

Technology: Changing the Game

- Impacts of Technological Changes in the Cyber Environment on Software/Systems Engineering Workforce Development

21st Anniversary - Systems & Software Technology Conference
April 26-29, 2010
Salt Lake Palace Convention Center
Salt Lake City, UT 84101
Theme: Technology : Changing the Game

Dr. Kenneth E. Nidiffer
Director of Strategic Plans for
Government Programs
nidiffer@sei.cmu.edu
703.908.1117

Report Documentation Page				Form Approved OMB No. 0704-0188	
Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.					
1. REPORT DATE APR 2010		2. REPORT TYPE		3. DATES COVERED 00-00-2010 to 00-00-2010	
4. TITLE AND SUBTITLE Impacts of Technological Changes in the Cyber Environment on Software/Systems Engineering Workforce Development				5a. CONTRACT NUMBER	
				5b. GRANT NUMBER	
				5c. PROGRAM ELEMENT NUMBER	
6. AUTHOR(S)				5d. PROJECT NUMBER	
				5e. TASK NUMBER	
				5f. WORK UNIT NUMBER	
7. PERFORMING ORGANIZATION NAME(S) AND ADDRESS(ES) Carnegie Mellon University, Software Engineering Institute, Pittsburgh, PA, 15213				8. PERFORMING ORGANIZATION REPORT NUMBER	
9. SPONSORING/MONITORING AGENCY NAME(S) AND ADDRESS(ES)				10. SPONSOR/MONITOR'S ACRONYM(S)	
				11. SPONSOR/MONITOR'S REPORT NUMBER(S)	
12. DISTRIBUTION/AVAILABILITY STATEMENT Approved for public release; distribution unlimited					
13. SUPPLEMENTARY NOTES Presented at the 22nd Systems and Software Technology Conference (SSTC), 26-29 April 2010, Salt Lake City, UT. Sponsored in part by the USAF. U.S. Government or Federal Rights License					
14. ABSTRACT					
15. SUBJECT TERMS					
16. SECURITY CLASSIFICATION OF:			17. LIMITATION OF ABSTRACT Same as Report (SAR)	18. NUMBER OF PAGES 33	19a. NAME OF RESPONSIBLE PERSON
a. REPORT unclassified	b. ABSTRACT unclassified	c. THIS PAGE unclassified			

Overview

- Perspective
- The Problem Space
- Software and Systems Engineering Issues
- The Human Element

Human Element

The ability of organizations to compete will increasingly depend on the innovation of the human element

Cyber Security Landscape

Stakeholders recognize the importance of cyber infrastructure to our nation's prosperity.

- Public and private sector enterprises today are *highly dependent* on information systems to carry out their missions and business functions.
- To achieve mission and business success, enterprise information systems must be *dependable* in the face of serious cyber threats.
- To achieve information system dependability, the systems must be appropriately *protected*.

Source: "Information Systems Under Attack", NIST

“...I’ll make cyber security the top priority that it should be in the 21st century... coordinate efforts across the federal government, implement a truly national cyber-security policy, and tighten standards to secure information...”

President Barack Obama

What is at risk?

Transportation Infrastructure

Healthcare Infrastructure

Banking & Financial Infrastructure

Energy & Utilities Infrastructure

Communications Infrastructure

Imperatives

- **DDR&E Imperatives***

- Accelerate delivery
- Uncertain future
- Reduce the cost, acquisition time and risk
- Develop world class STEM **

* The Honorable Zachary J. Lemnios, DDR&E

** Science, Technology, Engineering and Mathematics Capabilities

Need for Space, Air, Ground, Water, Underwater Software-Intensive Systems that are Interconnected

- Several million SLOC programs; “Hybrid” systems combining legacy re-use, COTS, new development
- Multi-contractor teams using different processes; dispersed engineering, development & operational locations
- New technologies create opportunities/challenges; products change/evolve, corporations mutate
- Business/operational needs change - often faster than full system capability can be implemented
- Skillset Shortfalls; Cost and schedule constraints
- Demands for increased integration, interoperability, system of system capabilities
- Enterprise perspectives/requirements; sustainment concerns

**Development Complexity of
Software-Intensive Systems
is Increasing**

Software Development Schedule Trends

#Years $\sim 0.4 * \text{cube root (KSLOC)}$

- Delaying software start increasingly risky
- Need to find ways to compress software schedules
- - Timeboxing; architecting for decoupled parallel development

Ref: Barry Boehm

Realities of Software Quality

The flowchart might correspond to a 100 LOC module with a single loop that may be executed no more than 20 times.

There are approximately 10^{14} possible paths that may be executed!

For any but the smallest programs, complete path coverage for defect detection is impractical.

