

Towards Modernizing the Electrical Grid

**The Real-Time
Middleware Experts**

Gabriela F. Ciocarlie, PhD

Report Documentation Page				Form Approved OMB No. 0704-0188	
Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.					
1. REPORT DATE MAY 2011		2. REPORT TYPE		3. DATES COVERED 00-00-2011 to 00-00-2011	
4. TITLE AND SUBTITLE Towards Modernizing the Electrical Grid				5a. CONTRACT NUMBER	
				5b. GRANT NUMBER	
				5c. PROGRAM ELEMENT NUMBER	
6. AUTHOR(S)				5d. PROJECT NUMBER	
				5e. TASK NUMBER	
				5f. WORK UNIT NUMBER	
7. PERFORMING ORGANIZATION NAME(S) AND ADDRESS(ES) Real-Time Innovations, Inc (RTI),232 E. Java Drive,Sunnyvale,CA,94089				8. PERFORMING ORGANIZATION REPORT NUMBER	
9. SPONSORING/MONITORING AGENCY NAME(S) AND ADDRESS(ES)				10. SPONSOR/MONITOR'S ACRONYM(S)	
				11. SPONSOR/MONITOR'S REPORT NUMBER(S)	
12. DISTRIBUTION/AVAILABILITY STATEMENT Approved for public release; distribution unlimited					
13. SUPPLEMENTARY NOTES Presented at the 23rd Systems and Software Technology Conference (SSTC), 16-19 May 2011, Salt Lake City, UT. Sponsored in part by the USAF. U.S. Government or Federal Rights License					
14. ABSTRACT					
15. SUBJECT TERMS					
16. SECURITY CLASSIFICATION OF:			17. LIMITATION OF ABSTRACT Same as Report (SAR)	18. NUMBER OF PAGES 35	19a. NAME OF RESPONSIBLE PERSON
a. REPORT unclassified	b. ABSTRACT unclassified	c. THIS PAGE unclassified			

What & Why is Middleware?

- What?

- Middleware is a layer between application and network stack
- It presents a more powerful API to the application
- It handles connections, failures, changes

- Why?

- Simpler conceptual model
- Easier programming
- Seamless interoperability
- Control communications “Quality of Service” (QoS)

Why Not Use TCP? (or C37.118)

- Rigid reliability protocol
- No multicast
- No OOB data
- Only global timeouts
- Can't do real time, can't filter
- Does not scale
- No prioritization
- Can't handle varying delivery QoS needs

Not intended for mission-critical real time

Why Not Use UDP?

- No reliability
- No discovery (where's the data?)
- No queuing or buffering
- No loss detection
- Must keep track of who needs the data
- Inefficient use of network resources

Data-Centric Decoupling

Connection-oriented

- Hard-wired
- Multi-hop
- Brittle
- Hard to evolve

Data-centric

- Loosely coupled
- Peer-to-peer
- Scalable
- Evolvable

The DDS Standard

- **OMG Data Distribution Service for Real-Time Systems**
 - Data-centric pub-sub
 - Per-channel QoS
 - Right data to the right place at the right time
 - Content and time aware
- **No vendor lock-in**
 - API for source portability
 - Message encoding for interoperability
- **Transparent connectivity**
 - C, C++, Java, .NET (C#, C++/CLI)
 - Windows, Linux, Unix, embedded, real-time

Cross-vendor portability

Cross-vendor interoperability

RTPS also standardized as IEC 61148

DDS Adoption

- Multiple vendors
 - 9 implementations!
- Dominant in military
 - DISA: DISR mandated
 - Navy: Open Architecture, FORCEnet
 - Air Force, Navy and DISA: NESI
 - Army: FCS / SoSCOE
 - NATO, South Korea, many more
- Many other applications
 - Air traffic control, industrial automation, transportation, medical
- Hundreds of active programs

What Does DDS Do?

**The Real-Time
Middleware Experts**

Ship Self-Defense System

The Ship Self Defense System is the “last line of defense”

SSDS coordinates high-speed radars, targets defensive missiles, and directs 1000+ rounds/sec at incoming cruise missiles

SSDS is in sea trial now

DDS *reliably delivers messages in real time*

Flight Simulation

"In the past we probably would have developed an expensive, proprietary system for data communications. By using RTI, we were able to deliver a proven, reliable and cost effective solution to our customers."

*--Peter Jarvis,
Chief Designer*

CAE, one of the world's leading providers of simulation and training, uses RTI over high-bandwidth IEEE-1394 on its Sim XXI product line.

Middleware **provides transport portability and architecture interoperability**

Air Traffic Management

Air traffic control flow traffic through busy metropolitan air spaces

Reliability is critical – hardware or software failures mean flight delays and substantial costs

Without disrupting the data flow, RTI **permits fast addition, updating and removal of system nodes**

Schneider PLCs

- Global discrete manufacturer of factory automation equipment
- Modern factories require up-to-the-minute data, even with limited memory and processing power
- Standardized protocol IEC 61148
- DDS middleware **controls large SCADA systems**

Cancer Treatment

Still River's PBRT (Proton Beam Radiation Therapy) system zaps tumors with accelerated protons.

