1. Introduction

1.1 Background

The Department of Defense (DoD) Air Force Continuous Acquisition and Life-Cycle Support (CALs) Test Network (AFCTN) is conducting tests of the military standard for the Automated Interchange of Technical Information, MIL-STD-1840A, and its companion suite of military specifications. The AFCTN is a DoD sponsored confederation of voluntary participants from industry and government managed by the Electronic Systems Center (ESC).

The primary objective of the AFCTN is to evaluate the effectiveness of the CALs standards for technical data interchange and to demonstrate the technical capabilities and operational suitability of those standards. Two general categories of tests are performed to evaluate the standards; formal and informal.

Formal tests are large and comprehensive, which follow a written test plan, require specific authorization from the DoD, and may take months to prepare, execute, and report.

Informal tests are quick and short, used by the AFCTN technical staff, to broaden the testing base. They include representative samples of the many systems and applications used by AFCTN participants. They also allow the AFCTN staff to gain feedback from many industry and government interpretations of the standards, to increase the base of participation in the CALs initiative, and respond to the many requests for help that come from participants. Participants take part voluntarily, benefit by receiving an evaluation of their latest implementation (interpretation) of the standards, interact with the AFCTN technical staff, gain experience using the standards, and develop increased confidence in them. The results of informal tests are reported in Quick Short Test Reports (QSTRs) that briefly summarize the standard(s) tested, the hardware and software used, the nature of the test, and the results.

1.2 Purpose

The purpose of the informal test, reported in this QSTR, was to analyze Westinghouse Electric Corporation's interpretation and use of the CALS Standards in transferring technical publication data. Westinghouse Electric used its CALS Technical Data Interchange System to produce data, in accordance with the standards, and delivered it to the AFCTN technical staff on a 9-track magnetic tape.

2. Test Parameters

MIL-R-28002A

3. 1840A Analysis

3.1 External Packaging

The tape arrived at the Air Force Test Bed (AFCTB) enclosed in a box in accordance with ASTM D 3951. The exterior of the box was marked with the magnetic tape warning label, as required by MIL-STD-1840A, para. 5.3.1.3.

The tape was enclosed in a barrier bag as required by MIL-STD-1840A, para. 5.3.1.2. Inspection of the tape reel showed the label indicating the recording density, as required by MIL-STD-1840A, para. 5.3.1. Enclosed in the box was a packing list showing all files recorded on the tape.

3.2 Transmission Envelope

The 9-track tape received by the AFTB contained MIL-STD-1840A files. The files were named per the standard conventions.

3.2.1 Tape Formats

The tape was run through the AFCTN *Tapetool* v1.2.8 utility. Two warnings were reported while evaluating the contents of the tape labels. Both warnings related to the use of carriage control characters in the data files. These characters are typically inserted into the file if a PC word processor is used. The warning is generated because some systems handle these characters in different ways and it may cause a problem.

***** WARNING - This variable length record type file contained carriage control characters. Carriage control characters are used as record terminators and are interpreted differently among dissimilar systems.**

3.2.2 Declaration and Header Fields

During the evaluation of the Document Declaration file and the data headers, 128 errors, 4 warnings, and 219 notes were reported.

Many of the reported errors and resulting notes were caused by the inserting of a space before the report data started. MIL-STD-1840A, para. 5.1.1.2 does not permit the use of leading spaces.

srcsys: Westinghouse MTD, PO Box 18429, Pittsburgh, PA 15236
*** ERROR (MIL-STD-1840A; 5.1.1.2) - Value contains leading spaces.
*** NOTE - Correction made in new %s Header File.

In the Document Declaration file, the chglvl record was incorrect. MIL-STD-1840A, para. 5.1.1.2 specifics that the value of this record contain either the word "ORIGINAL" of the revision number followed by a comma and the data in the format YYYYMMDD.

chglvl: FIRST REVISION 28 FEBRUARY 1990
*** ERROR (MIL-STD-1840A; 5.1.1.2) - Value contains leading spaces.
*** ERROR (MIL-STD-1840A; 5.1.1.2) - Invalid date format encountered.
*** NOTE (MIL-STD-1840A; 5.1.1.2) - Date Format shall be a four digit year followed by a two digit month followed by a two digit day.
*** NOTE - Correction made in new %s Header File.

