using proper orthogonal decomposition p 218 N95-21097
Direct simulation and graphics post-processing of three-dimensional turbulent flows p 218 N95-21098

THREE DIMENSIONAL MODELS
Computational procedures for preliminary design p 48 N92-23952
A critical evaluation of a three-dimensional Navier-Stokes method as a tool to calculate transonic flows inside a low-aspect-ratio compressor p 187 N92-27459
Steady and unsteady 3D flow computation through a transonic turbine stage p 78 N92-27469
Application of Monte Carlo simulation for three-dimensional flows p 190 N92-27485
Multidimensional upwind methods for unstructured grids p 191 N92-27675
Three-dimensional elasticity analysis of buckling of laminated plates p 126 N92-33037
The GARTEUR high lift research programme p 16 N94-18430
Engine static structures behaviour under impact load using 3D modelling p 227 N94-34464
Turbomachinery Design Using CFD | AGARD-LS-195 | p 207 N95-14127
Designing in three dimensions p 223 N95-14130
Unsteady flows in 'turbines: Impact on design procedure p 207 N95-14132
The role of CFD in the design process p 208 N95-14135
Simulation of pipe flow p 215 N95-21078

THREE DIMENSIONAL MOTION
Sensing and interpretation of 3-D shape and motion p 288 N93-13240

THRUST
Guide to the measurement of the transient performance of aircraft turbine engines and components | AD-280272 | p 93 N94-33874

THRUST BEARINGS
An air bearing system for small high speed gas turbines p 223 N94-34466

THRUST REVERSAL
Recent developments in low-speed TPS-testing for engine integration drag and installed thrust reversr simulation p 51 N93-13207
Aerodynamic integration of thrust reversers on the Fokker 100 p 51 N93-13208
Experimental investigation of the interaction of a thrust reverser jet with an external subsonic flow p 201 N94-28011
A study of jet effect and ground effect interference on a STOL fighter p 60 N94-28034

THRUST VECTOR CONTROL
Fuzzy guidance system evaluation p 282 N92-27903
Propulsion integration results of the STOL and Maneuver Technology Demonstrator p 52 N93-13228
X-31 demonstration of integrated flight and propulsion control for effective combat at extreme angles of attack p 106 N93-28851
Requirements for pilot assistance in a thrust-vectoring combat aircraft p 270 N93-28870
Adaptive reconfigurable flight controls for high angle of attack aircraft agility p 108 N94-11502
Vectored jets-induced interference on aircraft, prediction and verification p 202 N94-28012
Numerical investigation of thrust vectoring by injection of secondary air into nozzle flows p 202 N94-28013
A study of jet effect and ground effect interference on a STOL fighter p 60 N94-28034
Thrust vector aided maneuvering of the YF-22 Advanced Tactical Fighter prototype p 63 N94-34610
Results from the STOL and Maneuver Technology Demonstration program p 63 N94-34611
Aerodynamic design of super maneuverable aircraft p 64 N94-34617
X-31A control law design p 109 N94-34618
X-31A system identification applied to post-stall flight: Aerodynamics and thrust vectoring p 110 N94-34619
X-31 tactical utility: Initial results p 64 N94-34620

THYROID GLAND
TSH determination in subjects with medium-low levels of serum thyroxine p 254 N95-19421

THYROXINE
TSH determination in subjects with medium-low levels of serum thyroxine p 254 N95-19421

TILES
Aeroacoustic qualification of HERMES shingles p 301 N95-19145

TILT ROTOR AIRCRAFT
The convertible (helicopter/airplane) EUROFAR: General considerations on the technical progress and on future advances p 67 N94-36331

TIME DEPENDENCE
Sensing of radio refractivity and aerosol extinction p 175 N95-14830

Velocity measurements with hot-wires in a vortex-dominated flowfield p 28 N95-19261

TIME MARCHING

Time-marching methods for secondary flow analysis in curved ducts p 186 N92-27454

The application of a Navier-Stokes CFD method to civil engine intake flows p 188 N92-27471

Measurement of turbulent spots and intermittency modelling at gas-turbine conditions p 85 N93-29934

TIME MEASUREMENT

Time stress measurement devices for enhancement of onboard bit performance p 264 N93-19762

TIME SERIES ANALYSIS

Chaotic time series analysis p 296 N94-11490

A combined approach to buffet response analyses and fatigue life prediction p 228 N94-34587

TIME SIGNALS

Passive monitoring for automated MMPP communication systems p 177 N95-20927

TITANIUM

Characterisation of Fibre Reinforced Titanium Matrix Composites
| AD-A277520 | p 134 N94-36649

Possibilities and pitfalls in aerospace applications of titanium matrix composites p 135 N94-36650

Applications of Titanium Matrix Composite to large airframe structure p 135 N94-36651

SCS-6 (tm) fiber reinforced titanium p 135 N94-36652

Processing of titanium matrix composites p 135 N94-36653

Composites based on titanium with external and internal reinforcement p 135 N94-36654

Manufacture and properties of sigma fibre reinforced titanium p 135 N94-36655

Methodologies for thermal and mechanical testing of TMC materials p 136 N94-36659

Ultrasonic nondestructive characterization methods for the development and life prediction of titanium matrix composites p 136 N94-36660

Metal matrix composites: Analysis of simple specimens and model components under creep and fatigue loading p 136 N94-36661

Residual strength and life prediction techniques for Ti MMC p 136 N94-36662

Micromechanical modeling of damage growth in titanium based metal-matrix composites p 137 N94-36664

Crack growth under cycle loading in fibre reinforced titanium metal matrix composites p 137 N94-36665

Pre-standardisation work on fatigue and fracture testing of titanium matrix composites p 137 N94-36667

ASTM and VAMAS activities in titanium matrix composites test methods development p 137 N94-36668

Soft body impact on titanium fan blades p 102 N95-19671

TITANIUM ALLOYS

AGARD Engine Disc Cooperative Test Programme
| AGARD-R-766-ADD | p 88 N93-31741

Fractographic investigation of IMI 685 crack propagation specimens for SMP SC33 p 88 N93-31743

Material characterization and fractographic examination of Ti-17 fatigue crack growth specimens for SMP SC33 p 88 N93-31744

Low cycle fatigue behaviour of titanium disc alloys p 88 N93-31745

Fatigue crack growth results for Ti-6Al-4V, IMI 685, and Ti-17 p 88 N93-31746

Crack growth prediction results p 226 N93-31748

Fatigue life and crack growth prediction methodology p 227 N94-34583

Characterisation of Fibre Reinforced Titanium Matrix Composites
| AD-A277520 | p 134 N94-36649

Composites based on titanium with external and internal reinforcement p 135 N94-36654

Properties of TMC processed by fibre coating and hiping p 135 N94-36656

Fibre-matrix interface properties in Ti-matrix composites: Chemical compatibility and micromechanical behaviour p 136 N94-36657

Oxidation behavior of titanium aluminide matrix materials p 136 N94-36658

Process/composite concurrent tailoring of SiC/Ti composites p 136 N94-36663

Prediction of thermal and mechanical stress-strain responses of TMC's subjected to complex TMF histories p 137 N94-36666

Development of mechanical testing methods for titanium matrix composites (traction-ogligo-cyclic fatigue) p 137 N94-36669

Modelling and testing fibre reinforced titanium for design purposes p 138 N94-36670

Alternate melting and refining routes p 143 N94-37323

Maintaining constant standards during the forging process p 144 N94-37326

High temperature cyclic behaviour of aerospace materials: Room temperature validation tests of Ti-6Al-4V
| AGARD-AR-328 | p 229 N95-14198

TITANIUM NITRIDES

Protective coatings for compressor gas path components p 102 N95-19675

TOBACCO

Correlation of serum alpha sub 1 antitrypsin with cigarette smoking and pulmonary function status in Greek pilots, for a ten year period p 242 N93-11318

Survey of smoking habits in the Spanish Air Force p 273 N93-32262

Chronic obstructive pulmonary disease p 247 N94-23324

TOLERANCES (MECHANICS)

The crack severity index of monitored load spectra p 228 N94-34585

Damage tolerance management of the X-29 vertical tail p 62 N94-34595

Turbine disks: Lifing against defects and materials development p 225 N94-37329

Brite-Euram programme: ACOUFAT acoustic fatigue and related damage tolerance of advanced composite and metallic structures p 303 N95-19159

TOMAHAWK MISSILES

Development and qualification of the US Cruise Missile Propulsion System p 124 N93-17619

TOMOGRAPHY

A review of various techniques for computerized tomographic imaging of the ionosphere p 231 N92-22804

Mapping electron content and electron density in the sub-auroral ionosphere p 231 N92-22805

TOPOGRAPHY

Radar seeker based autonomous navigation update system using topography feature matching techniques p 157 N93-22030

TORNADOES

Effectiveness of protection clothing for cold weather conditions after ejection over sea: A case report p 277 N94-28435

TORSION

Engine life assessment test case TF41 LP compressor shaft torsional fatigue p 82 N93-14896

TOUCHDOWN

Effective cueing during approach and touchdown: Comparison with flight p 115 N92-28552

TOUGHNESS

GARTEUR compression behaviour of advanced CFRP --- carbon fiber reinforced plastics p 127 N92-33042

TOWED BODIES

Hose-drogue versus boom receptacle air refueling p 68 N94-36345

TOXICITY

Absence of protective immunity against diphtheria in a large proportion of young adults p 238 N93-11302

Clinical and immunological response to vaccination with parenteral or oral vaccines in two groups of 30 recruits p 239 N93-11305

Fires on board aircraft: Toxicological risk in flight p 243 N93-19694

TOXICITY AND SAFETY HAZARD

Environmentally Safe and Effective Processes for Paint Removal
| AGARD-R-791 | p 149 N94-10613

TOXICOLOGY

Toxicological investigations of flight accidetns: Findings and methods p 243 N93-19695

27 years armed forces aerospace pathology and toxicology in the Federal Republic of Germany: Development, current status, trends and challenges p 243 N93-19696

Significance of histological postmortem findings in pilots killed in military and civil aircraft accidents in Germany (West): A 25-year-review p 243 N93-19697

TOXINS AND ANTITOXINS

Absence of protective immunity against diphtheria in a large proportion of young adults p 238 N93-11302

TRACKING (POSITION)

Automated target tracking and location techniques applied to optical payloads on remotely piloted vehicles p 49 N92-27890

Advances in automatic electro-optical tracking systems p 305 N93-22020

Multi-window registration algorithm for automatic detection and tracking of moving targets p 283 N93-22022

ACCS Surveillance Exploratory Prototype (ASEP) p 170 N94-29566

Pointing and Tracking Systems
| AD-A282573 | p 122 N94-36616

Landing of an unmanned helicopter on a moving platform. High accuracy navigation and tracking p 69 N94-36618

Advanced helmet tracking technology developments for Naval aviation p 279 N94-36623

Advances in helmet trackers p 279 N94-36624

High accuracy control algorithm application to a tracking turret p 287 N94-36626

Aeroservoelastic stabilization considerations for pointing and tracking systems p 223 N94-36627

Studies and simulations on sensor fusion and cueing for fighter application p 279 N94-36632

Sensor data fusion for air to air situation awareness beyond visual range p 295 N94-36633

Manual tracking performance using a virtual hand controller: A comparison study p 280 N94-37271

A comparison of two examples of magnetic tracker systems p 281 N94-37275

TRACKING FILTERS

Multivariable frequency response methods for optimal Kalman-Bucy filters with applications to radar tracking systems p 157 N93-22024

TRAILING EDGE FLAPS

Evaluation of an unsteady implicit Euler code against two and three-dimensional standard configurations p 4 N92-27945

Control effectiveness at hypersonic speeds p 106 N94-10426

Calculation of maximum and high lift characteristics of multi element aerofoils p 14 N94-18419

Efficient simulation of incompressible viscous flow over multi-element airfoils p 14 N94-18421

Navier-Stokes calculations on multi-element airfoils using a chimera-based solver p 14 N94-18422

Numerical solution of the Navier-Stokes equations for high-lift configurations on structured composite grids p 14 N94-18423

High Reynolds number configuration development of a high-lift airfoil p 15 N94-18424

A viscous-inviscid solver for high-lift incompressible flows over multi-element airfoils at deep separation conditions p 15 N94-18425

Prediction of the high-lift performance of multi-element aerofoils using an unstructured Navier-Stokes solver p 15 N94-18427

Navier-Stokes simulation of flow field around a blown-flap high-lift system p 16 N94-18429

An experimental investigation of the optimum slat setting on a combat aircraft model p 56 N94-18431

An experimental investigation of attachment-line transition on the slat of a combat aircraft model p 56 N94-18432

Viscous phenomena affecting high-lift systems and suggestions for future CFD development p 16 N94-18433

In-flight pressure distributions and skin-friction measurements on a subsonic transport high-lift wing section p 16 N94-18435

High lift and the forward swept wing p 57 N94-18436

A fast computing method for the flow over high-lift wings p 16 N94-18437

Calculation of multielement airfoils and wings at high lift p 17 N94-18438

Forty years of high-lift R/D: An aircraft manufacturer's experience p 1 N94-18441

High-lift research: Application to the design of the ATR72 flap p 57 N94-18442

The aero-mechanical design of a novel Fowler flap mechanism p 57 N94-18443

High-lift design for large civil aircraft p 57 N94-18445

High lift systems for transport aircraft with advanced airfoils p 57 N94-18446

Choice and optimization of a high-lift system for an advanced amphibious aircraft p 58 N94-18447

Low-speed surface pressure and boundary layer measurement data for the NLR 7301 airfoil section with trailing edge flap p 22 N95-17855

Two-dimensional high-lift airfoil data for CFD code validation p 23 N95-17859

Investigation of the flow development on a highly swept canard/wing research model with segmented leading- and trailing-edge flaps p 26 N95-17876

TRAILING EDGES

Development of a method to predict transonic limit cycle oscillation characteristics of fighter aircraft p 105 N92-27958

A design procedure for slotted flaps p 56 N94-18418

Control jets in interaction with hypersonic rarefied flow p 122 N94-28020

Experiments in the trailing edge flow of an NLR 7702 airfoil p 22 N95-17853

Erosion of T56 5th stage rotor blades due to bleed hole overtip flow p 101 N95-19666

TRAINING AIRCRAFT

Combat and training aircraft class A mishaps in the Belgian Air Force 1970-1990 p 32 N93-19677

Fatigue design, test and in-service experience of the BAe Hawk p 62 N94-34597

TRAINING DEVICES

Piloted Simulation Effectiveness
| AGARD-CP-513 | p 1 N92-28522

AM-X flight simulator from engineering tool to training device p 112 N92-28536

Shipboard mission training effectiveness of the Naval Air Test Center's V-22 government test pilot trainer p 113 N92-28542

Water tunnel studies of inlet/airframe interference phenomena p 194 N93-13216
Helicopter crash survival at sea: United States Navy/Marine Corps experience 1977-1990 p 33 N93-19687
MB-339: The role of flight testing in the evolution phase of a proven aircraft p 53 N93-19907
Assistance in instruction and training of air traffic controllers p 261 N94-37265
Immersive virtual environments as trainer: System design from a cognitive stance p 280 N94-37267

TRAINING SIMULATORS
Piloted simulation effectiveness development applications and limitations p 111 N92-28524
Experience with piloted simulation in the development of helicopters p 112 N92-28528
Validation of simulation systems for aircraft acceptance testing p 50 N92-28531
Aircraft simulation and pilot proficiency: From surrogate flying towards effective training p 112 N92-28532
The use of a dedicated testbed to evaluate simulator training effectiveness p 112 N92-28533
AM-X flight simulator from engineering tool to training device p 112 N92-28536
The evaluation of simulator effectiveness for the training of high speed, low level, tactical flight operations p 113 N92-28539
Harrier GR MK 5/7 mission simulators for the Royal Air Force p 113 N92-28540
Possibilities and limitations of flying training in the German Air Force p 115 N93-10668
Immersive virtual environments as trainer: System design from a cognitive stance p 280 N94-37267

TRAJECTORIES
On board planning of 4D-trajectories p 37 N92-27897
Trajectory optimization for hypersonic aircraft guidance p 37 N92-27898
Optimal guidance anticipating missile performance p 118 N92-27902

TRAJECTORY ANALYSIS
Advanced air traffic control and flight management system concepts p 44 N94-29576
Experimental flight management system p 45 N94-29580

TRAJECTORY CONTROL
Trajectory optimization for hypersonic aircraft guidance p 37 N92-27898
Optimal guidance anticipating missile performance p 118 N92-27902
Symbology for head up and head down applications for highly agile fighter aircraft: To improve spatial awareness, trajectory control, and unusual attitude recovery, part 1 p 268 N93-28857
Profile negotiation: An air/ground automation integration concept for managing arrival traffic p 45 N94-29578
Yaw control by tangential forebody blowing p 109 N94-34615

TRAJECTORY OPTIMIZATION
Trajectory optimization for hypersonic aircraft guidance p 37 N92-27898
Potential missile flight performance gains from improvements to the propulsion system p 123 N93-17609
Profile negotiation: An air/ground automation integration concept for managing arrival traffic p 45 N94-29578

TRAJECTORY PLANNING
Status of automatic guidance systems for rotorcraft in low altitude flight p 37 N92-27894
Knowledge-based planning for controlled airspace flight operation as part of a cockpit assistant p 37 N92-27895
Comparison of the event-step algorithm to other path planning methods to avoid dynamic 3D obstacles p 37 N92-27896
An efficient method for three-dimensional route planning with different strategies and constraints p 38 N92-27901
Air-ground integration of the ATM system in PHARE p 45 N94-29579
Experimental flight management system p 45 N94-29580
The PHARE advanced tools p 45 N94-29581

TRANSATMOSPHERIC VEHICLES
Thermo-acoustic fatigue design for hypersonic vehicle skin panels p 229 N95-19161

TRANSFER FUNCTIONS
Multivariable frequency response methods for optimal Kalman-Bucy filters with applications to radar tracking systems p 157 N93-22024

TRANSFER OF TRAINING
The use of a dedicated testbed to evaluate simulator training effectiveness p 112 N92-28533
G-tolerance and spatial disorientation: Can simulation help us? p 234 N92-28534
AM-X flight simulator from engineering tool to training device p 112 N92-28536

TRANSFORMATIONS (MATHEMATICS)
Multitarget track initiation using a modified Hough transform p 174 N94-36630

TRANSIENT PRESSURES
Guide to the measurement of the transient performance of aircraft turbine engines and components [AD-280272] p 93 N94-33874

TRANSIENT RESPONSE
Evaluation of the transient operation of advanced gas turbine combustors p 91 N94-29269

TRANSITION FLIGHT
Transitional flight characteristics of a geometrically simplified STOVL model p 61 N94-28035
STOVL CFD model test case p 27 N95-17881

TRANSITION FLOW
Keynote address: Unsteady, multimode transition in gas turbine engines p 84 N93-29927
Measurement of turbulent spots and intermittency modelling at gas-turbine conditions p 85 N93-29934
Boundary layer transition: Prediction and wind tunnel simulation p 198 N94-11498
Special Course on Progress in Transition Modelling [AD-A283337] p 205 N94-33884
Physical description of boundary-layer transition: Experimental evidence p 205 N94-33885
Asymptotic approaches to transition modelling p 205 N94-33887
Direct numerical simulation of transition: The spatial approach p 206 N94-33889
CFD methodology and validation for turbomachinery flows p 207 N95-14131
Experimental investigation of the vortex flow over a 76/60-deg double delta wing p 26 N95-17874
Application of Direct and Large Eddy Simulation to Transition and Turbulence [AGARD-CP-551] p 212 N95-21061
Comparison of DNS and LES of transitional and turbulent compressible flow: Flat plate and mixing layer p 213 N95-21066
Simulation of large scale transitional flows p 215 N95-21075
Simulations of bypass transition for spatially evolving disturbances p 215 N95-21079
Direct numerical determination of the minimum bypass Reynolds number in boundary layers p 215 N95-21080
Direct numerical simulations of leading-edge receptivity for freestream sound p 217 N95-21090

TRANSMISSION
Propagation measurements on a troposcatter link in the Canadian High Arctic p 180 N95-20940

TRANSMISSION EFFICIENCY
Theoretical and experimental coverage analysis of a VLF transmitter p 165 N93-30734
Methods for evaluating the effects of conduits at the surface of the sea p 178 N95-20932

TRANSMISSION LINES
A technique for increasing the bandwidth of high performance electrical backplanes p 185 N95-20651

TRANSMISSION RATE (COMMUNICATIONS)
Electromagnetic compatibility effects of advanced packaging configurations p 176 N95-20658

