BI-ANNUAL DOD JOINT COMMITTEE ON TACTICAL SHELTERS (JOCOTAS) MEETING & OUTDOOR EXHIBITION WITH THE SOFT & RIGID WALL SHELTER

May 2-4, 2005

Reactive Coatings as a Protective Shelter Liner Against CB Agents

Dr. Joseph D. Wander
Jeffery R. Owens
Timothy T. Lewis
Rashelle S. McDonald

Report Documentation Page

Form Approved
OMB No. 0704-0188

Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

1. REPORT DATE	2. REPORT TYPE	3. DATES COVERED
MAY 2005		**00-00-2005 to 00-00-2005**

4. TITLE AND SUBTITLE	5a. CONTRACT NUMBER
Reactive Coatings as a Protective Shelter Liner Against CB Agents	5b. GRANT NUMBER
	5c. PROGRAM ELEMENT NUMBER
6. AUTHOR(S)	5d. PROJECT NUMBER
	5e. TASK NUMBER
	5f. WORK UNIT NUMBER
7. PERFORMING ORGANIZATION NAME(S) AND ADDRESS(ES) **Air Force Research Laboratory,Wright Patterson AFB,OH,45433**	8. PERFORMING ORGANIZATION REPORT NUMBER
9. SPONSORING/MONITORING AGENCY NAME(S) AND ADDRESS(ES)	10. SPONSOR/MONITOR'S ACRONYM(S)
	11. SPONSOR/MONITOR'S REPORT NUMBER(S)

12. DISTRIBUTION/AVAILABILITY STATEMENT
Approved for public release; distribution unlimited

13. SUPPLEMENTARY NOTES
4th Bi-Annual DOD JOCOTAS Meeting with Rigid & Soft Wall Shelter Industry & Outdoor Exhibition, 2-4 May 2005, Port Hueneme, CA

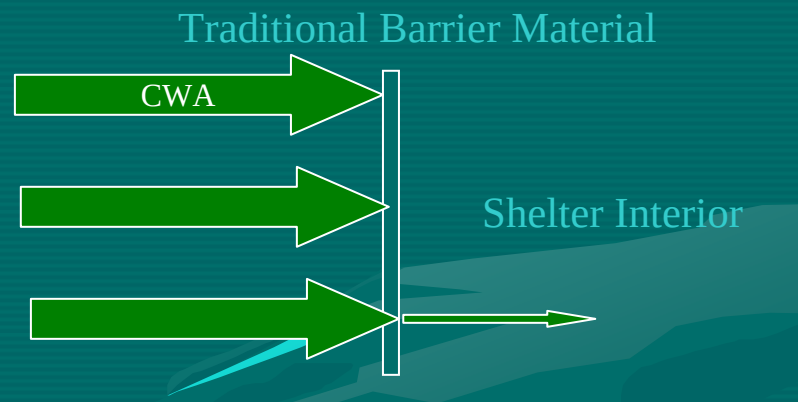
Order of Operation

- Introduction
- Theory
- Criteria for Success
- Background
- Coating Comparison
- Summary and Conclusions
- Questions

Reactive Treatments/Coatings for Collective & Individual Protection

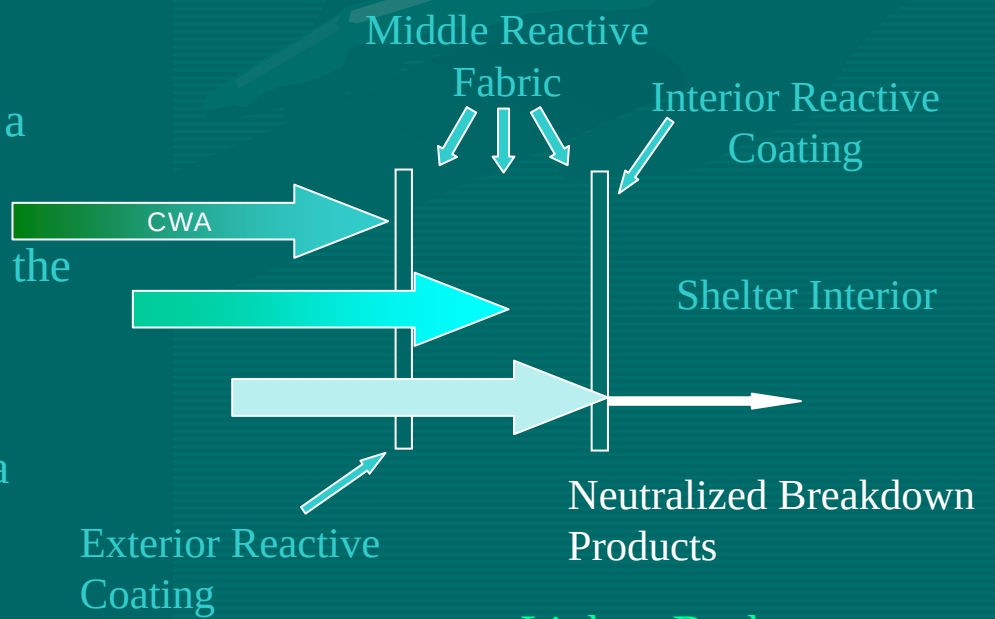
Conventional Barrier Materials

- All present barrier materials will fail over time
- Better barrier materials => to higher costs



Reactive/Barrier Materials

- Neutralization products at the surface act as a prophylactic
- Only neutralized products permeate through the reactive barrier component
- Shelter materials can be used to make less expensive barrier materials augmented with a reactive coating



Link to Back-ups

Criteria for Success

- Reactive system chemically active to the target C/BWA
- Reactive system compatible with proposed polymer system w\o significant loss of chemical reactivity
- Products considerably less toxic than CWA targets
- Favorable stoichiometry of reactive system vs CWA target
- Permeation kinetics must be slower than reaction kinetics
- Ideally catalytic or capable to regenerate

How Neutralization Occurs

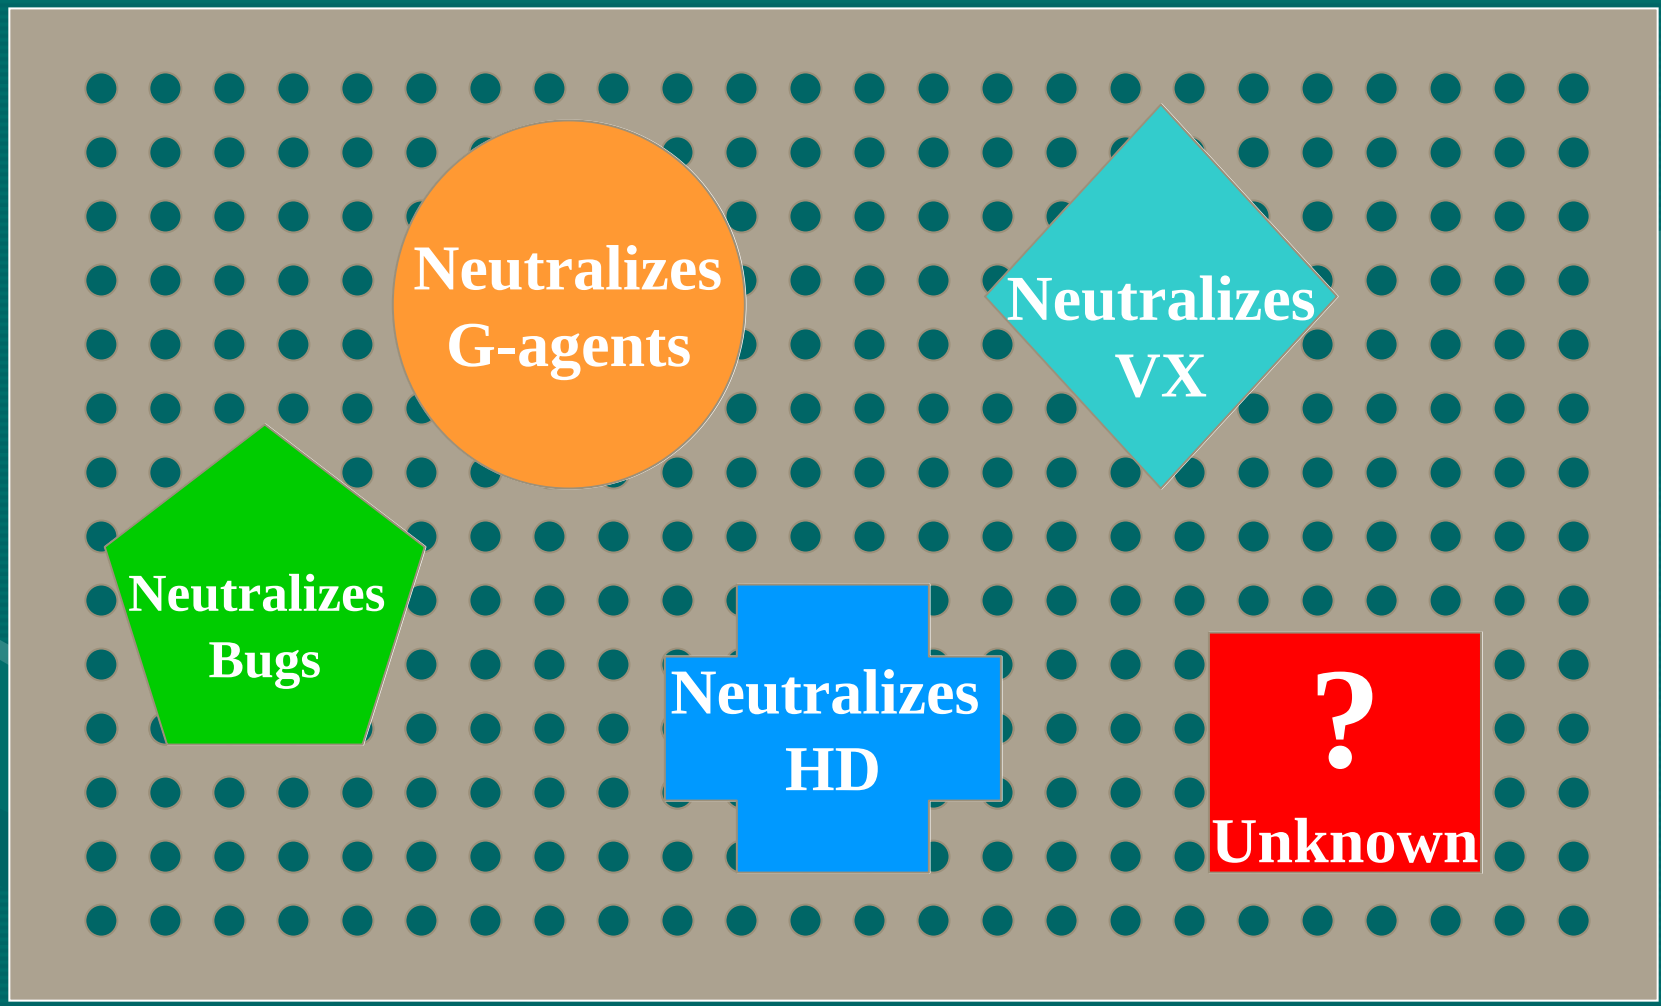
- cell toxicity
- membrane disruption
- oxidation

