SHIP STRUCTURE COMMITTEE

1995

19960223 138

DTIC QUALITY INSPECTED 1

SHIP STRUCTURE COMMITTEE

The SHIP STRUCTURE COMMITTEE is constituted to prosecute a research program to improve the hull structures of ships and other marine structures by an extension of knowledge pertaining to design, materials, and methods of construction.

RADM J. C. Card, USCG (Chairman)
Chief, Office of Marine Safety, Security
and Environmental Protection
U. S. Coast Guard

Mr. Thomas H. Peirce
Marine Research and Development
Coordinator
Transportation Development Center
Transport Canada

Mr. Edwin B. Schimler
Associate Administrator for Ship-
building and Technology Development
Maritime Administration

Dr. Donald Liu
Senior Vice President
American Bureau of Shipping

Mr. Robert McCarthy
Director, Survivability and Structural
Integrity Group (SEA O3P)
Naval Sea Systems Command

Mr. Thomas Connors
Acting Director of Engineering (N7)
Military Sealift Command

Dr. Ross Grahm
Head, Hydronautics Section
Defence Research Establishment-Atlantic

EXECUTIVE DIRECTOR

CDR Stephen E. Sharpe, USCG
U. S. Coast Guard

CONTRACTING OFFICER TECHNICAL REPRESENTATIVE

Mr. William J. Siekierka
Naval Sea Systems Command

SHIP STRUCTURE SUBCOMMITTEE

The SHIP STRUCTURE SUBCOMMITTEE acts for the Ship Structure Committee on technical matters by providing technical coordination for determining the goals and objectives of the program and by evaluating and interpreting the results in terms of structural design, construction, and operation.

MILITARY SEALIFT COMMAND

Mr. Robert E. Van Jones (Chairman)

HYDRODYNAMIC IMPACT ON DISPLACEMENT SHIP HULLS

The ability of the naval architect to optimize the structural design of a ship is limited by both our understanding of, and our ability to predict hydrodynamic loads. In addition to having to account for the random nature of wave induced loads, transient loadings such as slamming, wave slap and frontal impacts must also be addressed. Failure to account for these impulsive loads and how best to combine these loads with ever present slow varying wave induced loads can result in, at best, reduced ship operational time and, at worst, catastrophic failure.

In order to address these concerns, a critical review of the state of the art in predicting hydrodynamic impact forces has been completed. This report identifies numerous theories of hydrodynamic impact loading that have been developed over the years by many researchers. These theories are evaluated to identify which are most applicable for use in design with example calculations presented. Recommendations for future research are given.

J. C. CARD
Rear Admiral, U.S. Coast Guard
Chairman, Ship Structure Committee

16. Abstract This bibliography was formulated during the development of the Ship Structure Committee report: Hydrodynamic Impact Loading on Displacement Ship Hulls, An Assessment of the State of the Art, by Dr. John C. Daidola and Dr. Victor Mishkevich. The report provides a comprehensive assessment of the state of the art of hydrodynamic impact loading on displacement ship hulls. The subject is considered in light of the three distinct phenomena of slamming, wave slap, and frontal impact. Factors leading to hydrodynamic impact are defined in terms of environmental and vessel characteristics. The theories of impact are reviewed in sub-categories of two and three dimensional analytical hydrodynamic models, hydroelastic models, seakeeping theory, model tests and full scale data. The techniques and procedures identified which lend themselves to analysis and potential design application are identified and described, the characteristics of each summarized, and example calculations relating the techniques and procedures presented. The report concludes with recommendations for future research.

ACKNOWLEDGEMENT

The authors wish to thank the SSC Project Technical Committee for its guidance during the conduct of this study.

At M. Rosenblatt & Son, Inc., Messrs. Anthony Bromwell and Christopher Reyling contributed to the technical effort. Mrs. Evelyn Goodman painstakingly prepared the text allowing for the authors' indulgences.

Several references and literature sources were provided by Dr. Alfred Tunik, Senior Engineer, American Bureau of Shipping; Dr. Ephraim Suhir, Member of Technical Staff, AT&T Bell Laboratories; Dr. Vladimir Ankudinov, Vice-President, Designers and Planners, Inc.; and Mrs. Leslie Mitchell, Administrative Assistant, Science Applications International Corporation. The authors appreciate helpful suggestions provided by Dr. P. Kaplan, Chairman, Hydromechanics, Inc.; Mr. D. Lavis, Chief Executive Officer, Band, Lavis and Assoc., Inc.; Prof. Armin Troesch, University of Michigan; and the Survey of Russian / Soviet Studies results and data on hydrodynamic load estimation by Drs. O. Rabinovitch, Dr. Rostovtsev and I. Stepanov at the St. Petersburg State Marine Technical University, St. Petersburg, Russia.

INTRODUCTION

This Bibliography was formulated during the development of the Ship Structure Committee report: Hydrodynamic Impact Loading on Displacement Ship Hulls, An Assessment of the State of the Art, by John C. Daidola and Victor Mishkevich.

