Report No. 10-14N, supported by the U.S. Air Force Medical Logistics Agency, under Work Unit No **60334**. The views expressed in this article are those of the authors and do not reflect the official policy or position of the Navy, Department of Defense, or the U.S. Government. Approved for public release; distribution is unlimited. This research has been conducted in compliance with all applicable federal regulations governing the protection of human subjects. No human subjects were directly involved in this research.

Executive Summary

The Naval Health Research Center (NHRC) has used its modeling and simulation expertise to develop and update conventional U.S. Air Force medical assets since 2004. Air Force medical modeling capabilities currently capture care and treatment of the sick and injured from the first responder through theater hospitalization.

The objective of this study was to leverage medical modeling and simulation advantages to provide recommendations for allowance standard (AS) configurations based on the U.S. Air Force Otorhinolaryngology Augmentation Team (FFENT) operational and clinical requirements. NHRC analysts reviewed the FFENT, analyzed clinical requirements with subject matter experts, and used modeling and simulation tools to develop the operationally-based and patient-driven recommended 917E line list.

The Unit Type Code (UTC) capabilities, operational requirements, and materiel solutions were identified, addressing issues of modernization, clinical requirement, standardization, and redundancy. In this study, the major rationales for change were due to clinical requirements and standardization. Total changes resulted in a reduction in weight by 19%, cube by 19%, and cost by 3% or \$19,680.

Modeling and simulating a medical system like the FFENT, with a range of capabilities and functional areas, validates the materiel solutions for each UTC. It is effective in facilitating AS reviews that focus on advancing the mission, operational requirements, and capabilities of these agile, deployable medical resources.

Introduction

The Naval Health Research Center (NHRC) has used its modeling and simulation expertise to develop and update U.S. Air Force medical capabilities, allowance standards (AS), and surgical subspecialty Unit Type Codes (UTCs) since 2004. Air Force medical units must remain small, light, and flexible. Based on the success of previous work, the Air Force asked NHRC to conduct a review of the Otorhinolaryngology Augmentation Team (FFENT) (Konoske, 2007).

The U.S. Air Force Medical Services are faced with a wide range of potential scenarios, from providing warfighters forward resuscitative care to assisting civilian populations during humanitarian relief operations. Air Force planners and UTC developers have closely followed the *Joint Vision 2010* concept of providing highly mobile medical resources with a minimal logistic footprint, without compromising capability (Office of the Joint Chiefs of Staff, 1998). Additionally, guidance provided by the *Joint Vision 2020* calls for a more scientific approach that leverages and enhances existing information technologies to support modern operational capabilities (Office of the Joint Chiefs of Staff, 2000). Emphasis on mobility and capability resulted in a modular approach to prepare, plan, and deploy the FFENT expeditionary medical platform.

Method

The NHRC method of modeling medical supply requirements was developed to establish and/or review medical inventories for various levels of care. Its aim is to give clinicians, in the field, the materiel they need to provide the best care possible, while still maintaining as small a logistical footprint as possible. It involves a process that begins with the identification of likely patient types to be encountered by a particular type of medical treatment asset, including combat wounds, non-battle injuries, and illnesses. *International Classification of Diseases*, Ninth Revision (ICD-9) coded patient conditions, selected by the Defense Medical Materiel Program Office, are used for this purpose. Figure 1 illustrates the NHRC processes used when developing a modeling and simulation package.