- oxidation
- hydrolysis
- nucleophilic attack

- hydrolysis
- nucleophilic attack

- oxidation
- hydrolysis

What We Want



Neutralizes G-agents
Neutralizes VX
Neutralizes Bugs
Neutralizes HD
?
Unknown

Technical Approach

Weak oxidizers within a band of reactivity that targets specific functional groups

Chloramides

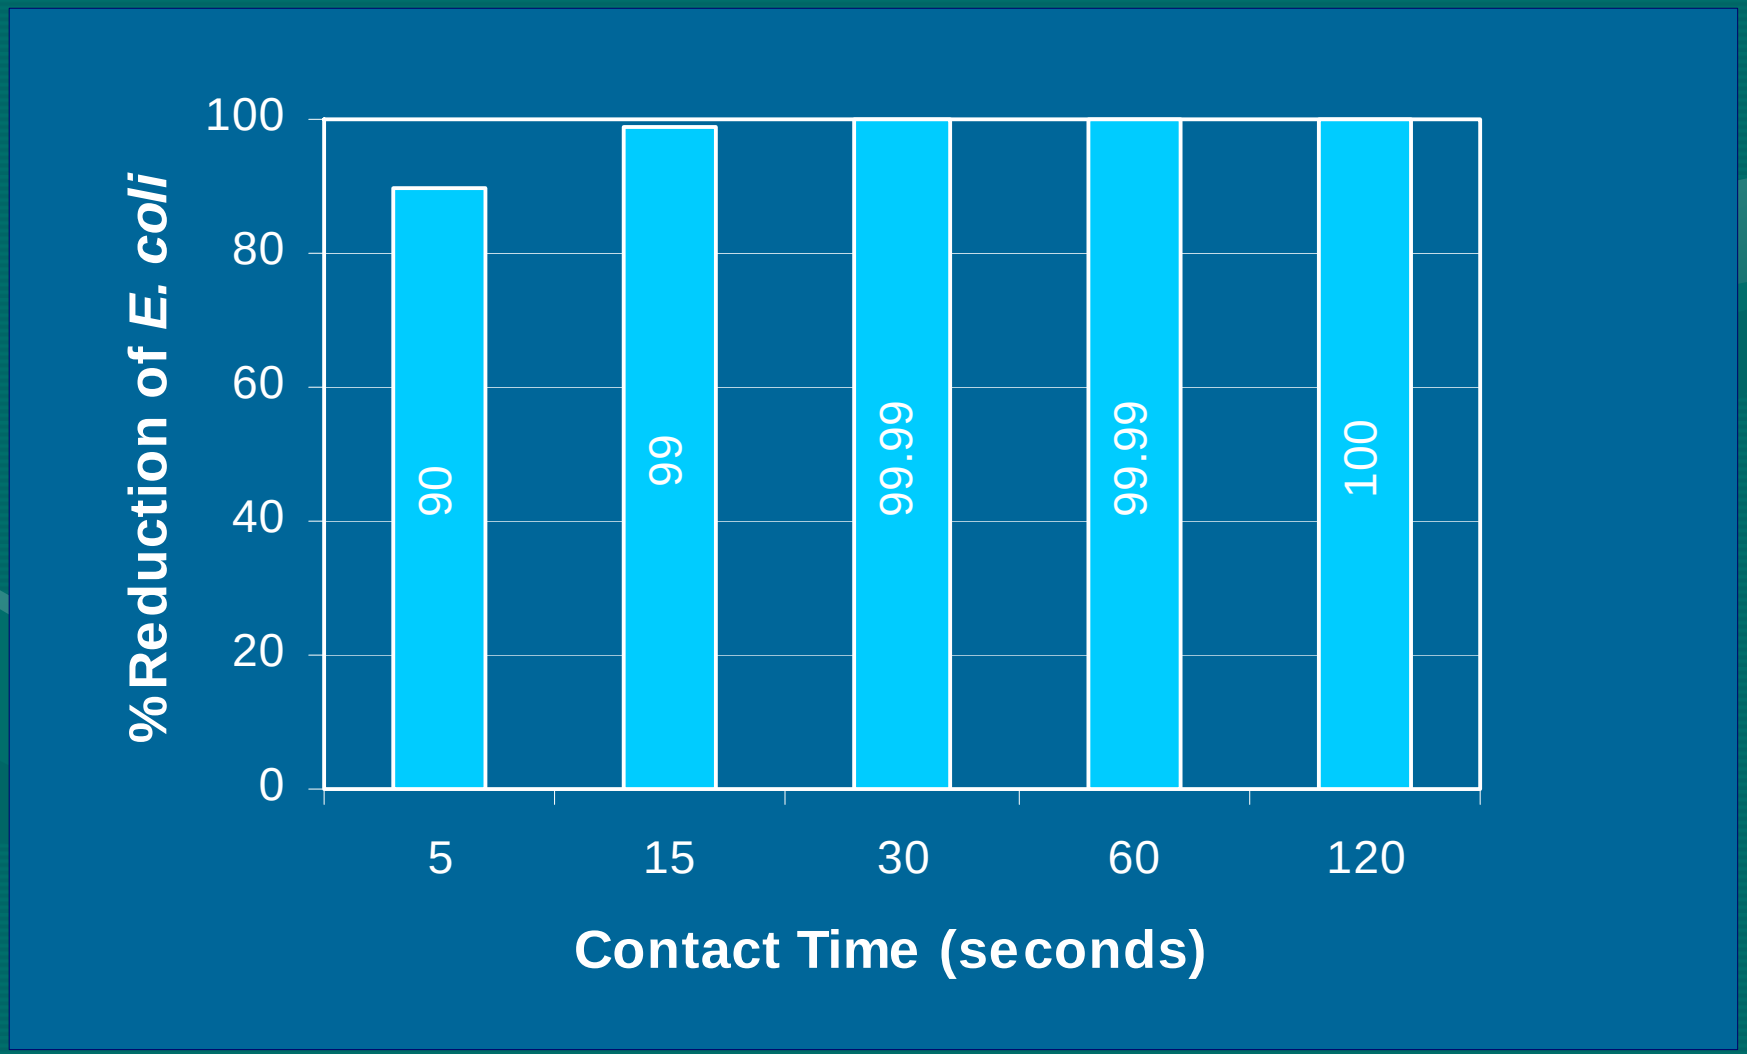
Why Chloramides?

- CWA decontaminant
- Antibiotic
  - nonspecific
  - acts on contact
  - broad-spectrum
- Benign

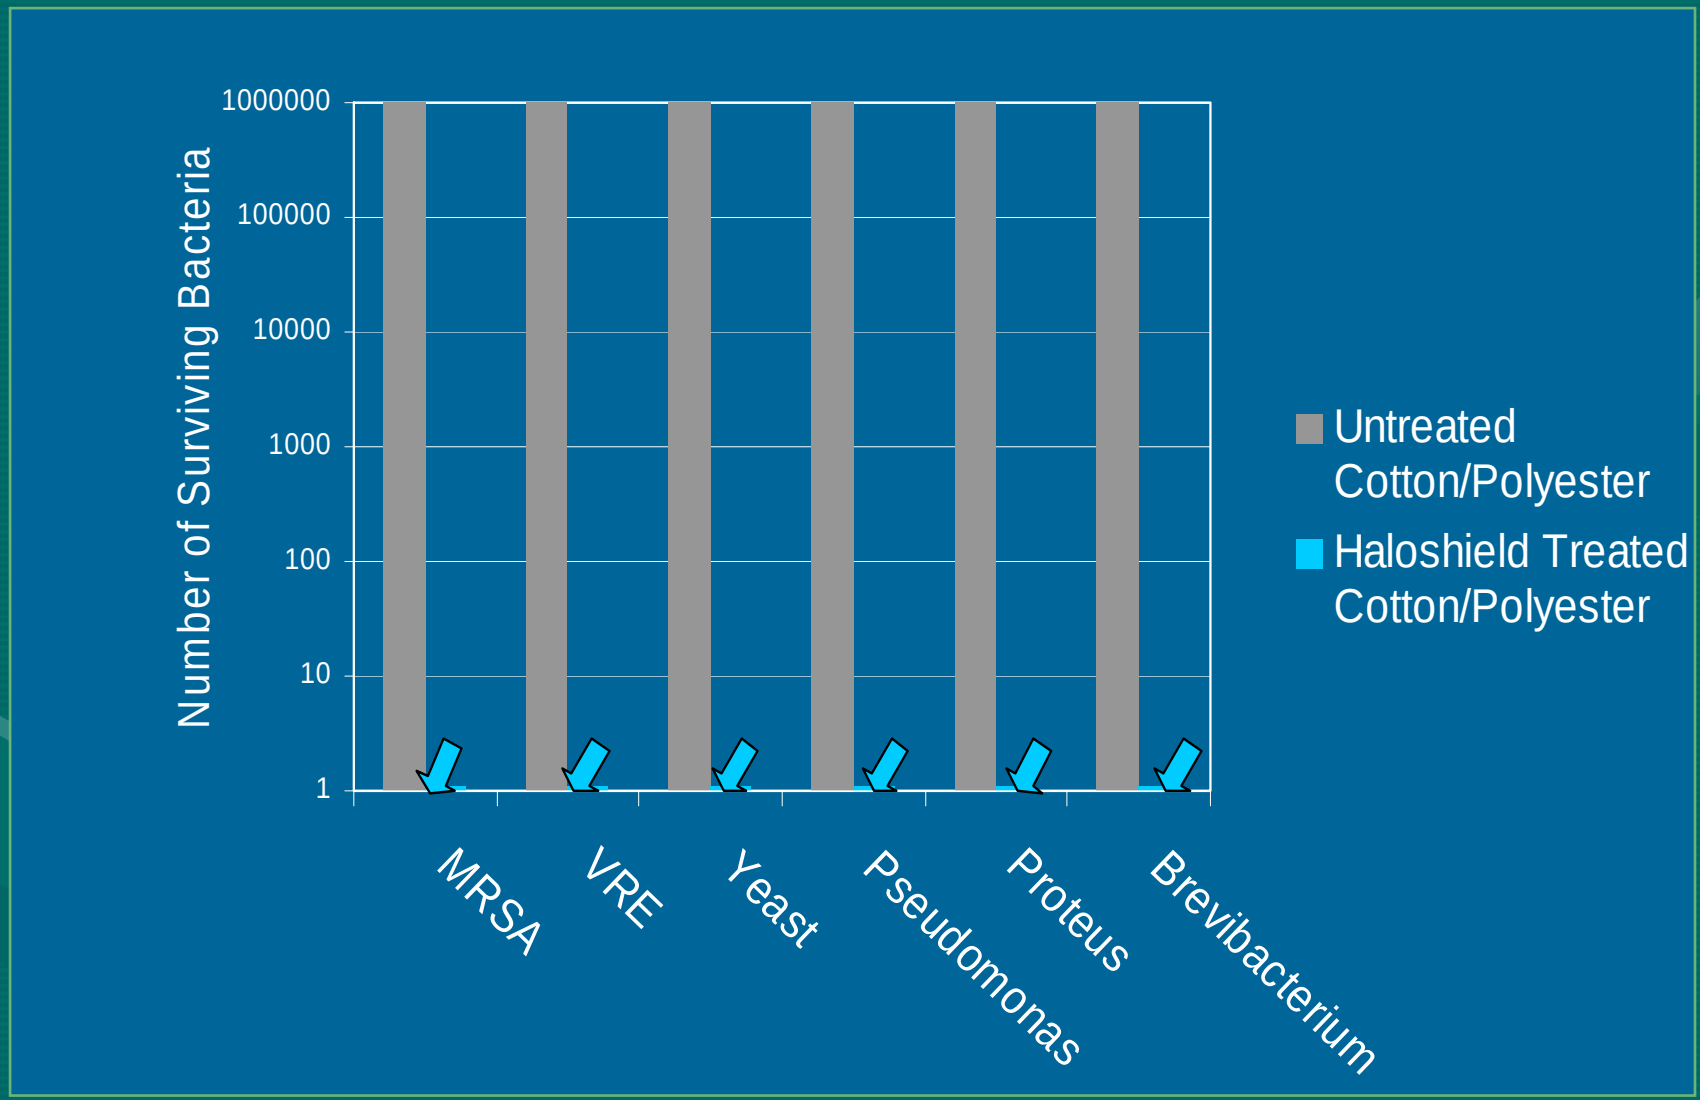
Progressive Approach to Reactive Barrier

