Iran: U.S. Concerns and Policy Responses

Summary

According to the Administration's "National Security Strategy" document released on March 16, 2006, the United States "may face no greater challenge from a single country than Iran." To date, the Bush Administration has pursued several avenues to attempt to contain the potential threat posed by Iran, including supporting a long-term policy of changing Iran's regime. However, the near-term Administration drive to prevent any Iranian nuclear weapons breakthrough has brought diplomatic and economic strategies to the forefront of U.S. policy. As part of that effort, the Bush Administration announced May 31 it would negotiate with Iran in concert with U.S. allies; in past years the Bush Administration had only limited dialogue with Iran on specific regional issues. If diplomacy and sanctions do not succeed, some advocate military action against Iran's nuclear infrastructure rather than acquiescence to a nuclear-armed Iran.

Iran's nuclear program is not the only major U.S. concern on Iran. Successive administrations have pointed to the threat posed by Iran's policy in the Near East region, particularly material support to groups that use violence to prevent or complicate Israeli-Arab peace. Such groups include Hizballah in Lebanon and the Palestinian groups Hamas and Palestinian Islamic Jihad. Hamas formed a Palestinian government following its victory in January 25, 2006, elections, but it is thus far holding fast to its rejection of Israel. Iran and other Middle Eastern states are providing Hamas assistance to help circumvent U.S. and European aid cuts intended to pressure the new Hamas-led government. Some senior Al Qaeda activists are in Iran as well, although Iran claims they are "in custody."

U.S. officials also accuse Iran of attempting to exert influence in Iraq by providing arms and other material assistance to Shiite Islamist militias, some of which have fought U.S. and partner forces there. However, most Iranian-supported factions in Iraq are supportive of the U.S.-led political transition roadmap. The United States and Iraq announced in March 2006 that they would hold bilateral talks on the issue of stabilizing Iraq, but talks were not held because of broader differences on Iran's nuclear program.

Iran's human rights practices and strict limits on free expression have been consistently criticized by official U.S. and U.N. reports. Iran's purported repression of ethnic and religious minorities, particularly the Bahai'is, is said to be harsh. However, Iran holds elections for many senior positions, including that of president. U.S. officials have tended to see the human rights issue in Iran as exemplifying the negative character of the Iranian regime, but not necessarily as a direct threat to U.S. interests.

Iran: U.S. Concerns and Policy Responses

Much of the debate over U.S. policy toward Iran has centered on the nature of the current regime. Some experts believe that Iran, a country of almost 70 million people, is a threat to U.S. interests because hardliners in Iran's regime dominate and set a policy direction intended to challenge U.S. influence and allies in the region. President Bush, in his January 29, 2002, State of the Union message, labeled Iran part of an "axis of evil" along with Iraq and North Korea.

Political History

The United States was an ally of the late Shah of Iran, Mohammad Reza Pahlavi ("the Shah"), who ruled from 1941 until his ouster in February 1979. The Shah assumed the throne when Britain and Russia forced his father, Reza Shah Pahlavi (Reza Shah), from power because of his perceived alignment with Germany in World War II. Reza Shah had assumed power in 1921 when, as an officer in Iran's only military force, the Cossack Brigade, he launched a coup against the government of the Qajar Dynasty. He was proclaimed Shah in 1925, founding the Pahlavi dynasty.

The Shah was anti-Communist, and the United States viewed his government as a bulwark against the expansion of Soviet influence in the Persian Gulf. In 1951, under pressure from nationalists in the Majles (parliament) who gained strength in the 1949 Majles elections, he appointed a popular nationalist parliamentarian, Dr. Mohammad Mossadeq, as Prime Minister. Mossadeq was widely considered left-leaning, and the United States was wary of his policies, which included his drive for nationalization of the oil industry. Mossadeq's followers began an uprising in August 1953 when the Shah tried to dismiss Mossadeq, and the Shah fled. The Shah was restored in a successful CIA-supported uprising against Mossadeq.

The Shah tried to modernize Iran and orient it toward the West, but in so doing he also tried to limit the influence and freedoms of Iran's Shiite clergy. He exiled Ayatollah Ruhollah Khomeini in 1964 because of Khomeini's active opposition to the Shah, opposition based on the Shah's anti-clerical policies and what Khomeini alleged was the Shah's forfeiture of Iran's sovereignty to its patron, the United States.

Khomeini fled to and taught in Najaf, Iraq before going to France in 1978, from which he stoked the Islamic revolution. Mass demonstrations and guerrilla activity by pro-Khomeini forces, allied with a broad array of anti-Shah activists, caused the Shah's government to collapse in February 1979. Khomeini returned from France and, on February 11, 1979, declared an Islamic Republic of Iran. The Islamic republic is characterized by direct participation in government by Shiite Islamic

theologians, a principle known as *velayat-e-faqih* (rule by a supreme Islamic jurisprudent). Khomeini was strongly anti-West and particularly anti-U.S., and relations between the United States and the Islamic Republic turned hostile even before the November 4, 1979, seizure of the U.S. Embassy by pro-Khomeini radicals.

Regime Stability, Human Rights, and Recent Elections

About a decade after founding the Islamic republic, Ayatollah Ruhollah Khomeini died on June 3, 1989. The regime he left behind remains relatively stable, despite internal schisms, occasional unrest in areas occupied by minority populations, and substantial unpopularity among intellectuals, educated elites, and many women. Upon his death, one of his disciples, Ayatollah Ali Khamene'i, then serving as president, was selected Supreme Leader by an "Assembly of Experts" (an elected body).¹ Khamene'i had served two terms as elected president (1981-1989), but he has lacked the unquestioned religio-political authority of Khomeini. Recently, he has been gaining strength by using his formal powers to appoint heads of key institutions, such as the armed forces and half of the twelve-member Council of Guardians.² This conservative-controlled body reviews legislation to ensure it conforms to Islamic law, and it screens election candidates. Khamene'i was strengthened by the election as president on June 24, 2005, of Mahmoud Ahmadinejad, a hardliner. Another appointed body is the Expediency Council, set up in 1988 to resolve legislative disagreements between the *Majles* (parliament) and the Council of Guardians. It is headed by former President (1989-1997) Akbar Hashemi-Rafsanjani; its executive officer is former Revolutionary Guard leader Mohsen Reza'i.

Former President Mohammad Khatemi and the Reformists.

Mohammad Khatemi, who has now been succeeded by Ahmadinejad, was first elected in May 1997, with 69% of the vote. He was re-elected in June 2001, with an even larger 77% of the vote, against nine conservative candidates. Khatemi rode a wave of sentiment for easing social and political restrictions among students, intellectuals, youths, and women. These segments wanted reform, although not an outright replacement of the Islamic republican regime. Khatemi's supporters held about 70% of the 290 seats in the 2000-2004 *Majles* after their victory in the February 18, 2000, elections.

Pro-reform elements gradually became disillusioned with Khatemi for his refusal to confront the hardliners. This dissatisfaction erupted in major student demonstrations in July 1999 in which four students were killed by regime security forces, and Khatemi reluctantly backed the crackdown. On June 8, 2003, a time period marking the fourth anniversary of those riots, regime forces again suppressed pro-reform demonstrators. President Bush issued statements in support of the 2003

¹ The Assembly also has the power to amend Iran's constitution.

² The Council of Guardians consists of six Islamic jurists and six secular lawyers. The six Islamic jurists are appointed by the Supreme Leader. The six lawyers on the Council are selected by the *Majles* (parliament).

demonstrators, although then Secretary of State Powell said the protests represented a “family fight” within Iran.

Khatemi was supported by several political organizations (not parties, which have not formally been allowed to register):

- The Islamic Iran Participation Front (IIPF). The most prominent and best organized pro-reform grouping, it is headed by Khatemi’s brother, Mohammad Reza Khatemi, who was a deputy speaker in the 2000-2004 Majles.
- The student-led Office for Consolidation and Unity. This group became critical of Khatemi for failing to challenge the hardliners.
- The Mojahedin of the Islamic Revolution organization (MIR). Composed mainly of left-leaning Iranian figures who support state control of the economy.
- The Society of Combatant Clerics. A long-time moderate clerical grouping, it is now headed by Khatemi following his departure from the presidency. Khatemi continues to travel abroad and remains a public figure in Iran. A senior member is Mehdi Karrubi, who was speaker of the 2000-2004 Majles and finished third in the June 17, 2005 presidential elections.

With Khatemi constitutionally ineligible to run again in the June 2005 presidential election, reformist organizations (formal “parties” have not been approved) tried to elect another of their own. For the first round of the voting on June 17, many reformists had pinned their hopes on former science minister Mostafa Moin, but he finished fifth, disappointing reformists.

The Conservative Ascendancy and Election of Ahmadinejad. Iran’s conservatives generally want only gradual reform, if any, but they primarily want to keep major institutions under the control of their faction. The conservatives, supported by Supreme Leader Khamene’i, have been gaining strength since the February 28, 2003, municipal elections, when reformists largely boycotted and hardliners won most of the seats. They gained additional strength from the February 20, 2004, Majles elections, in which the Council of Guardians disqualified about 3,600 mostly reformist candidates, including 87 members of the current Majles, enabling the conservatives to win a majority (about 155 out of the 290 seats) on turnout of about 51%. The Majles speaker chosen was Gholem Ali Haded-Adel, a relative by marriage of Khamene’i. The United States, most European Union countries, and the U.S. Senate (S.Res. 304, adopted by unanimous consent on February 12, 2004) criticized the elections as unfair, because of candidate screening.

On the tide of these conservative victories, Rafsanjani regained political prominence and decided to run in the June 2005 presidential elections. He has been the patron of many Majles conservatives, although he ran for president on a pro-free market, pro-reform platform. He was constitutionally permitted to run because a third term would not have been consecutive with his previous two terms.

Rafsanjani had several more conservative opponents, three of whom had ties to the Revolutionary Guard. They included former state broadcasting head Ali Larijani; former Revolutionary Guard Air Force commander and police chief, Mohammad Baqer Qalibaf; and Tehran mayor Mahmud Ahmadinejad. Former Guard commander-in-chief Mohsen Reza'i dropped out before the election was held.

On May 22, 2005, the Council of Guardians, as expected, significantly narrowed the field of candidates to 6 out of the 1,014 persons who filed. (In the 2001 presidential election, the Council permitted to run 10 out of the 814 registered candidates.) At Khamene'i's request, two reformist candidates were reinstated (Moin and Mohsen Mehralizadeh). On the eve of the first round, President Bush criticized the elections as unfair because of the denial of so many candidacies.³ In the June 17, 2005 first round, turnout was about 63% (29.4 million votes out of 46.7 million eligible voters). The results were as follows:

Rafsanjani:	21% (moved on to run-off)
Ahmadinejad:	19.5% (moved on to run-off)
Karrubi:	17%
Qalibaf:	13.8%
Moin:	13.77%
Larijani:	05.9%
Mehralizadeh:	04.38%
Reza'i	dropped out before first round

No candidate achieved a majority, forcing a second round. Few had foreseen the emergence of Tehran Mayor Ahmadinejad. He won a landslide victory in the June 24 runoff, receiving 61.8% to Rafsanjani's 35.7%. Turnout was 47%, less than the first round, suggesting that reformists did not turn out in large numbers to prevent Ahmadinejad's election. He took office on August 6, 2005.

Mahmud Ahmadinejad

First non-cleric to be president of the Islamic republic since the assassination of then president Mohammad Ali Rajai in August 1981. About 49, he campaigned as a "man of the people," the son of a blacksmith who lives in modest circumstances, who would promote the interests of the poor and return government to the principles of the Islamic revolution during the time of Ayatollah Khomeini. His official biography says he served with the "special forces" of the Revolutionary Guard, and he served subsequently (late 1980s) as a deputy provincial governor. With his momentum from the first round, and backing from his "Isargaran" faction composed of former Guard and Basij (volunteer popular forces) leaders and other hardliners. Thought by some to have been one of the holders of the 52 American hostages during November 1979-January 1981; U.S. intelligence reportedly determined he was not.

On August 14, 2005, he presented for Majles confirmation a 21-member cabinet composed largely of little-known hardliners, over half of whom were his associates in the Revolutionary Guard, the Basij, or the Tehran mayoralty. However, the Majles

³ "Bush Criticizes Iran Election Process as Unfair." Reuters, June 16, 2005.

rejected four of his appointments, mostly because of insufficient experience. The first three of his oil-minister nominees were rejected, although his fourth nominee was approved. He appointed the hardline Ali Larijani, one of his first round rivals, as Secretary General of the Supreme National Security Council; Larijani serves as chief negotiator on nuclear and most other security issues. In keeping with a practice begun by Khatemi, he also named a woman as one of his vice presidents. A former first round rival, Qalibaf, has assumed Ahmadinejad's former job as Tehran mayor. Ahmadinejad has inflamed world opinion with several anti-Israel statements:

- On October 26, 2005, he stated at a Tehran conference entitled "A World Without Zionism" that "Israel should be wiped off the map" and that "anybody who recognizes Israel will burn in the fire of the Islamic nations' fury." The statement was widely condemned, including in a U.N. Security Council statement and Senate and House resolutions (H.Res. 523 and S.Res. 292) passed in their respective chambers. The statement caused U.N. Secretary General Kofi Annan to delete Iran from his Middle East trip itinerary in November.
- On December 9, 2005, and then again on December 14, 2005, and May 28, 2006, he questioned the veracity of the Holocaust. In the December 14 case, he called it a "myth" — and stated that Europe should create a Jewish state in Europe, not in the Middle East. (Purportedly at Ahmadinejad's behest, in January 2006, Iran's Foreign Ministry said it would hold a conference on the Holocaust, and an Iranian team visited Germany to investigate the history of the Holocaust.)
- On January 1, 2006, Ahmadinejad said that the European countries created Israel after World War II to continue the process of ridding the European continent of Jews.
- On April 14, 2006, he said Israel is "heading toward annihilation."

