Form Approved
OMB No. 0704-0188

Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

Suicide Deaths in U.S. Army 1990-2008

Jelinek, P., Army suicide rates at record high. *Associated Press*, 5/30/2008

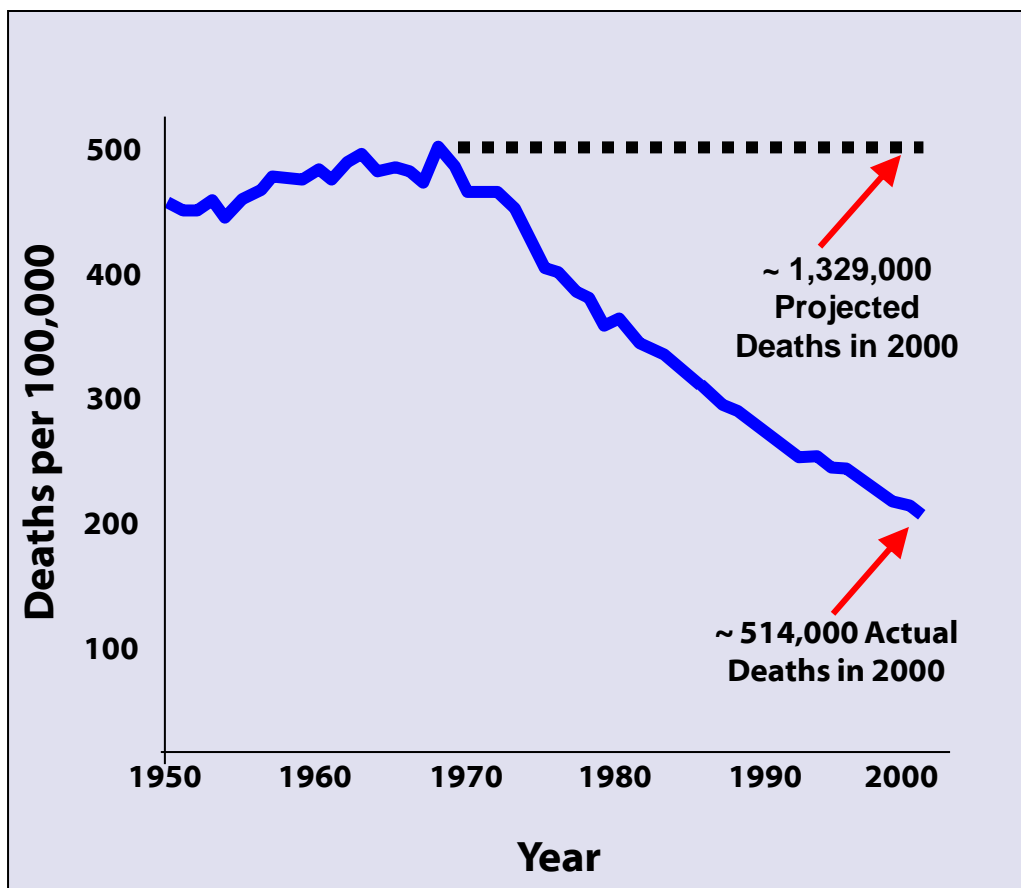

Army News Service, <http://www.army.mil/-news/2009/03/31/19022-army-vice-chief-addresses-suicide-rate-across-army/>, March 31, 2009

Purpose of Army STARRS

“The ultimate goal of this study is to develop data-driven methods for mitigating or preventing suicide behaviors and improving the overall mental health and behavioral functioning of Army Personnel during and after their Army service.”

- Identify salient risk and protective factors
 - Genetic, neurobiological, cognitive features; social support, training experiences, cumulative stressors, triggering events
- Inform development of empirically-derived interventions
 - Target malleable risk/protective factors in intervention and prevention trials conducted in real world settings
- Deliver “actionable” findings rapidly
 - Interim data analyses, adaptive research design, iterative approach to signal detection and confirmation