- Establish Biocidal Efficacy
- Challenge Broad Spectrum of Organisms
- Challenge Spores
- Challenge Chemical Simulants
- Incorporate into Coatings

Chloramides: Fast Acting Biocides



Chloramides: Broad Spectrum Biocide



After two minutes exposure

Chloramides Challenging Spores

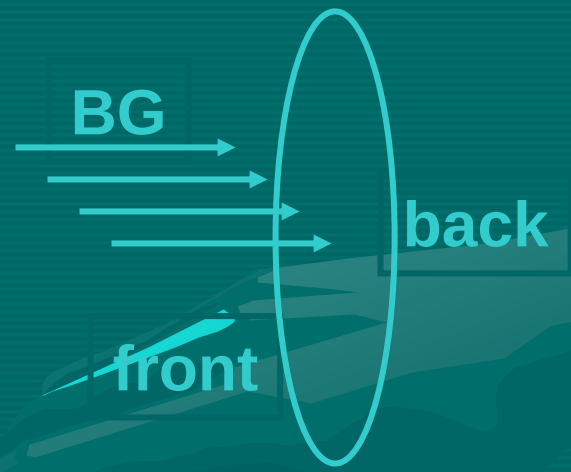
(Compliments of Natick)

AEROSOL CHALLENGE TEST

BG Spores, 10 min flow

525-675K Spores, 1 hr Incubation

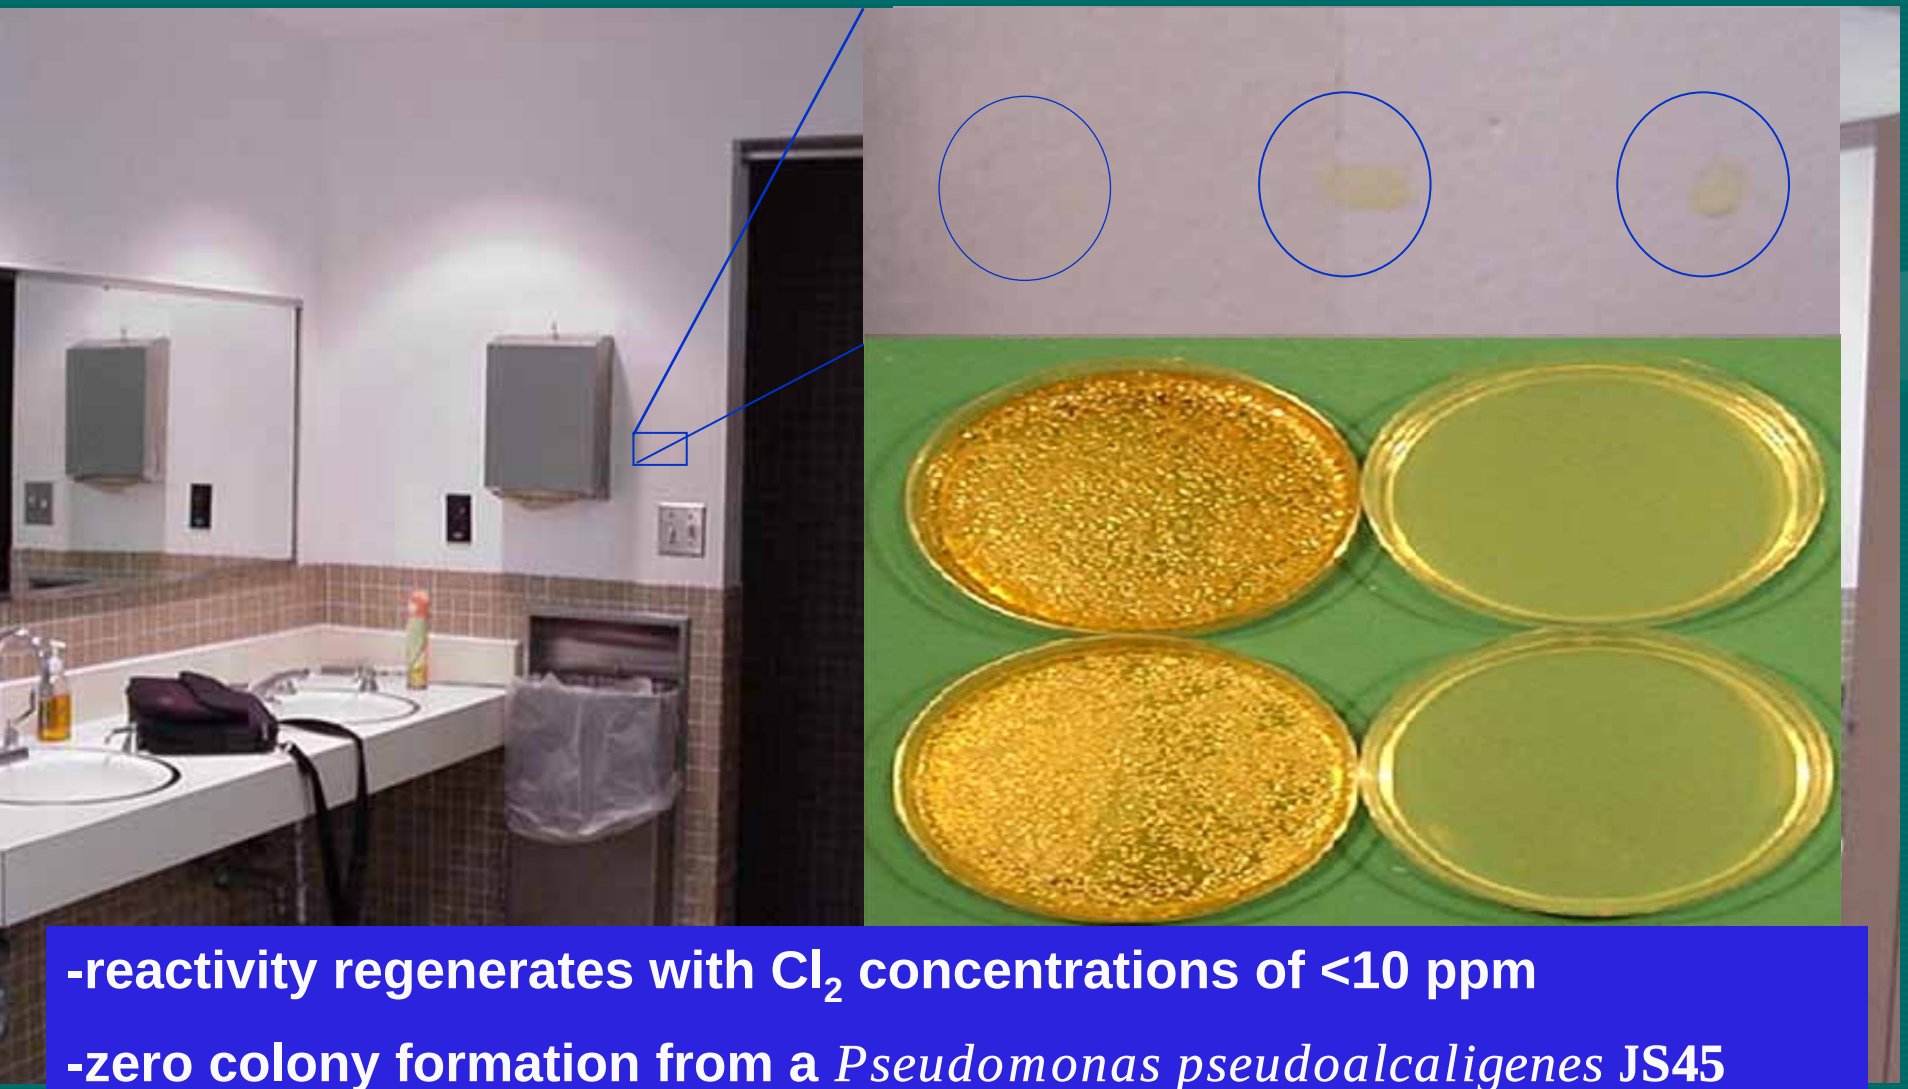
Plate Back Surfaces and Count



RESULTS

SAMPLE	Penetration (%)	Front (counts)	Back (counts)
Shell/Espun	3.0	36,000	1,150
Shell/Espun/Chloramine	2.7	29,000	720
Shell/Coated/Chloramine	9.6	1,610	0

