Form Approved
OMB No. 0704-0188

Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

The NRL Fact Book is prepared as a reference source for information about the Naval Research Laboratory (NRL). Personnel, fiscal information, and organization changes are current as of 1 November 1988. To provide additional information, a point of contact is listed for each activity.

NRL has a continuing need for physical scientists, mathematicians, engineers, and support personnel. Vacancies are filled without regard to age, race, creed, sex, or national origin. Information concerning current vacancies is furnished on request. Address all such inquiries to:

Civilian Personnel Office (Code 1810)
Naval Research Laboratory
Washington, DC 20375-5000

COVER: The 50-ft dish of the radio telescope mounted atop Building 43 has become the unofficial symbol of NRL. Originally constructed in 1951 and modified in 1958, scientists called it the first "accurately figured" radio telescope in the world. It was used extensively in the 1950s and 1960s to search for radiation from particular regions of the galaxy and to pinpoint celestial objects in the heavens. The dish was later used for moon radar. It gave the first accurate measurements of the distance to the moon, providing information on the radius of the earth and lunar topography. But by 1960, other larger dishes, superior in their measurements and accuracy, made the 50-ft dish obsolete. Now unused, it is shown silhouetted at sunset.

As NRL proceeds toward its seventh decade of service to the Navy and the nation, the dish remains what it has been to many thousands of viewers—at NRL, from the air, nearby highways, and the Potomac River—a symbol of a pioneering era.

REVIEWED AND APPROVED

A handwritten signature in dark ink, appearing to read "W.G. Clautice", with a long horizontal flourish extending to the right.

CAPT W.G. Clautice, USN
Commanding Officer

**Introduction to
the Naval Research
Laboratory**

Mission

The mission of the Naval Research Laboratory is to conduct a broadly based, multidisciplinary program of scientific research and advanced technological development directed toward new and improved materials, equipment, techniques, systems, and related operational procedures for the Navy. In fulfillment of this mission, the Naval Research Laboratory:

- initiates and conducts scientific research of a basic and long-range nature in scientific areas of special interest to the Navy;
- conducts exploratory and advanced technological development deriving from or appropriate to the scientific program areas;
- develops prototype systems applicable to specific projects within areas of technological expertise;
- performs scientific research and development for other naval commands and, where specially qualified, for other agencies of the Department of Defense and, in defense-related efforts, for other Government agencies;
- assumes responsibility as the Navy's principal R&D center in areas of unique professional competence upon request from appropriate naval commands;
- serves as the principal activity for the Navy and its contractors in providing accurate calibration, test, and evaluation services on acoustic transducers and materials; in providing a service whereby an inventory of calibrated standard acoustic transducers is maintained for issue; and in performing research and development to advance the state of the art of acoustic measurements and standard transducers;
- performs research and development on sonar transducers and related acoustic materials;
- furnishes scientific consultative services for the Navy and, where specially qualified, for other agencies of the Department of Defense and, in defense-related efforts, for other Government agencies; and,
- provides to the Navy determinations of performance characteristics of developmental and prototype devices through limited engineering test and evaluation services.

The Naval Research Laboratory in the Department of the Navy

The Naval Research Laboratory (NRL) is the principal in-house research laboratory under the command of the Chief of Naval Research (CNR). As the corporate research laboratory of the Navy, NRL is an important component in the Office of Naval Research's effort to meet its scientific research responsibilities.

For its basic research effort, the Laboratory receives guidance from the CNR that establishes the level of effort and trend direction. The Laboratory then develops a comprehensive research proposal package that is submitted to the CNR for consideration for Navy basic research support. The total Navy basic research program ultimately is evaluated by Congress.

In addition to internal critical review and the evaluation by the CNR and others, the research at NRL is published in refereed journals and/or reported at national and international scientific conferences. There is an aggressive policy of scientific interaction whereby scientists from around the world visit NRL and are visited by NRL scientists. In this way, NRL research is subject not only to management review but also to peer evaluation.

NRL is an important link in the Navy R&D chain. Through NRL, the Navy has direct ties with sources of fundamental ideas in the academic community throughout the world and provides an effective coupling point to the R&D chain for the Office of Naval Research (ONR) Contract Research Department.

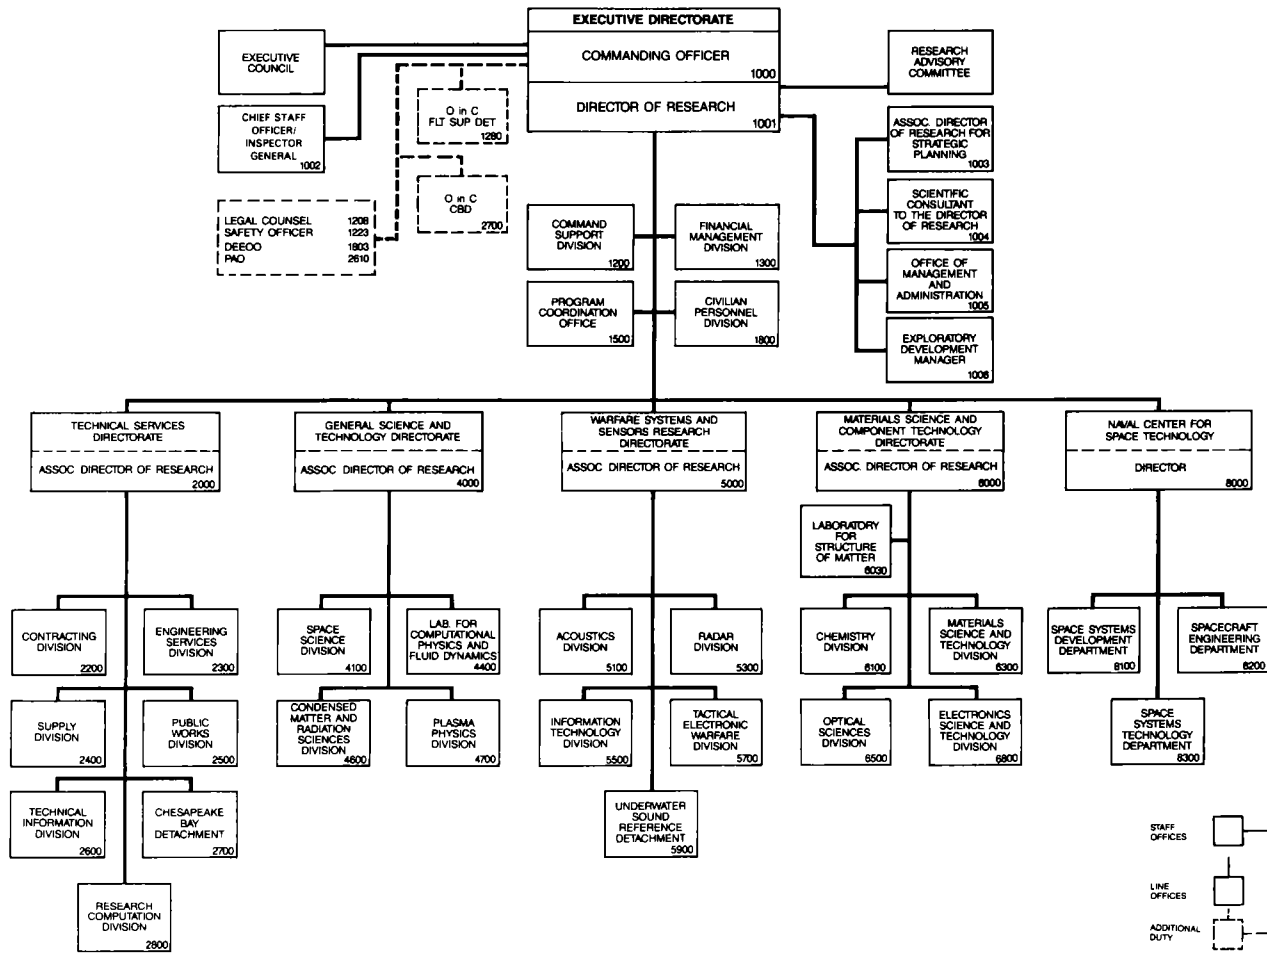

NRL PROGRAM EVOLUTION

The Naval Research Laboratory was officially established on July 2, 1923, as the Naval Experimental and Research Laboratory. In the following six decades, research efforts have expanded from the two original areas of radio and underwater sound to 15 broad areas of scientific endeavor encompassing many diverse fields.

NRL has been designated a major shore command and is led by a Navy captain who serves as commanding officer. The principal official under the commanding officer responsible for directing Laboratory operations is the director of research, a senior civilian. The Laboratory's overall management structure is built around four principal directorates and one technology center. Three research directorates—each headed by a senior civilian associate director of research—comprise 13 research divisions and detachments established along scientific discipline lines. The Technical Services Directorate, similarly led, consists of seven support divisions and detachments. The Naval Center for Space Technology—led by a senior civilian director—consists of three departments.

NRL 1989 Organization Chart

CURRENT RESEARCH

The following areas represent broad fields of NRL research. Under each, more specific topics that are being investigated for the benefit of the Navy and other sponsoring organizations are listed. Some details of this work are given in the *NRL Review*, published annually. More specific details are published in reports on individual projects provided to sponsors and/or presented as papers for professional societies or their journals.

Computer Science and Artificial Intelligence

- Standard computer hardware, development environments, operating systems, and run-time support software
- Methods of specifying, developing, documenting, and maintaining software
- Techniques for naval needs
- Expert systems for resource allocation, signal identification, operational planning, and target classification

Device Technology

- Integrated optics
- Radiation-hardened electronics
- Microelectronics
- MM wave technology
- Hydrogen masers for GPS

Directed Energy Technology

- High-energy lasers
- Chemical lasers
- Laser propagation
- High-power microwave sources
- Charged-particle devices
- Pulse power

Electronic Warfare

- Decoys (RF and IR)
- Repeaters/jammers, EO/IR active countermeasures
- EW/C³CM system concepts

Enhanced Maintainability, Reliability, and Survivability Technology

- Coatings
- Lubricants and greases
- Water additives and cleaners
- Fire safety
- Laser hardening
- Satellite survivability

Environmental Effects on Naval Systems

- Meteorological effects on electro-optical system performance

- Air quality in confined spaces
- Electromagnetic background in space
- Solar activity
- Ionospheric behavior

Information Management

- Antijam communication links
- Network architectures
- Combat management information systems

Materials

- Superconductivity
- Biomolecular engineering
- Materials processing
- Advanced alloy systems
- Rapid solidification technology
- High-temperature materials
- Laser fabrication and processing
- Ceramics and composite materials

Space Systems and Technology

- Advanced space systems
- Space sensing applications
- Satellite communications
- Spacecraft design, engineering, and integration
- Satellite ground station design
- Navigation systems

Surveillance and Sensor Technology

- Imaging radars
- Target classification/identification
- Towed acoustic arrays
- Underwater acoustic propagation
- Electromagnetic sensors—gamma ray to RF wavelengths
- SQUID for magnetic field detection
- Low observables technology

Undersea Technology

- Autonomous vehicles
- Bathymetric technology
- Anechoic coatings

Major Capabilities and Facilities

(Listed alphabetically by organizational unit)

Acoustics Division

- Large tank instrumented for investigating acoustic echo characteristics of targets
- Tank 30 ft in diameter by 22 ft in depth, automated with computer control and analysis for detailed studies of acoustic fields, transducers, and other underwater devices
- Multichannel programmable digital data processing system: a system of DEC computers, high-speed array processors, and peripherals for up to 256 channels; designed for acoustic surveillance array processing
- Connection-machine facility: an experimental facility that exploits the natural computational parallelism inherent in data-intensive research problems

Chemistry Division

- Nanometer-scale surface analytical facility
- Bio/molecular engineering facility
- Langmuir-Blodgett film facility
- Chemical diagnostic facility
- Surface diagnostic facility
- Tribology facility
- Paint and coating facility
- Mechanical and chemical characterization of polymers facility
- Surface cleaning facility
- Alternate and petroleum-derived fuels facility
- Combustion research facilities
- High-temperature chemistry facility
- Fire research facilities

Chesapeake Bay Detachment (CBD, Chesapeake Beach, MD)

- Radar experimental test site, which includes a variety of radars; ancillary equipment for test and evaluation of equipment, concepts, and techniques; and overwater ranges
- Tactical electronic warfare test site
- Communications facilities for transmission to and from land, sea, and air
- Hypervelocity gun for ballistics research
- Ship-motion simulator with 12-ton payload capacity

- Navy Technology Center for Safety and Survivability for fire extinguishment research
- Boat services

Civilian Personnel Division

- Supervisor/manager executive development
- Employment inquiries
- Science, engineering, and computer courses
- Administrative support
- Mechanical and technical trades training
- Long-term and special programs
- Instructional television via tape, microwave, and satellite as well as computer-based training

Command Support Division

- Legal and patent services
- Workplace monitoring for occupational hazard abatement and sight and hearing conservation
- Safety service
- Fire inspection and protection
- Security monitoring
- Operational support, using four research-configured P3 Orion aircraft

Condensed Matter and Radiation Sciences Division

- Hypervelocity gun ranges
- 3-MV tandem Van de Graaff accelerator
- 200-kV ion-implantation facility
- 60-MeV electron linear accelerator
- Synchrotron radiation beam lines (at Brookhaven)
- Synchronized laser facility
- Microwave test facility (with the Plasma Physics Division)
- Bomen infrared spectrometer facility
- HYPRES superconducting oscilloscope system

Electronics Science and Technology Division

- Microelectronics processing facility
- Electron-beam nanowriter
- Electron-beam lithography system
- Electron microscopes and electro-optical analytical devices
- Crystal-growing facilities including bulk growth, molecular beam epitaxy, and

organo-metallic chemical vapor
deposition
High magnetic field facility
Electronic testing and analysis facilities

Engineering Services Division

Mechanical, electronic, and project
engineering and design
Manual and computer-aided design and
drafting
Printed circuit CAD/CAM facility
(REDAC)
Shops for machining, sheet metal, welding,
casting, plating, plastics, printed
circuits, electronic assembly, and other
fabrication services

Financial Management Division

Accounting
Budget formulation and execution
Funds administration
Vendor and travel payments
Financial systems development
Payroll
Equipment accountability

Health Physics Group

X-ray and gamma-ray calibration facility

Information Technology Division

Extensive computer facilities
Microwave space research facility
HF modem and channel simulation
Brandywine antenna range
Pomomkey test range
Signal analysis laboratory
Artificial intelligence computer network
Distributed simulation and prototyping test
bed

Laboratory for Computational Physics and Fluid Dynamics

Hardware: Two VAX 11/780s, one IRIS
4D graphics workstation and 4 SUN
graphics workstations, plus peripherals
and terminals. Network and MILNET,
LANL X CRAY and Net, APTEC DPS
+ FPS and NUMERIX array
processors, TEKTRONIX 4128 and
METHEUS 3610 high-speed graphics
processor stations connected to the NRL
CRAY X-MP/24, DEC front-end
DICOMED D-38 design station and
NRL DICOMED microfilm recorder

Wave channel: a 30-m channel with fan
and mechanical wavemaker instrumented
for the study of wave generation and
wave effects