Impact of Risk and Protective Factor Research on Heart Disease Mortality

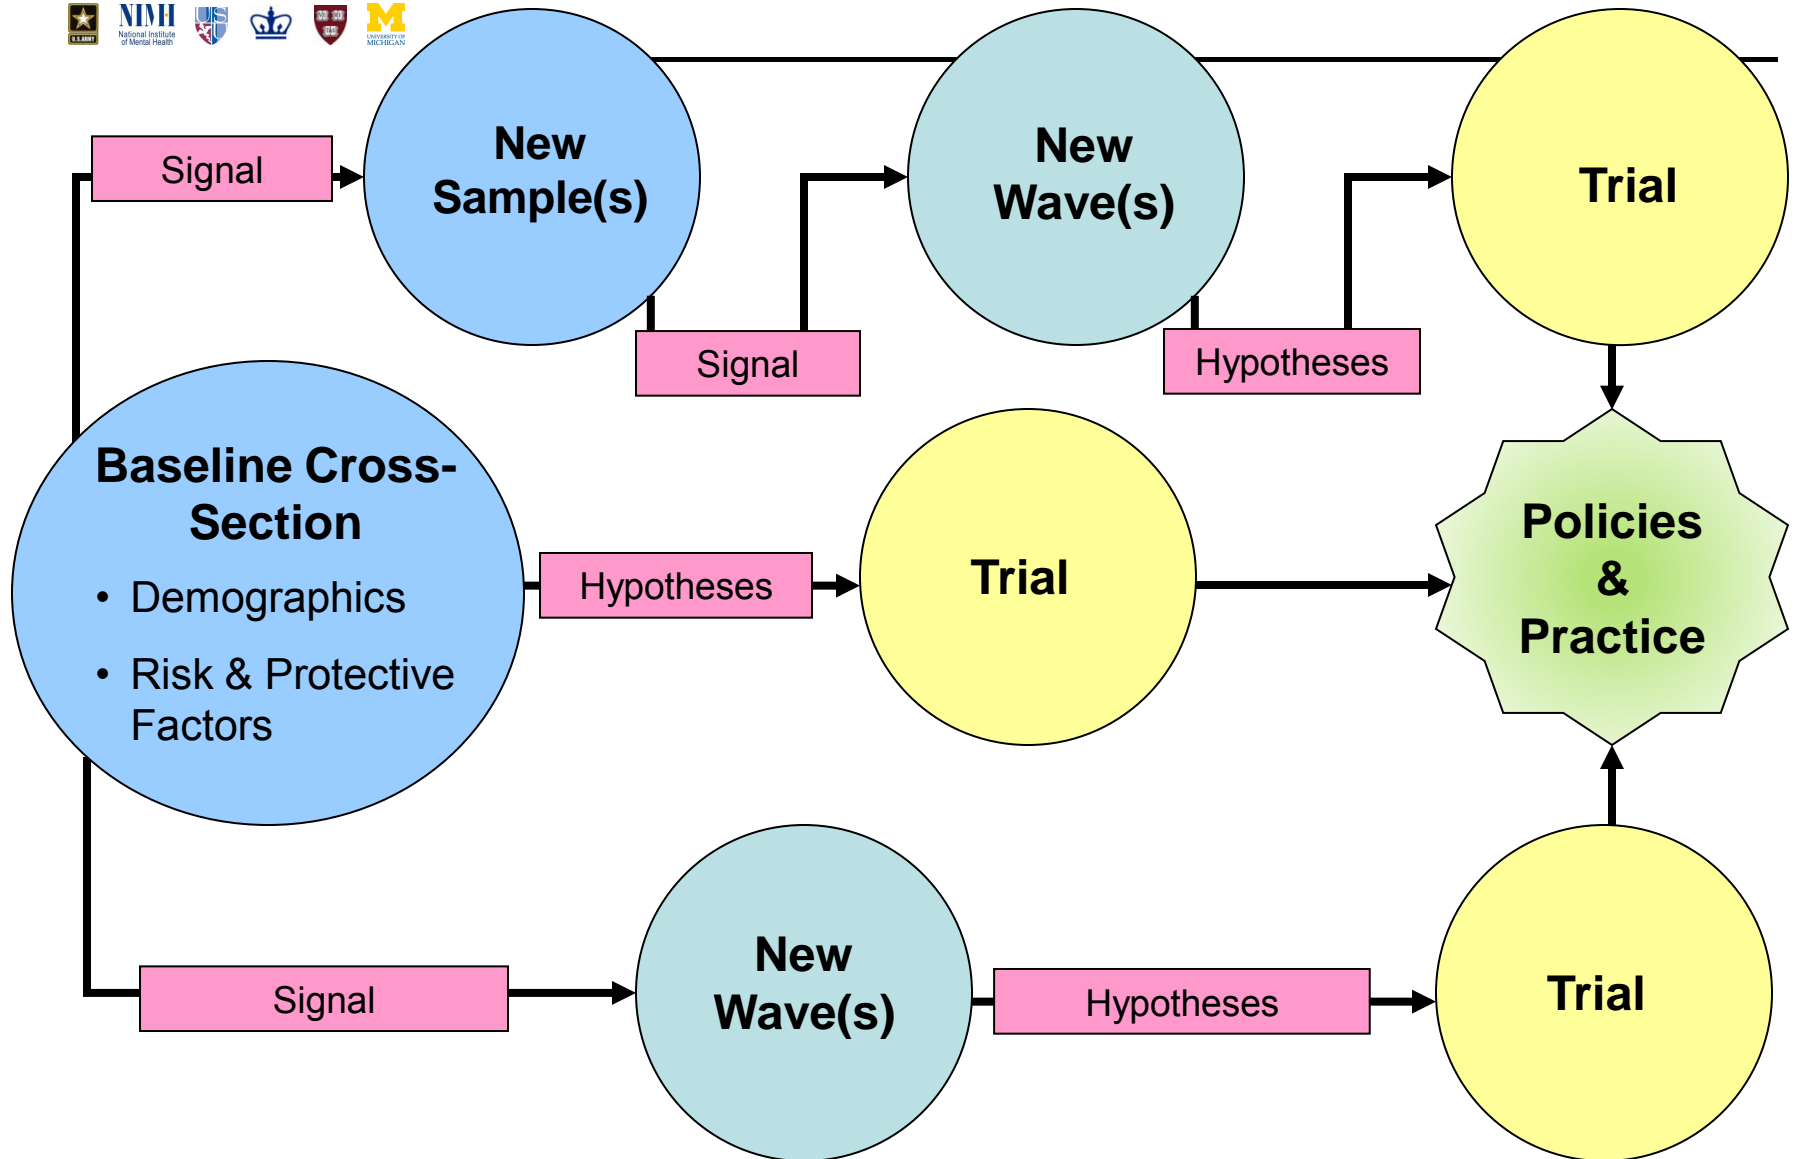

- 63% decrease in mortality
- ~ 1 million premature deaths/year averted
- \$2.6 trillion in economic return
- New, effective treatments and prevention strategies

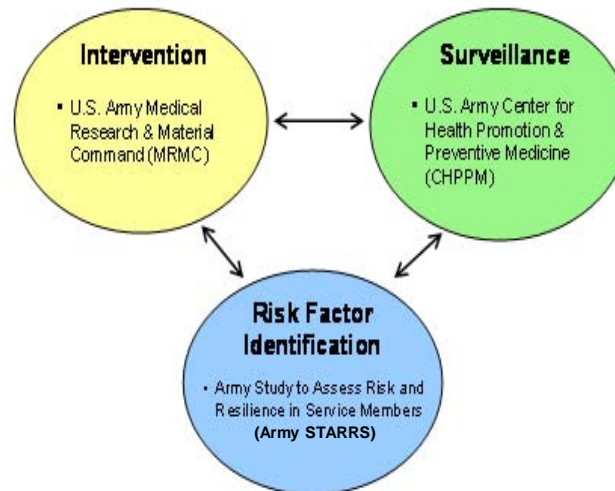

Translational Epidemiology Research

Army STARRS Overview

- Cooperative Agreement Research Project (U01)
- \$50 million Total Costs for 5-year project period
- Equal emphasis on risk and resilience factors related to suicidality and mental disorders, and behavioral health
- Integration and coordination of efforts with relevant U.S. Army research and public health surveillance agencies

Army STARRS Investigators

Robert Ursano, M.D., Principal Investigator

- Uniformed Services University of the Health Sciences

Ronald Kessler, Ph.D.

- Harvard University

John Mann, M.D.

