

Distributed Operations

**2006 Naval Research Advisory Committee
Summer Study Briefing to
The Honorable Delores M. Etter,
Assistant Secretary of the Navy (RD&A)**

**23 June 2006
SSC San Diego**

Report Documentation Page

Form Approved
OMB No. 0704-0188

Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

Findings
Recommendations
Panel

- **Objective: “Study the emergent concept of Marine Corps Distributed Operations in order to develop a set of future technology insertions and training opportunities”**
- **Specific Taskings:**
 - Compare and contrast required capabilities of Marines conducting DO with those required for conventional operations
 - Determine appropriate options for insertion of technology to support DO and associated training; key upstream investments, technology monitoring, and go/no-go assessment points; and probable time-frames for exploration and implementation
 - Estimate risk associated with particular options and identify potential show-stoppers

Note: Prior to start of NRAC DO Study, DARPA funded a DO Architecture Study. It recommends a set of specific technology programs. To complement the DARPA study, NRAC focused its efforts at a System of Systems level and also made S&T recommendations.

Panel

- **Consider the rifle squad as a system**
- **Emphasize enablers for local decision-making consistent with commander's intent**
- **Consider enhancement of human performance**
- **Consider higher-order effects**
- **Focus on the mid-term (~8 years)**
- **Do not be constrained by cost**

What is Distributed Operations?

TOR
Distributed
Operations
Fact-Finding
Enabling DO
Communications
Logistics
Education &
Training
Supporting
Establishment
Findings
Recommendations
Panel

- **CMC:** “Distributed Operations is a concept to promote discussion and generate ideas for specific combat development initiatives”
- **MCCDC:** Distributed Operations (DO) will enhance small unit effectiveness and will create an advantage over the enemy through
 - Deliberate use of separation and coordinated interdependent tactical actions
 - Increased access to functional support, including fires
 - Decision-making by those engaged in combat

NRAC working definition of DO: Operational approach that enables influence over larger areas through spatially separated small units, empowered to call for and direct fires, and to receive and use real-time and direct ISR.

“Distributed Operations will unleash the combat power of the young Marine”

—LtGen James Mattis, USMC

By-Echelon Capability for Irregular Warfare

Enabling DO
Communications
Logistics
Education &
Training
Supporting
Establishment
Findings
Recommendations
Panel

- **Number of DO-enabled units limited by available communications, fires, logistics, training**
- **Advanced technology needed to provide enhanced logistics, medical support, training**
- **Significant implications exist for communications architecture and throughput in the battle space**
- **Key actions:**
 - **Establish “DO Marine as System” S&T Program**
 - **Ensure ASD(NII) architecture and JTRS accommodate DO**
 - **Evaluate need, feasibility, and means of aging the force**
 - **Formalize and elevate Marine Expeditionary Rifle Squad “Program” in Corps acquisition**
 - **Establish “honest broker” for DO network systems engineering**

Radios per Battalion for Different at Levels of DO Implementation

DO Communications Recommendations

- **Ensure ASD(NII) architecture and JTRS accommodates DO requirements**
 - **Determine additional requirements for airborne and satcom nodes beyond current plans**
 - **Determine the communication requirements for DO logistics and medical support**
 - **Focus on DO network experimentation**
- **Establish “honest broker” for DO network systems engineering (e.g., MCTSSA)**
- **Explore surrogate radios compatible with JTRS to reduce the radio load at the small unit level (soon)**
- **Determine vulnerability to exploitation of frequent, highly networked DO tactical comms**

Logistics

TOR
 Distributed
 Operations
 Fact-Finding
 Enabling DO
 Communications
 Logistics
 Education &
 Training
 Supporting
 Establishment
 Findings
 Recommendations
 Panel

	Current	DO	Findings
Point of Delivery Systems	Company	Squad	Insufficient surface and air assets to achieve real-time delivery at precision locations over large distances
Logistics Comm Network	GCSS-MC* at Battalion	Squad	GCSS-MC does not reach down to squad; real-time sensors for autonomic logistics needed
Supplies / Maintenance	Battalion	Order of magnitude change with increased field units	Extended missions require more Marine load and/or timely resupply; current equipment reliability, availability, maintainability, durability (RAM-D) challenging for DO

Logistics S&T and modernization must be driven by DO needs

*Global Combat Support System - Marine Corps

 Enabling DO
 Communications
 Logistics
 Education & Training
 Supporting Establishment
 Findings
 Recommendations Panel

	Recommendations
Point of Delivery Systems	Acquire unmanned systems for air and ground transport to minimize manpower and force protection needs
Logistics Comms Network	Design GCSS-MC architecture to address the platoon- and squad-level requirements
Supplies / Maintenance	Develop “DO Marine as a System” architecture approach; address RAM-D in future infantry systems

Focus on reducing cost and/or developing deliver & return system

Unmanned VTOL to supply and / or medevac

Unmanned hybrid-electric mule to supply & sustain DO Squad

Education & Training

Conventional vs. Distributed Operations

TOR
Distributed
Operations
Fact-Finding
Enabling DO
Communications
Logistics
Education &
Training
Supporting
Establishment
Findings
Recommendations
Panel

- **Training for conventional operations focuses on basic elements needed for military success:**
 - Leadership, warfighting, MOS proficiency
- **DO builds on the above and adds**
 - Concentration on critical thinking and decision-making by small unit leader
 - Substantial technical and professional training in
 - C2ISR
 - Control of fires
 - Cultural awareness
 - Logistics

“Train for certainty ... educate for uncertainty”

Master Gunnery Sergeant Dominic Green, USMC (Ret.)