Some Iranian leaders have been concerned that Ahmadinejad's statements might isolate Iran. The concern might have contributed to the Supreme Leader's October 2005 decision to grant new governmental supervisory powers to Rafsanjani's Expediency Council. That move led to speculation that Ahmadinejad was in political trouble within the regime. However, since then, his position appears to have solidified, backed not only by nuclear progress but his ties to others who served in the Revolutionary Guard and other revolutionary institutions in the early days after the Islamic revolution. Among other moves, he has removed about 40 senior diplomats, mostly reformist oriented, from their positions overseas.

Economic Factors Assisting Stability. The regime has been helped in recent years by high oil prices, which are about \$70 per barrel. These same factors could help Iran minimize the effects of international sanctions that might be imposed in response to its nuclear activities. Ahmadinejad appears to have increased regime popularity by directing the raising of some wages, cancelling some debts of farmers, and increasing social welfare payments. However, oil revenues account for about

20% of Iran's gross domestic product (GDP), and he has not moved to correct economic structural imbalances. Major economic sectors or markets are controlled by the quasi-statal "foundations" (*bonyads*), run by powerful former officials, and there are special trading privileges for Iran's powerful bazaar merchants who form the main constituency for the Supreme Leader and other senior conservatives.

Some Economic Indicators

Economic Growth (2005)	4.8%
Proven Oil Reserves	100 billion barrels (fifth in world)
Refined Gasoline Imports	\$3 billion - \$4 billion value per year (60% from European oil trader Vitol)
Oil Production	4 million barrels per day (mbd)
Oil Exports	2.4 mbd
Major Oil Customers	China - 450,00 barrels per day (bpd); about 4% of China's oil imports; Japan - 800,000 bpd, about 12% of oil imports; South Korea - about 9% of its oil imports are from Iran; Italy - 9% from Iran; France - 7%; Belgium - 14%; Turkey - 22%; Greece - 24%.
Refined Gasoline Suppliers	India, Kuwait, Turkey, Venezuela
Some Major Trading Partners (2004)	Japan (\$7.5 billion exports to Japan); China (\$3.9 billion exports, \$2.7 billion imports); Italy (\$5.3 billion equally divided import/export); Germany (\$4.9 billion imports from); France (\$3.2 billion imports)
Trade With U.S. (2004)	\$142 million exports to U.S.; \$94 million imports
Foreign Exchange Reserves	\$25 billion (2005)
External Debt	\$12 billion (March 2005)
Income Per Capita (purchasing power parity)	\$8,100 per year
Unemployment Rate	11.2% (2004)

Groups Advocating Change

Although the regime appears generally stable, there are factions that seek to modify its policies or to replace it outright. Those seeking modest changes have some popularity inside Iran, but their ascendancy, were it to occur, might not fundamentally alter Iran's relations with the United States. Those groups seeking to replace the regime, by accounts of observers, have little popularity or ability to destabilize the regime.

Prominent Dissidents. Several dissidents have been supportive or even part of the regime but now seek substantial change, particularly the withdrawal of Iran's clerics from direct participation in government. One such figure, Ayatollah Hossein

Ali Montazeri, was released in January 2003 from several years of house arrest, but he remains under scrutiny. He had been Khomeini's designated successor until 1989, when Khomeini dismissed him for allegedly protecting intellectuals and other opponents of clerical rule. Other former regime dissidents still closely watched or harassed include theoretician Abd al-Karim Soroush, former Interior Minister Abdollah Nuri, former hostage-holder Abbas Abdi, and political activist Hashem Aghajari of the MIR grouping.

Anti-Regime Groups: People's Mojahedin Organization of Iran (PMOI). Among those groups seeking to replace the current regime, one of the best known is the People's Mojahedin Organization of Iran (PMOI).⁴ It is secular and left-leaning; it was formed in the 1960s to try to overthrow the Shah of Iran and advocated a form of Marxism blended with Islamic tenets. It allied with pro-Khomeini forces during the Islamic revolution and supported the November 1979 takeover of the U.S. Embassy in Tehran but was later purged and driven into exile.

Even though it is an opponent of Tehran, since the late 1980s the State Department has refused contact with the PMOI and its umbrella organization, the National Council of Resistance (NCR). The State Department designated the PMOI as a foreign terrorist organization (FTO) in October 1997⁵ and the NCR was named as an alias of the PMOI in the October 1999 re-designation. The FTO designation was prompted by PMOI attacks in Iran that sometimes killed or injured civilians — although the group does not appear to purposely target civilians. The State Department report on international terrorism for 2005 (p. 212) appears, for the first time, to incorporate an assertion by the group that it was a radical element of the organization — rather than the leadership of the organization itself — that was responsible for the alleged killing of seven American defense advisers to the former Shah in 1975-1976. The State Department report also notes the group's promotion of women in its ranks. On August 14, 2003, the State Department designated the NCR offices in the United States an alias of the PMOI, and NCR and Justice Department authorities closed down those offices. In November 2002, a letter signed by about 150 House Members was released, asking the President to remove the PMOI from the FTO list.⁶

The group's alliance with Saddam Hussein's regime in the 1980s and 1990s contributed to the U.S. shunning of the organization. U.S. forces attacked PMOI military installations in Iraq during Operation Iraqi Freedom and negotiated a ceasefire with PMOI military elements in Iraq, requiring the approximately 4,000 PMOI fighters to remain confined to their Ashraf camp near the border with Iran. The group's weaponry is in storage, guarded by U.S. military personnel. (U.S. personnel guarding Ashraf were replaced in April 2006 by Bulgarian troops.)

⁴ Other names by which this group is known is the Mojahedin-e-Khalq Organization (MEK or MKO) and the National Council of Resistance (NCR).

⁵ The designation was made under the authority of the Anti-Terrorism and Effective Death Penalty Act of 1996 (P.L. 104-132).

⁶ "Removal of Iran Group From Terror List Sought." *Washington Post*, Nov. 23, 2002.

Press reports continue to say that some Administration officials want the group removed from the FTO list and want a U.S. alliance with it against the Tehran regime.⁷ Then National Security Adviser Condoleezza Rice stated in November 2003 that the United States unambiguously considers the group as a terrorist organization. However, the debate over the group was renewed with the U.S. decision in late July 2004 to grant the Ashraf detainees “protected persons” status under the 4th Geneva Convention, meaning they will not be extradited to Tehran or forcibly expelled as long as U.S. forces remain in Iraq. In June 2003, France arrested about 170 PMOI members, including its co-leader Maryam Rajavi (wife of PMOI founder Masoud Rajavi, whose whereabouts are unknown); she was released and remains in France.⁸

The Son of the Former Shah. Some Iranian exiles, as well as some elites still in Iran, want to replace the regime with a constitutional monarchy presumably led by Reza Pahlavi, the U.S.-based son of the late former Shah. However, he does not appear to have large-scale support inside Iran. In January 2001, the Shah’s son, who is about 45 years old, ended a long period of inactivity by giving a speech in Washington D.C. calling for unity in the opposition and the institution of a constitutional monarchy and democracy in Iran. He has since broadcast messages into Iran from Iranian exile-run stations in California.⁹

Other U.S.-Based Exiles. Numerous other Iranian exiles, not necessarily linked to the Shah’s son or the PMOI, want to see a change of regime in Tehran. Many of them are based in California, where there is a large Iranian-American community, and there are about 25 small-scale radio or television stations that broadcast into Iran. Some of them are the following:

- *The Abdorrahman Boroumand Foundation.* This foundation, led by two Boroumand sisters, is trying to document human rights abuses in Iran.
- *The Iran Human Rights Documentation Center (IHDC).* The center is run by persons mostly of Iranian origin and affiliated with Yale University’s Griffin Center for Health and Human Rights. It is documenting abuses in Iran, using contacts with Iranians in Iran.
- *The National Iranian American Council (NIAC).* The organization’s objective is to build and expand networks of Iranian-American organizations, but it is generally considered an advocate of U.S. engagement with Tehran.

⁷ Cloud, David. “U.S., Iran Hit Bumpy Terrain on Road to Rapprochement.” *Wall Street Journal*, May 12, 2003.

⁸ For further information, see CRS Report RL31119, *Terrorism: Near Eastern Groups and State Sponsors*, 2002, by Kenneth Katzman.

⁹ Kampeas, Ron. “Iran’s Crown Prince Plots Nonviolent Insurrection from Suburban Washington.” *Associated Press*, Aug. 26, 2002.

- *Iran of Tomorrow Movement*. This group claims to have “resistance cells” inside Iran. It operates a 24-hour satellite TV station and a radio broadcast. A related movement, “XTV,” advocates the non-violent overthrow of the regime and is close to the Shah’s son.
- “*Channel One TV/Radio Pedar*.” Run by Mr. Shahram Homayoun, a Los Angeles-based exile, this station broadcasts to Iran one hour each day.
- *Movement for Freedom and Democracy in Iran*. Led by Dr. Ahura Khalegi Yazdi, a Zoroastrian, it advocates regime change through peaceful means. Operates Virginia-based “Rangaran TV.”

To date, no U.S. assistance is provided to exile-run stations. However, the conference report on the FY2006 regular foreign aid appropriations, P.L. 109-102, states the sense of Congress that the Administration consider such financial support.

Human Rights and Religious Freedom

The State Department’s human rights report for 2005, released March 8, 2006, said Iran’s already poor human rights record “worsened” during the year. That report, and the 2005 State Department “religious freedom” report (released November 8, 2005), cite Iran for widespread human rights abuses (especially of the Baha’i faith), including summary executions, disappearances, torture, arbitrary arrest and detention, and discrimination against women.¹⁰ Specific trends include the following:

- Since 2000, hardliners in the judiciary have closed hundreds of reformist newspapers, although many have tended to reopen under new names, and authorities have imprisoned or questioned several editors and even some members of the Majles. Iran also has blocked hundreds of pro-reform websites. On December 19, 2005, Ahmadinejad banned Western music from Iran’s state media, reviving a cultural decree from Ayatollah Khomeini’s rule.
- A State Department official testified on March 8, 2006, that the regime had beaten Tehran bus drivers who were demonstrating for the release of eight labor leaders who were incarcerated after a strike for higher wages. The leaders were released in March 2006. In May 2006, the regime arrested a prominent academic, Ramin Jahanbegloo, for alleged contacts with foreign governments.
- There was an apparent beating death of a Canadian journalist of Iranian origin, Zahra Kazemi, while she was in Iranian detention. She had been detained in early July 2003 for filming outside Tehran’s Evin prison. An intelligence agent who allegedly

¹⁰ For text of both, see [<http://www.state.gov/g/drl/rls/hrrpt/2005/61688.htm>]; and [<http://www.state.gov/g/drl/rls/irf/2005/51599.htm>].

conducted the beating resulted was acquitted on July 25, 2004, prompting accusations that the investigation and trial were unfair.

- Imprisoned journalist Akbar Ganji, who conducted hunger strikes to protest regime oppression, was released on schedule on March 18, 2006. The Bush Administration had issued a statement calling for his release on July 12, 2005; he had been sentenced in 2001 to six years in prison for alleging high-level involvement in a series of murders of Iranian dissident intellectuals that the regime had blamed on “rogue agents” in the security apparatus. (In the 109th Congress, H.Res. 414 expressed the sense of Congress that the United States and United Nations should condemn Iran’s imprisonment of him.)
- On the issue of women’s rights, the most widely reported issue is the requirement that women fully cover themselves in public, generally with a garment called a *chador*. There has been a progressive relaxation of enforcement of this rule, particularly during Khatemi’s presidency. To date, Ahmadinejad has not reversed that relaxation. However, in May 2006, the Majles passed a bill calling for increased public awareness of Islamic dress, an apparent attempt to persuade women not to violate the dress code or wear Western fashion. The bill did not, as some outside Iran intimated, contain any requirement or suggestion that members of Iran’s minority groups wear badges or distinctive clothing. In April 2006, Ahmadinejad directed that women be allowed to attend soccer matches, but the Supreme Leader reversed that move. Women can vote and run in parliamentary elections, but their candidacies for president have routinely been barred by the Council of Guardians. Iranian women can drive, and many work outside the home, including owning and running their own businesses. Eleven out of the 290 Majles deputies are women.
- Each year since 1999, the State Department religious freedom report has named Iran as a “Country of Particular Concern” under the International Religious Freedom Act, and no significant improvement in Iran’s practices on this issue was noted in the International Religious Freedom report for 2005. (No sanctions have been added because of this designation, on the grounds that Iran is already subject to extensive U.S. sanctions.)
- Iran is repeatedly cited for repression of the Baha’i community, which Iran’s Shi’ite Muslim clergy views as a heretical sect. In March 2006, U.N. Special Rapporteur on Freedom of Religion or Belief revealed the existence of an Iranian letter directing greater domestic surveillance of the Baha’is. In the 1990s, several Baha’is were executed for apostasy (Bahman Samandari in 1992; Musa Talibi in 1996; and Ruhollah Ruhani in 1998). Another, Dhabihullah Mahrami, was in custody since 1995 and died of unknown causes in prison in December 2005. In February 2000, Iran’s Supreme Court set aside the death sentences against three other Baha’is. Several congressional resolutions have condemned

Iran's treatment of the Baha'is, including S.Con.Res. 57 (106th Congress), which passed the Senate July 19, 2000, and H.Con.Res. 257, which passed the House on September 19, 2000. In the 109th Congress, partly in response to a May 2006 wave of arrests of Baha'is in Shiraz, H.Con.Res. 415, requests the Administration emphasize that it regards Iran's treatment of the Baha'is as a significant factor in U.S. Iran policy.