The report provides a comprehensive assessment of the state of the art of hydrodynamic impact loading on displacement ship hulls. The subject is considered in light of the three distinct phenomena of slamming, wave slap and frontal impact. Factors leading to hydrodynamic impact are defined in terms of environmental and vessel characteristics. The theories of impact are reviewed in sub-categories of two and three dimensional analytical hydrodynamic models, hydroelastic models, seakeeping theory, model tests and full scale data. The techniques and procedures identified which lend themselves to analysis and potential design application are identified, described, the characteristics of each summarized and example calculations relating the techniques and procedures presented. The report concludes with recommendations for future research.

The Bibliography is arranged in alphabetical order by author. Three key identifiers are provided indicating the specialization of the reference including type of hydrodynamic impact, format of approach and nature of the data. These have been provided only for those publications actually reviewed in the conduct of the study of the aforementioned report.

A list of abbreviations utilized in the Bibliography is provided as well.

Number Description

485 Kaplan, L.
A Survey on Hydro-Ski Water Loads.
Edo Corp., Rpt No. 4439,
1957, November.

486 Kaplan, P.
Analysis and Prediction of Flat Bottom Slamming Impact of Advanced Marine Vehicles in Waves.
AIAA 8th Advanced Marine Systems Conference, San Diego, CA
1986, September

487 Kaplan, P.
Analysis and Prediction of Flat Bottom Slamming Impact of Advanced Marine Vehicles in Waves.
ISP, V. 34, N 391
1987, March.

488 Kaplan, P.
Computer Simulation of Ship Structural Loads Due to Waves.
AIAA/ASME, Structural Dynamics and Materials Conference, San Antonio, TX, Paper No. 72-342,
1972, April.

489 Kaplan, P.
Development of Mathematical Models for Describing Ship Structural Response in Waves.
SSC-193, NSEC,
1969, January.

490 Kaplan, P.
Impact Forces on Horizontal Members.
Civil Engineering in the Oceans IV, Proceedings,
1979, September.

491 Kaplan, P.
The Effect of Motion-Induced Surface Wave Generation on SES Vertical Plane Motions in Incident Waves.
Intersociety Advanced Marine Vehicles Conference, Arlington, VA
1989, June.

492 Kaplan, P.; Bentson, J.; Davis S.
Dynamics and Hydrodynamics of surface-effect-ships.
Trans. SNAME, V.89
1981

493 Kaplan, P.; Dalzell, J.F.
Hydrodynamic Loads Prediction (Including Slamming) and Relation to Structural Reliability Ship Structures Symposium, Arlington
1993, November.

494 Kaplan, P.; Jiang, C.W.
Hydrodynamic Analysis of Barge-Platform Systems in Waves.
The Naval Architect
1983, July.

PROJECT TECHNICAL COMMITTEE MEMBERS

The following persons were members of the committee that represented the Ship Structure Committee to the Contractor as resident subject matter experts. As such they performed technical review of the initial proposals to select the contractor, advised the contractor in cognizant matters pertaining to the contract of which the agencies were aware, and performed technical review of the work in progress and edited the final report.

Mr. Alan Engle	Naval Sea Systems Command
Dr. Walter Maclean	U.S. Merchant Marine Academy
Mr. James White	U.S. Coast Guard
Mr. Richard Dai	U.S. Coast Guard
Dr. Subrata Chakrabarti	Chicago Bridge and Iron
Mr. Raymond Ng	American Bureau of Shipping
Mr. William Siekierka	Naval Sea Systems Command, Contracting Officer's Technical Representative
Dr. Robert Sielski Mr. Alex Stavavoy	National Academy of Science, Marine Board Liaison
Cdr. Steve Sharpe	U.S. Coast Guard, Executive Director Ship Structure Committee

COMMITTEE ON MARINE STRUCTURES

Commission on Engineering and Technical Systems

National Academy of Sciences – National Research Council

The COMMITTEE ON MARINE STRUCTURES has technical cognizance over the interagency Ship Structure Committee's research program.

John Landes, University of Tennessee, Knoxville, TN

Howard M. Bunch, University of Michigan, Ann Arbor, MI

Bruce G. Collipp, Marine Engineering Consultant, Houston, TX

Dale G. Karr, University of Michigan, Ann Arbor, MI

Andrew Kendrick, NKF Services, Montreal, Quebec

John Niedzwecki, Texas A & M University, College Station, TX

Barbara A. Shaw, Chairman, Pennsylvania State University, University Park, PA

Robert Sielski, National Research Council, Washington, DC

Stephen E. Sharpe, Ship Structure Committee, Washington, DC

DESIGN WORK GROUP

John Niedzwecki, Chairman, Texas A&M University, College Station, TX

Bilal Ayyub, University of Maryland, College Park, MD

Ovide J. Davis, Pascagoula, MS

Maria Celia Ximenes, Chevron Shipping Co., San Francisco, CA

MATERIALS WORK GROUP

Barbara A. Shaw, Chairman, Pennsylvania State University, University Park, PA

David P. Edmonds, Edison Welding Institute, Columbus, OH

John F. McIntyre, Advanced Polymer Sciences, Avon, OH

Harold S. Reemsnyder, Bethlehem Steel Corp., Bethlehem, PA

Bruce R. Somers, Lehigh University, Bethlehem, PA
