SECTION 1.0

INTRODUCTION

The U.S. Army Environmental Center (USAEC), Aberdeen Proving Ground, Maryland, directed EARTH TECH to complete a biota sampling at the Woodbridge Research Facility (WRF) installation. This sampling was conducted as part of the U.S. Army Installation Restoration Program (IRP) with all specific activities and project responsibilities as defined in contract number DAAA15-91-D-0009, Delivery Order 0014. Project-specific administration and technical supervision of this delivery order are provided by USAEC-Base Closure Division.

A Site Inspection (SI) was conducted to characterize and evaluate potentially contaminated sites at WRF. The SI identified several data gaps which included the lack of information on potential human health risks from the consumption of fish and on the potential for contaminants found at the study areas to impact aquatic life.

EARTH TECH was contracted to collect, store, and deliver biota samples from the waters on and surrounding WRF. The samples will be analyzed and included in a risk assessment under a separate contract. Guidance documents from the Virginia Department of Environmental Quality (VDEQ) were followed to conduct this sampling (VDEQ, 1994).

WRF occupies approximately 579 acres of land in the town of Woodbridge in the easternmost portion of Prince William County, Virginia. The facility is located 22 miles southwest of Washington, D.C., as shown in Figure 1-1. Occoquan and Belmont Bays border WRF on the south and east respectively. Marumsco Creek, which is part of Marumsco National Wildlife Refuge, bounds the facility on the west side. Other surface features on the WRF property include a drainage ditch and a pond. The entrance to WRF is located on Dawson Beach Road, east of U.S. Route 1 in Woodbridge. Residential, commercial, and industrial areas are located north of the WRF. A facility location map is provided as Figure 1-2.

The biota sampling included fish sampling at 3 locations and live clam box sampling at 8 locations on and surrounding WRF (Figure 1-3). The fish samples were collected with nets, seines, and electro-fishing gear. The fish samples were collected from 8 November 1994 through 10 November 1994. The live clam box sampling was conducted from 10 October 1994 to 6 December 1994. All samples have been stored since the time of collection at -20°C.

SECTION 2.0

LIVE CLAM BOX SAMPLING

This section provides the purpose, location descriptions, and sampling procedures for the live clam boxes.

2.1 PURPOSE AND DESCRIPTION OF SAMPLING

Live boxes containing wedge clams (*Rangia cunneata*) were deployed in 8 locations on and surrounding WRF. Two live boxes were placed in each location on 10 October 1994. Boxes were sampled every two weeks for 8 weeks. Each live box contained 250 clams. The clams were obtained from Dr. Eugene Maurakis, Director of St. Paul's College Aquaculture Program.

The purpose of the sampling to provide biota tissue for analysis of contaminants of concern. The locations were selected to assess background bioconcentration potentials and bioconcentration potentials in areas potentially impacted by WRF areas requiring environmental evaluation (AREEs). Live box tissue contaminant data can be used, in conjunction with indigenous tissue sample contaminant data, in the risk assessment analyses to determine the human health risk associated with the consumption of fish and shellfish.

2.2 LOCATION DESCRIPTIONS

The 16 live boxes were deployed in 8 locations. These locations are listed below and are shown on Figure 1-3.

1. Marumsco Creek, upstream of WRF
2. Marumsco Creek, adjacent to the western sewage sludge injection area
3. Marumsco Creek near Former Dump 2
4. Occoquan Bay near Former Dump 1
5. Drainage Ditch just upstream of the Occoquan Bay
6. Drainage Ditch downstream of the Main Compound in the area known as the beaver pond
7. Drainage Ditch upstream of the Main Compound
8. Belmont Bay, 150 feet from the shoreline.

Each of the locations is shown in Appendix B, the photo log.

2.3 SAMPLE COLLECTION, PROCESSING, AND STORAGE PROCEDURES

Live boxes were sampled every two weeks. Prior to deployment, 40 clams were collected as a control sample. At each sample collection event, the dead clams were removed and shucked. The tissue was wrapped in aluminum foil, dull side toward the sample, placed in heavy duty freezer bags, and frozen at -20°C. Twenty live clams were collected from each box, if practical. In some cases, only 10 live clams were collected due to high mortality rates. Table 2-1 provides the sample collection summary from each live box at all 8 locations. Live clams were wrapped with the shell in aluminum foil, dull side toward the sample, placed in heavy duty freezer bags, and frozen at -20°C. The clams from each box at a location per sampling event were composited into one sample. The samples were labeled with the date, sample location, and status of the clams (live or dead). Aquatic Systems Corporation (ASC) personnel assisted in sample preparation and recovery. ASC personnel transported the preserved samples to the ASC laboratory for temporary storage. The samples were delivered to ESE via Federal Express in May 1995. A copy of the Federal Express airbill along with copies of the chain-of-custody forms which accompanied the biota samples is contained in Appendix D.

