NAVAL RESEARCH LABORATORY

Washington, D.C.

FACT BOOK

JANUARY 1970

APPROVED FOR PUBLIC
RELEASE - DISTRIBUTION
UNLIMITED

Report Documentation Page				Form Approved OMB No. 0704-0188	
Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

Marine Corrosion Laboratory, Key West, Fla.			NA		
Underwater Track Facility Argus Island (near Bermuda)			NA		
Totals:	1,840.80	69.26	337.40	67,900,737	

Location of the principal field stations. Others are at Sugar Grove, W.Va., and on Lake Seneca, N.Y. (near Dresden). The Underwater Sound Reference Division is located at Orlando, Fla.

RESEARCH PLATFORMS

Aircraft

1. The S2D (BUNO 149240) contains specially installed equipment and wing-mounted pods for cloud physics research. Also used in chaff research and for short-term experiments compatible with space limitations of the aircraft.
2. The EC-121K (BUNO 128324) used mainly for wave propagation studies in the four-frequency radar system.
3. The EC-121K (BUNO 135753) used for research in cloud physics, ECM studies, low-frequency radar, and other projects requiring only minimal aircraft conversion.
4. The EC-121K (BUNO 141297) used for radar and VLF propagation studies. Equipment may be installed for other projects.

Available Ships

1. USNS GIBBS (T-AGOR-1)
 2. USNS MIZAR (T-AGOR-11)
- } Under operational control of MSTSLANT, scheduled by NRL
3. USNS MISSION CAPISTRANO T-AG-162) under operational control of MSTSLANT. Scheduled by NRL for use in ONR supported projects. Former tanker modified to accommodate a high-powered sonar transducer, approximately five stories high and weighing hundreds of tons, which was installed by lowering through center well.
 4. SSX-1 used mainly for oceanographic research, scheduled by NRL.
 5. Other surface vessels and submarines occasionally scheduled for NRL use by OPTEVFOR.

THE NAVY'S CORPORATE LABORATORY

The Naval Research Laboratory is one of the principal in-house research and development institutions of the U.S. Government. It was established in 1923 to ensure that advancements in science and engineering could be readily applied to the Navy's needs. Directed always toward this end, the NRL research program has developed to its present status as a broadly based and coordinated effort in the physical, mathematical, and environmental sciences, in advanced engineering, and in naval analysis. The work of the Laboratory is conducted at the main establishment in the District of Columbia and at various field sites that provide unique environment and facilities not available at the main site.

Some principal elements of the research program include fundamental and applied work in radio wave propagation, oceanography, deep-sea instrumentation, submarine air purification, structural design theory, fracture mechanics, surface chemistry, optical physics, radar, underwater sound propagation, acoustic signal processing, sonar transducers, nuclear physics, radio astronomy, high-temperature lubricants, high-energy fuels, plasma physics, refractory metals, exotic materials for high-performance structures, x-ray astronomy, high-power lasers, solid-state physics, and stress-corrosion cracking of high-strength titanium steels and aluminum alloys. The NRL FY 1970 Program Budget is \$100 million.

Some 1100 scientific and technical papers were produced in 1968 as a consequence of the research and development effort of the Laboratory staff. The figure includes 171 formal reports, 95 memorandum reports, 362 articles published in professional society journals, and 490 papers presented at scientific and technical meetings in the United States and in foreign countries (e.g., Austria, Belgium, England, Canada, Czechoslovakia, France, Japan, Switzerland, and Russia).

In addition, 71 U.S. Patents were issued in 1968 on inventions made by present and former employees of the Naval Research Laboratory. This figure brings the grand total of NRL patents, through the calendar year 1968, to 2110.

In its investigations of broad scientific areas, in considering its findings for potential military applications, and in furnishing to the Naval Systems Commands and Secretariat expert consultative services relating to science and military systems, NRL functions as the corporate laboratory of the Navy. Thus it provides a central focus of research and development activity that supports the Navy. When NRL findings and capabilities have borne fruit in particular areas, the results are made known to and used by not only the Navy but also the Army, the Air Force, the Advanced Research Projects Agency, the Atomic Energy Commission, and other agencies of the government.

MISSION

The mission of the Naval Research Laboratory is to conduct scientific research and development in the physical sciences and related fields directed toward new and improved materials, equipment, techniques, and systems for the Navy. In fulfillment of this mission, the Naval Research Laboratory:

1. Initiates and conducts scientific research and development of a basic and long-range nature in scientific areas of special interest to the Navy.
2. Performs scientific research and development for the Systems Commands and offices of the Navy and, where specially qualified, for the Defense Department and, in defense related efforts, for other government agencies.
3. Provides to the Navy and its contractors standardized techniques and procedures for measurements and for the accurate calibration of standard instruments in areas of special Navy needs.
4. Furnishes scientific consultative services for the Navy and, where specially qualified, for the Defense Department and, in defense related efforts, for other government agencies.
5. Provides to the Navy unbiased determination of performance characteristics of developmental and prototype devices through limited engineering test and evaluation services.

Position of NRL in the Department of Defense structure

AWARDS RECEIVED BY CIVILIAN EMPLOYEES
As of July 31, 1969

<u>Government Awards</u>	<u>Number</u>
The Medal of Merit from the President of the United States	1
The Certificate of Merit from the President of the United States	11
National Medal of Science from the President of the United States	1
The President's Award for Distinguished Federal Civilian Service	2
Department of Defense Distinguished Civilian Service Award	4
Department of Defense Certificate of Merit	1
Department of the Navy Award for Distinguished Achievement in Science	2
Navy Distinguished Civilian Service Award	53
Navy Captain Robert Dexter Conrad Award	3
Navy Superior Civilian Service Award (established 1959)	24
Navy Meritorious Civilian Service Award	187
E. O. Hulburt Annual Science Award (local NRL award)	14
<u>Non-Government Awards</u>	
Henry Draper Medal of the National Academy of Sciences	1
Engineering Science Award of the Washington Academy of Sciences	2
Physical Sciences Award of the Washington Academy of Sciences	4
Morris Liebmann Memorial Prize of the Institute of Radio Engineers	1
Medal of Merit Award of the Institute of Radio Engineers	2
Harry Diamond Award of the Institute of Radio Engineers	4
John Scott Medal of the City of Philadelphia	1
Patrons Award of the Institute of Radio Engineers (Washington section)	1
Reliability and Quality Control Award of the Radio Engineers Professional Group	1
Frederic Ives Award of the Optical Society of America	2
A. G. Bissel Memorial Award of the American Welding Society	1
Joseph S. Seaman Gold Medal Award of the American Foundrymen's Society	1
John A. Penton Gold Medal Award of the American Foundrymen's Society	1
Eisenman Medal of the American Society for Metals (Philadelphia Chapter)	1
Burgess Prize Award of the American Society for Metals	2
Burgess Memorial Lecture of the American Society for Metals (Wash. Section)	1
Charles B. Dudley Medal of the American Society for Testing Materials	1
Sam Tour Award of the American Society for Testing Materials	1
Gold Medal Award of the American Society of Naval Engineers	2
Trent-Crede Award of the Acoustical Society of America	1
Stuart Ballantine Medal of the Franklin Institute of Pennsylvania	1
A. K. Doolittle Award of the National American Chemical Society	1

