

Cognitive Guidelines to Support Effective Collaboration

Presented to
Collaboration and Knowledge Management Workshop

Team Members

David Noble (PI), Cara Christie, Jim Yeargain, Stacey Lakind,
Jim Richardson, and Steve Shaker

January 14, 2004

Report Documentation Page				Form Approved OMB No. 0704-0188	
Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.					
1. REPORT DATE 14 JAN 2004		2. REPORT TYPE		3. DATES COVERED 00-00-2004 to 00-00-2004	
4. TITLE AND SUBTITLE Cognitive Guidelines to Support Effective Collaboration				5a. CONTRACT NUMBER	
				5b. GRANT NUMBER	
				5c. PROGRAM ELEMENT NUMBER	
6. AUTHOR(S)				5d. PROJECT NUMBER	
				5e. TASK NUMBER	
				5f. WORK UNIT NUMBER	
7. PERFORMING ORGANIZATION NAME(S) AND ADDRESS(ES) Evidence Based Research Inc,1595 Spring Hill Rd Ste 250,Vienna,VA,22182				8. PERFORMING ORGANIZATION REPORT NUMBER	
9. SPONSORING/MONITORING AGENCY NAME(S) AND ADDRESS(ES)				10. SPONSOR/MONITOR'S ACRONYM(S)	
				11. SPONSOR/MONITOR'S REPORT NUMBER(S)	
12. DISTRIBUTION/AVAILABILITY STATEMENT Approved for public release; distribution unlimited					
13. SUPPLEMENTARY NOTES Collaboration and Knowledge Management (CKM) Workshop, 13-15 Jan 2004, San Diego, CA. U.S. Government or Federal Rights License					
14. ABSTRACT					
15. SUBJECT TERMS					
16. SECURITY CLASSIFICATION OF:			17. LIMITATION OF ABSTRACT Same as Report (SAR)	18. NUMBER OF PAGES 28	19a. NAME OF RESPONSIBLE PERSON
a. REPORT unclassified	b. ABSTRACT unclassified	c. THIS PAGE unclassified			

Project Summary

- Objectives
 - Synthesize cognitive theory of collaboration
 - Articulate critical knowledge for successful collaboration
 - Develop cognitive-based collaboration metrics
 - Apply theory to help teams collaborate more effectively (focus of this presentation)
- Research Questions
 - Critical knowledge for effective collaboration
 - Means to package awareness of critical knowledge to improve collaboration
 - Means to leverage cognitive framework to identify collaboration metrics
- Project Status
 - Third and final year of project
 - Metrics summarized in handbook “Command Center Performance Assessment System”
 - Five teams have tried out the Collaboration Advizor tool. All agreed it provided appropriate diagnosis, that its recommendations were useful, and that it helped teams surface and discuss critical issues
 - Formal evaluation planned at Navair in February
 - Commercial version of tool under development
 - Metrics and tool transitions on track

Topics

- Why teams fail
- Project goals
- Theory
- Diagnosis and recommendation tool
- Chronology, validation, publications, and transitions
- Summary

Why Teams Fail

- Physical causes
 - The goal is too hard for any team to achieve, given the available resources
- Cognitive causes
 - The goal is not too hard to achieve, but the team doesn't know how to achieve it
- Social causes
 - The goal is not too hard to achieve and the team knows how to achieve it, but team members are not willing to work hard enough

Examples: Team Failures for Cognitive Reasons

The Bay of Pigs, 1962

A talented and intelligent policy team, but Groupthink doomed the team to an unworkable plan with disastrous results

(WHITE HOUSE PHOTO)

The Iranian airline shootdown, July 3, 1988

Well trained team on Vincennes, but misunderstandings of each others information and perspectives led to a tragic mistake

Goals

Help Teams Do Well Cognitively

- Problems
 - There's a morass of cognitive factors
 - It's hard to understand cognitive factors
 - It's hard to diagnose specific problems
 - It's hard to determine effective means to address the problems
- Approach
 - Synthesize cognitive theory of collaboration
 - Organize cognitive issues to help teams understand them (e.g., create periodic table of cognitive factors)
 - Create a tool to help team members diagnose problems and identify remedies
 - Validate tool effectiveness
 - Explain and publicize cognitive team issues

Theory

- Basic premises
- Collaboration building blocks
- The twelve enablers

Premises

Knowledge Basis for Collaboration

- Knowledge is central to collaboration and teamwork
 - Teams whose members know what they need to know can work together effectively. Those that do not are prone to various kinds of predictable errors, with the type of error dependent on the type of knowledge deficiency
- Knowledge must be distributed among members of a team
 - Everybody does not need to know everything for a team to be effective. But every team member does need to know how to get the knowledge he or she needs.
- Individuals need to know about both “taskwork” and teamwork
 - Taskwork knowledge is team members need to carry out their tasks were they acting alone
 - Teamwork knowledge is what team members need to know to work together effectively
- The collaborative dialog helps generate the needed teamwork and taskwork knowledge
 - Team members exchange ideas to clarify issues and reach consensus to put in place the knowledge and understandings that team members must have to achieve the team’s mission.