Tow channel: a 20-m, dual-carriage tow
channel with variable stratification for
studies of geophysical flows and wakes

Lab measurements and diagnostics:
multiple channels of hot-wire/hot-film
and laser-Doppler anemometry, visual
and infrared digital imagery, fiber optic
devices, real-time spectral analysis, and
high-resolution pressure transduction

Laboratory for Structure of Matter

Two X-ray diffractometers
Zymark robotics
Evans and Southerland computer graphics
display system
Silicon graphics IRIS workstation
Chromatography

Materials Science and Technology Division

Ultrasonic gas atomizer
Hot isostatic press
Consumable arc electrode melter for
reactive metals
High-energy, dispersive X-ray analytical
system
Electron microprobe SEM and STEM
systems
Quantitative metallography
Computer-controlled multiaxial loading and
SCC measurement systems
Computer-interactive, nonlinear, multimode
fracture measurement system
Computer-aided, experimental stress
analysis
Crystallite orientation, distribution function
(CODF)
Elevated temperature and structural
characterization laboratory
Impression creep and mechanical property
evaluation
Automated physical constant measurement
system
Nondestructive evaluation laboratory
Closed-loop, low- and high-cycle fatigue
systems
Shock and vibration laboratory
Film deposition systems
Magnetometry
Mossbauer spectroscopy
Cryogenic facilities

High-field magnets
High-frequency facilities
Marine corrosion facility

Naval Center for Space Technology

CAD/CAM Facility
RF anechoic chambers
Thermal-vacuum chambers
Reverberation chamber
Shock and vibration test facility
Clean-room facilities
Satellite tracking, command, and control facilities
100-ft wave tank for studying dynamics of wind waves and their interactions with long waves; uses microwave Doppler spectrometry and optical and photometric techniques
Spacecraft fabrication and assembly facility
Propellant handling facility

Optical Sciences Division

Electron-beam, electron-beam sustained, X-ray, and UV preionized laser devices with spectroscopic and other diagnostic equipment
Short-pulse excitation apparatus for kinetic mechanisms investigations
Optical warfare laboratory
IR laser facility for optical characterization of semiconductors
Mobile, high-precision optical tracker
Facilities for synthesis and characterization of optical glass compositions and for the fabrication of optical fibers
Hybrid optical/digital image processing facility
Fiber-optic fabrication facilities
Facilities for fabricating and testing integrated optical devices
Optical probes laboratory to study viscoelastic, structural, and transport properties of molecular systems
Computer IR/EO technology/systems simulation center
High-energy pulsed chemical laser laboratory
100-J UV laser research facility
Field-qualified EO/IR measurements devices
Focal plane array evaluation facility

Plasma Physics Division

PAWN, 1-MJ compact inductive storage facility

Gamble I and II high-voltage pulsed power generators
PHAROS III, three-beam neodymium-glass laser and target facility
1000-J NRL CO₂ laser
7-MJ homopolar generator
High-power free-electron laser and gyrotron facilities
Modified betatron accelerator
Charged particle beam (CPB) propagation range
Super IBEX 5 MV, 100 kA, 40 ns CPB generator
Maxibeam 3 MV, 60 kA, 300 ns CPB generator

Public Works Division

Construction, engineering, repair, and other services to operate, maintain, and improve NRL's physical facilities, including utilities

Radar Division

Radar cross-section measurement system
Radar research and development test beds (at CBD)
Versatile C-, X-, and K_a-band monopulse precision tracking radar systems (at CBD)
IFF ground station
Interpretation facility for synthetic aperture radar (SAR)
Airborne APS-116 radar with SAR processing
Recording and control system for airborne adaptive array research
Noncooperative target recognition facility
Antenna measurement laboratory
Digital image processing laboratory
Computer-aided engineering (CAE) facility

Research Computation Division

Cray X-MP/24 computer (front-ended by five DEC VAX 700/8000 computers), an extremely large, high-speed, powerful computational system particularly well-suited for scientific and engineering usage
DEC VAX 700/8000s (5) Front end to the Cray X-MP/24 computer, providing linkages to a wide variety of concurrent computer services to over 1700 scientists and engineers, both at NRL and at remote locations throughout the U.S. These services include high-volume,

time-shared, local and remote batch, active graphics, and telecommunications processing.

NRL broadband local area network (NICENET) that connects most NRL buildings for computer communications and provides gateways to nationwide communications/computer capabilities

Off-line graphics capability via TID's DICOMED

CALCOMP 1055 and 5200 plotting facilities

DEC-10 MIS computer

VAX-11/750 MILNET connection

Space Science Division

Waldorf Annex (lower site) that is instrumented for continuous recordings of atmospheric-electricity, micrometeorological, and lightning-flash data and is used for investigations into environmental phenomena

Instrumented micrometeorological tower on San Nicolas Island, CA

Ionospheric sensing and propagation analysis

85-ft radio telescope at Maryland Point, MD

Other antennas for radio astronomy

E.O. Hulburt Center for Space Research

Development and test facilities for space-borne instruments to perform astrophysical, solar, high-atmospheric, and space-environment sensing

Clean-room facilities

Extensive computer-assisted data manipulation and interpretive capability for space-data imaging and modeling

Supply Division

Acquisition, storage, distribution, and disposal of materials and equipment required by the research directorates

Tactical Electronic Warfare Division

Mobile infrared signature measurement and simulation facility

Mobile ESM laboratory

Hybrid RF/IR missile-seeker simulation facility

Central target simulation facility for developing, testing, and evaluating EW systems and techniques, using real-time, hardware-in-the-loop models

RF simulation laboratory and signal simulators

Radar cross-section measurement facility (at CBD)

Search radar ECM simulator

Advanced tactical EW environment simulator

Electronic warfare coordinating module

Scale-model analysis facility

Technical Information Division

DICOMED (computer graphics system)

Electronic publishing

Technical library (2,000 subscriptions, 150,000 monographs and bound journals, and 1,100,000 technical reports (350,000 hard copy and 750,000 microfiche))

LS-2000 on-line library catalog

Photographic laboratories

Writing, editing, publications consultation

Exhibits

Design services

Video productions

Billboard

Labstracts

NRL's television network (NTN)

Underwater Sound Reference Detachment (Orlando, FL)

7-acre lake with a large pier and instrumentation for underwater acoustic studies

Anechoic tank for simulating ocean depths to 2297 ft

Smaller pressure vessels for simulating depths to 22,966 ft

Field station at Bugg Spring with floating platform and instrumentation for acoustic measurements

The Executive Directorate

The Commanding Officer and the Director of Research share executive responsibility for the management of the Naval Research Laboratory. In accordance with Navy requirements, the Commanding Officer is responsible for the overall management of the Laboratory and exercises the usual functions of command including compliance with legal and regulatory requirements, liaison with other military activities, as well as the general supervision of the quality, timeliness, and effectiveness of the technical work and of the support services.

The Commanding Officer delegates line authority and assigns responsibility to the Director of Research for the technical program, its planning, conduct, and staffing; evaluation of the technical competence of personnel; liaison with the scientific community; selection of subordinate technical personnel; exchange of technical information; and the effective execution of the NRL mission.

Within the limits of Navy regulations, the Commanding Officer and the Director of Research share authority and responsibility for the internal management of the Laboratory. The Commanding Officer retains all authority and responsibility specifically assigned to him by higher authority.

The mission of the Laboratory is carried out by four science and technology directorates supported by the Technical Services Directorate and the Executive Directorate. In addition, the Laboratory's operating staffs provide assistance in their special fields to the Commanding Officer and to the Director of Research. The operating staffs are listed on the following pages of this publication.

Commanding Officer (Code 1000)

Captain William G. Clautice, U.S. Navy, [REDACTED] and is a 1959 graduate of the U.S. Naval Academy. He holds an M.S. degree in Ocean Engineering from the University of Rhode Island, an M.S. from the University of Southern California, and an M.B.A. from Stetson University.

Upon being commissioned, Captain Clautice was assigned to USS *Sarsfield* (DD-837). He graduated from the Naval Submarine School in 1961 and reported to USS *Bashaw* (SS-241) on deployment in the Western Pacific from Pearl Harbor, Hawaii. In 1964, he completed nuclear power training and was assigned to the commissioning crew of USS *Sam Rayburn* (SSBN-635). In 1966, he became the commissioning Navigator and Operations Officer of USS *Will Rogers* (SSBN-659).

From 1969 to 1971, he served as Navigation Instructor, Assistant Director of the Executive Division, and Director of the Operations Division at the Naval Submarine School, New London, Connecticut. In 1972, he served in USS *Dace* (SSN-607), qualified as engineer of naval nuclear power plants, and was assigned as Executive Officer of USS *George C. Marshall* (SSBN-654). In 1973, he was selected for nuclear submarine command.

Following graduation from the Program Managers' Course at Defense Systems Management College in 1975, Captain Clautice served in the Headquarters, Strategic Systems Program Office until 1979 as Assistant Head of the Navigation Branch and then as Head of the Test Instrumentation Branch. From 1979 until 1983, he served as Commanding Officer of the Naval Ordnance Test Unit, Cape Canaveral and was responsible for flight testing the Navy's strategic missiles. In 1983, he was selected as a major program manager and assumed command of the Strategic Weapons Facility Pacific, Bangor Submarine Base, Bremerton, Washington in August of that year. Captain Clautice became the Assistant Chief of Naval Research in August of 1985 and assumed command of the Naval Research Laboratory on 26 August 1987.

Captain Clautice is the author of three technical papers that have been published in the *Institute of Navigation Journal* (1971, 1978), the *Marine Technology Society Journal* (1974), and the *Institut Francais de Navigation Revue Technique* (1979). He has been awarded the Legion of Merit (two awards), the Meritorious Service Medal (two awards), the Navy Achievement Medal (two awards), the Navy Unit Commendation, and the Meritorious Unit Commendation as well as several campaign and service medals.

Director of Research (Code 1001)

Dr. Timothy Coffey [REDACTED]. He graduated from the Massachusetts Institute of Technology in 1962, with a B.S. degree in electrical engineering, and obtained his M.S. (1963) and Ph.D. (1967), both in physics, from the University of Michigan.

During his graduate career, Dr. Coffey worked as a research assistant at the University of California (1963-64), a research physicist at the Air Force Cambridge Research Laboratories (1964-65), and a teaching fellow and research assistant in physics at the University of Michigan (1965-66). As a scientific consultant for EG&G, Inc. (1966-71), he was involved in investigations in theoretical and mathematical physics.

Dr. Coffey came to the Naval Research Laboratory in 1971, as Head of the Plasma Dynamics Branch, Plasma Physics Division. In this position, he directed research in the simulation of plasma instabilities, the development of multidimensional fluid and magnetohydrodynamic codes, and the development of computer codes for treating chemically reactive flows. In 1975, he was named Superintendent, Plasma Physics Division; he was appointed Associate Director of Research for General Science and Technology on January 1, 1980. On November 28, 1982, he was named Director of Research.

Dr. Coffey is recognized as an authority on the theory of nonlinear oscillations and has played a major role in the national program on high-altitude nuclear effects. The author or co-author of over 70 publications and reports, he has made several fundamental contributions to the theory of electron beam/plasma interaction and to the understanding of plasma processes in the Earth's ionosphere.

Dr. Coffey is a fellow of the American Physical Society and a fellow of the Washington Academy of Sciences. Among Dr. Coffey's recent honors and awards are the Senior Executive Service Performance Award and the Rear Admiral William S. Parsons Award for Scientific and Technical Progress (honorable mention). In 1981, he was awarded the Presidential Rank of Meritorious Executive, and in 1988 he received the Distinguished Presidential Rank award.

Executive Council

The Executive Council consists of executive, management, and administrative personnel. The monthly Executive Council meeting is a scheduled forum that provides the Commanding Officer a personal means to relay new policy or changes to current policy that affects all divisions and allows the other members of the Council to advise the Commanding Officer and Director of Research on matters relating to the administration of the Laboratory. The council also provides an opportunity for information exchange among its members. The Executive Council members include:

- Commanding Officer, chairperson
- Director of Research
- Associate Directors of Research
- Director, Naval Center for Space Technology
- Heads of Divisions
- Head, Laboratory for Structure of Matter
- Deputy Equal Employment Opportunity Officer
- Head, Administrative Services Office
- NRL Counsel

Research Advisory Committee

The Research Advisory Committee advises the Commanding Officer and the Director of Research on scientific programs and the administration of the Laboratory. The committee assists in planning the long-range scientific program, coordinating the scientific work, reviewing the budget, accepting or modifying problems, considering personnel actions, and initiating such studies as may be necessary or desirable. The membership consists of:

- Director of Research, Chairperson
- Commanding Officer
- Associate Directors of Research
- Director, Naval Center for Space Technology
- Chief Staff Officer (Observer)
- Head, Office of Management and Administration (Observer/Recorder)

OFFICE OF STRATEGIC PLANNING (Code 1003)

The Office of Strategic Planning, formed in December 1987, is headed by the Associate Director of Research for Strategic Planning. He is a member of the NRL Research Advisory Committee (RAC). This office carries out the function of strategic planning for NRL, which involves extensive examinations of the internal resources at NRL and the environments external to NRL (with particular emphasis on requirements within DoD and opportunities within the R&D community). Information examined includes projections for R&D, system engineering, resource requirements, laboratory resource and facility capabilities, computer and information technology projections, and the integration of these projections within the framework of Navy requirements. The office has responsibility to maintain the NRL facilities records; handle NRL's technology transfer functions; address other issues related to NRL's long-term future; and integrate directorate and division technology needs into an overall laboratory plan by defining the areas to be addressed and the levels of investment that are required.

Dr. William M. Tolles

Dr. Tolles [REDACTED] He obtained his undergraduate degree in chemistry from the University of Connecticut in 1958, and his Ph.D. in chemistry from the University of California, Berkeley in 1962. Subsequently, he spent one year as a Postdoctoral Fellow at Rice University.

In 1962, he assumed an appointment as Assistant Professor of Chemistry at the Naval Postgraduate School. His research there included electron paramagnetic resonance of energetic materials and radiation-damaged species and quantum mechanical calculations of molecular properties.

He served as a consultant for the Naval Weapons Center, China Lake, between the years of 1965 and 1975, where he did considerable research involving the microwave properties of materials.

During a five-month period in 1975, he performed research at NRL involving the introduction of Coherent Antistokes Raman Spectroscopy (CARS), nonlinear optical spectroscopic methods (including variations on the Raman induced Kerr effect spectroscopy (RIKES)), and related techniques.

In 1977, as a full professor, Dr. Tolles took the position of Dean of Research at the Naval Postgraduate School, and for four years, he also occupied the position of Dean of Science and Engineering.

He arrived at NRL in February 1984 as the Superintendent of the Chemistry Division. In 1987, he was appointed Associate Director of Research for Strategic Planning.

He is a member of the American Chemical Society, the American Physical Society, the American Optical Society, and Sigma Xi.