- On the treatment of Jews (along with Christians, a "recognized minority," with one seat in the Majles), the 30,000-member Jewish community (the largest in the Middle East aside from Israel) enjoys somewhat more freedoms than Jewish communities in several other Muslim states. However, in practice the freedom of Iranian Jews to practice their religion is limited, and Iranian Jews remain reluctant to speak out for fear of reprisals. During 1993-1998, Iran executed five Jews allegedly spying for Israel. In June 1999, Iran arrested 13 Jews (mostly teachers, shopkeepers, and butchers) from the Shiraz area that it said were part of an "espionage ring" for Israel. After an April-June 2000 trial, ten of the Jews and two Muslims accomplices were convicted (July 1, 2000), receiving sentences ranging from 4 to 13 years. An appeals panel reduced the sentences, and all were released by April 2003.
- The State Department report notes other discrimination against Sufis and Sunni Muslims, although abuses against Sunnis could reflect that minority ethnicities, including Kurds, are Sunnis. In addition, the regime has repressed recent unrest among the minority Azeri population, as well as Arabs in the southern province of Khuzestan.
- The June 6, 2006 (latest annual), State Department "Trafficking in Persons" report places Iran in Tier 3 (worst level) for failing to take action to prevent trafficking in persons. Girls purportedly are trafficked for sexual exploitation within Iran and from Iran to Turkey, Pakistan, and the Persian Gulf states.

Successive administrations have not generally considered Iran's human rights record as a strategic threat to U.S. interests, but the Bush Administration has stepped up criticism of Iran's human rights record. The Bush Administration has established with European allies and Canada a "Human Rights Working Group" that coordinates a response to Iran's human rights abuses. In his November 30, 2005, speech, Under Secretary of State Nicholas Burns said the United States is working with other countries for the release of all political prisoners, and he named several specific cases. A special U.N. Human Rights Commission monitoring mission for Iran, consisting of reports by a "Special Representative" on Iran's human rights record, was conducted during 1984-2002. Iran has since agreed to "thematic" monitoring consisting of periodic U.N. investigations of specific aspects of Iran's human rights record. Iran is a party to the two international human rights covenants.

Iran's Strategic Capabilities and Weapons of Mass Destruction Programs

For the past two decades, the United States has sought to contain Iran's weapons programs. The Administration's "National Security Strategy" document released March 16, 2006, says the United States "may face no greater challenge from a single country than from Iran," based on Iran's growing weapons of mass destruction (WMD) programs and its expanding ability to project power in its immediate region, as well as its support for radical Islamist movements (discussed below).¹¹

Conventional Military

Iran's armed forces total about 550,000 personnel, including both the regular military and the Revolutionary Guard. The latter, which also controls the *Basij* volunteer militia that enforces adherence to Islamic customs, is generally loyal to the hardliners and, according to some recent analysis, is becoming more assertive. That trend will likely continue now that a former Guard has become president. Iran's conventional forces are likely sufficient to deter or fend off conventional threats from Iran's relatively weak neighbors such as post-war Iraq, Turkmenistan, Azerbaijan, and Afghanistan but are largely lacking in logistical ability to project power much beyond Iran's borders. Lacking such combat capability, Iran has avoided cause for conflict with its more militarily capable neighbors such as Turkey and Pakistan. Even though it has upgraded its forces with Russian-supplied combat aircraft (25 MiG-29s and 30 Su-24s) and tanks (about 75 T-72's) in the mid-1990s, Iran is not considered by U.S. commanders to be a major conventional threat to U.S. forces.

Iran has developed a structure for unconventional warfare that gives Iran the capability to partly compensate for its conventional weakness. CENTCOM commander Gen. John Abizaid said in March 2006 that the Revolutionary Guard Navy, through its basing and force structure, is designed to give Iran a capability to "internationalize" a crisis in the Strait of Hormuz in the event of confrontation with Iran. The weaponry Iran might field for such operations includes the following.

- *Ship-launched cruise missiles.* Over the past decade, Iran (both regular and Revolutionary Guard navies) has built a fleet of about 300 ships of various, but mostly smaller, types, including 3 frigates, 40 small *Boghammers*, and 10 Chinese *Hudong* patrol boats armed with Chinese-made C-802 cruise missiles. Iran also has Chinese-supplied HY-2 Seerseekers emplaced along Iran's coast. In early 2005, Commander of U.S. Central Command Gen. John Abizaid and head of the Defense Intelligence Agency Vice Admiral Lowell Jacoby both said Iran could use these capabilities to block the Strait of Hormuz at the entrance to the Persian Gulf, to attack Persian Gulf state oil export terminals, or to threaten shipping through that

¹¹ [<http://www.whitehouse.gov/nsc/nss/2006/>]

waterway.¹² One possible tactic is to use suicide boat attacks or to lay mines in the Strait. In April 2006, Iran conducted naval maneuvers including test firings of what Iran claims are underwater torpedos that can avoid detection, presumably for use against U.S. ships in the Gulf, and a surface-to-sea radar-evading missile launched from helicopters or combat aircraft. U.S. military officials said the claims might be an exaggeration.

- *Russian-supplied Kilo-class submarines with “Club-S” (120 mile range) anti-ship missiles and older model British-made frigates.*¹³ Iran is said to also possess several midget submarines. Iran could try to use these vessels in any conflict, although some experts believe that U.S. naval forces could detect and counter this equipment, particularly the larger vessels, without substantial difficulty.
- *Anti-aircraft missile systems.* On December 3, 2005, Russia announced an agreement to sell Iran 29 anti-aircraft missile systems (Tor M1), worth about \$700 million, and raising fears of a possible new round of Russian sales to Iran of major combat equipment. U.S. officials are pressing Russia not to proceed with the sale.

Weapons of Mass Destruction: Nuclear Program¹⁴

Some observers believe that Iran and the international community have reached a crisis over Iran’s nuclear program; many outside experts and governments appear to agree that Iran is attempting to achieve a nuclear weapons capability. The International Atomic Energy Agency (IAEA), despite intensified inspections and other means of investigation since late 2002, says it cannot verify that Iran’s program is purely peaceful. Its reports on January 31, 2006, and February 27, 2006, say documents found by the IAEA show a possible “military nuclear dimension” to Iran’s program, including plans for high explosives and warheads. Iranian leaders insist that Iran’s nuclear program is for electricity generation because its oil resources are finite. Iran asserts it will not give up the “right” to enrich uranium to make nuclear fuel, saying doing so is allowed under the 1968 Nuclear Non-Proliferation Treaty,¹⁵ to which Iran is a party, and it will not allow other nations to control its nuclear fuel supply. On June 18, 2003, President Bush said that the United States would “not tolerate construction” of a nuclear weapon by Iran, and he has reiterated that position, with varying formulations, several times since.

¹² Jacoby testimony before the Senate Intelligence Committee. Feb. 16, 2005.

¹³ Pronina, Lyuba. “Paper: Iran In Talks to Refurbish Subs.” *Moscow Times*, July 5, 2005.

¹⁴ For further information, see CRS Report RS21592, *Iran’s Nuclear Program: Recent Developments*, by Sharon Squassoni.

¹⁵ For Iran’s arguments about its program, see Iranian paid advertisement “An Unnecessary Crisis — Setting the Record Straight About Iran’s Nuclear Program,” in the *New York Times*, Nov. 18, 2005. P. A11.

Despite Iran's professions that WMD is inconsistent with its ideology, virtually all Iranian factions appear to agree on the utility of a nuclear weapons capability as a means of ending its perceived historic vulnerability to U.S. domination and a symbol of Iran as a major nation. Others believe Iran sees nuclear weapons as instruments to dominate the Persian Gulf, and these experts believe an Iranian nuclear weapon would dramatically shift the balance of power in the Gulf/Middle East in Iran's favor. There are also fears Iran might transfer WMD to extremist groups or countries, and Supreme Leader Khamene'i heightened concerns in April 2006 by saying that Iran might transfer nuclear technology to Sudan or other countries.

Although suspicions of Iran's intentions are widely shared, there is disagreement over the urgency of the issue. In testimony before the Senate Intelligence Committee on February 16, 2005, DIA head Adm. Jacoby (see above) said that, "Unless constrained by a nuclear non-proliferation agreement, Tehran probably will have the ability to produce nuclear weapons early in the next decade." In August 2005, press reports about an intelligence community estimate said the U.S. estimate of an Iranian nuclear weapons ranges from 6-10 years from then.¹⁶ Other experts focus on a so-called "point of no return," a point at which Iran has the expertise needed for a nuclear weapon, a point that could be reached within a year by some estimates. Negroponte and other intelligence officials indicated that Iran's April 11, 2006, announcement that it had enriched uranium (low enrichment, 3.5%) did not materially change their estimates of how close Iran might be to a nuclear weapons capability. Iran subsequently claimed it had mastered a 164-centrifuge cascade, although press reports say that is in doubt and that Iran might have slowed its program in May 2006. However, some were alarmed at Ahmadinejad's related revelation that Iran has been conducting "research" with advanced (P-2) centrifuges.

European Diplomatic Efforts/"Paris Agreement." U.S., international, and IAEA attention to Iran's nuclear program began in late 2002 after Iran confirmed PMOI allegations that it was building two facilities that could be used to produce fissile material useful for a nuclear weapon. The Natanz facility could produce enriched uranium, and the Arak facility reportedly is a heavy water production plant considered ideal for the production of plutonium. It was also revealed in 2003 that the founder of Pakistan's nuclear weapons program, Abdul Qadeer (A.Q.) Khan, sold Iran and other countries (Libya, North Korea) nuclear technology and designs.¹⁷

At the same time, Russia has continued work, under a January 1995 contract, on an \$800 million nuclear power plant at Bushehr. Russia insisted that Iran sign an agreement under which Russia would provide reprocess the plant's spent nuclear material; that agreement was signed on February 28, 2005, somewhat easing proliferation concerns about the plant. The plant is expected to become operational in late 2006, but that might depend on whether Iran reaches an overall nuclear

¹⁶ Linzer, Dafna. "Iran Is Judged 10 Years From Nuclear Bomb." *Washington Post*, Aug. 2, 2005; Weissman, Steven and Douglas Jehl. "Estimate Revised On When Iran Could Make Nuclear Bomb." *New York Times*, Aug. 3, 2005.

¹⁷ Lancaster, John and Kamran Khan. "Pakistanis Say Nuclear Scientists Aided Iran." *Washington Post*, Jan. 24, 2004.

agreement with the international community, as discussed below. Iran wants to build up to 20 more nuclear power plants, including possibly six by Russia. On December 5, 2005, Iran announced it is putting out for bid two 1,000 megawatt reactors and said an Iranian company would build a 300 megawatt reactor in Khuzestan Province.

In 2003, France, Britain, and Germany (the “EU-3”) opened a separate diplomatic track to curb Iran’s program. On October 21, 2003, the EU-3 and Iran issued a joint statement in which Iran pledged, in return for peaceful nuclear technology, to (1) fully disclose its past nuclear activities, (2) to sign and ratify the “Additional Protocol” to the NPT (allowing for enhanced inspections), and (3) to suspend uranium enrichment activities. Iran signed the Additional Protocol on December 18, 2003, although the Majles has not yet ratified it. Iran abrogated the agreement after the IAEA reports of November 10, 2003, and February 24, 2004, stated that Iran had violated its NPT reporting obligations over an 18-year period.

In the face of the U.S. threat to push for Security Council action, the EU-3 and Iran resumed negotiations in an attempt to reach a more permanent agreement. Under the November 14, 2004, “Paris Agreement,” Iran agreed to suspend uranium enrichment (as of November 22, 2004, and pending a permanent agreement) in exchange for a resumption of talks on an Iran-EU trade agreement, support for Iran’s entry into the World Trade Organization, and other assistance.¹⁸ An IAEA board resolution (November 29, 2004) recognized the agreement. EU-3 - Iran negotiations on a permanent nuclear pact began on December 13, 2004, and related EU-Iran talks on a trade and cooperation accord began in January 2005. The nuclear talks also included “working groups” discussing “security” issues and economic cooperation. On March 11, 2005, the Bush Administration announced it would support the EU-3 talks by offering to drop U.S. objections to Iran’s application to the World Trade Organization (which it did in May 2005) and to consider sales of U.S. civilian aircraft parts to Iran. The United States did not join these talks.

Reference to the Security Council. The Paris Agreement broke down just after the June 2005 Iranian presidential election. Iran rejected as insufficient the EU-3 “final settlement” plan (August 5, 2005) that offered to assist Iran with peaceful uses of nuclear energy (medicine, agriculture, and other uses) and provide limited security guarantees in exchange for Iran’s (1) permanently ending uranium enrichment; (2) dismantling its heavy water reactor at Arak; (3) agreement to no-notice nuclear inspections; and (4) pledge not to leave the NPT (which has a legal exit clause). On August 8, 2005, Iran broke the IAEA seals on its uranium “conversion” (one step before enrichment) facility at Esfahan and began conversion.

On September 24, 2005, a majority of the IAEA Board voted to declare Iran in non-compliance with the NPT and to refer the issue to the Security Council if Iran did not come back into compliance with the Paris Agreement.¹⁹ No time frame was

¹⁸ For text of the agreement, see [http://www.iaea.org/NewsCenter/Focus/IaeaIran/eu_iran14112004.shtml].

¹⁹ Voting in favor: United States, Australia, Britain, France, Germany, Canada, Argentina, Belgium, Ghana, Ecuador, Hungary, Italy, Netherlands, Poland, Portugal, Sweden, Slovakia, (continued...)

set for the referral. Iran headed off immediate action by allowing new IAEA inspections of the military-related Parchin plant and by providing new information on a 1987 offer by the A.Q. Khan network for advanced centrifuge designs. Iran did not cease uranium conversion (and the IAEA said on April 28, 2006, that Iran has about 110 tons of converted uranium, enough for 10 nuclear weapons if enriched), although the conversion facility remained under IAEA inspection. The Administration supported a mid-November 2005 Russian proposal to Iran to establish a facility in Russia at which Iranian uranium would be enriched, thereby enabling Iran to claim it had retained its right to enrich. Iran did not accept the proposal, but it has not rejected the idea outright.

