Sensor Enhanced Armor Non Destructive Evaluation Laboratory

POC: Dr. Thomas J. Meitzler

Report Documentation Page				Form Approved OMB No. 0704-0188	
Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.					
1. REPORT DATE 11 AUG 2009		2. REPORT TYPE N/A		3. DATES COVERED -	
4. TITLE AND SUBTITLE Sensor Enhanced Armor Non Destructive Evaluation Laboratory				5a. CONTRACT NUMBER	
				5b. GRANT NUMBER	
				5c. PROGRAM ELEMENT NUMBER	
6. AUTHOR(S) Thomas J. Meitzler				5d. PROJECT NUMBER	
				5e. TASK NUMBER	
				5f. WORK UNIT NUMBER	
7. PERFORMING ORGANIZATION NAME(S) AND ADDRESS(ES) US Army RDECOM-TARDEC 6501 E 11 Mile Rd Warren, MI 48397-5000				8. PERFORMING ORGANIZATION REPORT NUMBER 20116	
9. SPONSORING/MONITORING AGENCY NAME(S) AND ADDRESS(ES)				10. SPONSOR/MONITOR'S ACRONYM(S) TACOM/TARDEC	
				11. SPONSOR/MONITOR'S REPORT NUMBER(S) 20116	
12. DISTRIBUTION/AVAILABILITY STATEMENT Approved for public release, distribution unlimited					
13. SUPPLEMENTARY NOTES Presented at NDIAs Ground Vehicle Systems Engineering and Technology Symposium (GVSETS), 17 22 August 2009, Troy, Michigan, USA					
14. ABSTRACT					
15. SUBJECT TERMS					
16. SECURITY CLASSIFICATION OF:			17. LIMITATION OF ABSTRACT SAR	18. NUMBER OF PAGES 10	19a. NAME OF RESPONSIBLE PERSON

Ground Vehicle Survivability Sensor Enhanced Armor and NDT/NDE

- Survivability role – identify, characterize and integrate sensors and technologies for various armor recipients.
- Prototype sensor enhanced armor on vehicle demonstrators.
- Lead the Army armor NDE/NDT life cycle integration effort.

Signal 1 = driving signal of transducer

Signal 2 = resonant vibration of undamaged plate

Signal 3 = resonant vibration of plate cracked and with one small hole

TECHNOLOGY DRIVEN. WARFIGHTER FOCUSED.

- Project is looking at a variety of ways to assess health of armor over life of vehicle (including prior to installation).
- Making vehicle more intelligent, increase survivability for vehicle and soldier, cost effective, more real time status, health of armor and vehicle.
- Portray capability to scan all types of armor with some type of wave/sound/light – data shows cracks/no cracks.

TARDEC groups involved: Survivability, Intelligent Ground Vehicle Systems, Condition Based Maintenance

Industry: General Dynamics / BAE

Academia: Michigan State University, University of Michigan, Wayne State University, Oakland University (supporting background research ways to measure health of armor)

Audience: future customers, other government labs, contractors, not so much universities

PARTNERS

Undamaged

Damaged

There is a profound difference in the shape and amplitude of the echo signal between the damaged and undamaged plates. Tests are underway using embedded transducers for real-time armor integrity monitoring.

TECHNOLOGY DRIVEN. WARFIGHTER FOCUSED.

Handheld Prototype Testing Device

Embedded sensors

Phased Array Ultrasonic Scanning in H2O

Mission:

- Develop methods to evaluate the integrity of armor designs during the manufacturing, at the depot, in the field and on the vehicle while in use.

Objective:

- Provide NDT/NDE for armor throughout the life cycle of the vehicle
- Design embedded health monitoring solutions for various armor solutions.
- Provide ultrasonic, x-ray and mmwave imaging for armor damage analysis.
- Explore various NDE options to support all armor recipies

Method:

- Use the latest NDE technology to mature armor solutions for cost reduction through improved reliability
- Design embedded health monitoring solutions for various armor solutions.
- Provide ultrasonic, x-ray and mmwave imaging for armor damage analysis.
- Explore various NDE options to support all armor recipies

Uses of NDE and Health Monitoring

- Health Monitoring during normal vehicle usage, before battle use or damage and performed at certain time intervals.
- Determination of the severity, identification, and location of ballistic impacts to the armor while the vehicle is being used in battle. An active NDE system could tell the commander of any vulnerabilities and or what areas need repair to stay in battle.
- Communication to neighboring forces integrity of armor and or severity of impacts.
- Assessment of armor integrity between missions. This would be done at the depot level and would involve NDE and health monitoring to test for any armor defects or flaws as well as internal damage that could lead to armor failure.
- There is a need for system integration at the armor level.