Theory: How Teams Work

Building Blocks of Collaboration and Teamwork

Team Set Up and Adjustment

- Form team
- Review goals
- Identify tasks
- Determine roles

Need for changes

Team set up

Group Problem Solving

- Brainstorm
- Prioritize
- Discover differences
- Enrich
- Reach consensus

Issues to work on

Discussion results

Synchronize and Act

- Mass effects
- Lay groundwork
- Hand off tasks
- Backup
- Cue to situation

Performance feedback

What to do next

Individual and Shared Understandings

- About plan, goals, tasks, and situation
- About team members backgrounds, activities, and status
- About task and team status and prospects

Group Problem Solving

Sharing of Perspectives

- Collaboration enables teams to “make better lists”
 - Better views on what is happening, the reasons for these occurrences, and their impacts on the team mission
 - Better set of candidate actions to take in response to these impacts
 - Better set of criteria to consider when evaluating the desirability of these actions
 - Better estimates of possible consequences of the alternatives being considered

Information to Product

*asynchronous, geographically distributed, cultural diversity, heterogeneous knowledge, unique roles, task dependencies, rotating team members

**highly interdependent tasks, poor management support, intelligent adversary, dynamic environment

***missed deadlines, failure to offer help, surprise at others behaviors, failure to share information, redundant or missed tasks

The Twelve Enablers

- Represents basic cognitive foundations for effective collaboration
- At a level useful for diagnosis and recommendations
 - Deficiencies in enablers are the underlying causes of teamwork problems
 - Risks and symptoms map easily to enablers
 - Recommendations follow directly from them
- Generalizes well known critical C2 and decision functions for teams

Knowledge Enablers

Foundational Knowledge

Goals

Others

Plans

Business rules

Dependencies

Task skills

Knowledge Enablers

Real Time Understanding and Assessments

Activity
Awareness

Mutual
Understanding

External
Situation

Plan
Prospects

Progress

Decision
Factors

Principal Enabler Dependencies

Diagnosis and Recommendation Tool

- Expert system software
 - Educates
 - Alerts to possible knowledge problems
 - Warns of consequences
 - Shows areas of agreement/disagreement
 - Suggests ways to improve

Tool Modes

- Individual mode
 - Asks questions about the team, task, and environment
 - Collects answers
 - Evaluates enablers that matter and are at risk or deficient
 - Helps people explore issues individually
- Team view
 - Assembles answers
 - Shows areas of agreement and disagreement
 - Provides safe discussion forum
- Trends view
 - Changes in team knowledge enablers over time, with critical events superimposed
 - Changes to risks and symptoms responsible for enabler changes

Storyboard for Commercial Version to Tool

Upon completing use of the tool, the user will see a screen presenting several options:

Enabler Areas of Concern

Knowledge Strength

weak

strong

- Goals
- Planning**
- Dependencies
- Each Other
- Business Rules
- Task Skills
- Activity Awareness
- External Situation
- Task Progress
- Mutual Understanding
- Plan Assessment
- Decision Factors

Description of Planning

This is the overall understanding of the plan, which should define tasks, assign those tasks to team members, and specify a work schedule.

Plans should also outline leadership roles, identify individuals as subject matter experts, and clarify who is responsible for a task and who will support that person's efforts.

Click to close

Description:

It is important to understand the team's roles, tasks, schedules, resources, and criteria for success. [more](#)

Consequences:

When teams are weak in Planning, team members may work on others' tasks or neglect their own tasks. [more](#)

Symptoms:

1. Disagreement over responsibilities.
2. Overlooked tasks.

3. Redundant efforts. [more](#)

1. Overly complex project plan.
2. Undefined roles and responsibilities.
3. Too many team members. [more](#)

Recommendations:

1. Define tasks and deadlines.

2. Write out the plan.

3. Hold regular meetings. [more](#)

 - requires immediate attention

 - requires monitoring

 - acceptable

Questions for: **Enabler - Planning**

 High Agreement: There is a problem.
 Poor Agreement: There may be a problem.
 High Agreement: There is not a problem.

