SUMMARY

Problem

The equipment and consumable supply blocks for the surgical company operating room (OR) – officially known as Authorized Medical Allowance Lists 639 and 640, respectively – have not been reviewed or updated since 1998. The success of the new Forward Resuscitative Surgery System (FRSS) in Operation Iraqi Freedom and the use of surgical company ORs as “jump FRSSs” to relieve the mobile surgical suites as they moved forward with the frontline, showed the need to standardize the supplies used in both ORs to minimize training and logistical support requirements.

Objective

The primary objective of this study was to model and determine the supply requirements of the surgical company OR with equipment that has been upgraded and standardized to the levels of the FRSS. At the same time, the new supplies and equipment must uphold the Marine Corps doctrine of greater mobility and minimal logistical footprints on the battlefield. The Naval Health Research Center (NHRC) method of modeling clinical requirements was chosen for this project due to its ability to provide an audit trail for each piece of equipment and each consumable supply item.

Method

The NHRC method of modeling clinical requirements utilizes the Deployable Medical Systems (DEPMEDS) “Time, Task, Treater” files for Level 3 and 4 but adapted to Levels 1 and 2 of field medical care. Seventy-two DEPMEDS patient conditions (PCs) were identified for the surgical company OR level of care (Level 2), including 59 PCs also seen at the FRSS and 13 that were surgical company-specific. Equipment and consumables from both ORs were compared and, where appropriate, upgraded equipment and supplies from the FRSS were substituted for older equipment in the surgical company OR. Task profiles were then created using the DEPMEDS treatment profiles and the revised surgical company OR supplies. A patient stream was created using NHRC’s Estimating Supplies Program (ESP) and ReSupply Validation Program (RSVP), and run through the revised surgical company OR model, producing a supply list that linked each item to its PC and task.

Discussion

This study provided an upgrading of the surgical company OR with the newer equipment found in the FRSS, without reducing the OR’s capability for surgical intervention in a larger variety of PCs and a greater number of patients. It also demonstrated the validity of using the FRSS as a model not only for standardizing equipment and supplies among existing field medical treatment facilities, but also for developing new capabilities.

Marine Corps Operational Medicine: An Analysis of Medical Supply Requirements for the Field Surgical Operating Room

INTRODUCTION

Since the conclusion of assault operations in Operation Iraqi Freedom (OIF) last year, Marine Corps medical planners and clinicians have been studying medical lessons learned during the invasion. Among the successes seen in field medicine in Iraq was the use of the new Forward Resuscitative Surgery System (FRSS). Designed to provide wounded Marines with “damage control” surgery close to the frontlines, the small, mobile FRSS saw its first large-scale use in OIF. Surgical company operating rooms (ORs), though not designed to act independently, often were used as “jump FRSSs,” setting up in advance of the parent surgical company to relieve the FRSS of its patients as the smaller mobile unit moved forward with the rapidly advancing battleline.¹

This experience showed the need to standardize the Authorized Medical Allowance Lists (AMALs) of the surgical company OR – AMAL 639 (equipment) and AMAL 640 (consumables) – to that of the FRSS OR (AMAL 645). Doing so would ease the transfer of patients from an FRSS to a surgical company OR acting as a jump FRSS, as well as minimize training and logistical support requirements. Such standardization, however, was not intended to reduce the surgical company OR’s capability to intervene in a wider variety of patient conditions (PCs) or operate on a larger number of patients than the FRSS.²

Unlike the FRSS, the surgical company by doctrine is deployed in a secure combat service support area usually during sustained combat operations ashore or during humanitarian and disaster relief operations. Each surgical company has 3 ORs, each with 2 OR tables. Each OR has a personnel complement of 2 general surgeons, 1 anesthesiologist, and 7 support staff. One set of OR AMALs is designed to give each OR the equipment, medications, and consumables required for 25 major surgical cases.³ Guidance received from the Marine Corps Combat Development Command (MCCDC) stipulated no new capabilities should be added to the surgical company OR during this review.²

METHOD

The Naval Health Research Center (NHRC) method of modeling medical supply requirements was developed to establish and/or review AMALs for various levels of care (LOCs) in the Navy and the Marine Corps. Its aim is to give clinicians in the field or the fleet the materiel they need to provide the best care possible, while still maintaining as