**Chief Staff Officer/Inspector General
(Code 1200/Code 1002)**

CAPT M.A. Howard

The Chief Staff Officer serves as the Deputy to the Commanding Officer and acts for the Commanding Officer in his absence. The Chief Staff Officer is the Laboratory's Inspector General, and when directed, he investigates, inspects, and/or inquires into matters that affect the operation and efficiency of NRL. These matters include but are not limited to: effectiveness, efficiency, and economy; safety and occupational health; personnel discipline, morale, and welfare; management practices, command relationships, and organizational structure; and fraud and waste. He serves as principal advisor to the Commanding Officer on all inspection matters and audits and is the principal point of contact and liaison with all agencies outside NRL.

**Deputy Equal Employment Opportunity Officer
(Code 1803)**

Mr. James Richardson*

The Deputy Equal Employment Opportunity Officer (DEEOO) is the EEO program manager and the advisor to the Commanding Officer on all EEO matters. The DEEOO manages the discrimination complaint process and directs the Laboratory's affirmative action plans and special emphasis programs (Federal Women's, Hispanic Employment, Individuals with Handicaps, and Disabled Veterans). Duties include reviewing, coordinating, and monitoring implementation of EEO policies and developing local guidance, directives, and implementation procedures for the EEO programs. The DEEOO also advises SES and Merit Pay System employees on setting EEO objectives.

**Public Affairs Officer
(Code 2610)**

Mr. J. W. Gately, Jr.

The Public Affairs Officer (PAO) advises the Commanding Officer and Director of Research on public affairs matters, including external and internal relations, and serves as the Commanding Officer's principal assistant in the area of public affairs. To do this, the PAO plans and directs a program of public information dissemination on official NRL activities. The PAO coordinates responses to requests from the news media and the public for unclassified information or materials dealing with the Laboratory, coordinates participation in community relations activities, and directs a program of internal information dissemination within the Laboratory. The PAO is also responsible for coordinating all actions within the Laboratory that respond to requirements of the Freedom of Information Act (FOIA).

*Acting

**Scientific Consultant to the Director of Research
(Code 1004)**

Dr. P. Mange

The Scientific Consultant conducts studies and analyses relating to the technical programs being carried out at the Laboratory on behalf of the Director of Research. He represents the Laboratory on external technical boards, advisory panels, or working groups as requested by the Director of Research and is the Laboratory point of contact with the Strategic Defense Initiative Organization.

**Exploratory Development Manager
(Code 1006)**

Dr. S. Sacks

On behalf of the Director of Research, the Exploratory Development Manager carries out program management activities related to the Navy 6.2 (exploratory development) efforts. Mission activities include assurance of technical quality and program relevance, orientation of the program to priority needs and transition opportunities, and overall coordination of NRL 6.2 block efforts. The Exploratory Development Manager is the Laboratory point of contact with the Office of Naval Technology.

Office of Management and Administration

(Code 1005)

Basic Responsibilities

The Office of Management and Administration provides managerial, technical, and administrative support to the Director of Research in his planning and direction of research and development programs in a variety of scientific and engineering disciplines. Specific functions include: performing special studies involving major NRL programs and resource issues; providing administrative support in the areas of personnel, budget, facilities, equipment, and security; reviewing and managing the Director of Research's correspondence; providing management information and analyses for various aspects of the research program effort; coordinating VIP and foreign visits to NRL; managing the NRL Directives System; coordinating unsolicited proposals, congressional correspondence, and other external inquiries; maintaining the NRL R&D achievements file; reviewing and interpreting external Navy and DoD directives addressed to NRL; managing the Defense Retail Interservice Support Program (Host-Tenant Agreements); coordinating the IR&D Program; developing guidance for and monitoring the 6.1 (basic research) Program and 6.2 (exploratory development) Program; providing central word processing services to the Directorate; coordinating the NRL-NRC and ONT Postdoctoral Resident Research Associateship Programs, NRL-U.S. Naval Academy Faculty Co-op Program, Navy ASEE Program, and other special Navy programs; interacting with ONR Headquarters and the R&D Centers as laboratory representative; and assisting in the development of NRL's Five-year Plan.

Legal staff

CAPT. M.A. Howard, USN

Basic Responsibilities

The Command Support Division is headed by the Chief Staff Officer who is also the Laboratory's Inspector General.

The Division provides a military staff to the Commanding Officer and to the Director of Research for direct research support and assistance in the military aspects of the management of the Laboratory. The staff is the liaison with DOD, Navy commands/activities, and the operating forces of the Navy. It supports NRL research and development operations and coordinates military applications of the scientific work of the Laboratory. Direct research support is provided through operations of four multiengine Laboratory aircraft. In addition, the staff arranges for air, surface, and subsurface services as required by research and development operations.

The Division is responsible for physical, personnel, communications, information, industrial and ADP security, and fire protection, as well as safety and occupational health. It provides intelligence support and support for international cooperative agreements in technology control.

It provides legal counsel and representation in the fields of procurement, business and commercial law, civilian personnel law, government regulations, intellectual property and patent law, EEO, standards of conduct, and litigation. The staff also coordinates the Laboratory's Management Control and Research Reserve Programs.

Financial Management Division (Code 1300)

- GENERAL ACCOUNTING
- COST ACCOUNTING
- SYSTEMS ACCOUNTING
- DISBURSING
- BUDGET

The Accounting Branch is divided into several sections that perform services essential to the Laboratory including vendor payments, payroll, payment information, and ledger accounting.

As a support division, our most important assets are the dedicated, knowledgeable employees within our area. Pictured above, Financial Management Division employees are providing valuable services in paying vendors and researching prompt payment actions.

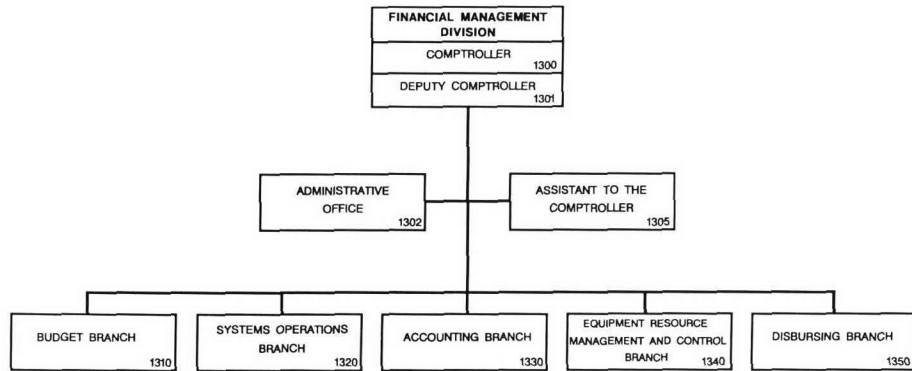

The Disbursing Branch is the most visible portion of the Financial Management Division. Its role in the Laboratory's operation includes disbursing checks, processing travel orders, and auditing.

The Payroll Section of the Accounting Branch provides customer services, processes payroll, and interacts with all divisions, branches, and personnel within the Naval Research Laboratory.

Mr. R.W. Steinbeck

Basic Responsibilities

The Comptroller is the financial adviser to the Commanding Officer, the Director of Research, and other officials of the Laboratory, and he administers the financial program of the Laboratory.

The Financial Management Division provides services to the Laboratory in budget formulation and funds administration, program and budget analysis, accounting and reporting, and disbursing. In addition, the division provides essential information and guidelines concerning equipment management.

**Technical Services
Directorate**

Technical Services Directorate

The Technical Services Directorate provides administrative and technical services required to support the mission of the Laboratory. This support is in the areas of technical information; facility construction and maintenance; engineering design and fabrication; supply; contracts; operation and maintenance of the Laboratory's central computer facilities; and administrative information to management. In addition, the Directorate operates and maintains a field facility for NRL research at the Chesapeake Bay.

**Associate Director of Research for Technical Services
(Code 2000)**

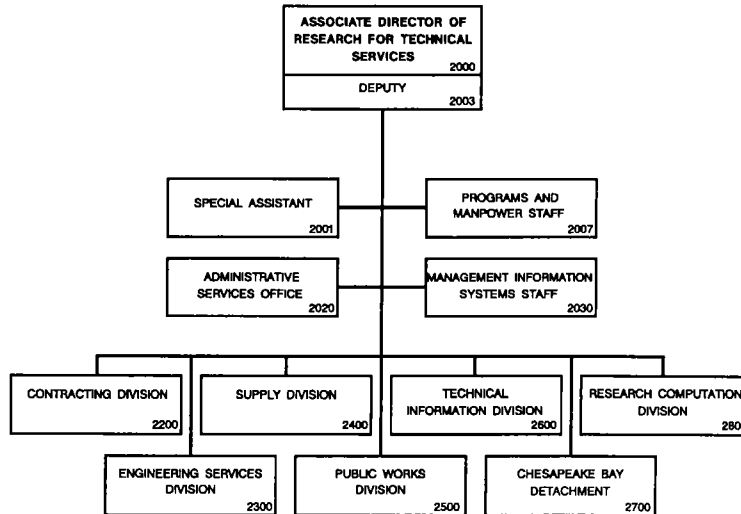

Mr. Jack D. Brown

Mr. Brown [REDACTED] He graduated from Michigan State University in 1943, with a BS degree in Physical Chemistry. He was called to active duty in the U.S. Army in 1943 and remained on active duty until he joined the Naval Research Laboratory on March 1, 1971.

Mr. Brown served as Associate Superintendent of the Plasma Physics Division from 1971 to 1981 when he was assigned duties as Associate Director of Research for Technical Services. In addition to his regular duties, he has been responsible for the organization and operation of a number of Laboratory-wide multidisciplinary study efforts on nonacoustic ASW and anomalous geophysical phenomena.

During his military service, Mr. Brown was designated an Atomic Energy Specialist and engaged in research and teaching in long-range detection of nuclear explosions, development and testing of nuclear weapons, and the effects of nuclear explosions in space. During this period he planned or served as technical director for nuclear effects tests in space, underground, and over open ocean. He also organized and coordinated major geophysical expeditions to observe solar eclipses and polar cap ionospheric events. From 1952 to 1953, he served as a guest scientist at the National Bureau of Standards, where he investigated the infrared emissivity of metals at cryogenic temperatures.

- MECHANICAL ENGINEERING AND MANUFACTURING
- ELECTRONIC ENGINEERING AND FABRICATION
- QUALITY ASSURANCE
- COMPUTER-AIDED DESIGN/COMPUTER-AIDED MANUFACTURING

Electronic engineers design and test circuits in one of ESD's laboratories by using microprocessor development systems to design and test the hardware and software. Personal computers are also used for various engineering applications such as FUTURENET, a schematic editor, and logic cell array design and simulation.

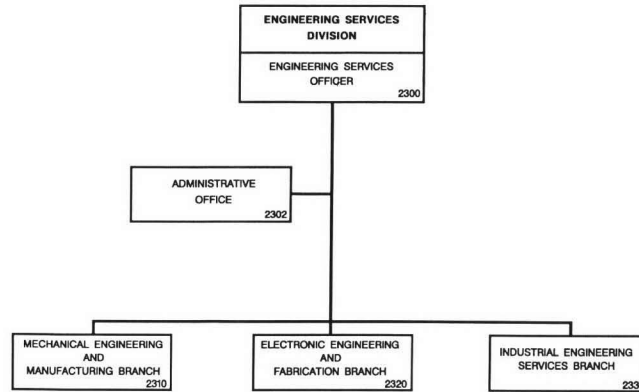

Technician from ESD's Sheet Metal Shop assembling an electronics chassis that he designed and fabricated; later he installed components provided by NRL scientists. Subsequently, the technician accompanied the scientists to the West Coast to assist in demonstrating the chassis to government and industry. The chassis is now used aboard Navy ships.

Machinist is milling a piece of copper component with a vertical milling machine for close tolerance requirements

Mr. Leo A. Sentiger, Sr.

Basic Responsibilities

The Engineering Services Division provides the engineering, design, fabrication, assembly, and test of experimental research equipment in support of the Laboratory's research efforts. Complete services covering the fields of mechanical and electronic engineering, fabrication and manufacturing, and industrial engineering services are provided. Emphasis is placed on quick reaction and flexibility to meet the needs of the Laboratory's research programs.

Mechanical support covers project engineering, computer-aided mechanical design and drafting, and thermal and structural analysis; it also includes shops for conventional machining or four-axis numerical control manufacturing, sheet metal work, welding, plating, casting, and plastic fabrication. Electronic support covers project engineering, digital and analog circuit design, microprocessor/microcomputer-based systems design (including programming), a computer-aided printed circuit board design (REDAC and Computervision), printed circuit board fabrication, electronic assembly and testing, and cable fabrication. Industrial engineering support provides cost analyses, environmental testing, planning, and advice to management and production officials on the most effective methods and procedures to support experimental and prototype equipment requirements.

The division has the expertise to attack new problems, work with new and exotic materials on prototype developments, and provide researchers with support or consultation in these areas.

The Public Works Division has a large in-house engineering staff to provide electrical, mechanical, and civil/structural modifications and repairs to NRL's many facilities.

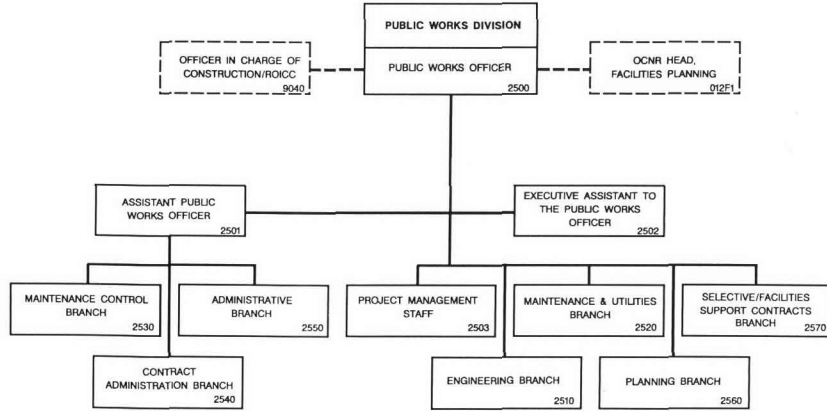

This technician is repairing an electronic security board. The Maintenance and Utilities Branch has 10 shops employing a skilled shop force of more than 200 personnel.

Checking operations at the Central Chilled Water Plant. The division also operates and maintains a central steam plant, electrical distribution, and telephone/alarm system communication networks.

CDR C.R. Allshouse

Basic Responsibilities

The Public Works Division is responsible for the physical plant of NRL. This includes: responsibility for the design, construction, maintenance, and repair of public works and utilities; responsibility for the operation of these public works and utilities in accordance with the technical standards of the Naval Facilities Engineering Command; and supporting the scientific program of the Laboratory by the construction, repair, and alteration of experimental and test equipment. In addition, the Division obtains required approvals for work for which the Division is responsible from the Chesapeake Division of the Naval Facilities Engineering Command, the Office of Naval Research, the Secretary of the Navy, and other authorities as appropriate.

The Public Works Division also supports the Office of the Chief of Naval Research for Facilities Coordination and supports the Resident Officer in Charge of Construction on all Naval Facilities Engineering Command and certain other research and development contracts at NRL.