The next reported error was in the dstdocid record. Part of the document id was moved to the next line which made Tapetool think that it was the next record information. This caused errors for the remainder of the records.

dstdocid: S9086-RQ-STM-010/
*** ERROR (MIL-STD-1840A; 5.1.1.2) - Value contains leading spaces.
*** NOTE - Correction made in new %s Header File.
CH-510
*** ERROR (MIL-STD-1840A; 5.1.1.2) - Colon missing in Document Declaration header field.
*** NOTE - The header record will be given the value NONE.
*** NOTE - Correction made in new Document Declaration Header File.

The next reported new error was in the header file for the text file. The *srcdocid* label was mistyped as *scrdocid* which was flagged as an error. The next error was reported in the *txtfilid* record. This value is correct but due to the error in the Document Declaration file, this was flagged as an error.

scrdocid: S9086-RQ-STM-010/CH-510
*** ERROR (MIL-STD-1840A; 5.1.4) - Invalid Text header;
field name. Expected => srcdocid:
*** NOTE - The value in the header field may not be evaluated.
*** NOTE - Correction made in new %s Header File.
dstdocid: S9086-RQ-STM-010/CH-510
txtfilid: W
*** ERROR (MIL-STD-1840A; 5.1.4.1) - Invalid 'txtfilid:' value for
product data. Expected => NONE
*** NOTE - The header record will be given the value NONE.
*** NOTE - Correction made in new %s Header File.

The next set of errors were in the Raster files. The *txtfilid* and *srcgph* were reported as being an error when they were in fact correct. This was traced to the error in the Document Declaration file defined above. These errors were consistent throughout the 37 Raster files.

txtfilid: W
*** ERROR (MIL-STD-1840A; 5.1.4.4) - Invalid 'txtfilid:' value for
product data. Expected => NONE
*** NOTE - The header record will be given the value NONE.
*** NOTE - Correction made in new %s Header File.
figid: 1
srcgph: D001R001
*** ERROR (MIL-STD-1840A; 5.1.4.4) - Invalid value for 'srcgph:'.
Expected 'NONE' for Product Data.
*** NOTE - The header record will be given the value NONE.
*** NOTE - Correction made in new %s Header File.
doccls: UNCLASS
rtype: 1
rorient: 000,270
rpelcnt: 001408,001836
rdensty: 0300
notes: NONE
*** ERROR (MIL-STD-1840A; 5.1.4) - Value contains leading spaces.
*** NOTE - Correction made in new %s Header File.

The last reported error was the incorrect file naming. MIL-STD-1840A specifics that the files start with D001X001 and are incremented by one for each file. The numbering does not restart when the file class changes. A suggested change to MIL-STD-1840B has been made to reflect this type numbering.

Evaluating numbering scheme...

*** ERROR (MIL-STD-1840A; 5.1.3) - The data files for Document D001 were not numbered properly.

*** NOTE (MIL-STD-1840A; 5.1.3) - The first data file for a Document shall use "001" and the number shall increment sequentially for each file of the Document so that each file has a unique file name.

Renumbering data files...

Updating Map File for Document D001

*** NOTE - 1 file(s) were renumbered.

Numbering scheme evaluation complete.

4. IGES Analysis

No Initial Graphics Exchange Specification (IGES) files were included on this tape.

5. SGML Analysis

The Text file from this document was tested using the Exoterica *XGMLNormalizer* parser. The tape did not contain a DTD, but the Text file indicated that MIL-M-38784C was used. The generic MIL-M38784C available in the AFCTB, was used for this operation. When the Text file was parsed, 310 errors were reported. The evaluation of the errors appeared that the MILM-38784C DTD used by Westinghouse had been modified. Without the modified DTD, the Text file could not be parsed.

6. Raster Analysis

All 37 Raster images were checked using the AFCTN *validg4* utility. Files D001R001, D001R003, D001R005, D001R006, and D001R015 were reported as having errors. When these files were converted using Inset Systems' *HiJaak* and then viewed, the errors were apparent. See the Appendix for hard copies of these files. The error log for file D001R001 is shown below. The error logs for the invalid files are included in the Appendix to this report.

```
density      = 300
path length  = 1408
scan lines   = 1836
bit format   = MSB
```

```
error, scan length exceeds pel count
s=87 a0=0 bstop=1409 pos=83
```

```
file = D001r001
```

The files were converted using Rosetta Technologies' *Prepare* and viewed using *Preview*. With the exception of the above noted files, all of the other files were acceptable. Copies of selected files are included in the Appendix to this report.

