TEAD Key Receptor Species Biological Profiles

The following profiles were derived in part from material found in the following references. The complete citations for these references may be found in Section 8 of the SWERA report.

Mammals: Burt, W.H., and Grossenheider, R.P., 1980; Armstrong, D.M., 1982; Fitzgerald, J. P. et al., 1994; Martin, A.C. et al., 1951 and 1961; and Yocum, C. et al., 1958.
Avian Species: Peterson, R.T., 1990; Craighead, J.J. et al., 1969; and Ryser, Fred A., Jr., 1985.
Plants: Whitson, T.D. et al., 1992; Welsh, S.L. et al., 1964 and 1987; MacMahon, J.A., 1990; and McPherson, 1979.
Reptiles and Amphibians: Stebbins, 1985.
Vertebrate Taxonomy: Banks, R. et al., 1987.
Protection Status Classification: Utah Division of Wildlife Resources, 1997; U.S. Fish & Wildlife Service, 1996.

Passerine and Other Birds

Common Yellowthroat (*Geothlypis trichas*). The common yellowthroat is an observed State of Utah sensitive species (SP). It nests in riparian and wetland habitats statewide. The common yellowthroat's numbers and presence as a species in the wetland community are adversely affected by loss of natural habitats due to development or disturbance by man. This bird is a migrant and is only rarely observed at TEAD, which may be due to the lack of sufficient nesting and foraging habitat on site or to the competition for resources by other migratory species.

Western Bluebird (*Sialia mexicana*). The western bluebird is a permanent resident of Utah that lives in different habitats during different times of the year. In the summer, it lives and nests in mid-elevation mountain forests communities of southern and central Utah, which are best described as scattered trees and open conifers. During the winter, the western bluebird resides in semi-open terrain or deserts. It has been observed rarely at TEAD and may be considered a rare migrant. This species is probably scarce at TEAD because it does not compete very well with non-native bird species. The loss of habitat during the spring/summer due to changes in forestry practices may also affect the frequency of sightings of this species at TEAD.

Western Snowy Plover (*Charadrius alexandrinus*). This species is Federally threatened. It is a permanent resident of central Utah's vegetated wetlands and mudflats which hold standing water. Nesting usually occurs on beaches or bare alkaline mudflats, but may also occur on the sandy margins of rivers, lakes, and ponds. These birds build scrape-type nests near the water margins and feed primarily on insects during the breeding season. These birds also consume some aquatic invertebrates and crustaceans.

Long-billed Curlew (*Numenius americanus*). The long-billed curlew is a State of Utah sensitive species (SP/SD). While TEAD is within the range of the long-billed curlew, this species has not been observed at the facility. This bird usually inhabits vegetated wetlands and mudflats with standing water. Like the snowy plover, it nests in grassy areas near marshes, ponds, or lakes. However, unlike the snowy plover, the long-billed curlew's diet is predominantly items associated with the grassy vegetation along the margin of the water bodies. The habitat where this species could be observed includes the areas adjacent to the Sewage Lagoons (SWMU 14) and the Old Industrial Waste Lagoons (SWMU 30) at TEAD.

White-faced Ibis (*Plegadis chihi*). The white-faced ibis is a Federal candidate species. It preferentially inhabits vegetated wetlands, but it may also use wetlands that have standing water during its migratory season. Like the snowy plover, it uses the TEAD area as an alternate nesting habitat during periods of high water in the Great Salt Lake. The white-faced ibis typically nests on the ground; however, they may also nest in aquatic vegetation, shrubs, or low trees. Their probing and ground gleaning foraging method indicates that their diet consists primarily of aquatic and terrestrial invertebrates, small aquatic vertebrates, and occasionally aquatic vegetation. In Utah, grasshoppers and frogs are the main constituents of their diet. There are no recorded sightings of the white-faced ibis on the TEAD facility, but the habitats where this species is most likely to be observed are adjacent to the Sewage Lagoons (SWMU 14) and the Old Industrial Waste Lagoons (SWMU 30).

Mountain Plover (*Charadrius montanus*). The mountain plover is a Federal candidate species/State of Utah sensitive species (SP/SD). It is a migrant species that is rarely observed in the TEAD area. It typically inhabits short grass prairies, but is known to also reside in dry fields and grassy deserts during migrations. The mountain plover is mainly insectivorous, consuming grasshoppers, beetles, crickets, and flies. It is a ground nesting species and usually builds its nest between hummocks or, occasionally, between scattered shrubs or cacti. At TEAD, this species has been observed near the Sewage Lagoons (SWMU 14).

Mallard (*Anas platyrhynchos*). The mallard typically inhabits inland ponds and shallow waters, and it is largely a vegetarian during the fall, winter, and spring months, foraging on marsh and aquatic plants. During the summer months, mallards change their preferred diet from vegetarian to animal food and subsist mainly on a diet of aquatic invertebrates. This species has been observed in the areas adjacent to the sewage lagoons (SWMU 14), the Bomb Washout Building (SWMU 42), and the Wastewater Spreading Area (SWMU 45).

American Avocet (*Recuvirostra americana*). The American avocet is found in alkali basins throughout the mountain-desert and prairie ecosystems of the western United States. This bird is omnivorous, feeding predominantly on aquatic flora and supplementing its vegetarian diet with fauna including insects and crustaceans. Several individuals of this species have been observed in and around the Sewage Lagoons (SWMU 14).

Raptors

Golden Eagle (*Aquila chrysaetos*). The golden eagle inhabits remote rangeland, badlands, and canyons of the American west. Their presence year-round at TEAD may indicate how relatively tolerant they are of human-related disturbances. As long as the adult birds have sufficient time to feed their young, the mature golden eagles will continue to reside in an area. During the breeding season, golden eagles feed primarily on small mammals. They will also include other prey, such as birds, jackrabbits, reptiles, and insects, in their diet when mammalian populations are on the decline. Golden eagles have been observed at all SWMUs at TEAD.

