Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

Degree Celsius ($^{\circ}\text{C}$) may be converted to degree Fahrenheit ($^{\circ}\text{F}$) by using the following equation:

$$F = 1.8 (^{\circ}\text{C}) + 32$$

Vertical coordinate information is referenced to the North American Vertical Datum of 1988 (NAVD 88)

Horizontal coordinate information is referenced to the North American Datum of 1983 (NAD 83)

Water year is the 12-month period October 1 through September 30 and is designated by the calendar year in which it ends.

Overview

This report contains water-quality and sediment-quality data from samples collected in the Yukon River Basin from March through September during the 2005 water year (WY). Samples were collected throughout the year at five stations in the basin (three on the main stem Yukon River, one each on the Tanana and Porcupine Rivers). A broad range of physical, chemical, and biological analyses are presented.

This is the final report in a series of five USGS Open-File Reports spanning five WYs, from October 2000 through September 2005. The previous four reports are listed in the references (Schuster, 2003, 2005a, 2005b, 2006). All five reports are also available on the World Wide Web:

WY 2001 *<http://pubs.usgs.gov/of/2003/ofr03427/>*

WY 2002 *<http://pubs.usgs.gov/of/2005/1199/>*

WY 2003 *<http://pubs.usgs.gov/of/2005/1397/>*

WY 2004 *<http://pubs.usgs.gov/of/2006/1258/>*

WY 2005 *<http://pubs.usgs.gov/of/2007/1037/>*

Water-quality and sediment-quality data from samples collected on the Yukon River and selected major tributaries in Alaska for synoptic studies during WYs 2002–03 are published in Dornblaser and Halm (2006) and also are available at: *<http://pubs.usgs.gov/of/2006/1228/>*.

Acknowledgments

The USGS National Stream Quality Accounting Network (NASQAN) and the National Research Program would like to thank the USGS Alaska Science Center, Water Discipline, in Anchorage and the USGS Field office in Fairbanks. Without their field expertise and continuous logistical support this work would not have been possible.

As the coordinator for the USGS Yukon River Basin studies and editor of all five data reports, I would like to acknowledge each individual who participated in some capacity during these 5 years. The collective insight, help, and dedication of these individuals created a unique, productive, successful, and fun work environment. The extensive list includes personnel and volunteers from the USGS, Canadian government, universities, public schools, indigenous tribal councils, advocacy groups, and village communities.

CHAPTER 1 - Introduction

by Paul F. Schuster

The U.S. Geological Survey (USGS) National Stream Quality Accounting Network (NASQAN) has completed a 5-year (2001–05) study of the water quality of the Yukon River Basin (330,000 square miles) from the Yukon River headwaters in Canada to the Bering Sea (Nelson and others, 2001). Climatic warming of the Yukon River Basin is resulting in lengthening of the growing season, melting of permafrost, and deepening of the soil active layer (Osterkamp, 2003; Miller and others, 2003; BESIS, 1997). These changes and related processes are anticipated to result in changes in water and sediment chemistry and discharge in upcoming decades. As a first step in understanding these changes, measurements of water discharge and water and sediment chemistry were made on the upper, middle, and lower Yukon River and on the Tanana and Porcupine Rivers (Schuster, 2003, 2005a, 2005b, 2006).

A thorough description of the basin is given in Brabets and others (2000). Schuster (2003) describes the objectives and approach of the study and provides a brief description of the basin (fig. 1), and summarizes sediment and water-quality data for Water Year (WY) 2001. Sediment and water-quality data for WY 2002, 2003, and 2004 are given in Schuster (2005a, 2005b, 2006), respectively. A broad range of constituents were measured in fixed-station samples during the 5-year study, including major ions, nutrients, dissolved and sediment-associated trace elements, biological indicators (such as dissolved oxygen) and the stable isotopic composition of nitrogen, carbon, and sulfur of particulate organic matter, and various forms of organic carbon. Because of extensive wetlands in the basin, the Yukon River exhibits high organic carbon concentrations in contrast to other large rivers. Both the chemical composition and concentration of organic carbon are expected

to change with melting permafrost. In addition to this work, intensive sampling campaigns of the entire reach of the Yukon River from headwaters above Whitehorse, Yukon Territory, Canada, to Pilot Station, Alaska, during high flow in early June and low flow in late August were completed during the years 2002–04. In 2005, intensive sampling campaigns were conducted at the fixed stations and several other key locations in the basin for the duration of the spring snowmelt peak (approximately mid May to mid June). The intensive sampling will address process-based questions about the water quality of the basin.