The treatment must be continuous for 30-40 days; downtime endangers treatment success.

Still River built the world's smallest, reliable, autonomous, turn-key, therapist-operated PBRT system **in record time**

Automotive Safety

The VW Driver Assistance & Integrated Safety system provides steering assistance when swerving to avoid obstacles, detects when the lane narrows or passing wide loads, and helps drivers to safely negotiate bends.

Middleware *bridges high speed networking to the CAN bus*

Human Robotic Systems

NASA's Human-Robotic Systems Project is building four prototype robots that will someday operate on extraterrestrial surfaces.

The project coordinates four NASA centers building four different robots. They operate in realistic environments, including over low-bandwidth, high-delay, lossy communications.

DDS middleware allows these very different systems to share a common **data communications over disadvantaged links**

How Does DDS Work?

**The Real-Time
Middleware Experts**

Real-Time Integration Infrastructure

DDS “Global Data Space”

DDS communications model

- **Typed, topic-based** subscriptions ensure correct, easy communications
- **QoS Contracts** control information flow
 - Reliability, filtering, liveliness, resources
- **Real-time notification** provides deterministic behavior

Peer-to-Peer Efficiency

Peer-to-Peer

Broker-based

Fast & Scalable

DDS is ~20X faster than JMS

DDS reliable multicast exhibits nearly perfect scalability

Platform: Linux 2.6 on AMD Athlon, Dual core, 2.2 GHz

Extend DDS for Multiple Systems

- Routing service connects DDS domains
 - Filters (guards)
 - Translates
 - A programmable bridge
- Decouples development
 - Can span DDS domains
 - Different types, topics, versions
 - Can span WAN
 - Can span other protocols

DDS in the Grid...

**The Real-Time
Middleware Experts**

To create a robust, widely available and secure measurement infrastructure for the interconnected North American electric power system

- WECC
- NYISO
- Midwest ISO
- PJM
- Southern Cal Edison
- ISO New England
- CCET
- EPRI
- Bonneville Power Administration
- Grid Protection Alliance
- Washington State University
- University of Illinois
- UC–Berkeley
- Georgia Institute of Technology
- Virginia Tech
- IncSys
- Areva
- OSISoft
- RTI
- Qualitrol
- Power World
- Space Time Insight
- Ametek
- TLI Inc
- Schweitzer Engineering Laboratories
- Siemens
- Psymetrix
- General Electric
- Verizon
- Many more

Synchro Phasors

- PMU = Phasor Measurement Unit
 - GPS + Volt meter
- PDC = Phasor Data Concentrator
 - Collates PMU measurements

Synchro Phasors

NASPInet Architecture

Architecture Vision

NASPI Use Case Demo

Utility A

Utility B

Legend

Austin Use Case Demo (Feb): Demonstrated Requirements

- **Interoperability** between different protocols
 - C37118 and Data Distribution Service (DDS)
 - Enabling Capability: Routing Service adapters
- **High availability and fault tolerance**
 - Two redundant (PMU, PDC, RS) configurations
 - Enabling Capability:
 - DDS QoSs (OWNERSHIP, DESTINATION_ORDER, LIVELINESS)
 - DDS Monitoring

Vancouver Use Case Demo: Demonstrated Requirements

- Interoperability between different protocols
 - GPA OpenPDC integration
- High availability and fault tolerance
- **WAN Traversal**
 - Enabling capability:
 - Pluggable TCP transport
- **Monitoring and Situation Awareness**
 - Monitored PG status: Throughput, CPU usage, etc.
 - Enabling Capability: Routing Service monitoring & DDS monitoring features.

Vancouver Use Case Demo: Demonstrated Requirements

- **Auditing**
 - Storage of synchrophasor data into persistent storage
 - Enabling Capability: RTI Recorder service
- **Data Classes**
 - Slow subscribers can receive samples at a lower rate
 - Enabling capability: DDS QoSs (TIME_BASED_FILTER)
- **Security**
 - Secure communication channel between RSs (Confidentiality, Integrity)
 - Enabling capability: Secure TCP transport

New Features

- Interoperability between different protocols
 - DDS adapter inside openPDC
 - RTI Routing Service adapter for protocols supported by openPDC
- Security
 - Access Control Mechanism
 - Enabling capability: RTI Routing Service

Why DDS for the Grid?

- Proven: Built on field-proven technology
- Flexible: Handles all use cases
- Fast: Sub-millisecond deterministic delivery
- Easy: Proven multi-point integration
- Open: Internationally-standard API, wire protocol
- Reliable: N-way redundancy support
- Scalable: Reliable multicast & partitionable
- Plug and Play: Automatic discovery
- Interoperable
 - Plug-ins support C37.118, 61850, other protocols
 - Also across operating systems, languages, network transports, chip architectures, vendors
- Secure: Implements modern security, authentication, access control and intrusion detection (in progress)