On January 3, 2006, Iran again appeared unwilling to reach an agreement when it announced that it would resume uranium enrichment for “research;” it subsequently broke IAEA seals at its uranium enrichment facility at Natanz and other locations (Pars Trash and Farayand Technique). On February 4, 2006, the IAEA board voted 27-3²⁰ for a resolution to “report” to the U.N. Security Council, after the IAEA reports steps required of Iran to come back into compliance. After the vote, Iran ceased allowing the voluntary IAEA inspections permitted under the Paris Agreement and had the IAEA remove some monitoring equipment. The IAEA report of February 27, 2006 confirmed that Iran had begun enrichment activities (10 centrifuges) and the March 6-8, 2006, IAEA board meeting did not withhold referral of the case to the U.N. Security Council.

On March 29, 2006, the Council agreed on a Security Council presidential statement (not a Council resolution) that was somewhat weaker than the United States had wanted. The statement set a 30-day time limit (April 28) for Iran to cease uranium enrichment and meet other IAEA requirements, after which time the Council will undertake further deliberations if Iran does not comply.²¹ The April 28 IAEA report (Gov/2006/27) said Iran had not complied with the March 29 Council presidential statement, and the issue returned to the Security Council for further consideration, where the United States sought a formal resolution, under Chapter 7 (“international peace and security”) of the U.N. Charter. Such a resolution would mandate Iran’s compliance and authorize punitive measures, such as economic sanctions, to compel compliance. However, Russia and China’s reservations blocked agreement on a resolution and, on May 8, 2006, the Administration said it would support a renewed diplomatic overture by the EU-3 entailing presenting to Iran both incentives, as well as possible sanctions for a final nuclear agreement that would halt Iran’s enrichment of uranium. At the same time, the Administration rebuffed a

letter from Ahmadinejad to President Bush²² as offering no proposals on the nuclear issue.

U.S. Offer to Join Talks and Future Steps. In an effort to strengthen the EU-3 diplomacy, as well as to build support for international or multilateral sanctions should that be required, President Bush approved issuing a U.S. proposal on May 31 for the United States to join EU-3 talks with Iran if Iran first suspends its uranium enrichment. Such talks would center on a package of incentives and possible sanctions that the United States, EU-3, Russia, and China agreed to in Vienna on June 1 and which EU representative Javier Solana formally presented to Iran on June 6, although the possible sanctions apparently were not presented to Iran in detail. Iranian reaction has ranged from criticizing the United States and the allied “condition” that Iran first suspend enrichment before talks could begin in earnest, to praising it (Ahmadinejad) as a “positive step forward.” Iran says it will give a final response by mid-August, somewhat outside the informal deadline of late June that the EU has set, suggesting Iran might not accept the package as presented. Many experts believe that Iran will try to modify the package to allow for at least some continued uranium enrichment capability. Administration officials say that if Iran does not accept the package as is, the United States will renew its push for a Security Council resolution or, alternately, action by a coalition of like-minded countries. However, Russia and China apparently have not agreed, in advance, to the possible sanctions if Iran rejects the package. In deference to Russia and China, the possible Security Council resolution would mention Article 41 of the U.N. Charter, which refers to economic measures, but not Article 42, which would authorize military action for non-compliance. The specific incentives and penalties presented to Iran have not been publicly disclosed, but press reports say it contains the following:²³

Reported Incentives

- Negotiations on an EU-Iran trade agreements and acceptance of Iran into the World Trade Organization.
- Easing of U.S. sanctions to permit sales to Iran of commercial aircraft or aircraft parts.
- Sale to Iran of a light-water nuclear reactor and guarantees of nuclear fuel.
- Possible light-water research reactors for medicine and agriculture applications.
- An “energy partnership” between Iran and the EU, including help for Iran to modernize its oil and gas sector and to build export pipelines.

²² See [<http://www.president.ir/eng/ahmadinejad/cronicnews/1385/02/19/index-e.htm#b3>].

²³ One source purports to have obtained the contents of the package from ABC News: [<http://www.basicint.org/pubs/Notes/BN060609.htm>]

- Support for a regional security forum for the Persian Gulf, and support for the objective of a WMD free zone for the Middle East.
- The possibility of eventually allowing Iran to resume uranium enrichment if it complies with all outstanding IAEA requirements and can prove that its nuclear program is purely for peaceful purposes.

Reported Sanctions

- Denial of visas for Iranians involved in Iran's nuclear program and for high-ranking Iranian officials.
- Freeze on assets of Iranian officials or institutions.
- Freezing of Iran's assets abroad and a ban on some financial transactions with Iran.
- Ban on sales of advanced technology to Iran.
- Ban on arms sales to Iran.
- Ban on sales to Iran of gasoline and other refined oil products.
- An end to support for Iran's application to the WTO.

Other sanctions and options are available on Iran, as discussed below. The impact of these and other sanctions and possible Iranian reactions are discussed later.

Chemical Weapons, Biological Weapons, and Missiles

Official U.S. reports and testimony, particularly the semi-annual CIA reports to Congress on WMD acquisitions worldwide, continue to state that Iran is seeking a self-sufficient chemical weapons (CW) infrastructure, and that it "may have already" stockpiled blister, blood, choking, and nerve agents — and the bombs and shells to deliver them. This raises questions about Iran's compliance with its obligations under the Chemical Weapons Convention (CWC), which Iran signed on January 13, 1993, and ratified on June 8, 1997. Unclassified CIA reports to Congress in 2004 said Iran "probably maintain[s] an offensive [biological weapons] BW program ... and probably has the capability to produce at least small quantities of BW agents." A *Jane's Defence Weekly* report of October 26, 2005, said that Iran agreed in July 2005 to provide Syria with CW equipment to enable Syria to independently produce CW agent precursors.

Missiles/Warheads. Largely with foreign help, Iran is becoming self sufficient in the production of ballistic missiles. DNI Negroponte testified on February 2, 2006, that Iran "already has the largest inventory of ballistic missiles in the Middle East, and Tehran views its ballistic missiles as an integral part of its strategy to deter or retaliate against forces in the region, including U.S. forces." A *New York Times* report of May 22, 2006, said that the Bush Administration is seeking

to establish an anti-missile site in Poland or the Czech Republic to counter Iranian ballistic missiles, at an initial cost of \$56 million. See CRS Report RS21548, *Iran's Ballistic Missile Capabilities*, by Andrew Feickert.

- *Shahab-3*. Two of its first three tests of the 800-mile range *Shahab-3* (July 1998, July 2000, and September 2000) reportedly were inconclusive or unsuccessful, but Iran conducted an apparently successful series of tests in June 2003. Iran subsequently called the *Shahab-3*, which would be capable of hitting Israel, operational and in production. Despite Iran's claims, U.S. experts say the missile is not completely reliable, and Iran tested a purportedly more accurate version on August 12, 2004. Iran called the test successful, although some observers said Iran detonated the missile in mid-flight. On May 31, 2005, Iran announced it had successfully tested a solid-fuel version of the *Shahab-3*.
- *Warheads*. A *Wall Street Journal* report of September 14, 2005, said that U.S. intelligence believes Iran is working to adapt the *Shahab-3* to deliver a nuclear warhead. Subsequent press reports say that U.S. intelligence captured an Iranian computer in mid-2004 showing plans to construct a nuclear warhead for the *Shahab*.²⁴ Iran denied work on such a warhead, but the IAEA is seeking additional information from Iran on the material.
- *Shahab-4*. In October 2004, Iran announced it had succeeded in extending the range of the *Shahab-3* to 1,200 miles, and it added in early November 2004 that it is capable of "mass producing" this longer-range missile, which Iran calls the *Shahab-4*. An *Agence France Presse* report of February 6, 2006, said an Iranian test of this missile in January 2006 was successful. If Iran's claims are accurate, large portions of the Near East and Southeastern Europe would be in range, including U.S. bases in Turkey. On March 31, 2006, Iran claimed to have tested a missile, possibly a *Shahab-4*, that Iran says has multiple, separately targeted warheads.
- *BM-25*. On April 27, 2006, Israel's military intelligence chief said that Iran had received a shipment of North Korean-supplied BM-25 missiles. The missile has a 1,550 mile range and is said to be capable of carrying nuclear warheads.
- *ICBM*. Iran's asserted progress on missiles would appear to reinforce the concerns of the U.S. intelligence community. In February 2005, DIA Director Jacoby testified that Iran might be capable of developing an intercontinental ballistic missile (3,000

²⁴ Broad, William and David Sanger. Relying On Computer, U.S. Seeks to Prove Iran's Nuclear Aims. *New York Times*, Nov. 13, 2005.

mile range) by 2015,²⁵ but that it was not yet clear whether Iran has decided to field such a system.

- *Other Missiles.* On September 6, 2002, Iran said it successfully tested a 200 mile range “Fateh 110” missile (solid propellant), and Iran said in late September 2002 that it had begun production of the missile.²⁶ On March 18, 2005, the *London Financial Times* reported that Ukraine has admitting selling 12 “X-55” cruise missiles to Iran in 2001; the missiles are said to have a range of about 1,800 miles. Iran also possesses a few hundred short-range ballistic missiles, including the *Shahab-1* (Scud-b), the *Shahab-2* (Scud-C), and the *Tondar-69* (CSS-8).

Foreign Policy and Support for Terrorist Groups

Iran’s foreign policy is a product of the ideology of Iran’s Islamic revolution, blended with and sometimes tempered by long-standing national interests. In the decade prior to Ahmadinejad’s election, Iran tried to normalize relations with most of its neighbors, although it continued some efforts to influence internal events in neighboring and nearby states, including through support of terrorist groups. The State Department report on international terrorism for 2005, released April 28, 2006, again stated (as it has for more than a decade) that Iran “remained the most active state sponsor of terrorism” in 2005, and the report again attributes the terrorist activity to the Revolutionary Guard and the Intelligence Ministry.²⁷

Relations With The Persian Gulf States.²⁸ During the 1980s and early 1990s, Iran sponsored Shiite Muslim extremist groups opposed to the Sunni Muslim-led monarchy states of the 6-member Gulf Cooperation Council (GCC; Saudi Arabia, Kuwait, Bahrain, Qatar, Oman, and the United Arab Emirates). These activities appeared to represent an effort by Iran to “export” its Islamic revolution. However, Iran’s efforts were unsuccessful and caused the Gulf states to ally closely with the United States. By the mid-1990s, and particularly during Khatemi’s presidency, Iran reduced support for Gulf Shiite dissident movements there. Some believe that Ahmadinejad, who is associated with the Revolutionary Guard and other hardline institutions, might shift back to a more confrontational stand toward the Gulf states, although such a policy shift has not occurred, to date. Ahmadinejad and several of his cabinet officials have visited the Gulf states since he took office. Kuwait and Iran signed a memorandum on March 20 to coordinate against smuggling and drug trafficking. The Gulf states nonetheless remain wary of Iran’s nuclear program, arguing against it on environmental grounds thus far; the GCC states held talks with U.S. officials in May 2006 to coordinate on potential U.S.-GCC joint Iran

²⁸ See CRS Report RL31533, *The Persian Gulf States: Issues for U.S. Policy, 2004*, by Kenneth Katzman.

containment and WMD defense measures. Other Gulf-Iran issues are discussed below.

- *Saudi Arabia.* Many observers closely watch the relationship between Iran and Saudi Arabia as an indicator of Iran's overall posture in the Gulf. During the 1980s, Iran sponsored disruptive demonstrations at annual Hajj pilgrimages in Mecca, some of which were violent, and Iran sponsored Saudi Shiite dissident movements. Iran and Saudi Arabia restored relations in December 1991 (after a four-year break), and progressed to high-level contacts during Khatemi's presidency. In May 1999, Khatemi became the first senior Iranian leader to visit Saudi Arabia since the Islamic revolution; he visited again on September 11, 2002. The exchanges suggested that Saudi Arabia had moved beyond the issue of the June 25, 1996, Khobar Towers housing complex bombing, which killed 19 U.S. airmen, and was believed by some to have been orchestrated by Iranian agents.²⁹
- In April 1992, Iran expelled UAE security forces from the Persian Gulf island of Abu Musa, which it and the UAE shared under a 1971 bilateral agreement. (In 1971, Iran, then ruled by the U.S.-backed Shah, seized two other islands, Greater and Lesser Tunb, from the emirate of Ras al-Khaymah, as well as part of Abu Musa from the emirate of Sharjah.) The UAE has sought to refer the dispute to the International Court of Justice (ICJ), but Iran insists on resolving the issue bilaterally. The UAE has not pressed the issue vigorously in several years, although the UAE still insists the islands dispute be kept on the agenda of the U.N. Security Council (which it has been since December 1971). The United States, which is concerned about Iran's military control over the islands, supports UAE proposals but takes no position on sovereignty.
- Qatar is wary that Iran might seek to encroach on its large North Field (natural gas), which it shares with Iran (called South Pars on Iran's side) and through which Qatar earns large revenues for natural gas exports. Qatar's fears were heightened on April 26, 2004, when Iran's deputy Oil Minister said that Qatar is probably producing more gas than "her right share" from the field and that Iran "will not allow" its wealth to be used by others.
- In 1981 and again in 1996, Bahrain officially and publicly accused Iran of supporting Bahraini Shiite dissidents (the Islamic Front for

²⁹ Walsh, Elsa. "Annals of Politics: Louis Freeh's Last Case." *The New Yorker*, May 14, 2001. The June 21, 2001 federal grand jury indictments of 14 suspects (13 Saudis and a Lebanese citizen) in the Khobar bombing indicate that Iranian agents may have been involved, but no indictments of any Iranians were announced. In June 2002, Saudi Arabia reportedly sentenced some of the eleven Saudi suspects held there. The 9/11 Commission final report asserts that Al Qaeda might have had some as yet undetermined involvement in the Khobar Towers attacks.

the Liberation of Bahrain, Bahrain-Hizbollah, and other Bahraini dissident groups) in efforts to overthrow the ruling Al Khalifa family. Bahrain is about 60% Shiite, but its government is dominated by the Sunni Muslim Al Khalifa family. Tensions eased substantially during Khatemi's presidency, but Bahraini leaders fear that Ahmadinejad might again stoke Shiite unrest similar to that which rocked Bahrain during 1994-1998.