Technical Information Division (Code 2600)

- **INFORMATION SERVICES**
- **TECHNICAL LIBRARY**
- **PUBLICATIONS**
- **PHOTOGRAPHIC SERVICES**
- **GRAPHIC DESIGN SERVICES**

The Ruth H. Hooker Library provides access to an extensive collection of books, reports, and periodicals. Through online access and cooperative agreements most literature is available through interlibrary loan.

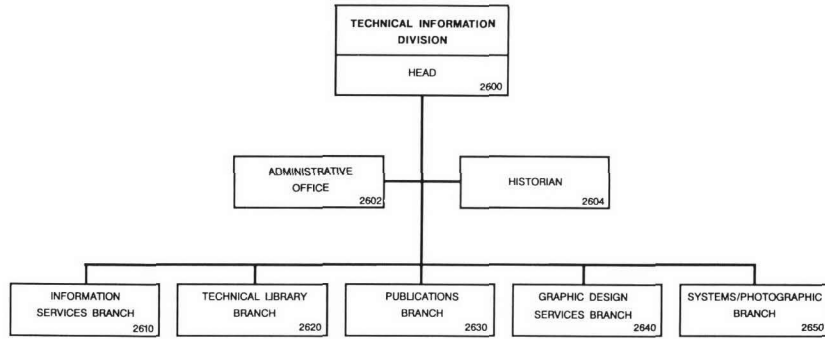

The graphic artists in the Graphic Design Services Branch design visuals and create artwork for NRL presentations and publications.

A full-service video/television production facility is available to produce professional-quality live and remote video technical reports. Complete editing, directing, and duplicating support are also available for video productions.

Mr. P. Imhof

Basic Responsibilities

The Technical Information Division provides centralized support to the Laboratory, and sometimes the Office of Naval Research, by collecting, retaining, processing, publishing, presenting, and distributing information in many forms to many audiences.

The Technical Information Division supports the Laboratory by editing and publishing reports and publications; by providing a full range of Library services, specialized scientific and general photographic services, illustration and visual aid services, DICOMED support, scientific composition, special projects graphics, auditorium and meeting support, collection and maintenance of historical data, exhibits, video data-gathering services; by managing public and internal information programs (publishing *Labstracts*, NRL's biweekly newspaper, and programming NRL's television network (NTN)); and by conducting Freedom of Information Act activities, as required by law.

Mr. Alan J. Zakraysek, Impact Vulnerability Staff

CDR S.I. Kummer

Basic Responsibilities

The Chesapeake Bay Detachment operates and maintains an independent military facility for NRL research. It has a variety of shops, plant facilities, and specialized equipment used to support a variety of NRL and tenant research and development projects that are best carried out at this location.

The Physical Plant

Located in a relatively clear area away from congestion and industrial interference, the main site, at Randle Cliff (Chesapeake Beach), Maryland, covers 167.9 acres and has 165 structures of various sizes and types of construction, eight of which are major laboratory and/or office buildings. Over 282 ft of usable dock space are available with a controlling water depth of 7 ft, located 2 mi north of the main site in Chesapeake Beach. Off-site facilities include the Tilghman Island Facility, located directly across the Bay from CBD at a range of 10 mi.

Research watercraft available at CBD include one 74-ft LCM-8, one 45-ft support craft, one 36-ft patrol boat, and one 22-ft motor whaleboat. These are used in support of research projects and for transportation to off-site facilities.

Research Computation Division (Code 2800)

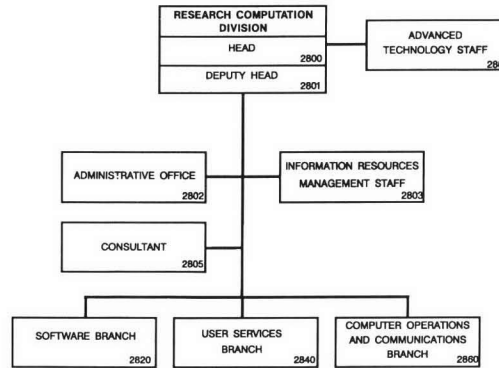

The Cray X-MP/24 multiprocessor supercomputer provides very high-speed vector and scalar processing with a peak processing speed of 488 million floating point operations per second (MFLOPS) with a sustainable speed of 105 MFLOPS per processor

These four VAX 11/785s provide access to the Cray X-MP/24 from NRL's local area network and the Defense Data Network, thus providing access from terminals, PCs, minicomputers, workstations, and other computers throughout the country

Mr. R.F. Saenger

Basic Responsibilities

The Research Computation Division (RCD) provides a wide variety of concurrent computer services to more than 1700 scientists, analysts, and engineers at NRL/ONR throughout the United States and at remote locations from London to Tokyo. These services include high-volume, time-shared, local and remote batch; active graphics; and telecommunications processing.

The RCD manages and operates NRL's Central Computer Facility (CCF), a totally integrated computer system consisting of a Cray X-M/24 multiprocessor with its associated support equipment, and a high-speed network of Digital Equipment Corporation VAX 700 plus VAX 8000 computer systems that facilitate communications between the user community and the CCF. The Cray is the fastest computer manufactured in the United States. Through use of local area networking (NICENET) and a worldwide networking system (Defense Data Network), both local and remote users access the CCF through their host computers (including personal workstations) or by terminals.

The RCD also provides appropriate ADP technical logistic support services for NRL; identifies ADP requirements and may secure and administer contractual ADP support services; and supports the Navy Laboratory Computing Committee and the Navy Laboratory Computer Network. The Head of the RCD, by additional duty assignment, is the OCNR Special Assistant for Information Resources Management.

**General Science and
Technology Directorate**

General Science and Technology Directorate

The Navy's operational effectiveness depends on its ability to keep pace with rapidly developing technologies. This directorate contributes to this requirement by conducting research in computational physics; astrophysics; atmospheric, ionospheric, space, and plasma sciences; fundamental properties of materials; radiation; and pulsed power technologies. Areas of particular emphasis include solar physics, wide-spectrum astronomy, fluid mechanics and hydrodynamics, modeling of atmospheric and ionospheric processes, nuclear weapons effect simulations, high-energy density storage devices, interactions of various types of radiation with matter, survivability of materials and components, and directed energy devices.

**Associate Director of Research
for General Science and Technology
(Code 4000)**

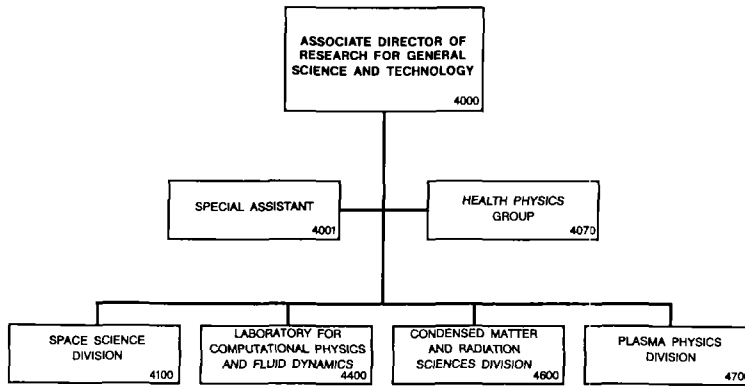

Dr. William R. Ellis

Dr. Ellis [REDACTED] He obtained his undergraduate degree in physics from Clemson University in 1962 and did his graduate work at Princeton University, where he obtained an M.S. degree in 1965 and a Ph.D. in 1967, gaining one of the first doctorates awarded in the emerging field of plasma propulsion.

In 1967-69, Dr. Ellis worked at the Culham Laboratory for Plasma Physics and Fusion Research in England, where he headed an experimental group investigating toroidal discharge physics problems in plasma confinement. In 1970, he accepted a position with the Los Alamos Scientific Laboratory in New Mexico where he became Associate Group Leader for the Scyllac experimental group in the Controlled Thermonuclear Research Division. In 1976, Dr. Ellis joined the Energy Research and Development Administration (ERDA), the predecessor agency of the Department of Energy. In 1979, he was appointed Director of the Department of Energy's Mirror Confinement Systems Division in the Office of Fusion Energy, Office of Energy Research, where he was responsible for programs to develop fusion power reactors based on the magnetic mirror confinement concept. Dr. Ellis was appointed Associate Director of Research for General Science and Technology at the Naval Research Laboratory in October 1983.

Dr. Ellis is a member of the American Physics Society, American Nuclear Society, Sigma Xi, American Association for the Advancement of Science, and the American Geophysical Union. He served on the Executive and Prize Committees of the APS Division of Plasma Physics, the Program Committee of the International School of Plasma Physics in Varenna, and the Department of Energy's USA/USSR Joint Fusion Power Coordinating Committee. He has received the Department of Energy's Exceptional Service Award and is a patentee in his field. He is the Navy's alternate member on the Under Secretary of Defense's High Power Microwave Executive Steering Group, a member of the Executive Steering Group's Program Implementation Panel, and Chairman of the Directed Energy Coordinating Committee of the Naval Research Laboratory. Dr. Ellis has published over 100 papers, reports, and articles in the areas of experimental and theoretical plasma physics and fusion research. He also has authored a regular newspaper column (about 50 articles) on science and the environment.

Health Physics Group

(Code 4070)

Basic Responsibilities

The Health Physics Group provides a Laboratory-wide protection program for the possession and use of all sources of ionizing and radio-frequency/microwave radiation. The group performs technical monitoring, evaluation, and research to assure that NRL radiological and radio-frequency/microwave operations are safe and in compliance with federal, state, and Navy regulations. It provides employees with training, instructions, instruments, assistance, and controls needed to meet their radiological and radio-frequency/microwave safety responsibilities.

Ionospheric Effects

Ionospheric modification; ionospheric
propagation, modeling

Technicians working on NRL's Oriented Scintillation Spectrometer Experiment (OSSE). The 4000-lb OSSE will be launched on NASA's Gamma Ray Observatory space shuttle mission in 1990. OSSE will observe 0.1 to 10 MeV gamma radiation from very energetic celestial sources.

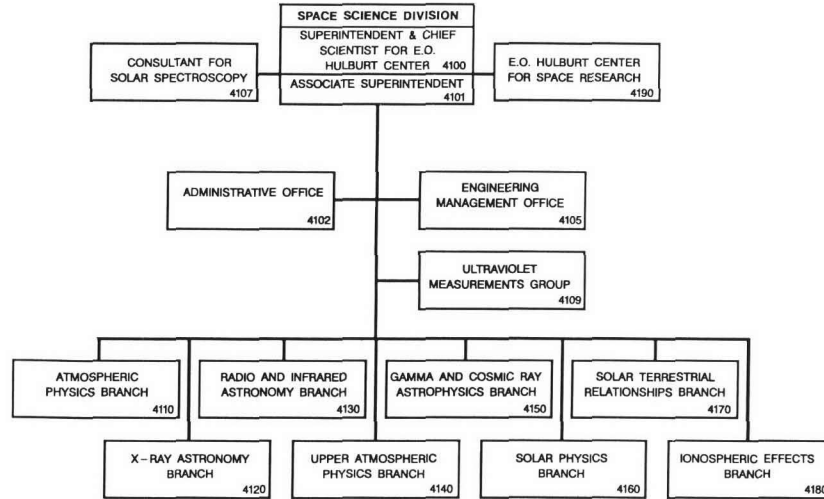

The Remote Atmospheric and Ionospheric Detection System (RAIDS) is an array of eight optical instruments including imaging spectrographs, spectrometers, and photometers that will measure ionospheric and thermospheric airglow emissions at wavelengths from 50 to 870 nm over the altitude range 75 to 750 km on the earth's limb. RAIDS, which is a proof-of-concept for future ionospheric weather sensors, will fly aboard the NOAA J weather satellite.

The Solar Ultraviolet Spectral Irradiance Monitor (SUSIM) instrument will fly on the Upper Atmospheric Research Satellite (UARS) scheduled to be launched in September 1991; it will measure the total solar irradiance in the wavelength region of 200 to 400 nm.

Dr. H. Gursky

Basic Responsibilities

The Space Science Division conducts research in the fields of astronomy and astrophysics, solar-terrestrial physics, and atmospheric science. Satellites, rockets, and ground-based facilities are used to obtain information on radiation from the sun and celestial sources, and to study the behavior of the ionosphere and high atmosphere. Radio telescopes are used for astronomical observations and atmospheric sensing. Research results are of importance to radio communications, to use of the space environment, to weather prediction, and to the fundamental understanding of natural radiation and geophysical phenomena. The Superintendent also acts as Chief Scientist of the E.O. Hulburt Center for Space Research, created to provide research opportunities in space science to appointees from universities.

†Additional duty

Dr. J.P. Boris

Basic Responsibilities

The Laboratory for Computational Physics and Fluid Dynamics is responsible for the research leading to and the application of advanced analytical, numerical, and experimental capabilities that are relevant to Navy, DOD, and other programs of national interest. This research is pursued in the fields of compressible and incompressible fluid dynamics, reactive flows, fluid/structure interaction including submarine and aerospace applications, atmospheric and ocean geophysics, magnetoplasma dynamics for laboratory and space applications, and in other disciplines of continuum and quantum computational physics as required to further the overall mission of the Naval Research Laboratory. The specific objectives of the Laboratory for Computational Physics and Fluid Dynamics are: to develop and maintain state-of-the-art analytic, computational, and experimental capabilities in fluid dynamics and related fields of physics; to establish in-house expertise in parallel processing for large-scale scientific computing; to perform analyses, computations, and experiments on specific relevant problems using these capabilities; and to transfer this technology to new and ongoing projects through cooperative programs with the research divisions at NRL and elsewhere.

Condensed Matter and Radiation

Sciences Division

(Code 4600)

Research Activity Areas

Condensed Matter Physics

- X-ray sources, optics, and detectors
- X-ray analysis of materials
- Plasma spectroscopy
- Synchrotron radiation applications
- Phase transformations
- Highly excited materials
- Hypervelocity impact
- Radiation effects in microelectronics
- Condensed matter theory

Surface Modification and Analysis

- Modification of surfaces by ion implantation and ion activated deposition
- Radiation effects from high energy, charged particle beams
- Crystal studies by channeling techniques
- Sputtering by high-energy ions
- Theory of ion-solid interactions
- 200-kV ion implantation systems
- 3-MV tandem ion accelerator

Radiation-Matter Interactions

- Interaction of laser and microwave radiation with materials and systems
- Interaction of particle beams with materials
- Radiation transport calculations
- Energetic radiation applications
- Molecular collisions

Radiation Survivability

- Satellite survivability
- Single event upsets
- Device and material damage and hardening
- Ultrafast charge collection
- Space experiments
- Nuclear radiation detection
- 60-MeV LINAC

Directed Energy Effects

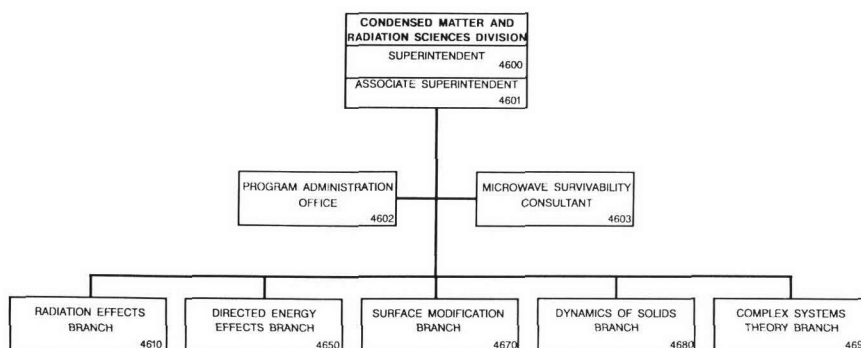

- Laser and microwave susceptibility and hardening

Adjusting the cooling system for the accelerator waveguides on the electron LINAC

Dr. D. J. Nagel

Basic Responsibilities

The Condensed Matter and Radiation Sciences Division conducts a broad program of basic and applied research on the fundamental properties of materials and on the interactions of various types of radiation with matter. Physical properties of condensed matter are investigated theoretically and experimentally as well as by various radiation probes. Damage produced by radiation, ranging from laser and X-ray beams through charged and neutral particle beams in the megavolt region, is studied. Techniques to use radiation for beneficial modification of materials are also developed. Radiations of military significance are studied and simulated in the laboratory by various radiation facilities maintained and operated by the Division primarily for DoD users.

