CHAPTER 1
DOCUMENT IDENTIFIER CODE FORMAT
MULTIPLE DIC INPUT

1. A combination of any of the following DICs may be included in an LMD package when applicable to system requirements. Combinations including two or more of the same DICs must contain at least one other different DIC. The following DICs may be submitted to DLSC in any sequence; however, DLSC will sequence and process them in the order reflected below:

- a. LCG, LDD, LAD, LCD, LDU, LCU, LAU, LDR, LAR, LCR, LCC, LPA, LPC
- b. LKD with LAD or LCM; LKU with LAD or LCM
- c. LKV with LAD, LCM
- d. LAU with LAM or LCM. The combination of DIC LAU with LAM or LCM will be used in accordance with the return code RJ edit/validation for DIC LAU in volume 11.
- e. LDU with LDM or LCM or LAD

(1) The combination of DIC LDU with CMD (LCM or LAD) must be used when the Delete MOE Rule (LDU) contains a Primary Inventory Control Activity Level of Authority (PICA LOA) of 01, 02, 06, 11, 15, 22, 23 (AZ), or 26 (military) and active CMD is currently recorded in the FLIS data base, and the MOE Rule is for the last recorded DoD/Civil manager on the item. LDM may only be used with LDU if the CMD is already inactive.

(2) The LMD must be submitted by the current item manager.

(3) The combination of DIC LDU with CMD (LCM or LAD) may be submitted by the SICA when the delete MOE Rule (LDU) contains a SICA LOA of 5D, 5G, 5H, 8C, 8D, 67, 68, 9D, 9G, 9H, 96 or 97 and active CMD is currently recorded in the FLIS.

f. LCU, LCU and LAU, LCU and LDU or LCU and LAU and LDU with LCM or LAM.

(1) The combination of DICs LDU/LCU/LAU with CMD (LCM or LAM) will be used when there is a logistics reassignment (including a change of PICA or PICA LOA) in accordance with the return code RJ edit/validation for DIC LCU in volume 11.

(2) DIC LCG may be included in this combination when there is an FSC class change on the item involved in the logistics reassignment.

g. LCG with LCM.

h. Only one CMD record may be included in a single LMD package and will reflect a Maintenance Action Code of MM, MS, SS, or TG, or blank as appropriate.

i. All effective dated DICs within an LMD transaction must contain the same effective date. (Effective date standard time frames for concurrent submittal of item management decisions and catalog management data are listed in volume 10, table 145.) NOTE: T-Moe Rules cannot be effective dated and therefore cannot be added or deleted in an LMD package with effective dated actions.

j. LCC, LCD (Segment A data elements i.e., type, FIIG, etc.) and LCM to accommodate change type 2 or type 4 to a Full Descriptive Type II).

(1) Characteristic (DIC LCC) Segment V portion and Segment A (DIC LCD) may be effective dated immediately (on processing date). The Segment H portion of the transactions remains effective dated in the futures file until the effective date.

(2) The combination of DICs LCG, LCM, and LCC will be used to process a FSC change with CMD and characteristics changes. DIC LCC must be future effective dated along with the FSC and CMD change.

k. LCD with LCM

(1) The combination of DICs LCD (DEMIL Code Change) and LCM (CIIC Change) will be used to process a DEMIL Code and Controlled Inventory Item Code (CIIC) changes.

(2) The DEMIL position (LCD) will be processed immediately. The Segment H (LCM) CIIC portion of the transaction remains effective dated in the futures file until the effective date.

2. Data elements, when submitted, must be input in the following sequence within the DICs:

TITLE - MATCH THROUGH ASSOCIATION

DEFINITION - YOUR SUBMITTAL IS A POSSIBLE DUPLICATE OF AN EXISTING FEDERAL ITEM IDENTIFICATION (FII) REVEALED BY A REFERENCE NUMBER MATCH THROUGH ASSOCIATION CODE RELATIONSHIP SCREENING. FLIS DATA BASE DATA CODED KFA IS FORWARDED. A SEGMENT 1 MAY ALSO BE PROVIDED REFLECTING THE SUBMITTED AND CHANGE VALUE. ALL SCREENING RESULTS ARE BASED ON THE USE OF THE REPLACED CAGE/NCAGE.

INSTRUCTIONS - 1. TO ELIMINATE MULTIPLE ENTRIES OF CONTROL DATA ELEMENTS IN THE FIXED DIC FORMAT BELOW, THESE ELEMENTS ARE SHOWN IN THE FIRST CARD IMAGE ONLY. CONTROL DATA ELEMENTS AS SHOWN, ARE REQUIRED IN POSITIONS 1-39 OF ALL SEGMENT CARD IMAGES IN THE TRANSACTION PACKAGE. THE PSN (DRN 1070) IN CC 4-6 MUST BE INCREMENTED BY ONE (1) IN EACH CARD. 2. REVIEW THE FLIS DATA BASE DATA AND IF THE EXISTING FII REPRESENTS YOUR ITEM OF SUPPLY SUBMIT, IF NECESSARY, THE APPROPRIATE LAU OR LCU TRANSACTION. IF THE EXISTING FII DOES NOT REPRESENT YOUR ITEM OF SUPPLY RESUBMIT THE PROPOSAL WITH THE APPROPRIATE REFERENCE NUMBER JUSTIFICATION CODE IN ALL REFERENCE NUMBER(S) THAT CAUSED THE POSSIBLE DUPLICATION. NOTE: KFA IS SECONDARY TYPE OUTPUT WHICH IS GENERATED AS A RESULT OF INPUT DIC/S LAR, LBC, LBK, LBR, LCR, LNC, LNK, LNP OR LNR. PRIMARY OUTPUT IS FORWARDED UNDER KRP.