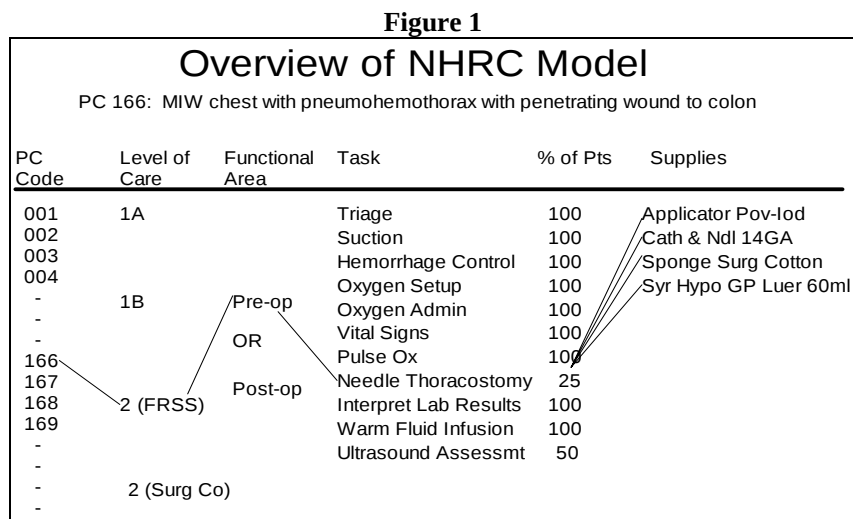

minimal a logistical footprint as possible in concert with current Navy and Marine Corps doctrine. Each step of the modeling process is rigorously reviewed and vetted by a panel of experienced subject matter experts (SMEs) to ensure each AMAL meets the medical needs of the service.

The NHRC model was designed to interface with the Level 3 and 4 Deployable Medical Systems (DEPMEDS) model, which consists of databases arranged in a relational structure called the “Time, Task, Treater” files. The data in the DEPMEDS model are based on treatment protocols for nearly 400 PCs that are considered representative of the injuries and illnesses expected to occur in theater. To build on this existing standard, the structural characteristics of the Level 1 and 2 NHRC databases are compatible with those of the DEPMEDS Time, Task, Treater files.

The NHRC model involves a four-step process that begins with the identification and number of PCs to be encountered, including combat wounds, nonbattle injuries, and illnesses. These are identified utilizing casualty projection programs such as NHRC’s FORECAS.⁴ This methodology has been successfully used to develop medical supply requirements at various levels of care. These include the development of the supply requirements for the FRSS, and an earlier review of the surgical company AMALs.^{3, 5}

Once the pertinent PCs are identified, clinical task profiles are created using the DEPMEDS treatment profiles. Tasks are identified for the appropriate LOC – first responder, battalion aid station, FRSS – as well as the functional area within those LOCs. The medical supplies and the quantities required for completion of each clinical task are then identified and mapped to the appropriate task. The modeling process also identifies the number of patients expected to receive a clinical task, since not all patients will receive the same treatment.

Figure 1 illustrates the NHRC modeling process.

Once all the task and supply profiles have been created, the overall required amount of supplies can be calculated and aggregated. The results then undergo an intense scrutiny by a panel of SMEs with operational experience in field or fleet medicine, including clinicians, senior hospital corpsmen, and logistical experts. The SMEs review the task and supply profiles and the aggregated supplies to ensure they include the appropriate protocols, equipment, and medications, and to recommend new medicines and technology that can be applied to field treatment.

For this study, a panel of 23 SMEs convened on May 11-12, 2004, at the 1st Medical Logistics Company warehouse at Camp Pendleton, CA, to review the revised surgical company OR supplies. The SMEs included clinicians and senior corpsmen with recent operational field medicine experience in Iraq or Afghanistan, logistics experts and representatives from MCCDC and Marine Corps Systems Command, both of Quantico, VA. See Appendix A for an SME attendance list.

Identifying Patient Conditions and Tasks

This study began with a comparison of PCs seen at the FRSS and the surgical company OR. All of the 59 PCs seen at the FRSS were also classified as surgical company OR PCs. An additional 13 PCs were identified as specific to the surgical company OR. These 13 PCs do not pose an immediate threat to life or limb, but still require surgery. They include such wounds as some full-thickness burns and smaller traumatic amputations. Table 1 lists all 79 PCs that make up the cohort of patient conditions for the surgical company, and indicates which are also seen at FRSS and which are not.