TRANSMITTANCE
Multispectral transmittance measurements through man-made water fogs p 171 N94-30499
Estimation of transmittance from satellite imagery p 171 N94-30500

TRANSMITTER RECEIVERS
Sensing the ionospheric reflection channel with a sounder p 231 N92-22802
A methodology and tool for the prediction of depth of reception in the sea for a VLF/LF communications system p 167 N93-30741
Ground independent landing system p 42 N94-29564
High performance backplane components for modular avionics p 186 N95-20653

TRANSMITTERS
The effects of multipath scatter from wind driven gravity waves on lines of bearing serving as direction finders p 158 N93-23601
Theoretical and experimental coverage analysis of a VLF transmitter p 165 N93-30734
A long wave TE/TM noise prediction model p 167 N93-30742
Development of a fast sampling system for estimation of impulse responses of mobile radio channels p 180 N95-20943

TRANSOCEANIC FLIGHT
Opportunities for integrating the aircraft FMS, aeronautical operational control centers, and future air traffic management systems in oceanic airspace p 44 N94-29577

TRANSONIC COMPRESSORS
A critical evaluation of a three-dimensional Navier-Stokes method as a tool to calculate transonic flows inside a low-aspect-ratio compressor p 187 N92-27459
On the computation of unsteady turbomachinery flows. Part 1: Euler equations in vibrating cascades p 187 N92-27460
Application of CFD in the design of gas turbine engine components p 78 N92-27461
Compact diffusers for small transonic compressors p 96 N94-34449
Design and analysis of a highly loaded transonic compressor cascade p 206 N94-34451

TRANSONIC FLIGHT
Numerical investigation of thrust vectoring by injection of secondary air into nozzle flows p 202 N94-28013

TRANSONIC FLOW
A critical evaluation of a three-dimensional Navier-Stokes method as a tool to calculate transonic flows inside a low-aspect-ratio compressor p 187 N92-27459
Predictions and measurements of 3D viscous flow in a transonic turbine nozzle guide vane row p 78 N92-27466
Special Course on Unstructured Grid Methods for Advection Dominated Flows [AGARD-R-787] p 191 N92-27671
Transonic Unsteady Aerodynamics and Aeroelasticity [AGARD-CP-507] p 3 N92-27936
Current status of computational methods for transonic unsteady aerodynamics and aeroelastic applications p 3 N92-27937
Unsteady aerodynamics for aeroelasticity at the Flight Dynamics Directorate p 3 N92-27939
A time-linearization approach for unsteady transonic flows p 4 N92-27941
A boundary integral formulation for unsteady transonic potential flows p 4 N92-27942
Computation of the unsteady transonic 2D cascade flow by an Euler algorithm with interactive grid generation p 4 N92-27944
Evaluation of an unsteady implicit Euler code against two and three-dimensional standard configurations p 4 N92-27945
Unsteady transonic aerodynamics of pointed bodies of revolution in supersonic freestream p 5 N92-27946
NLR inviscid transonic unsteady loads prediction methods in aeroelasticity p 5 N92-27947
Computation of viscous phenomena in unsteady transonic flow p 5 N92-27949
Transonic aeroelastic calculations in both the time and frequency domains p 5 N92-27950
Analysis of unsteady aerodynamic and flutter characteristics of an aeroelastic model in transonic flow p 6 N92-27953
Transonic aeroelastic computations on wings using Navier-Stokes equations p 6 N92-27957
Further investigation of the effect of model cooling on periodic transonic flow p 7 N92-27961
A Navier-Stokes solver with different turbulence models applied to film-cooled turbine cascades p 87 N93-29962
Advanced methods for cascade testing [AGARD-AG-328] p 198 N94-15119
Contribution of laser Doppler velocimetry to the physical description of shock wave/turbulent boundary layer interactions with incidence on turbulence modelling p 199 N94-15201
Flow field analysis in a high pressure ratio centrifugal compressor p 206 N94-34447
2-D airfoil tests including side wall boundary layer measurements p 208 N95-17847
Investigation of an NLF(1)-0416 airfoil in compressible subsonic flow p 22 N95-17852
OAT15A airfoil data p 23 N95-17857
DLR-F5: Test wing for CFD and applied aerodynamics p 24 N95-17864
Wind tunnel test on a 65 deg delta wing with rounded leading edges: The International Vortex Flow Experiment p 26 N95-17875
Investigation of the flow development on a highly swept canard/wing research model with segmented leading- and trailing-edge flaps p 26 N95-17876
Experimental techniques for measuring transonic flow with a three dimensional laser velocimetry system. Application to determining the drag of a fuselage p 222 N95-19258
The utilization of a high speed reflective visualization system in the study of transonic flow over a delta wing p 28 N95-19259
Transonic and supersonic flowfield measurements about axisymmetric afterbodies for validation of advanced CFD codes p 28 N95-19260
Transonic wind tunnel boundary interference correction p 117 N95-19271

TRANSONIC FLUTTER
Current status of computational methods for transonic unsteady aerodynamics and aeroelastic applications p 3 N92-27937
NLR inviscid transonic unsteady loads prediction methods in aeroelasticity p 5 N92-27947

TRANSONIC SPEED
Boundary layer transition: Prediction, application to drag reduction p 2 N92-27711
Development of a method to predict transonic limit cycle oscillation characteristics of fighter aircraft p 105 N92-27958

Scale effects on aircraft and weapon aerodynamics [AGARD-AG-323] p 19 N95-14103
Two-dimensional 16.5 percent thick supercritical airfoil NLR 7301 p 22 N95-17854
DLR-F4 wing body configuration p 71 N95-17863
Low aspect ratio wing experiment p 24 N95-17865
Test data on a non-circular body for subsonic, transonic and supersonic Mach numbers p 209 N95-17871
Wind tunnel test on a 65 deg delta wing with a sharp or rounded leading edge: The international vortex flow experiment p 25 N95-17872
Computational simulations for some tests in transonic wind tunnels p 210 N95-19264

TRANSONIC WIND TUNNELS
Transonic wind tunnel investigation of limit cycle oscillations on fighter type wings p 6 N92-27959
Single-engine tail interference model p 26 N95-17879
Computational simulations for some tests in transonic wind tunnels p 210 N95-19264
Interference determination for wind tunnels with slotted walls p 117 N95-19269
Transonic wind tunnel boundary interference correction p 117 N95-19271
The traditional and new methods of accounting for the factors distorting the flow over a model in large transonic wind tunnels p 211 N95-19275
Interference corrections for a centre-line plate mount in a porous-walled transonic wind tunnel p 29 N95-19280

TRANSPIRATION
Real gas and surface transpiration effects upon swept leading edge high speed flow including transition p 11 N94-10452

TRANSPONDERS
A calibration technique for the CNET HF backscatter radar p 154 N92-22825

TRANSPORT AIRCRAFT
Simultaneous stress and flutter optimization for the wing of a transport aircraft equipped with four engines p 105 N92-23238
Drag reduction: An industrial challenge p 2 N92-27708
Use of a virtual cockpit for the development of a future transport aircraft p 114 N92-28547
The use and effectiveness of piloted simulation in transport aircraft research and development p 114 N92-28549
Detailed analysis of wing-nacelle interaction for commercial transport aircraft p 193 N93-13203
Euler analysis of turbofan/superfan integration for a transport aircraft p 193 N93-13206
Aerodynamic integration of thrust reversers on the Fokker 100 p 51 N93-13208
Flight tests of the transport aircraft viewed from the industrial standpoint p 52 N93-19903
In-flight pressure distributions and skin-friction measurements on a subsonic transport high-lift wing section p 16 N94-18435
High-lift design for large civil aircraft p 57 N94-18445
High lift systems for transport aircraft with advanced airfoils p 57 N94-18446
Influence of active controls on the design process of a large transport aircraft p 59 N94-24323
Current and future design methods for large transport aircraft p 60 N94-24324
The future of large capacity/long range multipurpose air cargo fleets p 67 N94-36326
Tanker system and technology requirements definition: A tanker technology road map p 68 N94-36344
DLR-F4 wing body configuration p 71 N95-17863

TRANSPORT THEORY
Turbulence modelling for shock wave/boundary layer interactions specific issues and examples of applications p 199 N94-15202

TRANSPORT VEHICLES
Integration of turbo-ramjet engines for hypersonic aircraft p 81 N93-13230

TRAVELING SALESMAN PROBLEM
Search route planning p 38 N92-27900

TRENDS
Aircraft Accidents: Trends in Aerospace Medical Investigation Techniques [AGARD-CP-532] p 30 N93-19653
New Trends in coatings developments for turbine blades: Materials processing and repair p 103 N95-19676

TRIANGULATION
A frontal approach for node generation in Delaunay triangulations p 192 N92-27680
Procedures for determining the location of an HF radio transmitter p 159 N93-23610
Detection of active emitters using triangulation and trilateration techniques: Theory and practice p 160 N93-23612

TRISONIC WIND TUNNELS
Interference corrections for a centre-line plate mount in a porous-walled transonic wind tunnel p 29 N95-19280

TROPICAL REGIONS
Immunization of personnel traveling to a destination in tropical countries: French position p 239 N93-11304

TROPOSPHERE
Remote Sensing of the Propagation Environment [AGARD-CP-502] p 230 N92-22790
Ionosphere and troposphere seen through a radio interferometer p 231 N92-22806
Analysis algorithms for processing ultraviolet fluorescence data p 221 N92-22823
Propagation effects on HF direction finding p 158 N93-23602
Modelling and simulation of HF/VHF MMPPs p 177 N95-20925
Terrain and refractivity effects on non-optical paths p 178 N95-20931
Modeling tropospheric ducting effects on satellite-to-ground paths p 179 N95-20936
The Lorentz reciprocity theorem as a consistency test for propagation models p 179 N95-20937

TROPOSPHERIC SCATTERING
Study of the fast and slow variations of the power received at VHF links by tropospheric diffusion p 178 N95-20929
Propagation measurements on a troposcatter link in the Canadian High Arctic p 180 N95-20940
Comparative study of C- and K-band propagation mechanisms beyond the horizon p 181 N95-20946

TUBERCULOSIS
Immunological parameters in current and former US Air Force personnel p 237 N93-11295
Communicable diseases: A major burden of morbidity and mortality p 238 N93-11300

TUNABLE LASERS
Semiconductor lasers and fiber lasers for fiber-optic telecommunications p 154 N92-28085

TUNNELS
Propagation of high frequency waves in urban and road tunnel environments p 178 N95-20933

TURBINE BLADES
Computation of 3D-viscous flow and heat transfer for the application to film cooled gas turbine blades p 187 N92-27456
Experimental verification of a 3D turbulent flow calculation in an axial turbine cascade p 187 N92-27457
An integrated CFD system for 3D turbomachinery applications p 78 N92-27464
Navier-Stokes analysis of turbine blade heat transfer and performance p 188 N92-27468
Numerical representation of heat transfer into turbine blade cooling ducts p 188 N92-27474
Overview on test cases for computation of internal flows in turbomachines p 193 N93-13209
In-service considerations affecting component life p 82 N93-14898
Heat Transfer and Cooling in Gas Turbines [AGARD-CP-527] p 84 N93-29926
Vortex structure and mass transfer near the base of a cylinder and a turbine blade p 84 N93-29929
The influence of non-uniform spanwise inlet temperature on turbine rotor heat transfer p 84 N93-29932
Heat transfer in high turbulence flows: A 2-D planar wall jet p 195 N93-29935
The effect of orthogonal-mode rotation on forced convection in a circular-sectioned tube fitted with full circumferential transverse ribs p 196 N93-29937
Cooling geometry optimization using liquid crystal technique p 85 N93-29939
Prediction of jet impingement cooling scheme characteristics (airfoil leading edge application) p 196 N93-29941
An L2F-measurement device with image rotator prism for flow velocity analysis in rotating coolant channels p 220 N93-29942
Impingement/effusion cooling p 197 N93-29954
The aerodynamic effect of coolant ejection in the leading edge region of a film-cooled turbine blade p 87 N93-29958
Modeling of a turbulent flow in the presence of discrete parietal cooling jets p 87 N93-29960
Coupling of 3D-Navier-Stokes external flow calculations and internal 3D-heat conduction calculations for cooled turbine blades p 87 N93-29961
A Navier-Stokes solver with different turbulence models applied to film-cooled turbine cascades p 87 N93-29962
Navier-Stokes analysis of three-dimensional flow and heat transfer inside turbine blade rows p 87 N93-29963
Analysis of cooling jets near the leading edge of turbine blades p 90 N94-28037
Development of a HP-turbine for a small helicopter engine p 97 N94-34456
Effect of tip clearance on the performance of a highly loaded turbine stage p 97 N94-34458
Design and aerodynamic performance evaluation of a high-work mixed flow turbine stage p 97 N94-34459
Nozzle guide vane flow in radial inflow turbines p 97 N94-34460
Turbine blade dynamics and blade-vane interaction in a radial inflow turbine p 97 N94-34461
Engine static structures behaviour under impact load using 3D modelling p 227 N94-34464
Hot section materials for small turbines p 97 N94-34465
Process enhancements of superalloy material p 143 N94-37324
The industrial use of CFD in the design of turbomachinery p 207 N95-14133
New methods, new methodology: Advanced CFD in the Snecma turbomachinery design process p 207 N95-14134
Simulation of multidisciplinary problems for the thermostress state of cooled high temperature turbines p 99 N95-19021
Application of multidisciplinary models to the cooled turbine rotor design p 99 N95-19024
Aerodynamic investigation of the flow field in a 180 deg turn channel with sharp bend p 210 N95-19257
Out of area experiences with the RB199 in Toronto p 99 N95-19654
Particle deposition in gas turbine blade film cooling holes p 101 N95-19661
Experimental and numerical simulations of the effects of ingested particles in gas turbine engines p 101 N95-19662
Damage of high temperature components by dust-laden air p 102 N95-19673
New Trends in coatings developments for turbine blades: Materials processing and repair p 103 N95-19676
Thermal testing of high performance thermal barrier coatings for turbine blades p 103 N95-19681
Resistance of silicon nitride turbine components to erosion and hot corrosion/oxidation attack p 104 N95-19683

TURBINE ENGINES
Aero-thermal design of a cooled transonic NGV and comparison with experimental results p 87 N93-29957
Vibrations of structures with cyclic symmetry Application to the case of turbine engines p 227 N94-34463
Propulsion system selection for a High Altitude Long Endurance aircraft p 98 N94-36333
Modern transport engine experience with environmental ingestion effects p 100 N95-19660
Damage of high temperature components by dust-laden air p 102 N95-19673
New Trends in coatings developments for turbine blades: Materials processing and repair p 103 N95-19676

TURBINE WHEELS
Propulsion and Energetics Panel Working Group 20 on Test Cases for Engine Life Assessment Technology [AGARD-AR-308] p 81 N93-14890
Introduction to test cases for engine life assessment technology p 81 N93-14891
LARZAC HP turbine disk crack initiation and propagation spin pit test p 81 N93-14892
RB211-524B disc and drive cones hot cyclic spinning test p 82 N93-14895
F100 second stage fan disk bolthole crack propagation ferris wheel test p 82 N93-14897
Expendable gas turbine engine technology advances p 94 N94-34438

TURBINES
Validation of a CANARI code by the computation of three dimensional turbulent flow in turbine valve p 78 N92-27462
Computation of the unsteady transonic 2D cascade flow by an Euler algorithm with interactive grid generation p 4 N92-27944
ASTOVL model engine simulators for wind tunnel research p 115 N93-13213
Aerothermic calculations of flows in interdisc cavities of turbines p 86 N93-29947
Simulation of multidisciplinary problems for the thermostress state of cooled high temperature turbines p 99 N95-19021

TURBOCOMPRESSORS
Application of S1BYL2 to the AGARD WG18 compressor test cases p 186 N92-27452
Dynamic simulation of compressor and gas turbine performance p 79 N92-28463
Overview on test cases for computation of internal flows in turbomachines p 193 N93-13209
Analysis of rig test data for an axial/centrifugal compressor in the 12 kg/sec p 94 N94-34437
Experimental investigation and performance analysis of the turbojet engine T117 p 94 N94-34439
Microturbo's experience in the field of APU for civil and military applications and our role in the face of the challenges of the future p 95 N94-34440
Advanced concepts for next generation small gas turbine engine compressors p 95 N94-34443
The centrifugal compressor, an essential component of small and medium power engines p 95 N94-34445
Compact diffusers for small transonic compressors p 96 N94-34449

Nozzle guide vane flow in radial inflow turbines
p 97 N94-34460
Computational methods for preliminary design and geometry definition in turbomachinery
p 223 N95-14128
Elements of a modern turbomachinery design system
p 223 N95-14129
Performance deterioration of axial compressors due to blade defects p 101 N95-19665
Impact loading of compressor stator vanes by hailstone ingestion p 102 N95-19670

TURBOFAN ENGINES
Tests of models equipped with TPS in low speed ONERA F1 pressurized wind tunnel p 193 N93-13201
Euler analysis of turbofan/superfan integration for a transport aircraft p 193 N93-13206
The influence of intake swirl distortion on the steady-state performance of a low bypass, twin-spool engine p 194 N93-13211
The jet behaviour of an actual high-bypass engine as determined by LDA-measurements in ground tests
p 80 N93-13218
Investigation of the flowfield around an isolated bypass engine with fan and core jet p 195 N93-13227
Cooling predictions in turbofan engine components
p 88 N93-29964
Spray combustion experiments and numerical predictions p 142 N94-29277
Technology Requirements for Small Gas Turbines
[AD-280274] p 93 N94-34431

TURBOFANS
Steady and transient performance calculation method for prediction, analysis, and identification
p 79 N92-28461
Component performance requirements
p 79 N92-28462

TURBOJET ENGINES
Simple and powerful turbojet with four stage axial compressor and axial flow turbine for the propulsion of subsonic missiles p 83 N93-17620
Smaller expendable turbojets p 83 N93-17621
Aerothermochemical calculations in afterburners
p 90 N94-29258
CIAM experimental turboramjets p 93 N94-29299
Experimental investigation and performance analysis of the turbojet engine T117 p 94 N94-34439
Compact diffusers for small transonic compressors
p 96 N94-34449
Aerodynamic design and investigation of a mixed flow compressor stage p 206 N94-34450
Perspective problems of gas turbine engines simulation p 99 N95-19026

TURBOMACHINE BLADES
Computation of the unsteady transonic 2D cascade flow by an Euler algorithm with interactive grid generation p 4 N92-27944
Investigation of shear layer transition using various turbulence models p 218 N95-21096

TURBOMACHINERY
CFD Techniques for Propulsion Applications
[AGARD-CP-510] p 186 N92-27450
Turbine internal fluid flow analysis and Stokes' hypothesis p 186 N92-27455
A mathematical constraint placed upon inter-blade row boundary conditions used in the simulation of multistage turbomachinery flows p 187 N92-27458
On the computation of unsteady turbomachinery flows. Part 1: Euler equations in vibrating cascades
p 187 N92-27460
Computation and visualization of specific flow phenomena in turbomachinery application
p 78 N92-27463
Presentation of a computational code for 3-D compressible flow in complex channels and cavities
p 189 N92-27475
Modelling thermal behaviour of turbomachinery discs and casings p 86 N93-29949
Turbomachinery Design Using CFD
[AGARD-LS-195] p 207 N95-14127
Designing in three dimensions p 223 N95-14130
CFD methodology and validation for turbomachinery flows p 207 N95-14131
The industrial use of CFD in the design of turbomachinery p 207 N95-14133
New methods, new methodology: Advanced CFD in the Snecma turbomachinery design process
p 207 N95-14134
The role of CFD in the design process
p 208 N95-14135
Aero design of turbomachinery components: CFD in complex systems p 208 N95-14136
Application of multicomponent models to flow passage simulation in multistage turbomachines and whole gas turbine engines p 99 N95-19022
Simulation of steady and unsteady viscous flows in turbomachinery p 99 N95-19023
Verification of multidisciplinary models for turbomachines p 99 N95-19025

TURBOPROP AIRCRAFT
Noise transmission and reduction in turboprop aircraft
p 303 N95-19164

TURBORAMJET ENGINES
Integration of turbo-ramjet engines for hypersonic aircraft p 81 N93-13230
Research and Development of Ram/Scramjets and Turboramjets in Russia
[AD-A275588] p 92 N94-29291
Introduction and overview of research and development of solid propellant ramrockets, liquid fuel ramjets and experimental hydrogen ram combustors
p 92 N94-29292
Turboramjet engines: Types and performances
p 92 N94-29293
Research and development of ramjets/ramrockets. Part 3: The study of gaseous hydrogen ram combustors
p 93 N94-29298