The purpose of this report is to compile and report the water-quality and sediment-quality data collected during WY 2005. The sample-collection methods and the laboratory analytical methods are described in Schuster (2003). Because many of the results are research-oriented, they are not contained in the USGS National Water Information System (NWIS) database, but are available to the public upon request. This report, the fifth and final in a series of annual reports for the 5-year study, is being released both in paper and electronic format to meet both archival and data dissemination objectives.

CHAPTER 2 – Fixed-Station Samples

by Timothy P. Brabets

This section provides a summary of the Yukon River Basin fixed-station sampling site characteristics (table 1). References for the description of sample collection and processing of samples for various water-quality constituents are given in Schuster (2003). Sample analysis results for field measurements, major ions, nutrients, organic and inorganic carbon, trace elements, suspended sediment concentrations, and trace elements in suspended sediments during WY 2005 are given in tables 2–6. The data provided in this section also are available from the USGS NWIS database (<http://waterdata.usgs.gov/nwis/>).

CHAPTER 3 - Dissolved Organic Carbon Characterization

by George R. Aiken

A description of sample collection and processing of samples for dissolved organic carbon (DOC), ultraviolet (UV) absorbance spectroscopy, specific UV absorbance (SUVA), and DOC fractionation analyses is given in Schuster (2003). These analyses were performed at the USGS National Research Program Laboratories in Boulder, Colorado. Sample analysis results for WY 2005 are given in table 7.

Table 7. Dissolved organic carbon concentrations and fractionation analyses from fixed-station sampling sites in the Yukon River Basin

[Station ID, station identification number, refer to table 1 for description and figure 1 for location; DOC, dissolved organic carbon; mg C/L, milligrams carbon per liter; UV (abs @ 254 nm), Ultraviolet absorbance at the 254 nanometer wavelength; SUVA, Specific UV absorbance; L/(mg C*m), liters per milligram carbon multiplied by a one-meter path length; %, percent; --, missing value; all samples filtered with 0.45-µm glass-fiber filters prior to analyses]

Station ID	Date	DOC (mg C/L)	UV (abs @ 254nm)	SUVA [L/(mg C*m)]	Hydrophobic Acid SUVA [L/(mg C*m)]	Hydrophobic Acid (%)

CHAPTER 4 - Dissolved Major Cations and Trace Elements

by Howard E. Taylor, David A. Roth, and Ronald C. Antweiler

References for the description of sample collection and processing of samples for various water-quality constituents are given in Chapter 2 of Schuster (2003). A description of sample analysis for major cations and trace elements at the USGS National Research Program Laboratories in Boulder, Colorado, is given in Chapter 4 of Schuster (2003). Sample analysis results for WY 2005 are given below in table 8.

Table 8. Selected dissolved major cations and trace elements from fixed-station sampling sites in the Yukon River Basin

[See Schuster (2003) for qualification of the accuracy of these data; Station ID, station identification number, refer to table 1 for description and figure 1 for location; *, field replicate; µg/L, microgram per liter; mg/L, milligram per liter; A, average of triplicate analysis; SD, standard deviation of triplicate analysis; <, less than; ±, plus or minus]

CHAPTER 5 - Mercury Analyses

by John F. DeWild and Mark L. Olson

A description of sample collection and processing of samples for filtered (dissolved), methyl, particulate, and total mercury (Hg) is given in Schuster (2003). Sample analysis results for WY 2005 are given in table 9.

Table 9. Mercury and methylmercury concentrations from fixed-station sampling sites in the Yukon River Basin

[Station ID, station identification number, refer to table 1 for description and figure 1 for location; Hg, mercury; ng/L, nanogram per liter; FMHg, Filtered Methylmercury; FTHg, Filtered Total mercury; PMHg, Particulate Methylmercury; PTHg, Particulate Total mercury; <, less than; *, relative standard deviation among replicate analyses greater than 10%; E, estimated]

Station ID	Date/Time	Filtered Methyl-Hg (FMHg) (ng/L)	Filtered Total-Hg (FTHg) (ng/L)	Particulate Methyl-Hg (PMHg) (ng/L)	Particulate Total-Hg (PTHg) (ng/L)

CHAPTER 6 - Dissolved Gasses and Dissolved Inorganic Carbon

by Robert G. Striegl and Mark M. Dornblaser

A description of sample collection and processing of samples for the partial pressures of carbon dioxide (P_{CO_2}) and methane (P_{CH_4}) is given in Schuster (2003). Sample analysis results for WY 2005 are given in table 10.