DOCUMENT IDENTIFIER CODE - KMR

TITLE - MATCHING REFERENCE (SCREENING)

DEFINITION - THE REFERENCE NUMBER REFLECTED IN SEGMENT J RECORD CREATED A MATCH CONDITION. THE DIC REFLECTED IN THE SEGMENT L RECORD, WHICH FOLLOWS THIS DIC, IDENTIFIES THE TYPE/DEGREE OF MATCH CONDITION. (UNMATCHED REFERENCE NUMBER(S) WILL BE IDENTIFIED BY OUTPUT DIC KNR.) THIS SEGMENT J CONTAINS THE REFERENCE DATA AS SUBMITTED IN THE INPUT TRANSACTION. IF THE SUBMITTED CAGE/**NCAGE** HAS BEEN CANCELED AND REPLACED, A SEGMENT 1 WILL FOLLOW THE APPLICABLE SEGMENT J INDICATING THE SUBMITTED AND CHANGED VALUE. ALL SCREENING RESULTS ARE BASED ON THE USE OF THE REPLACEMENT CAGE/**NCAGE**.

INSTRUCTIONS - KMR IS A SECONDARY OUTPUT AS A RESULT OF INPUT DIC LSA, LSB, LSR OR LSN. PRIMARY OUTPUT IS FORWARDED UNDER DIC KSR.

For all other transactions, card columns 8-23 will contain DRN 4210,3720,2310, and 1000, and card columns 24-26 will be left blank.

2/ This segment will contain two records for each change: First record (type S) for the submitted value and the second record (type R) for the change value. Value for DRN 9979 is used with type S reply for DRN 0238. Value for DRN 9977 is used with type R reply for DRN 0238.

3/ Card columns 52-56 are limited to the values for four data elements - DRNs 9250, 4140, 4540, and 2650. When this field contains a submitted value for DRN 4540 or 2650, it will be entered in card column 52, and card columns 53-56 will be blank.

4/ When card columns 64-68 contains a changed value for DRN 4540 or 2650, it will be entered in card column 64, and card columns 65-68 will be blank.

5/ Segment 1 is used in FLIS as output notification only, to reflect a data element as it was submitted and the data element as it was changed mechanically by DLSC, utilizing a segment 1 format for each changed element. This segment 1 will be within an output DIC sent only to the originator/submitter, except KSR. The following data elements submitted under the cited input conditions are subject to DLSC change:

Segment 1

CHAPTER 3
SEGMENT FORMATS
SEGMENT 1 - NOTIFICATION OF DLSC CHANGE DATA (DRN 9121)

Data Element	When Subject to Change
Commercial and Government Entity Code (DRN 9250)/NATO Supply Code for Manufacturers (DRN 4140)	Only on submittals which reflect a code which has been cancelled and replaced.
Deletion Reason Code (DRN 4540)	Only on cancellations or Delete Major Organizational Entity (MOE) Rule actions when the recorded Item Standardization Code is 3 or E, and the submitted Deletion Reason Code is other than 3.
Item Standardization Code (DRN 2650)	Only on requests for new National Stock Number (NSN) assignment when an E segment is submitted by an unauthorized submitter of standardization and the ISC is changed to 0 or 5.

6/ The purpose for changing these data elements is (1) to permit further DLSC processing of a submittal which contained such data and (2) to provide notification to the appropriate activity of such change (e.g., file update, etc.). Segment 1 may apply to approvals, returns, match conditions, and screening results as applicable. The change feature to allow further DLSC processing of the item will not, however, exempt the submittal from any further edits which may cause an error condition and subsequent package disapproval.

7/ In instances where submittals are entered on a DLSC suspense after a segment 1 change has occurred, the suspense will reflect these changes. Any subsequent Service/Agency correction submittals (e.g., LRN) must reflect the corrected data as applicable.

SEGMENT FORMATS
SEGMENT E - STANDARDIZATION DECISION DATA (DRN 9104)

This segment, used as input to and output from DLSC, consists of the elements of data necessary to portray the relationship of NIINs/PSCNs involved in a standardization decision. The elements of data comprising this segment are contained on a single card; however, when three or more NSNs/PSCNs are involved in a standardization relationship, sufficient additional segment E cards will be required to accommodate all pertinent NSNs/PSCNs.

CHAPTER 3
SEGMENT FORMATS
SEGMENT E - STANDARDIZATION DECISION DATA (DRN 9104)

NOTES:

1/ Card columns 8-9 will contain DRN 0177 and card columns 10-26 will contain DRN 1120 for provisioning and other preprocurement screening transactions. DRN 1120 will always begin in card column 10; unused positions in the field provided for DRN 1120 may be left blank. For all other transactions, card columns 8-26 will contain DRNs 4210, 3720, 2310, 1000, and 1515 in accordance with the DIC. Should DRN 1515 not be included, card columns 24-26 will be left blank.

2/ This field is interchangeable and will contain any one of the data elements listed.

3/ This field is interchangeable and either DRN 2650 or 8525 must appear in this field. Applies to the NSN/PSCN reflected in card columns 27-39.

4/ Data applies to NSN/PSCN reflected in card columns 27-39.

5/ This field is interchangeable and may contain the data elements listed. If the data elements are not applicable, the field will be blank.

6/ This field is interchangeable and either DRN 2650 or 8525 will appear in this field if an NSN/PSCN appears in card columns 50-62.

7/ Data applies to NSN/PSCN in card columns 50-62. Will be blank if card columns 50-62 are blank.