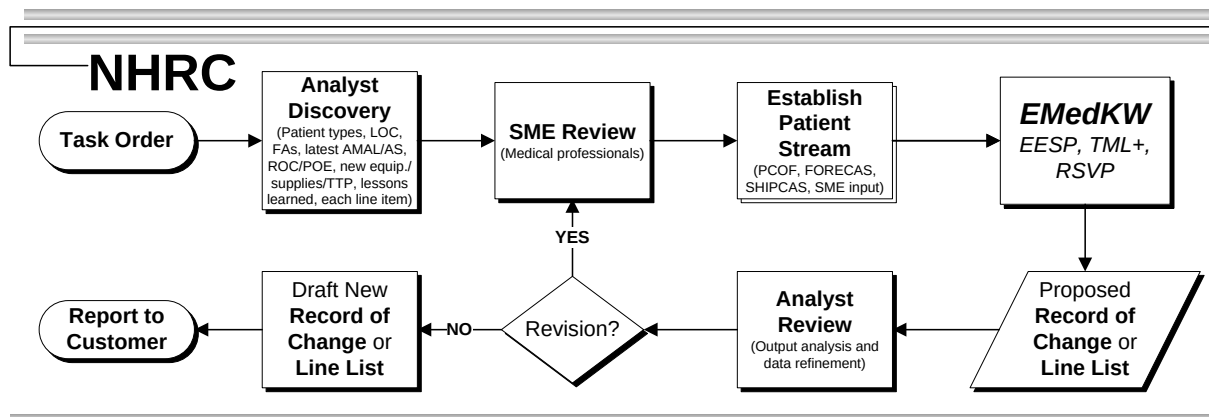

Figure 1. An example of the NHRC AS review process.

Subject Matter Expert Guidance

A subject matter expert (SME) AS review was performed on January 27, 2010. At this meeting, SMEs and NHRC analysts refined and validated assumptions regarding equipment and supply associations, and the range and scope of patient types.

Patient Stream

A 200-person patient stream, consisting of 87 surgical patients and 113 outpatients, was derived from patient encounter data provided by an otolaryngology surgeon deployed during Operation Iraqi Freedom-2. The patient stream was used to simulate the equipment and supply requirements for the range of pre-surgical cases and non-surgical injuries and illnesses that would typically be seen and treated by an ENT surgeon and one technician over a 30-day period. Table 1 displays the patient stream.

Expeditionary Medical Knowledge Warehouse

The patient stream is input to the Expeditionary Medical Knowledge Warehouse (EMedKW) program to perform modeling and simulation. EMedKW is comprised of the Enterprise Estimating Supplies Program (EESP), the Tactical Medical Logistics (TML+) planning tool, and the ReSupply Validation Program (RSVP). EMedKW is a service-oriented architecture system designed to protect and organize medical data. EMedKW provides the ability to estimate the equipment and consumable items needed to treat a particular patient distribution, while also tracking inventory to monitor mission readiness. Within EMedKW, the tasks required to treat each PC code are identified and matched with the required equipment and consumable items. Review of the output informs the appropriate modifications to the 917E line list for the Air Combat Command Manpower and Equipment Force Packaging System review.

The following example describes the EMedKW data structure (see Figure 2). The task profile shows the likely clinical tasks to be performed on this type of patient in that functional area, and the percentage of those patients expected to receive them. The “Equipment/supplies” column identifies the items needed to complete the “Insert endo-trach tube” task at that level of capability. Not shown in this figure are additional data fields used to calculate supply quantities, including the amount of each supply needed to complete the task, how often the task will be repeated in the first 24 hours of treatment, how often the task will be repeated in each subsequent 24-hour period, and the average length of stay at that facility.

ICD-9 code	Medical capability	Functional area	Task profile	Patients %	Equipment/supplies

Capability

The FFENT provides personnel and equipment to treat adult and pediatric patients for trauma to the head and neck. Primary surgical responsibilities include acute surgical and airway management, neck exploration for penetrating neck trauma, and treatment of craniofacial trauma. Non-trauma surgeries are limited to cases that are life- and limb-threatening, or cases where the patient can be expected to return to duty within the theater aeromedical evacuation policy. Consultative services for non-surgical otolaryngic problems are provided as required. Staffing this capability requires an otorhinolaryngologist surgeon (045N3) and a surgical services otorhinolaryngology journeyman (4N151D).

