Contents

1. Introduction

1.1 Background

The DoD Computer-aided Acquisition and Logistics Support (CALS) Test Network (CTN) is conducting tests of the military standard for the Automated Interchange of Technical Information, MIL-STD1840A, and its companion suite of military specifications. The CTN is a DoD-sponsored confederation of voluntary participants from industry and government managed by the Air Force Material Command.

The primary objective of the CTN is to evaluate the effectiveness of the CALS Standards for technical data interchange and to demonstrate the technical capabilities and operational suitability of those standards. Two general categories of tests are performed to evaluate the standards, formal and informal. Formal tests are large, comprehensive tests that follow a written test plan, require specific authorization from DoD, and may take months to prepare, execute, and report.

Informal tests are used by the CTN technical staff to broaden the testing base by including representative samples of the many systems and applications used by CTN participants. They also allow the CTN staff to gain feedback from many industry and government interpretations of the Standards, to increase the base of participation in the CALS initiative, and to respond, in a timely manner, to the many requests for help that come from participants. Participants take part voluntarily and are benefited by receiving an evaluation of their latest implementation (interpretation) of the standards, interacting with the CTN technical staff, gaining experience in use of the standards, and developing increased confidence in them. The results of informal tests are reported in Quick Short Test Reports (QSTRs) that briefly summarize the standard(s) tested, the hardware and software used, the nature of the test, and the results.

1.2 Purpose

The purpose of the informal test reported in this QSTR was to analyze Hughes Tucson Support Systems Operation's interpretation and use of the CALS Standards in transferring technical publications data. Hughes TSSO used its CALS Technical Data Interchange System to produce data in accordance with the standards and delivered it to the CTN technical staff on a 9-track magnetic tape.

2. Test Parameters

Test Plan: AFTB 92-27

Date of Evaluation: 7 April 1992

Evaluator: George Elwood
Air Force CALS Test Bed
AFMC/ENCT
4027 Colonel Glenn Hwy
Suite 200
Dayton, OH 45431-1601

Data Originator: Hughes Tucson Support Systems Operation
Ken Virgil
PO Box 11337
Tucson, AZ 85734

Data Description: Technical Manual Test
1 document declaration file
1 TEXT file

Data Source System:
Text/SGML
HARDWARE
Unknown
SOFTWARE
Unknown

Evaluation Tools Used:
MIL-STD-1840A (TAPE)
SUN 3/280
CTN Tapetools (v1.2.8) UNIX
Agfa Compugraphics CALS v40.4
MIL-M-28001 (SGML)
SUN 3/60
AGFA Compugraphics CALS
Cheetah Gold 486
Exoterica XGML V1.2e3.2
Datalogics ParserStation v3.36

Standards Tested: MIL-STD-1840A
MIL-M-28001A

3. 1840A Analysis

3.1 External Packaging

The tape arrived at the Air Force Test Bed enclosed in a box IAW ASTM D 3951. The exterior of the box was marked with the required magnetic tape warning label, MIL-STD-1840A, para. 5.3.1.3.

The tape was not enclosed in barrier bag as required by MIL-STD-1840A, para. 5.3.1.2. Inspection of the tape reel showed the required label indicating the recording density as required by MIL-STD-1840A, para. 5.3.1. Not enclosed in the box was a packing list showing all files that were recorded on the tape.

3.2 Transmission Envelope

The 9-track tape received by the Air Force Test Bed contained MIL-STD-1840A files. The files were named per the standard conventions.

3.2.1 Tape Formats

The 1840A Tape was run through the AFTB TAPETOOL utility version 1.2.8. No errors were encountered while evaluating the contents of the tape labels.

The tape was read without error using Agfa CAPS read1840A utility.

3.2.2 Declaration and Header Fields

No errors were reported in the Document Declaration File header or data header file header records.

4. IGES Analysis

No IGES files were included on the tape.

5. SGML Analysis

The text file from this document was tested using the Exoterica XGMLNormalizer parser. No errors were reported from this operation.

The text file was also parsed using Datalogics *ParserStation* with not reported errors.

6. Raster Analysis

No raster images were included on the tape.

7. CGM Analysis

No CGM files were included on the tape.

8. Conclusions and Recommendations

In summary, the MIL-STD-1840A tape from Hughes Tucson Support Systems Operation was correct. The tape could be read properly using the CTN *Tapetool* Software with no reported errors.

The text file parsed without reported error using the available parsers in the AFCTB.

The tape and text file included meet current CALS Standards.