CHAPTER 3
SEGMENT FORMATS
SEGMENT G - FREIGHT CLASSIFICATION DATA (DRN 9107)

This segment, used as input to and output from DLSC, contains freight classification information. For some DICs this segment will consist of a minimum of one card, but two cards may be necessary in order to accommodate all data elements required for specific DICs. The use of a Continuation Indicator (DRN 8555) in card column 80 will be governed by the requirements of the specific DIC involved. The data element positions indicating filled and/or blank relate to the Master Freight Table segment G data records only.

1/ The Integrity Code will only be input by MTMC. It will be provided on all Freight Outputs, when available.

2/ This code is used on all known hazardous items only.

3/ The classification tariffs do not always provide a than-car rating for all entries.

4/ This code is used only when there is a variation between the rail and motor freight classification tariffs.

SEGMENT FORMATS
SEGMENT H - CATALOG MANAGEMENT DATA (DRN 9108)

This segment is used as input to and output from the Defense Logistics Services Center (DLSC). It consists of the elements of management data that are associated with the CMD cards (input codes LAM, LBM, LCM, and LDM). For some Document Identifier Codes (DICs) this segment will consist of a minimum of one card, but additional cards may be necessary to accommodate all data elements required for specific DICs. In those instances where one or more Technical Document Numbers or Related National Stock Numbers apply, continuation cards will be required.

SEGMENT L - OUTPUT FILE DATA HEADER (DRN 9110)

This segment is created by the Defense Logistics Services Center (DLSC), as output only, when file data is included in the output package or when a search request matches a stock number assigned by a North Atlantic Treaty Organization (NATO) country other than the U.S. Except for output DIC KMN, segment L serves as an intermediate header in the output package and identifies the specific NSN/PSCN for which file data is being furnished. DIC KMN provides only segment L, featuring a stock number assigned by a NATO country other than the U.S. This data is contained on a single card.

SEGMENT FORMATS
SEGMENT M - CLEAR TEXT CHARACTERISTICS (DRN 9111)

This segment is generated by the Defense Logistics Services Center (DLSC), as output only, to furnish decoded characteristics data. In addition to the clear text data, the applicable Master Requirement Code is included. The format for this data is similar to DD Form 146, Federal Item Logistics Data Record, and will satisfy the item identification requirement. Record are not the most efficient manner to convey this type of information; however, if records are used, multiple occurrences will be required.

Positions 41-44 of each segment M record will contain either an MRC (DRN 3445) or be left blank. Continuation of a Requirement Statement (DRN 3614) and/or MRC Clear Text Reply (DRN 0113) will always commence in position 46. Portions of the record may be left blank if not required to complete the clear text reply for an MRC. (See attached segment M concepts for detailed explanation.)

NOTES:

1/ When Standard Requirement 1 Specification/Standard Control Data (SR-1) and/or Standard Requirement 5 the Manufacturers Data (DR-5) are Transmitted to a segment M record, the characters "SR-1" or "SR-5" will appear in the field designated for the MRC (position 41-44). SR-1/SR-5 data elements (e.g., the manufacturer's data, nondefinitive Government spec/std reference) will appear in the field designated for the requirement statement. The values for these data elements will be reflected in the field designated for the MRC value/reply.

2/ Data element will start in this position but the final position cannot be predetermined because of the variable length of this type of data.

3/ This data element is required, however, and it will appear in the position immediately following the preceding variable length data element.

4/ The position reflected for this entry are representative only. Actual entries will commence in card positions in which they can be accommodated, immediately following the preceding data element. In the event the entry for this element cannot be accommodated on the first record on which it appears, it will be continued on a succeeding record beginning in position 46.

CHAPTER 3
SEGMENT FORMATS
SEGMENT M - CLEAR TEXT CHARACTERISTICS (DRN 9111)

SEGMENT M CONCEPTS

1. Segment M is used to transmit clear text descriptive characteristics for use in printing a visual display as required by the user. A standard segment M includes the MRC (Primary Address Code (PAC)), requirement statement, and MRC reply data. In fixed format usage, these data elements will be repeated to the extent necessary to complete a segment M record as outlined below, and will require the generation of multiple records.

2. Immediately following these concepts is a Sample Segment M format Characteristics Data chart. The chart is divided into two parts. The upper position, Segment Data Portion of Segment M, illustrates segment M data as it would appear in the form of 13 records containing characteristics data pertinent to an item identification. This chart illustrates all the conventions that apply to segment M usages as outlined below.

3. There are three data elements provided for use in controlling the printing of a visual display from a segment M record.

a. The Print Control Code (DRN 0234) will appear in position 45 of every card in a segment M record. It has three numeric values - 1, 2, and 3. Code 1 can be used to instruct a print program to begin printing what appears in position 46 at the left margin of the area reserved for the requirement statement (the margin labeled (1) in the representation). Use of code 2 can readily instruct a program to begin printing what appears in position 46 at the left margin of the area reserved for the reply data. Code 3 is an instruction to continue printing information that could not be completed on the previous line of the segment M data format. The overflow information will be displayed beginning in position 46 of the next line in the segment M data format. 5/

b. The Control Character Code (DRN 8255) is a special character that is always entered by DLSC immediately following the requirement statement. It signals the end of the requirement statement and can serve to instruct a print program to begin printing what appears in the next position at the left margin of the area reserved for reply data. 1/

c. The Data Element Terminator Code will always appear in DLSC output immediately following the reply data and it signals the end of an individual segment M data group (MRC, requirement statement, control character, and reply data). 2/

4. Record 1 on the attached segment M chart illustrates the completion of a segment M data group on one record. The MRC (NAME) is entered in position 41-44; the Print Control Code (with value of 1) is entered in position 45; and the requirement statement commences in position 46.