American Kestrel (*Falco sparverius*). The American kestrel is a species that is found throughout the Americas. This species is one of several species of raptors that return to Utah between mid-February and early April, and return to the same territories each year. Kestrels, also known as sparrow hawks, live in many habitats including rural, open areas such as farmlands, along highways and forest edges, and in cities. They are omnivores, feeding on small mammals, small birds, and large insects including grasshoppers. Kestrels nest in several locations, including hollowed trees, secluded portions of buildings, and occasionally in other birds' nests. They have been observed in every SWMU and are not easily disturbed by man's presence. For this reason, and because of the availability of small mammals, the American kestrel will likely continue to be a common visitor at TEAD.

Great Horned Owl *(Bubo virginianus)*. The great horned owl is the largest and strongest owl in the United States, attaining a length of 25 inches. It eats mammals as well as birds, reptiles, and insects. Horned owls nest in almost any available cavity and adapt to man's presence. These owls have been observed at SWMUs 10, 11, 21, and 37. As with the American kestrel, the great horned owl will likely continue to be seen at TEAD.

Bald Eagle (*Haliaeetus leucocephalus*). The bald eagle is a Federal and State threatened species. It is a large raptor that frequents the vicinity of seacoasts, rivers, and large lakes; nests in tall trees or on cliffs; and winters in the U.S. near ice-free bodies of water. This species forages in rivers, lakes, and estuaries with the primary feeding areas being large bodies of open water. It is rarely associated with smaller streams or ponds, and, for this reason, it is unusual to have observed it near the Sewage Lagoons (SWMU 14).

Prey selection of the bald eagle is determined largely by availability. The bald eagle diet generally consists of fish, but they may also feed on deer carcasses and road-kill animals during the harder winter months. Prey availability is a function of both the size and productivity of the foraging habitat. Bald eagles that nest on smaller water bodies may require other nearby lakes for additional foraging areas.

The bald eagle is easily disturbed by activities associated with humans. However, minimal human activity or disturbances that are not recognized as human (e.g., railroads, planes, and vacant buildings) may be tolerated. This is probably the case in the sightings of bald eagles at TEAD-N.

Swainson's Hawk (*Buteo swainsoni*). The Swainson's hawk is a State of Utah sensitive species (SP). The Swainson's hawk is a common summer resident of TEAD and returns annually to nest. Its habitat includes plains, prairies, and dry meadows. These hawks typically feed on small mammals such as rodents and occasionally shrews and ground squirrels, but their diet may also include small invertebrates and large insects, particularly grasshoppers and crickets. Even though the Swainson's hawk is particularly sensitive to even minor disturbances during its breeding season (Erlich et al. 1988), observations of this species at SWMUs 21/37, 10/11, and 1b/1c suggest that man's presence at TEAD isn't sufficient to disrupt the bird's activities at the site.

Ferruginous Hawk (*Buteo regalis*). The ferruginous hawk is a State of Utah threatened species. The ferruginous hawk is a rare resident at TEAD compared to other raptors such as golden eagles, prairie falcons, northern harriers, and other buteos. Its population has been know to fluctuate widely, often paralleling the increase and decrease of prey populations such as cottontails, jackrabbits, ground squirrels, and prairie dogs. In addition to small- and medium-sized mammals, the ferruginous hawk will also feed on reptiles, insects, and small birds. Only a few individuals have been observed at TEAD (SWMUs 21/37 and 10/11); this could be linked to human disturbance during nesting or to diminishing prey populations. This hawk builds its nests in the open on ground or in lone junipers or crags at the ecotone between valley and foothills. It uses ground nests only if no trees or crags are available. Individual breeding pairs return to the same nest each year.

Northern Goshawk (*Accipiter gentilis*). The northern goshawk is a Utah sensitive species (SP). The northern goshawk is a migrant raptor that is more commonly seen in the mountain forests and valley cottonwood habitats in the state of Utah. Loss of habitat from timber harvest and development of riparian areas have adversely affected the goshawk populations. The absence of the generally preferred nesting habitat at TEAD is probably the reason that this species has not been observed at the site.

Loggerhead Shrike (*Lanius ludovicianus*). The loggerhead shrike is a permanent resident, which nests in the desert, shrub, and Pinyon-Juniper habitats statewide. The loggerhead shrike has been observed at SWMU 21/37 at TEAD. The small raptor feeds almost exclusively on animal life, both vertebrate and invertebrate. Their diet consists of grasshoppers, beetles, caterpillars, wasps, small rodents, and birds. They have been known to "hang" their prey on barbed wire strands or on the thorns of certain bushes.

Burrowing Owl (*Athene cunicularia*). The burrowing owl is a State of Utah sensitive species (SP). It is adversely impacted by agricultural and residential development. This species is a migrant, which nests in desert valleys and grasslands, and is often found in association with prairie dog communities. The owl's population appears to have declined across its range, with its distribution restricted to remaining undisturbed areas. While the habitat does exist for this species of owl, individuals of this species have not been observed at TEAD.

Short-eared Owl (*Asio flammeus*). The short-eared owl is a State of Utah sensitive species (SP). The short-eared owl is a permanent resident of central and northern Utah wetlands and

desert. This species' numbers appear to be declining, probably due to loss of nesting habitat as a result of expansion of agricultural areas and urban development. While the habitat does exist for the short-eared owl at TEAD, individuals of this species have not been observed.

Small Herbivores

Deer Mouse (*Peromyscus maniculatus*). The deer mouse is not confined to any single habitat, but is found in most ecosystems, with one of the widest ranges of all species of North American mammals. Because of its ability to adapt to differences in habitat, the deer mouse occupies more habitats than more specialized species of mice. The deer mouse is not a species of concern and is found throughout TEAD. Live trap data indicated that the deer mouse was abundant at ESAs 1 and 2 and at the RSA during the field effort in the September 1994. While primarily herbivores, this species is sometimes omnivorous. During the winter and summer months, they feed on seeds, fruits, roots, tubers, and nuts.

Females may breed at less than 2 months of age, and a female deer mouse born in March could bear four or five litters in her first summer. Litter size averages more than four. About 90 percent of these recruits mature and are taken for food without disrupting the stability of the population. Deer mice are active the whole year, but in extended periods of extremely cold weather, they may enter temporary torpor.

