Report Documentation Page				Form Approved OMB No. 0704-0188	
Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

SENSIAC is a US Department of Defense Information Analysis Center chartered with the collection, processing and management, analysis, and dissemination of scientific and technical information in military sensing.

SENSIAC is sponsored, administratively managed, and partly funded by the Defense Technical Information Center (DTIC-AI) under contract HC1047-05-D-4000. The Contracting Officer's Representative is Dr. James Howe, Night Vision and Electronic Sensors Directorate (AMSRD-CER-NV-ST-SIP, 10221 Burbeck Road, Fort Belvoir, VA 22060-5806).

A DTIC Funded DoD Information Analysis Center

When the Air Combat Command Needed Someone to Design Flare Patterns to Protect Aircraft During Airborne Refueling, THEY CALLED US.

- When the Air Mobility Command, Air Combat Command, PEO AMO, PM ASE, AFSOC and others want to protect US military Aircraft from MANPADS, they come to SENSIAC personnel led by Charlie Carstensen, and their aircraft join other aircraft flying safely with flare dispenser locations and flare patterns designed by our team: C-5B, C-130, C-17, A-10, F-16, HH-60, MH-53, C-26, AH-64

Carstensen

Who is SENSAC and What Does it Do?

- Charter and organizations
- Basic Core Services you can receive
- Representative ongoing tasks
- Capability to support you and the deployed forces using your equipment
- Summary

SENSIAC Charter Technologies

Four Key SENSIAC Attributes

- Team members with upwards of 60 years of history of solving DoD problems
- 10,000 knowledgeable, world-class, scientists and engineers
- Facilities and equipment not available elsewhere
- Not for profit institutes with the defense of the United States of America as our primary business

SENSIAC Holds the Archives of Military Sensing through SECRET

Every project **MUST** start in the library. Starting anywhere other than the library wastes precious time and money.

I have exactly what you need and will get it to you ASAP.

FREE access to the Archives of Military Sensing is but a phone call or e-mail away. (404) 407-7385.

SENSIAC SMEs are not Just Experts, They are the *Right Experts*

- SENSIAC SMEs span not only sensing technology but program phases from basic research to production transition and life cycle support. They:
 - Know (often have invented) the latest technology
 - Know production transition from having been there on numerous programs
 - Are as comfortable with Accelerated Environmental Stress Screening, FRACAS, and Interface Control as with new Technology
 - Solve operational problems in theater
 - Perform technology Insertion
- Call SENSIAC to be put in contact with the person/team you need
 - **No charge of course!**

Joseph Borst Laser Threat Warning SME Consultant

Design Engineer on the first US
Laser Threat Warning System – AVR-2

Team holds the patent on coherent detection of
threat lasers

Program Manager AVR-2 Responsible for Full
Scale Development and Production Transition
Program manager for AVR-2A production and the
development and production of the VVR-!
Manager Tactical systems
VP Tactical Systems
Officer –US Army Special Operations Forces

Questions We Answer/ Information We Provide

- Are pulsed lasers (such as the quantum cascade laser) appropriate to test infrared focal plane arrays (with scene generators) with the same results as CW blackbody type sources?
- Please give me Information on underwater radiated noise levels of AZIPOD thrusters at various power and thrust levels
- I would like 5-10 subject experts on EO/IR sensors for use on ground vehicles.
- Are there any sensors currently in development or fielded that capture energy in the sodium or potassium atomic line emission band? Have these or any sensors in other bands been shown to detect emissions through layers of clouds?
- Is there a relative strength difference or preference in specifying a monocrystalline silicon window substrate as <100>, <111>, or other?
- How long are trace explosive residuals on the surface of artillery shells after manufacture
- How do I adjust my RWR to get rid of the noise?

The Military Sensing Symposia (MSS):

Where engineers and scientists go to talk about their sensing problems/triumphs

SENSIAC operates the Primary Venue For Classified Discussions On Military Sensors & Publishes the Most Complete Record Of Military Sensing R&D

SENSIAC Educational Program

- Unique military sensing continuing education program
 - Distribution C level and Classified
 - Addresses urban warfare, the GWOT, and other paradigm shifts
- Taught by senior experienced engineers/scientists at your location or ours

Partial Course Listing

Sample Ongoing/Recent Projects

- FLIR Threat Analysis For PM NV/RSTA and PM FLIR
- Persistent Surveillance Sensor Band Analysis
- Simulation support to PM IRCM of Army PD ASE
- UAV SAR/GMTI Analyses
- Unmanned Systems Common Control (USCC)
- EP-X Top Down Function Analysis (TAT 81)
- Broad Area Maritime Surveillance (BAMS) Mission
- Control System Analysis (TAT 39)
- SENSIAC Puts Smart Cables on JDF C-130s

Related Capabilities and Activities

SENSIAC Team's Unparalleled Facilities and Equipment

Approaching \$2B/yr in Funded R&D

Exploitation of Adversarial Sensors/Weapon Systems

- Our Personnel at GTRI exploit adversarial sensors and weapon systems
 - MANPADS/SAMs: virtually all pertinent threats of the past 30 years
 - Ground Systems: 20 year program of exploitation
 - Gen 1 through Gen 3 NV devices
 - Handheld and vehicle laser rangefinders and designators
 - Handheld and vehicle mounted thermal imagers
 - Fire control systems
 - Direct-view observation and weapon sights
 - Other battlefield equipment
 - IEDs

These Threats ... were all Made in Atlanta, GA

Design by Evolution

- GTRI is a pioneer in the use of Genetic Algorithms to “evolve” optimum Designs – Hold many basic patents
- SENSIAC uses this technology in many of its programs.
- Based on:
 - High fidelity physics models of the technology
 - Assignment of “genes” to each element of the design
 - Large Beowulf Clusters of hundreds of computers to iterate design mutations
 - Pick the best result and alter their genes iteratively
- Achieve 30% bandwidth on metamaterial conformal antennas where 1-2% is common

⇒ ***Provides Optimum Designs in Minimum Time***

GTRI Genetically Developed Meta-material Antennas and Signature control

Objective:

- Electrically thin ($t \ll \lambda$)
- Conformal
- Significant Bandwidths
- End-fire capable

Sample results :

- 30% Bandwidth
- Thin, $\lambda/27$

Fragmented Antennas

Control of Surface Reflectance

Cone of Silence at Normal Incidence – MWIR

Broad band suppressed specular reflectance

High Fidelity EO/IR Self Protection Engagement Simulation

Dr. Darrell Lamm,
Dr. Albert Sheffer

SENSIAC is a Unique Asset

- Quickly answer your toughest questions
- Provide you the most knowledgeable team to solve your problems, supported by virtually unlimited research grade equipment.
- Build/modify existing equipment or create new technologies to solve your pressing needs
- Provide you a focal point for connecting with over 9,000 scientists and engineers dedicated to military sensing.
- Get going now, using our simple but powerful TAT contracting process.
