NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

BASIC RESULTS FROM THE 1985 BULGARIAN CENSUS

Preface

The regular population and housing census was conducted in the Bulgarian People's Republic between 4 and 12 December 1985. This statistical observation, the largest in terms of scale, provided extensive and varied statistical data on the status of the population and housing within the country and by individual territorial-administrative units--okrugs, settlement systems and settlements.

The population and housing census was accomplished by filling a census form, which included the ZhS card for housing and house building and card A for the population.

Four other representative surveys were made: on the birth rate and women's reproduction behavior; population migration and migration behavior; labor opportunities and possibilities of the employed population; and changes, problems and plans for life of the population. These data were culled, respectively, from cards R, M, T, L. Card NL applied to individuals of active age who are neither attending school nor working.

The processing of the census data and the publication of the results will take place gradually, until the end of 1987. Most of the results will come out in a series of individual publications of the Central Statistical Administration.

The present publication provides basic data on the population and housing. Its purpose is to meet some of the most urgent requirements for information needed by social management bodies. The data for 4 December 1985 are preliminary and were obtained by combining data from the list of households and housing, house buildings, cottages and rest homes, recorded by the census takers during the census.

The present publication is divided into two parts: Part One: Population According to the Census; Part Two: Housing According to the Census.

The population part is divided into three sections. Section one includes tables with data on the country's population, showing changes in its total number and structure by sex, age (under, of and over active age), family status, education, economic activeness and number and size of households. Section two includes tables with similar data on the number and structure of the population and households by okrug. The data in section three characterize changes in the overall size of the population by settlement system and city. This section also includes tables on the population size by settlement system in three age groups and for villages with a population in excess of 5000 as of 4 December 1985.

The part on housing also consists of three sections. Section one includes tables with data on housing facilities, size of average housing area per person, average number of individuals per housing and number of cottages and rest homes for the country. Section two breaks down the same characteristics by okrug; in section three the data on the housing facilities apply to the settlement systems and cities and villages with a population in excess of 5000.

Table of Contents

Preface	1
Table of Contents	2

Analytical notes	6

Part One -- Population According to Censuses

I. Total for the Country

1. Population size	18
2. Population increase between censuses	20
3. Population under, of and over active age	21
4. Population by family status	24
5. Population with 8 or more years of education	25
6. Population by economic activeness	26
7. Households and average number of members per household	26

II. By Okrug

8. Population size	27
9. Population under, of and over active age	33
10. Population by family status	39
11. Population on 4 December 1985 by family status	43
12. Population with 8 or more years of education	49
13. Population with 8 or more years of education by 4 December 1985	51

14. Population by economic activeness	54
15. Households and average number of members per household	57
III. By Settlement System, Cities and Villages with a Population of over 5000	
16. Population size by settlement system	60
17. Population on 4 December 1985 under, of and over active age by settlement system	64
18. Population by city	73
19. Villages with a population in excess of 5000 on 4 December 1985	78

Part Two -- Housing Based on Censuses

I. Total for the Country

1. House building, housing and housing area	80
2. Average housing area per individual and average number of individuals per housing	80
3. Cottages and rest homes on 4 December 1985	81

II. By Okrug

4. House buildings, housing and housing area	82
5. Average housing area per individual and average number of individuals per housing	88
6. Cottages and rest homes by 4 December 1985	91

III. By Settlement System, City and Village with a Population in Excess of 5000

7. House buildings, housing, cottages and rest homes by settlement system on 4 December 1985	94
8. House buildings, housing and housing area by city	112
9. House buildings, housing and housing area by village with a population of over 5000	124

Methodological Notes

Population

Sources of the preliminary data on the population in the 1985 census were the lists of households, which provided information on the number of people and the permanent population by sex, age, family status, education and economic activeness.

The "Permanent Population" category includes all individuals who usually reside in a given settlement, regardless of whether or not they were located on its territory or were temporarily elsewhere at the critical moment of the census.

The "Actual Population" category includes all individuals who, at the critical moment of the census, were located in a given settlement, regardless of whether or not they were its permanent or temporary residents.

Data on the urban and rural population are based on the status of the settlements at the time of the corresponding census. In the 4 December 1965 census urban-type settlements were combined with the cities.

Data by okrug and settlement system are based on the administrative-territorial division of the country by 4 December 1985.

Three age groups: under, of and over active age, were used in the preliminary results on the population's breakdown.

Considered as under active age are individuals 15 years old or younger.

The active age population includes men aged 16-59 and women aged 16-54.

The over active age population applies to men 60 and older and women 55 and older.

Data on the population by family status through the 1975 census are based on the actual family status of the individuals. Preliminary data of the 1985 census are based on the legal family status of the individuals.

The legal family status is based on a respective legal document: marriage certificate, court divorce decision or death certificate.

The family status of individuals who, at the time of the census, were married, regardless of whether or not the marriage was based on a legal document, was considered factual.

In terms of the education feature, the population aged 8 and over was divided into three groups: higher and semi-higher, secondary and less than secondary. In the 1965 and 1975 censuses individuals with a secondary education included those who had completed their secondary specialized training or SPTU and, in 1985, also graduates of ESPU with UPK.

Individuals who, at the time of the census, were employed and were earning a wage or income, regardless of the length of their employment, as well as individuals who had been granted temporary leave of absence for a variety of reasons were considered economically active. The 1975 census included as economically active also individuals who had performed temporary or seasonal work during the census year totaling no less than 60 working days, regardless of the fact that they may not have been employed at the time of the census. In the 1985 census individuals unemployed at the time of the census but who had worked 3 or more months in 1985 were also considered economically active.

In addition to individuals, households were also taken into consideration in the censuses. A household consists of one or more individuals who live together within a residence or part of a residence, have a joint budget and take their meals together, regardless of whether they are related or not.

Housing

Unlike previous censuses, the 4 December 1985 housing census considered three separate units: housing, house building and cottage (rest home).

The housing census was done with the help of two census documents: the ZhS card, consisting of two parts: part one for the housing and part two for the house building, and card C, which included data on cottages and rest homes.