Results

Change Justification

Modeling and simulation provides visibility for change justifications. These are typically placed in four categories; modernization, clinical requirement, standardization, and redundancy. In this study, 114 line items were recommended for deletion due to clinical

requirements, and 67 line items were recommended for addition that can be standardized with the Ophthalmology 917F AS. These line items will increase FFENT UTC surgical capabilities. The increased capabilities—orbital exenteration, enucleation, and decompression—are procedures that may be performed in the absence of an ophthalmology surgeon at an EMEDS +10 or +25. Quantities are listed in Appendix A

Quantity Changes

The 917E FFENT AS was optimized using the 938 EMEDS +10 AS. Equipment items that are recommended for deletion from the 917E AS are available, or have a reasonable substitute, in the 938 AS. Additionally, to increase clinical capability, 52 equipment line items are recommended additions. However, the overall weight for equipment is reduced by 15%, cube by 11%, and cost by 3%, or \$21,474.86.

Medications currently in the 917E AS would be drawn from the 938 AS, with the exception of lidocaine topical 4%, lidocaine and epinephrine injectable, povidone-iodine, and thrombin. These items are not carried by the EMEDS pharmacy, and are a standard of care for many ENT surgeries. Optimizing medications reduces the 917E AS weight by 87%, cube 93%, and cost by 73%.

Consumables drawn from the 938 AS will increase the overall weight by 1%, decrease cube 27%, and increase cost 12% or \$2,540. The 15 recommended line item additions to the 917E are based on the increased ophthalmology surgical capabilities recommended by the SME panel.

Durables consist of three line items, and are all recommended for deletion from the 917E because they are available from the 938 EMEDS AS.

Total overall changes resulted in a reduction in weight by 19%, cube by 19%, and cost by 3%, or \$19,680. A detailed listing of the 917E AS recommended changes is provided in Appendix B. A list of recommended line items for addition and standardization with the 938 AS are in Table 3. The majority of the line items that are recommended for change are consumables and are drawn from the 938 logistics area. The medicinal line items are drawn from the 938 pharmacy functional area. The vast majority of surgical equipment line items are drawn from the 938 Surgery/Operating Room. Quantities needed from these other functional areas will be aggregated and are listed in Appendix C.

% Change	-18.58	-18.94	-2.55

Conclusion

Modeling and simulation was used to study the FFENT and recommend changes to its AS. The clinical capabilities include acute surgical and nonsurgical airway management, neck exploration for penetrating neck trauma, and the treatment of craniofacial trauma. Non-trauma surgeries are limited to cases that are life- and limb-threatening, or cases where the patient can be expected to return to duty within the theater aeromedical evacuation policy. Consultative services for non-surgical otolaryngic problems are provided as required. Representative patient streams were developed to represent the type and frequency of patients likely to be seen at this level of care and functional area.

Modeling and simulation tools are essential for projecting appropriate medical care needs for our service personnel. Standardizing equipment and consumables with the Defense Medical Material Program Office-approved items makes the FFENT creation and resupply quicker and more efficient. Updating and maintaining the patient data and FFENT contents database will ensure that future medical needs are met in the most effective manner.

13. SUPPLEMENTARY NOTES					
14. ABSTRACT The Naval Health Research Center (NHRC) has used its modeling and simulation expertise to develop and update conventional U.S. Air Force medical assets since 2004. The objective of this study was to leverage medical modeling and simulation advantages to provide recommendations for allowance standard (AS) configurations based on the U.S. Air Force Otorhinolaryngology Augmentation Team (FFENT) operational and clinical requirements. NHRC analysts reviewed the FFENT, analyzed clinical requirements with subject matter experts, and used modeling and simulation tools to develop the operationally-based and patient-driven recommended 917E line list. The Unit Type Code capabilities, operational requirements, and materiel solutions were identified, addressing issues of modernization, clinical requirement, standardization, and redundancy. In this study, the major rationales for change were due to clinical requirements and standardization. Total changes resulted in a reduction in weight by 19%, cube by 19%, and cost by 3% or \$19,680.					
15. SUBJECT TERMS modeling and simulation, EMedKW, allowance standard, ENT, Air Force