Table 10. Carbon dioxide, methane, and dissolved inorganic carbon concentrations from fixed-station sampling sites in the Yukon River Basin

[Station ID, station identification number, refer to table 1 for description and figure 1 for location; CO₂, carbon dioxide; µmol/L, micromole per liter; P_{CO₂}, partial pressure of CO₂; µatmos, microatmospheres; CH₄, methane; P_{CH₄}, partial pressure of CH₄; DIC, dissolved inorganic carbon]

Station ID	Date	CO ₂ (µmol/L)	Corrected P _{CO₂} (µatmos)	CH ₄ (µmol/L)	Corrected P _{CH₄} (µatmos)	DIC (µmol/L)

CHAPTER 7 - Sediment Chemistry

by Arthur J. Horowitz

A description of sample collection and processing of samples for suspended sediment chemistry is given in Schuster (2003). Sample analysis results for WY 2005 are given in table 11.

Table 11. Sediment chemistry data from fixed-station sampling sites in the Yukon River Basin

[Station ID, station identification number, refer to table 1 for description and figure 1 for location; mg/L, milligram per liter; µg/g, microgram per gram; %, percent; Sets A & B indicate duplicate samples; *, average value reported; <, less than]

CHAPTER 8 - Sediment Mineralogy

by Dennis D. Eberl

A description of sample collection and processing of samples for quantitative X-ray mineralogical analysis is given in Schuster (2003). Sample analysis results for WY 2005 are given in table 12.

Table 12. Sediment mineralogy data from fixed-station sampling sites in the Yukon River Basin

CHAPTER 10 – Total Particulate Carbon, Particulate Inorganic Carbon, Particulate Organic Carbon, and Total Particulate Nitrogen

by Paul F. Schuster and Michael M. Reddy

A description of sample collection and processing of samples for total particulate carbon (TPC) and total particulate nitrogen (TPN) concentrations, also referred to as particulate carbon (PC) and particulate nitrogen (PN), respectively, is given in Schuster (2003). Duplicate samples are required for the determination of particulate inorganic carbon (PIC) and particulate organic carbon (POC). The first duplicate was analyzed for TPC (Zimmerman and others, 1997). The second duplicate was combusted at 500° C to remove all the POC. The second duplicate was then analyzed for PIC (Zimmerman and others, 1997). POC was determined by the difference of TPC and PIC. Sample analysis results for WY 2005 are given in table 14.

Table 14. Total particulate carbon, particulate inorganic carbon, particulate organic carbon, and total particulate nitrogen concentrations from fixed-station sampling sites in the Yukon River Basin

[Station ID, station identification number, refer to table 1 for description and figure 1 for location; TPC, total particulate carbon; PIC, particulate inorganic carbon; POC, particulate organic carbon; TPN, total particulate nitrogen; mg/L, milligram per liter; <, less than; *, replicate; concentrations averaged from duplicate samples; --, missing data]

CHAPTER 11 - Isotopic Analysis of Suspended Particulate Organic Matter

by Steven R. Silva and Carol Kendall

A description of sample collection and processing of samples for the percent of carbon and nitrogen, carbon:nitrogen ratios, carbon-13, and nitrogen-15 isotopes in suspended particulate organic matter (POM) is given in Schuster (2003). Sample analysis results for WY 2005 are given in table 15.

Table 15. Suspended sediment isotopic data from fixed-station sampling sites in the Yukon River Basin

[Station ID, station identification number, refer to table 1 for description and figure 1 for location; C, carbon; N, nitrogen; %, percent; δ , delta; *, replicate]

CHAPTER 12 - Uranium Isotopes

by Thomas F. Kraemer

A description of sample collection and processing of samples for uranium concentrations and activity ratios (UAR) is given in Schuster (2003). Sample analysis results for WY 2005 are given in table 16.

Table 16. Uranium concentration and $^{234}\text{U}/^{238}\text{U}$ isotopic activity ratio analyses in water samples from fixed-station sampling sites in the Yukon River Basin

[Station ID, station identification number, refer to table 1 for description and figure 1 for location; $\mu\text{g/L}$, microgram per liter; U, Uranium; $\pm$, plus or minus; *, replicate]

Station ID	Date and time	U ($\mu\text{g/L}$)	$^{234}\text{U}/^{238}\text{U}$ activity ratio (± 1 sigma uncertainty)
15356000	04/07/05 17:40	1.16	1.397 $\pm$ 0.008