Great Basin Pocket Mouse (*Perognathus parvus*). The Great Basin pocket mouse habitat varies and includes grasslands, sagebrush, pinyon, and greasewood communities through sand dunes and slickrock. However, they prefer dry sandy soils for nesting burrows. These mice do not need drinking water and are entirely nocturnal. By plugging the entrance to their burrows during the daytime, they create a water-saving, humid micro-climate.

The number of litters is dependent on the amount of food available. They usually have only one per season, but can have two if sufficient food is available. The size of the litter is generally between three and four individuals. During the summer months, they eat mainly seeds but also feed to a smaller extent on insects and vegetation. This species' feeding habits change with a larger percentage of insects being eaten during the spring and fall months. Seeds are cached for the winter, with the seeds of cheatgrass (*Bromus tectorum*) being the most important food item.

The Great Basin pocket mouse is found in all SWMUs at TEAD. Like the deer mouse, pocket mice are a key component in the diet of higher trophic level species, such as raptors.

Ord's Kangaroo Rat (*Dipodomys ordii*). The Ord's kangaroo rat is chiefly a nocturnal mammal, having a complex burrow system. Nests are made of fine plant material, and are usually constructed starting at the base of a shrub and extending into sandy soils. The entrances of these burrow systems are plugged during the day to maintain humidity and coolness. The kangaroo rat can obtain sufficient quantities of water from the metabolism of food in their diet, but will drink water when it is available.

Their reproductive season varies geographically, and can be from January to March, from August to October, and occasionally from February through August. Litter size ranges from two to four. Their diet consists mainly of seeds with insects such as beetles, moth larvae, butterflies, caterpillars and ants making up the remainder. This species has been observed at all of the SWMUs, and its recruits make up a significant portion of the diet of the raptors and larger mammalian carnivores at TEAD.

Western Harvest Mouse (*Reithrodontomys megalotis*). The western harvest mouse is usually the smallest rodent in this group of herbivores and is a resident of areas where there is a continuous cover of herbaceous vegetation. These mice are mostly nocturnal and, as a result, provide food for species of animals that feed at night. These herbivores eat mainly seeds from shrubs, grass, and herbs. Consumption of green vegetation also serves as a source of moisture. In addition to plants, these mice eat caterpillars, beetles, and spiders.

Harvest mice are reproductive from June through October, often becoming torpid during the winter months. Litter sizes range from three to seven individuals. Females of this species can breed at about 1 month old, which ensures a high rate of population growth (e.g., a female born in June could have two litters that same summer). This species has been observed at all of the SWMUs, and its recruits make up a significant portion of the diet of the raptors and larger mammalian carnivores at TEAD.

Mountain Vole (*Microtus montanus*). Mountain voles are common where there is an ample grass cover. Their presence can be detected by narrow runways that are approximately 1 to 2 inches wide. Their habitat is frequently more moist than those required of the other herbivorous mammals. They remain active both during the day and the night, feeding on grasses, seeds, grain, bark, and, occasionally, insects. Because of their diurnal and nocturnal activity, mountain voles can be prey for the raptors and carnivores that feed at all times of the day and night.

Mountain voles' nests can be either above or below ground, and they make burrows along surface runways. They breed throughout the entire year with litters of three to five. Mountain voles are very territorial and have been trapped at the Burn Pads (SWMU 1b) and the Trash Burn Pits (SWMU 1c) at TEAD.

Northern Pocket Gopher (*Thomomys talpoides*). The northern pocket gopher is widely distributed in the central mountain range of Utah, but isolated populations of this species are declining. The northern pocket gopher has been observed at the Burn Pads (SWMU 1b) and the Trash Burn Pits (SWMU 1c) at TEAD. The diet of this pocket gopher is entirely vegetarian, and consists largely of roots, rootstocks, bulbs, and tubers. Seeds, nuts, and some surface vegetation are secondary sources of food if they are located near the burrow opening. Food is stored in side tunnels of the burrow system or occasionally in below-ground caches. The burrow itself can be up to 150 meters in length and pocket gophers can displace as much as 3 tons of soil in the process of excavation. As a result, this species proves to be a good indicator species for potential uptake of soil contaminants.

Females give birth to a single litter of between three and four young from April to August. The young are preyed upon by raptors. Other predators dig gophers out of their burrows for food, and weasels and gopher snakes follow them into their burrow systems and prey on them.

Medium Herbivores

Black-tailed Jackrabbit (*Lepus californicus*). The black-tailed jackrabbit occupies prairies, grasslands, and other open, sparsely vegetated areas of the Western United States. This species is a year-round resident at TEAD and has been observed in all of the SWMUs. As a nocturnal species, they are most active from dusk to dawn, foraging on most green, herbaceous vegetation such as sweetclover, kochia, bitterbrush, sagebrush, greasewood, rabbitbrush, and a wide variety of grasses. Jackrabbits contribute to habitat degradation by overgrazing. They consume large quantities of grasses and prickly pear cactus during the summer months, and browse on shrubs during the winter months. During the day, they are mostly inactive, using shrubs as protection from daytime predators.

The black-tailed jackrabbit was designated a key receptor species for purposes of modeling uptake and elimination of contaminants at TEAD as part of the site-wide ecological risk assessment.

Large Herbivores

Mule Deer (*Odocoileus hemionus*). The mule deer feeds on shrubs, twigs, grasses, and forbs. This species can be found in a variety of habitats, including coniferous forests, desert scrub, chaparral, and grassland with shrubs. At TEAD, mule deer were observed at SWMUs 21/37, 10/11, and 42/45. The home range of mule deer is larger than the size of any single SWMU. Young are born in June through July, with twins being the most common occurrence.

Mule deer can do considerable damage to crops, range, and forest if populations grow unchecked. The observed populations of this species at the TEAD facility consist of several small herds with approximately five to nine individuals each.

Insectivores

Spotted Bat (*Euderma maculatum*). The spotted bat is a State of Utah sensitive species (SP). The spotted bat prefers the arid and semi-arid scrub country habitat of the desert southwest. It has been known to roost in rock crevices, buildings, or caves. Its diet consists mainly of small moths. The spotted bat has not been observed at TEAD but habitat exists. Spotted bats are common prey for raptors located in the same area.