TURBOSHAFTS
Technology Requirements for Small Gas Turbines
[AD-280274] p 93 N94-34431
MTR390, the new generation turboshaft engine
p 94 N94-34434
Non-polluting gas turbine as a result of self-heating working fluid in a closed circuit p 94 N94-34436
Analysis of rig test data for an axial/centrifugal compressor in the 12 kg/sec p 94 N94-34437
The centrifugal compressor, an essential component of small and medium power engines p 95 N94-34445
US Army rotorcraft turboshaft engines sand and dust erosion considerations p 100 N95-19656
Future directions in helicopter protection system configuration p 100 N95-19657

TURBULENCE
Study of turbulence structure through numerical simulations: The perspective of drag and reduction
p 3 N92-27713
Motion errors and compensation possibilities
p 155 N93-13052
Keynote address: Unsteady, multimode transition in gas turbine engines p 84 N93-29927
Measurement of turbulent spots and intermittency modelling at gas-turbine conditions p 85 N93-29934
Heat transfer in high turbulence flows: A 2-D planar wall jet p 195 N93-29935
Heat transfer with moderate free stream turbulence
p 195 N93-29936
Cooling geometry optimization using liquid crystal technique p 85 N93-29939
An L2F-measurement device with image rotator prism for flow velocity analysis in rotating coolant channels
p 220 N93-29942
Unsteady aspects of hot gas reingestion and statistical analysis p 89 N94-28019
Calculation of single and multiple jets in cross-flow with and without impingement using Reynolds-stress-transport closure p 203 N94-28024
Predictions of momentum and scalar fields in a jet in cross-flow using first and second order turbulence closures p 203 N94-28025
Effects of free-stream turbulence on a jet in a cross flow p 203 N94-28036
Analysis of cooling jets near the leading edge of turbine blades p 90 N94-28037
Electro-optics: Propagation from IR to UV and sensor considerations. Part A: Propagation theory
p 175 N95-14833
Experiments in the trailing edge flow of an NLR 7702 airfoil p 22 N95-17853
Large-eddy simulation of separated flow in a ribbed duct p 214 N95-21070
A cheap DNS tool for turbulence models testing
p 214 N95-21072
Simulation of large scale transitional flows
p 215 N95-21075
Simulations of bypass transition for spatially evolving disturbances p 215 N95-21079
The effect of initial conditions on the development of temporally evolving planar three dimensional incompressible wakes p 216 N95-21085
Direct numerical simulation of transition to turbulence from a high-symmetry initial condition
p 217 N95-21089
Direct numerical simulations of leading-edge receptivity for freestream sound p 217 N95-21090

TURBULENCE EFFECTS
Turbulent skin-friction drag reduction by active and passive means, part 1 p 3 N92-27714
Effects of free-stream turbulence on a jet in a cross flow p 203 N94-28036
Wake turbulence p 20 N95-14894
A study of the effect of store unsteady aerodynamics on gust and turbulence loads p 71 N95-18601
Comparison of stochastic and deterministic nonlinear gust analysis methods to meet continuous turbulence criteria p 71 N95-18602
Design limit loads based upon statistical discrete gust methodology p 72 N95-18603

TURBULENCE MODELS
Experimental verification of a 3D turbulent flow calculation in an axial turbine cascade
p 187 N92-27457
An integrated CFD system for 3D turbomachinery applications p 78 N92-27464
Predictions and measurements of 3D viscous flow in a transonic turbine nozzle guide vane row
p 78 N92-27466
Viscous three-dimensional calculations of transonic fan performance p 188 N92-27467
Aspects of unstructured grids and finite-volume solvers for the Euler and Navier-Stokes equations
p 192 N92-27677
Calibration of 2D unstructured grid methods on propulsive flowfields p 194 N93-13225
A Navier-Stokes solver with different turbulence models applied to film-cooled turbine cascades
p 87 N93-29962
Navier-Stokes analysis of three-dimensional flow and heat transfer inside turbine blade rows
p 87 N93-29963
Problems in the validation of CFD codes through comparison with experiment p 198 N94-10441
Experimental, analytical, and computational methods applied to hypersonic compression ramp flows
p 10 N94-10444
Numerical simulation of 3-D shock wave turbulent boundary layer interactions p 199 N94-15199
Contribution of laser Doppler velocimetry to the physical description of shock wave/turbulent boundary layer interactions with incidence on turbulence modelling
p 199 N94-15201
Turbulence modelling for shock wave/boundary layer interactions specific issues and examples of applications
p 199 N94-15202
Navier-Stokes calculations on multi-element airfoils using a chimera-based solver p 14 N94-18422
Computational and Experimental Assessment of Jets in Cross Flow
[AGARD-CP-534] p 200 N94-28003
A numerical investigation of a subsonic jet in a crossflow p 202 N94-28023
Theoretical and experimental investigation of a delta wing with turbulent leading-edge jets p 18 N94-28029
Navier-Stokes analysis of a swirling jet in crossflow
p 204 N94-28038
Turbulence: Engineering models, aircraft response
p 110 N95-14900
A supercritical airfoil experiment p 23 N95-17858
Solution of Navier-Stokes equations using high accuracy monotone schemes p 209 N95-19019
Simulation of steady and unsteady viscous flows in turbomachinery p 99 N95-19023
The asymptotic state of rotating homogeneous turbulence at high Reynolds numbers
p 213 N95-21065
Comparison of DNS and LES of transitional and turbulent compressible flow: Flat plate and mixing layer
p 213 N95-21066
Direct numerical simulation of turbulent flow in a sudden pipe expansion p 213 N95-21067
A cheap DNS tool for turbulence models testing
p 214 N95-21072
Direct simulation of turbulent flow in a square duct: Reynolds-stress budgets p 214 N95-21073
Modelling anisotropy and backscatter effects in the subgrid scale stress tensor p 215 N95-21077
Simulation of pipe flow p 215 N95-21078
Direct numerical determination of the minimum bypass Reynolds number in boundary layers
p 215 N95-21080
A flamelet model for turbulent unpremixed combustion
p 143 N95-21081
Direct numerical simulation for premixed turbulent combustion modelling p 143 N95-21082
Entrainment in a shear-free turbulent mixing layer
p 216 N95-21083
Direct simulation of a self-similar plane wake
p 216 N95-21084
Investigation of shear layer transition using various turbulence models p 218 N95-21096

TURBULENT BOUNDARY LAYER
Basic concepts on boundary layers p 2 N92-27707
Laminar-turbulent transition: Fundamentals
p 2 N92-27710
Study of turbulence structure through numerical simulations: The perspective of drag and reduction
p 3 N92-27713
Turbulent skin-friction drag reduction by active and passive means, part 1 p 3 N92-27714
Computation of viscous phenomena in unsteady transonic flow p 5 N92-27949
Keynote address: Unsteady, multimode transition in gas turbine engines p 84 N93-29927
Heat transfer in high turbulence flows: A 2-D planar wall jet p 195 N93-29935
Heat transfer with moderate free stream turbulence
p 195 N93-29936
Problems in the validation of CFD codes through comparison with experiment p 198 N94-10441
Numerical simulation of 3-D shock wave turbulent boundary layer interactions p 199 N94-15199
Contribution of laser Doppler velocimetry to the physical description of shock wave/turbulent boundary layer interactions with incidence on turbulence modelling
p 199 N94-15201

An experimental study of siphonal jets in a turbulent boundary layer crossflow p 202 N94-28015
Pneumatic management of blunted-forebody flow asymmetry for high-angle-of-attack directional control p 109 N94-28028
Modeling the transition region p 206 N94-33890
Three-dimensional boundary layer and flow field data of an inclined prolate spheroid p 208 N95-17867
Prediction of fluctuating pressure and power spectra in attached and separated compressible flow p 209 N95-19153
Developments and applications of dynamic models for large eddy simulation of complex flows p 212 N95-21062
Direct numerical determination of the minimum bypass Reynolds number in boundary layers p 215 N95-21080
Direct simulation of a self-similar plane wake p 216 N95-21084

TURBULENT COMBUSTION
Calculations of reactive turbulent flows in aeronautical chambers p 197 N93-29956
Simulation of pollutant formation in turbulent combustors using an extended coherent flame model p 139 N94-29251
Numerical prediction of turbulent sooting diffusion flames p 140 N94-29253
A flamelet model for turbulent unpremixed combustion p 143 N95-21081
Direct numerical simulation for premixed turbulent combustion modelling p 143 N95-21082

TURBULENT FLOW
Experimental verification of a 3D turbulent flow calculation in an axial turbine cascade p 187 N92-27457
Validation of a CANARI code by the computation of three dimensional turbulent flow in turbine valve p 78 N92-27462
Calculation by the finite element method of 3-D turbulent flow in a centrifugal pump p 187 N92-27465
Numerical representation of heat transfer into turbine blade cooling ducts p 188 N92-27474
Computational modelling of turbulent flow in S-bends p 189 N92-27480
Flow computation in combustion chambers using zonal nonstaggered grids p 190 N92-27483
Modelling the vaporiser and primary zone flows for a modern gas turbine combustion chamber p 79 N92-27484
The coherent flamelet model for propulsion applications p 138 N92-27486
Laminar-turbulent transition: Fundamentals p 2 N92-27710
Study of turbulence structure through numerical simulations: The perspective of drag and reduction p 3 N92-27713
Turbulent skin-friction drag reduction by active and passive means, part 1 p 3 N92-27714
Calibration of 2D unstructured grid methods on propulsive flowfields p 194 N93-13225
Heat Transfer and Cooling in Gas Turbines | AGARD-CP-527 | p 84 N93-29926
Keynote address: Unsteady, multimode transition in gas turbine engines p 84 N93-29927
Heat transfer in high turbulence flows: A 2-D planar wall jet p 195 N93-29935
Turbulent flow and heat transfer in idealized blade cooling passages p 85 N93-29938
Study of flow structure in rotating cavities: Numerical predictions of laminar and turbulent, steady, and unsteady flows p 196 N93-29948
Fluid flow and heat transfer in the entrance region of an annulus between independently rotating tubes with a turbulent axial flow p 196 N93-29952
Calculations of reactive turbulent flows in aeronautical chambers p 197 N93-29956
Modeling of a turbulent flow in the presence of discrete parietal cooling jets p 87 N93-29960
Dynamics and control of coherent structures in the turbulent wall layer: An overview p 107 N94-11494
Turbulence modelling for shock wave/boundary layer interactions specific issues and examples of applications p 199 N94-15202
Navier-Stokes computations of turbulent flow around high-lift configurations p 14 N94-18420
Predictions of momentum and scalar fields in a jet in cross-flow using first and second order turbulence closures p 203 N94-28025
Recent developments in the simulation of steady and transient transverse jet interactions for missile, rotorcraft, and propulsive applications p 203 N94-28030
Numerical assessment of aerodynamic interactions on missiles with transverse jets control p 18 N94-28031
Analysis of cooling jets near the leading edge of turbine blades p 90 N94-28037
Navier-Stokes analysis of a swirling jet in crossflow p 204 N94-28038
Experimental study on the interactions between a transverse heated supersonic jet and an external supersonic flow p 18 N94-28039
Numerical modelling of turbine combustion chambers p 90 N94-29254
Numerical simulation of aerothermal characteristics in gas turbine combustors with complex geometries p 90 N94-29255
A new Eulerian model for turbulent evaporating sprays in recirculating flows p 142 N94-29279
Time-resolved measurements in a three dimensional model combustor p 204 N94-29283
Physical description of boundary-layer transition: Experimental evidence p 205 N94-33885
Modeling the transition region p 206 N94-33890
Numerical simulation of airfoil film cooling: A jet in crossflow p 206 N94-34462
CFD methodology and validation for turbomachinery flows p 207 N95-14131
Simulation of steady and unsteady viscous flows in turbomachinery p 99 N95-19023
Velocity measurements with hot-wires in a vortex-dominated flowfield p 28 N95-19261
Investigation of mechanical erosion in fuel pipelines p 224 N95-19667
Application of Direct and Large Eddy Simulation to Transition and Turbulence | AGARD-CP-551 | p 212 N95-21061
Developments and applications of dynamic models for large eddy simulation of complex flows p 212 N95-21062
Subgrid scale models in finite difference simulations of complex wall bounded flows p 212 N95-21063
Large-eddy simulation of rotating channel flows using a localized dynamic model p 213 N95-21064
Comparison of DNS and LES of transitional and turbulent compressible flow: Flat plate and mixing layer p 213 N95-21066
Direct numerical simulation of turbulent flow in a sudden pipe expansion p 213 N95-21067
Large eddy simulation of turbulent flow over a cavity p 213 N95-21069
Large-eddy simulation of separated flow in a ribbed duct p 214 N95-21070
A cheap DNS tool for turbulence models testing p 214 N95-21072
Direct simulation of turbulent flow in a square duct: Reynolds-stress budgets p 214 N95-21073
Simulation of pipe flow p 215 N95-21078
Direct numerical determination of the minimum bypass Reynolds number in boundary layers p 215 N95-21080
Entrainment in a shear-free turbulent mixing layer p 216 N95-21083
Direct simulation of a self-similar plane wake p 216 N95-21084
DNS of turbulent flow in a driven cavity and their analysis using proper orthogonal decomposition p 218 N95-21097
Direct simulation and graphics post-processing of three-dimensional turbulent flows p 218 N95-21098

TURBULENT HEAT TRANSFER
Turbulent flow and heat transfer in idealized blade cooling passages p 85 N93-29938

TURBULENT JETS
Mechanisms of sound generation in subsonic jets p 300 N93-10688
Theoretical and experimental investigation of a delta wing with turbulent leading-edge jets p 18 N94-28029
Experimental study on the interactions between a transverse heated supersonic jet and an external supersonic flow p 18 N94-28039
Application of Direct and Large Eddy Simulation to Transition and Turbulence | AGARD-CP-551 | p 212 N95-21061

TURBULENT MIXING
Modeling of the phase liquidates in combustion chambers p 142 N94-29278
A new Eulerian model for turbulent evaporating sprays in recirculating flows p 142 N94-29279
Entrainment in a shear-free turbulent mixing layer p 216 N95-21083

TURBULENT WAKES
Heat Transfer and Cooling in Gas Turbines | AGARD-CP-527 | p 84 N93-29926
Determination of surface heat transfer and film cooling effectiveness in unsteady wake flow conditions p 85 N93-29933
A supercritical airfoil experiment p 23 N95-17858
Application of Direct and Large Eddy Simulation to Transition and Turbulence | AGARD-CP-551 | p 212 N95-21061
Direct simulation of a self-similar plane wake p 216 N95-21084

TURKEY
National scene in information and documentation activities and recent developments in the Documentation Center of TUBITAK (TURDOK) p 310 N93-10594

TURRET
High accuracy control algorithm application to a tracking turret p 287 N94-36626

TVD SCHEMES
Multidimensional upwind methods for unstructured grids p 191 N92-27675
Higher order upwind finite volume schemes with ENO-properties for general unstructured meshes p 192 N92-27678
On the CFD monotone high accuracy methods p 209 N95-19018

TWO DIMENSIONAL BODIES
2-D airfoil tests including side wall boundary layer measurements p 208 N95-17847
2-D aileron effectiveness study p 21 N95-17851

TWO DIMENSIONAL BOUNDARY LAYER
On subcritical instability of the attachment line boundary layer p 217 N95-21092

TWO DIMENSIONAL FLOW
Numerical analysis of converging-diverging nozzle flows in chemical non-equilibrium p 191 N92-27489
Heat transfer in high turbulence flows: A 2-D planar wall jet p 195 N93-29935
Calculation of multielement airfoils and wings at high lift p 17 N94-18438
Comparison of the interactions of two and three dimensional transverse jets with a hypersonic free stream p 17 N94-28021
Navier-Stokes simulation of two and three dimensional jets in crossflow, effects of grid, and boundary conditions p 203 N94-28026
Two-dimensional high-lift airfoil data for CFD code validation p 23 N95-17859
Direct numerical simulation of 2-D and 3-D instability waves in a laminar separation bubble p 218 N95-21095
Investigation of shear layer transition using various turbulence models p 218 N95-21096
DNS of turbulent flow in a driven cavity and their analysis using proper orthogonal decomposition p 218 N95-21097

TWO DIMENSIONAL MODELS
Multidimensional upwind methods for unstructured grids p 191 N92-27675
Aspects of unstructured grids and finite-volume solvers for the Euler and Navier-Stokes equations p 192 N92-27677
The GARTEUR high lift research programme p 16 N94-18430
Measurements on a two-dimensional aerofoil with high-lift devices p 21 N95-17848
Investigation of the flow over a series of 14 percent-thick supercritical aerofoils with significant rear camber p 21 N95-17849
Experiments in the trailing edge flow of an NLR 7702 airfoil p 22 N95-17853
Two-dimensional 16.5 percent thick supercritical airfoil NLR 7301 p 22 N95-17854
Low-speed surface pressure and boundary layer measurement data for the NLR 7301 airfoil section with trailing edge flap p 22 N95-17855
OAT15A airfoil data p 23 N95-17857
A supercritical airfoil experiment p 23 N95-17858
Two-dimensional high-lift airfoil data for CFD code validation p 23 N95-17859
Interference determination for wind tunnels with slotted walls p 117 N95-19269

TWO PHASE FLOW
Numerical simulation of aerothermal characteristics in gas turbine combustors with complex geometries p 90 N94-29255
Modeling of the phase liquidates in combustion chambers p 142 N94-29278
A new Eulerian model for turbulent evaporating sprays in recirculating flows p 142 N94-29279
Experimental studies on effervescent atomizers with wide spray angles p 204 N94-29280
Investigation of the two-phase flow in a research combustor under reacting and non-reacting conditions p 204 N94-29282
Investigation of mechanical erosion in fuel pipelines p 224 N95-19667

TYPHOID
Immunization of personnel traveling to a destination in tropical countries: French position p 239 N93-11304
Clinical and immunological response to vaccination with parenteral or oral vaccines in two groups of 30 recruits p 239 N93-11305
Studies of safety, infectivity, and immunogenicity of a new Temperature Sensitive (TS) 51-1 strain of S. typhi as a new live oral typhoid fever vaccine candidate p 239 N93-11306

U

UH-60A HELICOPTER
Crash experience of the US Army Black Hawk helicopter p 33 N93-19688

ULTRAHIGH FREQUENCIES
Remote sensing of refractivity structure by direct radio measurements at UHF p 230 N92-22791
Over the horizon propagation in a marine environment: Modelling and recent experimental results p 152 N92-22794
Review of spaceborne and airborne SAR systems p 156 N93-13060

Large bistatic angle clutter depolarization study
p 180 N95-20941
Mitigation of effects of multiple path nulls at super-high frequencies through diversity and networking
p 181 N95-20948

ULTRASONIC FLAW DETECTION
Ultrasonic nondestructive characterization methods for the development and life prediction of titanium matrix composites
p 136 N94-36660

ULTRASONIC RADIATION
Defect analysis using advanced interpretation of the reflected wave during ultrasonic scanning
p 224 N93-21528

ULTRASONIC SCANNERS
Damage detection by Acousto-Ultrasonic Location (AUL)
p 224 N93-21529

ULTRASONIC TESTS
Ultrasonic nondestructive evaluation as a tool for the development of aerospace structural ceramic composites
p 146 N94-24240
Ultrasonic nondestructive characterization methods for the development and life prediction of titanium matrix composites
p 136 N94-36660

UNITED KINGDOM
Aircrew acceptance of automation in the cockpit
p 264 N93-19761
Where is high-lift today? A review of past UK research programmes
p 1 N94-18416

UNIX (OPERATING SYSTEM)
Automating multilingual communication
p 313 N93-31219

UNSTEADY AERODYNAMICS
Transonic Unsteady Aerodynamics and Aeroelasticity [AGARD-CP-507]
p 3 N92-27936
Current status of computational methods for transonic unsteady aerodynamics and aeroelastic applications
p 3 N92-27937
Unstructured-grid methods development for unsteady aerodynamic and aeroelastic analyses
p 3 N92-27938
Unsteady aerodynamics for aeroelasticity at the Flight Dynamics Directorate
p 3 N92-27939
Recent applications of linear and nonlinear unsteady aerodynamics for aeroelastic analysis
p 4 N92-27940
Evaluation of an unsteady implicit Euler code against two and three-dimensional standard configurations
p 4 N92-27945
Unsteady transonic aerodynamics of pointed bodies of revolution in supersonic freestream
p 5 N92-27946
NLR inviscid transonic unsteady loads prediction methods in aeroelasticity
p 5 N92-27947
Computations of unsteady flows around airfoil sections by explicit and implicit methods solving the Euler and Navier-Stokes equations
p 5 N92-27948
Computation of viscous phenomena in unsteady transonic flow
p 5 N92-27949
Aeroelastic calculations for fighter aircraft using the transonic small disturbance equation
p 5 N92-27951
Computation of flutter boundaries in the time and frequency domain
p 5 N92-27952
Analysis of unsteady aerodynamic and flutter characteristics of an aeroelastic model in transonic flow
p 6 N92-27953
Numerical simulation of shock-stall flutter of an airfoil using the Navier-Stokes equations
p 105 N92-27956
Transonic wind tunnel investigation of limit cycle oscillations on fighter type wings
p 6 N92-27959
The benchmark aeroelastic models program: Description and highlights of initial results
p 6 N92-27960
A review of scale effects on surfaces in unsteady motion
p 7 N92-27962
Techniques for aerodynamic characterization and performance evaluation at high angle of attack
p 63 N94-34614
A study of the effect of store unsteady aerodynamics on gust and turbulence loads
p 71 N95-18601