The 1985 preliminary data were taken from the lists of housing, house buildings, cottages and rest homes.

House buildings are structures which were used as permanent residences by one or more households either initially or after remodeling. House buildings are classified into occupied and vacant; the census covered both types. However, it covered only habitable house buildings. House buildings also include all hostels, prefabricated wooden and panel houses and summer kitchens, considered as separate structures. The census did not include nonresidential buildings with a housing area, new and unfinished buildings, ancient house buildings used as museums, house buildings remodeled for other purposes and temporary buildings, barracks, huts, vans, trailers and others inhabited by individuals and households during the census.

Cottages and rest homes usable on a year-round basis were included in the number of house buildings, as is the custom with current statistics, and as had been the case in previous housing censuses.

A cottage is a structure whose initial purpose was to meet specific population needs for recreation and restoration of health.

Rest homes are rural houses initially built to meet housing needs but which, at the time of the census, were used as cottages, i.e., for recreation and recovery of health. Cottages and rest homes suitable for year-round use are buildings consisting of strong and durable materials and which can be efficiently heated during the winter. A single cottage or rest home is counted as a single residence.

The housing as an census unit is separate and independent from the point of view of its structure, suitable for living purposes, consisting of one or several living and auxiliary premises with a separate exit to the public area -- staircase, hall, etc. The housing may not have a separate built-in kitchen. A housing located on two or three stories within a single house building inhabited by a single household is considered a single housing. If the individual floors are inhabited by separate households, each floor is considered a separate housing. In hostels, boarding houses and other similar structures each room is considered a separate housing.

As was the case with previous housing censuses, the housing area includes the area of the living room, bedroom, dining room, day room, halls, closets, guest rooms, entranceways, kitchens and outdoor kitchens. Only rooms and kitchens with an area of 4 or more square meters are counted as rooms. The program for the fast processing of the preliminary census results has been abridged and enables us to obtain data only on the number of house buildings, cottages, rest homes, housing, volume of housing area, average housing area per person and average number of individuals per housing.

The number of buildings and housing includes, as was the case in previous censuses, the number of cottages and rest homes suitable for year-round living and their respective housing within them. It is only in the table on the settlement systems that cottages and rest homes have not been included in the number of buildings and housing, being listed separately within the same table. The number of housing units does not include mobile or primitive dwellings.

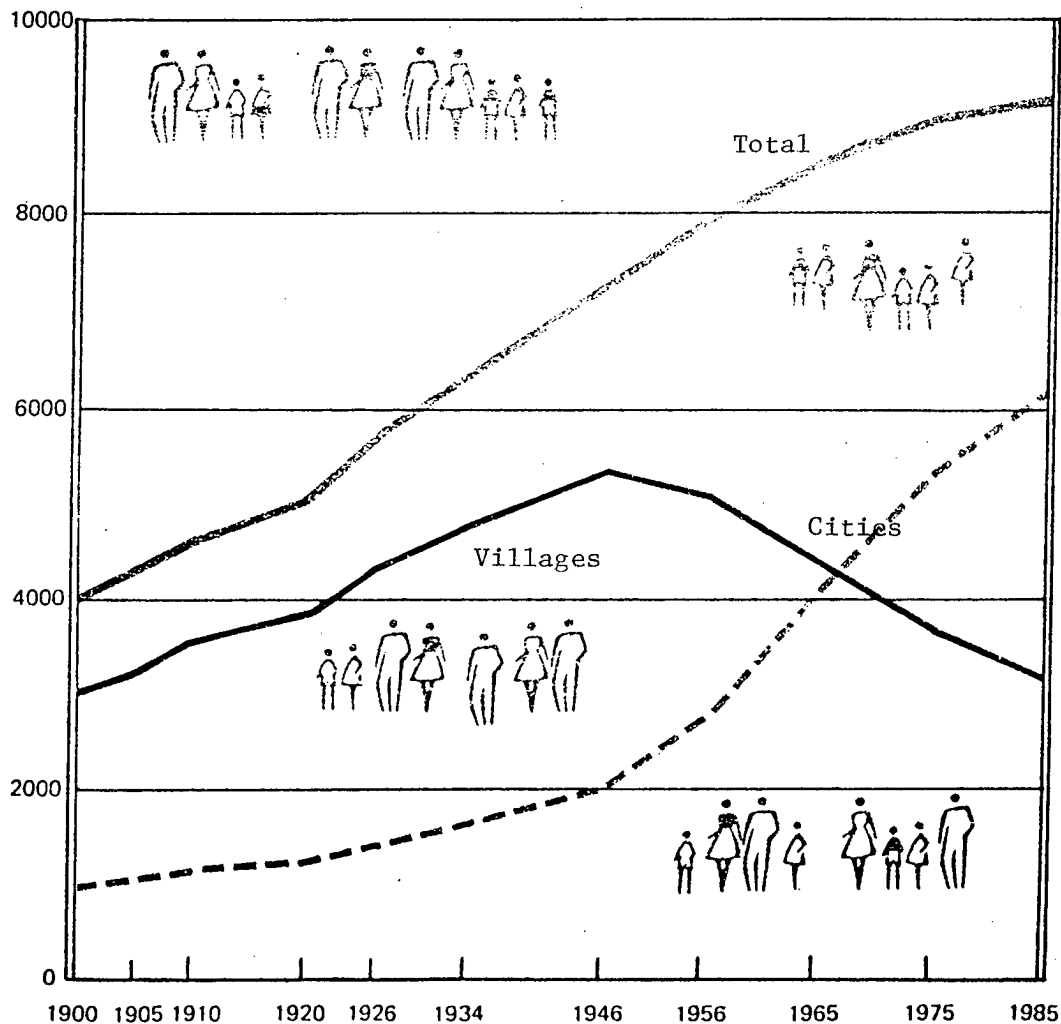

Analytical Notes

Population

Preliminary data of the latest Bulgarian census indicate that, compared with 1975, significant changes occurred in the population's size and structure.