The Control Character Code (the commercial "at" (@) sign) appears immediately following the requirement statement. The reply data begins in the position next following the Control Character Code and it is ended by the Data Element Terminator Code (#). Because there are additional records in this segment M record, the Continuation Indicator Code (-) is entered in position 80.

5. Records 2 and 3 illustrate the overflow of a requirement statement to a continuation record. The MRC (CPLM) is entered in position 41-44; the Print Control Code with a value of 1 appears in position 45; and the requirement statement begins in position 46. The requirement statement cannot be completed on record 2; therefore, a Continuation Indicator Code is entered in position 80.

a. Record 3 is blank in the MRC field and contains a Print Control Code with a value of 3 in position 45. The overflow requirement statement begins in position 46 and is followed by the Control Character Code, the reply data, and the Data Element Terminator Code. The remainder of the record through position 79 is blank. Because more records are required to complete the segment M record, the Continuation Indicator Code (-) appears in position 80.

b. If the requirement statement should end in position 79, position 80 will contain the Continuation Indicator Code. The next record will be blank in the MRC field, a Print Control Code of 3 will be entered in position 45, and the control character will appear in position 46, followed by the reply data.

6. Records 4, 5, and 6 illustrate the overflow of reply data. Record 4 contains the MRC (CPXC) in position 41-44, and a print Control Code with a value of 1 is entered in position 45. As the reply data cannot be fully accommodated on record 4, the Continuation Indicator Code is entered in position 80.

a. Record 5 is blank in the MRC field, and a Print Control Code with a value of 3 is entered in position 45. The overflow reply data begins in position 46. As the overflow cannot be accommodated on record 5, a Continuation Indicator Code appears in position 80.

b. Record 6 is blank in the MRC field, and a value of 3 is entered in the Print Control Code field; the overflow reply data begins in position 46 and is ended by the Data Element Terminator Code. The remainder of the record through position 79 is blank and, as additional records are required to complete the segment M record, A Continuation Indicator Code is entered in position 80.

CHAPTER 3
SEGMENT FORMATS
SEGMENT M - CLEAR TEXT CHARACTERISTICS (DRN 9111)

7. Records 4-8 illustrate the use of secondary address coding to accommodate multiple replies to a single requirement statement. Records 4-6 contain the first reply.

a. In record 7, which contains the second reply, the MRC field is blank; a Print Control Code of 2 is entered in position 45, and the second reply begins in position 46. Because the second reply cannot be entirely accommodated on record 7, the Continuation Indicator Code is entered in card column 80.

b. Record 8 is blank in the MRC field; it contains a Print Control Code with a value of 3 in position 45, and the overflow reply data begins in position 46. The Data Element Terminator Code follows the reply data, and the remaining unused positions are left blank. As there are additional records in the segment M record, a Continuation Indicator Code appears in position 80.

c. Second/succeeding replies to a single requirement statement portrayed with the AND/OR symbology will be handled in the same way as secondary address coding.

8. Records 9-13 show the portrayal of SR-1 data. In record 9, the characters "SR-1" are entered in the MRC field; the Print Control Code with a value of 1 is entered in position 45, and the phrase SPEC/STD CONTROLLING DATA is entered beginning in position 46. This phrase is immediately followed by the Data Element Terminator Code. The remaining unused positions on the record are left blank, and the Continuation Indicator Code is entered in position 80.

a. The next record (record 10) is blank in the MRC field; it contains a Print Control Code with a value of 1 in position 45, and the phrase COMMERCIAL AND GOVERNMENT ENTITY CODE is entered beginning in position 46. It is immediately followed by the Control Character Code. The value for the manufacturers code (81349) is entered following the Control Character Code and is ended by the Data Element Terminator Code. The remainder of the card is left blank, and the required Continuation Indicator Code is entered in position 80.

b. The next record (record 11) is blank in the MRC field; a Print Control Code of 1 is entered in position 45, and the phrase NON-DEFINITIVE GOVERNMENT SPEC/STND REFERENCE is entered beginning in position 46. 3/ As that phrase cannot be entirely accommodated on this record, the Continuation Indicator Code is entered in position 80.

c. The next record (record 12) is blank in the MRC field; a Print Control Code with a value of 3 is entered in position 45; the remainder of the phrase is entered beginning in position 46; and the Control Character Code immediately follows the end of the phrase. The reference number follows immediately and is ended by the Data Element Terminator Code.

(1) A fixed field of 32 positions has been allocated for SR-1 reference number information. When a reference number requires less than the allocated 32 positions, the remainder of the field will be blank filled.

(2) As the 32-position reference number cannot be entirely accommodated on record 12, the Continuation Indicator Code is entered in position 80.

d. The Data Element Terminator Code will appear in the 33rd position, which equates to position 54 of record 13. As record 13 is the last card in this sample M record, position 80 is left blank. 4/

9. SR-5 data will be handled in the same way as SR-1 data. The characters "SR-5" will be recorded in the MRC field as shown on record 9; a Print Control Code with a value of 1 will be entered in position 45, and the phrase THE MANUFACTURERS DATA will appear beginning in position 46, immediately followed by a Data Element Terminator Code. The remainder of the record will be blank through position 79, with a Continuation Indicator in position 80.

a. The MRC field (positions 41-44) of the next record (as in record 10) will be blank; the Print Control Code field (position 45) will contain the value of 1; MANUFACTURERS CODE will be shown as the requirement statement, and the applicable Commercial and Government Entity Code (CAGE) will be given as the reply data.

b. As applies to the SR-1 data example in record 11, the next record will also be blank in the MRC field (positions 41-44); the Print Control Code (with a value of 1) will be entered in position 45; and DESIGN CONTROL REFERENCE (as applicable to Reference Number Category Code (RNCC) 3) will be reflected as the requirement statement. The actual reference number will be entered as the reply data.