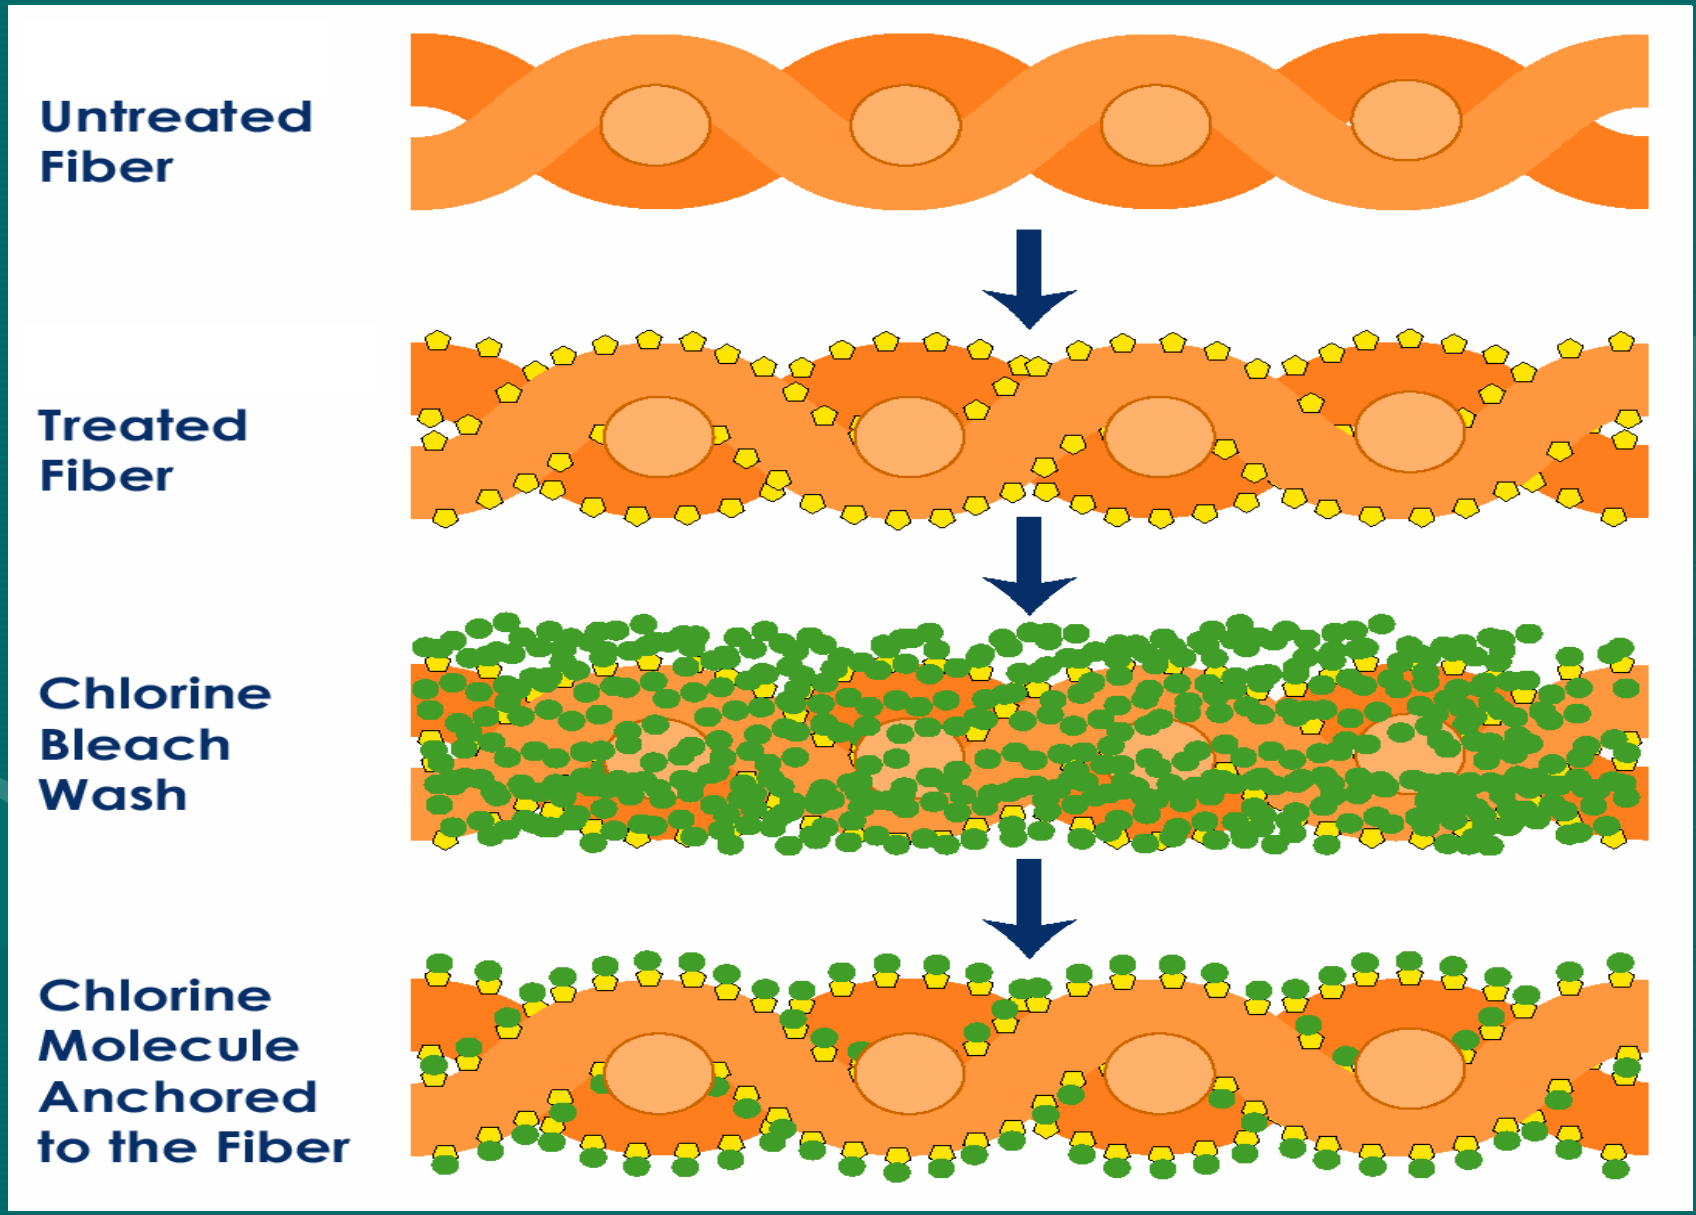
Chloramides: Practical Environment



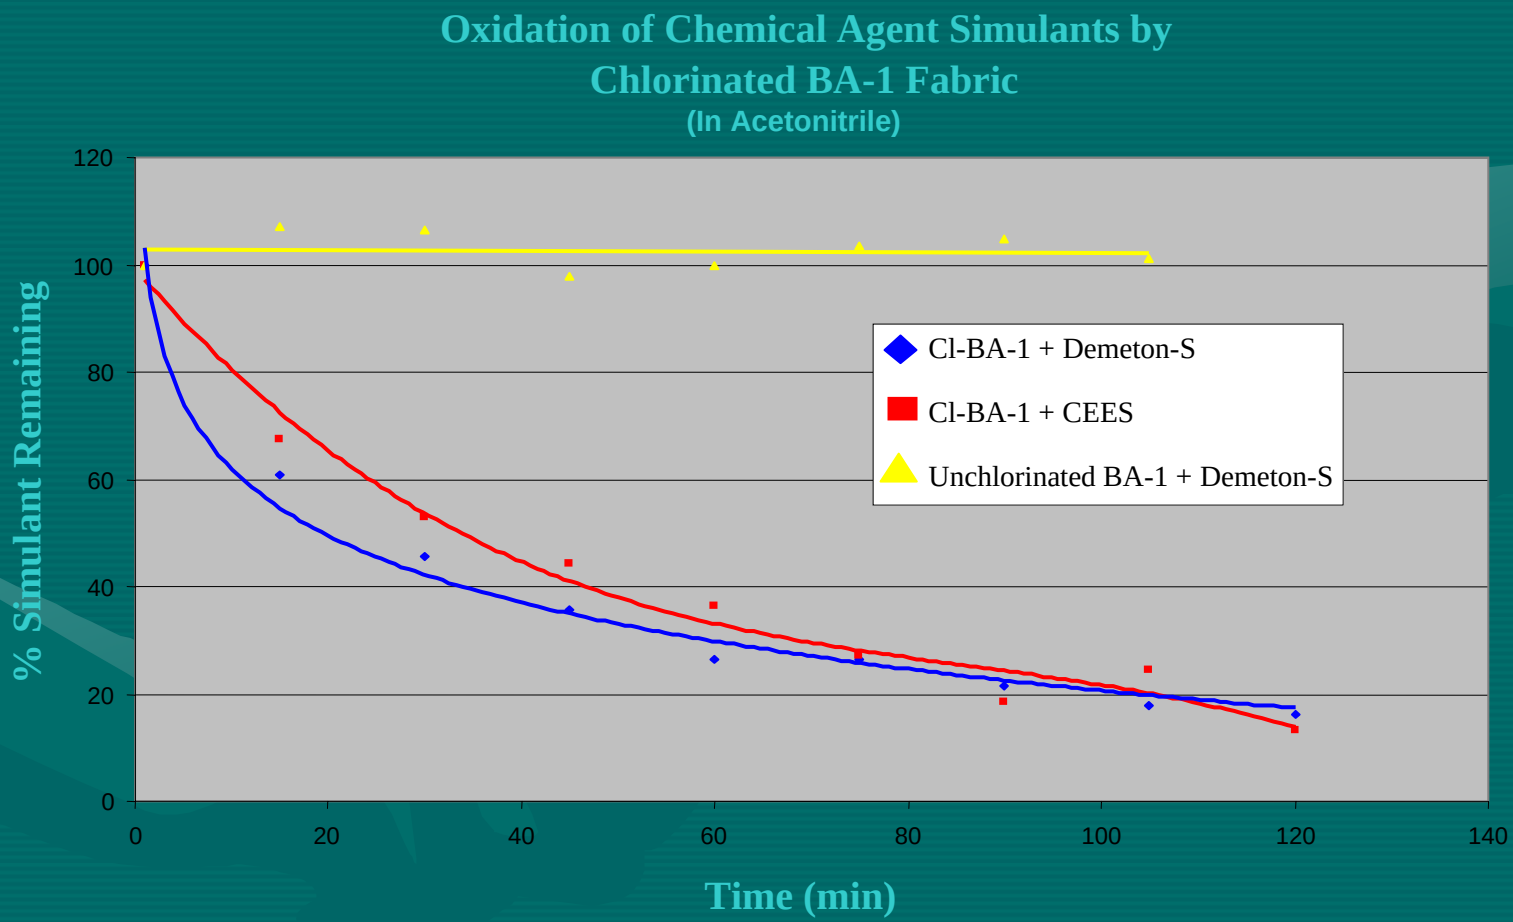
-reactivity regenerates with Cl_2 concentrations of <10 ppm

-zero colony formation from a *Pseudomonas pseudoalcaligenes* JS45 challenge after three, six, nine and twelve months w/o recharging

Grafting/Activating Reactive Sites to Cellulose Fibers



Chloramide Reactivity to CEES: Agent Simulant



The Reactive Coating System

•Fabric- 600 threat count, 100% cotton sateen
Manufacturer: Hotel Fine Linens

•Silicone Coating- Ultra Guard 5500®, single component silicone elastomer
Manufacturer: General Coatings, Inc.