On 4 December 1985 the country's population totaled 8,948,388 people, or 4,430,061 men and 4,518,327 women. In the decade since the last census the population had increased by 2,220,617, or an average of 22,062 people per year (0.2 percent). Compared with past censuses, the increase for the 1975-1985 period was the lowest. Thus, it had amounted to about 75,000 people annually (1.3 percent) for the 1926-1934 period; 68,000 (0.9 percent) for the 1956-1965 period; and 50,000 (0.6 percent) for 1965-1975. The trend is toward a steady drop in population increase, a phenomenon inherent not only in our but in all advanced countries.

Bulgarian Population (thousands)

The trend of absolute and relative increase in the size of the urban and a decrease in the rural population is continuing.

By the end of 1985 the urban population had reached a total of 5,796,330, while that of the countryside had declined to 3,152,058. These data indicate that changes in the percentage of the urban and rural populations in the country have been developing so far in two different directions. We notice for the cities a steady high increase at the expense of the rural population's outflow. The result is that from 19.8 percent of the population, which it was at the end of the year 1900, the urban population rose to 24.7 percent by the end of 1946 and 64.8 percent by the end of 1985. Meanwhile, the rural population correspondingly dropped from 80.2 percent to 75.3 percent and 35.2 percent. After 1946 the relative decline in the size of the rural population was paralleled by a decline in absolute figures, from 5,294,000 by the end of 1946 to 3,152,000 by the end of 1985.

In the interval between the last two censuses the population increased in 14 okrugs: Sofia City, Varna, Blagoevgrad, Burgas, Kurdzhali, Plovdiv, Stara Zagora, Ruse, Pazardzhik, Khaskovo, Sliven, Tolbukhin, Smolyan and Shumen. It is noteworthy that in these okrugs the population has been increasing ever since 1946.

A steady trend in the population's decline may be noted for the 1946-1985 period in five okrugs: Vidin, Mikhaylovgrad, Sofia, Veliko Turnovo and Lovech.

Changes in population increases and decreases have been noted in the remaining nine okrugs.

This dynamic in the size of the population in the individual okrugs is related, on the one hand, to the high birthrate in okrugs, such as Kurdzhali, Blagoevgrad, Khaskovo, Pazardzhik and others; and, on the other, the concentration of the population in some okrugs, such as Sofia City, Varna, Burgas, Plovdiv, Stara Zagora and others.

On 4 December 1985 the largest population was concentrated in the following okrugs: Sofia City, 1,199,000; Plovdiv, 754,000; Varna, 465,000; and Burgas, 449,000. The smallest population was in the following okrugs: Smolyan, 164,000; Vidin, 167,000; Turgovishte, 171,000; Pernik, 174,000; Silistra, 174,000; and Gabrovo, 175,000.

Substantial disparities in population size by settlement system may be noted, as follows: Sofia, 1,199,000; Plovdiv, 557,000; Varna, 308,000; Koprivshtitsa, 3,251; Treklyano, 2,171; Shiroka Luka, 1,860; and Melnik, 875. The largest population is in settlement systems surrounding okrug centers. Currently some 40 percent of the country's population resides in 14 of a total of 300 settlement systems.

The age structure is one of the basic demographic characteristics. It is related not only to the reproduction of the population but also to the shaping of manpower resources. Data of censuses since the beginning of the century indicate a trend of steady decline in the percentage of active-age population

and the increased share of population past the active age group. The share of individuals below the active age group declined from 44.1 percent in 1910 to 29.8 percent in 1946 and to 22.7 percent in 1985. Within the same period the share of the population above the active age group increased, respectively, from 9.8 percent to 11.7 and 21.2 percent.

The share of the active-age population increased until 1956, when it reached its maximum -- 58.9 percent. Data of subsequent censuses indicate the reverse trend, which was manifested with particular clarity in the 1975-1985 period. During that period the share of the active-age population declined by 1.9 percent.

A number of features in the development of the demographic processes in the urban and rural population determine the substantial disparities manifested in their age-group structures. As a result of intensive migration from country to town, despite its higher birth rate, the rural population has aged faster than the urban. For that reason, by the end of 1985 the share of the population under and over the active age group in the countryside was 3.9 and 10.4 percent lower than in the cities and the share of the population over the active age group was higher by 14.3 percent.

From the territorial viewpoint, the population's age structure is quite disparate. In okrugs, such as Vidin, Lovech, Gabrovo, Mikhaylovgrad and Veliko Turnovo, the share of individuals under the active age group is very low, ranging between 18.3 and 20.1 percent. Conversely, in okrugs such as Razgrad, Blagoevgrad, Smolyan and Kurdzhali, in which the birth rate has been traditionally high, it ranges between 25.1 and 30.5 percent.