Plasma Physics Division

(Code 4700)

Research Activity Areas

High-Power Electromagnetic Radiation

Application of high-current relativistic electron beams to microwave and millimeter wave generation, e.g., gyrotrons, short-pulse FEL, and CARM
Electron accelerators
Plasma microwave electronics

Experimental Plasma Physics

Dense Z-pinch
Magnetic fusion studies

Laser Plasma

Laser-plasma interaction
Laser fusion
High-altitude nuclear explosion simulations
Plasma diagnostics
Large glass laser facility
Laser-driven X-ray lasers
KrF laser development

Plasma Radiation

Pulsed-power radiation source and power-flow development
X-ray laser modeling
Dense plasma atomic structure, processes, and equations of state
Radiation hydrodynamics of dense Z-pinch and laser-produced plasmas
Plasma-radiation diagnostics

Advanced Beam Technologies

Modified betatron accelerator
Rebatron accelerator
High-quality electron beams
Wake field accelerators

Plasma Technology

Production of intense relativistic electron beams
Electron beam propagation and focusing
Pulse-power-driven X-ray lasers
Generation of intense ion beams
Inductive energy storage

Geophysical and Plasma Dynamics

Theoretical and numerical simulation of ionospheric and magnetospheric phenomena
High-altitude, nuclear weapons effects on the ionosphere/magnetosphere
Solar-terrestrial relations
Ionospheric-magnetospheric coupling
Solar-plasma processes

Plasma Theory

Numerical simulation of high-density plasmas
Theoretical study of nonlinear plasma dynamics
Production and propagation of high-energy charged particle beams
Radiation source development
FEL theory

Charged Particle Physics

Charged particle beam generation and propagation
Plasma channels in air
Experimental study of plasma chemistry
Rocket, satellite, and shuttle-borne natural and active experiments
Laboratory simulation of space plasma processes

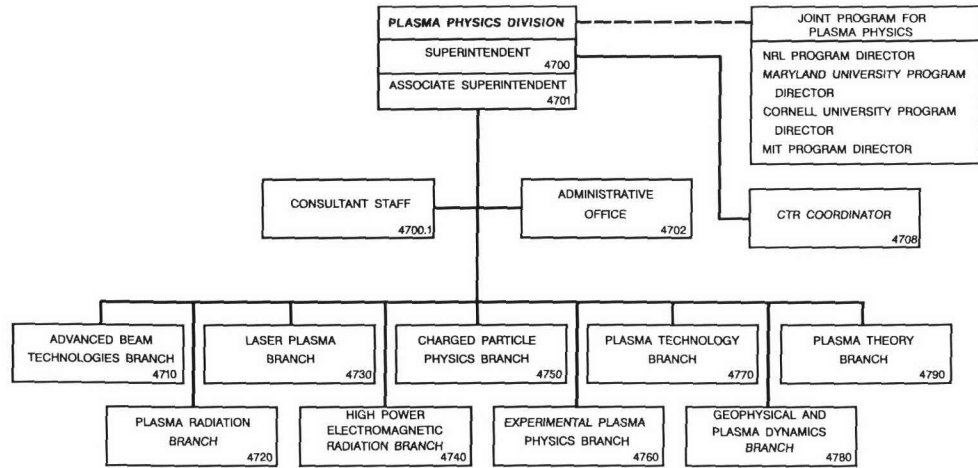

A device called PAWN is being developed at NRL. It is a pulse generator that uses inductive energy storage and opening switch techniques to condition electrical power for various pulsed power applications.

This is the target chamber of the Pharos III laser facility. Pharos III is a three-beam Nd:glass laser that can produce a kilojoule of energy in a few nanoseconds. When the light is focused onto a target, temperatures of 10 to 100 million degrees can be easily produced. The facility is being used to simulate high-altitude nuclear weapons effects, to study the physics of inertial confinement fusion, and to develop new X-ray lasers.

Dr. S.L. Ossakow

Basic Responsibilities

The Plasma Physics Division conducts a broad theoretical and experimental program of basic and applied research in plasma physics, intense electron and ion beams, atomic physics, pulsed power sources, and laser physics. The effort of the Division is concentrated on a few closely coordinated theoretical and experimental programs. Considerable emphasis is placed on large-scale numerical simulations related to plasma dynamics; ionospheric, magnetospheric, and atmospheric dynamics; the effects of high-altitude nuclear weapons on the atmosphere; thermonuclear plasma confinement; atomic physics; and relativistic electron beam propagation. Areas of experimental interest include: relativistic electron beams, laser-matter interaction, thermonuclear fusion, electromagnetic wave generation, the generation of intense ion beams, advanced accelerator development, inductive energy storage, the interaction of charged particle beams with the atmosphere, and in-situ space plasma measurements.

**Warfare Systems and
Sensors Research
Directorate**

Warfare Systems and Sensors Research Directorate

The Warfare Systems and Sensors Research Directorate performs basic research and development for major generic Navy systems. The emphasis is on radar, electronic warfare, undersea warfare systems, and the integration of these primary sensors by communications and battle management systems. The Directorate conducts an extensive experimental program in the field, using both ship and aircraft platforms to support the above activities. Programs in ocean engineering, environmental factors, artificial intelligence, and calibration and standards for underwater acoustic devices are pursued in support of research and development for Navy systems.

Warfare Systems and Sensors Research Directorate

**Associate Director of Research for
Warfare Systems and Sensors Research
(Code 5000)**

Mr. R.R. Rojas

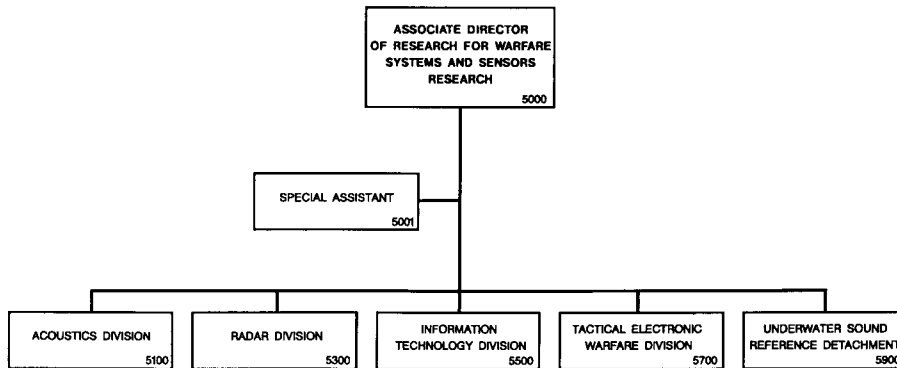

Mr. Rojas [REDACTED]. He attended City College of New York, where in 1952 he received a B.E.E. degree. In 1961, he received an M.E.E. degree from Drexel Institute of Technology, Philadelphia. Further graduate studies in mathematics and engineering were pursued at the University of Pennsylvania, Philadelphia.

From 1952 to 1960, Mr. Rojas was a project engineer in the Missile Department at Philco Corporation where he participated in the Talos, Terrier, and Tartar missile fuze programs and the Terrier missile guidance project. While at Philco, he received a company achievement award for his work on the design of specialized missile test equipment. From 1960 to 1969, he was manager of the Hydroacoustics Department at the Magnavox General Atronics Corporation. At General Atronics he was active in the area of signal processing techniques as applied to sonar, communication systems, and seismic detection systems.

In 1969, he joined the Naval Research Laboratory as Head of the Advanced Undersea Surveillance Program. In this capacity he was responsible for directing an experimental and theoretical program whose purpose was to evaluate and develop advanced surveillance systems for the Navy. Mr. Rojas served as Associate Director of Research and Director of Oceanology from 1977 until 1980, Associate Director of Systems Research and Technology Directorate from 1980 to 1986, and is currently Associate Director of the Warfare Systems and Sensors Research Directorate. Mr. Rojas also was on the graduate teaching staff at the Pennsylvania State University.

Mr. Rojas' research interests are centered on signal processing and the physics of underwater acoustic propagation, ambient noise, and reverberation.

Mr. Rojas is a member and Fellow of the Acoustic Society of America, Sigma Xi, the Institute of Electrical and Electronics Engineers, and the Association of Old Crows; he is also a charter member of the Marine Technology Society.

Dr. D.L. Bradley

Basic Responsibilities

The Acoustics Division conducts basic and applied research in undersea acoustics. The basic research areas are: signal processing; ocean acoustics and the associated description of the ocean environment as it impacts advanced systems; and physical acoustics. The applied spectrum includes: developing and proving system concepts; signal processing for active and passive detection, tracking and classification of underwater targets; echo strength; large area assessment techniques; and development of Navy Data Processing Systems. Also included are basic and applied research in marine characteristics and technology for ocean applications. The Division program is interactive with the ONR Contract Research Program, NORDA, and other Navy laboratories, both U.S. and foreign. The Division is responsible for bringing the Connection Machine (a parallel processor computer) on-line as part of NRL's commitment to maintaining a state-of-the-art computational capability.

Information Technology Division

(Code 5500)

Research Activity Areas

Navy Center for Applied Research in Artificial Intelligence

- Natural language for automated message processing
- Automated fault diagnosis
- Expert systems for decision aids and consultation
- Machine learning

Communication Systems

- Network design
- Secure communication systems
- Modulation, coding, and waveform design
- Satellite communication system technology
- Distributed simulation and prototyping

Human-Computer Interaction (HCI) Laboratory

- Cognitive processes and abilities
- Devices/techniques for HCI
- Voice processing (synthesis, recognition, etc.)

Center for Secure Information Technology

- Security architecture
- Formal proofs of system security
- COMSEC application technology
- Secure networks
- Software engineering for secure systems
- Key management and distribution

Transmission Technology

- Arctic communication
- Submarine communication technology
- Communication system architecture
- Communication antenna/propagation technology
- Signal processing for high-frequency intercept system

Integrated Warfare Technology

- Command decision support
- Parallel computing
- Battle management/C³
- Data fusion technology
- Database management technology
- Real-time parallel processing
- Distributed simulation

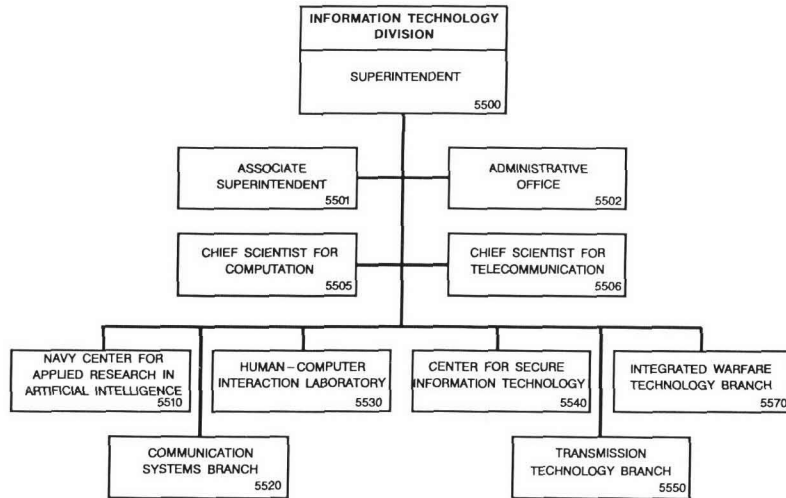

NRL scientists participate in yearly ICEX field test conducted in the Arctic. The goal of this work is to better understand the processes that limit the performance of communication channels having strategic value in this important geographic region.

The Navy Center for Applied Research in Artificial Intelligence is engaged in research and development designed to address the application of artificial intelligence technology and techniques to critical Navy and national problems.

Dr. J.R. Davis

Basic Responsibilities

The Information Technology Division conducts research and development programs in the collection, transmission, and processing of information to provide a basis for improving the conduct of military operations. The organization of the Division is directed toward addressing the technologies and subsystems necessary to develop architectures and system designs for the next-generation battle-force warfare systems.

Advanced Techniques

Analysis and modeling simulation
New EW techniques
Experimental systems
EW concepts
Infrared technology

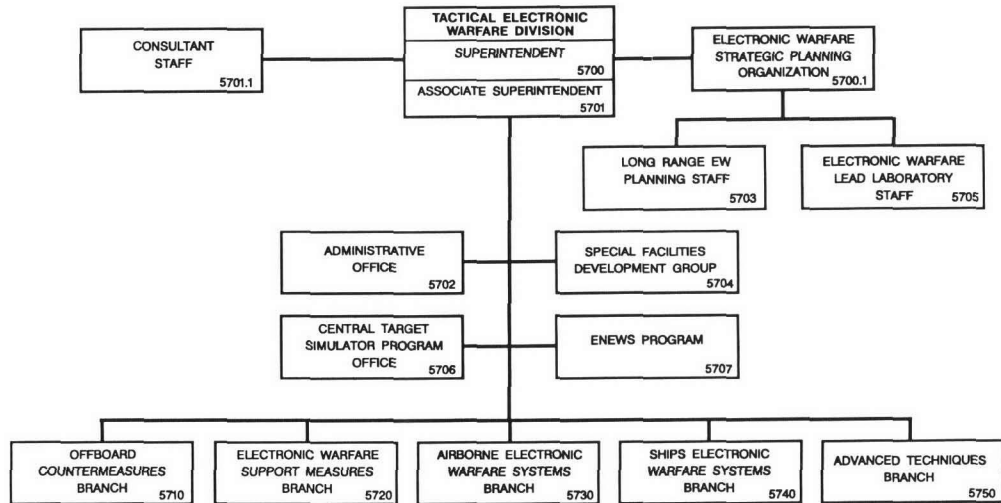

The mobile Advanced Tactical Electronic Warfare (EW) Environment Simulator (ATEWES) developed by TEWD permits both laboratory and field evaluations of complex EW receiving systems.

Low Altitude/Airspeed Unmanned Research Aircraft (LAURA) are aerodynamically and structurally advanced aircraft being developed by TEWD. Flight test results will provide the technology crucial for the development of long endurance, autonomous airborne platforms capable of carrying advanced EW payloads at ship-like flight speeds for fleet use.