Iranian Policy in Iraq. The U.S. military ousting of Saddam Hussein appears to have benefitted Iran strategically. This issue is covered in CRS Report RS22323, *Iran's Influence in Iraq*, by Kenneth Katzman. The main thrust of Iran's strategy in post-Saddam Iraq has been to persuade all Shiite Islamist factions in Iraq to work together to ensure political and electoral Shiite dominance of post-Saddam Iraq. However, Iran is increasingly close to powerful anti-U.S. Shiite cleric Moqtada Al Sadr, whose militia has been clashing with British peacekeeping forces in Basra since mid-2005 and conducted two major uprisings against U.S. forces in 2004. Secretary of Defense Rumsfeld said on March 7, 2006, that Iran had sent members of its Revolutionary Guard "Qods Force" (its export-of-the-revolution unit) into Iraq to assist militant forces, presumably those of Sadr. In May 2006, Iranian Foreign Minister Manuchehr Mottaki visited Iraq, and the two countries pledged cooperation on securing their joint border.

In an effort to limit opportunities for Iran to act against U.S. interests in Iraq, in November 2005 U.S. Ambassador to Iraq Zalmay Khalilzad said he had received approval from President Bush to begin a diplomatic dialogue with Iranian officials on the issue of Iraqi stability and Iran's aid to Shiite militias. Even though, on March 17, 2006, Iranian officials publicly accepted talks on Iraq, no talks have actually taken place, to date. Ahmadinejad said on April 25, 2006, that there was no need for U.S.-Iran talks now that an Iraqi government has formed.

Supporting Palestinian Militant Groups. Iran's support for Palestinian terrorist groups has long concerned U.S. Administrations, particularly since doing so gives Tehran an opportunity to try to obstruct Israeli-Palestinian peace prospects. The State Department reports on terrorism for 2005 (released on April 28, 2006) accuses Iran of providing "extensive" funding, weapons, and training to Hamas, Palestinian Islamic Jihad (PIJ), the Al Aqsa Martyr's Brigades, and the Popular Front for the Liberation of Palestine-General Command (PFLP-GC). All are named as foreign terrorist organizations (FTO) by the State Department for their use of violence against Israelis and efforts to undermine the Arab-Israeli peace process. Of these groups, PIJ is closest politically to Iran. State Department terrorism reports since 2002 have said that Iran, possibly via Lebanese Hizballah, has been encouraging coordination among Palestinian terrorist groups, particularly Hamas and PIJ, since the September 2000 Palestinian uprising.

Some see Iran's policy further strengthened by Hamas' victory in the January 25, 2006, Palestinian legislative elections, although Hamas activists say they are not politically close to Iran because Iran is mostly Shiite, while Hamas members are

Sunni Muslims.³⁰ Hamas was reputed to receive about 10% of its budget in the early 1990s from Iran, although since then Hamas has developed many other sources of funding from wealthy Persian Gulf donors and supporters in Europe and elsewhere. Others believe that Hamas now has a stake in running the Palestinian Authority and is less likely to accept advice or influence from Iran if such advice conflicts with Palestinian interests. On April 16, 2006, at a conference in Tehran of Palestinian militant leaders, Iran pledged \$50 million to the Hamas-led government to help it weather aid reductions from the United States and Europe. However, some pro-U.S. Arab states (Qatar, Saudi Arabia, UAE, and Kuwait) have pledged it similar amounts since Hamas took over governance.

Iran also has sometimes openly incited anti-Israel violence, including hosting conferences of anti-peace process organizations (April 24, 2001, and June 2-3, 2002). Ahmadinejad's various statements on Israel were discussed above. However, other Iranian leaders have made similar statements in the past. In the 1990s, Khamene'i called Israel a "cancerous tumor" and made other statements suggesting that he seeks Israel's destruction. In December 2001, Rafsanjani said that it would take only one Iranian nuclear bomb to destroy Israel, whereas a similar strike against Iran by Israel would have far less impact because Iran's population is large.

On the other hand, there have been differences within Iran's leadership on this issue. During his presidency, Khatemi generally refrained from inflammatory statements against Israel and even conversed with Israel's president at the 2005 funeral of Pope John Paul II. The Iranian Foreign Ministry, considered a bastion of moderates, has tried to soften or explain Ahmadinejad's statements as "emotional." Ministry spokespersons have repeatedly stated that Iran's official position is that it would not seek to block any final Israeli-Palestinian settlement, but that the peace process is too weighted toward Israel to result in a fair settlement for Palestinians.

Lebanese Hizballah. Iran maintains a close relationship with Lebanese Hizballah, a Shiite Islamist group and designated FTO, formed in 1982 by Lebanese Shiite clerics sympathetic to Iran's Islamic revolution and responsible for several acts of anti-U.S. and anti-Israel terrorism in the 1980s and 1990s.³¹ Hizballah maintains military forces along the border that operate outside Lebanese government control, even though the United Nations has certified that Israel had completed its withdrawal from southern Lebanon (May 2000) and despite U.N. Security Council Resolution 1559 (September 2, 2004) that requires the militia's dismantlement. Hizballah asserts that Israel still occupies small tracts of Lebanese territory (Shebaa Farms). A small number (less than 50, according to a *Washington Post* report of April 13, 2005) of Iranian Revolutionary Guards reportedly remain in Lebanon to coordinate

³⁰ CNN "Late Edition" interview with Hamas co-founder Mahmoud Zahar, Jan. 29, 2006.

³¹ Hizballah's last known terrorist attacks outside Lebanon was the July 18, 1994 bombing of a Jewish community center in Buenos Aires, which killed 85. On Mar. 11, 2003, an Argentinian judge issued arrest warrants for four Iranian diplomats, including former Intelligence Minister Ali Fallahian, for alleged complicity in the attack. Hizballah is also believed to have committed the Mar. 17, 1992, bombing of Israel's embassy in that city.

Iranian arms deliveries to Hizballah.³² Past reported shipments have included Stingers obtained by Iran in Afghanistan, mortars that can reach the Israeli city of Haifa and, in 2002, over 8,000 Katyusha rockets.³³ The State Department report on terrorism for 2004 (released April 2005) says Iran supplied Hizballah with an unmanned aerial vehicle (UAV), the *Mirsad*, that Hizballah briefly flew over the Israel-Lebanon border on November 7, 2004, and April 11, 2005.

Although it retains its militia, Hizballah is evolving into a political movement in Lebanon. In March 2005, it organized a huge demonstration against U.S. and other international pressure on Syria to completely withdraw from Lebanon, although Syria did subsequently withdraw its military (and intelligence) forces. The Syrian withdrawal has, by some accounts, left a vacuum for Iran to expand its influence in Lebanon. In the Lebanese parliamentary elections of May - June 2005, Hizballah expanded its presence in the Lebanese parliament; it now holds 14 seats in the 128-seat parliament. On the strength of this showing, one Hizballah member was given a cabinet seat (Mohammad Fneish, Minister of Energy and Water Resources), positioning Hizballah to exert greater influence on Lebanese government decisions. Despite Hizballah's record of attacks on U.S. forces and citizens in Lebanon during the 1980s, President Bush indicated, in comments to journalists in March 2005, that the United States might accept Hizballah as a legitimate political force in Lebanon if it disarms. Because Hizballah has not yet disarmed, the United States continues to refuse to meet with any Hizballah members.

In the 109th Congress, two similar resolutions (H.Res. 101 and S.Res. 82) have passed their respective chambers. They urge the EU to classify Hizballah as a terrorist organization; S.Res. 82 calls on Hizballah to disband its militia as called for in U.N. Security Council Resolution 1559 (September 2, 2004). The House-passed State Department authorization bill (H.R. 2601) contains provisions calling on the Bush Administration to help the Lebanese government disarm Hizballah and threatening the withholding of U.S. aid to Lebanon if it does not disarm Hizballah.

Central Asia and the Caspian. Iran's policy in Central Asia has thus far emphasized Iran's rights to Caspian Sea resources, particularly against Azerbaijan. That country's population, like Iran's, is mostly Shi'ite Muslim, but Azerbaijan is ruled by secular leaders. In addition, Azerbaijan is ethnically Turkic, and Iran fears that Azerbaijan nationalists might stoke separatism among Iran's large Azeri Turkic population. In July 2001, Iranian warships and combat aircraft threatened a British Petroleum (BP) ship on contract to Azerbaijan out of an area of the Caspian Iran considers its own. The United States called that action provocative, and it offered new border security aid and increased political support to Azerbaijan. The United States successfully backed construction of the Baku-Tblisi-Ceyhan oil pipeline, intended in part to provide alternatives to Iranian oil. Iran was purportedly a main topic of discussion during a White House meeting between Azerbaijan President Ilham Aliyev and President Bush on April 28, 2006. Along with India and Pakistan, Iran has been given observer status at the Central Asian security grouping called the

Shanghai Cooperation Organization (SCO), which contains Russia, China, Kazakhstan, Kyrgyzstan, Uzbekistan, and Tajikistan.

Afghanistan.³⁴ Since the fall of the Taliban, Iran has moved to restore some of its Iran's traditional sway in western, central, and northern Afghanistan where Persian-speaking Afghans predominate. It aided Northern Alliance figures that were prominent in the post-Taliban governing coalition, and Iranian companies have been extensively involved in road building and other reconstruction projects in western Afghanistan. Since 2004, Iran's influence has waned somewhat as its allies, mostly Persian-speaking Afghan minority factions still referred to as the "Northern Alliance," have been marginalized in Afghan politics. However, a CRS visit to Afghanistan in March 2006 noted Iranian-funded Shiite theological seminaries being built in Kabul, perhaps an indication of Iran's continuing efforts to support Afghanistan's Shiite minority. Fearing the continuing presence of the about 18,000 U.S. troops in Afghanistan, Iran has objected to the U.S. use of Shindand air base in western Afghanistan, asserting that it is being used to conduct surveillance on Iran. U.S. aircraft began using the base in September 2004 after the downfall of the pro-Iranian governor of Herat Province, Ismail Khan.

Iran long opposed the regime of the Taliban in Afghanistan on the grounds that it oppressed Shiite Muslim and other Persian-speaking minorities. Iran nearly launched a military attack against the Taliban in September 1998 after Taliban fighters captured and killed nine Iranian diplomats based in northern Afghanistan, and Iran provided military aid to the Northern Alliance factions. Iran, along with the United States, Russia, and the countries bordering Afghanistan, attended U.N.-sponsored meetings in New York (the Six Plus Two group) to try to end the conflict in Afghanistan. During the major combat phase of the post-September 11 U.S.-led war in Afghanistan, Iran offered search and rescue of any downed service-persons and the trans-shipment to Afghanistan of humanitarian assistance. In March 2002, Iran expelled Gulbuddin Hikmatyar, a pro-Taliban Afghan faction leader. Iran froze Hikmatyar's assets in Iran (January 2005).

Al Qaeda. Iran is not a natural ally of Al Qaeda, largely because Al Qaeda is an orthodox Sunni Muslim organization. However, U.S. officials have said since January 2002 that it is unclear whether Iran has arrested senior Al Qaeda operatives who are believed to be in Iran.³⁵ These figures are purported to include Al Qaeda spokesman Sulayman Abu Ghaith, top operative Sayf Al Adl, and Osama bin Laden's son, Saad.³⁶ A German monthly magazine, *Cicero*, reported in late October 2005 that Iran is allowing 25 high-ranking Al Qaeda activists, including three sons of bin Laden, to stay in homes belonging to the Revolutionary Guard.³⁷ This report, if true, would contradict Iran's assertion on July 23, 2003 that it had "in custody"

³⁴ See CRS Report RL30588, *Afghanistan: Post-War Governance, Security, and U.S. Policy*, by Kenneth Katzman.

³⁷ "Bin Laden Sons Said to Roam Free." *Washington Times*, Oct. 27, 2005.

senior Al Qaeda figures. U.S. officials blamed the May 12, 2003 bombings in Riyadh, Saudi Arabia against four expatriate housing complexes on these operatives, saying they have been able to contact associates outside Iran.³⁸ Possibly in response to the criticism, on July 16, 2005 Iran's Intelligence Minister said that 200 Al Qaeda members are in Iranian jails and that Iran had broken up an Al Qaeda cell planning attacks on Iranian students.³⁹ Hardliners in Iran might want to protect Al Qaeda activists as leverage against the United States and its allies, and some say Iran might want to exchange them for a U.S. hand-over of People's Mojahedin activists under U.S. control in Iraq. U.S. officials have called on Iran to turn them over to their countries of origin or to third countries for trial.

The 9/11 Commission report said several of the September 11 hijackers and other plotters, possibly with official help, might have transited Iran, but the report does not assert that the Iranian government cooperated with or knew about the plot. Another bin Laden ally, Abu Musab al-Zarqawi, killed by U.S. forces in Iraq on June 7, 2006, reportedly transited Iran after the September 11 attacks and took root in Iraq, becoming a major insurgent leader there.