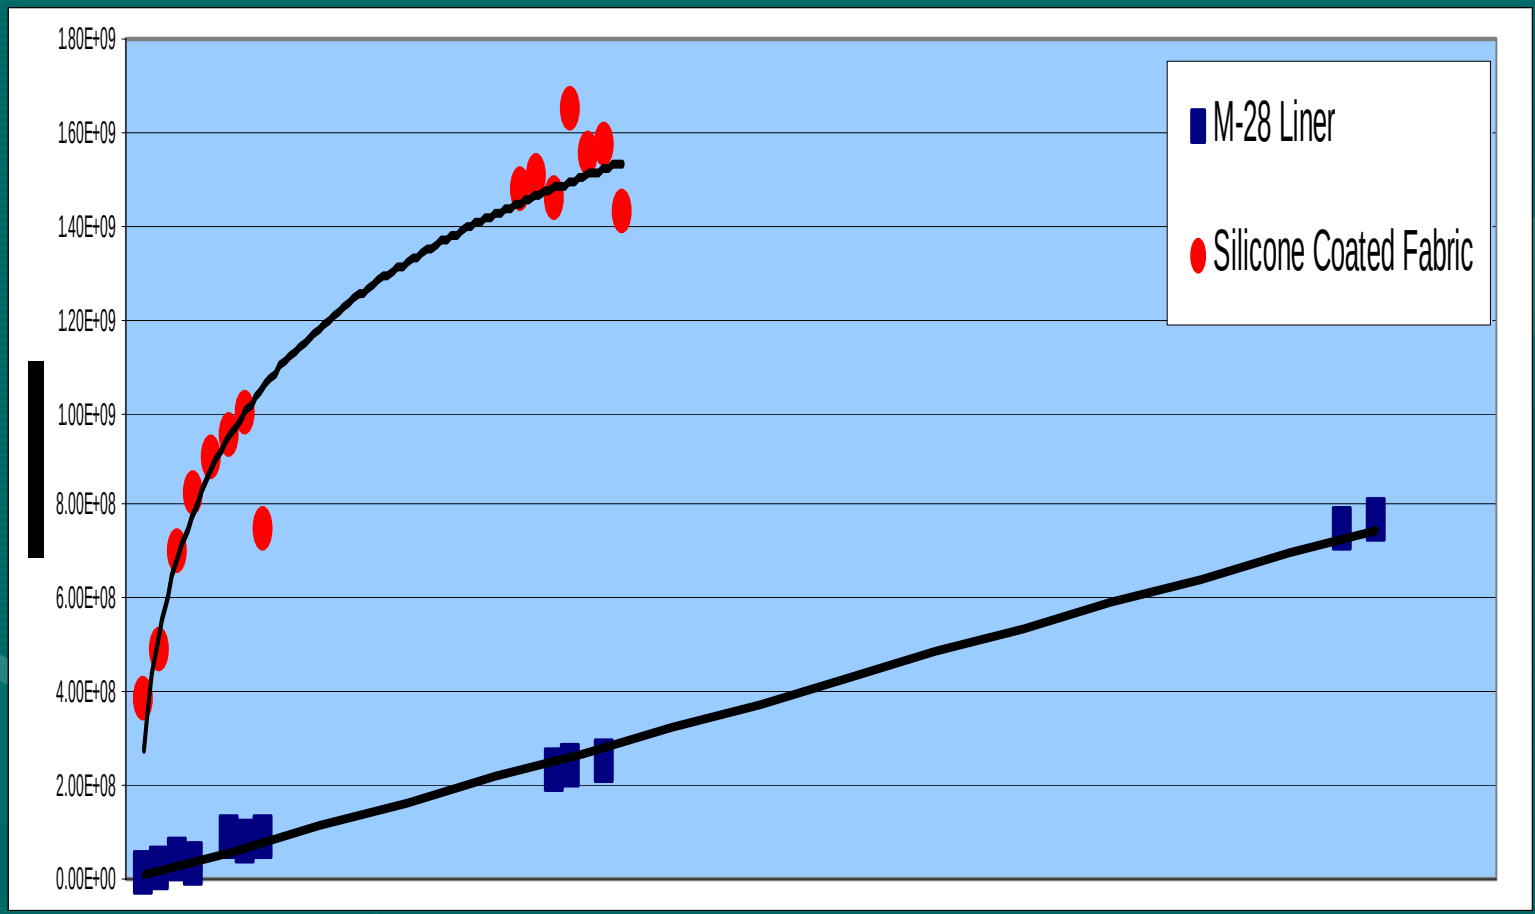
•Fluorinated Silicone Coating- Dow Corning® 94-003, single component fluorinated silicone elastomer
Manufacturer: Dow Corning

•Experimental chloramine monomers: DC, MC, BA-1, poly-TTDD
Synthesized by: Auburn University

•Reactive System = Silicone coating with Chloramine (10% wt/wt) coated onto chloramine treated 600 count cotton fabric

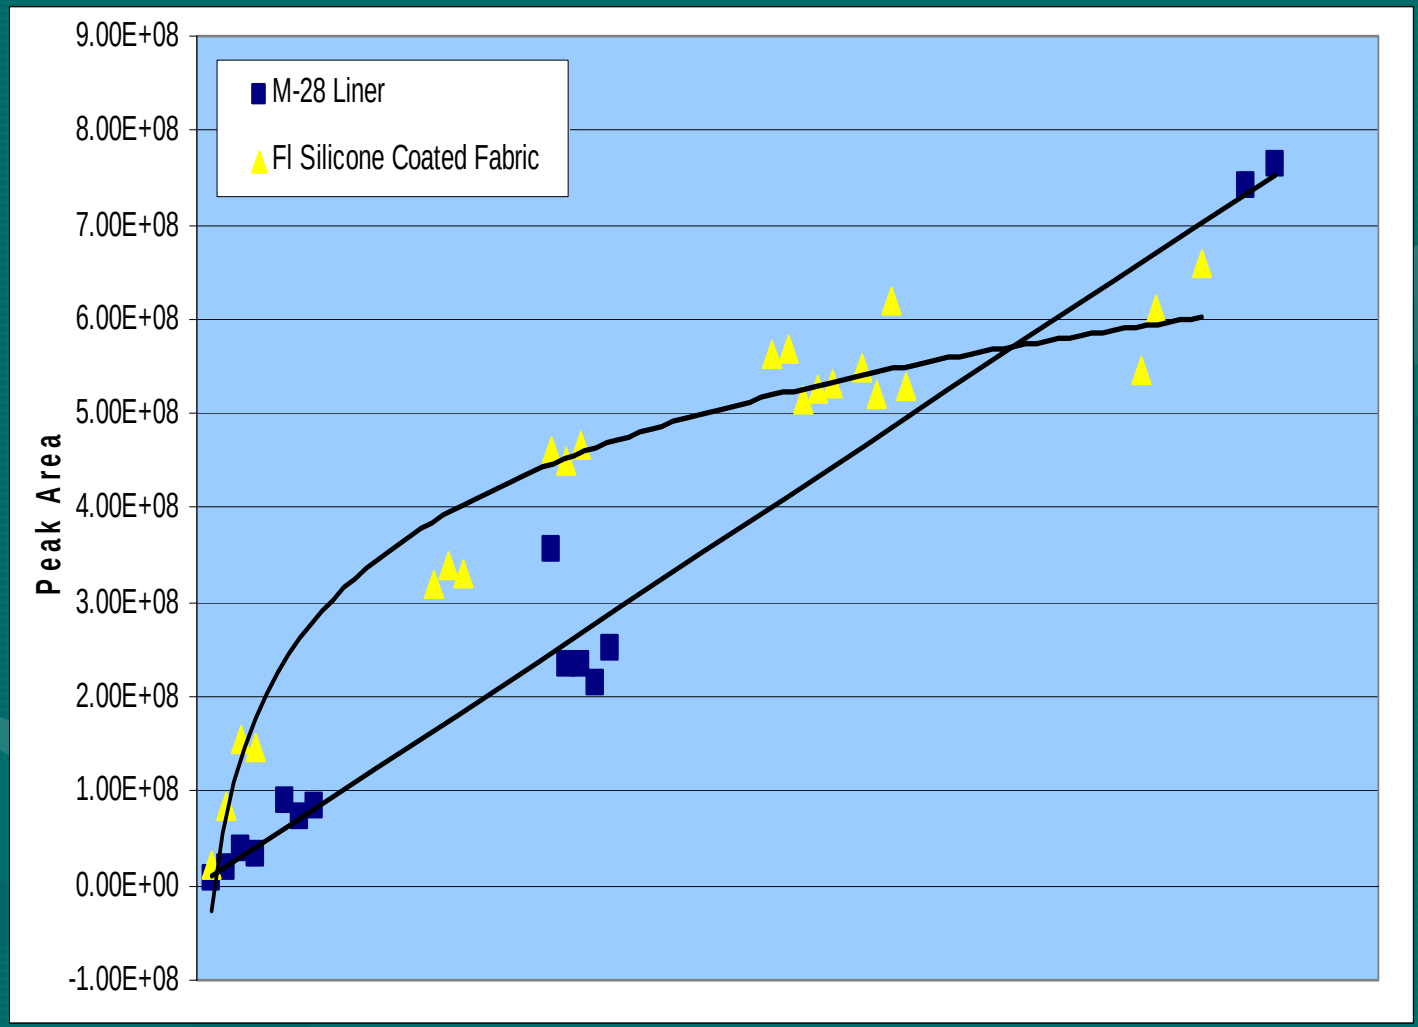
M-28 Liner vs Silicone Coated Fabric: CEES