Dr. J.A. Montgomery

Basic Responsibilities

The Tactical Electronic Warfare Division (TEWD) is responsible for research and development in support of the Navy's tactical electronic warfare requirements and missions. These include electronic warfare support measures, electronic countermeasures, and supporting counter-countermeasures, as well as studies, analyses, and simulations for determining and improving the effectiveness of these systems.

Technician lowering the cover to the smaller of the two ports of entry/exit to the anechoic tank pressure vessel in preparation for a test. The tank is used to test various types of sonar transducers as a function of temperature and pressure.

Dr. J. E. Blue

Basic Responsibilities

The Underwater Sound Reference Detachment (USRD) serves as the principal Navy expert in the theory and practice of underwater sound measurements. Specialized facilities provide acoustic calibration and test and evaluation measurements for acoustic transducers and materials. These facilities can simulate actual ocean temperatures and pressures over a broad frequency range, allowing them to accommodate nearly all underwater acoustic devices. The USRD conducts research and development on the theory and design of underwater electroacoustic transducers and in developing analytical techniques and instrumentation for electrical, mechanical, and electroacoustic testing of transducers and transducer components. Research is also conducted in the area of materials used to generate, transmit, and absorb underwater sound. It is a link in the traceability of underwater sound measurements to the National Bureau of Standards, supplying calibrated transducers for use in calibration and development of underwater acoustic weapons and sonar transducers. This provides greater uniformity, accuracy, and reliability in underwater acoustic measurement throughout the Navy and industry. The USRD manages a Navy-wide sonar transducer reliability improvement program and participates in the establishment of Navy, national, and international standards for underwater acoustics.

**Materials Science and
Component Technology
Directorate**

Materials Science and Component Technology Directorate

The Materials Science and Component Technology Directorate carries out a multidisciplinary research program whose objectives are the discovery and exploitation of new improved materials, the generation of new concepts associated with materials behavior, and the development of advanced components based on these new and improved materials and concepts. Theoretical and experimental research is carried out to determine the scientific origins of materials behavior and to develop procedures for modifying these materials to meet important naval needs for advanced platforms, electronics, and photonics. The program includes investigations of a broad spectrum of materials including

insulators, semiconductors, superconductors, metals and alloys, optical materials, polymers, plastics, and artificially structured biomolecular materials and composites, which are used in important naval devices, components, and systems. New techniques are developed for producing, processing, and fabricating these materials for crucial naval applications.

The properties and limits of performance of these materials in natural or radiation environments, components under deleterious conditions such as those associated with the marine environment, neutron or directed energy beam irradiation, or extreme temperatures and pressures, are established.

Materials Science and Component Technology Directorate

Hydrogen atoms not included

Space-filling model of the
structure of an analog of the
antibiotic zervamycin

Ion implantation of semiconductor materials

Electron beam lithography for microfabrication of
semiconductor integrated circuits

Laser melt particle injection process

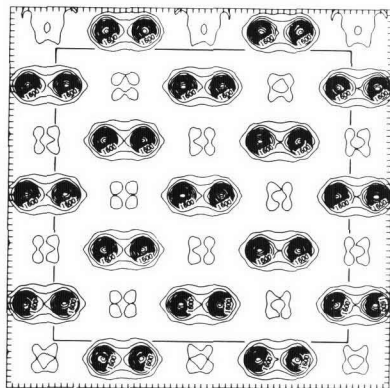

Studying liposome-encapsulated hemoglobin (LEH) as a synthetic red blood cell (RBC)

The ex-Shadwell (LSD-15)—advanced fire test laboratory for the Navy Center for Safety and Survivability

High-magnetic-field apparatus for spectroscopic characterization of materials

a. Original structure

b. Reconstruction

Atomic resolution image reconstruction by use of microdiffraction patterns from overlapping regions

Picosecond Stimulated Raman Scattering Facility

Substituted cubane containing many nitro propellants

**Associate Director of Research
for Materials Science and Component Technology
(Code 6000)**

Dr. B.B. Rath

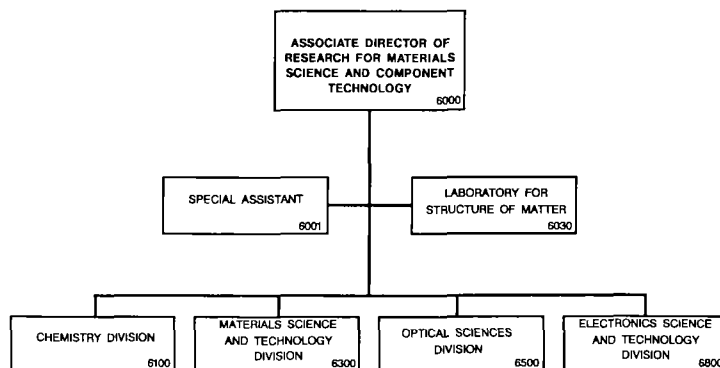

Dr. Rath was born in Banki, India, on October 28, 1934. He received a B.S. degree in physics and mathematics from Utkal University, an M.S. in metallurgical engineering from Michigan Technological University, and a Ph.D from the Illinois Institute of Technology.

Dr. Rath was Assistant Professor of Metallurgy and Materials Science at Washington State University from 1961 to 1965. From 1965 to 1972, he was with the staff of the Edgar C. Bain Laboratory for fundamental research of the U.S. Steel Corporation. From 1972 to 1976, he headed the Metal Physics Research Section of the McDonnell Douglas Research Laboratories, in St. Louis, Missouri, until he came to NRL as Head of the Physical Metallurgy Branch. During this period he was adjunct Professor at the Carnegie-Mellon University, the University of Maryland, and the Colorado School of Mines. Dr. Rath served as Superintendent of the Materials Science and Technology Division from 1982 to 1986, when he was appointed to his present position.

Dr. Rath is recognized in the fields of solid state transformations, grain boundary migrations, and structure-property relationships in metallic systems. He has published over 100 papers in these fields and edited several books and conference proceedings.

Dr. Rath serves on several planning, review, and advisory boards including the Department of Defense, Joint Directors of Laboratories, National Materials Advisory Board of the National Academy of Science, National Science Foundation, Carnegie-Mellon University, University of Virginia, and Colorado School of Mines. He is a member of the panel on Metals and Materials in Structures for The Technical Cooperation Program (TTCP) countries and the Indo-U.S. Joint Commission on Science and Technology.

Dr. Rath is a fellow of the American Society for Materials-International (ASM), Washington Academy of Sciences, a member of Sigma Xi, and The Metallurgical Society (TMS). He serves as a member of the Board of Directors of TMS, editorial board of international journals, and as chairman of several committees of TMS and ASM.

Laboratory for Structure of Matter

(Code 6030)

Basic Responsibilities

The Laboratory for Structure of Matter carries out experimental and theoretical investigations of the atomic, molecular, glassy, and crystalline structures of materials. The methods of X-ray, electron, and neutron diffraction are used in a broad program of structural studies that can form the basis for understanding and interpreting the results of research investigations in a wide variety of scientific disciplines. Structural investigations relate structure to function, facilitate industrial syntheses and the creation of new materials with improved properties, and provide foundation information for numerous associated disciplines and studies. Applications are made, for example, to propellants, explosives, dense energetic materials, absorptive carbons, metallic glasses, device materials, ion carriers, antibiotics, analgesics, reversible oxygen carriers, and synthetic reaction intermediates and final products.

- Biomembranes
- Lipid and protein structure
- Molecular graphics
- Biosensors
- Polymerizable lipids
- Langmuir-Blodgett films
- Red blood cell surrogate
- Bio-derived microstructures

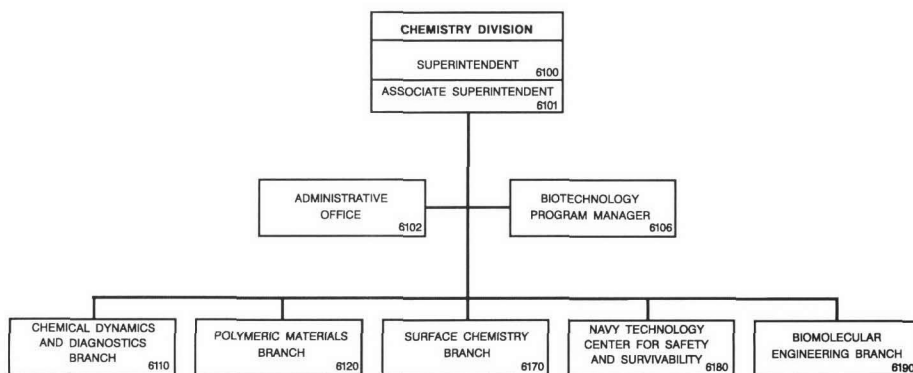

Navy combatant ships are now receiving Naval Fire-fighters Thermal Imagers (NFTIs) as a result of a 4-year evaluation and testing program conducted by NRL scientists. NFTI, which has already been used in one fire aboard an aircraft carrier, allows firefighters to immediately locate and extinguish a fire.

This state-of-the-art time-of-flight secondary ion mass spectrometer (SIMS), recently constructed at NRL, is one of only four in the world, and is the only one in the United States. It has the ability to analyze submonolayer thin films on surfaces with a demonstrated mass range of over 9000 amu and a mass resolution of 2000. It is successfully used for analyzing both organic and inorganic materials and can be applied to a wide range of both basic and applied research areas.

Dr. J. S. Murday

Basic Responsibilities

The Chemistry Division conducts basic and applied research and development studies in the broad fields of chemical diagnostics, polymeric materials, surface and electrochemistry, biomolecular engineering, combustion, and fuels chemistry. Specialized programs within these fields include organic polymeric materials, coatings, dynamics, laser chemistry, electroactive polymers, tribology, physical and chemical characterization of surfaces and theory of surfaces, chemistry of electronic materials, submarine atmosphere analysis and control, lipid chemistry, membranes and novel structures, sensors, solution chemistry, personnel protection (including chemical and biological defenses), fire suppression, and the chemistry and physics of synfuels.

- Corrosion science and mechanisms
- Stress corrosion cracking
- Surface protection and inhibitors
- Marine corrosion

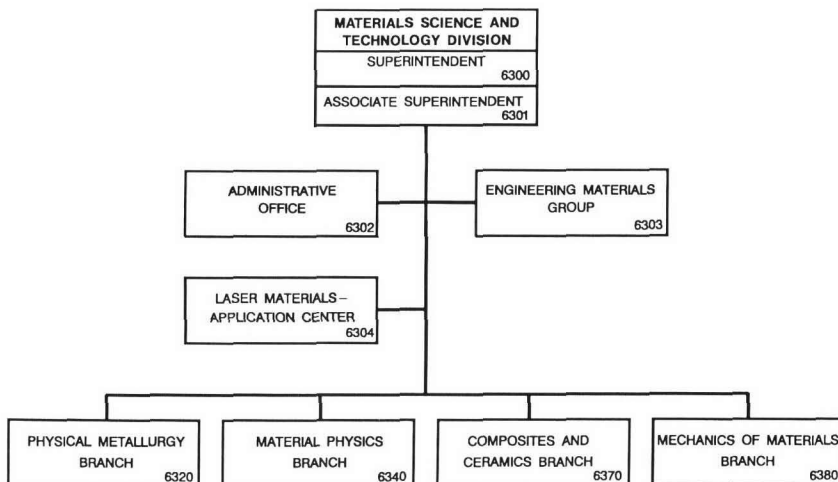

The growth of single crystal magnetic films on semiconductor substrates for electronics applications is observed.

Computer controlled double-crystal diffractometer used for determination of crystal perfection, and for mapping the distribution of elastic and plastic strains in deformed single crystal and polycrystals. This device yields information on dislocation density distribution resulting from a deformation; fatigue failure may also be predicted from the depth and spatial distribution of the excess dislocation density.

Dr. D.U. Gubser

Basic Responsibilities

The Materials Science and Technology Division conducts basic and applied research and engages in exploratory and advanced development of materials having substantive value to the Navy. R&D programs encompass the intrinsic behavior of metals, alloys, ceramics, glasses, and composites and their performance and reliability in naval structures and devices. Program objectives include achieving fundamental understanding of the mechanical, physical, electrical, magnetic, superconducting, and electrochemical properties of materials; identifying composition, processing, and microstructural parameters to produce improved materials; and developing guidelines for the selection, design, and certification of materials for life-cycle management of naval structures and systems. This diversity of programs is carried out by interdisciplinary teams of material scientists, metallurgists, ceramists, physicists, chemists, and engineers, using the most advanced testing facilities and diagnostic techniques.

The Missile Seeker Evaluation Facility is a computerized facility that is used to evaluate optical countermeasures to infrared missile seekers and infrared imaging sensors.

The Focal Plane Array Evaluation Facility consists of the optical sources and electronics required to evaluate monolithic or hybrid infrared focal plane arrays that use charge-coupled device, charge-injection device, direct-readout, or charge-imaging matrix technologies.

Dr. T.G. Giallorenzi

Basic Responsibilities

The Optical Sciences Division carries out a variety of research, development, and application-oriented activities in the generation, propagation, detection, and use of radiation in the wavelength region between near-ultraviolet and far-infrared wavelengths. The research, both theoretical and experimental, is concerned with discovering and understanding the basic physical principles and mechanisms involved in optical devices, materials, and phenomena. The development effort is aimed at extending this understanding in the direction of device engineering and advanced operational techniques. The applications activities include systems analysis, prototype system development, and exploitation of R&D results for the solution of optically related military problems. In addition to its internal program activities, the Division serves the Laboratory specifically and the Navy generally as a consulting body of experts in optical sciences. The work in the Division includes studies in quantum optics, laser physics, optical waveguide technologies, laser-matter interactions, atmospheric propagation, optical technology, holography, optical warfare, optical data processing, optical systems, optical materials, radiation damage studies, IR surveillance and missile seeker technologies, IR signature measurements, optical recording materials, and optical diagnostic techniques. A significant portion of the effort is devoted to developing, analyzing, and using special optical materials. Various field measurement programs on optical problems of specific interest are also conducted.

**Naval Center for
Space Technology**

Naval Center for Space Technology

(Code 8000)

In its role to preserve and enhance a strong space technology base and provide expert assistance in the development and acquisition of space systems that support naval missions, the Naval Center for Space Technology activities extend from basic and applied research through advanced development in all areas of interest to the Navy space program. These activities include developing spacecraft, systems using these spacecraft, and ground command and control stations. Principal functions of the Center include understanding and clarifying requirements; recognizing and prosecuting promising research and development; analyzing and testing systems to quantify their capabilities; developing operational

concepts that exploit new technical capabilities; system engineering to allocate design requirements to subsystems; and engineering development and initial operation to test and evaluate selected spacecraft subsystems and systems. The Center is a focal point and integrator for those divisions at NRL whose technologies are used in space systems. The Center also provides systems engineering and technical direction assistance to system acquisition managers of major space systems. In this role, technology transfer is a major goal and motivates a continuous search for new technologies and capabilities and the development of prototypes that demonstrate the integration of such technologies.