Carnivores

Kit Fox (*Vulpes macrotis nevadensis*). The kit fox lives in open, level areas with sandy soils, low desert vegetation types, and juniper forests. While they are considered a carnivore, kit foxes can be omnivorous if their prey populations aren't sufficiently large to sustain them. Their diet is principally jackrabbits, but they also eat mice, kangaroo rats, insects, reptiles, amphibians, cottontails, and birds. Fleshy fruits are also eaten if they are available.

Kit foxes breed in late December through February, with the pups usually born in March in a litter size of between four and five. They live in burrows that have several entrances, providing escape routes from larger predators. While there is a kit fox habitat on TEAD, no kit fox has been observed.

Omnivores

Ringtail (*Bassariscus astutus*). The ringtail is a State of Utah sensitive species (SD). They inhabit the rough, broken semi-desert shrublands and woodlands in Utah. They are secretive and nocturnal, preying on woodrats, small birds, lizards, insects, fruits, and carrion. Their dens are located in treeholes, beneath boulders, or in crevices. Young are born in May or June, and there are an average of three or four individuals per litter. Before they are weaned, both parents hunt and feed the young ringtails. After they leave the nest, ringtails will often hunt in pairs or sometimes in family groups. While the shrub habitat at TEAD is appropriate for this species, none have been observed.

Least Chipmunk (*Eutamias minimus*). The least chipmunk is the most wide ranging, both in altitude and geographically, of all the chipmunks. Their preferred habitats range from low sagebrush communities to the higher mountain coniferous forests. This species gathers and stores food in the spring, summer, and fall months, while feeding on vegetation, seeds, nuts, fruits, insects, smaller mammals, and occasionally carrion. They build their nests beneath stumps, logs, and rocks. The least chipmunk hibernates during the winter months. It has up to a couple of litters annually, for a total of two to six individuals per year. Because of the least chipmunk's ability to adapt to various constraints of specific habitats, it inhabits much of TEAD.

Vegetation

Yellow Sweetclover (*Melilotis officinalis*). Yellow sweetclover is an indicator species. This species is an annual legume that grow from 2 to 6 feet tall. It was introduced from Europe and Asia, and is common along roads and other waste areas, often being the first plant to revegetate disturbed areas. Varieties are grown as forage crops throughout the west. The seeds of the sweetclover are of value to some upland gamebirds. Rabbits, ground squirrels, antelope, and mule deer all use this species for forage. This plant species is found in disturbed

areas at TEAD and was present at all SWMUs in ESAs 1 and 2, and the RSA during the Fall 1994 field effort.

Rubber Rabbitbrush *(Chrysothamnus nauseosus)*. Rubber rabbitbrush is an indicator species. It is a strongly scented perennial that grows from 2 to 4 feet tall. Rubber rabbitbrush is a native western plant, 1 of 70 similar species that grow well on dry soils throughout the west. Dense stands of rabbitbrush are an indication of overgrazing that deplete the native and non-native grasses. Rabbitbrush is low in palatability, and is grazed only sparingly by domestic animals. The seed heads and foliage are consumed by rabbits, sheep, and mule deer. Eradication of this plant is difficult due to its tendency to resprout from the crown after being sprayed or burned. This plant species is common at TEAD, and was abundant at all SWMUs in ESAs 1 and 2, and at the RSA during the Fall 1994 field effort.

Gumweed *(Grindelia squarrosa)*. Gumweed is also an indicator species. It is a native perennial that grows from 1 to 2 feet high. It is an erect, freely branching plant with bright yellow resinously sticky flowers. It is found in cultivated fields and non-cultivated areas such as roadsides, overgrazed prairies, and alluvial grounds throughout the semi-arid west. Gumweed is seldom eaten by livestock because of its stickiness. This plant species is commonly found at TEAD and was included as an indicator species because of its availability at ESAs 1 and 2 as well as the RSA.

Invertebrates

Grasshopper (*Order Orthoptera*). Grasshoppers are abundant at TEAD during the summer months. Other Orthoptera varieties such as crickets and mantids exist at TEAD. The abundance of these insects is related to the dryness of the summer months. Orthopterans are either a primary or secondary food in the summer diet of many of the animals and birds that exist at TEAD.

Beetle *(Order Coleoptera)*. Various beetles have been identified at TEAD. This is the largest order of insects. They feed on all sorts of plant and animal materials. Beetles can be a food source for animals and birds at TEAD.

Scientific and Common Names for Vegetation Types

Codes	Scientific Name	Common Name
Shrubs		
Art tri	*Artemisia tridentata*	Big sagebrush
Atr con	*Atriplex confertifolia*	Shadscale
Atr can	*Atriplex canescens*	Four-wing saltbush
Chr nau	*Chrysothamnus nauseosus*	Rubber rabbitbrush
Chr vis	*Chrysothamnus viscidiflorus*	Green rabbitbrush
Chr dou	*Chrysothamnus douglasii*	Little rabbitbrush
Sar ver	*Sarcobatus vermiculatus*	Black greasewood
Forbs		
Cal nut	*Calochortus nuttallii*	Sego lily
Eur lan	*Eurotia lanata*	Winterfat, White-sage
Gut sar	*Gutierrezia sarothrae*	Broom snakeweed, Matchweed
Lep per	*Lepidium perfoliatum*	Clasping peppergrass
Lac ser	*Lactuca scarriola*	Prickly lettuce
Sal ibe	*Salsola iberica*	Russian-thistle
Sal pes	*Salsola pesitfer*	Russian thistle
Gri squ	*Grindelia squarrosa*	Curlycup gumweed
Mel off	*Melilotus officinalis*	Yellow sweetclover
Mel alb	*Melilotus alba*	White sweetclover
Amb aca	*Ambrosia acanthacarpa*	Annual bursage
Tra dub	*Tragopogon dubius ssp. major*	Goatsbeard; Yellow salsify
Ero cic	*Erodium cicutarium*	Storksbill
Sys alt	*Sisymbrium altissimum*	Jim Hill mustard
Ast sp.	*Astragalus species*	Milkvetch
Ast uta	*Astragalus utahensis*	Utah milkvetch
Ver bra	*Verbena bracteata*	Prostrate vervain
Koc sco	*Kochia scoparia*	Summer-cypress; kochia
Hal sp.	*Halogeton glomeratus*	Halogeton
Cap bur	*Capsella bursa-pastoris*	Shepherd's purse
Sph coc	*Sphaeralcea coccinea*	Scarlet globemallow
Opu sp.	*Opuntia species*	Central pricklypear cactus
Opu pol	*Opuntia polyacantha*	Plains prickly pear
Lup sp.	*Lupinus species*	Lupine
Pol avi	*Polygonum aviculare*	Prostrate knotweed
Zyg sp.	*Zygadenus paniculatus*	Foothill Deathcamus
Ped lan	*Pediomelum lanceolatum*	Lemon scurfpea
Nep cat	*Nepeta cataria*	Catnip
Hel ann	*Helianthus annuus*	Common sunflower
Ran tes	*Ranunculus testiculatus*	Bur buttercup
Pso spp.	*Psoralea species*	Scurfpea