<u>Non-Government Awards (Continued)</u>	<u>Number</u>
Kendall Company Award of the American Chemical Society	1
Hillebrand Prize of the American Chemical Society	1
William Blum Award of the Washington-Baltimore Electrochemical Society	1
National Award of the American Society of Lubrication Engineers	1
Annual Award of the Society for Applied Spectroscopy	2
E. Edward Pendray Award of the American Rocket Society	1
James H. Wyld Memorial Award of the American Rocket Society	1
Space Science Award of the American Institute of Aeronautics and Astronautics	1
Eddington Medal of the Royal Astronomical Society (Great Britain)	1
Janssen Medal of the French Photographic Society	1
Ancel Prize of the French Photographic Society	1
Progress Award of the Photographic Society of America	1
Professional Achievement Award of the D. C. Council of Engineers and Architectural Studies	1
National Capital Award of the D. C. Council of Engineers and Architectural Studies	3
Award for Technical Achievement of the American Society of Mechanical Engineers	1
Service to Mankind Award of the Washington Sertoma Club	1
Pittsburgh Spectroscopy Award of the Spectroscopy Society of Pittsburgh	1
Pure Science Award of the Scientific Research Society of America (NRL Branch)	15
Applied Science Award of the Scientific Research Society of America (NRL Branch)	15
Arthur S. Fleming Award of the Washington Chamber of Commerce	2
Society of Women Engineers Achievement Award	1
Notre Dame Centennial of Science Award	2
M. Barry Carlton Award - Institute of Electrical and Electronics Engineers	1
National Civil Service League Merit Citation	1
Brazilian Ordem do Merito Naval (Legion of Naval Merit) Cavaleiro	1

Part 2
Office of the Director

JAMES C. MATHESON

CAPTAIN, USN

Captain Matheson [REDACTED], in Oconomowoc, Wisconsin. He attended the University of Chicago from 1939 to 1941 and was graduated from the United States Naval Academy in 1944. He holds degrees in naval architecture and nuclear engineering from the Massachusetts Institute of Technology and has completed the Advanced Management Program at the Harvard School of Business Administration.

Captain Matheson is an Engineering Duty Officer. He is qualified in submarines and served aboard the DACE in the Pacific during World War II and the MEDREGAL in the Atlantic subsequent to the war. He has held positions at the Portsmouth Naval Shipyard, at the Bureau of Ships, and with the Atomic Energy Commission as Chief of the West Milton Site of the Knolls Atomic Power Laboratory. From 1961 to 1965 he served as the Nuclear Power Superintendent at the Mare Island Naval Shipyard. He reported to the Naval Research Laboratory as Director of Support Services in October 1965 and assumed the position of Director of the Laboratory on May 29, 1967.

He is a member of the Society of Naval Engineers, the Research Society of America, and the Philosophical Society of Washington.

**Captain James C. Matheson, USN
Director, Naval Research Laboratory**

Military Staff Office

CAPT R. M. Davis, USN

- MILITARY PERSONNEL
- MILITARY PLANS
- MUTUAL WEAPONS DEVELOPMENT DATA EXCHANGE
- OPERATIONAL SERVICES
- SCIENTIFIC LIAISON
- SECURITY
- COMMUNICATIONS

Basic Responsibilities

The Military Staff maintains liaison with the systems commands and offices of the Navy Department, with other units of the Naval establishment ashore and afloat, and with other governmental and nongovernmental agencies concerned with the coordination of military application of the scientific work of the Laboratory. It supports four multi-engine Laboratory aircraft and obtains and coordinates such additional air, surface, and subsurface services as are required. The Military Staff is also responsible for personnel and plant security, communications, and control of classified material.

Key Personnel

<i>Name</i>	<i>Title</i>
CAPT R. M. Davis, USN	Chief Staff Officer
CDR L.R. Marshall, USN	Assistant to the Chief Staff Officer
LT D.W. Harold, USN	Communications Officer
CDR M. R. Kalnitzky, USN	Operational Services Officer
Mr. F. W. Shannon	Head, Mutual Weapons Development Data Exchange Group
CDR W.E. Heyl, USN	Scientific Liaison Officer
Mr. W. C. Bryan	Head, Special Activities Office
Mr. C. J. Dryer	Head, Security Branch
Mr. J. J. Bagley	Classified Material Control Officer
LT N. K. Matheson, USN	Military Personnel and Plans Officer
LCDR F. C. Nelson, USN	Head, NRL Flight Office (Patuxent)

Personnel Complement

On Board: 158
(85 Civilian, 73 Military)

Mr. A. G. Gross

- EMPLOYMENT
- WAGE AND CLASSIFICATION
- EMPLOYEE DEVELOPMENT
- EMPLOYEE RELATIONS
- SAFETY
- TRAVEL

Basic Responsibilities

The Civilian Personnel Office administers the Laboratory's personnel program, which provides for the selection, development, promotion, utilization, appropriate recognition, travel, and safety of all civilian personnel. It is also responsible for the establishment and review of all Classification Act and ungraded positions.

Key Personnel

<i>Name</i>	<i>Title</i>
Mr. A. G. Gross	Director of Civilian Personnel
Mr. J. E. Goss	Head, Employment Branch
Mr. K. R. Harper	Head, Wage and Classification Branch
Mr. W. J. McLaughlin	Head, Employee Development Branch
Mr. H. H. Kay	Head, Employee Relations Branch
Dr. R. G. Nebelung	Head, Safety Branch
Mrs. B. E. Michaud	Head, Travel Branch

Personnel Complement

On Board: 53

Mr. J. P. Donovan

Office of the Comptroller

DISBURSING

BUDGET OFFICE

COMPUTER

- BUDGET
- ACCOUNTING
- DISBURSING
- DATA PROCESSING

Basic Responsibilities

The Comptroller is the financial adviser to the Director and other officials of the Laboratory. He administers the financial program of the Laboratory.

Key Personnel

<i>Name</i>	<i>Title</i>
Mr. J. P. Donovan	Comptroller
Mr. W. S. Slater	Budget Officer
Mr. R. A. Showman	Accounting Officer
LT C. R. Grant, SC, USNR	Disbursing Officer
Mr. D. A. Staudt	Data Processing Officer
Mr. D. K. Jones	Head, Internal Review Staff

Personnel Complement

On Board: 70

Part 3
The Research Department

Dr. Alan Berman
Director of Research

Dr. Berman [REDACTED] [REDACTED] [REDACTED] [REDACTED]. He received the A.B. degree in physics from Columbia College in 1947 and the Ph.D. degree in physics from Columbia University in 1952.

From 1952 to 1955 he was a research scientist at the Hudson Laboratories of Columbia University. He became Assistant Director of Hudson Laboratories in 1955, Associate Director in 1957, and Director in 1963. On May 29, 1967, Dr. Berman became Director of Research for the Naval Research Laboratory.

Dr. Berman's research specialties include the areas of underwater acoustics, oceanography, and signal processing. He has published numerous papers on these and related subjects. At present he is a member or chairman of a wide variety of Navy and oceanographic advisory groups. He also provides advisory services for a number of Department of Defense and other Government agencies.

Dr. Berman has on three occasions been visiting scientist to the Admiralty Research Laboratory, Teddington, England (1955, 1957, 1960), and once at the SACLANT ASW Research Center, La Spezia, Italy (1960).