Table 1
Surgical Patient Conditions
FRSS vs. Surgical Company

PC Code	PC Description	FRSS PC?	Surg Co.?
005	Cerebral contusion closed with intracranial hematoma with/without non-depressed linear skull fracture – severe – large hematoma (including epidural hematoma) with rapidly deteriorating comatose patient	Yes	Yes
007	Cerebral contusion closed with depressed skull fracture severe – with associated intracerebral hematoma and/or massive depression	No	Yes
017	Wound face jaws and neck open lacerated with associated fractures excluding spinal fractures severe – with airway obstruction	Yes	Yes
019	Wound face and neck open lacerated contused without fractures severe – with airway obstructions and/or major vessel involvement	Yes	Yes
045	Wound upper arm open penetrating lacerated without fracture severe – with nerve and/or vascular injury	Yes	Yes

PC Code	PC Description	FRSS PC?	Surg Co.?
047	Wound upper arm open with fractures and nerve and vascular injury arm non-salvageable	Yes	Yes
053	Wound forearm open lacerated penetrating with fracture and with nerve and vascular injury forearm not salvageable	Yes	Yes
054	Wound forearm open lacerated penetrating with fracture and with nerve and vascular injury forearm salvageable	Yes	Yes
061	Crush injury upper extremity severe – limb not salvageable	Yes	Yes
062	Crush injury upper extremity moderate – limb salvageable	No	Yes
070	Amputation forearm traumatic complete all cases	Yes	Yes
071	Amputation full arm traumatic complete all cases	Yes	Yes
079	Burn thermal full thickness upper extremities greater than 10% but less than 20% of total body area involved	No	Yes
087	Wound thorax (anterior or posterior) open penetrating with associated rib fractures and pneumohemothorax acute severe respiratory distress	No	Yes
094	Burn thermal full thickness trunk greater than 20% but less than 30% of total body area involved	No	Yes
098	Wound liver closed acute (crush fracture) major liver damage	Yes	Yes
099	Wound liver closed acute (crush fracture) minor liver damage	Yes	Yes
100	Wound spleen closed acute (crush fracture) all cases	Yes	Yes
101	Wound abdominal cavity open with lacerating penetrating perforating wound to the large bowel	No	Yes
102	Wound abdominal cavity open with lacerating penetrating perforating wound to small bowel without major or multiple resections	No	Yes
103	Wound abdominal cavity open with penetrating perforating wound of liver major damage	Yes	Yes
104	Wound abdominal cavity open with penetrating perforating abdominal wound with lacerated liver	Yes	Yes
105	Wound abdominal cavity open with penetrating perforating wound of spleen	Yes	Yes
106	Wound abdominal cavity open with lacerated penetrated perforated wound with shattered kidney	Yes	Yes
107	Wound abdominal cavity open with lacerated penetrating perforating wound with lacerated kidney initially repaired but subsequent nephrectomy	Yes	Yes
108	Wound abdominal cavity open with lacerated penetrating perforating wound with shattered bladder	Yes	Yes
109	Wound abdominal cavity open with lacerated penetrating perforating wound with lacerated bladder	No	Yes
114	Wound abdomen open with pelvic fracture and penetrating perforating wounds to multiple pelvic structures (male or female)	Yes	Yes
115	Wound abdomen open with pelvic fracture and penetrating perforating wounds to pelvic colon only (male or female)	No	Yes
123	Wound thigh open lacerated penetrating perforating with fracture and nerve/vascular injury limb not salvageable	Yes	Yes