Scientific and Common Names for Vegetation Types (continued)

Codes	Scientific Name	Common Name
Grasses		
Sti com	*Stipa comata*	Needle and threadgrass
Spo cry	*Sporobolus cryptandrus*	Sand dropseed
Agr smi	*Agropyron smithii*	Western wheatgrass
Agr elo	*Agropyron elongatum*	Tall wheatgrass
Agr cri	*Agropyron cristatum spp. desertorum*	Crested wheatgrass
Poa sec	*Poa secunda*	Sandberg's bluegrass
Poa bul	*Poa bulbosa*	Bulbous bluegrass
Poa fen	*Poa fendleriana*	Muttongrass
Poa com	*Poa compressa*	Canada bluegrass
Poa pra	*Poa pratensis*	Kentucky bluegrass
Ari lon/Ari pur	*Aristida purpurea*	Purple three-awn
Sit hys	*Sitanion hystrix*	Squirreltail
Sti hym	*Stipa hymenoides*	Indian ricegrass
Sti tra	*Stipa trachycaulum*	Slender wheatgrass
Hil jam	*Hilaria jamesii*	Galleta; curlygrass
Bro tec	*Bromus tectorum*	Cheatgrass
Sec cer	*Secale cereale*	Cultivated rye
Aeg cyl	*Aegilops cyclindrica*	Jointed goatgrass
Hor jub	*Hordeum jubatum*	Foxtail barley
Ely smi	*Elymus smithiii*	Smith's wild rye
Trees		
Jun sco	*Juniperus scopulorum*	Rocky Mountain Juniper
Jun ost	*Juniperus osteosperma*	Utah Juniper

Definitions of Terms Used in the Quantitative Wildlife and Vegetation Surveys

The following terms are used in the evaluations of the quantitative surveys performed at the ESAs/RSA to describe the ecological relationships that exist between individuals in populations and their respective habitats:

Age Class: This can be used in the same way *life history stage* is used to describe an individual in a population, with the exception that *age classes* are designated by years or other forms of measurement, and are frequently used in conjunction with the *life* history of an individual in a population. For example, the life history/age class of a deer mouse may be described as a "6 month old subadult that has a body length of 2.75 inches". Both age class and life history stage indicate a "snapshot" of the life cycle of an individual in a population.

Biomass = weight in grams of the entire animal. In this investigation, the individual was weighed using "Pesola" type scale, with measurements taken to the nearest gram.

Cover/Percent Cover = An estimate of foliar cover over the ground surface by plant species. This is an estimated measurement that is a represented by a percentage of the given species in relation to a given length of a randomly determined line transect. For purposes of this study, a 33 meter transect life was used.

Density = number of individuals of a species per unit area (in this case, the unit area is 1 acre).

Frequency/Percent Frequency = The frequency occurrence of a plant species within a series of quadrates or along a transect, expressed as a percentage in relation to a given area or distance. For example, if a species occurs in 4 out of 5 quadrates, or registers 80 out of 100 hits along a 33 meter line transect (with a hit being recorded at 1 foot intervals), then the frequency of occurrence is 80%. This measure indicates the "commonness" of a species within a plant community.

Home Range = This is the physical boundary (not necessarily an area; the home range can be a volume) frequented by an animal species in carrying out its life history activities. It is usually an estimate based on observation, tracking, trapping/recapture, as well as through existing literature on the species in question. The home range of species may overlap, as opposed to an animal's territory which does not overlap. A deer mouse may have a home range of approximately 1 acre whereas the home range of the coyote may be several square miles.

Life History Stage = description of the developmental stage within an animal's life cycle. In this study, three life history stages were recognized for the small mammals: juvenile, subadult, and adult. Pelage coloration and condition, as well as the animal's weight were used to separate the small mammals into one of the life history stages as follows:

Small Mammal	Juvenile	Subadult	Adult
Deer Mouse	<14g	14g - 18g	>18g
Pocket Mouse	<14g	14g - 18g	>18g
Kangaroo Rat	<25g	25g - 39g	>39g
Western Harvest Mouse	<11g	11g - 14g	>14g

Mean Biomass = the total biomass of all individuals of a single species by SWMU trap location, and over a trapping episode of 3 days, divided by the number of individuals.

Mean Life Span: In small mammal populations, this is a measure of time derived from a trapped population that represents when ½ of the trapped/marked individuals disappear from the "trappable" population. This is a rough estimate of the longevity of an individual in the population. For example, in a population of 30 Ord's Kangaroo rats with an estimated lifespan of 3 months, only 15 rats would remain after 3 months duration.

Reproductive/Non-reproductive = Each small mammal was examined to note the reproductive condition. A male was considered reproductive if the testes has descended from the internal position and the scrotal sac was enlarged. A female was considered reproductive if any of the following was apparent: the presence of a vaginal plug, visible lactating teats, and/or a swollen abdominal area with the presence of embryos identified by palpating.

