## OBJECTIVES AND METHODS

The U.S. Army Environmental Center (AEC) tasked the Mandatory Center of Expertise for the Curation and Management of Archaeological Collections (MCX) with the job of assisting Army installation personnel in complying with the requirements of the Native American Graves Protection and Repatriation Act (P.L. 101-601, NAGPRA). The MCX was asked to locate and assess archaeological collections derived from Army-owned lands, to identify the federally recognized Native American tribes most likely culturally affiliated with the collections, to draft Section 6 Summary letters for each installation, and to conduct physical inventories of any collections that contain human skeletal remains. This report conveys the results of the collections research completed to assist Fort Eustis in complying with the Section 6 Summary requirements of NAGPRA.

The MCX used a two-stage process to identify, locate, and assess the contents of archaeological collections from the installation. First, archival research was performed to review all archaeological site records and reports for the installation. Second, telephone interviews were conducted with personnel at installations, universities, museums, and archaeological contractors that were identified during the archival research as possible repositories of Army collections.

Archival research for Fort Eustis began with a search of the National Archeological Data Base (NADB) for references pertaining to the installation. This was followed by a thorough examination of all archaeological site forms and a literature review of all pertinent archaeological reports and manuscripts on file at the Virginia Department of Historical Resources, in Richmond, Virginia. The records search was performed at the Historical Resources office in June 1995 and sought to identify any work on the installation that may have produced archaeological collections.

Subsequent telephone interviews to potential collections repositories ascertained whether the materials were present and the range of objects in each collection. Once the collections were located and assessed, MCX personnel identified federally recognized Native American tribes that are likely to be culturally affiliated with the materials in the collections.

---

## RESEARCH RESULTS

### ARCHAEOLOGICAL INVESTIGATIONS AT FORT EUSTIS

Archaeological work on Fort Eustis began in 1975. Four institutions have conducted archaeological investigations there:

Department of Anthropology, College of William and Mary, Williamsburg, Virginia  
 James River Institute of Archaeology, Williamsburg, Virginia  
 Mid-Atlantic Archaeological Research, Inc. (MAAR), Williamsburg, Virginia  
 Virginia Department of Historic Resources, Richmond, Virginia

Investigations consisted of systematic surface surveys, shovel tests, and excavations conducted for the purpose of cultural resource reconnaissance. In addition, Ross Becker, a private collector, recorded sites on Fort Eustis and deposited the artifacts he collected from the surface of the sites with the Virginia Department of Historic Resources.

Sites range in time from prehistoric Archaic to the early 20th century historic period. Site types include prehistoric camp sites, and historic residential and military sites. Prehistoric artifacts include stone tools, chipped stone debris, shells, and fire cracked rock. Historic materials include glass, ceramics, metal, shell, and brick. No human remains were collected during the archaeological investigation of Fort Eustis.

### SUMMARY OF ARCHAEOLOGICAL COLLECTIONS

A total of approximately 58.4 ft<sup>3</sup> of boxed archaeological materials has been identified for Fort Eustis. As of September 1995, these materials were located in the following repositories:

James River Institute of Archaeology, Williamsburg, Virginia	2.0 ft <sup>3</sup>
Virginia Department of Historical Resources, Richmond, Virginia	55 boxes
William & Mary Center for Archaeological Research, Williamsburg, Virginia	1.4 ft <sup>3</sup>

Reports and/or other archaeological documentation for Fort Eustis, but no artifact materials, are housed at the following repositories:

Mid-Atlantic Archaeological Research, Inc., Williamsburg, Virginia	10.25 linear inches
Environmental Office, Fort Eustis, Virginia	< 6 linear inches

James River Institute of Archaeology houses approximately 2.0 ft<sup>3</sup> of boxed artifact materials from Fort Eustis. These materials have not been formally accessioned into the repository and are identified in the repository by site number. The collection materials are from historic period residential sites and date from the 18th through the 20th centuries. Artifacts include ceramics, metal, glass, brick, and shell. Approximately four linear inches of documentation is included with the artifact collection.

The Virginia Department of Historical Resources (VDHR) houses approximately 55 boxes of material from Fort Eustis. These materials have not been given accession numbers; they are identified in the repository as the "Fort Eustis" material and by site number under the Fort Eustis heading (telephone conversation: Keith Egloff, 18 September 1995). The collection contains materials from both the prehistoric and historic time periods. The prehistoric materials in this collection date from the Archaic through the Woodland archaeological time periods and include stone tools, fire cracked rock, shell, and ceramics. The historic period materials date from the 17th through the 20th centuries and are primarily related to residential, historic industrial, and military sites. Historic period materials include glass, brick, metal, ceramics, and structural debris. Bone material, present among artifacts from site numbers 44NN19, 44NN34, 44NN70, 44NN102, 44NN165, 44NN191, 44NN194, 44NN223, and 44NN265, are reported by repository officials to be faunal remains. Approximately one linear inch of documentation is included with the artifact collection.