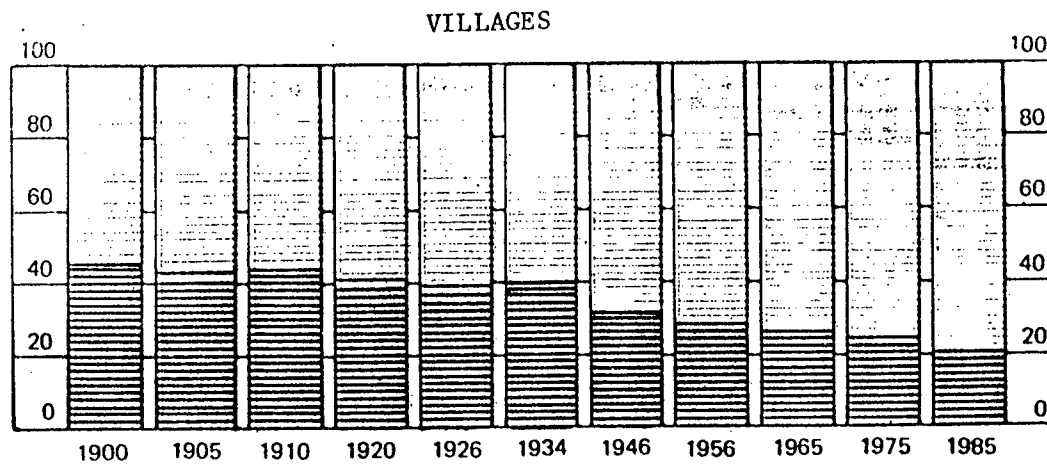

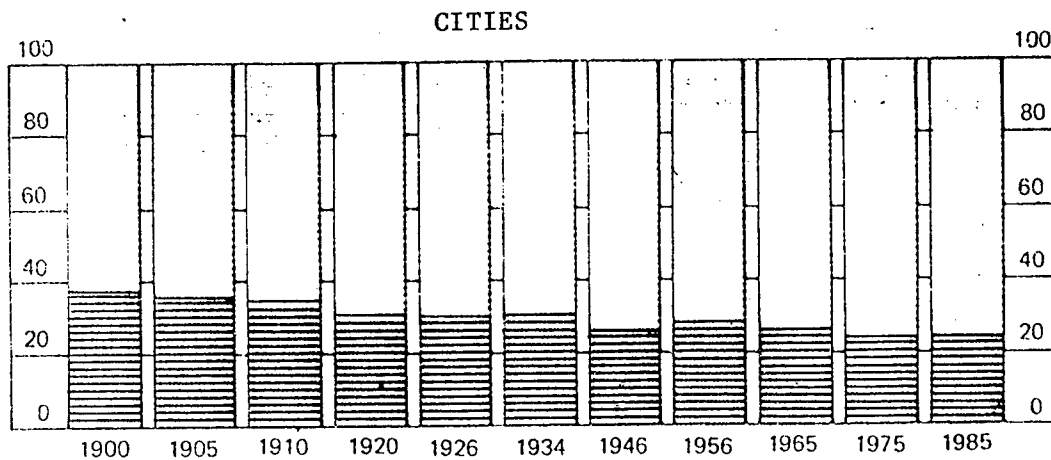

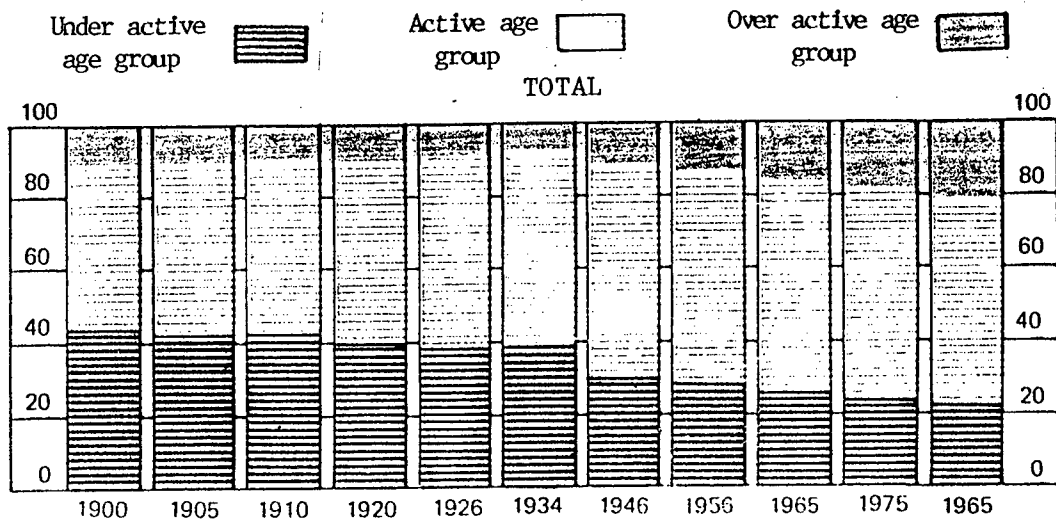

A very low share of the active age population (48.7 - 51.9 percent) may be noted in Vidin, Lovech and Mikhaylovgrad okrugs. Smolyan, Sofia-city, Varna, Plovdiv and Ruse okrugs have a substantially higher share of active-age population (57.6 - 59.4 percent) compared with the national average.

Okrugs characterized by a high share of the population below the active age group have a low share of the population over the active-age group, ranging between 12 and 16 percent. Conversely, okrugs in which the share of the population under the active age group is low have a high share of population over the active-age group.

The last census revealed that of the total 8,948,388 people in the country, 3,062,000 (34.2 percent) are unmarried, 5,018,000 (56.1 percent) are married, 229,000 (2.6 percent) are divorced and 639,000 (7.1 percent) are widowed.

The place of residence substantially influences the population's structure in terms of family status. The share of unmarried persons in the cities (36.6 percent) is 6.8 percent higher than in the countryside. The share of divorced individuals in cities is twice that in villages. Conversely, the share of married individuals is higher in the countryside: 58.8 percent as against 54.6 percent and of widowed respectively 10.1 percent in the villages and 5.5 percent in the cities.