Total Mean Biomass = the mean biomass by species per trapping location, summed for all species present at a sampling location.

Summary of Co-located Soil and Vegetation Sample Collection
Summary of Blacktailed Jackrabbit Collection
Summary of Vegetation Samples Collected by SWMU

FIELD DATA FORM 1.2
QUALITATIVE SURVEY/RELATIVE ABUNDANCE (WILDLIFE)

Site: TEAD-N ERA Date: 9-28-94 Project No.: 82470.180
Time: Started 0810 Finished 0920
Location: SWMU 1a, 1b
Field Personnel: J MERINO
Habitat Type(s) ANNUAL FIELD OF CHEATGRASS, RUSSIAN THISTLE AND STORKSBILL
Comments:

Observation/Collection Methods: OBSERVATION
Transect(s): No. Length 5 X 5 SMALL MAMMAL TRAPPING GRID & AREA
Field Notebook No.:

Scientific Name / Common Name	Number	Observed Evidence	Comments on Condition, Habitat, and Abundance
CANIS LATRANS / COYOTE	5	SCAT, OBSERVED	1 ADULT, 4 YOUNG. IN P-J, GRASSLAND; MOVING
POOECETES GRAMINEUS / VESPER SPARROW	3-5 FLOCKS	OBSERVED	10-25 INDIVIDUALS/FLOCK. IN RRB AND ANNUAL SUNFLOWER
STURNELLA NEGLECTA / WESTERN MEADOWLARK	3-5 FLOCKS	OBS	ABUNDANT. SOME INDIVIDUALS 5-10/FLOCK
LANIUS LUDOVICIANUS / LOGGERHEAD SHRIKE	4	OBS	COMMON ON RUBBER RABBITBRUSH
~~SP~~ AMPHISPIZA BELLI / SAGE SPARROW	10-20	OBS	COMMON IN SHRUBS, TALL WEEDS
AQUILA CHRYSAETOS / GOLDEN EAGLE	2	OBS	COMMON SOARING
FALCO SPARVERIUS / AMERICAN KESTREL	2	OBS	COMMON ON P-J, TELE LINES
SCELOPORUS GRACIOSUS / SAGEBRUSH LIZARD	3	OBS	COMMON DISTURBED GRASSLAND

FIELD DATA FORM 1.2
QUALITATIVE SURVEY/RELATIVE ABUNDANCE (WILDLIFE)

Site: TEAD-N ERA Date: 9-29-94 Project No.: 82470.180
Time: Started 1120 Finished 1200
Location: SWMU 10/11
Field Personnel: J. MERINO
Habitat Type(s) NEEDLEGRASS/SAND DROPSEED/CHEATGRASS GRASSLAND W/ JUNIPER INCLUSIONS
Comments:

Observation/Collection Methods: OBSERVATION
Transect(s): No. Length 5X5 SMALL MAMMAL TRAPPING GRID & AREA
Field Notebook No.:

Scientific Name / Common Name	Number	Observed Evidence	Comments on Condition, Habitat, and Abundance
CANIS LATRANS / COYOTE	—	SCAT	COMMON DISTURBED GRASSLAND ~~SAGEBRUSH STEPPE~~ & P-J
VULPES FULVUS / RED FOX	—	DEN, SCAT	UNCOMMON SANDY PIT IN GRASSLAND
BUBO VIRGINIANUS / GREAT HORNED OWL	1	OBS	COMMON IN JUNIPER TREE
ODOCOILEUS HEMIONUS / MULE DEER	8	OBS	COMMON PATCHY DISTRIBUTION
THOMOMYS UMBRINUS / POCKET GOPHER	—	MOUNDS	ABUNDANT - ALL HABITATS NUMEROUS MOUNDS
LANIUS LUDOVICIANUS / LOGGERHEAD SHRIKE	2	OBS	COMMON - ALL HABITATS FLYING & PERCHED IN JUNIPER
LARK SPARROW / CHONDESTES GRAMMACUS	2	OBS	COMMON GRASSLAND & SHRUBS
STURNELLA NEGLECTA / WESTERN MEADOWLARK	1	OBS	COMMON ALL HABITATS
PICA PICA / BLACK-BILLED MAGPIE	3	OBS	COMMON ALL HABITATS
BUTEO SWAINSONI / SWAINSON'S HAWK	3	OBS	COMMON PERCHED ON TELEPHONE LINES
FALCO SPARVERIUS / AMERICAN KESTREL	2	OBS	COMMON PERCHED ON TELEPHONE LINES

(use additional sheets if necessary)

Completed by: JOE MERINO (Name) Joe Merino (Signature)

Subcontractor: Rust Environment & Infrastructure

FIELD DATA FORM 1.2
QUALITATIVE SURVEY/RELATIVE ABUNDANCE (WILDLIFE)

Site: TEAD-N ERA Date: 9-27-94 Project No.: 82470.180
Time: Started 1430 hrs Finished 1500 hrs
Location: SWMUs 12/15 SANITARY LANDFILL
Field Personnel: J MERINO
Habitat Type(s) LANDFILL CAPPED & OVERGROWN W/ YELLOW SWEET CLOVER, ANNUAL SUNFLOWER, AND RUSSIAN THISTLE
Comments: THIS AREA IS HIGHLY DISTURBED & HAS BEEN RESEEDED TO SWEETCLOVER.