THE RESEARCH DEPARTMENT

The Research Department is headed by a distinguished civilian scientist and administrator. The research effort is divided into four major fields—electronics, materials, general sciences, and oceanology—which correspond to the principal areas of the Navy's interest in the physical and engineering sciences. There is an associate director of research for each of these four broad areas. Sixteen scientific divisions, each headed by a civilian scientist, pursue work in specific fields. Branches within these divisions form interrelated working units.

Key Personnel

<u>Name</u>	<u>Title</u>	<u>Code</u>
Dr. A. Berman	Director of Research	4000
Dr. P. Waterman	Special Assistant	4008
Mr. A. Hollings	Research Program Office	4010
Mr. C. L. Tipton	Special Studies Group	4020
Dr. W. R. Faust	Associate Director of Research for Electronics (Acting)	5000
Dr. J. H. Schulman	Associate Director of Research for Materials	6000
Dr. W. C. Hall	Associate Director of Research for General Sciences	7000
Dr. R. R. Goodman	Associate Director of Research for Oceanology	8000

RESEARCH PROGRAM OFFICE

Basic Responsibilities

The Research Program Office serves as staff to the research directorate of the Laboratory. It provides an orderly plan for coordinating NRL research programs with those of ONR and other sponsors or potential sponsors throughout the Departments of the Navy, the Army, and the Air Force, the Advanced Research Projects Agency, and other agencies of the government. It also serves as a focal point for program information for project managers and other key personnel of sponsoring activities on work in progress or in various stages of planning. The Research Program Office maintains a management information center which serves as a working tool for the Laboratory directorate, and it maintains appropriate records of the Laboratory's research programs.

Key Personnel

<i>Name</i>	<i>Title</i>
Mr. A. J. Hollings	Head, Research Program Office
Mr. R. E. Seebold	Deputy Head, Research Program Office
Mr. R. C. Spragg	Head, Management Information Center Section
Mr. R. E. Seebold	Head, Short-Range Program Planning and Appraisal Section
Dr. L. N. Morscher	Staff Assistant—Requirements

Mr. A. J. Hollings

Personnel Complement

On Board: 11

SPECIAL STUDIES GROUP

Basic Responsibilities

The Special Studies Group provides analytical staff support to the Director of Research in the fields of strategic, tactical, and special naval warfare. Programs of operation research and system analysis are undertaken to provide substantive analytical bases for (a) the orientation of naval research and development, and (b) the general delineation of advanced naval weapon systems and force structures requirements for the mid- to long-range time period. Broad scope analyses of projected threats, operations, tactics, equipments, and forces are conducted by four study units—the Operations Analysis; the Systems Analysis; the Systems Applications; and the Amphibious Warfare, respectively.

Key Personnel

<i>Name</i>	<i>Title</i>
Mr. C. L. Tipton	Head, Special Studies Group

Personnel Complement

Total Estimated R&D Funding

Fiscal Year 1970: \$440,000 (Projected)

Mr. C. L. Tipton

Electronics Area

Dr. W. R. Faust
Associate Director of Research for Electronics

Dr. Faust [REDACTED] He graduated from Oklahoma State University in 1939 with a B.S. degree in electrical engineering; from the Illinois Institute of Technology in 1941 with an M.S. degree in electrical engineering; and in 1948, he received the Ph.D. degree in physics from the University of Maryland. While studying for his master's degree at Illinois Institute of Technology he worked as a Graduate Assistant (1939-1941).

Dr. Faust joined the Research Department of NRL in 1941 as an electrical engineer in the Radio Division. He transferred to the Nucleonics Division in 1947 as a physicist. Assigned to the Radiation Division in 1950, Dr. Faust continued his work as a physicist for the next five years, during which time he became Acting Head of the Nuclear Reactions Branch and, subsequently, Head of the Analysis and Theory Branch. In 1955, he left NRL to accept a job at Convair, a subsidiary of General Dynamics Corporation, as Chief of Nuclear Research. He returned to NRL in 1956 as Associate Superintendent of the Radiation Division and Head of the Analysis and Theory Branch, positions he held until January 1964 when he was detailed Superintendent of the Applications Research Division. Dr. Faust's appointment in that position became permanent in 1965.

In 1945, Dr. Faust received a Meritorious Civilian Service Award for his "outstanding accomplishments in fundamental design studies in ultra high frequency radar receivers, pursuant to original theoretical investigations into unique types of tube applications." In 1956, he received the Applied Science Award of the NRL Branch of the Research Society of America for his "continuing efforts leading to quantitative knowledge in the field of interaction of radiation with matter, and successful application of this knowledge to the problems of shielding in connection with the testing of nuclear weapons and the development of nuclear power systems." He also received the E. O. Hulburt Award for 1961 "for his theoretical and experimental studies of the multiple scattering of gamma rays and measurements of the production of gamma rays by inelastic neutron collision, which gave a better understanding of nuclear shielding problems and led to the development of new methods of analysis of the interaction of gamma rays and various material; and for his studies leading to a better understanding of certain nuclear weapons phenomena and the behavior of high temperature plasmas which are subjected to magnetic and electromagnetic fields."

Dr. Faust is a Fellow of the American Physical Society of America, a member of the Philosophical Society of Washington, and a member of the Washington Academy of Science. He also holds honorary memberships in Sigma Tau, Eta Kappa Nu, Sigma Pi Sigma, Sigma Xi, and Phi Kappa Phi Societies. Dr. Faust is listed in the American Men of Science and Who's Who in the South, 1961.

Key Personnel

Dr. W. R. Faust	Associate Director of Research for Electronics (Acting)
Dr. L. A. Gebhard	Consultant
Mr. E. F. Kulikowski	Superintendent, Applications Research Division (Acting)
Mr. A. Brodzinsky	Superintendent, Electronics Division
Dr. M. I. Skolnik	Superintendent, Radar Division
Dr. L. B. Wetzel	Superintendent, Communications Sciences Division
Mr. H. O. Lorenzen	Superintendent, Electronic Warfare Division

Mr. E. F. Kulikowski

Applications Research Division

- APPLIED PHYSICS
- OPERATIONAL RESEARCH
- SPACE APPLICATIONS
- SATELLITE TECHNIQUES
- DYNAMICS

TIMATION

HYPERVELOCITY GUN

ROCKET
PLASMA
STUDIES

Basic Responsibilities

The Applications Research Division conducts research and development in the fields of plasma physics, laser systems, defense against ballistic missiles including impact and penetration ballistics, data handling and processing, satellite techniques, and celestial mechanics and navigation. As a result of these studies the Division designs and develops systems (e.g., satellites) and components (e.g., antennas for use in space) as related to such naval requirements as target identification, surveillance, navigation, guidance, and communication and provides for the evaluation of such systems.