PC Code	PC Description	FRSS PC?	Surg Co.?
124	Wound thigh open lacerated penetrating perforating with fracture and nerve and/or vascular injury limb salvageable	Yes	Yes
130	Wound lower leg open lacerated penetrating perforating with fracture and nerve/vascular injury limb not salvageable	Yes	Yes
131	Wound lower leg open lacerated penetrating perforating with fracture and nerve and/or vascular injury limb salvageable	Yes	Yes
136	Wound ankle foot toes open penetrating perforating with fractures and nerve/vascular injury limb not salvageable	Yes	Yes
137	Wound ankle foot toes open penetrating perforating with fractures and nerve and/or vascular injury limb salvageable	Yes	Yes
138	Crush injury lower extremity limb not salvageable	Yes	Yes
139	Crush injury lower extremity limb salvageable	Yes	Yes
144	Amputation foot traumatic complete all cases	No	Yes
145	Amputation below knee traumatic complete all cases	Yes	Yes
146	Amputation traumatic complete requiring hip disarticulation	No	Yes
147	Amputation above knee traumatic complete	Yes	Yes
154	Burn thermal full thickness lower extremities and genitalia greater than 30% but less than 40% of total body area involved	No	Yes
155	Burn thermal full thickness lower extremity and genitalia greater than 15% but less than 30% of total body area involved	No	Yes
159	MIW brain and chest with sucking chest wound and pneumothorax	Yes	Yes
160	MIW brain and abdomen with penetrating perforating wound colon	Yes	Yes
161	MIW brain and abdomen with penetrating perforating wound kidney	Yes	Yes
162	MIW brain and abdomen with penetrating perforating wound bladder	Yes	Yes
163	MIW brain and abdomen with shock and penetrating perforating wound spleen	Yes	Yes
164	MIW brain and abdomen with shock and penetrating perforating wound liver	Yes	Yes
165	MIW brain and lower limbs requiring bilateral above knee amputations	Yes	Yes
166	MIW chest with pneumothorax and abdomen with penetrating wound colon	Yes	Yes
167	MIW chest with pneumothorax and abdomen with penetrating perforating wound kidney	Yes	Yes
168	MIW chest with pneumothorax and abdomen with perforating wound bladder	Yes	Yes
169	MIW chest with pneumothorax and abdomen with penetrating perforating wound spleen	Yes	Yes
170	MIW chest with pneumothorax and abdomen with penetrating perforating wound liver	Yes	Yes
171	MIW chest with pneumothorax and limbs with fracture and vascular injury	Yes	Yes

PC Code	PC Description	FRSS PC?	Surg Co.?
172	MIW abdomen with penetrating perforating wound of colon and bladder	Yes	Yes
173	MIW abdomen with penetrating perforating wound of colon and spleen	Yes	Yes
174	MIW abdomen with penetrating perforating wound of colon and liver	Yes	Yes
175	MIW abdomen and limbs with penetrating perforating wound of colon and open fracture and neurovascular injury of salvageable lower limb	Yes	Yes
176	MIW abdomen and pelvis with penetrating perforating wound of liver and kidney	Yes	Yes
177	MIW abdomen and pelvis with penetrating perforating wounds of spleen and bladder	Yes	Yes
178	MIW abdomen pelvis limbs with fracture and neurovascular injury limb salvageable and penetrating wound kidney	Yes	Yes
179	MIW abdomen pelvis limbs without fracture or neurovascular injury and penetrating perforating wound bladder	Yes	Yes
180	MIW abdomen and lower limbs with fracture and nerve injury with penetrating wound of spleen with full thickness burns to greater than 20% of TBSA	Yes	Yes
181	MIW abdomen and limbs without fracture or nerve injury with penetrating wound of liver	Yes	Yes
182	MIW chest with pneumothorax soft tissue injury to upper limbs and penetrating wound of brain	Yes	Yes
183	MIW chest with pneumothorax soft tissue injury to upper limbs and abdomen with wound of colon	Yes	Yes
184	MIW chest with pneumothorax pelvis and abdomen with wound of colon and bladder	Yes	Yes
185	MIW abdomen and chest with multiple organ damage	Yes	Yes
313	Wound abdominal cavity open with lacerated penetrating perforating wound kidney moderate – kidney salvageable	Yes	Yes

The next step was to identify which clinical tasks were performed at both the FRSS and the surgical company OR, and which tasks were specific to only one or the other. Those tasks found in both were kept, as were those required for the surgical company's greater capabilities. Table 2 shows the 40 distinct clinical tasks that were identified as performed at either the FRSS or the surgical company OR. Note that sterilization of instruments was not included in these tasks at the recommendation of SMEs who advocated the use of cold chemical disinfection over autoclave sterilization to save on weight and cube. Thus Task ZZ51, though not originally a surgical company task, will be added to the surgical company OR tasks for cold disinfection of surgical instruments. Blood analyses at the surgical company level are performed in the surgical company lab, whereas the FRSS uses point-of-care technology to perform its lab tests. See Appendix B for complete task profiles with supplies attached.