10. The clear text characteristics data of the M segments will be in the following sequence:

Federal Item Identification Guide Section I Data
FIIG Section III Data (including MRC ZZZV)
Standard PACs (MRCs FEAT, ZZZS, ZZZT, ZZZW,
ZZZY, ELRN, ELCD, and CRTL as applicable
Administrative PAC (MRC 9001)
SR-1 Data
SR-5 Data

11. The using Services/Agencies are responsible for developing and maintaining programs for printing the clear text characteristics description in the visible display they desire. The entire content of the visible display can be extracted from the output package as follows:

NOTES:

1/ If a requirement statement ends in position 79, the Continuation Indicator Code will be entered in position 80. The next record will be blank in the MRC field, a Print Control Code with a value of 3 will appear in position 45, and the Control Character Code will be entered in position 46. Should a requirement statement end in position 78, the Control Character Code will be entered in position 79, and the Continuation Indicator will appear in position 80. The next record will be blank in the MRC field; a Print Control Code with a value of 2 will be entered in position 45, and the reply data will commence in position 46.

2/ There is one exception to this rule. The Data Element Terminator Code always immediately follows the phrases SPEC/STD CONTROLLING DATA and THE MANUFACTURER'S DATA when SR-1 and/or SR-5 data are entered in a segment M record.

3/ The phrases MFR SOURCE CONTROLLING REFERENCE or DEFINITIVE GOVERNMENT SPEC/STD REFERENCE may be entered as SR-1 data in lieu of NON-DEFINITIVE GOVERNMENT SPEC/STANDARD REFERENCE.

4/ For complete details on the use of the Continuation Indicator Code, refer to volume 10, section 10.3.5 and volume 2, section 2.3.2.

5/ A fixed field of 32 positions has been allocated for SR-1 reference number information. When a reference number requires less than the allocated 32 positions, the remainder of the field will be blank filled.

SEGMENT FORMATS
SEGMENT P - DATA ELEMENT ORIENTED WITHOUT VALUE (DRN 9113)

This segment is generated by DLSC, as output only, to return errors, conflicts and possible duplicates revealed during processing. The data element(s) involved are identified by the applicable DRN/MRC and return code to indicate specific error conditions. Any number of DRNs/MRCs may be included within this segment to identify pertinent data elements and related return codes in the transaction; however, there is a limit of three (3) occurrences per single card. If more than three errors are involved, continuation card(s) will be generated. The Date, Suspense Purge (DRN 8680) will appear on the first card and all continuation cards (when applicable) in card columns 41-46. The three data groups of SPSN/FMSN, DRN/MRC, and return code will be shown in the same format as on the first card. Any unused positions in the last card will be left blank.

When more than a single card is required to accommodate a submitted DRN value/data group, the SPSN cited in the segment will be the first SPSN in which the DRN value/data group originated (i.e., the second and succeeding PSNs required in the submission of the DRN value/data group will not be referenced in the SPSN field).

CHAPTER 3
SEGMENT FORMATS
SEGMENT Q - DATA ELEMENT ORIENTED WITH VALUE AND RETURN/ACTION CODE (DRN 9114)

This segment is used as input to and output from the Defense Logistics Services Center. It is generated by DLSC to return errors or conflicts revealed during processing. In addition to the applicable DRNs/MRCs and return codes, the values/replies are included. This segment will also be used as input to DLSC when correcting data which has been suspended by DLSC. Any number of DRNs/MRCs may be included within this segment to identify pertinent data elements and related return/action codes in the transaction package. The number of cards of this type which will be generated for a given package is unpredictable because of the variable length of the values/replies.

When more than a single card is required to accommodate a submitted DRN value/data group, the Submitted PSN cited in the segment will be the first SPSN in which the DRN value/data group originated (i.e., the second and succeeding PSNs required in the submission of the DRN value/data group will not be referenced in the SPSN field).

CHAPTER 3
SEGMENT FORMATS
SEGMENT Q - DATA ELEMENT ORIENTED WITH VALUE AND RETURN/ACTION CODE (DRN 9114)

NOTES:

1/ Card columns 8-9 will contain DRN 0177 and card columns 10-26 will contain DRN 1120 for provisioning and other preprocurement screening transactions. DRN 1120 will always start in card column 10; unused positions in the field provided for DRN 1120 may be left blank. For all other transactions, card columns 8-26 will contain DRNs 4210, 3720, 2310, 1000, and 1515 in accordance with the DIC. When DRN 1515 is not included, cc 24-26 will be blank.

2/ A NIIN, PSCN, or SCN will be shown in this field unless none is applicable in accordance with the DIC.

3/ Either DRN 8328 or DRN 1515 will be entered in this field.

4/ This blank one-position field will be repeated in each second/succeeding repetition of the data group SPSN/FMSN, DRN/MRC, Return/Action Code, Submitted DRN/MRC Value/Reply, and Data Element Terminator Code.

5/ Data element will start in this position, but the final position cannot be predetermined because of the variable length of this type of data. In the event this field cannot accommodate the entire data element, the entry will be continued on second (and succeeding) card(s), beginning in card column 47.

6/ This card column is not precise because of the variability of the preceding data length. The data element is required to be shown, however, and will appear in the card column immediately following the preceding variable length data element. If DRN 9979 ends in cc 79, the Data Element Terminator Code (DRN 8268) will appear on the next succeeding card in card column 47.