Branches

Applied Physics

Lasers
Space physics and quantum
electronics
Plasma physics

Space Applications

Navigation satellites
Profile techniques

Satellite Techniques

Satellite development
Gravity gradient stabilization
of satellites
Research satellites, especially solar
radiation devices
Calibration satellites

Operational Research

Orbit computation and celestial
mechanics
Fire and missile control evaluation
instrumentation
Satellite telemetry automatic data
processing

Dynamics

Vulnerability mechanics
Hypervelocity kill mechanisms
Hypervelocity impact mechanics
Penetration into earthy materials

Key Personnel

Electronics Division

MICRO-CIRCUITRY

GAS LASERS

ELECTRON TUBE RESEARCH

ANTENNA RESEARCH

- SOLID STATE ELECTRONICS
- ELECTROMAGNETIC MATERIALS
- ELECTRON PHYSICS
- MICROWAVE ANTENNAS & COMPONENTS
- SECURITY SYSTEMS
- WAVE PROPAGATION

Basic Responsibilities

The Electronics Division carries out programs of basic and applied research and development in the fields of: electronic properties of solid materials; microwave antennas and components; microelectronic technology; electronic identification systems; electromagnetic wave propagation; properties of ground and sea surface radar returns; and vacuum and gaseous electron devices.

Branches

Solid State Electronics

Semiconductor devices, materials and circuits, both low and microwave frequencies
Thin films

Electromagnetic Materials

Electromagnetic wave scattering: (1) from rough liquid surfaces; (2) from small particles
Development and application of radar protective coatings
Systems for production, processing, and control of electric power
Seawater battery development and applications

Electron Physics

Gas lasers
Microwave tubes
Vacuum breakdown
Surface physics research
Night vision tubes

Microwave Antennas and Components

Millimeter wave communication system
Naval electronic scanning antennas for airborne use
Advanced microwave antenna research
Microwave electronic components

Security Systems

Development of new IFF systems and components
Development of solid state transmitters at L-band
Development of IFF decision devices
Consulting services to AIMS* tri-service program

Wave Propagation

Properties of ground and sea surface radar echoes
Radar mapping of terrain
Target cross section measurements
Sea surface analysis

*AIMS

A - Air Traffic Control Radar Beacon
I - IFF (Identification Friend or Foe)
M - Mark XII
S - System

- AEROSPACE RADAR
- AIRBORNE RADAR
- RADAR GEOPHYSICS

Basic Responsibilities

The Radar Division conducts research on basic physical phenomena of importance to radar and related sensors, investigates new engineering techniques applicable to radar, demonstrates the feasibility of new radar concepts and systems, performs related systems analysis and evaluation of radar, and provides special consultative services. The emphasis is on new and advanced concepts and technology in radar and related sensors which are applicable to enhancing the Navy's ability to fulfill its mission.

Branches

Radar Techniques

High-frequency radar
Signal processing

Search Radar

Phased array techniques
ASW radar
Precision tracking radar techniques
Radar evaluation
Range instrumentation

Target Characteristics

Target signature analysis
Target radar-spectra studies
Microwave and laser techniques
Laser sensor systems

Aerospace Radar

Ocean surveillance

Airborne Radar

Airborne radar
Weapons analysis
ECCM
Airborne early warning radar
Moving target indication techniques for ship
and airborne radars

Radar Geophysics

Wave propagation
Studies of ionosphere by means of radar
and satellite transmissions
Radar measurements of satellites

Basic Responsibilities

The Communications Sciences Division conducts research and development in the fields of radio communication systems, satellite communications, integration of electronic systems, precise frequency and time, communication antennas, electromagnetic wave propagation and certain aspects of radio navigation.

Branches

Radio Communication Systems

Secure communications
Modem and interface functions
Crypto-logic systems
Terminal devices

Systems Integration and Instrumentation

Precise frequency and time
Centralized electronic control
Integrated communication, navigation
and identification systems
Long range aircraft navigation (OMEGA)
Advanced monitoring & testing techniques

Satellite Communication

Satellite communication systems
Precision satellite communication experiments
Modem studies
Orbit parameter studies

Radio Antenna

Communication antenna studies
Antenna circuitry
Underwater reception and propagation

Electromagnetic Propagation

ELF/VLF and LF propagation studies
Noise measurements and predictions
Microwave troposcatter
Effects of propagation on navigational accuracy

Materials Area

Dr. James H. Schulman
Associate Director of Research for Materials

Dr. Schulman [REDACTED] He is a graduate of the Massachusetts Institute of Technology, from which he received the B.S. degree in 1939 and the Ph.D. degree in 1942, both in the field of chemistry. While working toward his doctorate he held an instructorship at Suffolk, Boston, and a Teaching Fellowship at M.I.T. In 1941, he joined the staff of the M.I.T. Laboratory for Insulation Research, where he headed a section concerned with selenium rectifiers and photocells.

Dr. Schulman joined the Sylvania research laboratories in 1944 to carry out research on luminescent materials for use in cathode-ray tubes and fluorescent lamps. He came to NRL in 1946 to initiate a research program on luminescence, with particular emphasis on inorganic luminescent materials. At NRL he has served as Head, Chemical Metallurgy Branch, Metallurgy Division; Head, Dielectrics Branch, Solid State Division; Acting Associate Superintendent, Solid State Division; and Superintendent of the former Optical Physics Division. From August 1960 until December 1961, he was Deputy Scientific Director and Liaison Scientist for Solid State Physics with the London Branch of the Office of Naval Research. Upon his return to NRL in November 1964, Dr. Schulman was appointed to the Chair of Materials Sciences in recognition of his distinguished research accomplishments. In September 1967, he was appointed Associate Director of Research for Materials.

Dr. Schulman received the Applied Science Award of the NRL Branch of the Research Society of America (1957) and the Navy Superior Civilian Service Award (1965), both in recognition of his many contributions to the study of solid luminescent materials and phenomena, the investigation of radiation-induced optical effects in solids, and the application of the radiation-sensitive properties of solids to the dosimetry of nuclear and other high-energy radiations.

Dr. Schulman is a member of the Steering Committee of the Solid State Panel of the National Academy of Sciences, a former member of the Visiting Committee of the Argonne National Laboratory, and a former Chairman of the National Academy of Sciences-National Research Council Committee on High-Level Radiation Dosimetry. He is an Associate Editor of the Journal of the Optical Society of America and of the Materials Research Bulletin. Dr. Schulman is a Fellow of the American Physical Society, of the Optical Society of America, and of the American Association for the Advancement of Science. He has written numerous technical papers, coauthored a book in a special area of solid state physics, and been awarded several patents.

Key Personnel

Dr. H. Rabin	Superintendent, Optical Sciences Division (Acting)

SHOCK & VIBRATION INFORMATION CENTER

Basic Responsibilities

The Shock & Vibration Information Center is one of the information centers established by the Director of Technical Information, DDR&E, and assigned to Navy for management and operation. It provides a single source within the Department of Defense for up-to-date information in the fields of shock and vibration for scientists and engineers in government agencies and for government contractors.

LABORATORY FOR CHEMICAL PHYSICS

Basic Responsibilities

The Laboratory for Chemical Physics carries out an interdisciplinary program of fundamental and applied research with especial emphasis on phenomena occurring at phase boundaries, i.e., the interfaces between solids and solids, solids and liquids, solids and gases, liquids and liquids, and liquids and gases. Currently, attention is being given to adhesion and adhesion promoters, wetting, surface electric properties of metals and plastics, interfacial phenomena in composite materials, the quantitative relation of dry film lubricants to shear strength and its pressure coefficient, the ability of insoluble monolayers to dampen the surface waves in liquids, and the relation of the interfacial tension of two liquids to their solubility.