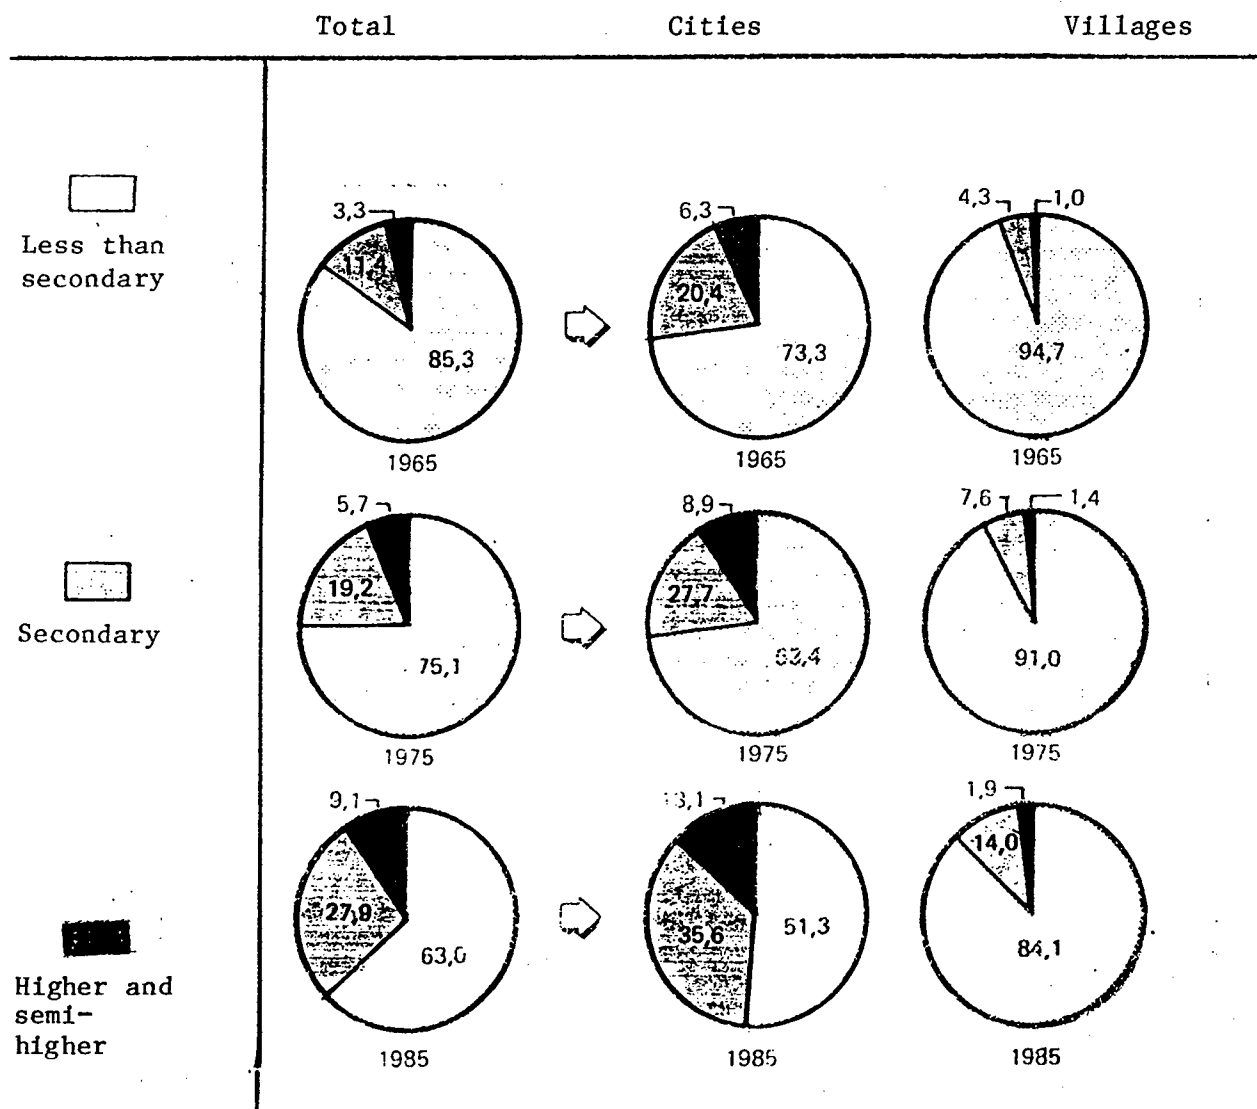

POPULATION UNDER, OF AND OVER ACTIVE AGE Percentage

These differences are due mainly to the great disparities in the age-group structure of the urban and rural population. The younger age structure of the urban population means a higher percentage of people aged 15 or younger, consisting mainly of unmarried people. The higher share of the population in the older age groups in the countryside means a higher percentage of married and widowed people.

Generally, this overall law is manifested in terms of the population in the individual okrugs. Okrugs such as Blagoevgrad, Kurdzhali, Smolyan, Pazardzhik and others, characterized by their young age group population structure, have a high percentage of unmarried and, respectively, a low percentage of married and widowed population, whereas the share of married and widowed individuals is higher in okrugs with an older population (Vidin, Mikhaylovgrad, Pleven and others).

POPULATION 8 YEARS OLD AND OLDER BY EDUCATION
Percent

Considerable changes have taken place in the structure of the population by family status. The share of unmarried individuals declined steadily from 39.5 percent in 1956 to 34.2 percent in 1985. Within the same period the percentage of married individuals increased from 54.6 to 56.1 percent; of divorced, from 0.6 to 2.6 percent and of widowed, from 5.3 to 7.1 percent. These structural changes are similar for the urban and rural population but are more strongly manifested in the countryside.

Changes in the educational structure of the Bulgarian population illustrate the tremendous contribution which the socialist revolution has made to enhancing the educational, training and cultural standards of the people. Between 1975 and 1985 the number of individuals with higher and semi-higher training increased from 437,000, or 5.7 percent of the population 8 years old and older, to 719,000, or 9.1 percent. There was also a substantial increase in the number of individuals with secondary school training, from 1,470,000 (19.2 percent) to 2,204,000 (27.9 percent). The increased number of individuals with higher, semi-higher and secondary training led to a strong absolute and relative drop in the number of individuals with primary or less than primary education. Within a decade the number of such individuals declined from 5,752,000, or 75.1 percent, to 4,985,000, or 63.0 percent.

Broken down by okrug, however, the educational structure of the population indicates a certain uneven distribution of highly skilled specialists (with higher and semi-higher training). With a 9.1 percent national average, their share ranges from 4.3 percent in Kurdzhali and 5.4 percent in Sofia okrugs, to 9.4 percent in Plovdiv and 10.6 percent in Varna okrugs. We can note a saturation of such specialists in Sofia city -- 22.6 percent of the population 8 years of age or older.

The same pattern is noted in the breakdown of individuals with secondary training. Here as well the highest percentage is found in Sofia city, with 38.9 percent, followed by Gabrovo, 31.6 percent; Plovdiv, 30.9 percent; Varna, 30.5 percent; Pernik, 30.1 percent, and so on.

The national trend of increase in the number and percentage of individuals with a higher educational standard applies to all okrugs without exception.

In the stage of building a developed socialist society, particular attention is paid to the efficient use of labor resources and, on this basis, to upgrading the well-being of the population. Society is interested in systematically increasing the number of individuals directly involved in socially useful work, i.e., of economically active individuals.