William & Mary Center for Archaeological Research houses a total of approximately 1.4 ft<sup>3</sup> of archaeological material from Fort Eustis. This collection of artifacts has been accessioned as collection number 90-33. The materials in this collection date from the historic/modern time period and represent a single archaeological site, the Matthew Jones house (44NN4). Artifact material types include glass, metal, ceramics, brick, and structural debris. Bone material collected from site 44NN4 derives from the modern period and is believed to be faunal material by laboratory archaeologist, Debbie Davenport, although no osteologist has examined the collection for verification (telephone conversation: 26 September 1995). Approximately three linear inches of documentation are included with the artifact collection.

Approximately 10.25 linear inches of reports and/or other archaeological records for Fort Eustis are located at Mid-Atlantic Archaeological Research, Inc., and less than one linear foot of documentation is located at the Fort Eustis Environmental Office.

The attached *Summary of Current Locations of Archaeological Collections from Fort Eustis* (Appendix I) provides detailed information about the collection derived as a result of archaeological investigations at the installation. A collection consists of all of the materials, artifacts and associated documentation (e.g., field notes, maps, photos, data analyses, correspondence), produced as a result of an archaeological investigation or project at a single site or multiple sites. In some cases, the same archaeological site may have been investigated by various individuals or organizations. Depending on where the resulting collections are curated, they may be stored and identified as separate collections or separate components of a single collection. In cases where the artifacts and records have become separated, we list the records collections repository as well.

Every attempt has been made to locate all collections cited on available archaeological site records or in published and unpublished references to archaeological investigations on the installation.

### **NAGPRA-Related Materials**

No human remains, associated/unassociated funerary objects, sacred objects, or objects of cultural patrimony have been identified during the review of archaeological records, associated literature and telephone interviews for Fort Eustis.

## **REFERENCES TO ARCHAEOLOGICAL INVESTIGATIONS**

Two sets of references regarding archaeological work conducted on Fort Eustis are attached: Appendix III contains the list of references reviewed by the MCX during its archival research and Appendix IV is the list of references contained in the National Archeological Data Base (NADB).

## **NATIVE AMERICAN TRIBES ASSOCIATED WITH FORT EUSTIS**

Spanish explorers are believed to have first contacted the Native Americans living in coastal and tidewater Virginia in the 1520s. Although the Spaniards made no attempt to establish a settlement for another 50 years, first hand knowledge of the area is evidenced by the detail of maps produced during the earlier period. In 1570, with the help of a Native American that had been kidnapped as a youth by Spanish explorers, Spanish Jesuits established a mission on the banks of the York River; but a year later, the former captive led an attack on the mission, killing the missionaries. A punitive raid by the Spaniards resulted in the deaths of over 30 tribesmen. Because of the hostilities created during this missionizing effort, no further settlement of the central coast region was attempted until 1584 when the English landed on

Roanoke Island off the coast of North Carolina. Two British attempts to establish settlements off the coast of North Carolina failed, and in 1607 a permanent settlement was finally established at Jamestown (Feest 1990).

At the time of British contact and during the early colonial period, a confederation of Algonkian speaking tribes, known historically as the Powhatan confederation, inhabited the coastal and tidewater region of southern Virginia. The Chiskiack, a member tribe of the Powhatan confederation, are believed to have been the aboriginal inhabitants of York county, which is directly adjacent to the area surrounding present day Fort Eustis. Other tribes, such as the Chickahominy, which inhabited land in James City county, to the northwest of Fort Eustis, and the Nansemond, Quiyoughcohanock, Weanoc, and Warrasqueoc tribes, which occupied portions of the Isle of Wright and Surry counties, directly across the James River from Fort Eustis, were also members of the Powhatan confederation of tribes (McCary 1957:4-7). These groups could also have potentially been associated with Native American activities occurring at, or near, the location of present day Fort Eustis.

Most of the tribes associated with the Powhatan confederation in Virginia disintegrated as tribal entities prior to the American Revolution. Their disappearance was probably related more to assimilation into the local White and Black populations than to removal to new lands or planned extermination by colonial forces. Today, the Pamunkey and the Mattaponi tribes are the closest living descendants of the aboriginal tribes that inhabited the area surrounding Fort Eustis (Peterson and Otter n.d.). Both tribes are recognized by the state of Virginia, but neither has received federal recognition. At present, no federally recognized tribes reside in Virginia (Department of the Interior 1995), and no federally recognized tribes have established an aboriginal land claim within the state (U.S.G.S. n.d.). It is not likely that any of the federally recognized tribes could verify cultural or biological descent from the aboriginal tribes of Virginia (Peterson and Otter n.d.).