- Columbia University

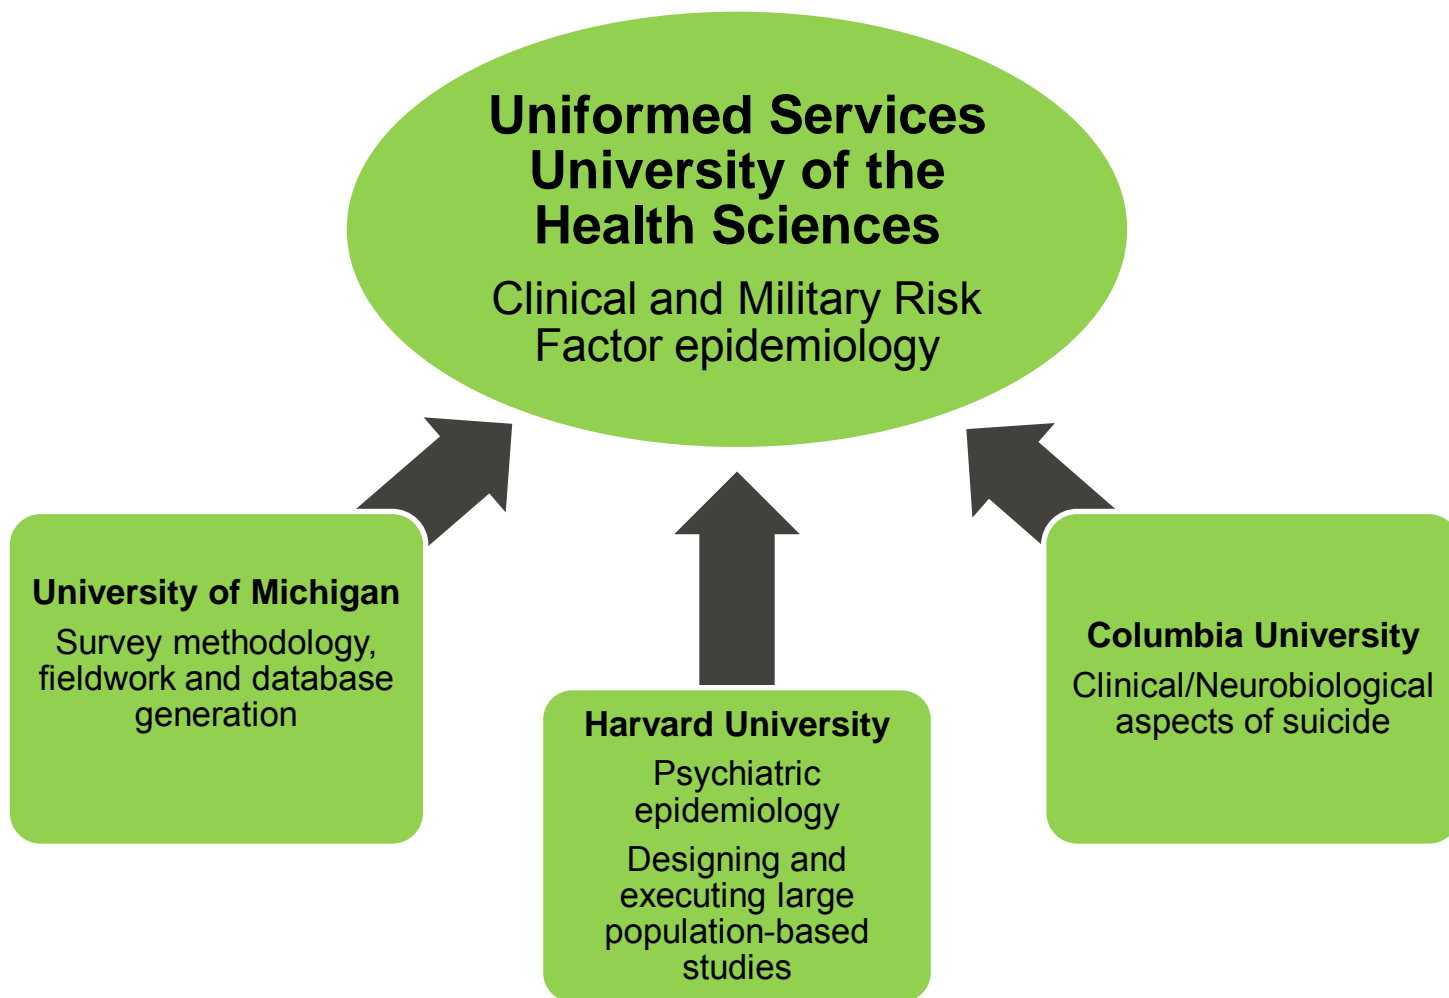

Steven Heeringa, Ph.D.