Questions	All V	Agree ▲ ▼	Disagree ▲ ▼	Enablers Planning V	Recommendation
1 The team never clearly defined member roles and task responsibilities.	Discussion Education Symptoms Risks Recommendations Agreement			☐ All ☒ Planning ☐ Goals ☐ Dependencies ☐ Each Other ☐ Task Skills ☐ Activity ☐ Task Progress ☐ External Situation ☐ Plan Assessment ☐ Decision Factors	the team's goals and products. more
2 The team never clearly defined member roles and task responsibilities.					conditions for success.
3 The team never clearly defined member roles and task responsibilities.					requirements. more
4 The team never clearly defined member roles and task responsibilities.					understanding
5 Team members do not know what resources have been assigned to tasks.					customers. more
		4	1	Planning	Describe necessary tasks. more

Recommendation

1. Articulate the team's goals, desired products, and how to achieve both.
2. Diagram the tasks that support common goals and that occur together or sequentially.
3. Create a timeline of task milestones.
4. Create a workflow chart that describes tasks, dependencies, resource needs, and individual assignments.

Development Chronology

- 2000 (Phase 1): Metrics, theories, taxonomies (with Klein)
- 2001 (Phase 2 begins): Case studies, initial enabler set, paper-based guidelines
- Fall 2002: Version 1. Medical diagnosis model, expert system framework, individual mode only
- Winter 2003: Version 2. War Room and CCRP team use, add team view, demo at Navy Opportunity Forum
- Summer 2003: Version 3. Improved question selection, with emphasis on exploring issues. NPGS team tryout. Define trend view
- Fall 2003: Version 4. Improved knowledge base increasing focus on education. UK team evaluation. Planned Navair evaluation. Tool patent submission
- Spring 2004. Commercial version

Validation

- From existing literature
 - Consistency of theory, risks, and symptoms with academic and business management findings
- “Face value” validation of the tool
 - Five teams tried it out: EBR war room (six times) and CCRP teams, NPGS teams (twice), and two UK teams
 - Team feedback: diagnoses appropriate and helped identify real issues, useful recommendations
- Formal experiments
 - Piggy backing on Navair in February
 - Will test statistically if teams with tool do better than teams without the tool
 - Streamlined tool to focus on educational utility

Lessons Learned

- Cognitive framework of twelve enablers makes sense to users
- Paper-based guidebook for diagnosis, discussion, and recommendations too hard to use.
- Expert system version easy to use. Users perceived diagnosis to be accurate and helpful
- Tool perceived to contribute in three ways
 - Educational: Informs users of critical knowledge and processes
 - Discussion: Provides a socially safe forum for raising issues
 - Recommendations: Provides good checklist
- Leaders may feel threatened by Advizor tool
- Tool cannot ignore social issues entirely, but it's risky to address too obviously and directly
- May need to tailor language and emphasis of tool for different types of teams

Some Publications

- Conference Proceedings
 - “Cognitive-Based Metrics to Evaluate Collaboration Effectiveness.” SAS 039 Symposium: Analysis of Military Effectiveness of Future C2 Concepts and Systems, April 2002
 - Collaboration Advizor™ Diagnosing and Fixing Collaboration Problems Navy Opportunity Forum. May 2003
 - “Understanding and Applying the Cognitive Foundation of Effective Collaboration” 15th International Conference on Systems Research, Informative, and Cybernetics
 - “Objective Metrics For Evaluation of Collaborating Teams” 2003 Command and Control Research and Technology Symposium, Info (June 2003)
 - “Understanding and Applying the Cognitive Foundation of Effective Collaboration” 5th Annual ONR Conference on Collaborative Decision-Support Systems, Quantico, VA, September 11, 2003
- Other
 - Command Center Performance Assessment System, Evidence Based Research, April 2003
 - Government Executive “The Cognitive Path to Team Success.” (submitted)
 - Navy Institute Proceedings “Network Centric Teamwork” (in draft)
 - DTIC “Cognitive Basis of Collaboration” (in draft)

Transitions

- Collaboration Diagnosis and Recommendation Tool
 - Currently used in EBR war room
 - Being evaluated by war room clients for internal use and by Collaborative Information Environment, JFCOM
 - To be demonstrated to Center for Naval Leadership, Little Creek
- Collaboration evaluation and evaluation metrics
 - Support to JFCOM experimentation
- Commercial book on cognitive basis of effective collaboration
 - Will follow publication path successfully employed by War Room book

Summary

- A knowledge-centered theory can explain how collaboration works
- This theory informs collaboration performance metrics, guidelines for diagnosing collaboration problems, and methods for correcting collaboration problems
- Metrics documented and considered for use at JFCOM
- Five teams have tried out and used the Collaboration Advizor tool
 - Felt set of twelve cognitive enablers made sense
 - Said tool's diagnoses were accurate and helpful
 - Agreed tool helps by educating team members on important cognitive factors, by surfacing areas of agreement and disagreement, and by suggesting remedies
- Commercial version of tool to be completed this spring
- Transitions and publications on track