20g/m² Challenge



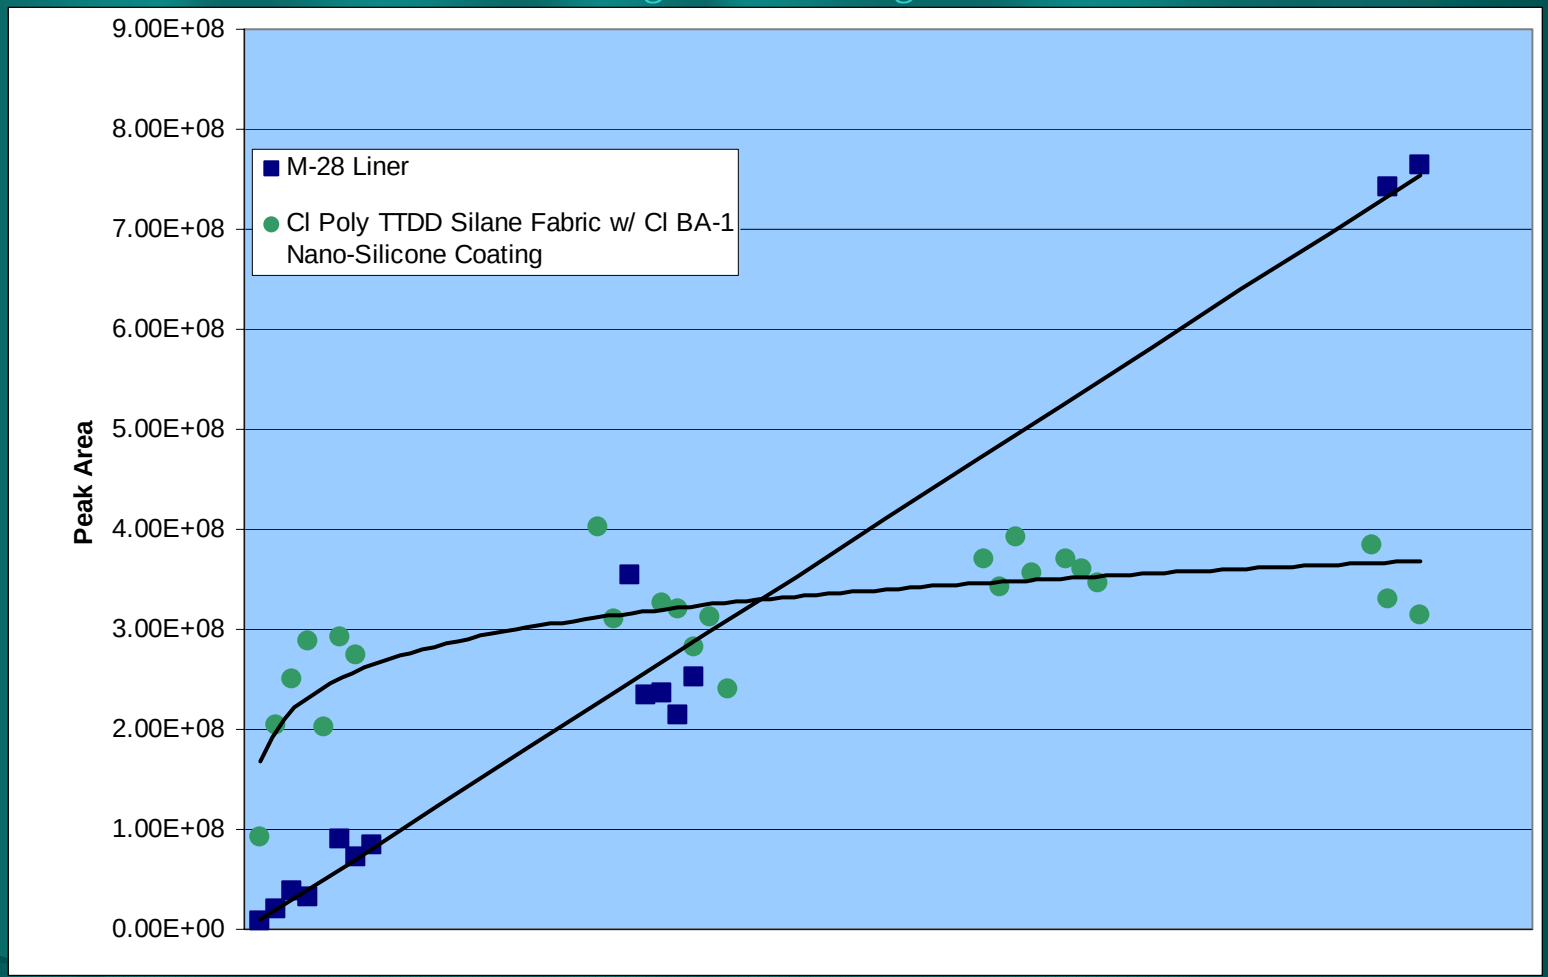
M-28 Liner vs Fl Silicone Coated Fabric: CEES

20g/m^2 Challenge



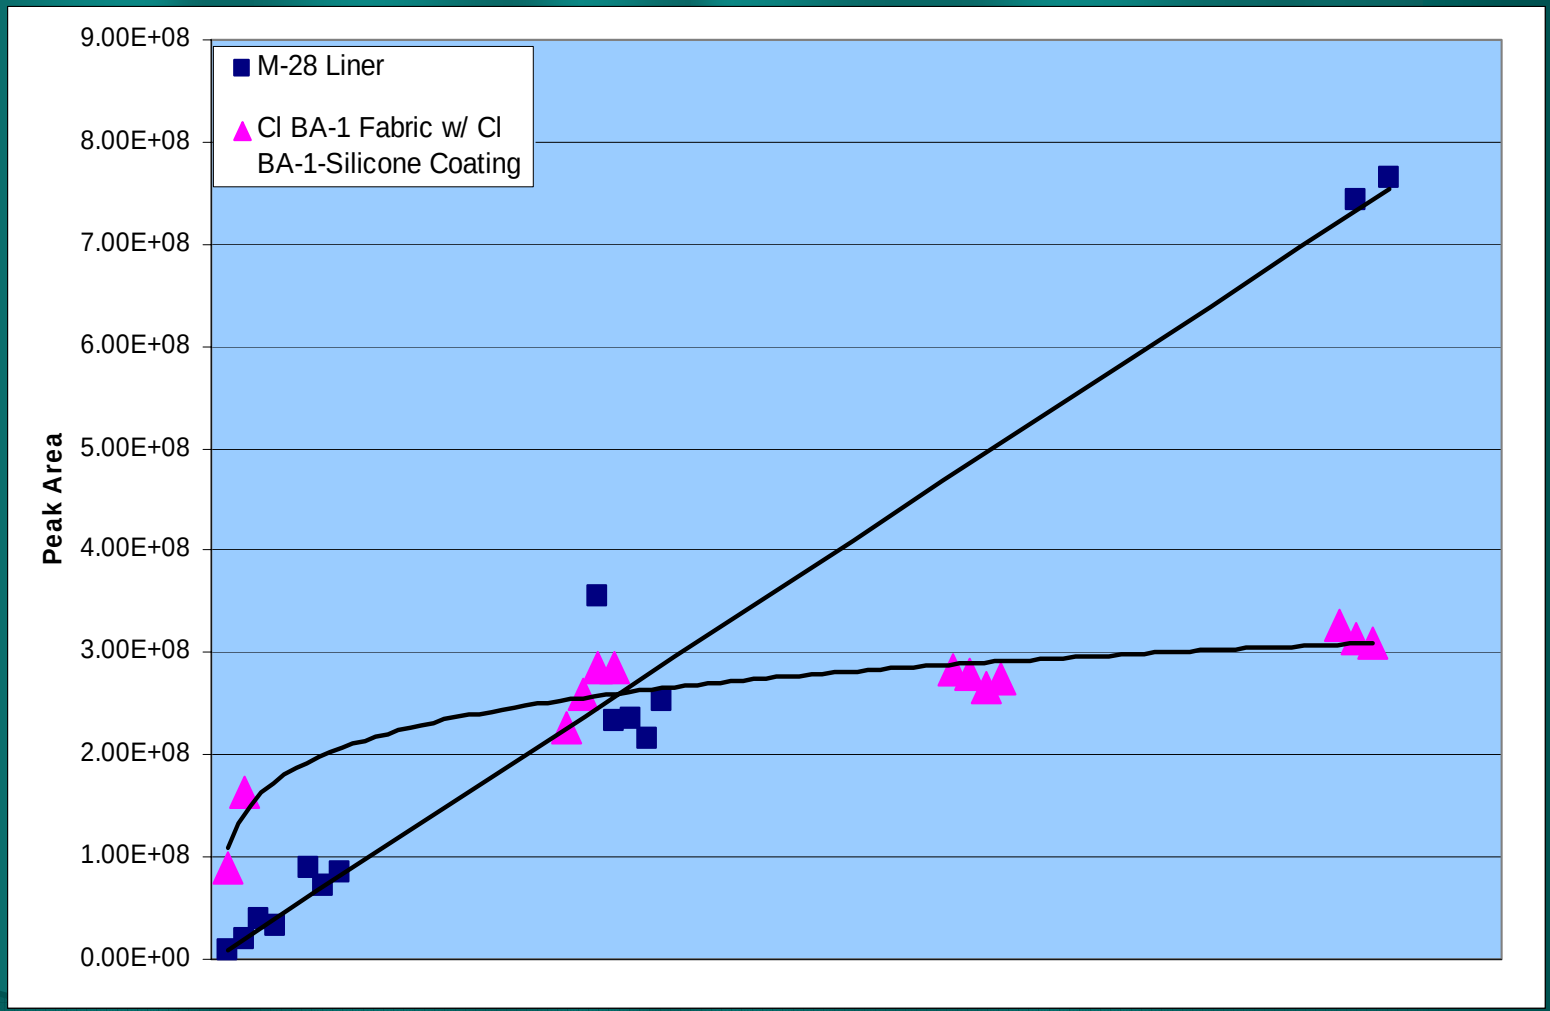
M-28 Liner vs Cl Poly TTDD Silane Fabric w/ Cl BA-1 Nano-Silicone Coating: CEES

20g/m^2 Challenge



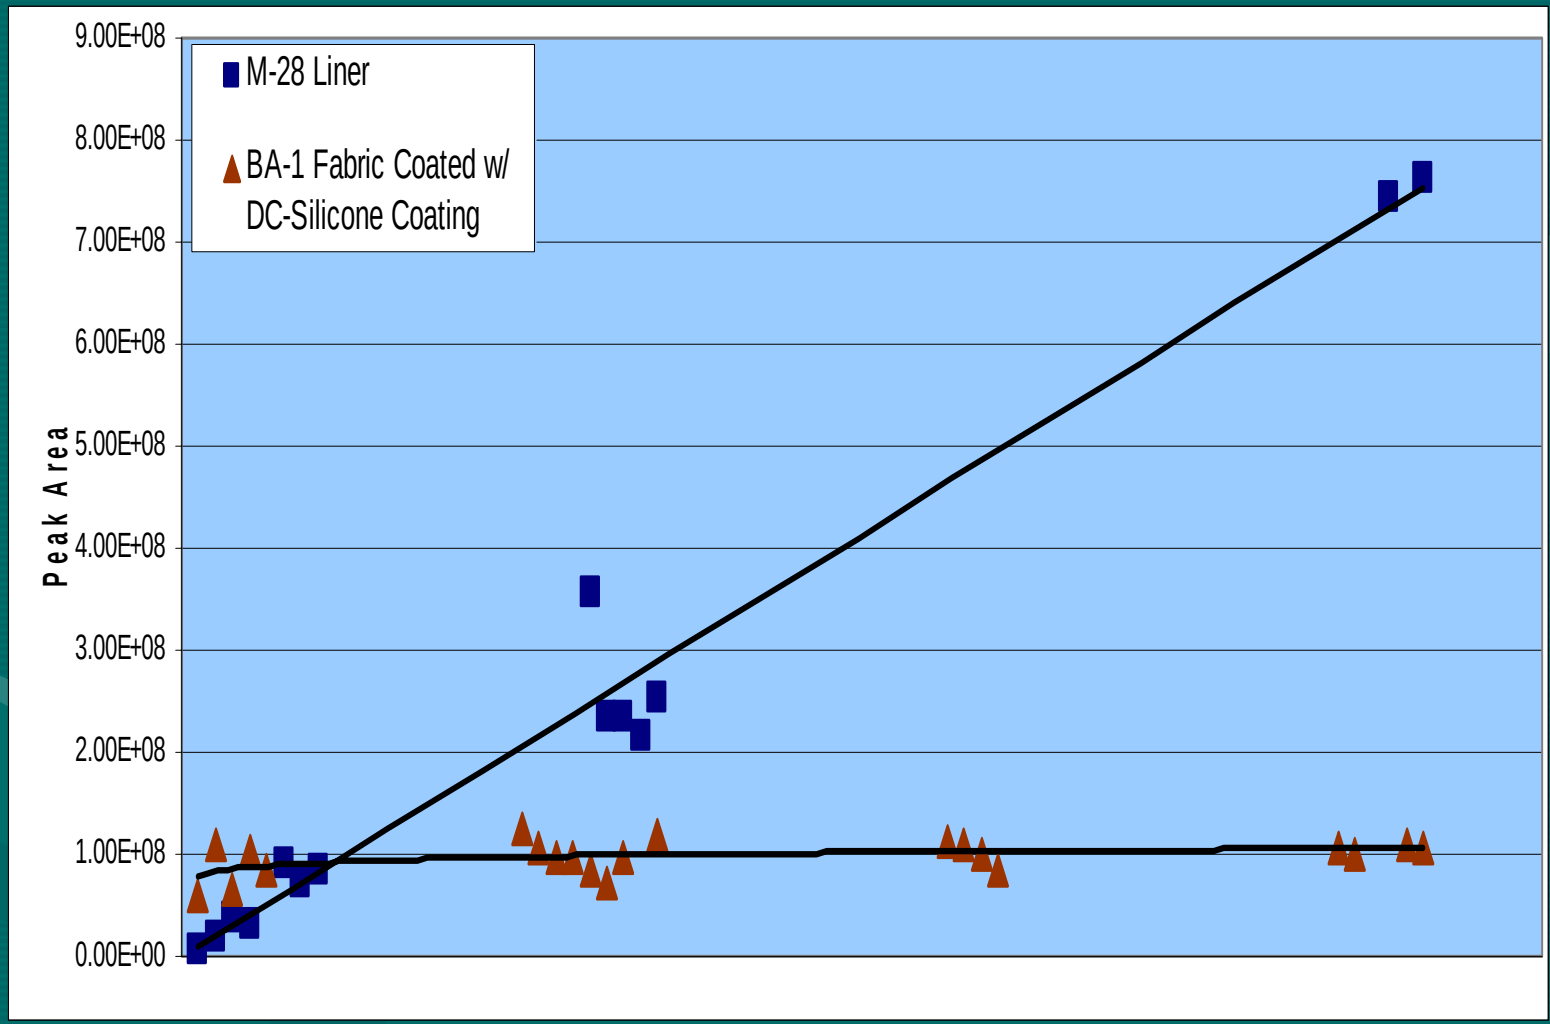
M-28 Liner vs Cl BA-1 Fabric w/ Cl BA-1 Silicone Coating: CEES

