Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

Water year is the 12-month period October 1 through September 30 and is designated by the calendar year in which it ends.

Horizontal coordinate information is referenced to the North American Datum of 1983 (NAD 83)

Water and Sediment Quality in the Yukon River Basin, Alaska, During Water Year 2003

Edited by Paul F. Schuster

Overview

This report contains water-quality and sediment-quality data from samples collected in the Yukon River basin from March through September during the 2003 water year (WY). Samples were collected throughout the year at five stations in the basin (three on the main stem Yukon River, one each on the Tanana and Porcupine Rivers). A broad range of physical, chemical, and biological analyses are presented.

Acknowledgments

The USGS Nation Stream Quality Accounting Network (NASQAN) and the National Research Program would like to thank the USGS Alaska Science Center, Water Discipline, in Anchorage and the Field office in Fairbanks. Without their field expertise and continuous logistical support this work would not have been possible. A.M. Shiller's participation was partly supported by the National Science Foundation (EAR-0001049).

CHAPTER 1 - Introduction

by Paul F. Schuster

The U.S. Geological Survey (USGS) National Stream Quality Accounting Network (NASQAN) is conducting a 5-year (2001-2005) study of the water quality of the Yukon River Basin (330,000 square miles) from the Yukon River headwaters in Canada to the Bering Sea (Nelson and others, 2001). Climatic warming of the Yukon River Basin is resulting in lengthening of the growing season, melting of permafrost, and deepening of the soil active layer (Osterkamp, 2003; Miller and others, 2003; BESIS, 1997). These and related processes are anticipated to result in changes in water and sediment chemistry and discharge in upcoming decades. As a first step in understanding these changes, measurements of water discharge and water and sediment chemistry are being made on the upper, middle, and lower Yukon River and on the Tanana and Porcupine Rivers (Schuster, 2003).

A thorough description of the basin is given in Brabets and others (2000). Schuster (2003) describes the objectives and approach of the study and provides a brief description of the basin (fig. 1). Sediment load and concentrations, and a broad range of constituents were measured in fixed station samples during Water Year (WY) 2003, including major ions, nutrients, dissolved and sediment-associated trace elements, biological indicators (such as dissolved oxygen) and the stable isotopic composition of nitrogen, carbon, and sulfur of particulate organic matter, and various forms of organic carbon. Because of its extensive wetlands, the Yukon River exhibits high organic carbon concentrations in contrast to other large rivers. Both the chemical composition and concentration of organic carbon are expected to change with melting permafrost. In addition to this work, intensive sampling campaigns of the entire reach of the Yukon River from headwaters at Atlin Lake, British Columbia, to Pilot Station, Alaska, during high flow in early June and low flow in late August were

completed during the years 2002-2004. The intensive sampling will address process-based questions about the water quality of the basin.

The purpose of this report is to compile and report the water-quality and sediment-quality data collected during WY 2003. The sample-collection methods and the laboratory analytical methods are described in Schuster (2003). Because many of the results are research-oriented, they are not contained in the USGS National Water Information System (NWIS) database and would, otherwise, be available to the public upon request. This report, the third in a series of annual reports for the 5-year study, is being released both in paper and electronic format to meet both archival and data dissemination objectives.

CHAPTER 2 - Fixed-Station Samples

by Timothy P. Brabets

The following section provides a summary of the site characteristics (table 1). References for the description of sample collection and processing of samples for various water quality constituents are given in Schuster (2003). Sample analysis results for field measurements, major ions, nutrients, organic and inorganic carbon, trace elements, suspended sediment concentrations, and trace elements in suspended sediments during WY 2003 are given in tables 2-6. The data provided in this section also are available from the USGS NWIS database (<http://waterdata.usgs.gov/nwis/>).

CHAPTER 3 - Dissolved Organic Carbon (DOC) Characterization

by George R. Aiken

A description of sample collection and processing of samples for DOC, ultraviolet (UV) absorbance spectroscopy, specific UV absorbance (SUVA), and DOC fractionation analyses is given in Schuster (2003). These analyses were performed at the USGS National Research Program Laboratories in Boulder, Colorado. Sample analysis results for WY 2003 are given in table 7.

Table 7. Dissolved organic carbon concentrations and fractionation analyses from fixed-station sampling sites in the Yukon River Basin

[Station ID, refer to table 1 for description and figure 1 for location; DOC, dissolved organic carbon; mg C/L, milligrams carbon per liter; UV (abs @ 254 nm), Ultraviolet absorbance at the 254 nanometer wavelength; SUVA, Specific UV absorbance; [L/mg C*m)], liters per milligram carbon times a one meter path length; %, percent; --, missing value; all samples filtered with 0.45 µm glass fiber filters prior to analyses]

CHAPTER 4 - Dissolved Major Cations and Trace Elements

by Howard E. Taylor, David A. Roth, and Ronald C. Antweiler

References for the description of sample collection and processing of samples for various water-quality constituents are given in Chapter 2 of Schuster (2003). A description of sample analysis for major cations and trace elements at the USGS National Research Program Laboratories in Boulder, Colorado, is given in Schuster (2003). Sample analysis results for WY 2003 are given below in table 8.