In the past three decades the size of the economically active population has been increasing steadily. On 4 December 1985 it totaled 4,802,000. Unlike the absolute number, however, its percentage showed a declining trend until 1975, from 54.5 percent in 1956 to 51.0 percent in 1975. The 1985 census indicates an end to this trend. Compared to 1975, the share of the economically active population increased by 2.7 percent. This fact is the consequence above all of the steps taken by party and state bodies in finding new opportunities for involving individuals, above all those over the active-age group, in the labor process.

The fast growth of the population in the cities is also a factor in the significant increase of the economically active population in the cities. By the end of 1985 it totaled 3,233,000 people, or 55.8 percent of the economically active population in the country, and was also paralleled by an increase in its share of the total urban population.

As a result of intensive internal migration, the reduced population in the countryside was paralleled by a reduction in the number of economically active individuals in the villages. Between 1956 and 1985 it declined by nearly one half, from 3,016,000 to 1,569,000. The absolute decline was paralleled by a drop in the percentage of the economically active population in the total strength of the rural population until 1975. The reasons for the recorded 1 percent increase between 1975 and 1985 are the same as for the country at large.

The population's structure by economic activeness in the individual okrugs was the result of the influence of a number of economic, demographic, geographic and other factors. The complex influence of these factors determines the specific aspect of the population's structure in each okrug. Okrugs such as Sofia city, with 56.3 percent; Pernik, with 56.0 percent; Gabrovo, with 55.8 percent; Smolyan, with 55.3 percent and others, have a relatively high percentage of economically active population, whereas okrugs such as Mikhaylovgrad, with 49.6 percent; Vidin, 50.0 percent; Turgovishte, 50.7 percent, and Pleven and Vratsa, with 50.9 percent each, have a share of economically active population below the national average.

By the end of 1956 the country's population consisted of 2,238,000 households, 907,000 in the cities and 1,331,000 in the villages. According to the 1985 census, there are 3,020,000 households in the country, 1,989,000 in the cities and 1,031,000 in the villages.

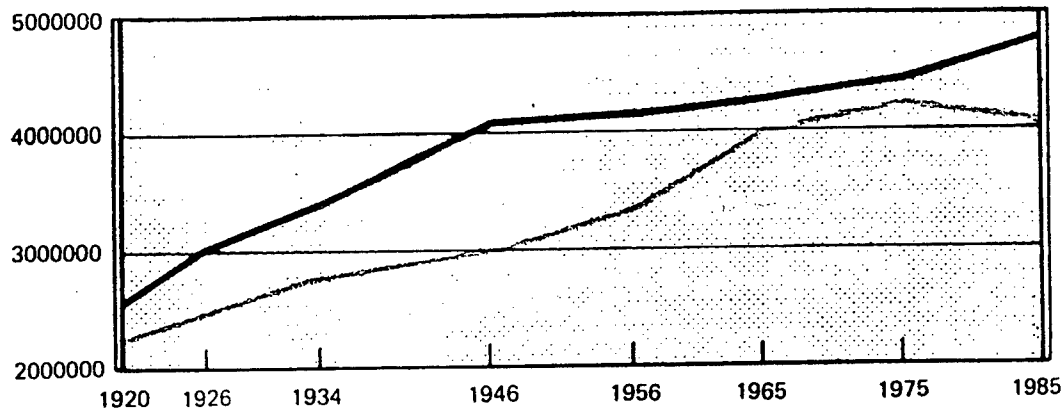

The factors which determine the increased number of households are the increased population and the process of household splintering. Under their influence the number of households within the period under consideration increased by 35.0 percent; it more than doubled in the cities. In the villages, the number of households declined by 22.6 percent within the same period of time.

The size of the households has declined as their number increased. The average number of household members declined from 3.4 in 1956 to 3.0 in 1985. The decline was stronger in the countryside (from 3.8 to 3.1) whereas a relative stability was noted in the cities (from 2.8 to 2.9 individuals). These changes in the average household size express the process of nuclearization of the Bulgarian family as a result of the industrialization of public production and the urbanization of the society.

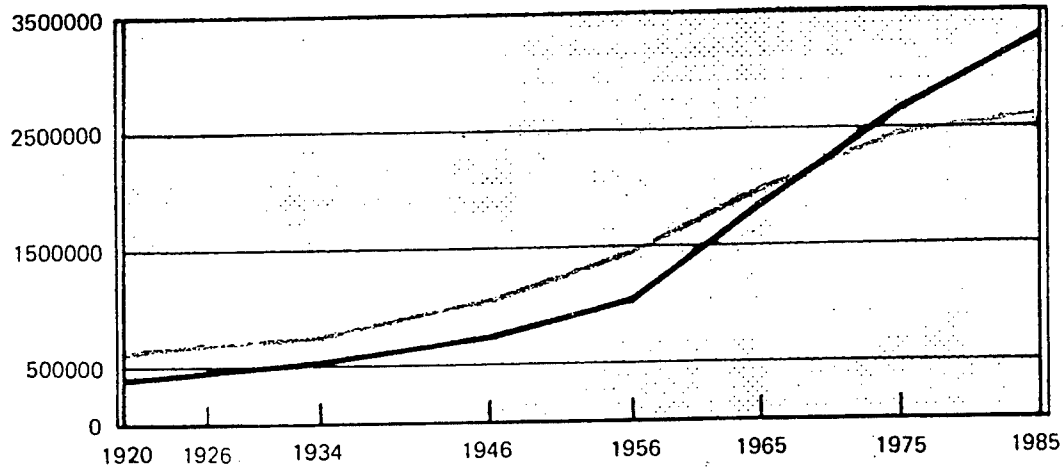

Generally, the development trends influencing the number and average size of households by okrug are shaped under the influence of the same demographic and economic factors; however, a number of specific features in the development of demographic processes in terms of time and place have left their mark on the number and size of households by okrug. The high birthrate noted in