UNSTEADY FLOW
Survey of experimental techniques for performance prediction
p 49 N92-23954
On the computation of unsteady turbomachinery flows. Part 1: Euler equations in vibrating cascades
p 187 N92-27460
Calculation by the finite element method of 3-D turbulent flow in a centrifugal pump
p 187 N92-27465
Steady and unsteady 3D flow computation through a transonic turbine stage
p 78 N92-27469
Unsteady Euler calculations in 3D internal aerodynamics
p 188 N92-27470
Finite element computation of unsteady incompressible flows involving moving boundaries and interfaces and iterative solution strategies
p 191 N92-27674
Unstructured grid methods for compressible flows
p 192 N92-27676
Transonic Unsteady Aerodynamics and Aeroelasticity [AGARD-CP-507]
p 3 N92-27936
A time-linearization approach for unsteady transonic flows
p 4 N92-27941
A boundary integral formulation for unsteady transonic potential flows
p 4 N92-27942
Computation of the unsteady transonic 2D cascade flow by an Euler algorithm with interactive grid generation
p 4 N92-27944
Evaluation of an unsteady implicit Euler code against two and three-dimensional standard configurations
p 4 N92-27945
Computations of unsteady flows around airfoil sections by explicit and implicit methods solving the Euler and Navier-Stokes equations
p 5 N92-27948
Computation of viscous phenomena in unsteady transonic flow
p 5 N92-27949
Analysis of unsteady aerodynamic and flutter characteristics of an aeroelastic model in transonic flow
p 6 N92-27953
The benchmark aeroelastic models program: Description and highlights of initial results
p 6 N92-27960
Keynote address: Unsteady, multimode transition in gas turbine engines
p 84 N93-29927
Determination of surface heat transfer and film cooling effectiveness in unsteady wake flow conditions
p 85 N93-29933
Study of flow structure in rotating cavities: Numerical predictions of laminar and turbulent, steady, and unsteady flows
p 196 N93-29948
Unsteady wake structures in transverse jets
p 200 N94-28006
Unsteady flows in turbines: Impact on design procedure
p 207 N95-14132
Aero design of turbomachinery components: CFD in complex systems
p 208 N95-14136
A supercritical airfoil experiment
p 23 N95-17858
The mathematical models of flow passage for gas turbine engines and their components
p 98 N95-19020
Simulation of steady and unsteady viscous flows in turbomachinery
p 99 N95-19023
Prediction of fluctuating pressure and power spectra in attached and separated compressible flow
p 209 N95-19153
Unsteady flow testing in a passive low-correction wind tunnel
p 118 N95-19272
Calculation of support interference in dynamic wind-tunnel tests
p 30 N95-19282

UPPER SURFACE BLOWING
Design, development, and flight evaluation of the Boeing YC-14 USB powered lift aircraft
p 57 N94-18444

UPWIND SCHEMES (MATHEMATICS)
Efficient simulation of incompressible viscous flow over multi-element airfoils
p 14 N94-18421
High-lift system analysis method using unstructured meshes
p 15 N94-18426
CFD methodology and validation for turbomachinery flows
p 207 N95-14131
Computational aerodynamics based on the Euler equations [AGARD-AG-325]
p 19 N95-14264

USER REQUIREMENTS
TICAMS: Telefunken Integrated Computer-Aided Maintenance System
p 283 N93-19763
Human factors of mission planning systems: Applications and implementation
p 294 N94-25011
Use of advanced technologies in ATM (air traffic management) domain
p 41 N94-29561

V

V-22 AIRCRAFT
Shipboard mission training effectiveness of the Naval Air Test Center's V-22 government test pilot trainer
p 113 N92-28542

V/STOL AIRCRAFT
ASTOVL model engine simulators for wind tunnel research
p 115 N93-13213
Vectored jets-induced interference on aircraft, prediction and verification
p 202 N94-28012
Influence of headwind on hot gas reingestion and consideration of pressure ratio scaling
p 89 N94-28018
Unsteady aspects of hot gas reingestion and statistical analysis
p 89 N94-28019
STOVL CFD model test case
p 27 N95-17881

VACCINES
Allergic, Immunological and Infectious Disease Problems in Aerospace Medicine [AGARD-CP-518]
p 235 N93-11283
Vaccination against Hepatitis B: The Italian strategy
p 236 N93-11289
HIV variability and perspectives of a vaccine
p 237 N93-11294
Communicable diseases: A major burden of morbidity and mortality
p 238 N93-11300
Susceptibility in USAF recruits to vaccine preventable diseases
p 238 N93-11301
Absence of protective immunity against diphtheria in a large proportion of young adults
p 238 N93-11302
Dramatic reduction of meningococcal meningitis among military recruits in Italy after introduction of specific vaccination
p 239 N93-11303
Immunization of personnel traveling to a destination in tropical countries: French position
p 239 N93-11304
Clinical and immunological response to vaccination with parenteral or oral vaccines in two groups of 30 recruits
p 239 N93-11305
Studies of safety, infectivity, and immunogenicity of a new Temperature Sensitive (TS) 51-1 strain of S. typhi as a new live oral typhoid fever vaccine candidate
p 239 N93-11306
Use of novel adjuvants and delivery systems to improve the humoral and cellular immune response to malaria vaccine candidate antigens
p 240 N93-11308
Cytokines as vaccine adjuvants: Interleukin 1 and its synthetic peptide 163-171
p 240 N93-11309
Future approaches to vaccine development single-dose vaccines using controlled-release delivery systems
p 240 N93-11310

VACUUM
LARZAC HP turbine disk crack initiation and propagation spin pit test
p 81 N93-14892

VANADIUM
High temperature cyclic behaviour of aerospace materials: Room temperature validation tests of Ti-6Al-4V [AGARD-AR-328]
p 229 N95-14198

VANELESS DIFFUSERS
Experimental and computational results from a large low-speed centrifugal impeller
p 96 N94-34446

VANES
Development of a HP-turbine for a small helicopter engine
p 97 N94-34456
Application of multidisciplinary models to the cooled turbine rotor design
p 99 N95-19024
Impact loading of compressor stator vanes by hailstone ingestion
p 102 N95-19670
Protective coatings for compressor gas path components
p 102 N95-19675
Braze repair possibilities for hot section gas turbine parts
p 103 N95-19677

VAPOR BARRIER CLOTHING
Development of a new chemical warfare agent protective material
p 276 N94-28432

VAPOR DEPOSITION
SCS-6 (tm) fiber reinforced titanium
p 135 N94-36652
Processing of titanium matrix composites
p 135 N94-36653
Manufacture and properties of sigma fibre reinforced titanium
p 135 N94-36655

VAPOR PHASES
Numerical simulation of aerothermal characteristics in gas turbine combustors with complex geometries
p 90 N94-29255

VAPORIZERS
Modelling the vaporiser and primary zone flows for a modern gas turbine combustion chamber
p 79 N92-27484

VELOCITY DISTRIBUTION
Unsteady Euler calculations in 3D internal aerodynamics
p 188 N92-27470
Three dimensional flow in sharp bends --- ducted flow
p 190 N92-27481
The jet behaviour of an actual high-bypass engine as determined by LDA-measurements in ground tests
p 80 N93-13218
Dynamics and control of coherent structures in the turbulent wall layer: An overview
p 107 N94-11494
Predictions of momentum and scalar fields in a jet in cross-flow using first and second order turbulence closures
p 203 N94-28025
Experimental and computational results from a large low-speed centrifugal impeller
p 96 N94-34446
Inverse design of radial flow impellers with prescribed velocity at hub and shroud
p 206 N94-34448
Single-pass method for the solution of inverse potential and rotational problems. Part 1: 2-D and quasi 3-D theory and application
p 20 N95-16563
Residual-correction type and related computational methods for aerodynamic design. Part 1: Airfoil and wing design
p 70 N95-16566
Residual-correction type and related computational methods for aerodynamic design. Part 2: Multi-point airfoil design
p 70 N95-16567
Aerodynamic investigation of the flow field in a 180 deg turn channel with sharp bend
p 210 N95-19257
The effect of initial conditions on the development of temporally evolving planar three dimensional incompressible wakes
p 216 N95-21085
Direct simulation of tridimensional wake of NACA 0012 profile
p 216 N95-21086
Rib vortices in round jets: Direct and large eddy simulation
p 217 N95-21088
Direct numerical simulation of transition to turbulence from a high-symmetry initial condition
p 217 N95-21089

VELOCITY MEASUREMENT
The jet behaviour of an actual high-bypass engine as determined by LDA-measurements in ground tests
p 80 N93-13218
Use of a triaxial laser velocimeter for anemometric calibration on an A340 airbus
p 222 N93-19926

Velocity measurements in hypersonic flows: A review p 9 N94-10436
Particle Image Velocimetry: Principles, current applications and future prospects p 306 N95-19253
Improvement and validation of an LDV system to perform measurements in laminar supersonic flows p 221 N95-19256
Aerodynamic investigation of the flow field in a 180 deg turn channel with sharp bend p 210 N95-19257
Experimental techniques for measuring transonic flow with a three dimensional laser velocimetry system. Application to determining the drag of a fuselage p 222 N95-19258
Velocity measurements with hot-wires in a vortex-dominated flowfield p 28 N95-19261

VELOCITY MODULATION
Semiconductor lasers and fiber lasers for fiber-optic telecommunications p 154 N92-28085

VENTILATION
Computational simulations for some tests in transonic wind tunnels p 210 N95-19264

VERTICAL AIR CURRENTS
Dynamics and control of coherent structures in the turbulent wall layer: An overview p 107 N94-11494

VERTICAL DISTRIBUTION
Optical refraction in the atmospheric surface layer p 233 N92-22817

VERTICAL LANDING
Experiments into the scaling parameters required for exhaust gas ingestion testing of vertical landing aircraft p 60 N94-28017
Influence of headwind on hot gas reingestion and consideration of pressure ratio scaling p 89 N94-28018
STOVL CFD model test case p 27 N95-17881

VERTICAL MOTION SIMULATORS
The use of ground based simulation for handling qualities research: A new assessment p 114 N92-28545
Generation of helicopter roll axis bandwidth data through ground-based and in-flight simulation p 53 N93-19909

VERTICAL TAKEOFF AIRCRAFT
Aircraft ship operations [AGARD-AR-312] p 49 N92-28468

VERY HIGH FREQUENCIES
Refractive effects from VHF to EHF. Part A: Propagation Mechanisms p 175 N95-14831
Refractive effects from VHF to EHF. Part B: Propagation models p 175 N95-14832
The relative importance of meteor burst and other distance polar cap propagation modes in the low VHF band p 177 N95-20928
Study of the fast and slow variations of the power received at VHF links by tropospheric diffusion p 178 N95-20929

VERY LARGE SCALE INTEGRATION
The silicon compiler for designing military VLSI ASIC's p 73 N92-28378
Applications of silicon hybrid multi-chip modules to avionics p 73 N92-28379

VERY LONG BASE INTERFEROMETRY
Ionosphere and troposphere seen through a radio interferometer p 231 N92-22806

VERY LOW FREQUENCIES
Lateral deviation of VLF radio waves due to diffraction and scattering from coast-lines, mountain ranges, and polar ice caps p 157 N93-23599
Introduction p 164 N93-30728
Numerical modeling of the propagation medium at VLF/LF p 164 N93-30729
The cone structure and focusing of the electric field of VLF and LF waves at high altitudes of the ionosphere p 165 N93-30731
VLF propagation measurements in the Canadian Arctic p 165 N93-30733
Theoretical and experimental coverage analysis of a VLF transmitter p 165 N93-30734
Investigations of equatorial ionosphere nighttime mode conversion at VLF p 166 N93-30735
Transient (approximately equals 10 s) VLF amplitude and phase perturbations due to lightning-induced electron precipitation into the ionosphere (the Trimpi effect) p 166 N93-30736
Lightning-induced effects on VLF/LF radio propagation p 166 N93-30737
A methodology and tool for the prediction of depth of reception in the sea for a VLF/LF communications system p 167 N93-30741
ELF/VLF radio noise measurements at high latitudes during solar particle events p 167 N93-30744
ELF/VLF spectrum measurements p 168 N93-30745
VLF/LF transmitting antennas p 168 N93-30747
A dynamic bandwidth and phase linearity measurement technique for 4-channel MSK VLF antenna systems p 168 N93-30748
Study of a VLF distributed antenna array p 168 N93-30749
Antenna modeling and analysis for ELF/VLF/LF applications p 168 N93-30751
Viability assessment for reliable long-wave communication links p 169 N93-30754
Orbiting transmitter and antenna for spaceborne communications at ELF/VLF to submerged submarines p 169 N93-30755

VESTIBULAR TESTS
Medical evaluation of spatial disorientation mishaps p 260 N93-19703

VESTIBULES
Perception in flight: Shape and motion perception, space perception, spatial orientation, and visual vestibular interaction p 260 N94-23979
Attenuating the disorienting effects of head movement during whole-body rotation using a visual reference: Further tests of a predictive hypothesis p 252 N94-37276
The use of a tactile interface to convey position and motion perceptions p 281 N94-37281
The musculoskeletal and vestibular effects of long term repeated exposure to sustained high-G [AGARD-AR-317] p 281 N95-14263
Vestibular examination in pilots susceptible to motion sickness p 255 N95-19427

VHF OMNIRANGE NAVIGATION
Toward achieving global sole means radionavigation systems p 40 N93-22794

VIABILITY
Viability assessment for reliable long-wave communication links p 169 N93-30754

VIBRATION
Numerical simulation of shock-stall flutter of an airfoil using the Navier-Stokes equations p 105 N92-27956
Hemispherical resonator gyro: Principle, design, and performance p 220 N93-22784

VIBRATION DAMPING
Adaptive structures for spacecraft: A USAF perspective p 121 N94-11319
Smart structures at Aastra Corporation p 133 N94-11326
On the stability of shape memory materials and their properties in static and dynamic applications p 133 N94-11329
Adaptive algorithms for use with digital filters in vibration control p 283 N94-11338
Structural analysis and optimization of adaptive structures by use of the finite element method p 227 N94-11339
Active landing gear control for improved ride quality during ground roll p 56 N94-11345
Active damping augmentation of elastomechanical systems using piezoelectric sensors and actuators p 134 N94-11346
Multidimensional intelligent control for superlight air vehicles p 56 N94-11347

VIBRATION EFFECTS
On the computation of unsteady turbomachinery flows. Part 1: Euler equations in vibrating cascades p 187 N92-27460

VIBRATION MODE
Identification of delamination by eigenfrequency degradation: An inverse problem p 131 N93-21526

VIBRATION TESTS
High-temperature acoustic test facilities and methods p 302 N95-19149
Nonlinear dynamic response of aircraft structures to acoustic excitation p 72 N95-19151
Acoustic fatigue behaviour of GLARE composites p 303 N95-19160

VIDEO COMMUNICATION
Newly available technologies present expanding opportunities for scientific and technical information exchange p 313 N93-31217

VIDEO DATA
Target detection using co-occurrence matrix segmentation and its hardware implementation p 283 N92-32443

VIRAL DISEASES
Clinical types of Hepatitis B p 235 N93-11286
Viral hepatitis in the US Air Force, 1980 - 1989 p 235 N93-11287
Hepatitis A and Hepatitis B: Risks compared to other vaccine preventable diseases and immunization recommendations p 235 N93-11288
Vaccination against Hepatitis B: The Italian strategy p 236 N93-11289

VIRTUAL REALITY
Developing virtual cockpits p 264 N93-19764
Panoramic cockpit displays p 264 N93-19765
Flight above a virtual world p 264 N93-19766
A visual of the helmet for the piloting and the day/night navigation of the combat aircraft: Requirements and technical approaches p 38 N93-19768
Virtual interface applications for airborne weapons systems p 268 N93-28858
Virtual Interfaces: Research and Applications [AGARD-CP-541] p 260 N94-37261
Profile analysis of after-effects experienced during exposure to several virtual reality environments p 252 N94-37263
On the feasibility of virtual environments in medicine p 279 N94-37264
Immersive virtual environments as trainer: System design from a cognitive stance p 280 N94-37267
Creation of a virtual world to study human spatial perception during sustained acceleration p 261 N94-37268
The DRA Virtual Cockpit Research Program p 280 N94-37269
Virtual reality evolution or revolution p 280 N94-37270
Manual tracking performance using a virtual hand controller: A comparison study p 280 N94-37271
A comparison of two examples of magnetic tracker systems p 281 N94-37275
Some side-effects of immersion virtual reality p 252 N94-37277
Low cost software-based rendering and stereoscopic interfaces for teleoperation and virtual reality p 287 N94-37279

VIRUSES
Immunization of personnel traveling to a destination in tropical countries: French position p 239 N93-11304

VISCOELASTICITY
Stability of viscoelastic flow: Physical and numerical considerations p 198 N94-11493

VISCOPLASTICITY
Micromechanical modeling of damage growth in titanium based metal-matrix composites p 137 N94-36664

VISCOSITY
Three dimensional solution of internal flows using a cell vertex finite volume method p 188 N92-27473
Finite element methods for flow problems p 191 N92-27672
Laminar-turbulent transition: Fundamentals p 2 N92-27710
Repairing delaminations with low viscosity epoxy resins p 132 N93-21532
Numerical modelling of turbine combustion chambers p 90 N94-29254

VISCOUS DRAG
Aircraft drag reduction p 2 N92-27709
Study of turbulence structure through numerical simulations: The perspective of drag and reduction p 3 N92-27713

VISCOUS FLOW
Predictions and measurements of 3D viscous flow in a transonic turbine nozzle guide vane row p 78 N92-27466
Viscous three-dimensional calculations of transonic fan performance p 188 N92-27467
The application of a Navier-Stokes CFD method to civil engine intake flows p 188 N92-27471
Finite element solution of viscous compressible flows in gas turbine ducts and diffusers p 189 N92-27477
Current status of computational methods for transonic unsteady aerodynamics and aeroelastic applications p 3 N92-27937
Recent applications of linear and nonlinear unsteady aerodynamics for aeroelastic analysis p 4 N92-27940
Evaluation of an unsteady implicit Euler code against two and three-dimensional standard configurations p 4 N92-27945
Computation of viscous phenomena in unsteady transonic flow p 5 N92-27949
Studies of hypersonic viscous flows p 12 N94-10454
Calculations of viscous nonequilibrium flows in nozzles p 12 N94-10455
On the accuracy and efficiency of CFD methods in real gas hypersonics p 13 N94-10462
Thermal and chemical non equilibrium hypersonic flow computations p 13 N94-10465
Efficient simulation of incompressible viscous flow over multi-element airfoils p 14 N94-18421
Viscous phenomena affecting high-lift systems and suggestions for future CFD development p 16 N94-18433
A fast computing method for the flow over high-lift wings p 16 N94-18437
CFD methodology and validation for turbomachinery flows p 207 N95-14131
Aero design of turbomachinery components: CFD in complex systems p 208 N95-14136
Investigation of the flow over a series of 14 percent-thick supercritical aerofoils with significant rear camber p 21 N95-17849
Measurements of the flow over a low aspect-ratio wing in the Mach number range 0.6 to 0.87 for the purpose of validation of computational methods. Part 1: Wing design, model construction, surface flow. Part 2: Mean flow in the boundary layer and wake, 4 test cases p 23 N95-17860
Solution of Navier-Stokes equations using high accuracy monotone schemes p 209 N95-19019
Simulation of steady and unsteady viscous flows in turbomachinery p 99 N95-19023

VISCOUS FLUIDS
Design and aerodynamic performance evaluation of a high-work mixed flow turbine stage p 97 N94-34459