CENTRAL MATERIALS RESEARCH ACTIVITY

Basic Responsibilities

The responsibilities of the Central Materials Research Activity are twofold: (1) to perform basic and applied research in the preparation and characterization of materials, and (2) to provide consultation or assistance for all laboratory research personnel in the above matters. Special research areas investigated by the staff include glasses, luminescent materials, single crystal, high purity, and rare earth materials. The primary facilities involved in characterization are x-ray diffraction techniques and solid state spark-source mass spectrometry.

Key Personnel

BEARING LUBRICANTS

Basic Responsibilities

The Chemistry Division conducts a diversified program of basic and applied research and development in physical, organic, inorganic, and analytical chemistry. Specialized programs within these fields include fuels, lubricants, corrosion, surface chemistry, fire suppression, protective coatings, polymers, electrochemistry, molecular structure, submarine atmosphere purification, and BW/CW personnel protection. Consultative services form an important element in the division effort.

Branches

Physical Chemistry

Infrared and ultraviolet spectroscopy
Analytical mass spectrometry
Nuclear magnetic resonance spectroscopy

Organic Chemistry

Synthesis and properties of polymers
Functional organic coatings
Properties of resins under high compressive loads

Inorganic Chemistry

Submarine air purification
Oxygen generating chemicals
Corrosion mechanisms and kinetics
Ceramic materials

Protective Chemistry

CW/BW ship defense
Adsorbents

Fire Suppression

Fire suppression agents and techniques for special hazards on board ships and naval shore activities
Interruption of fire propagation mechanism

Electrochemistry

Fuel cells
Fundamental electrode reactions
Electrochemical power sources

Surface Chemistry

Lubricants
Salvage of equipment damaged by sea water
Surface properties of fibers
Drag reduction

Chemical Dynamics

Organic contaminants in submarine atmosphere
Distillate fuels research
Autoxidation and combustion dynamics

FRACTURE MECHANICS

REMOTE HANDLING ROOM

DEFECT STRUCTURES

ELECTRON PROBE

Basic Responsibilities

The Metallurgy Division conducts research, development, and evaluation in the field of metallurgy, including the physical, mechanical, chemical, and structural aspects of metals. Important consultative services are provided to Navy and other DOD activities.

Branches

Physical Metallurgy

Fractography
Micromechanical metallurgy
Marine corrosion studies
Stress corrosion

Transformations and Kinetics

Solidification and crystal growth
Electron microscopy
Solid-state reactions

Metal Physics

Electronic properties of metallic materials
Metallic imperfection studies
Effects of irradiation upon the solid state properties of metals

Strength of Metals

Properties, selection criteria, and fracture-safe design parameters for high and ultra-high-strength structural metals

Thermostructural Materials

High-temperature flow and fracture
Effects of environment on fatigue and creep
Single crystals of refractory metals
Composites

Reactor Materials

Properties of irradiated structural metals and alloys
Mechanisms of radiation degradation of metals
Neutron spectra and dosimetry

HIGH MAGNETIC FACILITY

LUMINESCENT
PROPERTIES
OF GLASS

- CRYSTAL PHYSICS
- OPTICAL MATERIALS
- MAGNETISM
- SOLID STATE APPLICATIONS
- SEMICONDUCTORS

Basic Responsibilities

The Solid State Division is concerned with basic and applied research in the physics of materials, principally solids, and with the interaction of matter with radiation. Its purposes are to increase understanding of the physical principles involved, to pursue applications of military and industrial problems, and to serve as a corps of experts in solids for the Laboratory specifically and the Navy generally. The research work of the Division is fairly comprehensive in magnetism, semiconductors, and alkali halides. Important work is also carried on in surface physics, structure and optical properties of glass, properties of metals at low temperatures and high magnetic fields, the effects of high pressures on solids and radiation damage. Applications in solid state dosimeters, semiconductor photovoltaic cells, information storage systems, and infrared detectors are being pursued actively.

Branches

Crystal Physics

High-pressure effects
Ferroelectric materials

Solid State Applications

Environmental effects on semiconductor and dielectric materials and devices

Optical Materials

Electronic properties of nonmetal crystals and glasses
Radiation induced defects, color centers
Lattice dynamics

Semiconductors

Electronic energy levels and band structure
Semiconductor applications
Physical properties of semiconductors
Cryomagnetism
Lattice Vibrations
IR detectors
IR light sources such as semiconductor lasers

Magnetism

Electronic and nuclear paramagnetism
Spin-ordered magnetic phenomena
Magnetism and superconductivity at ultra-low temperatures

- APPLIED OPTICS
- INFRARED

Optical Sciences Division

GLASS LASER

AUTOMATIC X-RAY REFRACTOMETER

PHASE MATCHING IN NONLINEAR OPTICS

TILGHMAN ISLAND

Basic Responsibilities

The Optical Sciences Division is concerned with research in the generation, propagation, detection, and processing of radiation in all regions of the electromagnetic spectrum where optical techniques predominate; these are generally regions where the detectors are not fast enough to follow the field frequency and most commonly include frequencies from x-rays through infrared. The research is concerned with increasing understanding of basic physical principles, applying these principles to the development of technology and techniques which will assist in the solution of military problems, and developing a body of experts in optical sciences to serve the Laboratory specifically and the Navy generally. The work of the Division includes studies in quantum optics, infrared physics, atmospheric optics, optical technology, hydrological optics, holography, optical systems, and a variety of field measurement programs on optical problems of specific interest.

Staff Activity

Mathematics Staff

X-ray crystallography
Noncentrosymmetric space groups
Simulation of atmospheric turbulence
Consultations

Branches

Quantum Optics

Nonlinear optical phenomena
EMR interactions in matter
Laser action and devices
Optical Parametric Oscillators
Up-conversion
Quantum effects in materials

Applied Optics

Laser applications
Atmospheric and undersea optics and propagation
Optical communication and night viewing
Optical information processing
Optical technology

Infrared

Night vision and communication
IR characteristics of military targets
Special purpose IR devices

General Sciences Area

Dr. Wayne C. Hall
Associate Director of Research for General Sciences

Dr. Hall [REDACTED] He was educated at the University of Kansas, where he received a Bachelor of Science degree in electrical engineering in 1931, a Master of Science degree in physics in 1933, and a Ph.D. in physics in 1936. He was an Assistant Instructor in the Physics Department at the University of Kansas from 1931 to 1935.

Dr. Hall came to the Laboratory in 1935 for research on the use of fuel cells to effect direct conversion of heat energy. During the next ten years he was also involved in studies of energy conversion, electronic strain gages, and torsion meters. His work on the problem of interference of precipitation static on aircraft radio communications ultimately led to development of the antiprecipitation static antenna and fittings now used on military and civilian aircraft to ensure the reliability of radio communications and radio navigational aids during severe weather conditions.

In January 1945 Dr. Hall was appointed Assistant Head of the Aircraft Electricity Division and later, in 1946, Superintendent of the Division. In this position he was responsible for a group of scientists conducting research and development on electrical power systems for aircraft, basic research in electricity and magnetism, and basic research in solid state physics and physical phenomena at ultralow temperatures. From 1948 through 1951, in addition to his duties as a Division Superintendent, he was Scientific Officer at NRL in charge of a project from the Los Alamos Scientific Laboratory involving diagnostic measurements in the atomic weapons program. Early in 1954 he became Superintendent of the Solid State Division at the Laboratory and was shortly thereafter appointed to the position of Associate Director of Research for Nucleonics. The title of this position was redesignated Associate Director of Research for General Sciences in February 1966.