U.S. Policy Responses and Legislation

The February 11, 1979 fall of the Shah of Iran, a key U.S. ally, opened a long rift in U.S.-Iranian relations. On November 4, 1979, radical "students" seized the U.S. Embassy in Tehran and held its diplomats hostage until minutes after President Reagan's inauguration on January 20, 1981. The United States broke relations with Iran on April 7, 1980 and the two countries have had only limited official contact since.⁴⁰ The United States tilted markedly toward Iraq in the 1980-88 Iran-Iraq war, including U.S. diplomatic attempts to block conventional arms sales to Iran, providing battlefield intelligence to Iraq⁴¹ and, during 1987-88, direct skirmishes with Iranian naval elements in the course of U.S. efforts to protect international oil shipments in the Gulf from Iranian attacks. In one battle on April 18, 1988, Iran lost about a quarter of its larger naval ships in a one-day engagement with the U.S. Navy, including one frigate sunk and another badly damaged.

In his January 1989 inaugural speech, President George H.W. Bush laid the groundwork for a rapprochement, saying that, in relations with Iran, "goodwill begets goodwill," implying better relations if Iran helped obtain the release of U.S. hostages held by Hizballah in Lebanon. Iran reportedly did assist in obtaining their releases, which was completed in December 1991, but no substantial thaw followed, possibly

³⁹ "Tehran Pledges to Crack Down on Militants." *Associated Press*, July 18, 2005.

⁴⁰ An exception was the abortive 1985-1986 clandestine arms supply relationship with Iran in exchange for some American hostages held by Hizballah in Lebanon (the so-called "Iran-Contra Affair").

⁴¹ Sciolino, Elaine. *The Outlaw State: Saddam Hussein's Quest for Power and the Gulf Crisis*. New York: John Wiley and Sons, 1991. p. 168.

because Iran continued to back groups opposed to the U.S.-sponsored Middle East peace process, a major U.S. priority.

Upon taking office in 1993, the Clinton Administration moved to further isolate Iran as part of a strategy of “dual containment” of Iran and Iraq. In 1995 and 1996, the Clinton Administration and Congress added sanctions on Iran in response to growing concerns about Iran’s weapons of mass destruction, its support for terrorist groups, and its efforts to subvert the Arab-Israeli peace process. The election of Khatemi in May 1997 precipitated a U.S. shift toward engagement; the Clinton Administration offered Iran official dialogue, with no substantive preconditions. In January 1998, Khatemi publicly agreed to “people-to-people” U.S.-Iran exchanges but ruled out direct talks.

In a June 1998 speech, then Secretary of State Albright stepped up the U.S. outreach effort by calling for mutual confidence building measures that could lead to a “road map” for normalization of relations. Encouraged by the reformist victory in Iran’s March 2000 parliamentary elections, Secretary Albright gave another speech on March 17, 2000, acknowledging past U.S. meddling in Iran, announcing some easing of U.S. sanctions, and promising to work to resolve outstanding claims disputes. In September 2000 U.N. “Millennium Summit” meetings, Albright and President Clinton sent a positive signal to Iran by attending Khatemi’s speeches.

Bush Administration Policy and Options

Until 2005, the Bush Administration continued the main thrust of Clinton Administration efforts to try to limit Iran’s strategic capabilities through international diplomacy and sanctions. During 2005 to mid-2006, there was an apparent growing U.S. preference for a longer term strategy of regime change. However, as of mid-2006, the pressing U.S. interest in curbing Iran’s nuclear program has led to a de-emphasis of regime change in favor of international diplomacy and a revival of the option of direct engagement with Iran. These differing policy trends and options are discussed in greater detail below.

Regime Change. Although this option appears to have receded in favor of multilateral diplomacy on the nuclear issue, some U.S. officials believe that only an outright change of regime would permanently reduce the threat posed by Iran. Those who advocate this policy believe that the regime — no matter which faction of it is in control — harbors ambitions fundamentally at odds with the United States and its values. There has been some support in the United States for regime change since the 1979 Islamic revolution; the United States provided some funding to anti-regime groups, mainly pro-monarchists, during the 1980s.⁴²

⁴² CRS conversations with U.S. officials responsible for Iran policy. 1980-1990. After a period of suspension of such assistance, in 1995, the Clinton Administration accepted a House-Senate conference agreement to include \$18-\$20 million in funding authority for covert operations against Iran in the FY1996 Intelligence Authorization Act (H.R. 1655, P.L. 104-93), according to a *Washington Post* report of Dec. 22, 1995. The Clinton Administration reportedly focused the covert aid on changing the regime’s behavior, rather (continued...)

The Administration shift began to take shape after the September 11, 2001, attacks and President Bush's description of Iran as part of an "axis of evil" in his January 2002 State of the Union message. On July 12, 2002, President Bush stated his support for Iranians demonstrating for reform and democracy, a message he reiterated on December 20, 2002, when he inaugurated Radio *Farda*. President Bush's second inaugural address (January 20, 2005) and his State of the Union messages of February 2, 2005, and January 31, 2006, suggested a clear preference for a change of regime by stating, for example in the latter speech, that "...our nation hopes one day to be the closest of friends with a free and democratic Iran."

Recent indications of a shift toward this option include increased public criticism of the regime's human rights record — for example supporting General Assembly resolutions condemning Iran's human rights record — as well as the funding of Iranian pro-democracy activists in Iran and the expansion of U.S. Iran-related diplomatic activity. In March 8, 2006, testimony to the House International Relations Committee, Undersecretary of State Nicholas Burns confirmed press reports that the United States would increase the presence of Persian-speaking U.S. diplomats in U.S. diplomatic missions around Iran, in part to help identify and facilitate Iranian participation in U.S. democracy-promotion programs. The Iran unit at the U.S. consulate in Dubai is being expanded, according to Burns. New Persian-speaking Iran positions will be added at U.S. diplomatic facilities in Baku, Azerbaijan; Istanbul, Turkey; Frankfurt, Germany; London; and Ashkabad, Turkmenistan, all of which have large expatriate Iranian populations and/or proximity to Iran.⁴³ An enlarged (six-person) "Office of Iran Affairs" has been formed at State Department, and it is reportedly engaging in contacts with U.S.-based exile groups such as those discussed earlier.⁴⁴

Many question the prospects of U.S.-led Iran regime change, short of all-out U.S. military invasion, because of the weakness of opposition groups committed to outright regime overthrow. Those groups are discussed in the above section on regime stability. Providing overt or covert support to anti-regime organizations, in the view of many experts, would not make them materially more viable or attractive to Iranians. Others argue that reformist groups such as students, women, intellectuals, and others might be able to galvanize regime change unexpectedly.

Congress and Regime Change. The State Department has used funds provided in recent appropriations to support pro-democracy activists. The funds represent congressional sentiment for efforts to change Iran's regime. The policy is discussed in the State Department report "Supporting Human Rights and Democracy: U.S. Record 2005-2006," released April 6, 2006. Iran asserts that such steps represent a violation of the 1981 "Algiers Accords" that settled the Iran hostage

⁴² (...continued)
than its overthrow.

⁴³ Stockman, Farah. "Long Struggle" With Iran Seen Ahead." *Boston Globe*, Mar. 9, 2006.

⁴⁴ Weisman, Steven. *U.S. Program Is Directed At Altering Iran's Politics*. New York Times, April 15, 2006.

crisis and provide for non-interference in each others' internal affairs. The following have been appropriated.

- The FY2004 foreign operations appropriation (P.L. 108-199) earmarked “notwithstanding any other provision of law” up to \$1.5 million for “making grants to educational, humanitarian and non-governmental organizations and individuals inside Iran to support the advancement of democracy and human rights in Iran.” The State Department Bureau of Democracy and Labor (DRL)⁴⁵ gave \$1 million of those funds to the IHDC organization, mentioned earlier. The remaining \$500,000 was distributed through the National Endowment for Democracy (NED).
- The conference report on the FY2005 foreign aid appropriations (P.L. 108-447) provided a further \$3 million for these efforts. The State Department put out a solicitation for proposals for similar projects to be funded in 2005. The winning grantees were not announced by DRL to protect the identities of the grantees, according to U.S. diplomats. DRL had said that priority areas were political party development, media development, labor rights, civil society promotion, and promotion of respect for human rights.⁴⁶
- The conference report on the regular FY2006 foreign aid appropriation (P.L. 109-102) appropriated up to \$10 million in democracy promotion funds for use in Iran, according to the explanation of the conference managers (H.Rept. 109-265). The funds are to be drawn from a “Democracy Fund” as well as from the Middle East Partnership Initiative (MEPI). The conference report also encourages the State Department to consider funding media initiatives in Iran, presumably broadcasting by Iranian exile groups.
- On February 16, 2006, the Administration requested supplemental FY2006 funds, including \$75 million for democracy promotion in Iran. This planned increase reflected a U.S. belief that nuclear negotiations were not succeeding and that U.S.-led pressure on Iran's regime needed to be increased. According to the request, \$15 million is to be used to support “civic education” in Iran and help organize Iranian labor unions and political organizations (through such U.S. organizations as the International Republican Institute, National Democratic Institute, and National Endowment for Democracy. Another \$5 million would be for sponsoring Iranian student visits to the United States, and an additional \$5 million would be for public diplomacy directed at the Iranian population.

⁴⁵ The State Department has determined that, because Iran is ineligible for U.S. aid, Iran democracy promotion funds cannot be channeled through the Middle East Partnership Initiative, because those are Economic Support Funds, ESF, and cannot be used in Iran.

⁴⁶ Briefing by DRL representatives for congressional staff. May 9, 2005.

- The major portion of the FY2006 supplemental request (\$50 million) is to be for increased U.S. broadcasting to Iran. The funds would likely be used to enhance the Radio Free Europe/Radio Liberty (RFE/RL)-operated broadcasting services into Iran that began in October 1998.⁴⁷ As of December 2002, the radio service has been called Radio Farda (“Tomorrow” in Farsi), which now broadcasts 24 hours per day and costs about \$18 million per year. A U.S.-sponsored television broadcast service to Iran, run by the Voice of America (VOA), began operations on July 3, 2003. In early 2005, the VOA announced it is increasing the duration of the television broadcasts to three hours a day from 30 minutes a day. However, the Administration request states that some of the funding could be for U.S.-based exile-controlled media broadcasting.
- In congressional action, the FY2006 supplemental appropriation (H.R. 4939, P.L. 109-234) provided a total of \$66.1 million, broken down as follows: \$20 million for democracy programs, \$5 million each for public diplomacy and for student exchanges, and \$36.1 million for VOA-TV and Radio Farda broadcasting. The broadcasting funds are provided through the Broadcasting Board of Governors, an apparent rebuff to the idea of funding Iranian exile broadcasts.

H.R. 282 and S. 333. Some pending legislation exemplifies the preference of some Members for regime change in Iran. In the 109th Congress, H.R. 282, introduced by Representative Ros-Lehtinen, passed the House on April 26, 2006, by a vote of 397-21. A companion, S. 333, was introduced by Senator Santorum, although a version of that bill, introduced as an amendment to the FY2007 defense authorization bill, was defeated on June 14, 2006. H.R. 282 passed the House even though Undersecretary of State Burns testified on March 8, 2006, that the Administration opposed the economic sanctions-related sections of it as likely to cause tensions with U.S. allies. The Administration supports the democracy-promotion sections of the bills; those sections, which are similar to steps the Administration is taking, contain the following provisions:

- Both recommend the appointment of an Administration policy coordinator on Iran, serving as a special assistant to the President.
- Both specify criteria for designating pro-democracy groups eligible to receive U.S. aid, and H.R. 282 calls for expanded U.S. contacts with groups attempting to promote democracy in Iran. S. 333 authorizes \$10 million in U.S. funding for such groups; H.R. 282 authorizes no specific dollar amount.

⁴⁷ The service began when Congress funded it (\$4 million) in the conference report on H.R. 2267 (H.Rept. 105-405), the FY1998 Commerce/State/ Justice appropriation. It was to be called “Radio Free Iran.”

- Both call for Iranian government representatives to be denied access to all U.S. government buildings.

Engagement? Before the nuclear issue came to the fore, the Bush Administration pursued direct engagement with Iran. This approach lost favor as Iran's nuclear stances hardened. However, the option is now at the forefront of U.S. policy, although in the context of multilateral nuclear talks with Iran. As part of the nuclear-related U.S. shift, the Administration is attempting to demonstrate that it considers Iran a great nation and respects its history; such themes were prominent in a speech by President Bush at the Merchant Marine Academy on June 19, 2006. For now, the Administration has ruled out U.S.-Iran bilateral talks on all issues of U.S. concern. The May 2006 U.S. offer came after some, including former Clinton Administration foreign policy officials Samuel Berger and Madeleine Albright, and former Secretary of State Henry Kissinger, said that the United States should exhaust all possible options to curb Iran's nuclear program, including dialogue with Iran. Others say that the decision to offer to enter the nuclear talks came after Administration advocates of regime change and other harder line approaches were persuaded that the United States needed to garner international support on Iran by demonstrating it is willing to fully exhaust all options for a peaceful resolution of the nuclear issue. An amendment by Senator Biden to the FY2007 defense authorization bill (S.2766), adopted June 14, 2006, supports the Administration's May 2006 overture to Iran.

No substantive U.S.-Iran talks have taken place since May 2003, when the United States broke off a dialogue with Iran following the May 12, 2003, terrorist bombing in Riyadh. At that time, the United States and Iran publicly acknowledged that they were conducting direct talks in Geneva on Afghanistan and Iraq,⁴⁸ the first confirmed direct dialogue between the two countries since the 1979 revolution. However, U.S. officials rebuffed a reported overture from Iran just before the Riyadh bombing to negotiate all outstanding U.S.-Iran issues. The United States briefly resumed some contacts with Iran in December 2003 to coordinate U.S. aid to victims of the December 2003 earthquake in Bam, Iran, including a reported offer to send a high-level delegation to Iran. However, Iran rebuffed that offer.