VISIBILITY
Engineering the visibility of small features on electronic flight displays p 263 N93-19758
VISIBLE SPECTRUM
Equipment, more or less ready to be used in helicopters p 267 N93-19785
VISORS
Multi-function visor p 265 N93-19770
VISUAL ACCOMMODATION
Visual accommodation to virtual image displays when knowledge of object distance conflicts with optical distance p 261 N94-37278
VISUAL ACUITY
Cockpit/NVG visual integration issues p 276 N94-23983
Photorefractive Keratectomy (PRK) in the military aviator: An aeromedical expose p 258 N95-19442
VISUAL CONTROL
Interactive large screen: A multi-mode dialogue tool for future cockpits p 280 N94-37266
A non-intrusive way to measure point-of-gaze p 280 N94-37272
Operator gaze position control interfaces: Investigation of psychophysical and operational parameters p 281 N94-37273
Gaze orientation under G(z)-load. Methodological aspects: Preliminary results p 281 N94-37274
A comparison of two examples of magnetic tracker systems p 281 N94-37275
VISUAL FLIGHT
Visual autonomous automatic landing of airplanes p 40 N93-22791
VISUAL PERCEPTION
Otolithic illusions on takeoff and visual information: Reflections in connection with an air accident case p 259 N93-19681
Engineering the visibility of small features on electronic flight displays p 263 N93-19758
Visual Problems in Night Operations [AGARD-LS-187] p 275 N94-23976
Multi-sensoral approach to night flight: Perceptive and Cognitive limitations p 275 N94-23981
Cockpit/NVG visual integration issues p 276 N94-23983
Night vision goggle illusions and visual training p 276 N94-23984
Creation of a virtual world to study human spatial perception during sustained acceleration p 261 N94-37268
The DRA Virtual Cockpit Research Program p 280 N94-37269
Color vision issues in modern military aviation or the search for the Abominable Coneman p 258 N95-19441
VISUAL STIMULI
Physical aspects of the visual stimulus p 275 N94-23978
The use of a tactile interface to convey position and motion perceptions p 281 N94-37281
VISUAL TASKS
Human capabilities and limitations in situation awareness p 269 N93-28863
VOICE COMMUNICATION
Advances in speech processing p 156 N93-19771
The use of voice processing for some aspects of the pilot-vehicle-interface in an aircraft p 265 N93-19772
Principles for integrating voice I/O in a complex interface p 265 N93-19774
G-load effects and efficient acoustic parameters for robust speaker recognition p 266 N93-19775
A current assessment of single site locating technology p 159 N93-23608
Newly available technologies present expanding opportunities for scientific and technical information exchange p 313 N93-31217
The Canadian network for the advancement of research, industry and education (CANARIE) p 315 N94-37336
VOICE CONTROL
Fly-by voice, a technology demonstration p 105 N93-19918
Interactive large screen: A multi-mode dialogue tool for future cockpits p 280 N94-37266
VOICE DATA PROCESSING
Perception-based and machine-oriented signal processing within speech understanding systems p 288 N93-13239
Advances in speech processing p 156 N93-19771
VOMITING
Profile analysis of after-effects experienced during exposure to several virtual reality environments p 252 N94-37263
VORTEX GENERATORS
Inclined air-jets used as vortex generators to suppress shock-induced separation p 18 N94-28040
Control of leading-edge separation on a cambered delta wing p 109 N94-34616
VORTEX SHEDDING
Separated flow generated by a vectored jet in a crossflow p 201 N94-28007
Yaw control by tangential forebody blowing p 109 N94-34615
High angle of attack aerodynamics p 20 N95-14450
VORTICES
High angle of attack: Aerodynamics p 2 N92-23956
A computational study of tip leakage flow and losses in a linear turbine cascade p 186 N92-27453
The eddy structures in bounded shear flows p 3 N92-27712
Current status of computational methods for transonic unsteady aerodynamics and aeroelastic applications p 3 N92-27937
Vortex flow aerodynamics [AGARD-AR-299] p 7 N92-30947
The influence of intake swirl distortion on the steady-state performance of a low bypass, twin-spool engine p 194 N93-13211
The jet behaviour of an actual high-bypass engine as determined by LDA-measurements in ground tests p 80 N93-13218
Vortex structure and mass transfer near the base of a cylinder and a turbine blade p 84 N93-29929
Wake structure and aerodynamic behavior of high lift aircraft configurations during unsteady maneuvers in ground effect p 17 N94-18439
Unsteady wake structures in transverse jets p 200 N94-28006
The interaction region associated with twin jets and a normal crossflow p 201 N94-28009
Experimental investigation of the interaction of a thrust reverser jet with an external subsonic flow p 201 N94-28011
Topological structure of a jet in a cross flow p 202 N94-28014
Experiments on the ground vortex formed by an impinging jet in cross flow p 202 N94-28016
Comparison of the interactions of two and three dimensional transverse jets with a hypersonic free stream p 17 N94-28021
Effects, limits, and limitations of spanwise blowing p 18 N94-28027
Recent developments in the simulation of steady and transient transverse jet interactions for missile, rotorcraft, and propulsive applications p 203 N94-28030
Effects of free-stream turbulence on a jet in a cross flow p 203 N94-28036
Inclined air-jets used as vortex generators to suppress shock-induced separation p 18 N94-28040
Dynamic tests to demonstrate lateral control using forebody suction on large scale models in the DRA 24 foot wind tunnel p 109 N94-34613
Yaw control by tangential forebody blowing p 109 N94-34615
Computational aerodynamics based on the Euler equations [AGARD-AG-325] p 19 N95-14264
High angle of attack aerodynamics p 20 N95-14450
Wake turbulence p 20 N95-14894
Ellipsoid-cylinder model p 208 N95-17869
Supersonic vortex flow around a missile body p 25 N95-17870
Test data on a non-circular body for subsonic, transonic and supersonic Mach numbers p 209 N95-17871
Wind tunnel test on a 65 deg delta wing with a sharp or rounded leading edge: The international vortex flow experiment p 25 N95-17872
Delta-wing model p 25 N95-17873
Experimental investigation of the vortex flow over a 76/60-deg double delta wing p 26 N95-17874
Wind tunnel test on a 65 deg delta wing with rounded leading edges: The International Vortex Flow Experiment p 26 N95-17875
Investigation of the flow development on a highly swept canard/wing research model with segmented leading- and trailing-edge flaps p 26 N95-17876
Subsonic flow around US-orbiter model FALKE in the DNW p 26 N95-17877
Velocity measurements with hot-wires in a vortex-dominated flowfield p 28 N95-19261
Application of Direct and Large Eddy Simulation to Transition and Turbulence [AGARD-CP-551] p 212 N95-21061
Developments and applications of dynamic models for large eddy simulation of complex flows p 212 N95-21062
Subgrid scale models in finite difference simulations of complex wall bounded flows p 212 N95-21063
Large-eddy simulation of rotating channel flows using a localized dynamic model p 213 N95-21064
The asymptotic state of rotating homogeneous turbulence at high Reynolds numbers p 213 N95-21065
Comparison of DNS and LES of transitional and turbulent compressible flow: Flat plate and mixing layer p 213 N95-21066
Simulation of separated flows p 213 N95-21068
Large eddy simulation of turbulent flow over a cavity p 213 N95-21069
Large-eddy simulation of separated flow in a ribbed duct p 214 N95-21070
Analysis of subgrid models using direct and large-eddy simulations of isotropic turbulence p 214 N95-21071
Rib vortices in round jets: Direct and large eddy simulation p 217 N95-21088
Direct numerical simulation of transition to turbulence from a high-symmetry initial condition p 217 N95-21089
Direct numerical simulations of leading-edge receptivity for freestream sound p 217 N95-21090
VORTICITY
Large eddy simulation of channel flow using a vorticity transport subgrid model p 215 N95-21076
Direct numerical simulation of transition to turbulence from a high-symmetry initial condition p 217 N95-21089
Direct numerical simulations of leading-edge receptivity for freestream sound p 217 N95-21090

W

WAFERS
Assuring Known Good Die (KGD) for reliable, cost effective MCMs p 185 N95-20644
WAKES
Wake structure and aerodynamic behavior of high lift aircraft configurations during unsteady maneuvers in ground effect p 17 N94-18439
Unsteady wake stfuctures in transverse jets p 200 N94-28006
Surface pressure and wake drag measurements on the Boeing A4 airfoil in the IAR 1.5X1.5m Wind Tunnel Facility p 21 N95-17850
The effect of initial conditions on the development of temporally evolving planar three dimensional incompressible wakes p 216 N95-21085
Direct simulation of tridimensional wake of NACA 0012 profile p 216 N95-21086
WALL FLOW
Finite element solution of viscous compressible flows in gas turbine ducts and diffusers p 189 N92-27477
Computational modelling of turbulent flow in S-bends p 189 N92-27480
Study of turbulence structure through numerical simulations: The perspective of drag and reduction p 3 N92-27713
Experimental study of heat transfer close to a plane wall heated in the presence of multiple injections (subsonic flow) p 84 N93-29931
Dynamics and control of coherent structures in the turbulent wall layer: An overview p 107 N94-11494
Experiments on the ground vortex formed by an impinging jet in cross flow p 202 N94-28016
2-D airfoil tests including side wall boundary layer measurements p 208 N95-17847
Data from the GARTEur (AD) Action Group 02 airfoil CAST 7/DOA1 experiments p 22 N95-17856
A supercritical airfoil experiment p 23 N95-17858
Boundary-flow measurement methods for wall interference assessment and correction: Classification and review p 210 N95-19262
Adaptive wind tunnel walls versus wall interference correction methods in 2D flows at high blockage ratios p 117 N95-19267
Interference determination for wind tunnels with slotted walls p 117 N95-19269
Calculation of low speed wind tunnel wall interference from static pressure pipe measurements p 211 N95-19273
Analysis of test section sidewall effects on a two dimensional airfoil: Experimental and numerical investigations p 211 N95-19276
Calculation of wall effects of flow on a perforated wall with a code of surface singularities p 211 N95-19277
Subgrid scale models in finite difference simulations of complex wall bounded flows p 212 N95-21063
Direct numerical simulation of turbulent flow in a sudden pipe expansion p 213 N95-21067
Large eddy simulation of turbulent flow over a cavity p 213 N95-21069
WALL JETS
Heat transfer in high turbulence flows: A 2-D planar wall jet p 195 N93-29935
Theoretical and experimental investigation of a delta wing with turbulent leading-edge jets p 18 N94-28029
WALL PRESSURE
Wall correction method with measured boundary conditions for low speed wind tunnels p 210 N95-19263
Estimating wind tunnel interference due to vectored jet flows p 210 N95-19265
Wall interaction effects for a full-scale helicopter rotor in the NASA Ames 80- by 120-foot wind tunnel p 29 N95-19270
WALL TEMPERATURE
Computation of 3D-viscous flow and heat transfer for the application to film cooled gas turbine blades p 187 N92-27456

Further investigation of the effect of model cooling on periodic transonic flow p 7 N92-27961

WALLS

Experimental study of heat transfer close to a plane wall heated in the presence of multiple injections (subsonic flow) p 84 N93-29931

Wall correction method with measured boundary conditions for low speed wind tunnels p 210 N95-19263

Computational simulations for some tests in transonic wind tunnels p 210 N95-19264

Wall interaction effects for a full-scale helicopter rotor in the NASA Ames 80- by 120-foot wind tunnel p 29 N95-19270

WAR GAMES

Airpower planning and battle management training at airbase level p 292 N92-27889

Optimal tactics for agile aircraft technology: A differential game methodology p 295 N94-34631

WARFARE

Interdiction mission planning and co-ordination during the Gulf conflict 17 January - 27 February 1991 p 292 N92-27888

Night operations p 275 N94-23977

Profile analysis of after-effects experienced during exposure to several virtual reality environments p 252 N94-37263

WARHEADS

The United States Air Force explosives hazards reduction program p 147 N92-33241

WARNING SYSTEMS

Automatic detection, pursuit, and classification in infrared imagery p 304 N92-32445

Model-based reasoning applied to cockpit warning systems p 266 N93-19778

The Satellite Attack Warning and Assessment Flight Experiment (SAWAFE) p 121 N94-11323

TacSats for NATO [AD-A277710] p 122 N94-30350

WATER

Royal Naval helicopter ditching experience p 32 N93-19684

Helicopter accidents over water in the national navy: Epidemiological study over the period 1980-1991 p 32 N93-19686

Helicopter crash survival at sea: United States Navy/Marine Corps experience 1977-1990 p 33 N93-19687

Aeromedical support for casualties in extremely hot climates p 277 N94-28443

WATER CONSUMPTION

Nutrition and hydration status of aircrew members consuming an improved survival ration during a simulated survival scenario p 249 N94-28429

WATER FLOW

An experimental study of siphonal jets in a turbulent boundary layer crossflow p 202 N94-28015

WATER IMMERSION

Fuelling shivering in humans during cold water immersion p 249 N94-28426

Advanced integrated cold protection for aircrew p 277 N94-28436

Emergency underwater breathing aids for helicopter passengers and crew p 277 N94-28437

A comparison of four methods of rewarming individuals cooled by immersion in cold water p 250 N94-28442

WATER TEMPERATURE

Effectiveness of protection clothing for cold weather conditions after ejection over sea: A case report p 277 N94-28435

WATER TUNNEL TESTS

Water tunnel studies of inlet/airframe interference phenomena p 194 N93-13216

Experimental data for CFD validation of impinging jets in crossflow with application to ASTOVL flow problems p 201 N94-28010

Topological structure of a jet in a cross flow p 202 N94-28014

WATER VAPOR

Fire-resistant water vapour permeable buoyant insulation p 276 N94-28431

On the effect of emissions from aircraft engines on the state of the atmosphere p 229 N94-29247

Propagation modeling of moist air and suspended water/ice particles at frequencies below 1000 GHz p 170 N94-30497

Estimation of transmittance from satellite imagery p 171 N94-30500

Non-polluting gas turbine as a result of self-heating working fluid in a closed circuit p 94 N94-34436

WATER WAVES

The effects of multipath scatter from wind driven gravity waves on lines of bearing serving as direction finders p 158 N93-23601

Measurements of radar backscatter from the ocean surface at 94 GHz as a function of wind speed, direction and the modulation by the ocean waves during the SAXON-FPN experiment p 184 N95-20960

WAVE DIFFRACTION

Ground wave and diffraction, A p 175 N95-14828

Ground wave and diffraction, B p 175 N95-14829

WAVE DISPERSION

Sensing of ELF signatures arising from space vehicle disturbances of the ionosphere p 232 N92-22809

WAVE DRAG

Comparison of performances of different circular intakes p 83 N93-17616

WAVE FRONT DEFORMATION

Adaptive optics for laser beamforming in the atmosphere p 222 N94-36621

WAVE INTERACTION

Direct numerical simulation of 2-D and 3-D instability waves in a laminar separation bubble p 218 N95-21095

WAVE PROPAGATION

Active remote sensing of the ionosphere and the Earth surface irregularities p 232 N92-22808

Remote sensing of the atmosphere by multi-channel radiometers p 232 N92-22816

A calibration technique for the CNET HF backscatter radar p 154 N92-22825

Lateral deviation of VLF radio waves due to diffraction and scattering from coast-lines, mountain ranges, and polar ice caps p 157 N93-23599

ELF/VLF/LF Radio Propagation and Systems Aspects [AGARD-CP-529] p 164 N93-30727

ELF propagation highlights p 165 N93-30730

VLF/LF propagation measurements p 165 N93-30732

VLF propagation measurements in the Canadian Arctic p 165 N93-30733

Investigations of equatorial ionosphere nighttime mode conversion at VLF p 166 N93-30735

Lightning-induced effects on VLF/LF radio propagation p 166 N93-30737

Comparative study of undersea fields produced by various dipoles p 167 N93-30740

A methodology and tool for the prediction of depth of reception in the sea for a VLF/LF communications system p 167 N93-30741

Vibrations of structures with cyclic symmetry: Application to the case of turbine engines p 227 N94-34463

Electro-optics: Propagation from IR to UV and sensor considerations. Part A: Propagation theory p 175 N95-14833

Electro-optics: Propagation from IR to UV and sensor considerations. Part B: Tools for exploitation of propagation conditions and system range performance p 176 N95-14834

Effects of hydrometeors and atmospheric gases at SHF/EHF p 176 N95-14835

Multiple Mechanism Propagation Paths (MMPPs): Their Characterisation and Influence on System Design [AGARD-CP-543] p 176 N95-20921

Propagation of high frequency waves in urban and road tunnel environments p 178 N95-20933

The effects of multihop HF propagation on the performance of OTH backscatter radars p 183 N95-20953

WAVE REFLECTION

Electromagnetic wave reflection from irregular plasma layers p 182 N95-20952

WAVE SCATTERING

Digital channel sounder for remote sensing of scatterers in mobile radio environment p 153 N92-22820

Electromagnetic wave reflection from irregular plasma layers p 182 N95-20952

WAVEGUIDES

Active remote sensing of the ionosphere and the Earth surface irregularities p 232 N92-22808

Nonlinear effects in optical fibers p 304 N92-28088

Lateral deviation of VLF radio waves due to diffraction and scattering from coast-lines, mountain ranges, and polar ice caps p 157 N93-23599

Numerical modeling of the propagation medium at VLF/LF p 164 N93-30729

WEAPON SYSTEM MANAGEMENT

Risk analysis of the C-141 WS405 inner-to-outer wing joint p 62 N94-34592

WEAPON SYSTEMS

Development and evaluation of an attack and maneuvering system with combat development simulators as main development tool p 113 N92-28541

Operational needs for an unmanned air vehicle p 293 N92-32438

Multisensor airborne target acquisition systems and their integration p 73 N92-32439

A visual of the helmet for the piloting and the day/night navigation of the combat aircraft: Requirements and technical approaches p 38 N93-19768

Test and evaluation challenges in the nineties p 52 N93-19902

Advances in Guidance and Control of Precision Guided Weapons [AGARD-CP-524] p 149 N93-22018

Linear payout systems for dispensing fiber-optic data links from precision-guided munitions or high-performance aircraft/missles p 305 N93-22026

Versatile attack weapon p 149 N93-22027

System concept for an advanced stand-off weapon p 149 N93-22029

Opportunities and challenges in avionics integration, INS/GPS: A case study p 39 N93-22782

Combat Automation for Airborne Weapon Systems: Man/Machine Interface Trends and Technologies [AGARD-CP-520] p 268 N93-28850

Pilot decision aiding for weapon delivery: A novel approach to fire control cueing using parallel computing p 268 N93-28853

Virtual interface applications for airborne weapons systems p 268 N93-28858

Early manufacturing considerations in design p 58 N94-24315

A common Ada run-time system for avionics software p 75 N94-29331

Validation and test of complex weapon systems p 75 N94-29336

Testing Operational Flight Programs (OFPs) p 285 N94-29337

A disciplined approach to software test and evaluation p 286 N94-29339

Operational agility [AD-A283336] p 61 N94-33875

WEAPONS

Scale effects on aircraft and weapon aerodynamics [AGARD-AG-323] p 19 N95-14103

WEAPONS DELIVERY

AGARD flight test techniques series. Volume 10: Weapon delivery analysis and ballistic flight testing [AGARD-AG-300-VOL-10] p 293 N93-11711

Pilot decision aiding for weapon delivery: A novel approach to fire control cueing using parallel computing p 268 N93-28853

WEAPONS DEVELOPMENT

Operational agility: An overview of AGARD Working Group 19 p 65 N94-34625

WEAR RESISTANCE

High velocity oxygen fuel spraying of erosion and wear resistant coatings on jet engine parts p 103 N95-19680

WEATHER FORECASTING

Winter storms research in Canada p 234 N95-14895

WEIBULL DENSITY FUNCTIONS

Statistical characterization of rare events p 291 N94-37327

WEIGHT REDUCTION

Aspects of compression in aerospace composites: Future requirements p 126 N92-33036

WHEAT

Paint removal using wheat starch blast media p 151 N94-10627

WHEELS

Contribution of the analysis of ocular activity (complementary to the electroencephalographic analysis) to the detection of low vigilance in instances of piloting a vehicle p 244 N93-19708

WIND (METEOROLOGY)

Stability model of the atmosphere p 233 N94-11500

WIND EFFECTS

Deterioration of manual performance in cold and windy climates p 249 N94-28434

WIND PROFILES

Compact laser Doppler anemometer p 219 N92-22815

WIND SHEAR

On non-linear longitudinal stability of an aircraft in a dive in the presence of atmospheric disturbances p 107 N94-11492

Wind shear and its effects on aircraft p 36 N95-14898

Heavy rain effects p 36 N95-14899

WIND TUNNEL CALIBRATION

The traditional and new methods of accounting for the factors distorting the flow over a model in large transonic wind tunnels p 211 N95-19275

Analysis of test section sidewall effects on a two dimensional airfoil: Experimental and numerical investigations p 211 N95-19276