Director of Naval Center for Space Technology

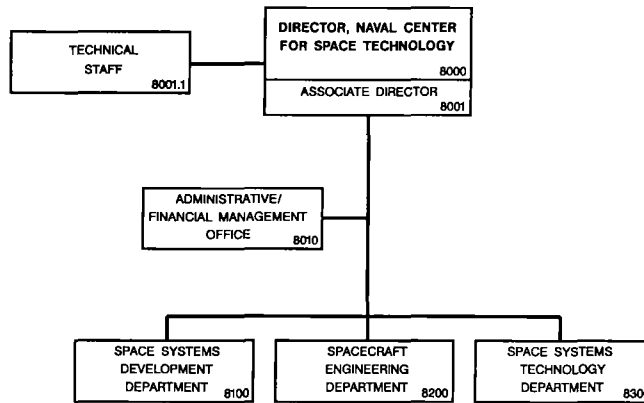

Mr. P.G. Wilhelm

Mr. Wilhelm [REDACTED] He attended Purdue University, where he received a BSEE degree in 1957. By 1961, he had completed all the course work for an MSE degree from George Washington University.

From 1957 to 1959, Mr. Wilhelm served as an electrical engineer with Stewart Warner Electronics where he was assigned to a project to redesign the UPM-70, a Navy radar test set. In March 1959, he joined the Naval Research Laboratory as an electrical scientist in the Electronics Division. In December 1959, he joined the Satellite Techniques Branch. In 1961, he became Head of the Satellite Instrument Section; in 1965, he became Head of the Satellite Techniques Branch; and in 1974, Head of the Spacecraft Technology Center. In these positions, he performed satellite system design, equipment development, environmental testing, launch operations, and orbital data handling. In 1981, he was named the Superintendent of the Space Systems and Technology Division, the Navy's principal organization, or "lead Laboratory," for space. He is credited with contributions in the design, development, and operation of 78 scientific and Fleet-support satellites. He has been awarded five patents. In October 1986, he was appointed Director of the newly established Naval Center for Space Technology. The Center's mission is to "preserve and enhance a strong space technology base and provide expert assistance in the development and acquisition of space systems which support naval missions."

Mr. Wilhelm has been recognized with numerous awards including the Navy's Meritorious Civilian Service Award, the Distinguished Civilian Service Award, the Presidential Meritorious Executive Award, NRL's Space Systems Program Achievement Award, the Institute of Electrical and Electronics Engineers Aerospace and Electronic Systems Group Man of the Year Award in 1981, the NRL E.O. Hulburt Annual Science and Engineering Award for 1982, and the Dexter Conrad Award. He also has been elected a Fellow of the Washington Academy of Sciences and an Associate Fellow of the American Institute of Aeronautics and Astronautics.

Key Personnel

Name	Title	Code
Mr. P.G. Wilhelm	Director, Naval Center for Space Technology	8000
Mr. F.V. Hellrich	Associate Director, Naval Center for Space Technology	8001
Mrs. L.T. McDonald	Head, Administrative/Financial Management Office	8010
Mr. R.E. Eisenhauer	Superintendent, Space Systems Development Department	8100
Mr. R.T. Beal	Superintendent, Spacecraft Engineering Department	8200
Mr. L.M. Hammarstrom	Superintendent, Space Systems Technology Department	8300

Point of Contact: Mr. F.V. Hellrich, Code 8001, 767-6549

Space Systems Development Department

(Code 8100)

Research Activity Areas

Special Projects

Advanced and experimental communications systems for spacecraft and earth terminals
Investigations and technology assessment of advanced satellite programs

Spacecraft Engineering

Spacecraft power and ordnance systems
Aerospace systems fabrication
Quality assurance and reliability
Spacecraft test systems designs

Advance Systems Development

Survivability concepts
Spaceborne signal and data processors development

Spacecraft telemetry, command, and data management

Communications Systems Technology

Advanced space and related ground communications systems
Radio frequency active components and antennae
Communications systems study and analysis
Electromagnetic spectrum utilization
Laser-based optical communications systems

Terrestrial Systems

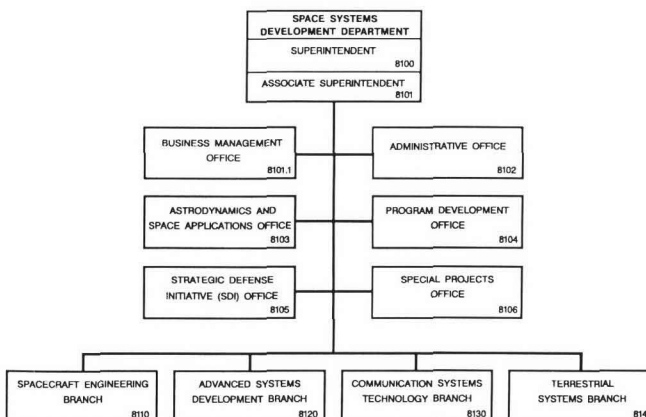

Software for collection systems control
Advanced satellite ground station design
Fleet-deployed satellite systems

The RF Anechoic Chamber is used to test and qualify satellites and other spacecraft components. It simulates the RF environment of free space so that accurate measurements can be made.

Mr. R.E. Eisenhauer

Basic Responsibilities

The Space Systems Development Department (SSDD) is the space systems research and development organization of the Naval Center for Space Technology. The SSDD develops space systems (both satellite and ground elements) to support Navy mission requirements and develops new technologies for use in space. Research continually strives to improve performance, capacity, reliability, efficiency, and life-cycle cost. To this end, the SSDD defines system requirements based on overall mission objectives, develops alternative system architectures, and designs and develops optimized operational space/ground systems. These development responsibilities extend across the entire space/ground spectrum of hardware, software, and systems advanced technologies including digital processing and control, analog, power, communications, command and telemetry, radio frequency, optical, and electromechanical systems. The SSDD pursues advanced concepts studies, analyses, and technical enhancements that enable advanced systems.

Design, Manufacturing and Processing

- Launch vehicle integration
- Spacecraft production design, planning, manufacturing, and assembly

Systems Analysis and Test

- Spacecraft structural design
- Spacecraft environmental testing
- Mechanical analysis and testing

Control Systems Branch

- Attitude and thermal control system
- Reaction control systems

Propulsion systems

Launch operations support

Concept Development

Engineering analysis and conceptual design for new space systems

Flexible space structures research

Expert systems

Spaceborne applications of robotics

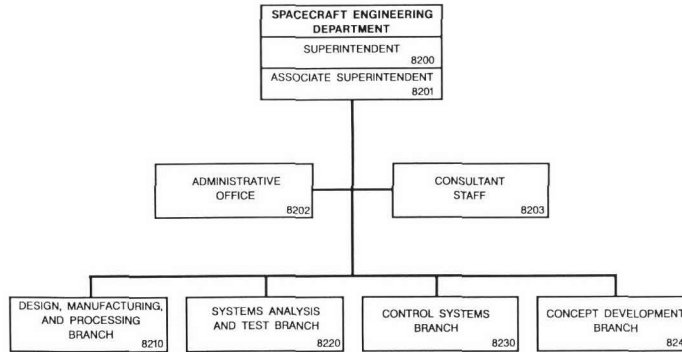

Ball-screw actuator being readied for vacuum-chamber test

A specially designed and constructed facility for the safe handling and testing of propellants used in Naval Center for Space Technology spacecraft

Mr. R.T. Beal

Basic Responsibilities

The Spacecraft Engineering Department (SED) is the focal point for the Navy's in-house spacecraft capability. The two primary functions of the SED are to design and build spacecraft platforms in support of Navy missions and to provide transfer vehicles to inject these spacecraft into their unique mission orbits. The activities of the SED range from concept and feasibility planning through the on-orbit Initial Operational Capability (IOC) for Navy Space Systems. The SED provides analysis, design, and hardware expertise in structures and mechanisms, attitude control systems, propulsion and reaction control systems, thermal control systems, satellite design integration, launch vehicle integration, and satellite-to-boost-stage integration.

The SED functions as a program manager for Navy programs by providing systems engineering and technical direction while maintaining an active in-house satellite development, test, and fabrication capability. In this role, the SED performs as a prototype laboratory and pursues the program to facilitate the transfer of technology to industry so that production satellites can be built in a cost-effective environment. To accomplish this, the SED supports the Navy Program Acquisition Office by providing experienced technical consultation after the prototype is built at NRL.

The Chesapeake Light Tower (CLT), owned and operated by the Coast Guard, was the platform used by Code 8310 for passive and active remote sensing experiments during September/October 1988. These experiments were part of an ONR field exercise called SAR X-band Ocean Nonlinearities (SAXON). During SAXON, the NRL P-3 overflew the CLT with an imaging RAR and the TRIFAR systems.

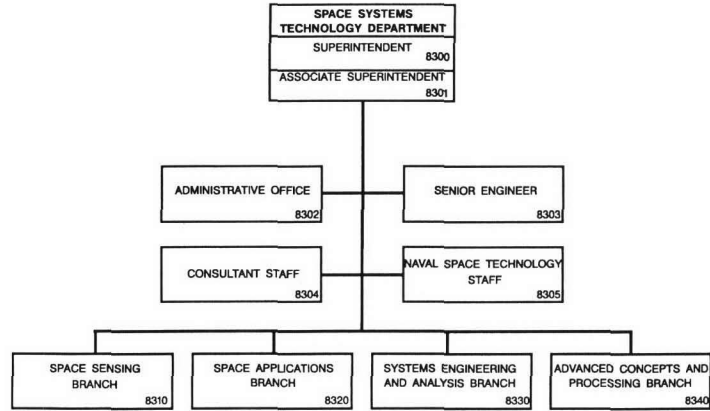

Aerial view of the Midway Research Center (MRC) at Stafford, VA, showing one antenna completed and one under construction

NRL is leading a joint Navy/Air Force program to calibrate and validate the SSM/I sensor and environmental data products. The SSM/I, built by the Hughes Aircraft Company, is an operational sensor onboard the Defense Meteorological Satellite Program (DMSP) spacecraft, and provides measurements of critical atmospheric, oceanographic, and land parameters on a global scale. These parameters include detection and measurement of rain storms, ocean surface windspeed, mapping of sea-ice concentration and ice/water boundaries, and land surface moisture and temperature.

Mr. L. Hammarstrom

Basic Responsibilities

The Space Systems Technology Department (SSTD) is involved in a wide range of activities from basic research through concepts, technology, and testing of space systems. The department has highly skilled teams doing research on remote sensing of the oceans of the world and state-of-the-art frequency standards from the Global Positioning System and the Naval Observatory. It continues to improve the Naval Space Surveillance System. The SSTD builds complex receiving and transmitting systems that exploit the latest concepts in microprocessing and device technologies. Detailed analysis, simulation, and testing are performed on space systems. Hardware, software, and computer systems for use in space systems are being developed. Two remote field sites, a large wavetank facility, and the NRL P-3 aircraft support the work. The SSTD interacts with operational forces in examining areas for future research and development.

**Technical Output,
Fiscal, and
Personnel Information**

Technical Output

Publications

Scientists and engineers at the Naval Research Laboratory have published more than 30,894 articles, reports, and books since the Laboratory was established in 1923. During fiscal year 1988, NRL researchers published 4 books, 594 journal articles, and 232 NRL reports. In addition, their works were described in 364 conference proceedings; 2151 presentations were made to scientific, military, and government audiences.

Patents

NRL scientists have made significant contributions in many areas of technology. The quality and quantity of these contributions can be measured by the number of patents received and applications filed. During fiscal year 1988, researchers were awarded 21 patents; this brings NRL's total of patents issued since 1923 to 3203. The number of patent applications filed during this period increased to 53. In addition, 8 SIRs were issued to NRL researchers, bringing NRL's total to 25 SIRs.

In 1986, Congress enacted the Federal Technology Transfer Act in an effort to encourage the commercial use of technology developed in federal laboratories. The Act allows Government inventors and the laboratories where they work to share the royalties generated by commercial licensing of their inventions. Also, the Act encourages the establishment of cooperative research and development agreements between laboratories such as NRL and nonfederal entities such as state and local governments, universities, and business corporations. Such cooperative R&D agreements can include the allocation in advance of patent rights on any inventions made under the joint research effort.

The 1986 Act has given additional impetus to the Laboratory's efforts to patent important inventions arising out of its various research programs.

Professional Development

PROFESSIONAL DEVELOPMENT

NRL has established many programs for the professional and personal development of its employees so they may better serve the needs of the Navy. These programs develop and retain talented people and keep them abreast of advanced technology and management skills. Graduate assistantships, fellowships, sabbatical study programs, cooperative education programs, individual college courses, and short courses for personal improvement contribute to professional development.

Programs also exist for non-NRL employees. These programs enhance research efforts by providing means for non-NRL professionals to work at the Laboratory, thereby improving the interchange of ideas, meeting critical short-term technical requirements, and providing sources for new scientists and engineers. The programs include two-year graduate fellowships, faculty and professional interchanges, undergraduate work, and introducing gifted and talented high school students to the world of technology.

Programs for NRL Employees

During 1988, NRL employees participated in approximately 4400 individual training events. Many of these were presented as either video-taped or on-site instructed courses on diverse technical subjects, management techniques, and enhancement of personal skills (efficient use of time, memory improvement, interpersonal communications, speed reading, etc.).

One common study procedure is for employees to work full time at the Laboratory and take job-related scientific courses at universities and schools in the Washington area. The training ranges from individual courses to full-time graduate- and postgraduate-level programs. Tuition for job-related training is paid by NRL. Formal programs offered by NRL include:

Graduate Programs

- **The Advanced Graduate Research Program** (formerly the Sabbatical Study Program) enables selected professional employees to devote full time to research or course work in their own or a related field for one academic year at an institution of their choice without the loss of regular salary, leave, or fringe benefits. NRL pays all education, travel, and moving expenses for the individual and dependents. The program is open to paraprofessional (and above) employees who have completed six years of federal service, including four years at NRL.

- **The Edison Memorial Graduate Training Program** enables employees to pursue advanced studies in their fields at local universities. Eligible employees who are selected for participation in this program normally spend 24

hours of every work week in their studies. The criteria for eligibility include a minimum of one year of service at NRL, a bachelor's or master's degree in an appropriate field, and professional standing in keeping with the candidate's opportunities and experience.

- To be eligible for the **Select Graduate Student Program**, employees must have a college degree in an appropriate field and must have maintained at least a B average in undergraduate study. Accepted students devote a full academic year to graduate study. While attending school, they receive one half of their salary, and NRL pays for tuition, books, and laboratory expenses. During the summer, they work at the Laboratory and receive normal pay and fringe benefits.

- Research conducted at NRL may be used as **thesis material for an advanced degree**.

This original research is supervised by a qualified employee of NRL who is approved by the graduate school. The candidate should have completed the required course work and should have satisfied the language, residence, and other requirements of the graduate school from which the degree is sought. NRL provides space, research facilities, and supervision but leaves decisions on academic policy to the cooperating schools.

- **The Alfred P. Sloan Fellows Program** is designed for competent young executives whose job performance indicates senior management potential. The Sloan Fellows spend one year with the Massachusetts Institute of Technology faculty and with policymakers in industry and government. They study the theory and practice of effective and responsible management in a rapidly changing society.