The files were then converted using Inset Systems' *HiJaak* to both a PCX and IMG format without a reported problem. The PCX files were viewed on the screen without a problem. The IMG files were imported into Corel's *Ventura Publisher* and are included in the Appendix to this report.

7. CGM Analysis

No Computer Graphics Metafile (CGM) files were included on this tape.

8. Conclusions and Recommendations

In summary, the tape from Westinghouse Electric Corporation, Machinery Technology Division had many problems. The tape Document Declaration file and data header records contained many errors. These errors resulted in the tape being unreadable by other tape utilities.

The tape did not contain the DTD and the generic MIL-M-38784C was used. This resulted in 310 errors being generated during the parsing operation. Because of the number of reported errors, no correction was attempted. The SGML file does not meet the CALS MIL-M-28001A specification.

The tape contained 37 Raster images. Five of these images were reported as having errors by the AFCTN *validg4* software. These errors are graphically displayed in the Appendix to this report. The Raster files do not meet the CALS MIL-R-28002A specification.

The tape received from Westinghouse Electric Company did not meet the CALS MIL-STD-1840A requirements. The tape should have contained the DTD, to ensure modifications made by the original organization are used throughout the validation process.

This diagram shows an exploded view of a mechanical assembly. The components are labeled with numbers 1 through 10. The assembly includes a base plate (1), a central housing (2), a motor or actuator (3), a gear or pulley (4), a shaft (5), a bearing (6), a pin or screw (7), a spring (8), a bush or spacer (9), and a final output component (10). The diagram illustrates the spatial relationship and assembly sequence of these parts.

12. Westinghouse Electric Corporation's Comments

Regarding the Tape Formats section:

Problem: "Carriage control characters in the tape labels."

Comment: "Concur, will review the problem. The AFTB TAPETOOL Utility was used to create the tape."

Regarding the Declaration and Header Fields:

Problem: "Leading spaces before report data."

Comment: "Do not concur. MIL-STD-1840A, FIGURE 1. Example of a declaration file., shows two spaces before report data. The example was followed. The figure is reproduced below. The extra space will be deleted for future tests."

MIL-STD-1840A

```
srcsys: AJAX Inc. 100 Doe St., San Diego, CA 92110
srcdocid: Benchmark 14
srcrelid: Benchmark 12
chglvl: 1
dteis: 19810801
dstsys: ATOS System, Hill Air Force Base, UT 84056
dstdocid: 4SA6-11-4
dstrelid: 4SA6-11
dtetrm: 19850710
dlvacc: CDRL item 6 of Contract 1XYZ1085, DUE 31JUL85
filcnt: T8, Q4, C1, R1
ttlcls: Unclass
doccls: Unclass
doctyp: A character string
docttl: A character string
srcreldoc: NONE
chgdt: 19830606
```

Problem: "chglvl field is incorrect format."

Comment: "Concur, will change to 1, 19900228"

Problem: "dstdocid record - part of document id was moved to the next line."

Comment: "Concur, will review the problem."

"The remainder of the errors in the header fields were caused by the above."

Problem: "Incorrect file naming."

Comment: "Concur, will rename the text file so that it does not restart the numbering."

Regarding the SGML Analysis:

Problem: "The tape did not contain a DTD and the generic MIL-M-38784C DTD was used for the test."

Comment: "The generic MIL-M-38784C DTD is the correct DTD. The DTD was not modified for our use. According to the error log, carriage control characters appear to be causing a domino effect on the tags. Tags appear to be broken causing them to be partially interpreted. The cause of the tag corruption will be reviewed."

Regarding the Raster Analysis:

Problem: "Five graphics were reported having a scan length that exceeds the pel count."

Comment: "Concur, graphics D001R001, D001R003, and D001R015 did not print accurately. Do not concur, graphics D001R005 and D001R006 did not appear to have a problem. All of the graphics were created using Inset Systems Hijaak. The problem of three having an incorrect scan length will be reviewed."

Summary:

"Westinghouse MTD concurs with the findings of the CTN with the exception of the Declaration and Header Fields (3.2.2), leading spaces before report data and the two raster files."