Dr. Hall received the Distinguished Civilian Service Award in 1946 "for distinguished achievement in research on mitigation of precipitation static interference encountered by aircraft flying in adverse weather conditions."

Dr. Hall is a member of several professional societies, including the American Physical Society, Sigma Xi, RESA, Tau Beta Pi, and the National Philosophical Society and is a Fellow of the Institute of Electrical and Electronics Engineers and the Washington Academy of Sciences. He is the author of many technical papers and has been granted a number of patents.

RADIOLOGICAL SAFETY OFFICE

Basic Responsibilities

The Health Physics Staff is assigned the overall responsibility for radiological safety at the Naval Research Laboratory and acts, as requested, as representative of the Office of Naval Research in radiological safety matters. The NRL radiological safety program has three primary purposes: (1) to assure that all operations using ionizing radiation are safe and in compliance with Federal Regulations; (2) to provide employees with instruments, instructions, and assistance to assure radiation safety in the performance of their duties; and (3) to conduct research in radiation dosimetry, instrumentation, and methodology.

LABORATORY FOR COSMIC RAY PHYSICS

Basic Responsibilities

The Laboratory for Cosmic Ray Physics conducts a program of fundamental investigations of cosmic radiation—its composition and spectra, its origin, its “age,” its propagation through space, its interactions with particles and fields in the regions of space that it traverses, and its role in various astrophysical phenomena. The program is framed so as to be broadly responsive to the anticipated technical requirements of the Navy and the general research and development program of the Department of Defense.

Basic Responsibilities

The Space Science Division conducts research, development, and tests in the fields of upper air physics, astronomy, and astrophysics. Satellites and rockets are used to obtain information on radiation from the sun and celestial sources, and to study the composition and behavior of the ionosphere. Radio telescopes are used for astronomical observations. Results are of importance to radio communications, to utilization of the space environment, and to the fundamental understanding of natural radiation phenomena.

Branches

Upper Air Physics

Gamma-ray, x-ray, ultraviolet, and infrared astronomy
Aeronomy
Solar x-ray monitoring satellites
Electronic imaging studies
Meteor astronomy

Rocket Spectroscopy

X-ray and ultraviolet solar spectroscopy
Spectroheliographic and coronagraphic research
Laboratory astrophysics
XUV spectroradiometry
Apollo telescope mission solar research

Radio Astronomy

Galactic and extragalactic radio astronomy
Radar measurements of earth-moon distance and topography of moon
Radar and microwave applications to oceanography

E. O. Hulburt Center for Space Research

The program is that of the combined Upper Air Physics, Rocket Spectroscopy, and Radio Astronomy Branches. It allows graduate and post-graduate students and visiting faculty members to cooperate with NRL in space research.

Key Personnel

<i>Name</i>	<i>Title</i>
Dr. H. Friedman	Superintendent
Dr. P. Mange	Associate Superintendent (Acting)
Dr. B. Lepson	Mathematics Consultant
Dr. T. A. Chubb	Head, Upper Air Physics Branch
Mr. C. H. Mayer	Head, Radio Astronomy Branch
Dr. R. Tousey	Head, Rocket Spectroscopy Branch
Dr. H. Friedman	Chief Scientist, Hulburt Center

Nuclear Physics Division

- CYCLOTRON
- LINAC
- NUCLEAR SYSTEMS
- REACTORS
- THEORY
- VAN DE GRAAFF
- X-RAY OPTICS

REACTOR CORE

LINAC

CYCLOTRON

Basic Responsibilities

The Nuclear Physics Division is engaged in a broad program of basic and applied research in nuclear physics and related areas. Included are theoretical and experimental programs in properties of nuclei, nuclear forces, nuclear reactions, shielding studies, x-ray and electron optics, materials analysis, and nuclear-weapon-related research. The Division operates a 75-MeV sector focussing cyclotron, 60-MeV Linac, 1-Mw reactor, 5-MeV Van de Graaff, and other particle accelerators and radiation sources.

Branches

Cyclotron

Charged particle nuclear reactions
Nuclear structure
Charged particle scattering
Neutron shielding
Radioactivation analysis
Production of radioactive sources

Linac

Electron scattering
Photonuclear reactions
Nuclear excitation
Neutron capture reactions
Pulsed radiation effects
Radioactivation analysis

Nuclear Systems

Low-level nuclear radiation detectors for special purposes

Reactors

Neutron activation analysis
Production of radioactive sources
Neutron capture reactions
Radioactive decay

Theory

Nuclear reactions
Field theory
Elementary-particle physics
Nuclear structure
Mathematical physics

Van de Graaff

Charged particle nuclear reactions
Nuclear structure
Radiation damage due to charged particles
Surface and film analysis by nuclear techniques
Monoenergetic neutrons

X-Ray Optics

X-ray spectral measurements
X-ray fluorescence analysis
Electron probe micro-analysis

Key Personnel

<i>Name</i>	<i>Title</i>
Dr. E. A. Wolicki	Superintendent (Acting)
Dr. C. V. Strain	Consultant
Mr. F. H. Attix	Consultant
Dr. R. O. Bondelid	Head, Cyclotron Branch

- ELECTRON BEAMS
- HIGH TEMPERATURE PHYSICS
- ADVANCED TECHNOLOGY
- LASER PHYSICS
- PLASMA DYNAMICS

θ -PINCH FACILITY

SOZOTRON

LASER STUDIES

Basic Responsibilities

The Plasma Physics Division conducts both basic and applied experimental and theoretical research. Examples of effort underway include: fusion physics and the generation and containment of high-temperature plasmas, directed toward eventual power sources; laboratory astrophysics; electron beams; collision-free shock waves; laser-produced plasma and high-power lasers. This Division, the University of Maryland, and Cornell University engage in a joint program of research in plasma physics. In addition to increasing significantly the scientific breadth of the participating institutions, the program is acquainting graduate students with research frontiers in plasma physics through association with leading scientists in the field. Students have an opportunity to use NRL facilities and talent for thesis research, and NRL scientists, in turn, are able to use the research facilities of both universities.

Branches

Electronic Instrumentation

Instrumentation support to the Division for control measurement of experiments

Electron Beams

Production and applications of intense electron beams
Beam stabilization

High Temperature Physics

Physics and utilization of ultra-high-temperature plasmas
Plasma chemistry

Advanced Technology

Technological support to the Division in the form of electrical, mechanical, optical, and vacuum systems

Laser Physics

Physics of solid state chemical and gas lasers
Nonlinear optics

Plasma Dynamics

Theoretical and numerical simulation studies of problems in nonlinear plasma dynamics

Key Personnel

RESEARCH
COMPUTATION
CENTER

CDC 3800 COMPUTER

MATHEMATICS SCIENCE COORDINATION

Basic Responsibilities

The Mathematics and Information Sciences Division conducts basic and applied research in the mathematical sciences; determines present and future Navy needs with reference to mathematics and the computer-oriented sciences; and creates and maintains the competence required to formulate and to meet these needs.

