

SPIDERS Microgrids for Enhanced Mission Assurance and Renewable Energy Utilization

**SERDP ESTCP Symposium
Meeting DoD's Environmental Challenges
November 29 – December 1
Washington DC**

Report Documentation Page			Form Approved OMB No. 0704-0188		
Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.					
1. REPORT DATE NOV 2011		2. REPORT TYPE		3. DATES COVERED 00-00-2011 to 00-00-2011	
4. TITLE AND SUBTITLE SPIDERS Microgrids for Enhanced Mission Assurance and Renewable Energy Utilization			5a. CONTRACT NUMBER		
			5b. GRANT NUMBER		
			5c. PROGRAM ELEMENT NUMBER		
6. AUTHOR(S)			5d. PROJECT NUMBER		
			5e. TASK NUMBER		
			5f. WORK UNIT NUMBER		
7. PERFORMING ORGANIZATION NAME(S) AND ADDRESS(ES) U.S. ARMY Engineer Research and Development Command (ERDC CERL),2902 Newmark Drive,Champaign,IL,61821			8. PERFORMING ORGANIZATION REPORT NUMBER		
9. SPONSORING/MONITORING AGENCY NAME(S) AND ADDRESS(ES)			10. SPONSOR/MONITOR'S ACRONYM(S)		
			11. SPONSOR/MONITOR'S REPORT NUMBER(S)		
12. DISTRIBUTION/AVAILABILITY STATEMENT Approved for public release; distribution unlimited					
13. SUPPLEMENTARY NOTES Presented at the Partners in Environmental Technology Technical Symposium & Workshop, 29 Nov ? 1 Dec 2011, Washington, DC. Sponsored by SERDP and ESTCP					
14. ABSTRACT The ability of today?s warfighter to command, control, deploy, and sustain forces is adversely impacted by a fragile, aging, and fossil fuel dependent electricity grid. This poses a significant threat to national security. The SPIDERS (Smart Power Infrastructure Demonstration for Energy Reliability and Security) is designed to provide a comprehensive secure energy solution using energy surety microgrids (ESMs) and cyber-security of electric grids applying virtual secure enclave networks to SCADA. Smart Grid Technologies will be implemented to secure micro-grid for sustained mission assurance and emergency support. Integration of distributed & variable renewable generation and storage along with intelligent demand-side management will be deployed in concert with redundant back-up power systems to provide seamless, secure power to mission loads in grid connected and grid islanded operation. The SPIDERS Joint Concept Technology Demonstration (JCTD) will address four critical deficiencies 1. Inability to protect task critical assets from loss of power due to cyber attack 2. Inability to integrate renewable and other distributed generation electricity to power task critical assets in times of emergency 3. Inability to sustain critical operations during prolonged power outages 4. Inability to manage installation electrical power and consumption efficiently, to reduce petroleum demand, carbon ?footprint,? and cost.

CO-PERFORMER: Tarek Abdallah

The ability of today's warfighter to command, control, deploy, and sustain forces is adversely impacted by a fragile, aging, and fossil fuel dependent electricity grid. This poses a significant threat to national security. The SPIDERS (Smart Power Infrastructure Demonstration for Energy Reliability and Security) is designed to provide a comprehensive secure energy solution using energy surety microgrids (ESMs) and cyber-security of electric grids applying virtual secure enclave networks to SCADA. Smart Grid Technologies will be implemented to secure micro-grid for sustained mission assurance and emergency support. Integration of distributed & variable renewable generation and storage along with intelligent demand-side management will be deployed in concert with redundant back-up power systems to provide seamless, secure power to mission loads in grid connected and grid islanded operation.

The SPIDERS Joint Concept Technology Demonstration (JCTD) will address four critical deficiencies:

1. Inability to protect task critical assets from loss of power due to cyber attack
2. Inability to integrate renewable and other distributed generation electricity to power task critical assets in times of emergency
3. Inability to sustain critical operations during prolonged power outages
4. Inability to manage installation electrical power and consumption efficiently, to reduce petroleum demand, carbon "footprint," and cost.

Problem Statement

- ▶ The ability of today's warfighter to command, control, deploy, and sustain forces is adversely impacted by a fragile, aging, and fossil fuel dependent electricity grid.
- ▶ This poses a significant threat to military operations as critical mission loads are typically highly dependent on electric power
- ▶ Existing emergency generators are often unreliable, inefficient, and environmentally unfriendly

SPIDERS Approach

- ▶ SPIDERS (Smart Power Infrastructure Demonstration for Energy Reliability and Security) delivers a comprehensive, cyber secure energy solution using energy surety microgrids (ESMs) developed at Sandia National Laboratory

SPIDERS Approach

- ▶ Smart Grid technologies will be implemented to secure micro-grid for sustained mission assurance and emergency support. Integration of distributed & variable renewable generation and storage
- ▶ Intelligent demand-side management will be and coordinated with aggressive renewable energy solutions to significantly reduce environmental impact of mission operations
- ▶ Seamless, secure power to mission loads in grid connected and grid islanded operation.

SPIDERS Approach

The SPIDERS JCTD will address four critical deficiencies:

- 1) Inability to protect task critical assets from loss of power due to cyber attack
- 2) Inability to integrate renewable and other distributed generation electricity to power task critical assets in times of emergency
- 3) Inability to sustain critical operations during prolonged power outages
- 4) Inability to manage installation electrical power and consumption efficiently, and reduce petroleum demand, carbon “footprint,” and cost.

SPIDERS Design Process

SPIDERS Cyber Security

- ▶ The SPIDERS JCTD is the "the pioneer in the area of cyber defense of smart microgrids"
- ▶ "Virtual Secure Enclave" active protective strategy for supervisory control and data acquisition control systems.
- ▶ Active cyber protection intrusion detection and design protects system status/operational data from agents seeking to collect, modify, or manipulate the system.

SPIDERS Management Team

- ▶ Technical Manager – US Army Engineering Research Development Center – Construction Engineering Research Laboratory (ERDC-CERL)
- ▶ Operational Manager – PACOM Innovation and Experimentation (**J81**) Energy
- ▶ Transition Manager – Naval Facilities Command (NAVFAC)