Calculation of wall effects of flow on a perforated wall with a code of surface singularities p 211 N95-19277

Interference corrections for a centre-line plate mount in a porous-walled transonic wind tunnel p 29 N95-19280

Correction of support influences on measurements with sting mounted wind tunnel models p 29 N95-19281

WIND TUNNEL MODELS

Investigation of the aeroelastic stability of the AFW wind-tunnel model using CAP-TSD p 6 N92-27955

Aerodynamic integration of thrust reversers on the Fokker 100 p 51 N93-13208

Mass flow effects on the low speed characteristics of an advanced combat aircraft p 7 N93-13214

A novel-high-performance system for recording and analysing instantaneous total pressure distortion in air intakes p 219 N93-13215
A study of the use of half-models in high-lift wind-tunnel testing p 16 N94-18434
High lift systems for transport aircraft with advanced airfoils p 57 N94-18446
A combined approach to buffet response analyses and fatigue life prediction p 228 N94-34587
Dynamic tests to demonstrate lateral control using forebody suction on large scale models in the DRA 24 foot wind tunnel p 109 N94-34613
Evaluation of combined wall- and support-interference on wind tunnel models p 29 N95-19278
Interaction of a three strut support on the aerodynamic characteristics of a civil aviation model p 29 N95-19279
Interference corrections for a centre-line plate mount in a porous-walled transonic wind tunnel p 29 N95-19280
Correction of support influences on measurements with sting mounted wind tunnel models p 29 N95-19281
Calculation of support interference in dynamic wind-tunnel tests p 30 N95-19282

WIND TUNNEL NOZZLES

A CFD-based aerodynamic design procedure for hypersonic wind-tunnel nozzles p 116 N94-10458

WIND TUNNEL TESTS

Survey of experimental techniques for performance prediction p 49 N92-23954
Test techniques for engine/airframe integration p 192 N93-13200
Tests of models equipped with TPS in low speed ONERA F1 pressurized wind tunnel p 193 N93-13201
Detailed analysis of wing-nacelle interaction for commercial transport aircraft p 193 N93-13203
Recent developments in low-speed TPS-testing for engine integration drag and installed thrust reversr simulation p 51 N93-13207
Aerodynamic integration of thrust reversers on the Fokker 100 p 51 N93-13208
Flight analysis of air intake/engine compatibility p 51 N93-13212
ASTOVL model engine simulators for wind tunnel research p 115 N93-13213
Mass flow effects on the low speed characteristics of an advanced combat aircraft p 7 N93-13214
A novel-high-performance system for recording and analysing instantaneous total pressure distortion in air intakes p 219 N93-13215
Comparative performance tests of a pitot-inlet in several European wind-tunnels at subsonic and supersonic speeds p 7 N93-13221
AM-X high angle of attack flight test experience (single and two seat versions) p 53 N93-19910
System identification for X-31A project support: Lessons learned so far p 54 N93-19914
Natural laminar flow test in-flight visualization p 8 N93-19921
Development and flight testing of a surface pressure measurement installation on the EAP demonstrator aircraft p 219 N93-19927
On the development of a film cooling layer p 197 N93-29959
Experimental results in aerodynamic stability and control of a TSTO configuration p 106 N94-10424
New hypersonic test methods developed at ONERA: The R5 and F4 wind tunnels p 55 N94-10429
Design and production of insulated wind tunnel models of the Hermes shuttle for heat transfer measurements at hypersonic speeds p 116 N94-10431
Experimental and computational comparisons of Mach 6 high Reynolds number heat transfer and skin friction p 10 N94-10443
Joint computational and experimental aerodynamic research on a hypersonic vehicle p 10 N94-10445
Some experimental study and numerical simulation in wind tunnel flow p 12 N94-10457
Boundary layer transition: Prediction and wind tunnel simulation p 198 N94-11498
Modeling nonlinear aerodynamic loads for aircraft stability and control analysis p 108 N94-11499
Experimental investigation of flow around a multielement airfoil p 14 N94-18417
High Reynolds number configuration development of a high-lift airfoil p 15 N94-18424
The GARTEUR high lift research programme p 16 N94-18430
An experimental investigation of the optimum slat setting on a combat aircraft model p 56 N94-18431
An experimental investigation of attachment-line transition on the slat of a combat aircraft model p 56 N94-18432
A study of the use of half-models in high-lift wind-tunnel testing p 16 N94-18434
High-lift design for large civil aircraft p 57 N94-18445
High lift systems for transport aircraft with advanced airfoils p 57 N94-18446
Transient flow features of a supersonic jet in a low speed cross flow p 200 N94-28005
Experimental investigation of the interaction of a thrust reverser jet with an external subsonic flow p 201 N94-28011
Experiments on the ground vortex formed by an impinging jet in cross flow p 202 N94-28016
Experiments on interaction force of jets in hypervelocity cross-flow in a shock tunnel p 17 N94-28022
Design and analysis of a highly loaded transonic compressor cascade p 206 N94-34451
A combined approach to buffet response analyses and fatigue life prediction p 228 N94-34587
Dynamic tests to demonstrate lateral control using forebody suction on large scale models in the DRA 24 foot wind tunnel p 109 N94-34613
Scale effects on aircraft and weapon aerodynamics [AGARD-AG-323] p 19 N95-14103
Quality assessment for wind tunnel testing [AGARD-AR-304] p 19 N95-14197
A selection of experimental test cases for the validation of CFD codes, volume 1 [AGARD-AR-303-VOL-1] p 208 N95-14201
A selection of experimental test cases for the validation of CFD codes, volume 2 [AGARD-AR-303-VOL-2] p 21 N95-17846
2-D airfoil tests including side wall boundary layer measurements p 208 N95-17847
Measurements on a two-dimensional aerofoil with high-lift devices p 21 N95-17848
Investigation of the flow over a series of 14 percent-thick supercritical aerofoils with significant rear camber p 21 N95-17849
Surface pressure and wake drag measurements on the Boeing A4 airfoil in the IAR 1.5X1.5m Wind Tunnel Facility p 21 N95-17850
2-D aileron effectiveness study p 21 N95-17851
Investigation of an NLF(1)-0416 airfoil in compressible subsonic flow p 22 N95-17852
Experiments in the trailing edge flow of an NLR 7702 airfoil p 22 N95-17853
Two-dimensional 16.5 percent thick supercritical airfoil NLR 7301 p 22 N95-17854
Low-speed surface pressure and boundary layer measurement data for the NLR 7301 airfoil section with trailing edge flap p 22 N95-17855
Data from the GARTEur (AD) Action Group 02 airfoil CAST 7/DOA1 experiments p 22 N95-17856
OAT15A airfoil data p 23 N95-17857
A supercritical airfoil experiment p 23 N95-17858
Two-dimensional high-lift airfoil data for CFD code validation p 23 N95-17859
Measurements of the flow over a low aspect-ratio wing in the Mach number range 0.6 to 0.87 for the purpose of validation of computational methods. Part 1: Wing design, model construction, surface flow. Part 2: Mean flow in the boundary layer and wake, 4 test cases p 23 N95-17860
Detailed study at supersonic speeds of the flow around delta wings p 24 N95-17861
Pressure distributions on research wing W4 mounted on an axisymmetric body p 24 N95-17862
DLR-F4 wing body configuration p 71 N95-17863
DLR-F5: Test wing for CFD and applied aerodynamics p 24 N95-17864
Low aspect ratio wing experiment p 24 N95-17865
Wind tunnel investigations of the appearance of shocks in the windward region of bodies with circular cross section at angle of attack p 25 N95-17866
Three-dimensional boundary layer and flow field data of an inclined prolate spheroid p 208 N95-17867
Force and pressure data of an ogive-nosed slender body at high angles of attack and different Reynolds numbers p 25 N95-17868
Ellipsoid-cylinder model p 208 N95-17869
Supersonic vortex flow around a missile body p 25 N95-17870
Test data on a non-circular body for subsonic, transonic and supersonic Mach numbers p 209 N95-17871
Wind tunnel test on a 65 deg delta wing with a sharp or rounded leading edge: The international vortex flow experiment p 25 N95-17872
Delta-wing model p 25 N95-17873
Experimental investigation of the vortex flow over a 76/60-deg double delta wing p 26 N95-17874
Wind tunnel test on a 65 deg delta wing with rounded leading edges: The International Vortex Flow Experiment p 26 N95-17875
Investigation of the flow development on a highly swept canard/wing research model with segmented leading- and trailing-edge flaps p 26 N95-17876
Subsonic flow around US-orbiter model FALKE in the DNW p 26 N95-17877
Low speed propeller slipstream aerodynamic effects p 27 N95-17882
Wall Interference, Support Interference and Flow Field Measurements [AGARD-CP-535] p 209 N95-19251
The crucial role of wall interference, support interference and flow field measurements in the development of advanced aircraft configurations p 209 N95-19252
Improvement and validation of an LDV system to perform measurements in laminar supersonic flows p 221 N95-19256
The utilization of a high speed reflective visualization system in the study of transonic flow over a delta wing p 28 N95-19259
Transonic and supersonic flowfield measurements about axisymmetric afterbodies for validation of advanced CFD codes p 28 N95-19260
Determination of solid/porous wall boundary conditions from wind tunnel data for computational fluid dynamics codes p 211 N95-19266
Adaptive wind tunnel walls versus wall interference correction methods in 2D flows at high blockage ratios p 117 N95-19267
Development of pneumatic test techniques for subsonic high-lift and in-ground-effect wind tunnel investigations p 29 N95-19268
Interference determination for wind tunnels with slotted walls p 117 N95-19269
Wall interaction effects for a full-scale helicopter rotor in the NASA Ames 80- by 120-foot wind tunnel p 29 N95-19270
Unsteady flow testing in a passive low-correction wind tunnel p 118 N95-19272
Calculation of low speed wind tunnel wall interference from static pressure pipe measurements p 211 N95-19273
The traditional and new methods of accounting for the factors distorting the flow over a model in large transonic wind tunnels p 211 N95-19275
Analysis of test section sidewall effects on a two dimensional airfoil: Experimental and numerical investigations p 211 N95-19276
Calculation of wall effects of flow on a perforated wall with a code of surface singularities p 211 N95-19277
Evaluation of combined wall- and support-interference on wind tunnel models p 29 N95-19278
Interaction of a three strut support on the aerodynamic characteristics of a civil aviation model p 29 N95-19279
Interference corrections for a centre-line plate mount in a porous-walled transonic wind tunnel p 29 N95-19280
Correction of support influences on measurements with sting mounted wind tunnel models p 29 N95-19281
Calculation of support interference in dynamic wind-tunnel tests p 30 N95-19282

WIND TUNNEL WALLS

Further investigation of the effect of model cooling on periodic transonic flow p 7 N92-27961
Surface pressure and wake drag measurements on the Boeing A4 airfoil in the IAR 1.5X1.5m Wind Tunnel Facility p 21 N95-17850
2-D aileron effectiveness study p 21 N95-17851
Data from the GARTEur (AD) Action Group 02 airfoil CAST 7/DOA1 experiments p 22 N95-17856
OAT15A airfoil data p 23 N95-17857
A supercritical airfoil experiment p 23 N95-17858
Two-dimensional high-lift airfoil data for CFD code validation p 23 N95-17859
Wall Interference, Support Interference and Flow Field Measurements [AGARD-CP-535] p 209 N95-19251
The crucial role of wall interference, support interference and flow field measurements in the development of advanced aircraft configurations p 209 N95-19252
Boundary-flow measurement methods for wall interference assessment and correction: Classification and review p 210 N95-19262
Estimating wind tunnel interference due to vectored jet flows p 210 N95-19265
Determination of solid/porous wall boundary conditions from wind tunnel data for computational fluid dynamics codes p 211 N95-19266
Adaptive wind tunnel walls versus wall interference correction methods in 2D flows at high blockage ratios p 117 N95-19267
Interference determination for wind tunnels with slotted walls p 117 N95-19269
Unsteady flow testing in a passive low-correction wind tunnel p 118 N95-19272
Analysis of test section sidewall effects on a two dimensional airfoil: Experimental and numerical investigations p 211 N95-19276
Calculation of wall effects of flow on a perforated wall with a code of surface singularities p 211 N95-19277
Evaluation of combined wall- and support-interference on wind tunnel models p 29 N95-19278

WIND TUNNELS

CFD contributions during hypersonic airplane intake design p 188 N92-27472
Further investigation of the effect of model cooling on periodic transonic flow p 7 N92-27961

Non-propulsive aerodynamic noise
p 297 N93-10673
The upgrading of the arc heated wind tunnel of the DLR (LBK) with respect to its effects on the material testing p 116 N94-10432
Control of leading-edge separation on a cambered delta wing p 109 N94-34616
Quality assessment for wind tunnel testing
| AGARD-AR-304 | p 19 N95-14197
STOVL CFD model test case p 27 N95-17881
Wall correction method with measured boundary conditions for low speed wind tunnels
p 210 N95-19263
Estimating wind tunnel interference due to vectored jet flows p 210 N95-19265
Development of pneumatic test techniques for subsonic high-lift and in-ground-effect wind tunnel investigations p 29 N95-19268
Wall interaction effects for a full-scale helicopter rotor in the NASA Ames 80- by 120-foot wind tunnel
p 29 N95-19270

WIND VELOCITY
Compact laser Doppler anemometer
p 219 N92-22815
Prediction of survival times on land in a cold climate
p 248 N94-28423
Measurements of radar backscatter from the ocean surface at 94 GHz as a function of wind speed, direction and the modulation by the ocean waves during the SAXON-FPN experiment p 184 N95-20960

WINDSHIELDS
Cockpit/NVG visual integration issues
p 276 N94-23983

WING FLAPS
High-Lift System Aerodynamics
| AGARD-CP-515 | p 1 N94-18415
Where is high-lift today? A review of past UK research programmes p 1 N94-18416
Experimental investigation of flow around a multielement airfoil p 14 N94-18417
A design procedure for slotted flaps
p 56 N94-18418
Low-speed surface pressure and boundary layer measurement data for the NLR 7301 airfoil section with trailing edge flap p 22 N95-17855

WING FLOW METHOD TESTS
Numerical simulation of a powered-lift landing
p 60 N94-28033

WING LOADING
2-D aileron effectiveness study p 21 N95-17851

WING NACELLE CONFIGURATIONS
Detailed analysis of wing-nacelle interaction for commercial transport aircraft p 193 N93-13203
Aerodynamic analysis of slipstream/wing/nacelle interference for preliminary design of aircraft configurations p 7 N93-13205
Euler analysis of turbofan/superfan integration for a transport aircraft p 193 N93-13206
Recent developments in low-speed TPS-testing for engine integration drag and installed thrust reversr simulation p 51 N93-13207
Application of subsonic first-order panel methods for prediction of inlet and nozzle aerodynamic interactions with airframe p 8 N93-13223

WING PANELS
Transonic wind tunnel investigation of limit cycle oscillations on fighter type wings p 6 N92-27959

WING PLANFORMS
Aerodynamic design of super maneuverable aircraft
p 64 N94-34617

WING PROFILES
Direct simulation of tridimensional wake of NACA 0012 profile p 216 N95-21086

WING SLOTS
A design procedure for slotted flaps
p 56 N94-18418

WING TANKS
Flight test certification of a 480 gallon composite fuel tank on CF-18 p 68 N94-36340

WINGS
Sensitivity analysis of dynamic aeroelastic responses
p 104 N92-23229
Application of multidisciplinary optimization methods to the design of a supersonic transport p 47 N92-23230
Application of analytical and design tools for fighter wing aeroelastic tailoring p 47 N92-23231
The structural optimization system OPTSYS: Current status and applications p 47 N92-23232
Simultaneous stress and flutter optimization for the wing of a transport aircraft equipped with four engines
p 105 N92-23238
Recent applications of linear and nonlinear unsteady aerodynamics for aeroelastic analysis p 4 N92-27940
A time-linearization approach for unsteady transonic flows p 4 N92-27941
Evaluation of an unsteady implicit Euler code against two and three-dimensional standard configurations
p 4 N92-27945
Computation of viscous phenomena in unsteady transonic flow p 5 N92-27949
Transonic aeroelastic calculations in both the time and frequency domains p 5 N92-27950
Analysis of unsteady aerodynamic and flutter characteristics of an aeroelastic model in transonic flow
p 6 N92-27953
Transonic wind tunnel investigation of limit cycle oscillations on fighter type wings p 6 N92-27959
A review of scale effects on surfaces in unsteady motion p 7 N92-27962
High-Lift System Aerodynamics
| AGARD-CP-515 | p 1 N94-18415
Prediction of the high-lift performance of multi-element aerofoils using an unstructured Navier-Stokes solver
p 15 N94-18427
The GARTEUR high lift research programme
p 16 N94-18430
Viscous phenomena affecting high-lift systems and suggestions for future CFD development
p 16 N94-18433
In-flight pressure distributions and skin-friction measurements on a subsonic transport high-lift wing section p 16 N94-18435
A fast computing method for the flow over high-lift wings p 16 N94-18437
Calculation of multielement airfoils and wings at high lift p 17 N94-18438
Forty years of high-lift R/D: An aircraft manufacturer's experience p 1 N94-18441
High-lift research: Application to the design of the ATR72 flap p 57 N94-18442
The aero-mechanical design of a novel Fowler flap mechanism p 57 N94-18443
High lift systems for transport aircraft with advanced airfoils p 57 N94-18446
Effects, limits, and limitations of spanwise blowing
p 18 N94-28027
Risk analysis of the C-141 WS405 inner-to-outer wing joint p 62 N94-34592
Computational aerodynamics based on the Euler equations
| AGARD-AG-325 | p 19 N95-14264
Aerodynamic shape optimization p 71 N95-16572
Investigation of the influence of pylons and stores on the wing lower surface flow p 28 N95-17885

WIRE
Reliability assessment of Multichip Module technologies via the Triservice/NASA RELTECH program p 226 N95-20643

WORK CAPACITY
Expanding the pilot's envelope p 278 N94-34627

WORKING FLUIDS
Non-polluting gas turbine as a result of self-heating working fluid in a closed circuit p 94 N94-34436

WORKLOADS (PSYCHOPHYSIOLOGY)
A teamwork model of pilot aiding: Psychological principles for mission management systems design
p 292 N92-27893
Shipboard mission training effectiveness of the Naval Air Test Center's V-22 government test pilot trainer
p 113 N92-28542
Use of microprocessor-based simulator technology and MEG/EEG measurement techniques in pilot emergency-manoeuver training p 115 N93-19706
Pilot decision aiding for weapon delivery: A novel approach to fire control cueing using parallel computing
p 268 N93-28853
A new class of mission support for combat air-crew
p 293 N93-28854
Human capabilities and limitations in situation awareness p 269 N93-28863
New Advances in Mission Planning and Rehearsal Systems
| AGARD-LS-192 | p 293 N94-25008
Human factors of mission planning systems: Theory and concepts p 294 N94-25010
Expanding the pilot's envelope p 278 N94-34627

WORKSTATIONS
From an automated flight-test management system to a flight-test engineer's workstation p 282 N92-27907
Intelligent gateways p 308 N92-32184
ACCS Surveillance Exploratory Prototype (ASEP)
p 170 N94-29566

X

X RAY ABSORPTION
X-ray absorption spectroscopy in high temperature oxidation of metals and alloys p 144 N95-19682

X WING ROTORS
Wall interaction effects for a full-scale helicopter rotor in the NASA Ames 80- by 120-foot wind tunnel
p 29 N95-19270

X-29 AIRCRAFT
X-29: Longitudinal instability at high angle-of-attack
p 108 N94-11504
High lift and the forward swept wing
p 57 N94-18436
Damage tolerance management of the X-29 vertical tail p 62 N94-34595

X-31 AIRCRAFT
X-31A high angle of attack and initial post stall flight testing p 54 N93-19911
System identification for X-31A project support: Lessons learned so far p 54 N93-19914
X-31 demonstration of integrated flight and propulsion control for effective combat at extreme angles of attack
p 106 N93-28851
X-31A system identification applied to post-stall flight: Aerodynamics and thrust vectoring p 110 N94-34619
X-31 tactical utility: Initial results p 64 N94-34620

XANTHINES
Biochemical enhancement of cold tolerance
p 249 N94-28427

Y

YAW
Yaw control by tangential forebody blowing
p 109 N94-34615
Study findings on the influence of maneuverability and agility on helicopter handling qualities
p 64 N94-34624

YAWING MOMENTS
Yaw control by tangential forebody blowing
p 109 N94-34615

YC-14 AIRCRAFT
Design, development, and flight evaluation of the Boeing YC-14 USB powered lift aircraft
p 57 N94-18444

YF-16 AIRCRAFT
Human factors causes and management strategies in US Air Force F-16 mishaps 1984-present
p 31 N93-19673

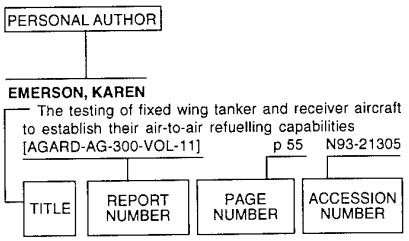
YIELD POINT
Effect of impacts on CFRP structures, results of a comprehensive test program for practical use
p 132 N93-21534

YTTRIUM OXIDES
Thermal testing of high performance thermal barrier coatings for turbine blades p 103 N95-19681

Z

ZIRCONIUM OXIDES
Thermal testing of high performance thermal barrier coatings for turbine blades p 103 N95-19681

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. When a title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The titles are arranged under each author in ascending accession number order. The report number helps to indicate the type of document cited. It is given only for complete publications, not for individual papers. The page number helps you locate the citation in the abstract section. The accession number is the number by which the document is identified on that page.