Military Action? As concerns over Iran's nuclear program have grown, public discussion of a military option against Iran's nuclear facilities has increased. President Bush has maintained that "all options are on the table."⁴⁹ Administration officials and others cite a statement by Senator McCain at a conference in Germany in early February 2006, in which he said that military action would be preferable to a nuclear Iran. All-out U.S. military action to remove Iran's regime does not appear to be under serious consideration within the Administration. Most experts believe U.S. forces are spread too thin, including about 133,000 deployed in Iraq, to undertake such action, and that U.S. forces would be greeted with hostility by most Iranians. U.S. allies in Europe, not to mention Russia, China, and others, have

⁴⁹ Fletcher, Michael and Keith Richburg. "Bush Tries to Allay E.U. Worry Over Iran." *Washington Post*, Feb. 23, 2005.

expressed strong opposition to military action, at least while diplomatic options remain active.

Some experts believe that limited military action, such as air or missile strikes against suspected nuclear sites should be considered. Most experts believe the United States could carry out such strikes with cruise missiles and combat aircraft and bombers from bases in or within range of the Gulf and from aircraft carriers. A January 2005 *New Yorker* article by Seymour Hersh asserts that President Bush has authorized covert special forces missions into Iran to assess potential nuclear-related targets for a U.S. air strike. A subsequent *New Yorker* piece by Hersh, published April 17, 2006, repeated many of the same assertions of military planning but added that the military might be contemplating using small nuclear weapons to penetrate hardened, underground targets.

Experts differ on the effectiveness of striking Iran's nuclear facilities. Some argue that doing so could set back Iran's nuclear program because many of the relevant targets are known and could be struck, even those that are hardened or buried.⁵⁰ Some advocates say that there are only a limited number of key nuclear sites and that striking them would cripple Iran's program. One former Air Force planner estimates that up to 400 targets would need to be struck, including at least 75 that would require penetrating munitions.

Opponents of a strike question whether the United States is aware of or militarily able to reach all relevant sites and argue that Iran might retaliate through terrorism or other means, such as shutting down its own oil exports. Supreme Leader Khamene'i threatened military retaliation in a speech on April 26, 2006. Some believe that a U.S. strike would cause the Iranian public to rally around Iran's regime, setting back U.S. efforts to promote change within Iran. Still others, such as authors of a recent National Defense University study, believe that a nuclear weapons capability would not embolden Iran's foreign policy because U.S. conventional capabilities and regional alliances could blunt any Iranian aggressiveness.⁵¹ Others believe the United States could reduce Iran's potential for military or unconventional retaliation by striking not only nuclear facilities but also Iran's conventional military infrastructure, particularly the small ships and coastal missiles Iran has in and around the Strait of Hormuz.

Expressing particular fear that Iran might achieve a nuclear weapons capability, some Israeli officials, including former Defense Minister Shaul Mofaz (October 2004), have refused to rule out the possibility that Israel might strike Iran's nuclear infrastructure. However, several experts doubt that Israel has the capabilities, such as sufficient aerial refueling capacity, that could make such action effective.

A decision to take military action might raise the question of presidential authorities and congressional consultation. H.Con.Res. 391, introduced by

⁵⁰ Sanger, David. "Why Not A Strike On Iran?" *New York Times*, Jan. 22, 2006.

⁵¹ Yaphe, Judith and Charles Lutes. Reassessing the Implications of a Nuclear Armed Iran. Institute for National Strategic Studies, National Defense University. McNair Paper 69. Aug. 2005.

Representative Peter DeFazio on April 26, 2006, calls on the President to not initiate military action against Iran without first obtaining authorization from Congress.

Containment? Some options might be employed to contain a nuclear Iran. Some experts have called for U.S. naval forces in the Gulf to institute searches of Iran-bound vessels suspected of containing WMD-related technology, or to place nuclear-armed weapons aboard U.S. ships operating in the Gulf as a signal of strength to Iran. The Administration has discussed with its allies some measures that could be used to block North Korea's technology exports and alleged drug smuggling,⁵² an initiative that has won allied support. In contrast, some officials of allied governments, including Britain, have called for greater cooperation with Iran to curb the movement of smugglers and terrorists across the Persian Gulf.⁵³

In mid-2006, the Administration has taken steps to shore up nervous U.S. allies in the Persian Gulf region. Visits to the Gulf states (Saudi Arabia, Kuwait, Bahrain, UAE, Qatar, and Oman) by U.S. officials have focused on renewing long-discussed joint efforts to develop missile defense and anti-WMD capabilities. These efforts might be intended, at least in part, to prevent the Gulf states from accommodating Iran strategically and to convince them that the United States can protect them from Iran.

International Sanctions? Regime change and military action appear to be longer term options, but the more immediate question of whether, and if so what, international sanctions might be imposed on Iran if it rejects the package offered to it in June 2006. In order to gain international support to pressure Iran on its nuclear program, the Administration has indicated a willingness to avoid imposing sanctions that would hurt Iran's people. Iran, for its part, has indirectly threatened to reduce its oil exportation if any international sanctions are imposed on it, although some Iranian officials now downplay that possibility. Some experts believe Iran's might collapse if it took such a step. Iran has also threatened to withdraw from the NPT entirely if it is sanctioned.

The following represent sanctions that the Security Council might impose (and some of them have already been threatened) if Iran does not comply with U.N. demands. Some are proposed in a Senate resolution (S.Res. 351) introduced by Senator Evan Bayh on January 20, 2006. A House resolution (H.Con.Res. 341) calling on the international community to impose U.N. economic sanctions on Iran because of its nuclear activity passed the House on February 16, 2006.

- *Mandating Reductions in Diplomatic Exchanges with Iran or Limiting Travel by Iranian Officials.* These restrictions were imposed on the Taliban government of Afghanistan in 1999 in response to its harboring of Al Qaeda leadership. Another possibility is limitations on sports or cultural exchanges with Iran,

⁵² Krale, Thomas. "U.S. Asks Aid Barring Arms From Rogue States." *Washington Times*, June 5, 2003.

⁵³ "British Commander Calls for More Cooperation With Iran in Persian Gulf." *BBC*, May 3, 2004.

such as Iran's participation in the World Cup soccer tournament or the Olympics. However, many experts oppose using sporting events to accomplish political goals.

- *Banning International Flights to and from Iran.* This sanction was imposed on Libya in response to the finding that its agents were responsible for the December 21, 1988, bombing of Pan Am 103.
- *A Ban on Exports to Iran of Refined Oil Products or of Other Products.* Some countries that supply such goods and services to Iran might oppose this sanction. The gas exports ban, a major feature of the Bayh resolution (S.Res. 351), would almost certainly hurt Iran's economy because Iran lacks refinery capacity to meet demand and must import gasoline. However, some believe Iran might respond by raising domestic gasoline prices (now heavily subsidized) to dampen demand.
- *Financial Sanctions, Such as a Freeze on Iran's Financial Assets Abroad or on the Assets of Designated Iranian Officials, or Limiting Lending to Iran by International Financial Institutions.* Anticipating an asset freeze, Iran announced on January 20, 2006, that it had already begun moving some assets in Europe back to Iran, although Iran later backtracked on that announcement. Some U.S. allies that conduct extensive trade with Iran, including Japan, are said to oppose this sanction.
- *Imposing a Worldwide Ban on Sales of Arms to Iran.* Such a sanction could incur Security Council opposition from Russia and China, which have been Iran's key arms suppliers in recent years.
- *Imposing an Intrusive U.N.-led WMD Inspections Regime.* The objective of such an inspections program could be to enforce a Security Council decision to halt uranium enrichment, although Iran is likely to resist such a program and reduce its effectiveness.
- *Imposing an International Ban on Purchases of Iranian Oil or Other Trade/Ban on International Investment in Iran's Energy Sector.* These are widely considered the most sweeping of sanctions that might be imposed, and would likely be considered in the Security Council only if other sanctions are imposed but fail. However, the sanction is unlikely to be proposed or adopted because world oil prices have already risen to over \$70 per barrel.

U.S. Sanctions

Any international or multilateral sanctions would add to the wide range of U.S. sanctions in place since the November 4, 1979, seizure of the U.S. hostages in

Tehran.⁵⁴ Some experts believe that U.S. sanctions have slowed Iran's economy, forcing it to curb spending on weapons purchases, but others believe that because the sanctions are not multilateral, the U.S. sanctions have had only marginal effect.⁵⁵ Some who take the latter view maintain that Iran's economic performance fluctuates according to the price of oil, and far less so from other factors.

Terrorism/Foreign Aid Sanctions. In January 1984, following the October 1983 bombing of the U.S. Marine barracks in Lebanon (believed perpetrated by Hizballah) Iran was added to the "terrorism list." The list was established by Section 6(j) of the Export Administration Act of 1979, imposing economic sanctions on countries determined to have provided repeated support for acts of international terrorism.

- The terrorism list designation bans direct U.S. financial assistance (Foreign Assistance Act, FAA) and arms sales (Arms Export Control Act), restricts sales of U.S. dual use items (Export Administration Act), and requires the United States to vote to oppose multilateral lending to the designated countries (Anti-Terrorism and Effective Death Penalty Act of 1996, P.L. 104-132). Waivers are provided under these laws, but successive foreign aid appropriations laws since the late 1980s ban direct assistance to Iran (loans, credits, insurance, Eximbank credits) without providing for a waiver.
- Section 307 of the FAA (added in 1985) names Iran as unable to benefit from U.S. contributions to international organizations, and require proportionate cuts if these institutions work in Iran. No waiver is provided for.
- Under the Anti-Terrorism and Effective Death Penalty Act, the President is required to withhold U.S. foreign assistance to any country that provides to a terrorism list country foreign assistance (Section 325) or sells arms to one (Section 326). Waivers are provided for.
- U.S. regulations do not bar disaster relief and the United States donated \$125,000, through relief agencies, to help victims of two earthquakes in Iran (February and May 1997), and another \$350,000 worth of aid to the victims of a June 22, 2002 earthquake. (The World Bank provided some earthquake related lending as well.) The United States provided \$5.7 million in assistance (out of total governmental pledges of about \$32 million, of which \$17 million have been remitted) to the victims of the December 2003 earthquake in Bam, Iran, which killed as many as 40,000 people and destroyed 90% of Bam's buildings. The United States flew in 68,000 kilograms of supplies to Bam, flown in by U.S. military flights, the

⁵⁴ On Nov. 14, 1979, President Carter declared a national emergency with respect to Iran, renewed every year since 1979.

⁵⁵ "The Fight Over Letting Foreigners Into Iran's Oilfields." *The Economist*, July 14, 2001.

first U.S. military flights into Iran since the “Iran-Contra Affair” of 1985-1986.

Proliferation Sanctions. Several sanctions laws are unique to Iran. The Iran-Iraq Arms Nonproliferation Act (P.L. 102-484) requires denial of license applications for exports to Iran of dual use items, and imposes sanctions on foreign countries that transfer to Iran “destabilizing numbers and types of conventional weapons,” as well as WMD technology. The Iran Nonproliferation Act (INA, P.L. 106-178) authorizes sanctions on foreign entities that assist Iran’s WMD programs.⁵⁶ It bans U.S. extraordinary payments to the Russian Aviation and Space Agency in connection with the international space station unless the President can certify that the agency or entities under its control had not transferred any WMD or missile technology to Iran within the year prior. The provision contains certain exceptions to ensure the safety of astronauts and for certain space station hardware. The provision could complicate U.S. efforts to keep U.S. astronauts on the station beyond April 2006, when Russia plans to start charging the United States for transporting them on its Soyuz spacecraft. In February 2005, the Bush Administration proposed an amendment to the INA that would allow continued U.S. access to the station. Legislation, S. 1713, took that step; the House version of S. 1713, which extended INA sanctions provisions to Syria, was accepted by the Senate and became P.L. 109-112 on November 22, 2005. A bill to sanction any U.S. dealings with companies identified as violating the INA (S. 2279) was introduced February 14, 2006.

Reflecting a Bush Administration decision to impose sanctions rather than overlook alleged violations or waive sanctions, the Bush Administration has sanctioned numerous entities as discussed below. These entities were sanctioned under the INA, the Iran-Iraq Arms Non-Proliferation Act of 1992 (P.L. 102-484), and another law, the Chemical and Biological Warfare Elimination Act of 1991, for sales to Iran:

- In May 2003, the Administration sanctioned a Chinese industrial entity, Norinco, for allegedly Iran selling missile technology.
- On July 4, 2003 an additional Chinese entity, the Taiwan Foreign Trade General Corporation, was sanctioned under the INA.
- On September 17, 2003 the Administration imposed sanctions on a leading Russian arms manufacturer, the Tula Instrument Design Bureau, for allegedly selling laser-guided artillery shells to Iran.
- On April 7, 2004, the Administration announced sanctions on 13 entities under the INA, including companies from Russia, China, Belarus, Macedonia, North Korea, UAE, and Taiwan.
- On September 29, 2004 fourteen entities were sanctioned under the INA from China, North Korea, Belarus, India (two persons, Dr. Surendar and Dr. Y.S.R. Prasad), Russia, Spain, and Ukraine.

⁵⁶ See CRS Report RS22072, *The Iran Nonproliferation Act and the International Space Station: Issues and Options*, by Sharon Squassoni and Marcia S. Smith.

- In December 2004 and January 2005, INA sanctions were imposed on fourteen more entities, mostly from China, for alleged supplying of Iran's missile program. Many, such as North Korea's Changgwang Sinyong and China's Norinco and Great Wall Industry Corp, have been sanctioned several times previously. Other entities sanctioned included North Korea's Paeksan Associated Corporation, and Taiwan's Ecoma Enterprise Co.
- On December 26, 2005, the Administration sanctioned another nine entities, including those from China (Norinco included yet again), India (two chemical companies), and Austria. At the same time, sanctions against Dr. Surendar of India (see September 29, 2004) were ended, presumably because of information exonerating him of helping Iran.
- On June 13, 2006, the Treasury Department designated four Chinese companies, under Executive order 13382 (June 29, 2005),⁵⁷ as proliferators of WMD to Iran. The four companies are Beijing Alite Technologies, LIMMT Economic and Trading Company, China Great Wall Industry Corp, and China National Precision Machinery Import/Export Corp.

