

REPORT DOCUMENTATION PAGE		<i>Form Approved</i> OMB No. 0704-0188	
Public reporting burden for this collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202-4302, and to the Office of Management and Budget, Paperwork Reduction Project (0704-0188), Washington, DC 20503.			
1. AGENCY USE ONLY (Leave blank)		2. REPORT DATE 29 Dec. 1995	
		3. REPORT TYPE AND DATES COVERED Final Technical Rept. Jan. 1990 - 6/30/95	
4. TITLE AND SUBTITLE Three-dimensional aspects of nominally 2-D and 3-D bluff body wakes		5. FUNDING NUMBERS N00014-90-J-1686	
6. AUTHOR(S) C.H. K. Williamson			
7. PERFORMING ORGANIZATION NAME(S) AND ADDRESS(ES) Cornell University, Ithaca, NY 14853-7501		8. PERFORMING ORGANIZATION REPORT NUMBER Final	
9. SPONSORING/MONITORING AGENCY NAME(S) AND ADDRESS(ES) Dr. S. E. Ramberg, Dr. E. Hendricks Office of Naval Research Arlington, VA 22217		10. SPONSORING/MONITORING AGENCY REPORT NUMBER

GENERAL INSTRUCTIONS FOR COMPLETING SF 298

The Report Documentation Page (RDP) is used in announcing and cataloging reports. It is important that this information be consistent with the rest of the report, particularly the cover and title page. Instructions for filling in each block of the form follow. It is important to **stay within the lines** to meet **optical scanning requirements**.

Block 1. Agency Use Only (Leave blank).

Block 2. Report Date. Full publication date including day, month, and year, if available (e.g. 1 Jan 88). Must cite at least the year.

Block 3. Type of Report and Dates Covered. State whether report is interim, final, etc. If applicable, enter inclusive report dates (e.g. 10 Jun 87 - 30 Jun 88).

Block 4. Title and Subtitle. A title is taken from the part of the report that provides the most meaningful and complete information. When a report is prepared in more than one volume, repeat the primary title, add volume number, and include subtitle for the specific volume. On classified documents enter the title classification in parentheses.

Block 5. Funding Numbers. To include contract and grant numbers; may include program element number(s), project number(s), task number(s), and work unit number(s). Use the following labels:

C - Contract	PR - Project
G - Grant	TA - Task
PE - Program Element	WU - Work Unit Accession No.

Block 6. Author(s). Name(s) of person(s) responsible for writing the report, performing the research, or credited with the content of the report. If editor or compiler, this should follow the name(s).

Block 7. Performing Organization Name(s) and Address(es). Self-explanatory.

Block 8. Performing Organization Report Number. Enter the unique alphanumeric report number(s) assigned by the organization performing the report.

Block 9. Sponsoring/Monitoring Agency Name(s) and Address(es). Self-explanatory.

Block 10. Sponsoring/Monitoring Agency Report Number. (If known)

Block 11. Supplementary Notes. Enter information not included elsewhere such as: Prepared in cooperation with...; Trans. of...; To be published in.... When a report is revised, include a statement whether the new report supersedes or supplements the older report.

Block 12a. Distribution/Availability Statement. Denotes public availability or limitations. Cite any availability to the public. Enter additional limitations or special markings in all capitals (e.g. NOFORN, REL, ITAR).

DOD - See DoDD 5230.24, "Distribution Statements on Technical Documents."

DOE - See authorities.

NASA - See Handbook NHB 2200.2.

NTIS - Leave blank.

Block 12b. Distribution Code.

DOD - Leave blank.

DOE - Enter DOE distribution categories from the Standard Distribution for Unclassified Scientific and Technical Reports.

NASA - Leave blank.

NTIS - Leave blank.

Block 13. Abstract. Include a brief (*Maximum 200 words*) factual summary of the most significant information contained in the report.

Block 14. Subject Terms. Keywords or phrases identifying major subjects in the report.

Block 15. Number of Pages. Enter the total number of pages.

Block 16. Price Code. Enter appropriate price code (*NTIS only*).

Blocks 17. - 19. Security Classifications. Self-explanatory. Enter U.S. Security Classification in accordance with U.S. Security Regulations (i.e., UNCLASSIFIED). If form contains classified information, stamp classification on the top and bottom of the page.

Block 20. Limitation of Abstract. This block must be completed to assign a limitation to the abstract. Enter either UL (unlimited) or SAR (same as report). An entry in this block is necessary if the abstract is to be limited. If blank, the abstract is assumed to be unlimited.

FINAL REPORT OF RESEARCH ON ONR GRANT
N00014-90-J-1686

"THREE-DIMENSIONAL ASPECTS OF NOMINALLY 2-D
AND 3-D BLUFF BODY WAKES"

P.I. C.H.K. WILLIAMSON
CORNELL UNIVERSITY

Over the last decade, there has been much work carried out to understand three-dimensional effects at low Reynolds numbers (Re) in the wake of bluff bodies, yielding the realization that end effects can influence the vortex shedding across large spanwise lengths. Wake patterns such as parallel shedding, oblique shedding, cellular shedding, transient patterns, such as "phase shocks" and "phase expansions", as well as the existence of large-scale 'vortex dislocations', have been investigated, aspects of this research being spearheaded by the studies at Cornell under the above Contract. In particular, we have discovered a new mechanism for oblique wave resonance in the far wake. We have found a means to control the near wake by using suction at the spanwise ends of a body, which has enabled much more precise phenomena to be investigated including the critical conditions for turbulence inception, and a careful study of 3-D wake transition. We have combined our research at Cornell with studies by Dr. Peter Monkewitz at Ecole Polytechnique, Lausanne, who has effectively laid much of the foundation of the description of these near wake patterns in terms of a Guinzburg-Landau equation. For example, the new transient phenomenon known as a "phase expansion" has been found to be directly analogous to a Prandtl-Meyer expansion found in gas dynamics. Clearly, the work under the support of the ONR has led to a surprisingly rich new understanding of three-dimensional effects in nominally two-dimensional wake flows. The importance of these studies lies in the fact that three-dimensionality affects directly the integrated unsteady forces on a long structure, as well as the wake signature left far downstream of a body. There has been a need to extend the results found over the last 5-6 years to higher Reynolds numbers, and we are attacking these problems precisely at the present time. Our work has involved some other collaboration with groups at Marseille (Provansal), Nice (Pumir) and Caltech (Henderson). Our research under this contract at Cornell has discovered a number of the new phenomena, as well as leading to new understanding of questions in the literature which had remained unanswered for 30-40 years. Our research has directly lead to my invitation to present a review of all of these new findings within the research community in the *Annual Review of Fluid Mechanics*, in a paper entitled "Vortex Dynamics in the Cylinder Wake". It should be said that the Accelerated Research Initiative on Bluff Body Wakes and Instabilities, of which my Grant has been a component, has been the principal trigger for most of the new discoveries, coming from experiment, computation and analytical studies, which I have reviewed comprehensively in the above paper. In particular, our work at Cornell is comprehensively published in several of the principal refereed journals, all of which are listed on the ensuing pages of references coming from support on the above research Contract.
