Attention regular customers: please see new information below for each publication.

Airport Activity Statistics of Certificated Route Air Carriers is now published by the Bureau of Transportation Statistics (BTS). Included in the data are passenger enplanements and tons of enplaned freight and mail. Scheduled/ nonscheduled service shown by airport and carrier are also included. Breakdown of data includes departures/enplanements/ cargo/mail by airport, carrier & type of operation, and type of aircraft.

General Aviation & Air Taxi Activity and Avionics Survey is an annual report that presents the results of the general aviation/air taxi activity and avionics survey conducted to obtain information on the activity and avionics of the US registered general aviation aircraft fleet. The report contains estimated flying time, landings, fuel consumption, lifetime airframe hours, and engine hours of the active general aviation aircraft by manufacturer/model group, aircraft type, state and region of based aircraft, and primary use.

INTRODUCTION

The *Census of U.S. Civil Aircraft* is published annually by the Federal Aviation Administration. Its purpose is to serve as reference on the U.S. civil aircraft fleet.

Chapter I shows summary information about the registered civil fleet-both active and inactive aircraft. These statistics were compiled from official records maintained by the Aircraft Registry, Mike Monroney Aeronautical Center. The detailed counts by manufacturer and model shown in Appendix A were also developed from these registration records.

Prior to 1992 the U.S. air carrier fleet data shown in Chapter 2 were developed from monthly Aircraft/Engine Utilization Reports submitted by air carrier operators. Beginning with 1992 the data were developed from the Vital Information System. The Aircraft population shown in this chapter is not an inventory of the aircraft owned by the air carriers but represents the aircraft actually used by the air carriers.

The information about general aviation aircraft shown in Chapter 3 and Appendix C were developed from two different sources. The registered aircraft information was compiled from the Registry records at the Aeronautical Center. The state and county of the aircraft shown in Appendix C is assigned based on the registrant's address as shown on the registration records. Statistics on the number of active general aviation aircraft and flight hours were compiled using a sample survey of owners.

The *Census of U.S. Civil Aircraft* is prepared by the Statistics and Forecast Branch, Planning Analysis Division, Office of Aviation Policy, Plans and Management Analysis. Suggestions and comments on the scope and content of this report are requested and will be given careful consideration in planning future editions.

Note: Prior to 1994 Experimental/Amateur aircraft included those built without a production certificate. Beginning in 1994 Experimental/Amateur includes aircraft with an experimental airworthiness certificate. These include research and development, amateur built, exhibition, racing, crew training, and market survey aircraft and aircraft used to show compliance with the Federal Aviation Regulations.

Note: Air carrier aircraft are aircraft carrying passengers or cargo for hire under 14 CFR 121 (large aircraft-more than 30 seats) and 14 CFR 135 (small Aircraft--30 seats or less). This definition is more encompassing than that used in the FAA Aviation Forecast--jet aircraft, 60 seats or more carrying passengers or cargo for hire.

Note: Beginning in 1987, the number of aircraft is the monthly average of the number of aircraft reported in use for the last three months of the year. Prior to 1987, it was the number of aircraft reported in use during December of the year.

Note: Air carrier aircraft are aircraft carrying passengers or cargo for hire under 14 CFR 121 (large aircraft--more 30 seats) and 14 CFR 135 (small Aircraft--30 seats or less). This definition is mores encompassing than that in the FAA Aviation Forecast--jet aircraft, 60 seats pr more carring passengers or cargo for hire.

Note: Beginning in 1987, the number of aircraft is the monthly average of the number of aircraft reported in use for the last three months of the year. Prior to 1987, it was the number of aircraft reported in use in December of the year.

Active Pilots per Registered General Aviation Aircraft by State

ACTIVE GENERAL AVIATION AIRCRAFT AND HOURS FLOWN

The tables in the rest of this chapter show activity for general aviation aircraft. These data are for the active--flew one or more hours during the year--fleet as opposed to the registered fleet data shown in preceding tables.

General aviation aircraft activity information was obtained using the General Aviation/Air Taxi Activity (and Avionics) Survey, which is mailed to the owners of a sample of registered general aviation aircraft. The survey collects data relative to flight hours, airframe hours and, in alternate years, the avionics equipment on board the aircraft. In addition, the survey collects information about the number of hours flown under instrument flight rules, the number of landings, and the state where the aircraft is based.

The sample is a scientifically designed random sample which represents all general aviation and air taxi aircraft registered in the United States.

Because the estimates are derived from a sample--not the total population of aircraft--a certain amount of sampling error is introduced. The user must consider this error along with the estimate itself when making an inference or drawing any conclusions about the aircraft population. Although the exact value of the sample error is unknown, a quantity known as the standard deviation is used to approximate it. Using the standard deviation, one can develop an interval within which the true population estimate will lie with a known probability. The probability that the true value will lie within the interval depends on the width of the interval, i.e., the estimate plus or minus 1, 2, or 3 times the standard deviation. The table below shows selected interval widths and their corresponding confidence.

<u>Width of Interval</u>	<u>Approximate Confidence that Interval Includes True Population Value</u>
1 standard deviation	68%
2 standard deviations	95%
3 standard deviations	99%

For example if the estimate for total flight hours for a particular aircraft type were 40,000 and the percent standard deviation was 3%, then the 95% confidence interval would be:

$$\begin{aligned} &40,000 \pm (2 \times 0.03 \times 40,000) \\ &40,000 \pm 2,400 \\ &(42,400; 37,600) \end{aligned}$$

One can then assume that there is a 95% probability that the true population value of the total flight hours for this aircraft type lies between 42,000 and 37,600 hours.

More detailed estimates and a more detailed discussion of the survey and its methodology are available in the *General Aviation/Air Taxi Activity and Avionics Report*.

Beginning in 1993, commuters were excluded

1993 New Aircraft Types: Prior to 1993, single engine turboprops were included in "Other turboprops", single and multiengine turbine rotorcraft were not shown separately; gliders and lighter-than-air aircraft were combined into the "Other" category. Experimental aircraft were included in the appropriate aircraft type. For example, prior to 1993 the single engine piston aircraft type included both experimental and non experimental aircraft. Starting in 1993 that aircraft type includes only the non experimental.

1993 Use Categories Changes: Beginning in 1993,

Commuters were excluded from the survey.

External Load and Sight Seeing were created as separate categories. Prior to 1993 they were included in one of the other nine categories as appropriate.

N/A Rental Hours no longer collected as separate use category.

1993 New Aircraft Types: Prior to 1993, single engine turboprops were included in "Other turboprops", single and multiengine turbine rotorcraft were not shown separately; gliders and lighter-than-air aircraft were combined into the "Other" category. Experimental aircraft were included in the appropriate aircraft type. For example, prior to 1993 the single engine piston aircraft type included both experimental and non experimental aircraft. Starting in 1993 that aircraft type includes only the non experimental.