As with previous years' appropriations, the FY2006 foreign aid appropriation (P.L. 109-102) punishes the Russian Federation for assisting Iran by withholding 60% of any U.S. assistance to the Russian Federation unless it terminates technical assistance to Iran's nuclear and ballistic missiles programs. House-passed FY2007 foreign aid legislation (H.R. 5522) contains a similar provision.

Counter-Narcotics. In February 1987, Iran was first designated as a state that failed to cooperate with U.S. anti-drug efforts or take adequate steps to control narcotics production or trafficking. U.S. and U.N. Drug Control Program (UNDCP) assessments of drug production in Iran prompted the Clinton Administration, on December 7, 1998, to remove Iran from the U.S. list of major drug producing countries. The decision exempted Iran from the annual certification process that kept drug-related U.S. sanctions in place on Iran. According to several governments, over the past few years Iran has augmented security on its border with Afghanistan in part to prevent the flow of narcotics from that country into Iran. Britain has sold Iran some night vision equipment and body armor for the counter-narcotics fight. Iran also reportedly is supporting the international counter-narcotics effort in Afghanistan by providing aid to Afghan farmers to grow crops other than poppy.

Trade Ban. On May 6, 1995, President Clinton issued Executive Order 12959 banning U.S. trade and investment in Iran. This followed an earlier March 1995 executive order barring U.S. investment in Iran's energy sector. The trade ban was partly intended to blunt criticism that U.S. trade with Iran made U.S. appeals for multilateral containment of Iran less credible. Each March since 1995, most recently on March 11, 2005, the U.S. Administration has renewed a declaration of a state of

⁵⁷ [<http://www.whitehouse.gov/news/releases/2005/06/print/20050629.html>].

emergency that triggered the March 1995 investment ban. An August 1997 amendment to the trade ban (Executive Order 13059) prevented U.S. companies from knowingly exporting goods to a third country for incorporation into products destined for Iran. However, some modifications to the trade ban since 1999 account for the small trade that does exist between the United States and Iran. The trade ban would likely have to be eased further to provide Iran the incentives promised in the U.S.-European-Russia and China nuclear package, if Iran accepts that offer. The following conditions and modifications, as administered by the Office of Foreign Assets Control (OFAC) of the Treasury Department, apply:

- Some goods related to the safe operation of civilian aircraft may be licensed for export to Iran, and in December 1999, the Clinton Administration allowed the repair of engine mountings on seven Iran Air 747s (Boeing).
- OFAC regulations do not permit U.S. firms to negotiate investment deals with Iran or to trade Iranian oil overseas.
- Since April 1999, commercial sales of food and medical products to Iran have been allowed, on a case-by-case basis and subject to OFAC licensing. Private letters of credit can be used to finance approved sales, but no U.S. government credit guarantees are available and U.S. exporters are not permitted to deal directly with Iranian banks. The FY2001 agriculture appropriations (P.L. 106-387) contained a provision banning the use of official credit guarantees for food and medical sales to Iran and other countries on the U.S. terrorism list, except Cuba, although allowing for a presidential waiver to permit such credit guarantees. Neither the Clinton Administration nor the Bush Administration provided the credit guarantees. Iran says the lack of credit makes U.S. sales, particularly of wheat, uncompetitive.
- In April 2000, the trade ban was further eased to allow U.S. importation of Iranian nuts, dried fruits, carpets, and caviar. The United States was the largest market for Iranian carpets before the 1979 revolution, but U.S. anti-dumping tariffs imposed on Iranian pistachio nut imports in 1986 (over 300%) dampened imports of that product. In January 2003, the tariff on roasted pistachios was lowered to 22% and on raw pistachios to 163%. In December 2004, U.S. sanctions were further modified to allow Americans to freely engage in ordinary publishing activities with entities in Iran (and Cuba and Sudan).
- Subsidiaries of U.S. firms are not barred from dealing with Iran, as long as the subsidiary has no operational relationship to the parent company. Some U.S. companies have come under scrutiny for dealings by their subsidiaries with Iran. On January 11, 2005, Iran said it had let a contract to the U.S. company Halliburton, and an Iranian company, Oriental Kish, to drill for gas in Phases 9 and 10 of South Pars. Under the deal, Halliburton reportedly is to provide

\$30 million to \$35 million worth of services per year through Oriental Kish. This leaves unclear whether Halliburton would be considered in violation of the U.S. trade and investment ban or the Iran-Libya Sanctions Act (ILSA)⁵⁸ because the dealings apparently involved a subsidiary of Halliburton. Because of criticism, Halliburton announced on January 28, 2005, that it would withdraw all employees from Iran and end its pursuit of future business opportunities there, although it is not clear that Halliburton has pulled out of the Oriental Kish deal.⁵⁹ One week later, GE announced it would seek no new business in Iran. According to press reports, GE has been selling Iran equipment and services for hydroelectric, oil and gas services, and medical diagnostic projects through Italian, Canadian, and French subsidiaries. The trade ban appears to bar any Iranian company from buying a foreign company that has U.S. units.

- The trade ban permits U.S. companies to apply for licenses to conduct “swaps” of Caspian Sea oil with Iran, but, as part of a U.S. policy to route Central Asian energy around Iran (and Russia), a Mobil Corporation application to do so was denied in April 1999.
- In May 2002 Moody’s stopped its credit ratings service for Iran’s government bonds on the grounds that performing this service might violate the U.S. trade ban.
- The U.S. Treasury and State Departments have begun using U.S. trade regulations on Iran to pressure European banks not to do business with Iran. On December 20, 2005, the Treasury Department had fined Dutch bank ABN Amro \$80 million for failing to fully report the processing of financial transactions involving Iran’s Bank Melli (and another bank partially owned by Libya). In 2004, the Treasury Department fined UBS \$100 million for the unauthorized movement of U.S. dollars to Iran and other sanctioned countries.

The Iran-Libya Sanctions Act (ILSA) and Regional Oil and Gas Projects. ILSA (P.L. 104-172, August 5, 1996), as amended, sanctions foreign (or U.S.) investment of more than \$20 million in one year in Iran or Libya’s energy sector. It was to sunset on August 5, 2001, but it was renewed for another five years (P.L. 107-24, August 3, 2001). It is now scheduled to expire on August 5, 2006, unless renewed. One bill, S. 2657, would extend ILSA for another five years (August 5, 2011) without modification. H.R. 282, passed by the House on April 26, and S. 333 (61 co-sponsors as of June 21, 2006) have several ILSA-related provisions, including extending it indefinitely; making exports to Iran of WMD or advanced conventional weapons technology sanctionable; and setting a 90-day time limit for

⁵⁸ “Iran Says Halliburton Won Drilling Contract.” *Washington Times*, Jan. 11, 2005.

⁵⁹ Boyd, Roderick. “Halliburton Agrees to Leave Iran, Thompson Says.” *New York Sun*, Mar. 25, 2005.

the Administration to determine whether a project violates ILSA. H.R. 282 also mandates cuts in U.S. foreign aid to countries whose companies violate ILSA. (See CRS Report RS20871, *The Iran-Libya Sanctions Act (ILSA)*, by Kenneth Katzman.)

Travel-Related Guidance. Use of U.S. passports for travel to Iran is permitted, but a State Department travel warning, softened somewhat in April 1998, asks that Americans “defer” travel to Iran. Iranians entering the United States are required to be fingerprinted, and Iran has imposed reciprocal requirements. In January 2006, Iran requested direct flights between the United States and Iran to accommodate a growing number of Iranian-Americans visiting Iran, but little movement on this is expected because of deep U.S.-Iran strains on nuclear and other issues. Ahmadinejad denied that the request signaled a desire on his part to improve relations with the United States more broadly.

Status of Some U.S.-Iran Assets Disputes. A U.S.-Iran Claims Tribunal at the Hague continues to arbitrate cases resulting from the break in relations and freezing of some of Iran’s assets following the Iranian revolution. Major cases yet to be decided center on hundreds of Foreign Military Sales cases between the United States and the Shah’s regime, which Iran claims it paid for but were unfulfilled. About \$400 million in proceeds from the resale of that equipment was placed in a DOD account, and about \$22 million in Iranian diplomatic property remains blocked. The DOD funds were drawn down to pay judgments against Iran for past acts of terrorism against Americans, filed under the Anti-Terrorism and Effective Death Penalty Act of 1996. Other disputes include the mistaken U.S. shoot-down on July 3, 1988, of an Iranian Airbus passenger jet (Iran Air flight 655), for which the United States, in accordance with an ICJ judgment, paid Iran \$61.8 million in compensation (\$300,000 per wage earning victim, \$150,000 per non wage earner) for the 248 Iranians killed. The United States has not compensated Iran for the airplane itself, to date. As it has in past similar cases, the Administration has opposed a terrorism lawsuit against Iran by victims of the U.S. Embassy Tehran seizure on the grounds of diplomatic obligation. (See CRS Report RL31258, *Suits Against Terrorism States by Victims of Terrorism*, by Jennifer K. Elsea.)

Multilateral Policies Toward Iran

Most U.S. allies have favored engagement as a means to change Iran’s behavior, a philosophy consistent with European efforts to negotiate a solution on the nuclear issue. During 1992-1997, the European Union (EU) countries maintained a policy of “critical dialogue” with Iran, asserting that dialogue and commerce could moderate Iran’s behavior. The United States did not oppose those talks but maintained that the EU’s dialogue would not change Iran’s policies. The dialogue was suspended following the April 1997 German terrorism trial (“Mykonos trial”) that found high-level Iranian involvement in assassinating Iranian dissidents in Germany. After Khatemi became president, the EU-Iran dialogue resumed (May 1998), and he made state visits to most major European countries as well as Japan.

EU-Iran Trade Negotiations/WTO Membership. In December 2002, as part of its engagement strategy, the EU (European Commission) first began negotiations with Iran on a “Trade and Cooperation Agreement” (TCA) that would lower the tariffs or increase quotas for Iranian exports to the EU countries. However,

revelations about Iran's undeclared nuclear activity caused a suspension of the talks in July 2003. The TCA talks resumed in January 2005 in concert with the "Paris Agreement" (above). Working group discussions focused not only on the TCA terms and proliferation issues but also on Iran's human rights record, Iran's efforts to derail the Middle East peace process, Iranian-sponsored terrorism, counter-narcotics, refugees, migration issues, and the Iranian opposition PMOI. After the eighth round of negotiations on July 12-13, 2005, European Commission negotiators said the talks were making progress, although the talks were suspended after the August 2005 breakdown of the Paris Agreement. As noted above, this possibility is again on offer if Iran accepts the international nuclear package.

Iran first attempted to apply to join the WTO in July 1996. On 22 occasions after that, representatives of the Clinton and then the Bush Administration blocked Iran from applying (applications must be by consensus of the 148 members). As discussed above, as part of an effort to assist the EU-3 nuclear talks with Iran, the Administration announced on March 11, 2005, that it would drop opposition to Iran's applying for WTO membership. At a WTO meeting in May 2005, no opposition to Iran's application was registered by any state, and Iran began accession talks. However, movement on the issue is believed contingent on the nuclear negotiations as discussed above.

Multilateral, World Bank, and IMF Lending to Iran. U.S.-allied differences on Iran during the 1990s included European and Japanese creditors' rescheduling of about \$16 billion in Iranian debt during 1994-1995. These countries (governments and private creditors) rescheduled the debt bilaterally, in spite of Paris Club rules that call for multilateral rescheduling. Iran's improved external debt led most European export credit agencies to restore insurance cover for exports to Iran. In July 2002, Iran tapped international capital markets for the first time since the Islamic revolution, selling \$500 million in bonds to European banks.

The European countries and Japan have also differed with the United States on providing international loans to Iran, although new lending appears to be contingent on Iran's response to international nuclear demands. Acting under provisions of successive foreign aid laws, in 1993 the United States voted its 16.5% share of the World Bank against loans to Iran of \$460 million for electricity, health, and irrigation projects, but the loans were approved. To block that lending, the FY1994-FY1996 foreign aid appropriations (P.L. 103-87, P.L. 103-306, and P.L. 104-107) cut the amount appropriated for the U.S. contribution to the Bank by the amount of those loans. The legislation contributed to a temporary halt in new Bank lending to Iran, but by 1999, Iran's moderating image had led the World Bank to consider new loans. U.S. policy, as explained on October 29, 2003, a Treasury Department official, Bill Schuerch, in testimony before the House Financial Services Committee, has been to try to persuade other nations not to approve World Bank loans. However, in May 2000, the United States' allies outvoted the United States to approve \$232 million in loans for health and sewage projects. During April 2003-May 2005, a total of \$725 million in loans were approved for environmental management, housing reform, water and sanitation projects, and land management projects, in addition to a \$400 million in loans for earthquake relief. A provision of the House-passed State Department authorization bill for FY2006 and FY2007 (H.R. 2601) calls on the Administration to lobby other governments to vote against international loans to Iran.

Conclusion

Mistrust between the United States and Iran's Islamic regime has run deep for over two decades, even before the emergence of a dispute over Iran's nuclear program. Many experts say that all factions in Iran are united on major national security issues and that U.S.-Iran relations might not improve unless or until the Islamic regime is removed or moderates substantially, even if a nuclear deal is reached and implemented. Others say that, despite Ahmadinejad's presidency, the United States and Iran have a common interest in stability in the Persian Gulf and South Asia regions in the aftermath of the defeat of the Taliban and the regime of Saddam Hussein. Those who take this view say that Iran is far more secure now that the United States has removed these two regimes, and it might be more willing than previously to accommodate U.S. interests in the Gulf. Others say that the opposite is more likely, that Iran now feels more encircled than ever by pro-U.S. regimes and U.S. forces guided by a policy of pre-emption, and Iran might redouble its efforts to develop WMD and other capabilities to deter the United States.