The following parameters were determined in the field at each location during each sampling event.

- Dissolved Oxygen
- Temperature
- pH
- Conductivity
- Hardness

These parameters are reported in Table 2-2.

- (1) The 2 live clams remaining in basket "A" at Location 6 after the dead clams were collected during the second sampling period (November 7) were added to basket "B" due to the 2 remaining live clams in basket "A" not having enough tissue for a sample.
- (2) The live clams collected during the third sampling period (November 21 - November 22) at Location 1 from baskets "A" and "B" were combined into one sample due to not enough tissue for 2 separate samples.
- (3) Number remaining refers to number remaining after second sampling period (November 7).
- (4) Clams remaining after fourth sampling period (December 5 - December 6) were considered waste.

SECTION 3.0

FISH COLLECTION

This section provides the purpose, location descriptions, and sampling procedures for the fish collection.

3.1 PURPOSE AND DESCRIPTION OF FISH COLLECTION

The objective of studying contaminant levels in indigenous fish tissues is to assess risk associated with the ingestion of contaminated tissues. Sampling of indigenous fish tissues provides data for determining a reasonable maximum exposure value for use in risk assessment algorithms.

Fish were collected from 3 locations on and surrounding WRF. The fish collection was conducted from 8 November 1994 through 10 November 1994. A fishing permit, Permit No. SCP94116, was obtained on 31 October 1994 (see Appendix D). Collection focused on bottom oriented fish, pelagic fish, and game fish. U.S. Environmental Protection Agency (USEPA) guidance on fish sampling and analysis recommends that the smallest fish in the sample be no less than 75 percent of the length of the largest fish in the sample. Samples that did not meet the size requirements were released.

3.2 LOCATION DESCRIPTIONS

Fish were collected from the lower portions of Marumsco Creek, the drainage ditch downstream from the Main Compound, and the pond. Locations are shown on Figure 1-3 and in Appendix B, the photo log.

3.3 SAMPLE COLLECTION, PROCESSING, AND STORAGE PROCEDURES

Samples were collected at all 3 locations over the three day period. The fish were collected using electro-fishing, gill netting, and seining. Five individuals per species were allowed per location. If individuals of a certain species were not large enough to yield 50 grams of fillet tissue, composite samples were allowed.

At the pond, 8 largemouth bass, 10 bluegill, 4 channel catfish, and 10 white perch were collected. Three of the largemouth bass were released due to size and number limitations.

Ten white perch, 10 bluegill, 1 black crappie, 2 common carp, and 7 yellow perch were collected from Marumsco Creek. None of the measured fish were released.

Three common carp, 10 bluegill, 10 black crappie, 10 american eel, and 8 large mouth bass were collected from the drainage ditch. Two of the large mouth bass and 1 american eel were released due to size and number limitations.

All the samples were measured and recorded in the field notes (Appendix A). All samples were wrapped whole in aluminum foil, dull side toward the sample, and placed in heavy duty freezer bags by species and location. The samples were labeled with species, sample number, location, and collection date. The samples were stored on ice during transport to the storage facility and then frozen at -20°C.

Samples were delivered to ESE in May 1995. ESE is responsible for processing and analyzing the samples.

EARTH TECH

FIELD NOTES

This page intentionally left blank

SATURDAY OCTOBER 8, 1994

WEATHER: SUNNY, CLOUD, HIGH IN LOW 70'S

55- CHRIS LONG AND BIDA SUBCONTRACTORS ONSITE AT MAIN GATE

00- KEITH SCHENKEL ONSITE AT MAIN GATE

05- KATHY JANIZA ONSITE AT MAIN GATE

15- KEVIN MCCROWOR ONSITE AT MAIN GATE

- EVERYONE GOES TO EARTH TECH TRAILER TO DROP OFF CARS. THEN GO TO MAIN COMPOUND TO DROP OFF BIDA SUBCONTRACTORS BOATS.