## SECTION 6 COMPLIANCE

P.L. 101-601 (NAGPRA) requires that federal agencies engage in active consultation with Native Americans federally recognized tribes and/or lineal descendants who may be culturally affiliated with the archaeological collections from the installation. Among of the tribes referenced above, none are federally recognized at this time.

Several groups of Indians have sent letters of intent to petition the Bureau of Indian Affairs for federal recognition: the Mattaponi Tribe (Mattaponi Indian Reservation), the Upper Mattaponi Tribe, Inc. (Mattaponi Indian Tribal Association, Inc.), and the United Rappahannock Tribe. None has yet to submit a petition (Bureau of Indian Affairs 1995:6,8).

## APPENDIX I

### SUMMARY OF CURRENT LOCATIONS OF ARCHAEOLOGICAL COLLECTIONS FROM FORT EUSTIS, VIRGINIA

All collections information has been entered into a Paradox data base file and can be queried by any of the fields listed below, as well as by the name of the installation and by MACOM. The data base will be delivered by the MCX to the U.S. Army Environmental Center upon completion of the U.S. Army NAGPRA Compliance Project. Inquiries for additional information are welcome (MCX: 314-331-8865; U.S. Army Environmental Center NAGPRA Compliance Project: 410-671-1573). The data fields listed in the summary of collections contain the following information:

- REPOSITORY:** The current location in which the collection is stored, as of the date of this report.
- REPOSITORY POC:** The person contacted by the MCX, or the person to whom inquiries regarding the collection should be addressed.
- TELEPHONE:** The telephone number for the repository POC.
- COLLECTION ID:** The identifying unit used by the repository to store and/or locate the collection. This can be a unique accession number assigned by the repository, the archaeological site number or project name, the name of the collector of the collection, or another number or name assigned by the repository.
- SITE NUMBERS:** The official site number or name only for those sites from which materials were collected. An investigator may have performed work at additional sites but did not collect any materials. Those site numbers are not included in this field.
- FIELDWORK DATES:** The date(s) during which the investigation(s) occurred. This information is provided to differentiate between projects that may have investigated the same site repeatedly.
- EXCAVATOR/COLLECTOR:** The individual and/or organization that conducted the investigation.

**COLLECTION SIZE:** The volume or number of objects in a collection, estimated by the repository POC or from project reports.

**DESCRIPTION OF MATERIALS:** General material classes of the objects in the collection derived from data provided on site records, in references, and/or by the Repository POC.

**ANTIQUITY/ARCH. PERIOD:** Chronological or cultural-historical designations recorded on site records or in references specific to the collection.

**CULTURAL AFFILIATION:** This column contains only those ethnic identifications found in the site records or references specific to the collection. This field is left blank if no such information was recorded.

**BASIS OF DETERMINATION:** Documents the source of the cultural affiliation information (e.g., site record, oral testimony, reference).

**SECTION 5 MATERIALS:** Describes the number and kind of human skeletal remains and associated funerary objects in the collection, as indicated by the site records, references, repository management documents, or information from repository POC. If these materials are present or are suspected to be present, NAGPRA Section 5 requires a physical inventory of the materials.

## APPENDIX II

### MCX LIST OF REFERENCES

In addition to the references reviewed by MCX personnel at the archaeological site information center, every attempt was made to obtain references cited but not on file. Information taken from these references was coded for data relating to collections made from sites located on installation property (see attached sample of PD-C Bibliographic Data Sheet form) and entered into a data base for ease of manipulation.

Report titles were drawn directly from the title page of reports, and consist of the following fields:

FIELD	DATA ENTERED
Subject Property	Army Installation name
Last Name	Primary author's last name
First Name	Primary author's first name
Middle Initial	Primary author's middle initial
Secondary Authors	Names of secondary authors, <i>or</i> in instances where the author is a company rather than an individual, the company name is listed here
Title	Title of the reference. For letter reports, the person or agency to whom the correspondence is addressed is listed as the title.
Series	If the report is part of a publication series, the name and number are provided here.
Date	Date of publication or submission
Length	Report length in pages
Contract Number	Contract number and delivery order number, if applicable

The data for the next three fields are drawn directly from the report title page and reflect the hierarchy of contracting agencies involved in accomplishing the work. In some cases, the sponsoring agency is listed as the Army installation; in others, the intermediary contracting agent, (e.g., the Army Corps of Engineers or the National Park Service) is listed as the Sponsoring Agency.

Sponsoring Agency	Agency for which the report was prepared
Contractor	The agent contracted to perform the work
Subcontractor	The agent subcontracted to perform the work

The majority of the citations for archaeological investigations on Army land refer to unpublished reports prepared under contract with federal agencies, consequently the MCX printout was designed to address these reports. In instances where the author is a company rather than an individual, the company name is listed in the Secondary Authors field (due to the length of the field). For published references, the publisher is listed in the Sponsoring Agency field.
