In accordance with the terms of the Office of Naval Research Grant No. N00014-99-1-0175, I am sending you the following material:

Type of Material:	Annual Technical Report
Title:	Polarimetric Microwave Remote Sensing of the Ocean Surface
Submitted by:	Prof. Jin Au Kong
Period Covered:	December 1, 1998 - November 30, 1999
Number of Copies:	Three plus Form 298
Distribution:	Naval Distribution List (3)

Thank you. Please contact me if you have any questions or comments.

The polarimetric passive techniques have been used for the retrieval of ocean wind speed and directions by measuring the polarimetric brightness temperature of the ocean surface. However, under high wind conditions, the presence of foam will significantly affect the brightness temperature signature of the plain ocean surface. In addition to the empirical model of the foam contribution to the thermal emission, the previous theoretical studies are mostly based on simple geometry models, which may not reflect the realistic physical situation.

In our study, we modeled the foam as a volume with thin-film water bubbles. The radiative transfer (RT) equations were set up in this volume with the boundary conditions linking the atmosphere and the ocean surface. At the frequency we were interested in, we assumed the penetration depth of the electromagnetic wave in the foam layer to be much shorter than the foam thickness, the electromagnetic wave interaction between the foam layer and the ocean surface was ignored and the formulation was greatly simplified. The RT equations in the foam layer were solved by using an iterative method, and a closed form solution was obtained up to the first order. In the solution of the RT equations in the foam layer, the terms provide the physical meaning of the wave propagation and interaction between the atmosphere and the water bubbles in the foam. For the interface of the atmosphere and the open ocean surface, thermal emission is the sum of the reflection of down-going atmospheric thermal emission and the thermal emission from the plain ocean surface. The total thermal emission at the radiometer is the sum of the contribution from the atmosphere-foam interface and the atmosphere-plain ocean surface interface, weighted by the foam coverage. In the one-scale model, in which only the small-scale ocean waves are taken into account, we found that the atmospheric thermal emission is comparable to the foam's thermal emission for the co-polarized waves. The two-scale model is more realistic in comparison with the one-scale model, however it requires much more computational time since two more folds of integration are needed for averaging over the slope of large-scale ocean waves. The propagation of the specific intensity is also modeled using the RT theory for the atmosphere. Since the scattering in the atmosphere is ignored, the only existing parameter in the RT equations is the absorption coefficient that is obtained from the millimeter-wave propagation model (MPM) with the use of standard atmospheric profile data available in the US Standard Atmosphere 1976. Although it is difficult to obtain the atmospheric profile data at the particular measurement site, a further study is suggested to validate the atmospheric emission model using measurement data.

REPORTS AND REPORT DISTRIBUTION

REPORT TYPES

- (a) Performance (Technical) Report(s) (Include letter report(s)) Frequency: Annual
- (b) Final Technical Report, issued at completion of Grant.
NOTE: Final Technical Reports must have a SF-298 accompanying them. Unless otherwise stated in the grant, complete Block 12a. of the SF-298: "Approved for Public Release; distribution is Unlimited."
- (c) Final Financial Status Report (SF 269)
- (d) Final Patent Report (DD 882)

REPORTS DISTRIBUTION		
ADDRESSEES	REPORT TYPES	NUMBER OF COPIES
Office of Naval Research Program Officer Marie C. Colton ONR 321 Ballston Centre Tower One 800 North Quincy Street Arlington, VA 22217-5660	(a) & (b) w/(SF-298's)	3
Administrative Grants Officer OFFICE OF NAVAL RESEARCH REGIONAL OFFICE BOSTON 495 SUMMER STREET ROOM 627 BOSTON, MA 02210-2109	(c), (d) & SF-298's only for (a) & (b)	1
Director, Naval Research Laboratory Attn: Code 5227 4555 Overlook Drive Washington, DC 20375-5326	(a) & (b) w/(SF-298's)	1
Defense Technical Information Center 8725 John J. Kingman Road STE 0944 Ft. Belvoir, VA 22060-6218	(a) & (b) w/(SF-298's)	2
Office of Naval Research Attn: ONR 00CC1 Ballston Centre Tower One 800 North Quincy Street Arlington, VA 22217-5660	(d)	1

If the Program Officer directs, the Grantee shall make additional distribution of technical reports in accordance with a supplemental distribution list provided by the Program Officer. The supplemental distribution list shall not exceed 250 addresses.

* For report types (a) and (b), send only a copy of the transmittal letter to the Administrative Contracting Officer; do not send actual reports to the Administrative Contracting Officer.