330- GO TO REVIEW LOCATIONS OF CLAM BOXES AND FISH COLLECTION AREAS WITH BIDA SUBCONTRACTORS. BEEN AT CLAM BOX SITE IN BELMONT BAY.

- ACCESS TO BELMONT BAY APPEARS TO BE REASONABLE FROM GATE NEAR TOMBSTONES. THIS ACCESS MAY ALSO BE SUFFICIENT FOR ALL SITES OUTSIDE OF THE MAIN COMPOUND PERIMETER FENCE.

45- MOVING TO CLAM BOX LOCATION AT DOWNSTREAM POINT IN DRAINAGE DITCH (AREA 22).

- SUGGEST THAT ONE ACCESS POINT FOR THIS LOCATION CAN BE THE PLACE WHERE THE PERIMETER ROAD DIPS INTO THE DRAINAGE CHANNEL. THE SECOND ACCESS POINT CONSIDERED IS WHERE THE DITCH CROSSES THE ROAD FROM THE MAIN COMPOUND. SUBCONTRACTORS FEEL THAT THIS LOCATION SHOULD NOT BE TOO DIFFICULT TO GET TO. ALSO INDICATE THAT ONE FISH COLLECTION ZONE WILL BE FROM THIS DOWNSTREAM POINT IN THE DRAINAGE DITCH WHERE THE BOX IS BEING PLACED UPSTREAM TO THE BEAVER POND.

1415 - MOVING TO LOCATION IN OCCOQUAN BAY, OFF OF
 - GARD STEPS BY TO ASK IF WE WANTED THE GATE
 TOMBSTONES OPENED. WE SAID YES BUT TO MEET THERE
 1500. HE SAID OKAY.

- INDIATE TO SUBCONTRACTORS THAT THE CLAM BOXES
 SUGGESTED TO BE PLACED IN THE BAY AND TIED OFF
 A SNAG JUST OFFSHORE.

1430 - MOVING TO DOWNSTREAM LOCATION IN MARUMSLO CREEK

- INDIATE TO SUBCONTRACTORS THAT THE CLAM BOXES
 SUGGESTED TO BE PLACED AT THE CONFLUENCE OF THE
 DRAINAGE DITCH WITH MARUMSLO CREEK.

- ALSO NOTED THAT THIS AREA, JUST UPSTREAM AND
 DOWNSTREAM OF THIS BOX IS ANOTHER FISH COLLECTOR.

1445 - MOVING TO SECOND LOCATION IN MARUMSLO CREEK.

- INDIATE THAT THIS BOX IS TO BE PLACED AT THE
 DOWNSTREAM POINT WHERE A MEANDOR CUTS BACK
 THE MAIN CHANNEL. NOTE: CAN NOT REALLY SEE THIS
 FROM THE PERCELINE.

1500 - MOVING TO LOCATION IN AREA 22 DRAINAGE DITCH
 UPSTREAM OF CHARLIE ROAD.

- INDIATE THAT THESE BOXES ARE TO BE PLACED AS FAR
 UPSTREAM AS PRACTICAL.

1505

1505 - BACK AT GATE NEAR TOMBSTONES, GARD UNLOCKS G
 AND CHAS LONG AND SUBCONTRACTORS BEGAN CLEARING

- KEVIN MCCORMACK GOES WITH GARD TO SEE IF GAT
 NEAR AREA 1 CAN BE OPENED.

1530 - BRUSH IS CLEAR. MOVING TO GATE NEAR AREA 1.

- BEGAN TRYING TO CLEAR BRUSH ONCE GATE IS UNLOCKED.

1545 - IT IS DETERMINED THAT THE BRUSH IS TOO THICK AND
 SLOPE TOO STEEP TO REALLY CONSIDER THIS FOR
 ACCESS. WE WILL SEE IF ACCESS CAN BE ACCOMPLISHED AT UPST.
 LOCATION IN MARUMSLO CREEK.

550 - MOVING TO LOCATION AT BEAVER POND

- INDICATE THAT THIS BOX IS TO BE PLACED JUST WEST OF BEAVER DAM IN THE POND.

605 - MOVING TO LOCATION AT UPSTREAMMOST POINT IN MARLIN CREEK.