7/ Card columns reflected for these elements are representative only. If a second/succeeding data groups of SPSN/FMSN, DRN/MRC, Return/Action Code, Submitted Value Reply, and Data Element Terminator Code can be entirely accommodated in the remaining unused positions on any given card, it will be started in the position immediately following the preceding Data Element Terminator Code. If it cannot be so accommodated, it will be started in card column 47 of the succeeding card.

8/ This data element applies only to input by the International Codification Division, DLSC-SD (activity code 9Z). Other submitting activities should disregard this data element.

NOTES:

1/ For provisioning and other preprocurement screening requests (DICs LSR and LSF), cc 8 and 9 will contain DRN 0177, Activity Code, Screening, and cc 10 through 26 will contain DRN 1120, Submitter Control Number.

2/ This blank one-position field will be repeated following the Data Record Number (DRN 0950) in each subsequent repetition of the data group composed of DRN, DRN Value, and Data Element Terminator Code.

3/ Data element will commence in this position, but the actual ending card column cannot be predetermined because of the variable length of this type of data. In the event this field cannot accommodate the entire data element value, the entry will be continued on second (and succeeding) card(s) beginning in card column 41.

4/ This card column is representative only, owing to the variable length of the preceding data element. The data element is required to be shown, however, and will appear in the card column immediately following the preceding data element. If DRN 9975 ends in card column 79, cc 80 will contain the Continuation Indicator Code, and the Data Element Terminator Code (DRN 8268) will be entered in cc 41 of the next succeeding card.

5/ Card columns reflected for these elements are representative only. If a second/succeeding data group of DRN, DRN Value, and Data Element Terminator can be accommodated in the remaining unused positions on any given card, they will be started in the position immediately following the Data Element Terminator Code. If they cannot be fully accommodated, they will be started in card column 41 of the succeeding card, leaving any unused positions blank, with DRN 8555 in card column 80.

SEGMENT T - CANCELLATION/DELETE MOE RULE (DRN 9117)

This segment is used primarily for input. It is used for output only when included with segment Z (Future Data). It is used when a MOE Rule is to be deleted from an existing NSN. It is also used when an NSN/PSCN is to be cancelled in the FLIS master file, (i.e., cancel-inactive, cancel-use, etc.). When the cancellation/delete MOE Rule transaction is involved with a future effective date, segment T will be input, stored in the future data file, and output only when required with segment Z.

NOTES:

1/ Position 8-9 will contain DRN 0177 and position 10-26 will contain DRN 1120 for provisioning and other preprocurement screening transactions. DRN 1120 will always begin in position 10; unused positions in the field provided for DRN 1120 will be left blank. For all other transactions, position 8-23 will contain DRNs 4210, 3720, 2310 and 1000, and position 24-26 will be blank, except for NATO/FG data receivers. Output to NATO/FGs may contain a NATO File Maintenance Sequence Number in position 24-26.

2/ The field showing this data element is representative only. The element will begin in the first column as shown but, owing to the variable length of the element, its end cannot be predicted. In the event the entry cannot be accommodated on the first record it will be continued on a second (or succeeding) record(s) beginning in position 42.

3/ The position reflected for this data element is representative only, owing to the variable length of the preceding data element. This code is required, however, and it will appear in the position immediately following the data element to which it applies. If DRN 3317 ends in position 79, position 80 will contain the Continuation Indicator Code and DRN 8268 will be entered in position 42 of the next succeeding record.

4/ This field is representative only. The initial position cannot be predicted owing to the variable length of the preceding characteristics group, nor can the end of the field be predicted as the length of this data is variable. If a second/succeeding Characteristics Data Group can be fully accommodated in the remaining unused positions on any given record, it will begin immediately following the preceding data element (DRN 8268). If a second/succeeding Characteristics Data Group cannot be so accommodated, it will begin on the next succeeding record in position 42, leaving blank unused positions following the first Characteristics Data Group. (DRN 8555 will be entered in position 80.)

5/ The positions reflected for this data element are representative only, owing to the variable length of the preceding data elements. If the last Characteristics Data Group ends in position 78, DRN 0339 may be accommodated in position 79 of the same record and position 42 in the next record. DRN 0339 may be accommodated in position 42 and 43 only if the last Characteristics Data Group began in position 42 of the preceding record; otherwise, DRN 0339 may be in any position within position 42-79.

CHAPTER 3
SEGMENT FORMATS
SEGMENT Z - FUTURE DATA (DRN 9119)

This segment is generated by the Defense Logistics Services Center (DLSC) as output only. It is used to notify authorized data recipients of maintenance type actions which have been received by DLSC and placed in a suspense status. These actions will be processed into the FLIS data base on the established effective date. This segment will also be included in file data packages resulting from interrogations or screening. Multiple occurrences of records for this segment may be generated.

When these maintenance actions will affect a single data element, the Data Record Number for segment R (DRN 9115) will be entered in position 53-56, and the remainder of the record through position 80 will be blank. The next succeeding record(s) will be in segment R format containing the affected data element and value. When maintenance actions will affect an entire segment, the DRN for that segment will be entered in position 53-56, and the remainder of the record will be blank. The next succeeding record(s) will be in the format of the segment affected. Each data element or segment affected by these maintenance actions will require a separate segment Z record.

This segment will be output in the DIC package in which the affected segment is output. Immediately following segment Z will be the segment represented by the DRN given in segment Z in reply to DRN 0950 (cc 53-56) such as segment B, H, R, or T, which will include the effective dated data elements.