Table 8. Selected dissolved major cations and trace elements from fixed-station sampling sites in the Yukon River Basin

[See Schuster (2003) for qualification of the accuracy of these data; Station ID, refer to table 1 for description and figure 1 for location; Rep, field replicate; µg/L, microgram per liter; mg/L, milligram per liter; A, average of triplicate analysis; SD, standard deviation of triplicate analysis; <, less than; ±, plus or minus]

CHAPTER 5 - Dissolved and Colloidal Trace Elements

by Alan M. Shiller

A description of sample collection and processing of samples for colloidal and dissolved trace elements filtered through 0.45- μm and 0.02- μm pore size respectively, 25-mm-diameter filters is given in Schuster (2003). For operational definitions in this report, the 0.45- μm filtered samples include dissolved and colloidal material whereas the 0.02- μm filtered samples include dissolved material only. The colloidal fraction of the sample can be determined by subtracting the 0.02- μm fraction from the 0.45- μm fraction. Sample analysis results for WY 2003 are given in tables 9 and 10.

Table 9. Dissolved trace elements in 0.02- μm filtered samples from five fixed-station sampling sites in the Yukon River Basin

[Station ID, refer to table 1 for description and figure 1 for location; data are in micrograms per liter; Ba, barium; Cd, cadmium; Ce, cerium; Co, cobalt; Cr, chromium; Cs, cesium; Cu, copper; Fe, iron; Li, lithium; Mn, manganese; Mo, molybdenum; Ni, nickel; Pb, lead; Rb, rubidium; Re, rhenium; Sr, strontium; Tl, thallium; U, uranium; V, vanadium; Zn, zinc; --, no data; <, less than]

CHAPTER 6 - Mercury Analyses

by John F. DeWild and Mark L. Olson

A description of sample collection and processing of samples for filtered (dissolved), methyl, particulate, and total mercury (Hg) is given in Schuster (2003). Sample analysis results for WY 2003 are given in table 11.

Table 11. Mercury and methylmercury concentrations from fixed-station sampling sites in the Yukon River Basin

[Station ID, refer to table 1 for description and figure 1 for location; Hg, mercury; ng/L, nanogram per liter; QA flag, Quality Assurance flag; FMHg, Filtered Methylmercury; FTHg, Filtered Total mercury; PMHg, Particulate Methylmercury; PTHg, Particulate Total mercury; UMHg, Unfiltered Methylmercury; UTHg, Unfiltered Total mercury; S2, Percent recovery of either the matrix spike or matrix spike duplicate exceed the data quality objectives (value is less than 75% or greater than 125%) but the difference between the pair is less than 25%; E, Estimated; Q, Quality Control failed; S1, Percent recovery for matrix spike and matrix spike duplicate pair meet data quality objectives (both values fall between 75% and 125%) but the values of the pair differ by more than 25%; --, no data collected; <, less than]

CHAPTER 7 - Dissolved Gasses and Dissolved Inorganic Carbon

by Robert G. Striegl and Mark M. Dornblaser

A description of sample collection and processing of samples for the partial pressures of carbon dioxide (P_{CO_2}) and methane (P_{CH_4}) is given in Schuster (2003). Sample analysis results for WY 2003 are given in table 12.

Table 12. Carbon dioxide, methane, and dissolved inorganic carbon concentrations from fixed-station sampling sites in the Yukon River Basin

[Station ID, refer to table 1 for description and figure 1 for location; CO₂, carbon dioxide; µmol/L, micromole per liter; P_{CO2}, partial pressure of CO₂; µatmos, microatmospheres; CH₄, methane; P_{CH4}, partial pressure of CH₄; DIC, dissolved inorganic carbon]

Station ID	Date	CO ₂ (µmol/L)	Corrected P _{CO2} (µatmos)	CH ₄ (µmol/L)	Corrected P _{CH4} (µatmos)	DIC (µmol/L)

CHAPTER 10 - Sediment Concentration and Percent Organic Matter (OM)

by Paul F. Schuster and Michael M. Reddy

A description of sample collection and processing of samples for suspended sediment concentration and percent OM in the sediment is given in Schuster (2003). Sample analysis results for WY 2003 are given in table 15.

Table 15. Suspended sediment concentrations and percent organic matter in sediment from fixed-station sampling sites in the Yukon River Basin

[Station ID, refer to table 1 for description and figure 1 for location; mg/L, milligram per liter; OM, Organic Matter; NA, not available; <, less than]

CHAPTER 11 – Particulate Carbon (PC) and Particulate Nitrogen (PN)

by Paul F. Schuster and Michael M. Reddy

A description of sample collection and processing of samples for PC and PN concentrations is given in Schuster (2003). Sample analysis results for WY 2003 are given in table 16.

Table 16. Particulate carbon and particulate nitrogen concentrations from fixed-station sampling sites in the Yukon River Basin

[Station ID, refer to table 1 for description and figure 1 for location; PC, particulate carbon; PN, particulate nitrogen; mg/L, milligram per liter; < less than; concentrations averaged from duplicate samples]

CHAPTER 12 - Isotopic Analysis of Suspended Particulate Organic Matter (POM)

***by* Steven R. Silva and Carol Kendall**

A description of sample collection and processing of samples for the percent of carbon and nitrogen, carbon:nitrogen ratios, carbon-13, and nitrogen-15 isotopes in suspended POM is given in Schuster (2003). Sample analysis results for WY 2003 are given in table 17.

Table 17. Suspended sediment isotopic data from fixed-station sampling sites in the Yukon River Basin

CHAPTER 13 - Uranium Isotopes

***by* Thomas F. Kraemer**

A description of sample collection and processing of samples for uranium concentrations and activity ratios (UAR) is given in Schuster (2003). Sample analysis results for WY 2003 are given in table 18.

Table 18. Uranium concentration and $^{234}\text{U}/^{238}\text{U}$ isotopic activity ratio analyses in water samples from fixed-station sampling sites in the Yukon River Basin

[Station ID, refer to table 1 for description and figure 1 for location; $\mu\text{g/L}$; microgram per liter; U, Uranium; --, not available]