Observation/Collection Methods: OBSERVATION
Transect(s): No. _____ Length 5x5 SMALL MAMMAL TRAPPING GRID & AREA
Field Notebook No.: _____

Scientific Name / Common Name	Number	Observed Evidence	Comments on Condition, Habitat, and Abundance
BLACKTAILED JACKRABBIT	3	OBS	RUNNING INTO SWEET CLOVER FIELD FROM GENERATOR SHED
GOLDEN EAGLE	1	OBS	IMMATURE ON TELEPHONE POLE
LARK SPARROW	8	OBS	FEEDING ON ANNUAL SUNFLOWER SEED
WESTERN MEADOWLARK	11	OBS	IN BRACES IN SMALL GROUPS
SAGE SPARROW	3	OBS	ON RUBBER RABBITBRUSH
AMERICAN KESTREL	1	OBS	FLYING OVERHEAD & ON TELE LINE
COMMON RAVEN	3	OBS	ON RUBBISH PILES
POCKET GOPHER	—	MOUNDS	COMMON IN GRASS & SHRUBLAND AROUND CAPPED AREAS

(use additional sheets if necessary)

Completed by: JOE M MERINO (Name) Joe M Merino (Signature)

Subcontractor: Rust Environment & Infrastructure

FIELD DATA FORM 1.2
QUALITATIVE SURVEY/RELATIVE ABUNDANCE (WILDLIFE)

Site: TEAD-N ERA Date: 9-28-94 Project No.: 82470.180
Time: Started 1010 Finished 1135
Location: SEWAGE LAGOON SWMU 14
Field Personnel: J. MERINO
Habitat Type(s): DISTURBED - RUBBER RABBITBRUSH AND INTRODUCED WHEATGRASSES
Comments: OBSERVATIONS ALONG THE SOUTH, EAST AND WEST SHORES OF THE LAGOON. TOTAL LENGTH APPROXIMATELY 1400'

Observation/Collection Methods: OBSERVATIONS
Transect(s): No. _____ Length _____
Field Notebook No.: _____

Scientific Name / Common Name	Number	Observed Evidence	Comments on Condition, Habitat, and Abundance
VULPES VELOX / RED FOX	—	SCAT	RED FOX HAS BEEN SEEN HERE IN THE PAST.
SYLVILAGUS NUTTALLII / DESERT COTTONTAIL	1	OBS	COMMON IN SHRUB & GRASSLAND & P-J
LARUS CALIFORNICUS / CALIFORNIA GULL	16	OBS	ON LAGOON. COMMON
PHALACROCORAX AURITUS / DOUBLE-CRESTED CORMORANT	1	OBS	ON LAGOON. COMMON AT GREAT SL
BRANTA CANADENSIS / CANADA GOOSE	>25	OBS	ON LAGOON
ANAS PLATYRHYNCHOS / MALLARD	15-25	OBS	ON LAGOON. COMMON
RECURVIROSTRA AMERICANA / AMERICAN AVOCET	3	OBS	ON LAGOON, FEEDING
LEPUS CALIFORNICUS / BLACK-TAILED JACKRABBIT	—	PELLETS	COMMON TO ABUNDANT ALL HABITATS
CHONDESTES GRAMMACUS / LARK SPARROW	8	OBS	COMMON IN RUBBER RABBITBRUSH
STURNELLA NEGLECTA / MEADOWLARK, WESTERN	3	OBS	COMMON IN GRASS & SHRUB COVER
PANDION HALIAETUS / OSPREY	1	OBS	RARE FLYING OVERHEAD & DIPPING FEET IN LAGOON

(use additional sheets if necessary)

Completed by: JOE MERINO (Name) J. MERINO (Signature)

Subcontractor: Rust Environment & Infrastructure

FIELD DATA FORM 1.2
QUALITATIVE SURVEY/RELATIVE ABUNDANCE (WILDLIFE)

Site: TEAD-N ERA Date: 9-29-94 Project No.: 82470.180
Time: Started 1030 Finished 1115
Location: SWMU 21/37
Field Personnel: J. MERINO
Habitat Type(s) SAGEBRUSH STEPPE WITH INCLUSIONS OF JUNIPER
Comments: WINDY AND COOL

Observation/Collection Methods: OBSERVATIONS
Transect(s): No. _____ Length 5X5 SMALL MAMMAL TRAPPING GRID & AREA
Field Notebook No.: _____

Scientific Name / Common Name	Number	Observed Evidence	Comments on Condition, Habitat, and Abundance
VULPES FULVA / RED FOX	—	SCAT, DEN	DEN ON SANDY DEPRESSION GRASSLAND; UNCOMMON
CANIS LATRANS / COYOTE	—	SCAT	COMMON — GRASSLAND ALL HABITATS.
ODOCOILEUS HEMIONUS / MULE DEER	5	PELLETS, OBS	COMMON ALL HABITATS
BUBO VIRGINIANUS / GREAT HORNED OWL	1	CASTS, OBS	COMMON. FOUND CASTS UNDER JUNIPERS. OWL IN JUNIPER
CHONDESTES GRAMMACUS / LARK SPARROW	1	OBS	COMMON IN RUBBER RABBITBRUSH
STURNELLA NEGLECTA / WESTERN MEADOWLARK	1	OBS	COMMON/ABUNDANT GRASSLAND
PICA PICA / BLACK-BILLED MAGPIE	3	OBS	COMMON ALL HABITATS
LANIUS LUDOVICIANUS / LOGGERHEAD SHRIKE	2	OBS	COMMON/ABUNDANT PERCHED ON JUNIPER
CHARADRIUS VOCIFERUS / KILDEER	1	OBS	EGG SHELLS, ON GRAVEL PAVING
AMPHISPIZA BELLI / SAGE SPARROW	7-15	OBS	ABUNDANT SAGEBRUSH STEPPE
FALCO SPARVERIUS / AMERICAN KESTREL	3	OBS	COMMON PERCHED ON TELEPHONE WIRES

(use additional sheets if necessary)

FIELD DATA FORM 1.2
QUALITATIVE SURVEY/RELATIVE ABUNDANCE (WILDLIFE)

Site: TEAD-N ERA Date: 9-27-94 Project No.: 82470.180
Time: Started 1340 Finished 1410
Location: SWMU 42 SMALL MAMMAL TRAPPING GRID & AREA
Field Personnel: J MERINO
Habitat Type(s) GRASSLAND (BOA SECUNDA, ARISTIDA PURPUREA) & SHRUBS (CHRY NAU & GUT SAR)
Comments: OBSERVED UP TO 8 DEER DURING WEEK OF 9/11 IN THIS SWMU

Observation/Collection Methods: OBSERVATIONS
Transect(s): No. _____ Length 5X5 GRID & AREA
Field Notebook No.: _____