Table 2
Required Surgical Tasks

Task No.	Task Description	FRSS Task?	SC OR Task?
062	IV infusion blood products	Yes	Yes
106	Escharotomy w/o general anesthesia	No	Yes
197	Charting & paperwork - patient specific	Yes	No
339	Operating room preparation	Yes	Yes
344	Patient preparation in the OR	Yes	Yes
351	OR team preparation	Yes	Yes
353	Transfer patient to ward	Yes	Yes
354	Minor room clean-up	Yes	Yes
358	Tracheostomy	Yes	Yes
359	Induce local anesthesia	No	Yes
403	Decompression Craniotomy	Yes	Yes
455	Amputation through upper arm	Yes	Yes
456	Amputation through forearm	Yes	Yes
457	Amputation through upper leg	Yes	Yes
458	Amputation through lower leg	Yes	Yes
459	Amputation of foot	No	Yes
467	Fasciotomy	No	Yes
494	Thoracotomy	Yes	Yes
530	Induce/maintain general anesthesia	Yes	Yes
533	Induce/maintain nerve block	Yes	Yes
535	Induce/maintain spinal anesthesia	No	Yes
537	Recovery/release from anesthesia	Yes	Yes
595	Blood gas estimation	Yes	No
596	Electrolyte levels (NA, K, CL, CO2)	Yes	No*
614	Hematocrit level	Yes	No*
Z106	Arterial PH	Yes	No*
Z107	Base deficit	Yes	No*
Z378	Vascular shunt/temp ligate/debride/irrigate	Yes	Yes
ZZ19	Warm infusion fluids	Yes	Yes
ZZ27	Treatment area setup	Yes	No
ZZ32	Abbreviated laparotomy	Yes	Yes
ZZ35	Issue basic operating room equipment	Yes	Yes
ZZ36	Issue basic major instrument set	Yes	Yes
ZZ37	Issue OR extremity instrument set	Yes	Yes
ZZ38	Issue OR neurological instrument set	Yes	Yes
ZZ39	Issue general anesthesia equipment set	Yes	Yes
ZZ40	Issue regional block anesthesia equipment set	Yes	Yes
ZZ41	Issue operating room basic consumable setup	Yes	Yes
ZZ43	Issue spinal block equipment set	No	Yes
ZZ51	Clean and prepare instruments	Yes	No**

* Task performed in lab. **Originally used autoclave.

Identifying Equipment Needs

Once the clinical tasks were identified, the equipment portion of the task profiles had to be established. Equipment from both ORs was review and compared. Three instrument sets from the FRSS were adopted for use in the surgical company OR. These included 6 basic major sets (containing all the instruments necessary for major surgery), 6 extremity/orthopedic sets, and 2 neurological sets. These replaced the corresponding items in the original AMAL 639, with the sets evenly divided between the OR's 2 tables.

At any given time, one basic major set or one extremity/orthopedic set can be in use, with a second in reserve and the third being cleaned. Because head injuries occur less often, redundancy was not necessary for the neurological sets. The 2 standard OR tables were retained.

The OR's 2 Drager Medical Narkomed M field anesthesia machines were also retained, but both drawover anesthesia vaporizers were deleted on the advice of SMEs, since the device soon will no longer be manufactured. It is expected the medical logistics companies will retain these drawovers rather than dispose of them so they can continue to be used by the FRSSs. The 2 portable ventilators currently in the OR equipment AMAL for use with the drawover have also been deleted. However, these will be relocated to the surgical company ward AMAL 633 at its next review to increase the number of critical care ward beds from 2 to 4.

The current OR surgical lights were deleted in favor of battery-operated surgical lights that have already been slated to replace the existing lights. On the advice of SMEs, the OR's current Doppler blood flow ultrasound was replaced with a Parks Medical Electronics pencil-tip model that provides better imaging. To aid in warming hypothermic patients, 2 Bair Hugger® Model 505 rewarmers replaced the Thermal Angel® rewarmers, which have had disappointing results in the FRSS. An anesthesia gas monitor was added for use with the Narkomed to bridge a gap identified by anesthesiologists in the field. The full contents of AMAL 639 are shown in Appendix C. A comparison of weight, cube, and cost between the current AMAL 639 and the revised AMAL 639 is shown in Table 3.