CHAPTER 4
STANDARDIZED DIC INPUT/OUTPUT NOTES

NOTE DEFINITION

- BV The second entry will be DRN 3921 (Document Identifier Code, Input) followed by the value of the input DIC of the original transaction on which the follow-up was submitted.
- BW The third entry will be DRN 0166 (Follow-Up Status Code) followed by the value.
- BX When applicable, a fourth entry will be DRN 3920 (Document Identifier Code) followed by the value of the output DIC representing the resultant output of the original transaction on which the follow-up was submitted.
- BY Data element is mandatory. Computer generated by submitting activity on input and by DLSC on output. All characters, including the count field, are added together to make up this element.
- BZ Mandatory when the MOE pre-established in the MOE Rule Table is a Military Service, a DoD manager, or a Defense Supply Center for the MOE Rule Number being deleted from the NIIN record or when a NIIN/PSCN is being cancelled (i.e., cancel-invalid, cancel-duplicate, etc.).
- CA An Association Code, CAGE Code **NCAGE** (DRN 8855) will only be included in input when the Replacement Code is the new parent of a corporate complex and the new Association Code is recorded on the file. Whenever an Association Code is reflected in input, it must be equal to the Replacement Code (DRN 3595/9292/9293) with the fifth position converted to a twelve overpunch.
- CC Mandatory for use with Association Code, CAGE/**NCAGE** (DRN 8855) on affiliate Organizational Entity records. Not applicable for parent O.E. record.
- CD Applicable for O.E. type A only.

NOTE DEFINITION

- CE Submitted Package Sequence Number (DRN 8328), Data Record Number (DRN 0950), and Return Code (DRN 9480) will be used in segment 822 only by the DLSC program manager for returning errors found during review of the submittal.
- CF Address Verification Indicator (DRN 3280) will be preprinted in segment 822 on the Optical Character Recognition (OCR) DLSC Form 540 (Verification of Contractor's Status) for the purpose of clearing the suspense when the form is resubmitted, thus indicating that a reply was from the contractor.
- CG Applicable for O.E. type E only.
- CH Applicable for O.E. type F only.
- CJ CAGE Code (DRN 9250) or NATO Supply Code for Manufacturers (DRN 4140) as applicable. The appropriate value will be input by the program manager.

No clear text data will be output. When a 002 transaction is output, there will always be a 003 transaction output in the same cycle, which will provide the valid code and the applicable clear text data. Applies to DIC KHN only.
- CM Identifies the recipient of the outgoing interrogation data. The Destination Activity Code (DRN 3880) will reflect the Submitting Activity Code (DRN 3720) for Services/Agencies (external DLSC) submittals and the Originating Activity Code (DRN 4210) for internal DLSC submittals.

CT	When value of O.E. Line Segment Number (DRN 1001) is 10 (O.E. types A and F only), the entry will be followed by O.E. Clear Text Data Counter (DRN 0248) and by optional elements ZIP Code (DRN 4400), Contract Administration Office Code (DRN 8870), and Automatic Data Processing Point Code (DRN 8835) as applicable. Data Element Terminator Code (DRN 8268) will be contained in the next succeeding position when DRNs 4400/8870/8835 are shown. Applies to DIC KHN only.
CU	Not applicable as replacement for cancelled O.E. types A and E.
CV	Data element is mandatory. A combination of any 7 alphanumeric characters (e.g., CPT0001) assigned for control purposes by the originator will be reflected. Must not be repeated for another transaction on the same day. For KVI special projects, the first position must be K (e.g., K000001).
CX	Not applicable to O.E. type F.
CZ	If no NIIN is applicable, this field will show the NCB Codes of the addressee.

NOTE	DEFINITION
DA	The Package Sequence Numbers (PSN) is constructed of an alpha A through Z in the first position and the numerics 00 through 99 in the next two positions. If a transaction contains only one record the PSN will be Z01. When a transaction contains multiple records, the first segment record in a transaction package will begin with A01; the second A02; the third A03; the final record will be assigned a Z in the first position and the next sequential number in the next two positions. If the package exceeds 99 segment records, the 100th segment record will be B00; the 101st B01; etc. If the package exceeds PSN Y99, then Y99 will be repeated until the final record which will be Z00. DICs LSF and LSR are an exception. The LSR input transaction cannot exceed PSN Z25 for the same Submitter Control Number (DRN 1120). If a transaction package consists of only one segment record, PSN Z01 will be used. Output from these DICs will be in alpha-numeric format. (See volume 1, paragraph 1.3.1.d).
DB	Computer generated when input contains Organization Entity Designator (DRN 2620) values 3, 4, 5, 6, 7, or G.
DC	When the erroneous code has been used as an Association Code (the fifth digit converted to twelve overpunch), the erroneous Association Code will automatically be changed to reflect the corrected Association Code on the parent and each affiliate record.
DE	"Z" required when input contains Contract Administration Office Code (DRN 8870) and Automatic Data Processing Point Code (DRN 8835).
DF	O.E. Designator (DRN 2620) values G, 3, or 6 only.

QS	The factor by which the old quantity must be multiplied to convert to a new Unit of Issue must always be supplied when the Unit of Issue changes. Criteria for development is as follows: First position - Decimal locator identifies position of decimal point in the multiplier field. "0" whole number (no decimal) "1" decimal point before position 5 "2" decimal point before position 4 "3" decimal point before position 3 "4" decimal point before position 2 Positions 2-5 - Multiplier field. Standard factors are contained in volume 10, table 79.	QY	The first segment H DRN must be Date, Effective, Logistics Action (DRN 2128), except Former Phrase Relationship Group (DRN 0216) or Unit of Issue Change Data (DRN 0218) will be entered when permissible.