20g/m^2 Challenge

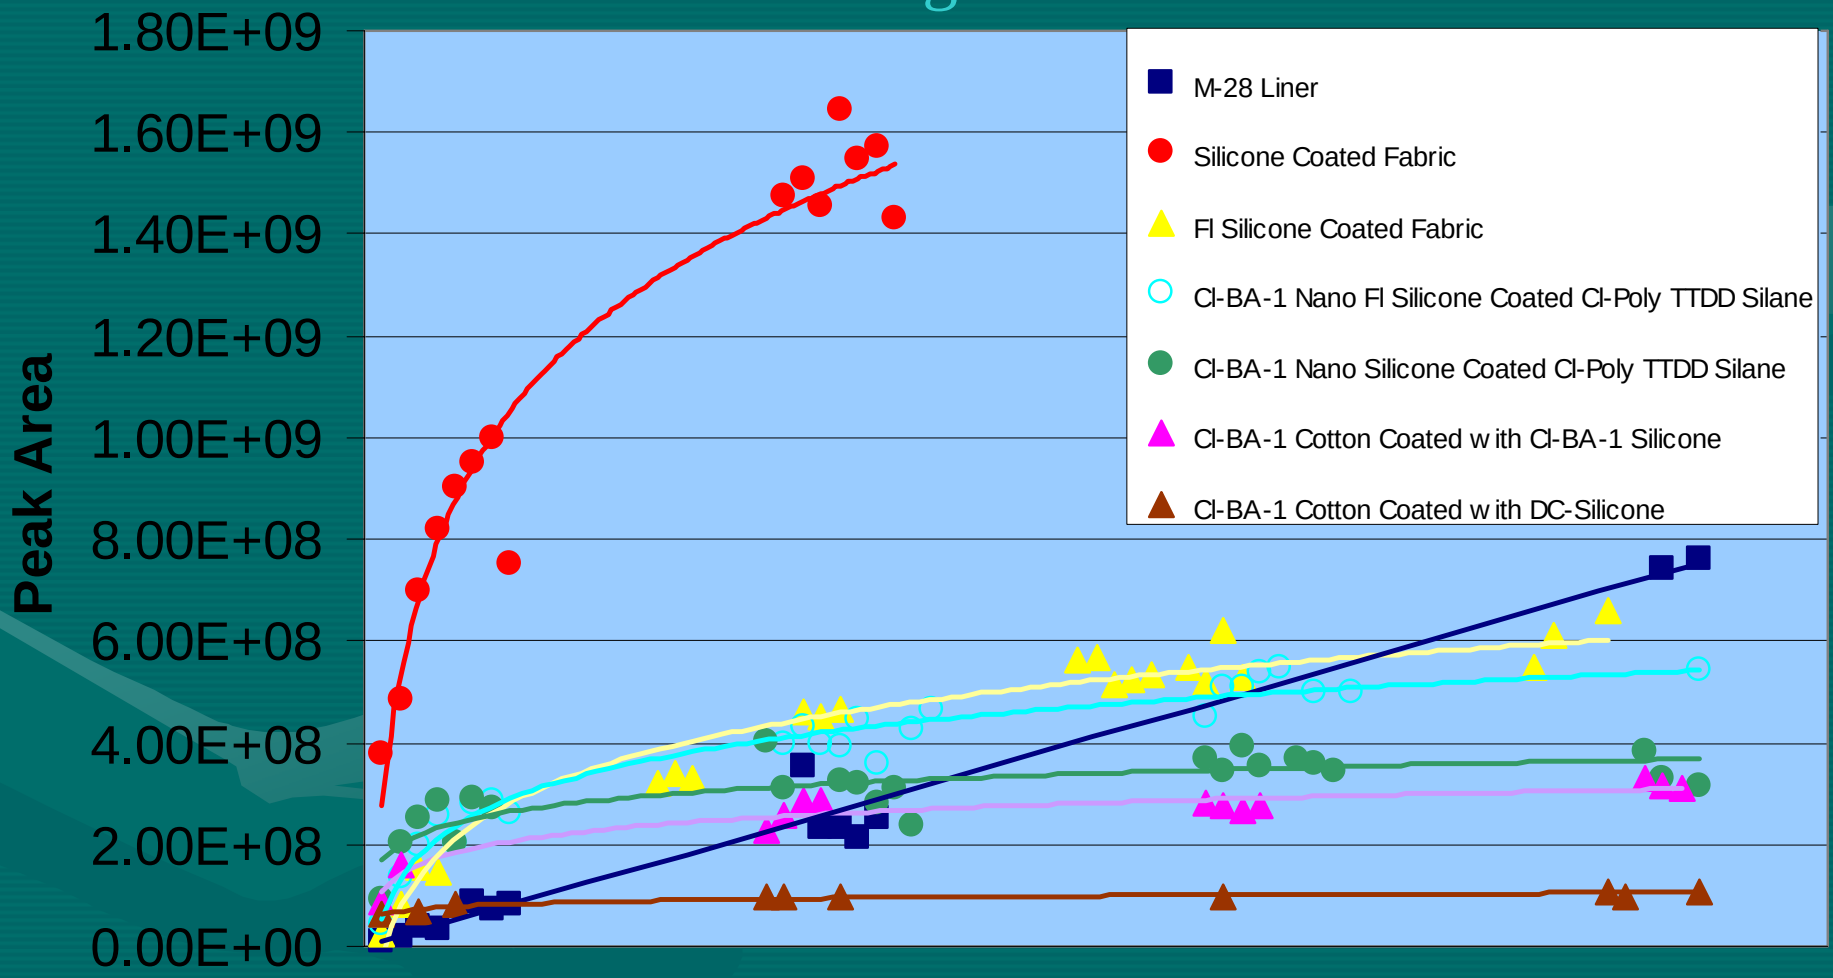


M-28 Liner vs BA-1 Fabric Coated w/ DC-Silicone Coating: CEES

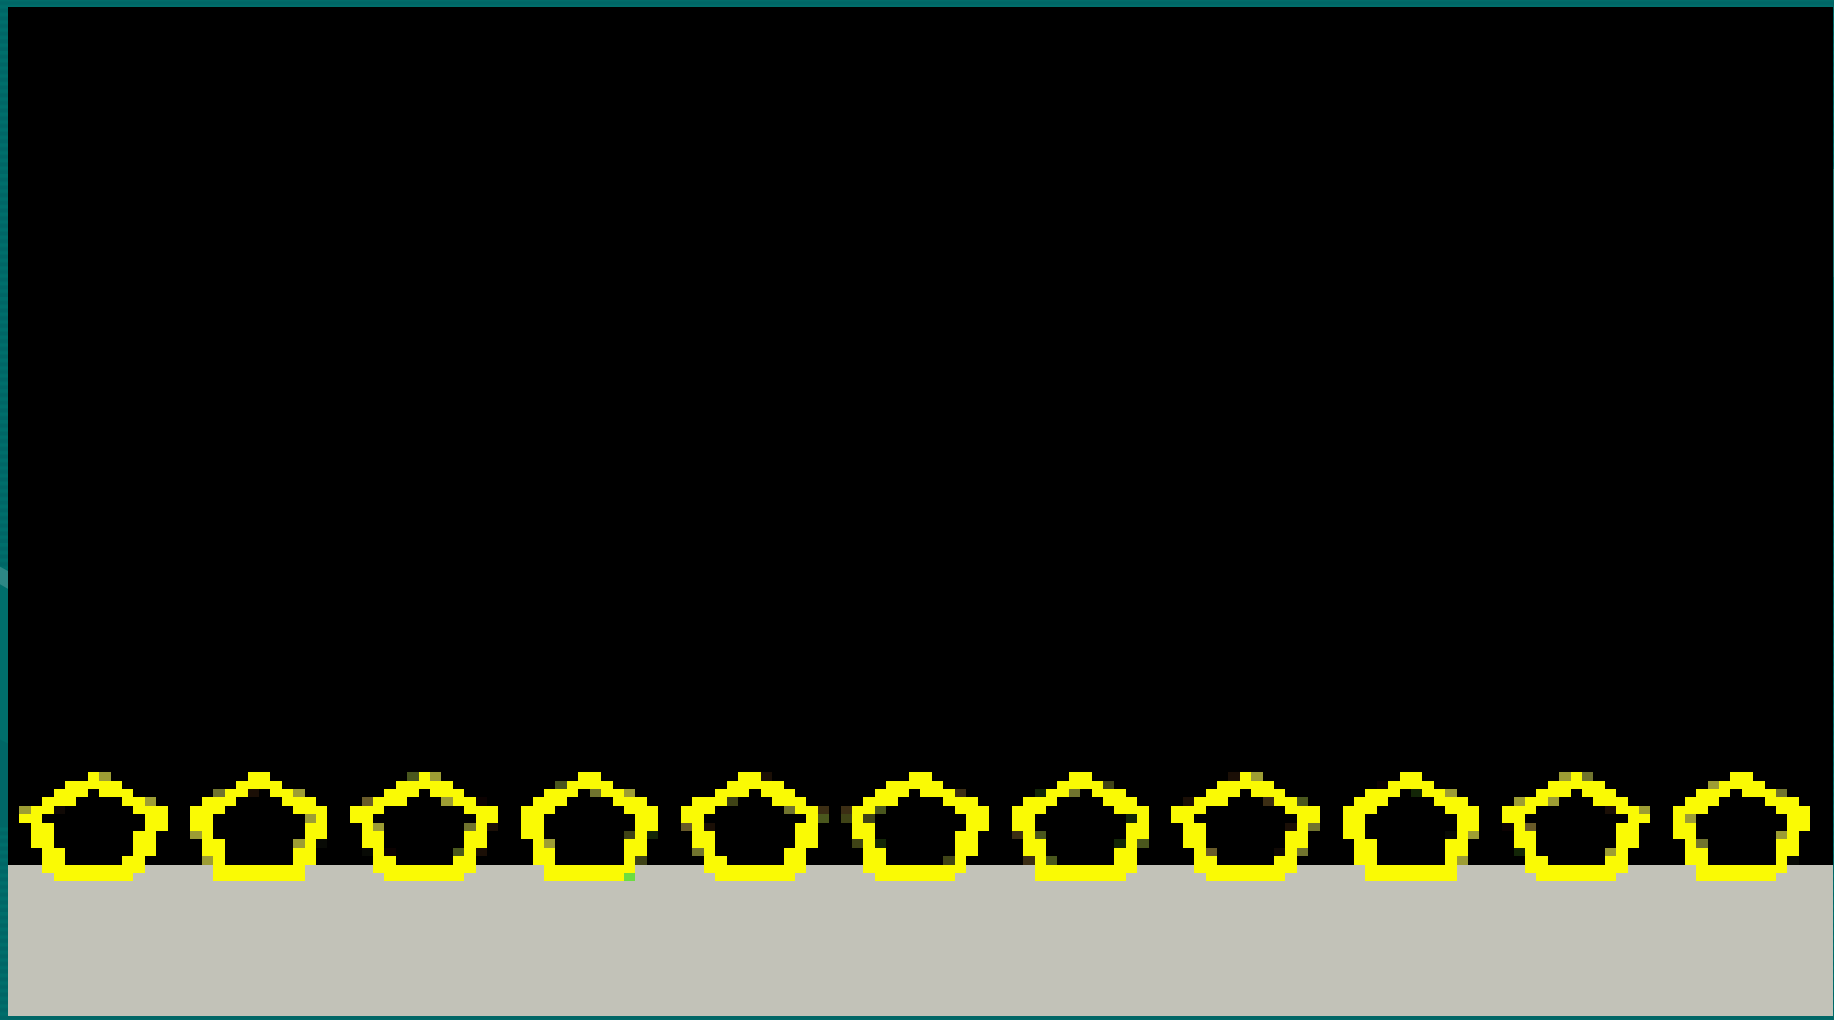
20g/m² Challenge



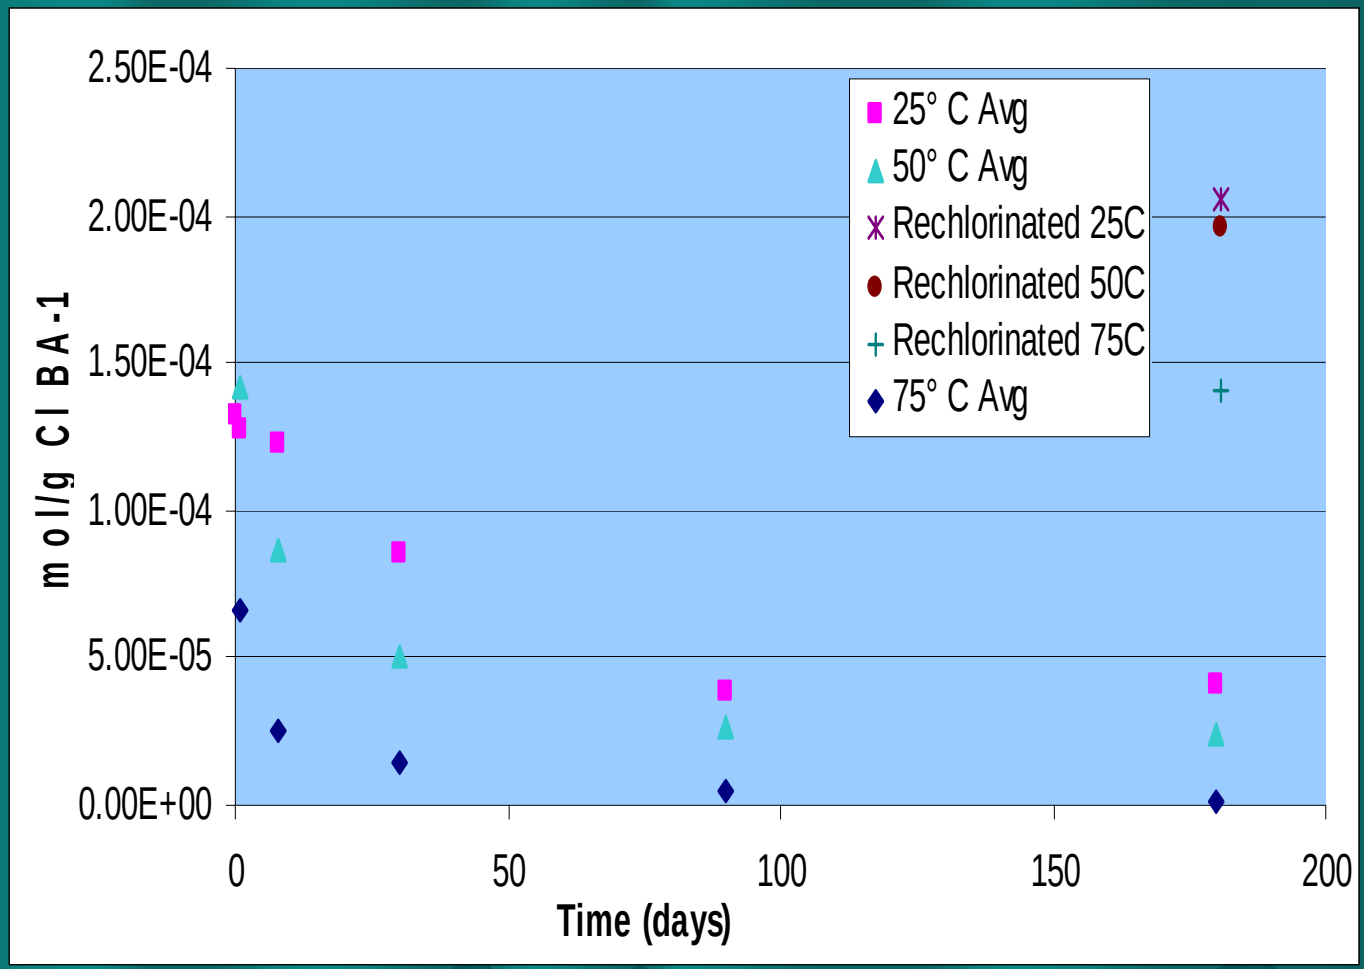
Liner Materials Challenged with CEES 20g/m^2



Chloramides of the World…
Regenerate!



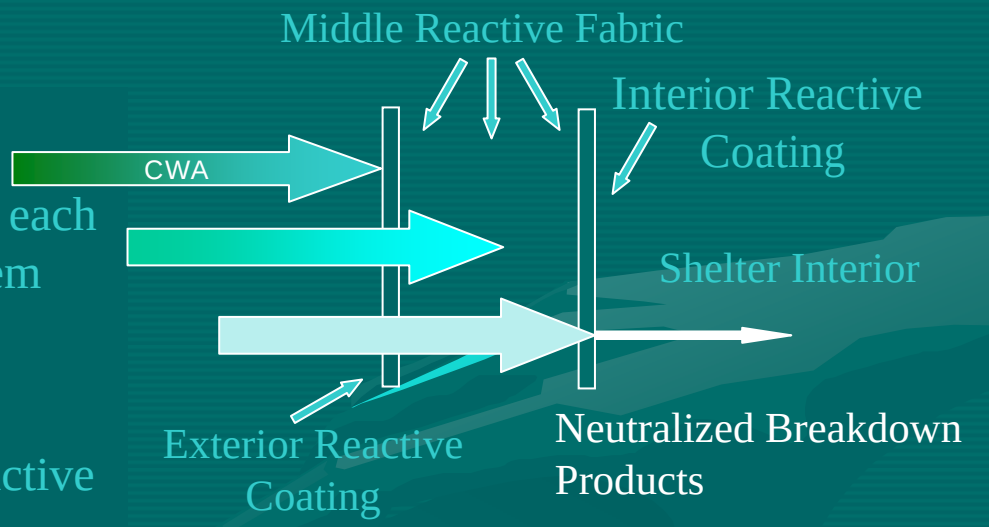
Temperature / Regeneration Study



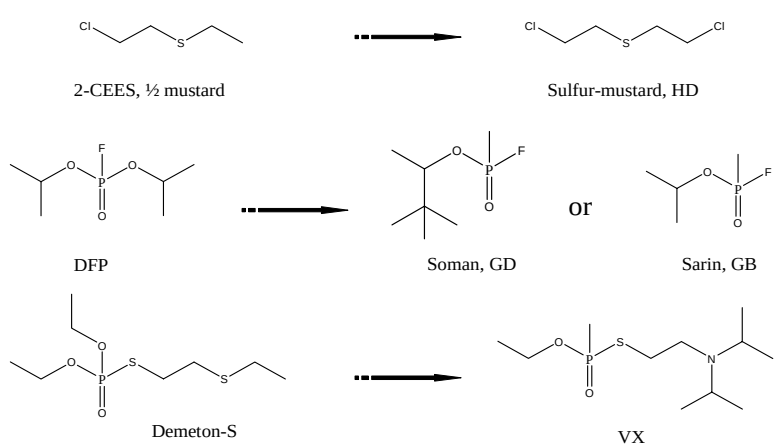
Summary and Conclusions

Reactive/Barrier Materials

- The defined Criteria For Success were met for each target CWA, therefore the reactive barrier system will outperform conventional barrier materials
- Shelter materials can now be made using less expensive barrier materials augmented with reactive coatings to provide increased protection
- Potential for expedient field-applied system to non-CB hardened structures
- Further simulant and agent testing is required



Simulant/CWA Comparison



Questions?