Table 3

<u>AMAL 639 Comparison</u>	
Current vs. Proposed	
Current Total Line Items	147
Current Total Weight (lbs.)	2712.86
Current Total Cube	204.84
Current Total Cost	\$276,477.92
Proposed Total Line Items	150
Proposed Total Weight (lbs.)	2240.31
Proposed Total Cube	348.33
Proposed Total Cost	\$306,430.18

Determining Consumable Requirements

Determining the proper amount of consumables, including medications, required modeling the surgical company OR's patient flow. A robust patient stream was created in NHRC's Estimating Supplies Program (ESP) using a scenario created by the casualty generation program PATGEN and the 72 PCs identified for the surgical company OR. The scenario combined two major regional force-on-force heavy battle intensity contingencies – one in Northeast Asia and one in Southwest Asia. The scenario was then imported into NHRC's ReSupply Validating Program (RSVP) to further refine the patient stream.

RSVP is a simulation program that stochastically generates multiple iterations of a patient stream based on PC probabilities, generates the supplies necessary to treat the patients, and compares these needs with a time-phased inventory to identify the most efficient way to package resupply blocks.⁶ In developing RSVP, NHRC investigated different methods of generating a supply stream. For this study, 1000 iterations were run using the 80th percentile PC method to generate a casualty stream for a single surgical company OR over a 72-hour period. In this method, each PC of the 1000 iterations is ranked in descending order by number of casualties, and the 80th percentile of each iteration was extracted. The patient stream created by RSVP was then applied to the modeling described above to determine consumable quantities. A comparison of weight, cube, and cost between the current AMAL 640 and the revised AMAL 640 is shown in Table 5. Appendix D shows the full list of medications and consumables.

Table 4

<u>AMAL 640 Comparison</u> Current vs. Proposed	
Current Total Line Items	153
Current Total Weight (lbs.)	1210.6851
Current Total Cube	78.10596
Current Total Cost	\$33,758.02
Current Total Line Items	187
Proposed Total Weight	1239.7738
Proposed Total Cube	92.5743
Proposed Total Cost	\$64,237.22

The guidance provided for this AMAL review required a review of whether prepackaged roll-down surgical bags like those found in the FRSS would be appropriate for the surgical company OR. NHRC determined incurring cost of providing expensive prepackaged bags, while appropriate for the highly mobile FRSS, was unnecessary for the more stationary surgical company. SMEs agreed providing a few empty surgical and anesthesia bags, which could be stocked by surgical company personnel before deployment, would help speed the initial setup of the surgical company OR without incurring the high cost of prepackaged bags.

Civilian Trauma Supplies

The draft guidance for this review stipulated the development of a list of supplies to provide “limited medical care” to civilian casualties, enemy prisoners of war, and other displaced personnel.² A small amount of such supplies was originally provided by Captain H.R. Bohman, MC, USN, based on his experience with an FRSS in OIF.⁷ These were expanded upon by the SME panel, also based on their experiences in OIF, to 31 line items, most of them associated with pediatric care. These supplies can be seen in Appendix E.

DISCUSSION

The methodology used in this AMAL review allowed the upgrading of the surgical company OR with the newer equipment found in the FRSS, without reducing the OR’s capability for surgical intervention in a larger variety of PCs for a greater number of patients. Standardization of the equipment will streamline training and logistics, and allow for easier transfer of patients between the FRSS and surgical company OR, particularly if the latter is operating as a jump FRSS. In addition, this study resulted in improvements to the surgical company OR’s ability to provide limb-saving blood vessel grafts, patient monitoring and warming, and humanitarian surgery to indigenous, nonmilitary personnel. Furthermore, each supply line item is presented with its own audit trail, identifying why it is clinically required.

This study also demonstrated the validity of using the FRSS as a model not only for standardizing equipment and supplies among existing field medical treatment facilities (MTFs), but also for developing new capabilities. Using the FRSS as a model, NHRC’s method of analyzing clinical requirements is currently being used to develop a highly mobile Shipboard Surgical System to provide surgical care aboard small combatants, such as destroyers, engaged in special operations.⁸ The FRSS model and NHRC’s methodology is also being used to identify and model the surgical capabilities of the U.S. Air Force’s Mobile Forward Surgical Teams.⁹

These studies prove the potential for using the FRSS model and NHRC’s methodology to assist in reorganizing MTFs, including the current modularization of Navy Fleet Hospitals to be, in the words of Vice Admiral Michael Cowan, Surgeon General of the Navy, “more agile, mobile 116-bed Expeditionary Medical Facilities.”¹⁰