QU	Data element is mandatory. The originator of the futures dated transaction will be reflected.	TA	The Data Element Terminator Code (#) will be reflected between and at the end of each address component of In The Clear Address (DRN 0045).
QV	Data element is mandatory. This DRN represents the segment that contains the futures data.	TB	O.E. Name Edit Control (DRN 0245) must be equal to the first twelve (12) positions of the O.E. name as recorded on the existing record.
QW	Data element is mandatory. The reference number extracted from the Military Standard Requisitioning and Issue Procedure requisition, which is limited to 10 positions, will be reflected. The complete reference number will be recorded in the MIL-STRIP remarks position. Any reference number exceeding ten positions should not be submitted in this transaction.	TC	If the MOE Rule Status Code equals 1 (canceled - not replaced), the cancelled MOE Rule will be retained as reference information in your file. If the status code is not present, delete this MOE Rule from file.
QX	Reference number must not exceed 32 positions. Reference number will not be submitted without its assigned Commercial and Government Entity Code/NATO Commercial and Government Entity . (CAGE/NCAGE).	TD	See volume 10, table 104 and volume 13.
		TE	Element will be included only when an actual or possible duplicate has been revealed during item identification processing.
		TF	Applicable code will be reflected. Source of codes is DoD 4140.17-M, supplement 1, MILSTRIP Routing Identifier Codes.
		TG	Correct code will be reflected when there is knowledge of possible duplication or when code presently in FLIS is to be changed. Otherwise field will be left blank.
		TH	Data element is mandatory. The Assigned NSN (DRN 3960), Master NSN (DRN 0797); Generic Master NSN (DRN 0796), or Related NSN (DRN 2895) will be reflected as appropriate.

CHAPTER 4
STANDARDIZED DIC INPUT/OUTPUT NOTES

NOTE DEFINITION

- TI Data element is mandatory. The Master NSN (DRN 0797) or Generic Master NSN (DRN 0796) will be reflected as appropriate.
- TJ The Assigned NIIN, Assigned PSCN, or System Control Number (SCN) for the item being interrogated will be reflected. If none is applicable, leave blank.
- TK Submittal is mandatory for the Federal Aviation Administration, Civil Agencies with Primary Inventory Control Activity Level of Authority 48, and National Security Agency as a PICA with PICA LOA 23 or 26.
- TL The field reflected for DRN 3317, Characteristics Data Group, is representative only. The data element will begin in the first column as shown, but owing to the variable length of the data element, its end cannot be predicted (990 character maximum for clear text reply; maximum of 78 replies for any single Master Requirement Code (MRC) when Secondary Address Coding (SAC) or AND/OR coding is authorized). Enter a Data Element Terminator Code (#)(DRN 8268) at the end of each Characteristics Data Group.
- TM If deleting individual characteristics data (MRC by MRC), each Characteristics Data Group which is to be deleted will consist of the four-position MRC followed by the Data Element Terminator Code (#). If deleting all of the characteristics data (all MRCs) on file, the four-position MRC will be 9118 followed by the Data Element Terminator Code (#). This MRC must always be the first MRC in the LCC submittal, followed by a Data Element Terminator Code, and must be followed by characteristics data for the new description.
- TN Field can reflect a date up to 180 days in the future, adjusted to the first day of a month. Use last two digits of year and Julian day. For immediate effective date, submit zeroes (00000). Field must be filled, except for NATO/foreign government recordings (LOA 81) which must be zero filled or blank.

NOTE DEFINITION

- TP Data element is optional. If a change to the Criticality Code is required, the appropriate code will be selected from Volume 10, Table 181. m There must be compatibility between the new Criticality Code and MRCs CRTL and NHCF in the FIIG. If the Criticality Code indicates the item is nuclear hardened MRC NHCF must be answered. If the Criticality Code indicates the presence of another critical feature MRC CRTL must be answered.
- TQ Enter the activity code of the activity requesting deletion of the logistics transfer.
- TR Enter activity code 9T.
- TS Destination Activity Codes will be obtained by inputting LBUX0100 to obtain a printout of FLIS and futures file data prior to submission of the LDZ. All recorded and supplementary data collaborators and receivers reflected on current and future segment B records will be listed on LDZ. Activity code GM will be added if any Navy MOE Rules are recorded on the FLIS data base or futures file, or if current or future Defense Logistics Agency (DLA) Catalog Management Data reflects a Non-Service User Code (DRN 0136). Activity code SA will be added if any Air Force MOE Rules are recorded on the FLIS data base or futures file. Activity code AN will be added if any Army MOE Rules are recorded on the FLIS data base or futures file. Distribution will also include normal Federal Supply Class (FSC) distribution and the Defense Automatic Addressing System (DAAS).
- TT Additional records will be used, if required, to reflect all Destination Activity Codes.
- TU The appropriate Item Management Classification Agency for the FSC Class should be entered from the standard FSC Table. If the item is a DLA/General Services Administration management exception item, enter the appropriate Integrated Materiel Manager (IMM) for the item regardless of the class.

- This data element is not applicable to U.S. Submitters except for Navy and FAA.
- VY HMIC (D, P, and N only) automatically generated by DLSC for all NIIN assignments, reinstatements, PSCN changes to a NIIN. FOR FSC changes, DLSC updates the HMIC whenever the following conditions occur:
- a. FSC changes to a FSC in Table I or II of Federal Standard 313.
 - b. Former FSC and new FSC listed on different Tables of Federal Standard 313.
 - c. FSC changing from a FSC on either Table I or II of Federal Standard 313 to a FSC not on either table.
- Only DLSC or DGSC (Activity HM) authorized to submit HMIC using DICs LAD or LCD.
- The HMIC is not permitted on nuclear ordnance items.