- University of Michigan, Ann Arbor

U.S. Army and NIMH Scientists

- U.S. Army Public Health Command (Provisional)
- NIMH Division of Services and Intervention Research

Consortium Expertise

ARMY

STARRS

Scientific Activities

- Historical analysis of Soldiers with and without suicidal behavior since 2004 (using all data available on Active Duty Soldiers, 2004-2009)
- Representative sample of 90,000 Active Duty Soldiers, including mobilized Reserve and National Guard Soldiers, will be surveyed
- Census of new recruits in 2010, 2011, & 2012 (~80,000 – 120,000 Soldiers per year)
- Longitudinal follow-up of 15,000 Soldiers selected on the basis of particular risk/profile characteristics

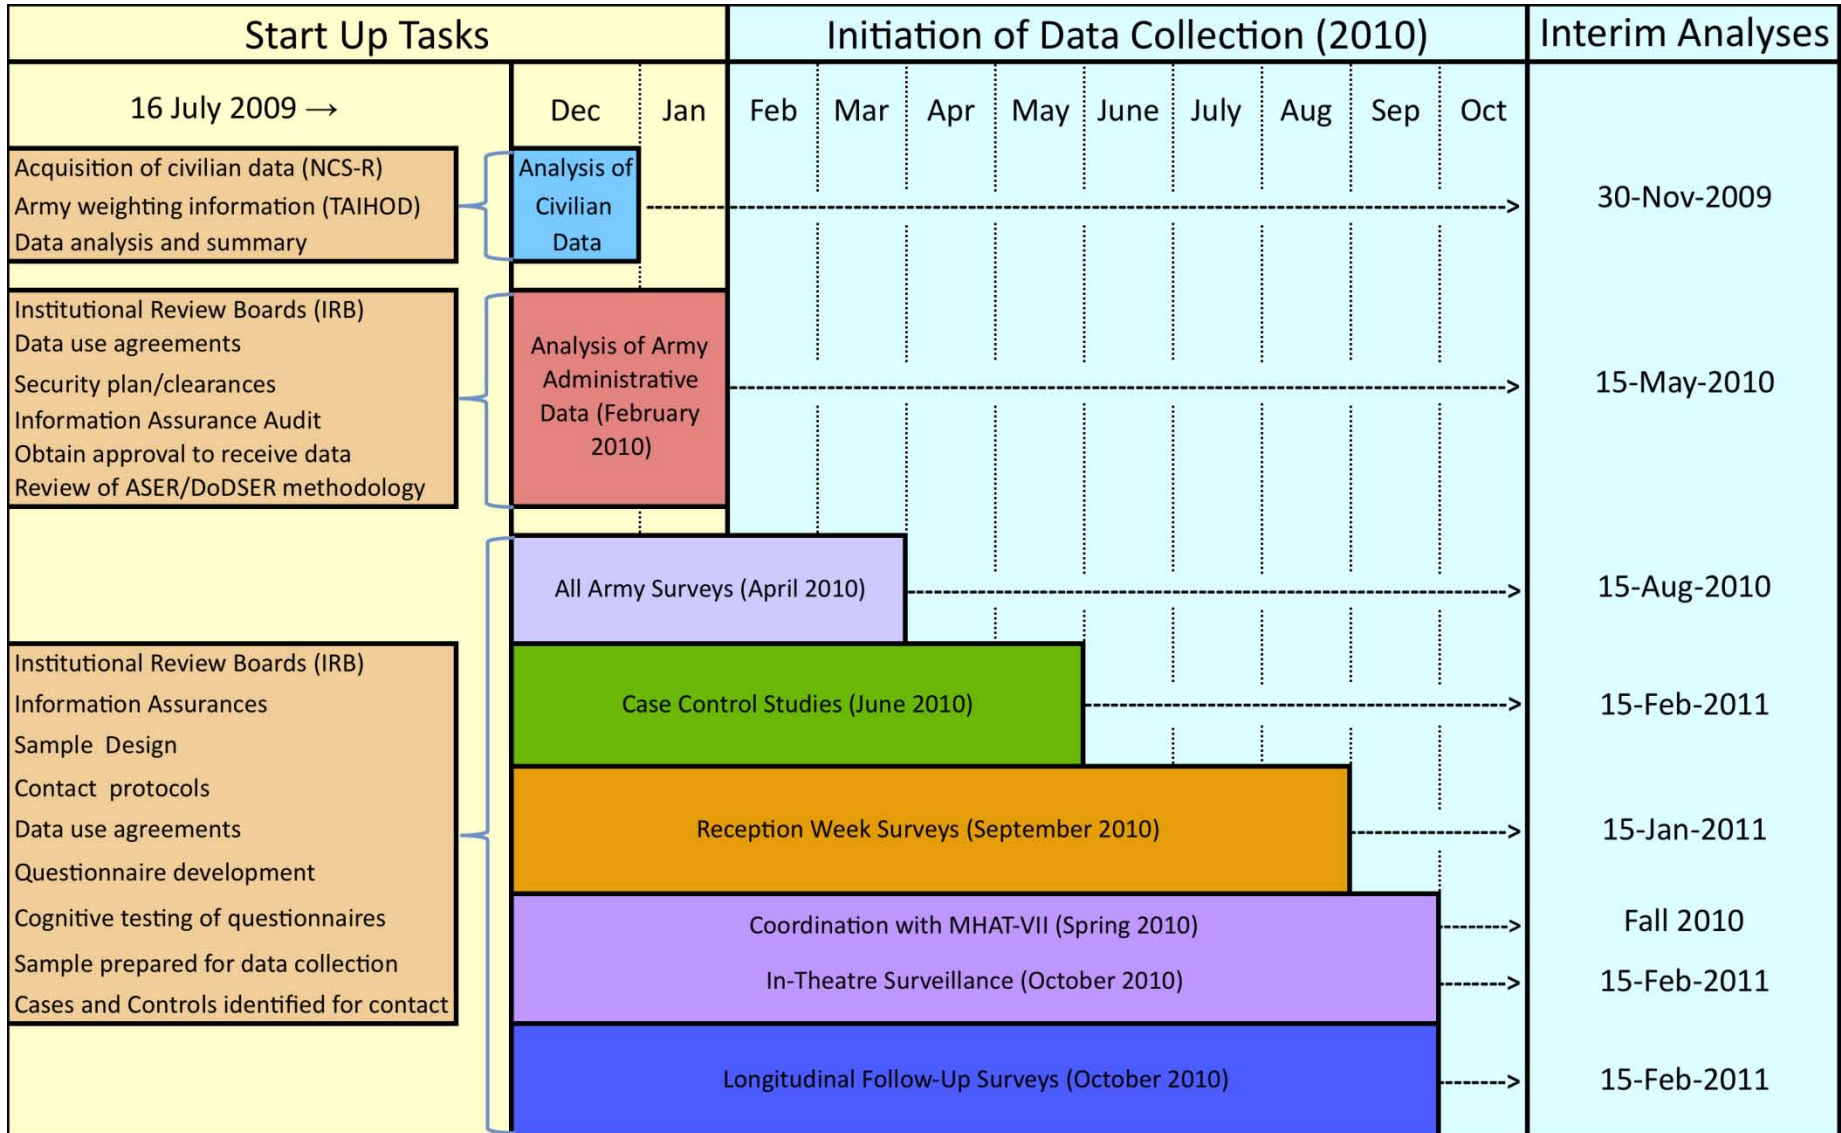

Special Features

- Feedback loop between retrospective data analysis, case control studies, and prospective surveys
- Family-member and unit leadership informants to provide additional information about social and environmental context (culture/cohesion/stress)
- Evaluation of current and future Army suicide prevention and treatment interventions
- Exploration of potential neurobiological risk and protective factors

ARMY STARRS

Timeline and Deliverables

Army Study to Assess Risk and Resilience in Service Members (Army STARRS): A Partnership Between NIMH and the U.S. Army

The Army Study to Assess Risk and Resilience in Service members (Army STARRS) is the largest study of suicide and mental health among military personnel ever undertaken. Army STARRS will identify — as rapidly as possible — modifiable risk and protective factors related to mental health and suicide. It also will support the Army's ongoing efforts to prevent suicide and improve soldiers' overall wellbeing.

Beginning in 2001, the suicide rate among soldiers rose significantly, reaching record levels in 2007 and again in 2008 despite the Army's major prevention and intervention efforts. In response, the Army and NIMH partnered to develop and implement STARRS, with Army funding. [More <<](#)

Press releases and updates

The National Institute of Mental Health (NIMH) has announced that an interdisciplinary team of four research institutions will carry out the largest study of suicide and mental health among military personnel ever undertaken, with \$50 million in funding from the U.S. Army. [More <<](#)

NIMH and the U.S. Army have entered into a memorandum of agreement (MOA) to conduct research that will help the Army reduce the rate of suicides. NIMH Director Thomas R. Insel, M.D., Army Secretary Pete Geren, and Army Chief of Staff Gen. George W. Casey Jr. signed the MOA on October 23, 2008. [More <<](#)