- **The Education for Public Management Program** serves the training needs of individuals who are at midcareer and who have the talent to assume increasing responsibilities to direct agency programs and policies.

- **The Education Program for Federal Officials** exists for a small group of Federal employees who have demonstrated high competence and unusual promise. The Woodrow Wilson School of Princeton University has developed this program to enable selected mid-career officials to enlarge their knowledge in particular disciplines, to relate their fields of specialization to the broader concerns of government, and to sharpen their capacity for objective analysis of governmental problems.

- Federal Executive fellowships are available each year for employees to study in the **Brookings Institute Advanced Study Program**. In this program, the fellow is exposed to and participates in planning, developing, and conducting educational conferences on public policy issues for leaders in public and private life.

- **The Fellowship in Congressional Operations for Executives** provides an opportunity for some of the most promising young, technically oriented Federal executives to participate in a variety of assignments designed to

develop their knowledge and understanding of Congressional operations. These fellows share activities with other members of the Congressional Fellowship Program who come mainly from journalism, law, and college teaching.

- **The Maxwell Midcareer Development Program** of the Maxwell Graduate School of Citizenship and Public Affairs, Syracuse, New York, increases the managerial knowledge, ability, and skills of experienced Government officials who have been identified by their agencies as having potential for advancement to positions demanding progressively greater managerial and executive responsibilities.

- **The Practicing Engineer Advanced Study Program** of the M.I.T. Center for Advanced Engineering, Cambridge, Massachusetts, enables experienced engineers and applied scientists to work in-depth in technological areas pertinent to their professions, preparing for continued leadership in an age of unparalleled technological change.

- **The Science and Technology Fellowship Program**, a subsidiary of the Commerce Science Program, includes a variety of special events, lectures, seminars, visits, conferences, field trips, and interactions with key people from both the public and private sectors. Participants spend one week on Capitol Hill in an intensive, congressional orientation; they spend one week with the Brookings Institute, Science Policy Conference; and they take two week-long field trips for on-site inspection of scientific institutions and industrial complexes.

- **The Stanford-Sloan Program of the Graduate School of Business**, Stanford, California, gives exceptional young executives an opportunity to make an intensive study of new concepts and developments in business, to develop a top management perspective, and to broaden their intellectual horizons.

- **The Naval Postgraduate School (NPS)** in Monterey, California, provides advanced graduate study for selected Federal civilian employees who meet NPS academic requirements for the program in which they are interested, and whose employing agency is willing to act as sponsor.

Continuing Education

- Local colleges and universities offer **undergraduate courses** at NRL for employees to improve their skills and keep abreast of current developments in their fields. These courses are also available at many other DoD installations in the Washington, D.C. area.

- The Employee Development Branch at NRL offers to all employees **short courses** in certain program areas that are not available at local schools; laboratory employees may attend these courses at nongovernment facilities as well. Interagency courses in management, personnel, finance, supervisory development, clerical skills, and other areas are also available.

For further information on any of the above programs, contact the Employee Development Branch at 767-2956.

Technology Transfer

- The **Navy Science Assistance Program** establishes an information loop between the fleet and the R&D shore establishments to expedite technology transfer to the user. The program addresses operational problems, focuses resources to solve specific technical problems, and develops a nucleus of senior scientific personnel familiar with the impact of current research and system performance on military operations.

- The **Office of Research and Technology Applications Program** ensures the full use of the results of the nation's federal investment in research and development by transferring federally owned or originated technology to state and local governments and the private sector.

- The **Scientist to Sea Program (STSP)** is a COMNAVSURFLANT initiative providing increased opportunities for Navy R&D laboratory/center personnel to go to sea to gain first-hand insight into operational factors affecting system design and performance. NRL has participated in the program for the past two years.

Inquiries concerning NRL's technology transfer programs should be made to Mr. Richard Fulper at (202) 767-3744.

Growth Opportunities

NRL has several programs, professional society chapters, and informal clubs that enhance the professional growth of employees. Some of these are listed below.

- The **Career Counseling Center** helps employees to define short- and long-range career goals, to improve their job-seeking skills, and to deal with issues affecting job productivity.

- A chartered chapter of **Women in Science and Engineering (WISE)** has been established at NRL. Informal monthly luncheons and seminars are held to inform scientists and engineers of women's research at NRL and to provide an informal environment for practicing their presentations.

- **Sigma Xi**, the Scientific Research Society, encourages original investigation in pure and applied science. The NRL chapter of approximately 450 active members meets nine times each year (from October to June) and sponsors a series of lectures on a wide range of pure and applied scientific topics of interest to both scientific and government communities. Each spring it sponsors an Edison Memorial Lecture at which a distinguished scientist, usually a Nobel Laureate, speaks on his or her research. The chapter also presents annual awards in pure and applied science.

- Any employee who is interested in developing effective self expression, listening, thinking, and leadership potential can join either of the two NRL chapters of **Toastmasters International**. Members of these clubs, who possess diverse career backgrounds and talents, meet three times a month to learn to communicate not by rules but by doing in an atmosphere of understanding and helpful fellowship.

Other programs that enhance the development of NRL employees include computer clubs (Edison Atari, Edison Commodore, and the NRL-IBM PC) and the Amateur Radio Club. The Recreation Club offers many facilities to promote physical fitness. The Showboaters, a nonprofit drama group, presents live theater for the enjoyment of NRL and the community and produces two major productions each year, in addition to occasional performances at Laboratory functions and benefits for local charities.

Programs for Non-NRL Employees

Programs also exist for non-NRL employees. These programs encourage and support the participation of visiting scientists and engineers in research of interest to the Laboratory. Some of the programs may serve as stepping stones to federal careers in science and technology. Their objective is to enhance the quality of Laboratory research activities through working associations and interchanges with highly capable scientists and engineers and to provide opportunities for outside scientists and engineers to work in the Navy laboratory environment. Along with enhancing NRL research, these programs acquaint participants with Navy capabilities and concerns.

Recent Ph.D., Faculty Member, and College Graduate Programs

- The **National Research Council (NRC)/NRL Cooperative Research Associateship Program** selects associates who conduct research at NRL in their chosen fields in collaboration with NRL scientists and engineers. The tenure period is two years, and following their tenure, the Office of Naval Research offers the associate posttenure research grants tenable at an academic institution.

- The American Society for Engineering Education (ASEE) administers the **Office of Naval Technology (ONT) Postdoctoral Fellowship Program** to increase the involvement of highly trained scientists and engineers in disciplines to meet the evolving needs of naval technology. Appointments are for one year (renewable for a second and sometimes a third year). The appointments are competitive and are made jointly by ONT and ASEE.

- The American Society for Engineering Education also administers the **Navy/ASEE Summer Faculty Research Program** for university faculty members to work for 10 weeks with professional peers in participating Navy laboratories on research of mutual interest. NRL hosted 35 of these faculty participants in 1988.

- The **NRL/United States Naval Academy (USNA) Cooperative Program for Scientific Interchange** allows faculty members of the U.S. Naval Academy to participate in NRL research. This collaboration benefits the

Academy by providing the opportunity for USNA faculty members to work on research of a more practical or applied nature. In turn, NRL's research program is strengthened by the available scientific and engineering expertise of the USNA faculty.

- The **Office of Naval Research Graduate Fellowship Program** helps U.S. citizens obtain advanced training in disciplines of science and engineering critical to the U.S. Navy. The three-year program awards fellowships to recent outstanding graduates to support their study and research. This research must lead to doctoral degrees in specified disciplines such as electrical engineering, computer sciences, material sciences, applied physics, and ocean engineering. Award recipients are encouraged to continue their study and research in a Navy laboratory during the summer. The summer option began in 1983; 9 ONR graduate fellows chose NRL for their summer work in 1988.

Contact: Mrs. Jessica Hileman, 767-3865

- The **United States Naval Academy Ensign Program** assigns Naval Academy graduates to NRL to work in areas of their own choosing and commensurate with their academic qualifications. These graduates provide invaluable summer research assistance while gaining experience in Navy R&D programs.

Contact: Military Operations Office, 767-2271

Professional Appointments

- **Faculty Member Appointments** use the special skills and abilities of university faculty

members for short periods to fill scientific, engineering, professional, or analytical positions.

- **Consultants and experts** are employed because they are outstanding in their specialized fields or because they possess rare abilities but cannot normally be employed as regular full-time civil servants.

- **Intergovernmental Personnel Act Appointments** temporarily assign personnel from state or local governments or educational institutions to the Federal Government (or vice versa) to improve public services rendered by all levels of government.

Contact: Special Recruitment Programs Branch,
767-3030

Undergraduate College Student Programs

Several programs are tailored to the undergraduate that provide employment and work experience in naval research. These are designed to attract applicants for professional employment in the Laboratory's shortage category positions such as engineers, physicists, mathematicians, and computer scientists. The student employment programs foster an understanding of NRL job opportunities among students and educational personnel so that educators can provide students who will meet NRL's occupational needs. The employment programs for college students include:

- **The Cooperative Education Program** alternates periods of work and study for students pursuing bachelor degrees in engineering, computer science, or the physical sciences. Several universities participate in this program.

- **The Federal Junior Fellowship Program** hires students entering college to be assistants to scientific, professional, or technical employees.

- **The Summer Employment Program** employs students for the summer in paraprofessional and technician positions in engineering,

physical sciences, and computer sciences. A limited number of positions are also filled in administrative occupations.

- **The Student Volunteer Program** helps students gain valuable experience by allowing them to voluntarily perform educationally related work at NRL.

- **The 1040-Hour Appointment** employs students on a halftime basis to assist in scientific work that is related to their academic program. A limited number of positions are also filled in administrative occupations.

Contact: Special Recruitment Programs Branch,
767-3030

High School Programs

- **The Gifted and Talented Internship Program** provides a meaningful, part-time employment experience for high school graduates who plan to pursue a bachelor's degree in engineering, computer science, or the physical sciences.

Contact: Special Recruitment Programs Branch,
767-3030

- **The DOD Summer Science and Engineering Apprentice Program** employs high school juniors and seniors to serve for eight weeks as junior research associates as part of a university grant program. Under the direction of a mentor, students gain a better understanding of research, its opportunities, and challenges through participation in scientific programs. Criteria for eligibility are based on science and mathematics courses completed and grades achieved; scientific motivation, curiosity, and capacity for sustained hard work; a desire for a technical career; teacher recommendations; and ability and achievement test scores.

- **The Clerical Cooperative Education Program** allows students to work part time while attending high school. Several high schools participate in this program.

1002	Chief Staff Officer/Inspector General	CAPT M.A. Howard, USN	73621
1003	Associate Director of Research for Strategic Planning	Dr. W.M. Tolles	73584
1004	Scientific Consultant to the Director of Research	Dr. P. Mange	73724
1005	Head, Office of Management and Administration	Mrs. M. Oliver	73086
1006	Exploratory Development Manager	Dr. S. Sacks	73666
1200	Head, Command Support Division	CAPT M.A. Howard, USN	73621
1208	Legal Counsel	Mr. R.H. Swennes II	72244
1220	Security Manager	Mr. M.B. Ferguson	73048/72240
1223	Safety Officer	Mr. A. Mayes	72249
1280	O in C Flight Support Detachment (PAX River NAS)	LCDR G.R. Viggiano, USN	(autovon) 8-356-3751
1300	Comptroller	Mr. R.W. Steinbeck	73405
1500	Head, Program Coordination Office	Dr. R.T. Swim	73314
1800	Head, Civilian Personnel Division	Mrs. B.A. Duffield	73421
1803	Deputy Equal Employment Officer	Mr. J. Richardson	72486
2610	Public Affairs Officer	Mr. J.W. Gately, Jr.	72541
2700	O in C Chesapeake Bay Detachment	CDR S.I. Kummer, USN	(301) 257-4002
TECHNICAL SERVICES DIRECTORATE			
2000	Assoc. Dir. of Res. for Technical Services	Mr. J.D. Brown	72879
2003	Deputy for Operations	CDR L.H. Bounds, USN	72371
2020	Head, Administrative Services Office	Mrs. L.V. Dabney	73858
2030	Head, Management Information Systems Staff	Mr. R.L. Guest	72030
2200	Head, Contracting Division	Mr. J.H. Ablard	75227
2300	Engineering Services Officer	Mr. L.A. Sentiger, Sr.	72300
2400	Supply Officer	CDR W.E. Ralls, Jr., USN	73446
2500	Public Works Officer	CDR C.R. Allshouse, USN	73371
2600	Head, Technical Information Division	Mr. P. Imhof	72187/73388
2610	Information Services	Mr. J.W. Gately, Jr.	72541/72542
2700	O in C, Chesapeake Bay Detachment	CDR S.I. Kummer, USN	(301) 257-4002
2800	Head, Research Computation Division	Mr. R.F. Saenger	72751
GENERAL SCIENCE AND TECHNOLOGY DIRECTORATE			
4000	Assoc. Dir. Res. for General Science & Technology	Dr. W.R. Ellis	73324
4070	Head, Health Physics Group	Mr. J.N. Stone	72232
4100	Supt., Space Science Division	Dr. H. Gursky	76343
4400	Chief Scientist & Director, Laboratory for Computational Physics and Fluid Dynamics	Dr. Jay P. Boris	73055
4600	Supt., Condensed Matter & Radiation Sciences Division	Dr. D.J. Nagel	72931
4700	Supt., Plasma Physics Division	Dr. S. Ossakow	72723
SYSTEMS RESEARCH AND TECHNOLOGY DIRECTORATE			
5000	Assoc. Dir. Res. for Systems Research & Technology	Mr. R.R. Rojas	73294
5100	Supt., Acoustics Division	Dr. D.L. Bradley	73482
5300	Supt., Radar Division	Dr. M.I. Skolnik	72936
5500	Supt., Information Technology Division	Dr. J.R. Davis	72903
5700	Supt., Tactical Electronic Warfare Division	Dr. J.A. Montgomery	76278/73622
5900	Supt., Underwater Sound Reference Detachment	Dr. J.E. Blue	(407) 857-5230
MATERIALS SCIENCE AND COMPONENT TECHNOLOGY DIRECTORATE			
6000	Assoc. Dir. Res. for Materials Science & Component Tech.	Dr. B.B. Rath	73566
6030	Head, Laboratory for Structure of Matter	Dr. J. Karle	72665
6100	Supt., Chemistry Division	Dr. J.S. Murday	73026
6300	Supt., Materials Science & Technology Division	Dr. D.U. Gubser	72926
6500	Supt., Optical Sciences Division	Dr. T.G. Giallorenzi	73171
6800	Supt., Electronics Technology Division	Dr. G.M. Borsuk	73525
NAVAL CENTER FOR SPACE TECHNOLOGY			
8000	Director Naval Space Technology Center	Mr. P.G. Wilhelm	76547
8001	Assoc. Director Naval Space Technology Center	Mr. F.V. Hellrich	76549
8100	Supt., Space Systems Development Department	Mr. R.E. Eisenhauer	72611
8200	Supt., Spacecraft Engineering Department	Mr. R.T. Beal	76407
8300	Supt., Space Systems Technology Department	Mr. L.H. Hammarstrom	73920