- INDICATE THAT THIS BOX IS TO BE PLACED AT THE POINT WHERE THE FENCE GOES INTO THE CREEK.
- SUBCONTRACTORS SAY THAT THIS WILL BE THE PLACE THEY WILL ACCESS ALL POINTS IN MARLIN CREEK PLUS 10 LOCATION OFF AREA 1 (TOTAL OF 4 POINTS).
- BEGAN CLEARING BRUSH FOR ACCESS

630 - BRUSH IS CLEAR. DECIDE TO MEET TOMORROW AT 09

- EVERYONE OFFSITE FOR DAY

FISHING PERMIT

This page intentionally left blank

COMMONWEALTH of VIRGINIA

Department of Game and Inland Fisheries

SCIENTIFIC COLLECTION/SALVAGE PERMIT

October 31, 1994

Permit No. SCP94116

To whom it may concern:

Permission is granted to Jeffrey Briggs, Principal Permittee, and Gary J. Kenderes, Gregory M. Styborski, Michael F. Davison, Robert L. Shema, Christopher Long, Kevin McCreanor, Kathy Janiga, and Keith Schenkel, Sub-Permittees, of Earth Technology Corp., 1420 King Street, Suite 200, Alexandria, VA 22314, to collect freshwater fishes in the waters of the Woodbridge Research Facility, Prince William County, Virginia, with nets, seines, electro-fishing gear, and by hand for scientific purposes under the following special conditions:

1. No species currently listed by the U.S. Fish and Wildlife Service, or the Virginia Dept. of Game and Inland Fisheries, as threatened or endangered may be intentionally taken under this permit.
2. If incidental take of threatened or endangered species does occur, the permittee is required to notify this Department within five (5) working days of the species, location (county, quad), and number. More specific information (as specified in the reporting requirements) shall be given to the Department within ninety (90) days.
3. Any collections falling within waters defined by this Department as Endangered Species Waters must be coordinated through this Department (Nongame Aquatic staff, 703/552-6992). A sampling plan including stream names must be provided to this Department prior to any sampling.
4. If necessary, the permittee is authorized to take (remove) up to 5 individuals or 20% of the number of specimens (whichever is lower) of any species identified as "State Special Concern" except *Etheostoma osburni* (candy darter) at any collection location. The permittee is also authorized to take (remove) up to 10 individuals of any species not identified as endangered, threatened, or special concern at any collection location if necessary. Justification must be submitted to this Department for the taking (removal) of individuals in numbers greater than indicated above.
5. The permittee will, in advance, advise the State District Fisheries Biologist and the State Game Warden in the county of the date and location collection will be made. Contact must be made with the State District Fisheries biologist at least one week prior to sampling.
6. The permittee is required to submit to this Department a report of all specimens collected by July 31, 1995. This requirement also includes those specimens that were released after identification was made. Report format is attached. FAILURE TO RETURN THIS REPORT WILL RESULT IN NON-ISSUANCE OF FUTURE PERMITS. A negative report should be submitted if collections were not attempted or were unsuccessful.
7. This permit is issued with the understanding that no collections will be made on federal, state, or private property without the prior approval and necessary permits from the landowners involved.

Page 2

SCIENTIFIC COLLECTIONS/SALVAGE PERMIT Permit No. SCP94116

8. A valid Virginia fishing license is required for each person collecting samples by hook-and-line.

9. Sampling gear, boats, or trailers which have been used in states harboring zebra mussels must be cleaned and prepared following the guidelines specified in the attached summary prior to use in waters in the Commonwealth.

This permit expires June 30, 1995.

Gary F. Martel
Chief, Fisheries Division

Subj: Shipment of Biota Samples to
ESE Laboratory, Gainesville, FL
Monday, May 15, 1995

Ref: Telephone Conversation
May 15, 1995

Dear Mr. McCreanor:

This correspondence is to inform you that the biota samples collected at Woodbridge Research Facility in the fall of 1994 have been shipped to ESE Laboratory in Gainesville, Florida per your request. Six (6) coolers of biota samples (fish and mussels) were shipped overnight via Federal Express on May 15, 1995.

Enclosed please find a Copy of the Federal Express Airbill along with copies of the Chain-of-Custody forms which accompanied these biota samples.

If I can be of further assistance to you please do not hesitate to contact me.

Sincerely,

Gregory M. Styborski

This image shows a full page of blank graph paper. The grid consists of 10 columns and 15 rows of squares. A prominent horizontal line runs across the middle of the page, separating the top half from the bottom half. There are also several faint vertical lines that divide the page into sections of varying widths. The overall appearance is that of a standard piece of graph paper used for mathematics or science.