Education & Training Findings

TOR
Distributed
Operations
Fact-Finding
Enabling DO
Communications
Logistics
Education &
Training
Supporting
Establishment
Findings
Recommendations
Panel

- **Distributed Operations approach, training and implementation plan has been completed**
- **CG MCCDC is dual-hatted as Deputy Commandant for Combat Development & Integration**
 - **Leads Marine Corps Order-directed Infantry Battalion Enhancement Period Program**
 - **Designed to fund, man, equip, train, and support DO**

Education & Training Recommendations

- **Establish uniform selection criteria and standards for DO leadership across the Marine Corps**
- **DO requires “brilliance in the basics,” therefore:**
 - Increase proficiency levels for specified skills, techniques, procedures
 - Increase formal schools emphasis on DO tactics
 - Improve decision making skills for small unit leaders
- **Develop unique training and educational technology to enhance learning for DO platoon and squad leaders**
- **Update Infantry Training and Readiness Manual syllabus to include**
 - Training requirements for designation of platoon and squad leaders for control of fires
 - DO live fire and simulator training support requirements

 Manpower Management
 Medical Acquisition
 S&T
 Findings
 Recommendations
 Panel

	Conventional Operations	Distributed Operations
Logistics	3–4 Company distribution nodes Internal reallocation / rebalancing Consolidated processing	Increased direct delivery sites Limitations to internal rebalancing Disaggregated processing
	Finding: Analysis, supply, and distribution functions likely exceed organic capability in sustained operations	
Intelligence	Fusion at higher echelons Limited battlespace sensors Near real time	Fusion at lower echelons Increased battlespace sensors Real time
	Finding: Intelligence requirements (processing, fusion, dissemination required for DO situational awareness) likely exceed capacity of organic manpower at battalion level	
Transportation/Mobility/ Maintenance	Primarily augmented/dismounted Limited density/limited authority at battalion level (e.g., transport, NVG)	Primarily organic/mounted (JLTV) Increase in density and authority
	Finding: Dramatic increases in equipment densities and support required by DO are likely beyond existing organic capability to repair, replace, evacuate

Rifle Squad (Possibly Reinforced)