Scientific Name / Common Name	Number	Observed Evidence	Comments on Condition, Habitat, and Abundance
WESTERN MEADOWLARK	5	OBS	ABUNDANT TO COMMON IN GRASSLAND
BLACKTAILED JACKRABBIT	1	OBS	ALSO RUNS & DROPPINGS
POCKET GOPHER	NUMEROUS	MOUNDS	ABUNDANT MOUNDS THROUGHOUT
WESTERN FENCE LIZARD	1	OBS	UNDER R. RABBITBRUSH
SAGE SPARROW	2	OBS	ON RUBBER RABBITBRUSH
COYOTE	—	SCAT	WEATHERED SCAT
MULE DEER	—	PELLET GROUPS	OBSERVED DEER DURING 9/11/94 WEEK

(use additional sheets if necessary)

Subcontractor: Rust Environment & Infrastructure

FIELD DATA FORM 1.2
QUALITATIVE SURVEY/RELATIVE ABUNDANCE (WILDLIFE)

Site: TEAD-N ERA Date: 9-27-94 Project No.: 82470.180
Time: Started 1310 hr Finished 1340
Location: SWMU 45 SMALL MAMMAL GRID & AREA
Field Personnel: J. MERINO
Habitat Type(s) GRASSLAND - BLUE GRASS & RED 3-AWN W/ SAGEBRUSH & RUBBER RABBITBRUSH
Comments: DEER BED DOWN AROUND THE ASH TREE. ALSO, FRESH DEER PELLETS UNDER THIS TREE

Observation/Collection Methods: OBSERVATIONS
Transect(s): No. _____ Length 5X5 SMALL MAMMAL TRAPPING GRID & AREA
Field Notebook No.: _____

Scientific Name / Common Name	Number	Observed Evidence	Comments on Condition, Habitat, and Abundance
POCKET GOPHER	ABUNDANT	MOUNDS	ABUNDANT
SAGE SPARROW	6	OBSERVED	COMMON
WESTERN MEADOWLARD	4	OBS	COMMON
MULE DEER	1	BEDDING	HAVE SEEN UP TO 8 IN THIS NOT COMMON. AREA.
COYOTE	—	FRESH SCAT	SCAT AROUND POND, ASH TREE AND UPPER BENCH
BLACK-TAILED JACKRABBIT	—	RUNS & DROPPINGS	SHRUBS COMMON. ALSO SEE CUTTING AROUND
GOLDEN EAGLE	1	OBS	IMMATURE; FLYING FROM SWMU 45
COMMON RAVEN	2	OBS	USE TRAPPED FOR J. RABBITS PERCHED ON TRUCKS WHERE

FIELD DATA FORM 1.2
QUALITATIVE SURVEY/RELATIVE ABUNDANCE (WILDLIFE)

Site: TEAD-N ERA Date: 9-27-94 Project No.: 82470.180
Time: Started 0830 Finished 0920
Location: RSA - 1
Field Personnel: J Merino, J Flook, R Bregg
Habitat Type(s) Sagebrush Steppe with pockets of disturbance -
Comments: Clear, cool morning. Temp about 50°F, wse 5 mph. Area is also fringed w agricultural (hay) and pinyon-juniper. Evidence of jackrabbits, cottontails & coyote & sagebrush lizard.
Observation/Collection Methods: Qualitative observations
Transect(s): No. RSA Length 5x5 200 ft x 200 ft plus area around
Field Notebook No.:

Scientific Name / Common Name	Number	Observed Evidence	Comments on Condition, Habitat, and Abundance
Golden eagle (1 adult, 1 juvenile)	2	obs	1 perched in sagebrush 1 perched on juniper
Harrier hawk	1	obs	In sagebrush hunting
Great-horned owl	1	obs	Flushed from side of road
Kestrel	3	obs	Perched on junipers
Swainson's hawk	1	obs	On ground in alfalfa field
Common raven	5	obs	Perched on junipers and flying on ground
Least chipmunk	2	obs	Fairly abundant in sage & juniper
Sage sparrows	abundant	obs	flushed from sagebrush
Western meadowlark	common	obs	flocks of 5-10 in sage & juniper
Mtn bluebird	common	obs	Single individuals in juniper
Coyote		scat	Old scat not recent in sage & juniper

(use additional sheets if necessary)

FORM 1.8 STUDY AREA COMMUNITY SIMILARITY FORM

Site: TEAD-N Project No.: 82470.180 Date: 8-16-94 Location: South of South Ref. Area

Subcontractor: Rust Environment & Infrastructure Field Personnel: BERNIE/JOHN LUDLUM

Logbook No.: RSA #1 SOUTH of SOUTH MTN

SPECIES	TEAD-N (a)	REFERENCE AREA (b)	PHYSICAL FEATURES
Art tri (Big Sagebrush)	1	1	Elev: 4900 vs 5200
Sar ver (Black Greasewood)	1	1	Soils: Sandy/Gravelly
Gut sar (Snakeweed)	1	1	Loams vs Silty/Sandy
Poa sec (Sandberg Bluegrass)	1	1	Loams w/some Gravel
Agr smi (Western Wheatgrass)	1	1	Climate: equal
Agr spi (Bluebunch Wheatgrass)	1	1	Aspect: NE vs E
Opu spy (Prickly Pear)	1	1	Slope: equal
Bro tec (Cheatgrass)	1	1	
Spo cry (Sand Dropseed)	1	1	
Ely (Russian Wildrye)	1	1	
Ari pur (Purple Three-awn)	1	0	SI = 2w/a+b
Str com (Needle and Thread)	1	0	
Chr nau (Rubber Rabbitbrush)	1	1	
Chr vis (Little Rabbitbrush)	1	1	
Ory hym (Indian Ricegrass)	1	1	
Agr tra (Slender Wheatgrass)	1	1	
Total Species Count	16	14	
Similarity Index (SI): a	0.93		

a = sum of shared species for TEAD-N b = sum for Reference Area

w = sum of lesser values for species found in both areas

Comments: Non-big sagebrush is the dominant species w/ black greasewood a subdominant. Cheatgrass & Opuntia are dominant grasses. This site is considered TEAD-N except for soils, elevation, & slope. Texture (some gravel) & aspect are also problems.