Adapted from Pressman, R.S., *Software Engineering: A Practitioner's Approach*, Third Edition, McGraw Hill, 1992

Technological: Rate of Adoption

The Cyber Domain is Hotly Contested

Overview

- Perspective
- The Problem Space
- Software and Systems Engineering Issues
- The Human Element

- Increasingly, urgent demands of the warfighter are requiring effective capabilities to be fielded more rapidly than the conventional acquisition processes and development methodologies allow.
- The quantity and quality of Systems Engineering expertise is insufficient to meet the demands of the government and defense industry
- Systems engineering practices known to be effective are not consistently applied or properly resourced to enable early system definition
- Technical decision makers do not have the right information & insight at the right time to support informed & proactive decision making to ensure effective & efficient program planning, management & execution.
- The development of systems with a full level of integrity (all technical aspects considered) is longer and more expensive over the entire lifecycle as the technical solution is iterated and reworked in later stages of the development.

- The increasing demands of the war fighter are requiring development of software and systems more rapidly than acquisition models and development processes allow.
- Inadequate/insufficient program planning and start-up has a negative exponential impact on the program's software success.
- For complex systems and systems-of-systems, software engineering practices are not well defined
- There is insufficient attention given to the overall software life cycle activities including sustainment and changing threats
- Fundamental system engineering decisions are made without full participation of software engineering (2006 carry over)
 - Education programs do not adequately address need for software engineering to be involved throughout the acquisition process.

Software Engineering Trends

- Software engineering will become increasingly vital to DoD, government, and commercial operations.
- Software will become increasingly complex and connected.
- New technical, governance, and process concepts are needed to handle increasing complexity and decentralization.
- Software and systems engineering architectures are vital to the development, evolution and sustainment of future systems.
- Increasing complex and connected systems need to be architected for security and for operational resiliency.

What Makes Software Engineering Different?

- Essential Properties of Software differentiate it from other kinds of engineering artifacts
 - Software Invisibility
 - No physical properties
 - Complexity
 - Effort/expense required to construct it for their size
 - Conformity
 - Must conform to exacting specifications
 - Software Changeability
 - Most frequently changed element

Cyber Engineering Compared with other Sciences

	PHYSICAL SCIENCE	BIOSCIENCE	SOFTWARE/CYBER ENGINEERING
Origins/History	Begun in antiquity	Begun in antiquity	Mid-20 th Century
Enduring Laws	Laws are foundational to furthering exploration in the science	Laws are foundational to furthering exploration in the science	Only mathematical laws have proven foundational to computation
Framework of Scientific Study	Four main areas: astronomy, physics, chemistry, and earth sciences	Science of dealing with health maintenance and disease prevention/treatment	• Several areas of study: computer science, software/ systems engineering, IT, HCI, social dynamics, AI • All nodes attached to/relying on netted system
R&D and Launch Cycle	10-20 years	10-20 years	Significantly compressed ; solution time to market needs to happen very quickly

Human Capital: Using Core Competencies

- ✦ Accurate identification of required competencies are important to support the curriculum review and development effort needed to ensure the best and most relevant training.

Current Resource Profile (initial inventory)

Workforce Competency	Staffing by Capacity Level			
	I	II	III	IV
Software Engineer	17	25	12	5
User Training	2	8	4	1

Current Resource Needs (one-year cycle)

Workforce Competency	Current Staffing Level Needed			
	I	II	III	IV
Software Engineer	23	30	15	7
User Training	4	9	6	2

Strategic Workforce Needs (2-5 year)

Workforce Competency	2010 Staffing Level Needed			
	I	II	III	IV
Software Engineer	31	35	18	9
User Training	4	10	8	3

Human Capital: Changing Demographics

Demographics of workforce are changing and different views may emerge with four generations to consider

Generation Y professionals entering workforce will likely necessitate non-traditional training techniques, such as virtual approaches

			
Silent Generation 1928-1945	Baby Boomers 1946-1964	Generation X 1965-1980	Generation Y/Millennials 1981-2000
Hard worker Respects authority Work is obligation Formal communicator Work/family separation	Workaholic Questions authority Works efficiently Competitive Little work/life balance	Technically advanced Prefers informality Needs structure and direction Direct/immediate communicator Seeks work/life balance	Technically savvy Embraces diversity Requires supervision Indirect/virtual communicator Demands work/life balance

In the Current Cyber Environment, We Must Fully Engage the Software/Systems Engineering Workforce

•Complexity

- Scope & Scale: number and diversity of elements
- Connectivity: interdependencies among the disparate elements
- Emergent behaviors: nonlinear stochastic response functions
- Effects of non-technical attributes and characteristics

•Criticality

- Systems to be continuously available
- Able to deal with Security, Privacy, Authenticity, Accuracy, requirements “seamlessly” & without performance degradation

•Compatibility

- Integrate the newest/fastest with the oldest/slowest

•Chronology

- “Idea” to “IOC” measured in weeks/months versus years/decades

•Competency

- Can the workforce develop the knowledge and abilities to adapt & survive?