POPULATION BY ECONOMIC ACTIVENESS

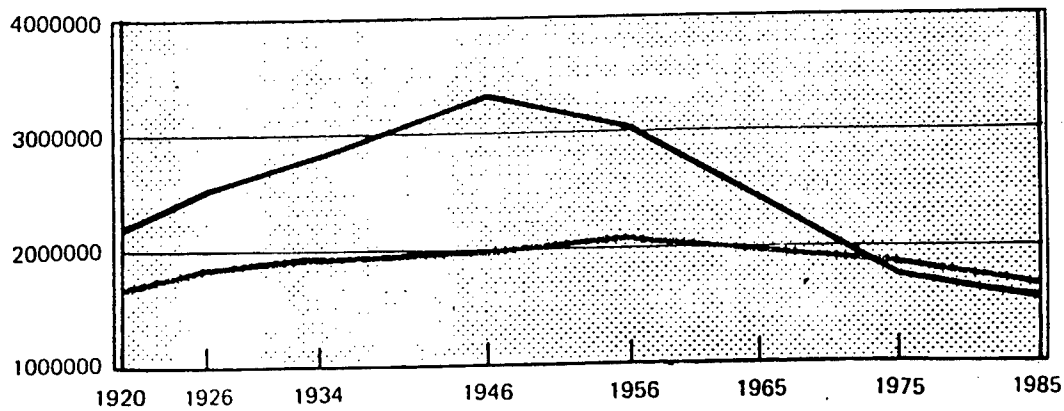

Total

In the Cities

In the Villages

Blagoevgrad, Kurdzhali, Smolyan, Silistra, Tolbukhin and other okrugs influenced the faster population growth rates, which is a prerequisite for a faster increase in the number of households. The opposite prevailed in lower birth rate okrugs, such as Vidin, Gabrovo, Lovech, Mikhaylovgrad and others.

The number of households declined in three okrugs -- Lovech, Vidin and Kyustendil -- in the 1975 - 1985 period; it remained stable in Vratsa and Smolyan okrugs; in the others the increase ranges between 1 and 19 percent (23 percent for Sofia city).

With an average number of 3.0 individuals per household in 1985, their number by okrug ranges between 2.6 and 3.3. An exception is Kurdzhali Okrug, where the average number of household members is 3.9. In most okrugs the average size of a household is close to the national average.

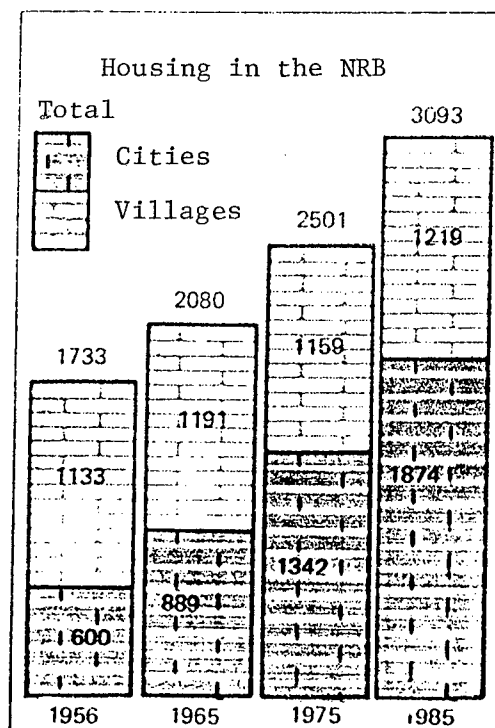

Between 1975 and 1985 the average size of the household increased in Smolyan Okrug; it remains stable in Blagoevgrad, Kyustendil and Shumen; in the other okrugs it dropped by 0.1 - 0.3; the highest decline was noted in Sofia city, Pernik, Sofia okrug and Khaskovo.

HOUSING

The initial results of the housing census of 4 December 1985 confirmed the successes of the social and housing policies of the party and the government in decisively improving the material and cultural well-being of our country's population. They confirmed the tremendous concern shown by the people's regime and successes it achieved in the area of large-scale housing construction with a view to the overall satisfaction of the housing needs of the population.

On 4 December 1985 the country had 1,954,738 house buildings and 3,093,349 dwellings with an overall housing area of 148,749,581 square meters. Compared with the 2 December 1975 housing census, the number of buildings increased by 5.9 percent; dwellings increased by 23 percent and housing area, by 28.2 percent. The average housing area per capita increased from 13.3 square meters to 16.6 square meters, or by 3.3 square meters. The growth rates of these basic indicators for the period between 1975 and 1985 significantly exceeded, in most cases, the respective rates for 1965-1975.

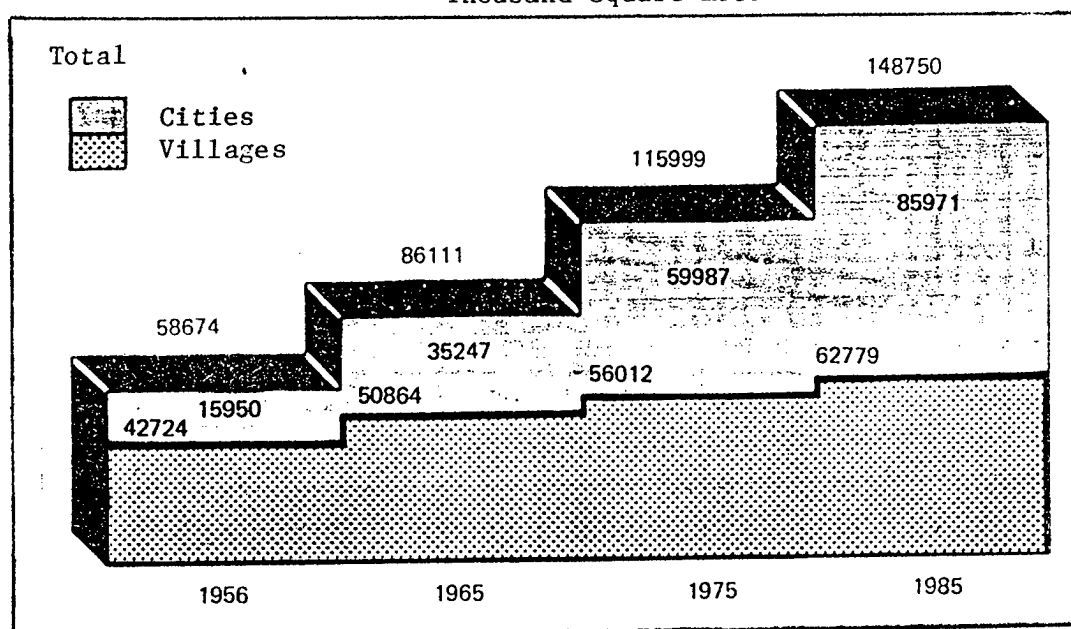

The lesser growth and, in some cases, even the decline in the number of house buildings, compared with the number of dwellings, is due to the

fact that today construction is concentrated mainly on large multiple-dwelling buildings which frequently require the removal of several smaller house buildings.

