BUSINESS

Getting to Know the President: CIA Briefings of Presidential Candidates 1952-1992

John Helgerson, CIA's Deputy Director for Intelligence during the Bush administration and head of the team that briefed Bill Clinton after the 1992 election, offers a first-time eyewitness history of the early encounters between 10 presidents and the CIA. Helgerson notes, and former presidents agree, that each candidate who went on to become president had a distinctly different level of knowledge and experience regarding intelligence. *Getting to Know the President* is a riveting account of how CIA briefers have attempted, with varying success, to adapt briefings to the differing experiences, priorities and work patterns of individual presidential candidates from 1952 to the present.

Global Communications: Opportunities for Trade and Aid

Office of Technology Assessment, Washington, D.C.

This document examines the question of how telecommunication-related aid policies might be designed to support both U.S. trade and foreign aid goals. By targeting poor and underserved areas, telecommunication-based aid programs have the potential to enhance U.S. trade opportunities in developing countries, and promote competition and telecommunications regulatory reform, while at the same time providing for the communities and people most in need. The report examines the likely scenarios for the deployment of communication and information technologies in support of global trade; identifies the policy issues, market failures, and regulatory barriers that need to be overcome; and identifies and analyzes telecommunications-related foreign aid strategies that the federal government might pursue to address these problems.

*Order number PB96-111505LNH
\$35 plus handling fee.*

HEALTH

By the Sweat and Toil of Children, Volumes I & II

U.S. Department of Labor

Two Congressionally mandated reports by the U.S. Department of Labor on the exploitation of child labor are now available through NTIS: *By the Sweat and Toil of Children, Volume I: The Use of Child Labor in U.S. Manufactured and Mined Products*, considered child labor in manufacturing and mining industries exporting to the U.S. *By the Sweat and Toil of Children, Volume II: The Use of Child Labor in U.S. Agricultural Imports and Forced and Bonded Child Labor* is newly released. It addresses children working in commercial agriculture and fishing, and child slavery. While few major changes have occurred in the countries reviewed, the issue of child slavery is receiving heightened attention from the public, the media, governments, donor agencies and international organizations. This interest is beginning to produce action by governments, industry and consumers worldwide. The United Nations Children's Fund, in testimony at the Department of Labor's hearings, stated that "we are now seeing growing commitment and increased action toward the goal of eliminating exploitative child labour--although there is no question that progress remains uneven and we obviously have a very long way to go to win back childhood for the world's labouring children...."

Olympic Spirit: Building Resiliency in Youth (Video)

Department of Education, Washington, DC

Alcohol, tobacco, and drug abuse is the top problem facing our nation's schools. It affects young people from elementary school through high school. Help your children value their health and understand the dangers of drug and alcohol use. This exceptional video provides teachers a creative and engaging supplement to classroom drug and violence prevention lessons. The theme was taken from the 1996 Summer Olympics and Special Olympics world games. It is centered around the Olympic ideals of cooperation and teamwork, citizenship, fair play, and goal setting. Suggested activities engage students in a variety of information, problem solving, and service learning projects that are appropriate for all students, including students with disabilities. Designed for middle school, junior and senior high school students.

This VHS video is 1/2-inch, color with playing time of 16 minutes. Package also includes a 36-page activity guide, two posters and a bookmark. Cleared for TV. Can be duplicated with no restrictions.

Order Number AVA19787-VNB1LNH

\$50 plus handling fee.

Prices and handling fees are subject to change.

PREFACE

The *Directory of Soviet Officials* identifies individuals who hold positions in selected party, government, scientific, and public organizations of the USSR. It may be used to find either the incumbents of an organization or the positions of given individuals. For some organizations, it serves as a guide to the internal structure of the organization.

Coverage. This publication supersedes *Directory of Soviet Officials: Science and Education* (LDA 87-11012, May 1987). It identifies individuals who hold positions in or are members of selected scientific and educational organizations. It is one of a three-part series: the other volumes deal with national- and republic-level organizations.

Because of the broad scope of the Science and Education Directory, the level of coverage within any particular organization is necessarily limited; most organizations listed herein are covered only through the level of director. An index of major organizations and a personality index appear at the end of the publication. Duplicate names in the personality index refer to different individuals who have the same name.

Directory Abbreviations and Dates. The date an individual assumed his position is listed in the position" column. Dates are preceded by the abbreviations ap" (appointed), el" (elected), or id" (identified in the position). Partial dates are given when exact dates are not known (for example, when identifications are taken from books or periodicals). Dates of birth are listed in the birth" column when known. In most cases, only the last two digits of a year are listed. For example, 97 refers to 1897, 00 indicates 1900, and 17 indicates 1917. Dates are given in full where known. The highest earned academic degree and/or the military rank are listed for some individuals. A list of abbreviations follows the Table of Contents.

Rendering of Proper Names. Transliteration generally follows the system authorized by the Board of Geographic Names (BGN). Non-Russian names (such as those of Ukrainian or Estonian origin) for which original Latin alphabet spellings or separate BGN transliteration systems exist are treated as Russian names and are transliterated from their Russian spellings. (For instance, the Ukrainian surname Honchar" is rendered Gonchar.") Exceptions are the cities of Kiev (BGN spelling is Kiyev), Klapeida, and Vilnius and the names of the republics themselves, which reflect accepted Westernized forms (Lithuania" for Litva," "Georgia" for Gruziya," etc.).

Organizations. An effort has been made to verify and standardize the names of organizational components and the position titles of individuals, but some unverified entries remain for names whose sole source is a non-Soviet publication. Organization names are listed in English, but the word

order varies slightly. The names of universities and a few other institutions follow the Russian word order. The English-language form of most organizations, however, is as follows: descriptive term(s); type of organization; *imeni* (named after); location (e.g., Applied Mathematics Institute *imeni* M.V. Keldysh, Moscow). Beneath the names of most of the major organizations are short notes relating to the date of establishment and the general functions of the organization. For the purposes of this directory the symbol used to transliterate the Russian "soft sign" (') has been omitted from place names, although the soft sign remains in personality names. The index to major organizations includes the English and Russian transliterated versions of organization names, together with their acronyms.

AN SSSR

Moscow 117901, Leninskiy Prospekt 14. The USSR Academy of Sciences is basically the organization established in 1725 by Tsar Peter the Great. Originally known as the Russian Academy of Sciences, it received its present name in July 1925. The main task of the academy is to use its scientific establishments and personnel to organize scientific work and research of primary importance to the development of science, technology, and the national economy.

		Date of Position	Date of Birth
Note (The governing authority of the academy officially resides with the academy's General Assembly, which meets not less than twice a year, but the de facto executive organ is the academy's presidium, comprised of elected academy officials and certain leading scientists. Research is conducted by the academy's 18 departments and the scientific institutes subordinate to those departments.)