Branches

Research Computation

Data engineering and operations
Analog computer
Programming
Programming systems
Information retrieval

Information Systems

Surveillance and intelligence
Engineering applications
Computer science
Information system development
Operations analysis and logistics

Mathematics Research Center

Functional analysis
Ordinary and partial differential equations
Special functions
Approximation theory
Functions of a complex variable
Diophantine approximations
Stochastic processes
Control theory
Numerical methods

Oceanology Area

Dr. Ralph R. Goodman
Associate Director of Research for Oceanology

Dr. Goodman [REDACTED] [REDACTED] He attended the University of Michigan, at Ann Arbor, where in 1950 he received a B.S. degree in mathematics, in 1951 a B.S. in physics, in 1952 an M.S. in physics, and in 1958 a Ph.D. in physics.

Before coming to NRL in September 1968, Dr. Goodman had held positions at NEL, at Colorado State University, and at the SACLANT ASW Research Center in La Spezia, Italy. He began his career as a scientist with the U.S. Navy Electronics Laboratory at San Diego, California, where he remained for 18 months. He left NEL in 1959 to join the staff of Colorado State University as an Assistant Professor; while serving in that capacity from 1959 to 1961, he also conducted research in theoretical physics and gave lectures and performed consulting services outside the University.

From 1961 to 1963, Dr. Goodman served as a consultant to the Applied Physics Group at the SACLANT ASW Research Center, La Spezia, Italy.

He then returned to Colorado State University, where from 1963 to 1968 he served as Professor of Physics. During his last year there (1968), he also served as the Acting Chairman of the Department of Physics.

Dr. Goodman is a member of the American Physical Society, the Acoustical Society of America, the American Geophysical Union, the American Institute of Physics, Sigma Xi, Phi Kappa Phi, and Tau Beta Pi. He was also a member of the Board of Trustees of the Colorado State University Research Foundation and the NAS/NRC Committee on Undersea Warfare.

Key Personnel

Dr. R. R. Goodman	Associate Director of Research for Oceanology
Mr. A. L. Gotthardt	Ship Facility Group
Mr. F. C. Macdonald	Nonacoustic ASW (R&D) Task Group (Acting)
Dr. J. C. Munson	Superintendent, Acoustics Division
Mr. R. J. Bobber	Superintendent, Underwater Sound Reference Division
Dr. V. J. Linnenbom	Superintendent, Ocean Sciences Division
Mr. J. A. Kies	Superintendent, Ocean Technology Division (Acting)

SHIP FACILITY GROUP

Basic Responsibilities

The Ship Facility Group is responsible for coordinating and providing ship services, sea-going facilities, and specialized expertise common to and required by the at-sea experiments of Research Divisions under the Associate Director of Research for Oceanology.

Key Personnel

<i>Name</i>	<i>Title</i>
Mr. A. L. Gotthardt	Head, Ship Facility Group

ARGUS ISLAND

- ACOUSTIC WARFARE
- LARGE APERTURE SYSTEMS
- PHYSICAL ACOUSTICS
- SIGNAL PROCESSING
- TRANSDUCER
- PROPAGATION
- SHALLOW WATER SURVEILLANCE

CREEPING WAVE PHENOMENA

Basic Responsibilities

The Acoustics Division has major responsibility for basic research and development in undersea acoustic surveillance. The spectrum of work covered in the program includes theoretical acoustics, system concepts, validation of operational concepts, and systems analysis. The Division also conducts theoretical and experimental research programs in physical acoustics, ocean acoustics, and predictive oceanography to develop theory and models of the interaction of acoustics with structures and the ocean environment for the Navy undersea warfare programs and for research and development programs of the Division in the fields of transducers, signal processing, and acoustic warfare. The Division works with research programs outside the Division, such as materials, oceanography, and deep ocean technology, to provide these supporting disciplines with information on long-range material and on environmental data and technology needs, and to obtain cooperation on joint programs which must cross disciplinary lines.

Staff Activities

System Engineering

Support and ship facility
Acoustic sources
Engineering research
Sea spider motion studies

Systems Analysis

Systems studies
Strategic and tactical systems planning
and evaluation

Branches

Acoustic Warfare

Acoustic countermeasure techniques
Surveillance system countermeasures

Shallow Water Surveillance

Boundary interactions

Large Aperture Systems

Active target detection and classification
Propagation, coherency, and wave front
behavior
Low frequency monostatic and bistatic
reverberation studies

Transducer

Basic radiation theory
Electroacoustic modeling
Transducer physical models
Transducer mathematical models
Calibration of large transducer arrays
Transducer materials research

Propagation

Long-range propagation models
Application of low-range low-frequency
propagation
Scattering from ocean bottom, surface,
and volume
Natural and man-made noise

Physical Acoustics

Microacoustics
Flow acoustics
Ultrasonics

Signal Processing

Signal processing and display
Information processes for underwater acoustics

Key Personnel

<i>Name</i>	<i>Title</i>
Dr. J. C. Munson	Superintendent
Mr. A. T. McClinton	Head, System Engineering Staff
Mr. R. R. Rojas	Head, Advanced Undersea Surveillance Program
Mr. F. C. Titcomb	Head, Systems Analysis Group (Acting)
Mr. R. H. Mathes	Head, Acoustic Warfare Branch
Mr. R. H. Ferris	Head, Shallow Water Surveillance Branch (Acting)
Dr. W. G. Neubauer	Head, Physical Acoustics Branch (Acting)

- UNDERWATER ELECTROACOUSTIC TEST & EVALUATION

UNDERWATER SOUND REFERENCE DIVISION,
ORLANDO, FLORIDA

HIGH-FREQUENCY LABORATORY

ANECHOIC TANK

LEESBURG FACILITY -
CALIBRATION BARGE

* Indicates collateral duty as Assoc. Superintendent.

Basic Responsibilities

The Underwater Sound Reference Division is a focal point in the Navy for standardization in the science and technology of underwater sound measurements. Its research and development program is aimed at expanding the state of the art and providing Navy in-house expertise. Reference calibration measurements in a large complex of specialized facilities and calibrated standard transducers are available to all naval activities and contractors in support of undersea warfare programs.

Research and Development Branches

Methods and Systems

Calibration theory
Measurement methods
Digital and analog systems
Acoustic absorption
Cavitation studies

Standards

Transducer materials
Electroacoustic standards
Acoustic sources
Specialized electroacoustic transducers
Vibration analysis techniques
Standard loan services

Measurements

Standard calibration services
Sonar transducer test and evaluation
Measurements on acoustic materials
Simulated deep-submergence measurements
Measurement facility development

Key Personnel

<i>Name</i>	<i>Title</i>

- CHEMICAL OCEANOGRAPHY
- MARINE BIOLOGY & BIOCHEMISTRY
- NUCLEAR TECHNIQUES
- PHYSICAL OCEANOGRAPHY
- AIR/SEA INTERACTIONS
- GEOPHYSICS AND SEA FLOOR

NANSEN BOTTLE
PREPARATION

Basic Responsibilities

The Ocean Sciences Division conducts basic and applied research and development in the ocean sciences. Included are studies of the physics, chemistry, geology, and biology of the oceans directed toward an improved understanding and use of the oceans as the major operating environment of the Navy. Practical results lead ultimately to improvement in the design and effectiveness of naval equipment, materials, and systems.