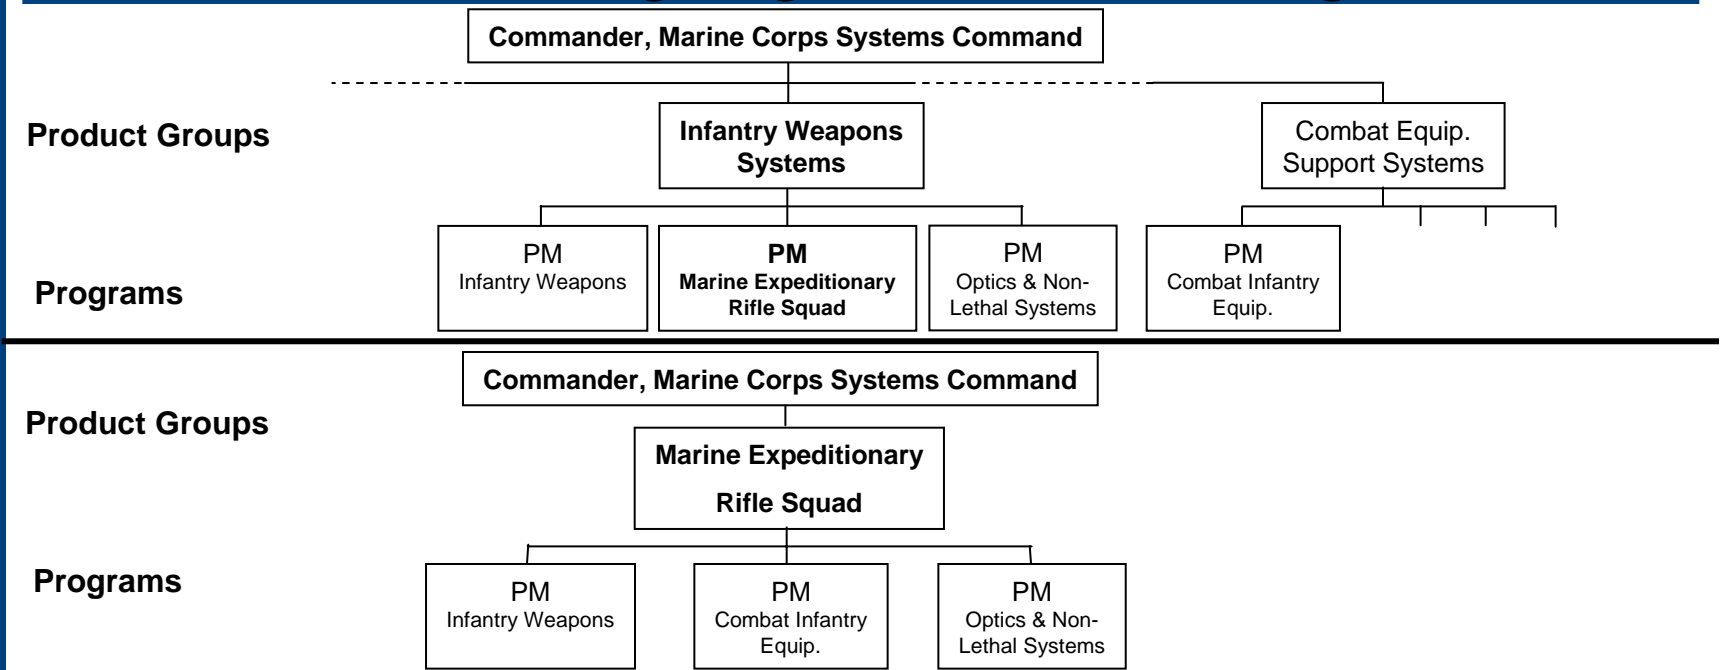

Individual Marine's Load: Personal Protective Gear + Weapons/Optics + Food/Water
 Sum of Unallocated Individual Loads Available for Squad Use

- Tradeoffs among mass, cost, and utility are necessary to optimally equip Rifle Squad
 - At level of individual Marine
 - At level of Rifle Squad
- “Commodity Market” model has proven effective in other complex system tradeoff contexts
 - Spacecraft development

Acquisition

An Enabling Organizational Change

• Marine Expeditionary Rifle Squad “Program”

- Excellent conceptual basis for System of Systems engineering
- Not currently a program of record
- At PM level not empowered to enforce mass constraints, nor effect mass, cost, utility tradeoffs
- At PM level not empowered to coordinate “commodity market” approach

• Marine Expeditionary Rifle Squad Program

- Excellent conceptual basis for System of Systems engineering
- Empower to enforce mass constraints, nor effect mass, cost, utility tradeoffs
- Empower to coordinate “commodity market” approach

Management
Medical
Acquisition
S&T
Findings
Recommendations
Panel

- **ONR PRESBUD FY06 ~\$1.8B**
 - Marine Corps is ~\$99M (5.6% of ONR budget)
 - ONR Code 30: ~\$62M; MCWL: ~\$37M
- **Panel Observation 1**
 - Very small percentage allocated to S&T underpinning of Expeditionary Maneuver Warfare Applications
- **Panel Observation 2**
 - Establishment of Code 30 at ONR affords Corps opportunity for strategic leverage and focus
 - With DO as transformational initiative, will be important for Code 30 to prioritize investment in support
 - Based on Panel experience, sub-critical investment unlikely to produce leap-ahead capability or achieve significant leverage
- **Recommendations**
 - Effective leverage of other Services (especially Army), DARPA S&T is *essential*
 - Code 30 investment should be focused on fewer, more significant, high-priority investments

“DO Marine as a System” S&T Program

- Create comprehensive system architecture studies to define technology needs
 - Determine ONR/MCWL S&T Funds focused on DO Marine
 - Assure that this is \geq \$50M/yr
- Leverage and complement the DARPA/USMC DO Technology Program

Comms (C2 STO-1; C2 STO-4; Marine Corps S&T Strategic Plan, Sept. 2005)

- Airborne relays on manned and unmanned platforms (opportunistic and dedicated)
- Surrogate software defined radios and networks

Training & Education (HPT&E STO-1–4)

- Simulation-based scenarios for decision making; comms education; control of fires; training for squad “Corpsman”

Logistics (Log STO-2,3; MVR STO-6)

- Unmanned VTOL and unmanned “Mule” (for each DO squad)
- Low-cost parafoil, recoverable with mule or VTOL UAV
- Real-time autonomic supply sensors and network

Medical (FP STO-1)

- Improved body armor through nanotechnology as co-investment with Army at MIT/SNI
- Remote wireless monitoring device to assess shock
- Continue development of reconstitutable intravenous hemostatic solutions

Top-Level Findings

- **Number of DO-enabled units limited by available communications, fires, logistics, training**
- **DO will require significant resources**
 - **DO will require advanced technology to provide needed training, logistics, medical support**
 - **DO has significant implications for communications equipment, architecture, and throughput in the battle space**
 - **DO may require aging the Force**