For the country at large, between 1975 and 1985 the number of dwellings increased by 591,892, or 23.7 percent, 532,059 of which are in the cities. Unlike the 1965 - 1975 period, when dwellings in the countryside declined by 1.8 percent, in the past 10 years their number in the villages increased by 5.2 percent. The increase of housing in the countryside is a positive fact, indicating that the satisfaction with housing of the rural and some of the urban population has improved, essentially through the use of weekend homes and cottages.

HOUSING AREA IN THE BULGARIAN PEOPLE'S REPUBLIC
Thousand square meters

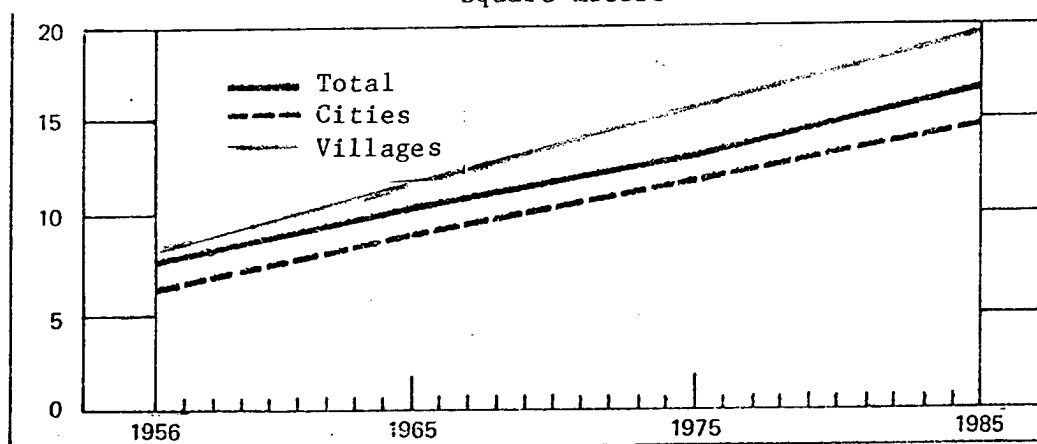

The greatest increase in the number of dwellings was in the following okrugs: Sofia city, 37.3 percent; Varna, 32.4 percent; and Blagoevgrad, 31.4 percent; the slowest increase was in Vidin, 11.8 percent; Turgovishte, 12.8 percent; and Mikhaylovgrad, 14.1 percent. The greatest increase in the cities in okrugs in which the number of dwellings increased the most was found in the following okrugs: Kurdzhali, 60.9 percent; Razgrad, 59.8 percent; and Blagoevgrad, 53.1 percent. The lowest increase in this respect was in the following okrugs: Silistra, 15.6 percent; Gabrovo, 22.5 percent; and Vidin, 28.4 percent. Unlike previous decades, in the last decade the number of dwellings in the countryside increased in all but 5 okrugs. The greatest increase was in the following okrugs: Smolyan, 15.6 percent; Silistra, 15.1 percent; Sofia and Pernik, 14.6 percent each. The number of dwellings in the

villages declined in Razgrad, Turgovishte, Pleven, Veliko Turnovo and Lovech okrugs.

The housing area increased in accordance with the increased number of dwellings; in all cases the relative increase in the housing area was significantly higher than that of dwellings. This fact indicates a positive trend: the building of more dwellings with a larger housing area in accordance with the real needs of the population. The average housing area per dwelling has already reached 48 square meters; it is 46 square meters in the cities, which is roughly consistent with the housing area of a 3-room dwelling.

These high growth rates of the basic indicators of available housing, combined with the relatively low growth of the population, have resulted in a significant increase in the average housing area per individual. With an average per capita housing area of 16.6 square meters for the country at large, it exceeds 20 square meters for Sofia, Vidin, Pernik and Lovech okrugs. Kurdzhali is the only okrug with an average per capita housing area of less than 15 square meters. In the cities in most okrugs the average per capita housing area is about 15 square meters and only Tolbukhin, Kurdzhali, Burgas, Ruse and Yambol okrugs average slightly under 14 square meters per capita. In the villages, as one should expect, the per capita average housing area is significantly higher; in half the okrugs it exceeds 20 square meters; in Pernik Okrug it is 33 square meters per person. A similar situation prevails with the average number of individuals per dwelling. All okrugs, with the exception of eight, average three or fewer individuals per dwelling; in Sofia, Pernik, Lovech, Kyustendil and Gabrovo okrugs the average number of individuals per dwelling is 2.5 or fewer. Only in Kurdzhali Okrug is there an average of four individuals per dwelling.

HOUSING AREA PER INDIVIDUAL
Square meters

Housing availability increased differently in the cities; in principle, in the case of the larger cities, the relative increase was higher. Thus, for example, housing area increased by about 50 percent in virtually all okrug centers.

The amount of housing for more specific purposes, such as cottages and rest homes, used for recreation and health recovery of the working people, is an indicator of the increased well-being of the Bulgarian people.

Today the country has a total of 319,445 cottages and rest homes; more than 200,000 of them are usable the year-round. The breakdown of cottages and rest homes greatly varies by okrug and depends on the climatic-natural conditions and some structural population characteristics in the respective okrugs. The highest number of cottages and rest homes -- 44,874 -- are in Sofia Okrug.

On an average, 1 out of 9 households in the country has its own place for recreation and health recovery.