A

AARONS, JULES
The longitudinal occurrence of equatorial F layer irregularities p 158 N93-23605
Mitigation of the effects of F layer regularities by using multiple paths p 182 N95-20951

ABDULAZIZ, M.
Ultra low NO(x) ultra lean gas turbine primary zones with liquid fuels p 91 N94-29267

ABDULHUSSAIN, U. S.
Ultra low NO(x) ultra lean gas turbine primary zones with liquid fuels p 91 N94-29267

ABGRALL, REMI
Synthesis of the Workshop on Hypersonic Flows for ReEntry Problems p 9 N94-10440

ABOLFADL, MOHAMED A.
Application of CFD in the design of gas turbine engine components p 78 N92-27461

ABOU-HAIDAR, N. I.
Computational modelling of turbulent flow in S-bends p 189 N92-27480

ABRAHAM, JACOB
The Advanced Avionics Subsystem Technology Demonstration Program p 77 N95-20636

ABRAMS, RICHARD
YF-22A prototype advanced tactical fighter demonstration/validation flight test program overview p 53 N93-19906

ABSIL, L. H. J.
Experiments in the trailing edge flow of an NLR 7702 airfoil p 22 N95-17853

ACHEROY, MARC
Knowledge combination and data fusion with application to recognition systems p 287 N94-30513

ACKERMAN, M. Y.
Thermal protective performance and instrumented mannequin evaluation of multi-layer garment systems p 277 N94-28433

ADAM, V.
On board planning of 4D-trajectories p 37 N92-27897
DLR's ATM demonstration programme p 44 N94-29575
Experimental flight management system p 45 N94-29580

ADAMCZYK, J. J.
A mathematical constraint placed upon inter-blade row boundary conditions used in the simulation of multistage turbomachinery flows p 187 N92-27458

ADAMS, N. A.
Numerical simulation of supersonic boundary layer transition p 214 N95-21074

ADAPALLI, SRIDHAR
Manual tracking performance using a virtual hand controller: A comparison study p 280 N94-37271

ADJARDOUZOV, P. A. K.
CIAM experimental turboramjets p 93 N94-29299

ADOLPH, CHARLES E.
Test and evaluation challenges in the nineties p 52 N93-19902

ADVANI, S.
An evaluation of IFR approach techniques: Generic helicopter simulation compared with actual flight p 114 N92-28550

AESCHLIMAN, DANIEL P.
Joint computational and experimental aerodynamic research on a hypersonic vehicle p 10 N94-10445

AGARWAL, R. K.
Transonic wind tunnel boundary interference correction p 117 N95-19271
The demise of plastic encapsulated microcircuit myths p 185 N95-20640

AGATONOVIC, P.
Integrated approach in modelling, testing, and design of gradient-CVI derived CMC components p 146 N94-24239

AGELIDIS, A.
Allergic and nonallergic rhinitis in Greek pilots p 242 N93-11317

AGNES, GREGORY S.
Aircraft smart structures research in the USAF Wright Laboratory p 134 N94-11343

AGRANIER, L.
Localization system based on data merging of images and inertia p 162 N93-23623

AGRAWAL, SHREEKANT
Navier-Stokes calculations on multi-element airfoils using a chimera-based solver p 14 N94-18422

AGRELL, JOHAN
Transonic and supersonic flowfield measurements about axisymmetric afterbodies for validation of advanced CFD codes p 28 N95-19260

AGRELL, NADA
Computational simulations for some tests in transonic wind tunnels p 210 N95-19264

AGUADO, M. T.
Future approaches to vaccine development single-dose vaccines using controlled-release delivery systems p 240 N93-11310

AHMED, M. JAMIL
Terrain and coverage prediction analyses for non-geostationary orbit EHF satellite communications p 164 N93-29902

AIUTI, FERNANDO
Silent HIV infection p 236 N93-11293

AKMANDOR, I. SINAN
Three dimensional solution of internal flows using a cell vertex finite volume method p 188 N92-27473

AKMANDOR, IBRAHIM SINAN
Navier-Stokes simulation of two and three dimensional jets in crossflow, effects of grid, and boundary conditions p 203 N94-28026

AKSELVOLL, K.
Developments and applications of dynamic models for large eddy simulation of complex flows p 212 N95-21062

ALCON, J. L. GARCIA
An epidemiological study in SAF's pilots ejections p 263 N93-19699

ALCON, JOSE L. GARCIA
Objective improvements obtained by control of diet and physical training in Spanish Air Force fighter pilots p 273 N93-32258

ALDABAGH, A. M.
Impingement/effusion cooling p 197 N93-29954

ALEM, NABIH M.
The effectiveness of airbags in reducing the severity of head injury from gunsight strikes in attack helicopters p 34 N93-19691

ALEMDAROGLU, NAFIZ
Experimental investigation of flow around a multielement airfoil p 14 N94-18417

ALEXANDER, D.
Development of a minimum smoke propellant based on glycidyl azide polymer and ammonium nitrate p 147 N92-33243

ALFORD, R. E.
Risk analysis of the C-141 WS405 inner-to-outer wing joint p 62 N94-34592

ALGE, T. L.
Modern transport engine experience with environmental ingestion effects p 100 N95-19660

ALIZADEH, S.
Flowfield prediction of NO(x) and smoke production in aircraft engines p 140 N94-29252

ALKABIE, H. S.
Ultra low NO(x) ultra lean gas turbine primary zones with liquid fuels p 91 N94-29267

ALLEGRE, J.
Control jets in interaction with hypersonic rarefied flow p 122 N94-28020

ALLEN, S. NICHOLAS
Development of a new chemical warfare agent protective material p 276 N94-28432

ALLMAN, D. J.
GARTEUR damage mechanics for composite materials: Analytical/experimental research on delaminations p 129 N93-21513

ALLOUCHE, R.
DAISY: A decision aid for an air situation interpretation system p 44 N94-29574

ALMOSNINO, D.
Calculation of support interference in dynamic wind-tunnel tests p 30 N95-19282

ALNAES, E.
Operational use of contact lenses by military aircrew [AGARD-AG-334] p 242 N93-15824

ALONSO, C.
Cardiovascular Risk Factors (CVRF) in Spanish pilots with coronary artery disease demonstrated by angiographic studies p 245 N93-32253

ALPERINE, S.
New Trends in coatings developments for turbine blades: Materials processing and repair p 103 N95-19676

ALPERT, Y. L.
The cone structure and focusing of the electric field of VLF and LF waves at high altitudes of the ionosphere p 165 N93-30731

ALTINTAS, A.
Calculation of turbulence degraded point spread function of an imaging system p 173 N94-30514

ALVAREZ, J.
Predictions of momentum and scalar fields in a jet in cross-flow using first and second order turbulence closures p 203 N94-28025

AMALBERTI, R.
Cognitive factors in the air events of the Air Force during the last decade p 259 N93-19682

AMALBERTI, RENE
Mental images p 260 N94-23980
Multi-sensoral approach to night flight: Perceptive and Cognitive limitations p 275 N94-23981

ANASTASSOPOULOS, A. A.
Defect analysis using advanced interpretation of the reflected wave during ultrasonic scanning p 224 N93-21528

ANDERSEN, H. T.
Portable equipment developed to estimate energy expenditure by simultaneous recording of heart rate and body position p 271 N93-32243
Changes in food and energy intake in military aircrew p 271 N93-32246
Changes in some lifestyle parametres in Norwegian pilots as students, and after 6 and 12 years of service p 273 N93-32261

ANDERSEN, HARALD T.

YAGCI, HUSEYIN
Navier-Stokes analysis of a swirling jet in crossflow
p 204 N94-28038

YALUG, O.
Assessment of morale in Turkish Air Force pilots with two clinical psychological tests p 259 N93-19660

YAMAGUCHI, YOSHIO
Basic equations of radar polarimetry and solutions the sensing of propagation path polarization state changes
p 153 N92-22821
Adaptive communications polarimetry: Sensing of propagation path changes and adaptation to optimal performance in cellular communications
p 153 N92-22822

YAN, WEI-LING
Basic equations of radar polarimetry and solutions the sensing of propagation path polarization state changes
p 153 N92-22821

YANISHEVSKY, MARKO
Material characterization and fractographic examination of Ti-17 fatigue crack growth specimens for SMP SC33 p 88 N93-31744

YANTA, WILLIAM J.
Velocity measurements in hypersonic flows: A review
p 9 N94-10436

YATES, J. TERRY
Color vision issues in modern military aviation or the search for the Abominable Coneman
p 258 N95-19441

YAVUZ, D.
Highly survivable communications: Complementary media packet switched networks p 176 N95-20922

YAWORSKY, PAUL S.
Improving Multichip Module (MCM) design and reliability using the Intelligent MCM Analyzer
p 225 N95-20637

YEE, Y. P.
Analysis algorithms for processing ultraviolet fluorescence data p 221 N92-22823

YEE, YOUNG P.
Inverting radiometric measurements with a neural network p 233 N92-22818
Multispectral transmittance measurements through man-made water fogs p 171 N94-30499

YEH, K. C.
Sensing the ionospheric reflection channel with a sounder p 231 N92-22802

YEUNG, P. K.
Analysis of subgrid models using direct and large-eddy simulations of isotropic turbulence p 214 N95-21071

YEVICH, S. D. HART
Nutritional assessment of United States tactical air command pilots p 271 N93-32242

YEVICH, S. J.
Nutritional assessment of United States tactical air command pilots p 271 N93-32242

YILDIZ, IMRE
National scene in information and documentation activities and recent developments in the Documentation Center of TUBITAK (TURDOK) p 310 N93-10594

YIP, B.
Combustion instabilities in a side-dump model ramjet combustor p 82 N93-17613

YIP, LONG P.
In-flight pressure distributions and skin-friction measurements on a subsonic transport high-lift wing section p 16 N94-18435

YORK, B. J.
Recent developments in the simulation of steady and transient transverse jet interactions for missile, rotorcraft, and propulsive applications
p 203 N94-28030

YOUNG, A. D.
Vortex flow aerodynamics
[AGARD-AR-299] p 7 N92-30947
Scale effects on aircraft and weapon aerodynamics
[AGARD-AG-323] p 19 N95-14103

YOUNG, D. P.
Analysis of unsteady aerodynamic and flutter characteristics of an aeroelastic model in transonic flow
p 6 N92-27953

Z

ZACHAROV, N.
Scramjet CFD methods and analysis. Part 1: Scramjet CFD methods. Numerical simulation of the flow in scramjet duct p 92 N94-29296

ZAIDI, SOHAIL H.
Nozzle guide vane flow in radial inflow turbines
p 97 N94-34460

ZAITSEV, S.
Scramjet CFD methods and analysis. Part 2: Scramjet CFD analysis. Numerical simulation of supersonic mixing and combustion applied to scramjet combustor
p 93 N94-29300

ZANETTI, A. R.
Vaccination against Hepatitis B: The Italian strategy
p 236 N93-11289

ZARIFI-RAD, F.
Further investigation of the effect of model cooling on periodic transonic flow p 7 N92-27961

ZATMAN, M. A.
Superresolution direction finding algorithms for the characterisation of multi-moded HF signals
p 184 N95-20958

ZAVIDOVIQUE, B.
Silicon vision: Elementary functions to be implemented on electronic retinas p 289 N93-13242

ZEDAN, MOHAMED G.
Application of CFD in the design of gas turbine engine components p 78 N92-27461

ZEH, JAMES M.
Full mission simulation for research and development of air combat flight and attack management systems
p 112 N92-28538

ZEITOUN, D.
Nonequilibrium hypersonic flow in a wind-tunnel nozzle
p 12 N94-10456

ZELIGS, B. J.
Studies of safety, infectivity, and immunogenicity of a new Temperature Sensitive (TS) 51-1 strain of S. typhi as a new live oral typhoid fever vaccine candidate
p 239 N93-11306

ZELLNER, JOHN W.
An improved anthropometric test device
p 262 N93-19670

ZHANG, X.
Transient flow features of a supersonic jet in a low speed cross flow p 200 N94-28005

ZHANG, Y.
Simulation of pipe flow p 215 N95-21078

ZIJLSTRA, B. H. A.
Search strategies in natural language
p 309 N92-32186

ZIMMERMANN, H.
Simultaneous stress and flutter optimization for the wing of a transport aircraft equipped with four engines
p 105 N92-23238
Computation of flutter boundaries in the time and frequency domain p 5 N92-27952
Influence of active controls on the design process of a large transport aircraft p 59 N94-24323

ZINGG, D. W.
Numerical solution of the Navier-Stokes equations for high-lift configurations on structured composite grids
p 14 N94-18423

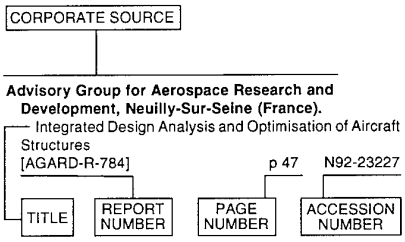
ZOGA, T.
Correlation of life-style and dietary concomitants of Greek pilots with serum analytes p 272 N93-32256

ZON, G, D. R.
A non-intrusive way to measure point-of-gaze
p 280 N94-37272

ZUPPARDI, G.
Adaptive wind tunnel walls versus wall interference correction methods in 2D flows at high blockage ratios
p 117 N95-19267

AGARD INDEX OF PUBLICATIONS (1992–1994)

Typical Corporate Source Index Listing



Listings in this index are arranged alphabetically by corporate source. When a title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The titles are arranged under each source in ascending accession number order. The report number helps to indicate the type of document cited. It is given only for complete publications, not for individual papers. The page number helps you locate the citation in the abstract section. The accession number is the number by which the document is identified on that page.

A

Aastra Aerospace, Inc., Downsview (Ontario).
Smart structures at Aastra Corporation
p 133 N94-11326

ABB Power Generation, Inc., Baden (Switzerland).
The aerodynamic effect of coolant ejection in the leading edge region of a film-cooled turbine blade
p 87 N93-29958

Academy of Sciences (USSR), Moscow (USSR).
Composites based on titanium with external and internal reinforcement p 135 N94-36654

Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).
Remote Sensing of the Propagation Environment
[AGARD-CP-502] p 230 N92-22790
Integrated Design Analysis and Optimisation of Aircraft Structures
[AGARD-R-784] p 47 N92-23227
Special Course on Engineering Methods in Aerodynamic Analysis and Design of Aircraft
[AGARD-R-783] p 48 N92-23950
Automated software generation approaches for the design and development of guidance and control systems software
[AGARD-AR-292] p 282 N92-25980
CFD Techniques for Propulsion Applications
[AGARD-CP-510] p 186 N92-27450
Special Course on Unstructured Grid Methods for Advection Dominated Flows
[AGARD-R-787] p 191 N92-27671
Special Course on Skin Friction Drag Reduction
[AGARD-R-786] p 2 N92-27706
Technical evaluation report on the Flight Mechanics Panel Symposium on Flying Qualities
[AGARD-AR-311] p 49 N92-27870
Air Vehicle Mission Control and Management
[AGARD-CP-504] p 1 N92-27887
Transonic Unsteady Aerodynamics and Aeroelasticity
[AGARD-CP-507] p 3 N92-27936
Advances in Fibre-Optic Technology in Communications and for Guidance and Control
[AGARD-LS-184] p 154 N92-28084
Applications of ASICs to avionics
[AGARD-AG-329] p 73 N92-28376
Steady and Transient Performance Prediction of Gas Turbine Engines
[AGARD-LS-183] p 79 N92-28458
Aircraft ship operations
[AGARD-AR-312] p 49 N92-28468
Integrated Design Analysis and Optimisation of Aircraft Structures
[AGARD-LS-186] p 50 N92-28469
Piloted Simulation Effectiveness
[AGARD-CP-513] p 1 N92-28522
Technical evaluation report on the Flight Mechanics Panel Symposium on Piloted Simulation Effectiveness
[AGARD-AR-315] p 115 N92-30769
Vortex flow aerodynamics
[AGARD-AR-299] p 7 N92-30947
Bringing Down the Barriers to Information Transfer
[AGARD-CP-505] p 308 N92-32182
Integrated Target Acquisition and Fire Control Systems
[AGARD-CP-500] p 73 N92-32437
The Utilization of Advanced Composites in Military Aircraft
[AGARD-R-785] p 125 N92-33033
Insensitive Munitions
[AGARD-CP-511] p 147 N92-33240
Seminar on Basic Documentation Practices
[AGARD-R-788] p 310 N93-10593
AGARD index of publications, 1989-1991
[AGARD-INDEX-89-91] p 312 N93-10610
Combat Aircraft Noise
[AGARD-CP-512] p 296 N93-10666
Allergic, Immunological and Infectious Disease Problems in Aerospace Medicine
[AGARD-CP-518] p 235 N93-11283
Directory of factual and numeric databases of relevance to aerospace and defence R and D
[AGARD-R-777] p 312 N93-11710
AGARD flight test techniques series. Volume 10: Weapon delivery analysis and ballistic flight testing
[AGARD-AG-300-VOL-10] p 293 N93-11711
Fundamentals and Special Problems of Synthetic Aperture Radar (SAR)
[AGARD-LS-182] p 154 N93-13049
Aerodynamic Engine/Airframe Integration for High Performance Aircraft and Missiles
[AGARD-CP-498] p 192 N93-13199
Machine Perception
[AGARD-LS-185] p 288 N93-13238
Propulsion and Energetics Panel Working Group 20 on Test Cases for Engine Life Assessment Technology
[AGARD-AR-308] p 81 N93-14890
Operational use of contact lenses by military aircrew
[AGARD-AG-334] p 242 N93-15824
Airbreathing Propulsion for Missiles and Projectiles
[AGARD-CP-526] p 123 N93-17607
Aircraft Accidents: Trends in Aerospace Medical Investigation Techniques
[AGARD-CP-532] p 30 N93-19653
Advanced Aircraft Interfaces: The Machine Side of the Man-Machine Interface
[AGARD-CP-521] p 263 N93-19757
A Research Agenda for Scientific and Technical Information
[AGARD-AR-316] p 312 N93-19796
Flight Testing
[AGARD-CP-519] p 52 N93-19901
Mission planning systems for tactical aircraft (pre-flight and in-flight)
[AGARD-AR-313] p 35 N93-21187
The testing of fixed wing tanker and receiver aircraft to establish their air-to-air refuelling capabilities
[AGARD-AG-300-VOL-11] p 55 N93-21305
Debonding/Delamination of Composites
[AGARD-CP-530] p 128 N93-21507
Advances in Guidance and Control of Precision Guided Weapons
[AGARD-CP-524] p 149 N93-22018
Integrated and Multi-Function Navigation
[AGARD-CP-525] p 39 N93-22780
Terminology and assessment methods of solid propellant rocket exhaust signatures
[AGARD-AR-287] p 124 N93-22998
Radiolocation Techniques
[AGARD-CP-528] p 157 N93-23598
Combat Automation for Airborne Weapon Systems: Man/Machine Interface Trends and Technologies
[AGARD-CP-520] p 268 N93-28850
T(lc2)acS(lc3)ats for Surveillance Verification and C3I
[AGARD-CP-522] p 163 N93-29892
Heat Transfer and Cooling in Gas Turbines
[AGARD-CP-527] p 84 N93-29926
ELF/VLF/LF Radio Propagation and Systems Aspects
[AGARD-CP-529] p 164 N93-30727
The Impact of Changing International Relations on the Scientific and Technical Community
[AGARD-CP-523] p 313 N93-31215
AGARD Engine Disc Cooperative Test Programme
[AGARD-R-766-ADD] p 88 N93-31741
Nutrition, Metabolic Disorders and Lifestyle of Aircrew
[AGARD-CP-533] p 270 N93-32240
Theoretical and Experimental Methods in Hypersonic Flows
[AGARD-CP-514] p 8 N94-10421
Environmentally Safe and Effective Processes for Paint Removal
[AGARD-R-791] p 149 N94-10613
A Recommended Methodology for Quantifying NDE/NDI Based on Aircraft Engine Experience
[AGARD-LS-190] p 89 N94-11022
Smart Structures for Aircraft and Spacecraft
[AGARD-CP-531] p 132 N94-11317
Stability in Aerospace Systems
[AGARD-R-789] p 107 N94-11489
Advanced methods for cascade testing
[AGARD-AG-328] p 198 N94-15119
Special course on Shock-Wave/Boundary-Layer Interactions in Supersonic and Hypersonic Flows
[AGARD-R-792] p 198 N94-15196
Rocket Motor Plume Technology
[AGARD-LS-188] p 124 N94-15217
Electronic messaging for the 1990's
[AD-A267143] p 314 N94-15437
Non Linear Dynamics and Chaos
[AGARD-LS-191] p 307 N94-18236
High-Lift System Aerodynamics
[AGARD-CP-515] p 1 N94-18415
Cardiopulmonary Aspects in Aerospace Medicine
[AGARD-LS-189] p 246 N94-23313
Visual Problems in Night Operations
[AGARD-LS-187] p 275 N94-23976
Aircraft flight safety: A bibliography
[AGARD-R-805] p 35 N94-24091
Introduction of Ceramics into Aerospace Structural Composites
[AGARD-R-795] p 144 N94-24228
Integrated Airframe Design Technology
[AGARD-R-794] p 58 N94-24313
New Advances in Mission Planning and Rehearsal Systems
[AGARD-LS-192] p 293 N94-25008
Computational and Experimental Assessment of Jets in Cross Flow
[AGARD-CP-534] p 200 N94-28003
The Support of Air Operations under Extreme Hot and Cold Weather Conditions
[AGARD-CP-540] p 234 N94-28420
Fuels and Combustion Technology for Advanced Aircraft Engines
[AD-A275679] p 138 N94-29246
Research and Development of Ram/Scramjets and Turboramjets in Russia
[AD-A275588] p 92 N94-29291
Aerospace Software Engineering for Advanced Systems Architectures
[AD-A277101] p 283 N94-29315
Machine Intelligence in Air Traffic Management
[AD-A275680] p 41 N94-29558
TacSats for NATO
[AD-A277710] p 122 N94-30350
Atmospheric Propagation Effects Through Natural and Man-Made Obscurants for Visible to MM-Wave Radiation
[AD-A276919] p 170 N94-30495
Marketing tools for increasing proactivity in technical information centers
[AGARD-AR-326] p 308 N94-30934
Guide to the measurement of the transient performance of aircraft turbine engines and components
[AD-280272] p 93 N94-33874
Operational agility
[AD-A283336] p 61 N94-33875
Special Course on Progress in Transition Modelling
[AD-A283337] p 205 N94-33884

Damage tolerance management of the X-29 vertical tail p 62 N94-34595
Progress and purpose of IHPTET program p 98 N94-34607
Results from the STOL and Maneuver Technology Demonstration program p 63 N94-34611
Flying qualities evaluation maneuvers p 64 N94-34623
High Altitude Long Endurance aircraft design studies p 66 N94-36322
Possibilities and pitfalls in aerospace applications of titanium matrix composites p 135 N94-36650
Residual strength and life prediction techniques for Ti MMC p 136 N94-36662
Process enhancements of superalloy material p 143 N94-37324
Weapons bay acoustic environment p 301 N95-19146
High-temperature acoustic test facilities and methods p 302 N95-19149
Nonlinear dynamic response of aircraft structures to acoustic excitation p 72 N95-19151
Modelling structurally damaging twin-jet screech p 72 N95-19154
Thermo-acoustic fatigue design for hypersonic vehicle skin panels p 229 N95-19161
Determination of solid/porous wall boundary conditions from wind tunnel data for computational fluid dynamics codes p 211 N95-19266
The impact of advanced packaging technology on modular avionics architectures p 76 N95-20632

Wright Research Development Center, Wright-Patterson AFB, OH.
Panoramic cockpit displays p 264 N93-19765
Interface evaluation in ceramic composites p 145 N94-24231
Micromechanical failure modes in brittle matrix composites p 145 N94-24232

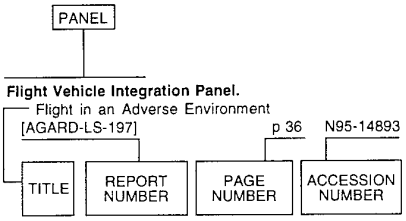
Z

Zeiss (Carl), Oberkochen (Germany).
Airborne experimental FLIR program p 73 N92-32447

Zurich Univ. (Switzerland).
Hepatitis A and Hepatitis B: Risks compared to other vaccine preventable diseases and immunization recommendations p 235 N93-11288
Recent lessons on the safety and effectiveness of malaria chemoprophylaxis in a non-immune population p 240 N93-11307

AGARD INDEX OF PUBLICATIONS (1992–1994)

Typical Panel Index Listing



Listings in this index are arranged alphabetically by panel. When a title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The titles are arranged under each panel in ascending accession number order. The report number helps to indicate the type of document cited. It is given only for complete publications, not for individual papers. The page number helps you locate the citation in the abstract section. The accession number is the number by which the document is identified on that page.

A

Aerospace Medical Panel.
Allergic, Immunological and Infectious Disease Problems in Aerospace Medicine
[AGARD-CP-518] p 235 N93-11283
Aircraft Accidents: Trends in Aerospace Medical Investigation Techniques
[AGARD-CP-532] p 30 N93-19653
Nutrition, Metabolic Disorders and Lifestyle of Aircrew
[AGARD-CP-533] p 270 N93-32240
Visual Problems in Night Operations
[AGARD-LS-187] p 275 N94-23976
The Support of Air Operations under Extreme Hot and Cold Weather Conditions
[AGARD-CP-540] p 234 N94-28420
Virtual Interfaces: Research and Applications
[AGARD-CP-541] p 260 N94-37261
Psychophysiological assessment methods (including a register of psychophysiologists on microfiches)
[AGARD-AR-324] p 261 N95-12133
The musculoskeletal and vestibular effects of long term repeated exposure to sustained high-G
[AGARD-AR-317] p 281 N95-14263
The Clinical Basis for Aeromedical Decision Making
[AGARD-CP-553] p 252 N95-19413

Avionics Panel.
Applications of ASICs to avionics
[AGARD-AG-329] p 73 N92-28376
Integrated Target Acquisition and Fire Control Systems
[AGARD-CP-500] p 73 N92-32437
Fundamentals and Special Problems of Synthetic Aperture Radar (SAR)
[AGARD-LS-182] p 154 N93-13049
Advanced Aircraft Interfaces: The Machine Side of the Man-Machine Interface
[AGARD-CP-521] p 263 N93-19757
Mission planning systems for tactical aircraft (pre-flight and in-flight)
[AGARD-AR-313] p 35 N93-21187
T(Ic2)acS(Ic3)ats for Surveillance Verification and C3I
[AGARD-CP-522] p 163 N93-29892
Aerospace Software Engineering for Advanced Systems Architectures
[AD-A277101] p 283 N94-29315
TacSats for NATO
[AD-A277710] p 122 N94-30350
Challenge of Future EW System Design
[AGARD-CP-546] p 174 N95-14200
Advanced Packaging Concepts for Digital Avionics
[AGARD-CP-562] p 75 N95-20631

E

Electromagnetic Wave Propagation Panel.
Remote Sensing of the Propagation Environment
[AGARD-CP-502] p 230 N92-22790
Advances in Fibre-Optic Technology in Communications and for Guidance and Control
[AGARD-LS-184] p 154 N92-28084
Radiolocation Techniques
[AGARD-CP-528] p 157 N93-23598
ELF/VLF/LF Radio Propagation and Systems Aspects
[AGARD-CP-529] p 164 N93-30727
Multiple Mechanism Propagation Paths (MMPPs): Their Characterisation and Influence on System Design
[AGARD-CP-543] p 176 N95-20921

F

Flight Mechanics Panel.
Technical evaluation report on the Flight Mechanics Panel Symposium on Flying Qualities
[AGARD-AR-311] p 49 N92-27870
Aircraft ship operations
[AGARD-AR-312] p 49 N92-28468
Piloted Simulation Effectiveness
[AGARD-CP-513] p 1 N92-28522
Technical evaluation report on the Flight Mechanics Panel Symposium on Piloted Simulation Effectiveness
[AGARD-AR-315] p 115 N92-30769
AGARD flight test techniques series. Volume 10: Weapon delivery analysis and ballistic flight testing
[AGARD-AG-300-VOL-10] p 293 N93-11711
Flight Testing
[AGARD-CP-519] p 52 N93-19901
The testing of fixed wing tanker and receiver aircraft to establish their air-to-air refuelling capabilities
[AGARD-AG-300-VOL-11] p 55 N93-21305
Combat Automation for Airborne Weapon Systems: Man/Machine Interface Trends and Technologies
[AGARD-CP-520] p 268 N93-28850
Operational agility
[AD-A283336] p 61 N94-33875
Basic principles of flight test instrumentation engineering, volume 1, issue 2
[AD-A282984] p 221 N94-33940
Technologies for Highly Manoeuvrable Aircraft
[AD-280271] p 63 N94-34605
Recent Advances in Long Range and Long Endurance Operation of Aircraft
[AGARD-CP-547] p 66 N94-36321
Identification of dynamic systems. Volume 3: Applications to aircraft. Part 2: Nonlinear analysis and manoeuvre design
[AGARD-AG-300-VOL-3-PT-2] p 69 N95-14102
The principles of flight test assessment of flight-safety-critical systems in helicopters
[AGARD-AG-300-VOL-12] p 35 N95-14199
Aircraft and sub-system certification by piloted simulation
[AGARD-AR-278] p 117 N95-17388

Flight Vehicle Integration Panel.
Flight in an Adverse Environment
[AGARD-LS-197] p 36 N95-14893

Fluid Dynamics Panel.
Special Course on Engineering Methods in Aerodynamic Analysis and Design of Aircraft
[AGARD-R-783] p 48 N92-23950
Special Course on Unstructured Grid Methods for Advection Dominated Flows
[AGARD-R-787] p 191 N92-27671
Special Course on Skin Friction Drag Reduction
[AGARD-R-786] p 2 N92-27706
Vortex flow aerodynamics
[AGARD-AR-299] p 7 N92-30947
Aerodynamic Engine/Airframe Integration for High Performance Aircraft and Missiles
[AGARD-CP-498] p 192 N93-13199
Theoretical and Experimental Methods in Hypersonic Flows
[AGARD-CP-514] p 8 N94-10421
Special course on Shock-Wave/Boundary-Layer Interactions in Supersonic and Hypersonic Flows
[AGARD-R-792] p 198 N94-15196
High-Lift System Aerodynamics
[AGARD-CP-515] p 1 N94-18415
Computational and Experimental Assessment of Jets in Cross Flow
[AGARD-CP-534] p 200 N94-28003
Special Course on Progress in Transition Modelling
[AD-A283337] p 205 N94-33884
Scale effects on aircraft and weapon aerodynamics
[AGARD-AG-323] p 19 N95-14103
Quality assessment for wind tunnel testing
[AGARD-AR-304] p 19 N95-14197
A selection of experimental test cases for the validation of CFD codes, volume 1
[AGARD-AR-303-VOL-1] p 208 N95-14201
Computational aerodynamics based on the Euler equations
[AGARD-AG-325] p 19 N95-14264
Missile Aerodynamics
[AGARD-R-804] p 19 N95-14445
Optimum Design Methods for Aerodynamics
[AGARD-R-803] p 70 N95-16562
A selection of experimental test cases for the validation of CFD codes, volume 2
[AGARD-AR-303-VOL-2] p 21 N95-17846
Wall Interference, Support Interference and Flow Field Measurements
[AGARD-CP-535] p 209 N95-19251
Application of Direct and Large Eddy Simulation to Transition and Turbulence
[AGARD-CP-551] p 212 N95-21061

G

Guidance and Control Panel.
Automated software generation approaches for the design and development of guidance and control systems software
[AGARD-AR-292] p 282 N92-25980
Air Vehicle Mission Control and Management
[AGARD-CP-504] p 1 N92-27887
Machine Perception
[AGARD-LS-185] p 288 N93-13238
Advances in Guidance and Control of Precision Guided Weapons
[AGARD-CP-524] p 149 N93-22018
Integrated and Multi-Function Navigation
[AGARD-CP-525] p 39 N93-22780
Stability in Aerospace Systems
[AGARD-R-789] p 107 N94-11489
Non Linear Dynamics and Chaos
[AGARD-LS-191] p 307 N94-18236
Machine Intelligence in Air Traffic Management
[AD-A275680] p 41 N94-29558
Pointing and Tracking Systems
[AD-A282573] p 122 N94-36616
Advanced Guidance and Control Aspects in Robotics
[AGARD-LS-193] p 290 N95-14942
On-line handling of air traffic: Management, guidance and control
[AGARD-AG-321] p 46 N95-18927

P

Propulsion and Energetics Panel.
CFD Techniques for Propulsion Applications
[AGARD-CP-510] p 186 N92-27450
Steady and Transient Performance Prediction of Gas Turbine Engines
[AGARD-LS-183] p 79 N92-28458
Insensitive Munitions
[AGARD-CP-511] p 147 N92-33240
Combat Aircraft Noise
[AGARD-CP-512] p 296 N93-10666
Propulsion and Energetics Panel Working Group 20 on Test Cases for Engine Life Assessment Technology
[AGARD-AR-308] p 81 N93-14890
Airbreathing Propulsion for Missiles and Projectiles
[AGARD-CP-526] p 123 N93-17607

Terminology and assessment methods of solid propellant rocket exhaust signatures
[AGARD-AR-287] p 124 N93-22998
Heat Transfer and Cooling in Gas Turbines
[AGARD-CP-527] p 84 N93-29926
Advanced methods for cascade testing
[AGARD-AG-328] p 198 N94-15119
Rocket Motor Plume Technology
[AGARD-LS-188] p 124 N94-15217
Fuels and Combustion Technology for Advanced Aircraft Engines
[AD-A275679] p 138 N94-29246
Guide to the measurement of the transient performance of aircraft turbine engines and components
[AD-280272] p 93 N94-33874
Technology Requirements for Small Gas Turbines
[AD-280274] p 93 N94-34431
Turbomachinery Design Using CFD
[AGARD-LS-195] p 207 N95-14127
Experimental and analytical methods for the determination of connected-pipe ramjet and ducted rocket internal performance
[AGARD-AR-323] p 125 N95-17278
Mathematical Models of Gas Turbine Engines and their Components
[AGARD-LS-198] p 98 N95-19017
Erosion, Corrosion and Foreign Object Damage Effects in Gas Turbines
[AGARD-CP-558] p 99 N95-19653

S

Sensor and Propagation Panel.
Propagation Modelling and Decision Aids for Communications, Radar and Navigation Systems
[AGARD-LS-196] p 174 N95-14825

Structures and Materials Panel.
Integrated Design Analysis and Optimisation of Aircraft Structures
[AGARD-R-784] p 47 N92-23227
Transonic Unsteady Aerodynamics and Aeroelasticity
[AGARD-CP-507] p 3 N92-27936
Integrated Design Analysis and Optimisation of Aircraft Structures
[AGARD-LS-186] p 50 N92-28469
The Utilization of Advanced Composites in Military Aircraft
[AGARD-R-785] p 125 N92-33033
AGARD Engine Disc Cooperative Test Programme
[AGARD-R-766-ADD] p 88 N93-31741
Environmentally Safe and Effective Processes for Paint Removal
[AGARD-R-791] p 149 N94-10613
A Recommended Methodology for Quantifying NDE/NDI Based on Aircraft Engine Experience
[AGARD-LS-190] p 89 N94-11022
Smart Structures for Aircraft and Spacecraft
[AGARD-CP-531] p 132 N94-11317
Introduction of Ceramics into Aerospace Structural Composites
[AGARD-R-795] p 144 N94-24228
Integrated Airframe Design Technology
[AGARD-R-794] p 58 N94-24313
An Assessment of Fatigue Damage and Crack Growth Prediction Techniques
[AD-280273] p 227 N94-34581
Characterisation of Fibre Reinforced Titanium Matrix Composites
[AD-A277520] p 134 N94-36649
Impact of Materials Defects on Engine Structures Integrity
[AD-A267718] p 225 N94-37321
High temperature cyclic behaviour of aerospace materials: Room temperature validation tests of Ti-6Al-4V
[AGARD-AR-328] p 229 N95-14198
Aircraft Loads due to Turbulence and their Impact on Design and Certification
[AGARD-R-798] p 110 N95-18597
Impact of Acoustic Loads on Aircraft Structures
[AGARD-CP-549] p 301 N95-19142

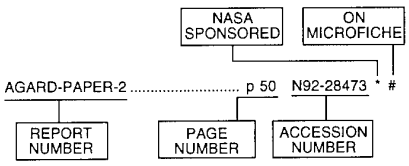
T

Technical Information Panel.
Bringing Down the Barriers to Information Transfer
[AGARD-CP-505] p 308 N92-32182
Seminar on Basic Documentation Practices
[AGARD-R-788] p 310 N93-10593
AGARD index of publications, 1989-1991
[AGARD-INDEX-89-91] p 312 N93-10610
Directory of factual and numeric databases of relevance to aerospace and defence R and D
[AGARD-R-777] p 312 N93-11710
A Research Agenda for Scientific and Technical Information
[AGARD-AR-316] p 312 N93-19796
The Impact of Changing International Relations on the Scientific and Technical Community
[AGARD-CP-523] p 313 N93-31215
Electronic messaging for the 1990's
[AD-A267143] p 314 N94-15437
Marketing tools for increasing proactivity in technical information centers
[AGARD-AR-326] p 308 N94-30934
International High Speed Networks for Scientific and Technical Information
[AD-A278021] p 314 N94-37333
A guide to tenders and contracts alerting services
[AGARD-R-799] p 308 N94-37447

REPORT / ACCESSION NUMBER INDEX

AGARD INDEX OF PUBLICATIONS (1992–1994)

Typical Report/Accession Number Index Listing



Listings in this index are arranged alphanumerically by AGARD report number. The page number helps to locate the citation in the abstract section. The accession number denotes the number by which the citation is identified on that page. An asterisk (*) indicates that the item is a NASA sponsored report. A pound sign (#) indicates that the item is available on microfiche. MF or HC are available from the purchase agencies listed on the back cover.

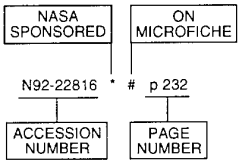
ACCESSION NUMBER INDEX

AGARD INDEX OF PUBLICATIONS (1992–1994)

Typical Accession Number Index Listing



Listings in this index are arranged alphanumerically by accession number. The page number helps to locate the citation in the abstract section. The accession number denotes the number by which the citation is identified on that page. An asterisk (*) indicates that the item is a NASA sponsored report. A pound sign (#) indicates that the item is available on microfiche. MF or HC are available from the purchase agencies listed on the back cover.

6. Title
AGARD Index of Publications 1992-1994

7. Presented at/sponsored by
The Technical Information Committee of AGARD

8. Author(s)/Editor(s)
NASA Center for AeroSpace Information (CASI)

9. Date
July 1995

10. Author's/Editor's Address
800 Elkridge Landing Road, Linthicum Heights,
MD 21090-2934
United States

11. Pages
504

12. Distribution Statement There are no restrictions on the distribution of this document. Information about the availability of this and other AGARD unclassified publications is given on the back cover.

13. Keywords/Descriptors

Indexes (documentation)
Documents
Bibliographies
Aerospace engineering
Aircraft
Aeronautics
Aerodynamics
NATO forces

14. Abstract

This volume provides abstracts and indexes for AGARD unclassified publications published during the period 1992-1994. Full bibliographical citations and abstracts for all the documents in this publication are given in the abstract section, which is organized in the major subject divisions and specific categories used by NASA in abstract journals and bibliographies. The major subject divisions are listed, together with a note for each that defines its scope and provides any cross-references. Category breaks in the abstract section are identified by category number and title, and a scope note. Within each category, the abstracts are arranged by series and year.

Six indexes — Subject (based on *NASA Thesaurus nomenclature*), Personal Author, Corporate Source, Panel, Report/Accession Number, and Accession Number — are included. Sample entries are shown on the first page of each index.

This publication was sponsored by the Technical Information Committee of AGARD (TIC), and compiled by NASA's Center for AeroSpace Information (CASI).