Branches

Applied Oceanography

Nonacoustic detection of submarines
Hydrodynamics of submerged bodies
Infrared characteristics of the ocean

Atmospheric Physics

Air-Sea interactions
Atmospheric Dynamics
Cloud Physics
Weather instrumentation

Chemical Oceanography

Physical and analytical chemistry of seawater, dissolved gases, and marine sediments

Physical Oceanography

Hydrodynamics and turbulence of the oceans
Marine geophysics

Marine Biology & Biochemistry

Biodegradation of materials in the marine environment
Organic chemistry of seawater
Biochemistry of marine organisms

Nuclear Techniques

Application of nuclear techniques to oceanography

Key Personnel

<i>Name</i>	<i>Title</i>
Dr. V. J. Linnenbom	Superintendent
Dr. A. H. Schooley	Senior Research Scientist
Dr. M. F. M. Osborne	Consultant

Ocean Technology Division

Dr. J. P. Walsh

MIZAR

BOTTOM STUDIES

- OCEAN ENGINEERING
- OCEAN MATERIALS CRITERIA
- OCEAN STRUCTURES

PITTING SEVERE FLAKING
HYDROSTATIC PRESSURE
FAILURE STUDIES

UNDERWATER CAMERA

Basic Responsibilities

The Ocean Technology Division researches, develops, and applies specialized equipment, instrumentation, techniques for conducting ocean and ocean-floor operations, and evolves operational technology for advanced systems. The Division utilizes advanced materials and design technology for engineering optimization of required equipment. It also conducts research activities in select areas of ocean technology with coupling and support activities related to other ongoing research and development in these and other fields of interest. This Division in conjunction with other Divisions of NRL and out-of-house agencies brings to bear on crucial problems the collective expertise available.

Branches

Ocean Engineering

Deep-ocean instrumentation and investigations
Hydrodynamics of deep towing
Reliable acoustic paths

Ocean Materials Criteria

Fracture mechanics and fracture strength
Plastic flowing
Compression failure mechanisms
Armor research and development
Deep submergence materials-structures
Missile component failure
Nondestructive testing

Ocean Structures

Shipboard shock fundamentals
Shock protection for weapons systems
Methods for design against shock
Fracture mechanics design studies
Developmental studies of prototypes
Shock strength of materials
Shock propagation and instrumentation
Hydromechanic studies

Key Personnel

Part 4
The Support Services Department

Captain Seymour N. Ross, USN
Director of Support Services

Captain Seymour N. Ross is a native of Newburgh, New York. He received his commission and B.S. degree from the U.S. Naval Academy in 1947; a Nav.E. degree from the Massachusetts Institute of Technology in 1952; and in 1957, a B.S. in metallurgy from the Carnegie Institute of Technology. He has also done graduate work in international relations at the University of California.

Prior to coming to NRL, Captain Ross served as Fleet Maintenance Officer with the staff of Commander-in-Chief, U.S. Naval Forces Europe, with Headquarters in London, England (1967-1969). As additional duty, he was Assistant Supervisor of Salvage, Europe. Before that he was the Planning and Estimating Superintendent at the Boston Naval Shipyard (1966-1967). Captain Ross also served tours of duty with the Shipbuilding Liaison Office at The Hague, The Netherlands (1963-1966); in the Design and Research and Development Divisions of the Bureau of Ships (1959-1963); and in the Development Divisions of the Office of the Chief of Naval Operations (1957-1959).

Captain Ross became Director of Support Services on September 30, 1969. In this position he administers the Supply, Technical Information, Engineering Services, Public Works, and Chesapeake Bay Divisions; the Medical Staff; the Management Engineer; and the Patent Counsel, all of which provide a wide spectrum of services in support of the Laboratory's research and development program.

Captain Ross is a member of Sigma Xi, the Society of Naval Engineers, and the Marine Technology Society.

THE SUPPORT SERVICES DEPARTMENT

The Director of Support Services is a Naval Officer with the appropriate rank, training, and experience. His primary responsibility is the supervision, coordination, and control of the administrative and service operations required in support of the work of the Research Department.

Key Personnel

<u>Name</u>	<u>Title</u>	<u>Code</u>
CAPT S. N. Ross, USN	Director of Support Services	1100
Mr. S. L. Cohen	Management Engineer	1103
Mr. A. L. Branning	Patent Counsel	1104
LT M. D. Lieberman, MC, USN	Medical Officer	1106
CDR O. L. Woodbury, SC, USN	Supply Officer	1900
Mr. E. L. Smith	Head, Technical Information Division	2000
CDR R. B. Hayman, USN	Engineering Services Officer	2300
CDR C. F. Cook, Jr., CEC, USNR	Public Works Officer	2500
CDR R. S. Mason, USN	Chesapeake Bay Division Officer	2700

OFFICE OF THE MANAGEMENT ENGINEER

Basic Responsibilities

The Office of the Management Engineer provides staff support to management officials of the Laboratory in matters of administrative operations, management control, and facilities planning.

Key Personnel

<i>Name</i>	<i>Title</i>
Mr. S. L. Cohen	Management Engineer
Mr. A. M. Toscano	Deputy Management Engineer

Mr. S. L. Cohen

Personnel Complement

On Board: 8

OFFICE OF PATENT COUNSEL

Basic Responsibilities

The Office of Patent Counsel provides services concerning inventions, patents, trademarks, copyrights, and other related matters. Patent applications are prepared, filed, and prosecuted on NRL inventions of significance to the Government. The Patent Counsel serves as consultant and adviser on patent and data clauses in R&D and procurement contracts. Assistance is provided the Research Department through state-of-the-art searches in the patent literature pertinent to particular research problems.

Key Personnel

<i>Name</i>	<i>Title</i>
Mr. A. L. Branning	Patent Counsel
Mr. R. J. Erickson	Deputy Patent Counsel

Mr. A. L. Branning

Personnel Complement *

On Board: 22

*Includes personnel physically located at ONR headquarters.

MEDICAL STAFF

Basic Responsibilities

The Medical Staff provides a comprehensive industrial health program. Its members serve in an advisory capacity on the Radiological, Safe Driving, Eye Hazard, and other Laboratory Committees, as directed.

Key Personnel

<i>Name</i>	<i>Title</i>
LT M. D. Lieberman, MC, USNR	Medical Officer
Mrs. H. N. East, RN	Occupational Health Nurse

Personnel Complement

(Civilian 3, Military 4)

LT M. D. Lieberman

Supply Division

CDR O. L. Woodbury, USN

- STAFF SERVICES
- PURCHASE AND CONTROL
- MATERIAL
- TECHNICAL

Basic Responsibilities

The Supply Division provides service functions to the Laboratory including the operation of supply issue stores, procurement of equipment, material, and contractual services; receipt, inspection, and delivery of material and equipment; storage of inactive laboratory equipment; packing; shipping; traffic management; and survey and disposal of excess and unusable property.

During FY-1968 the Supply Division occupied 204,351 square feet of building space; its stores inventory value averaged \$937,000; procurements totalled \$45,700,000 stores issued totalled \$2,400,000 and disposals totalled \$3,400,000.

Key Personnel

<i>Name</i>	<i>Title</i>
CDR O. L. Woodbury, SC, USN	Supply Officer
LT J. R. Stafford, SC, USN	Assistant Supply Officer
Mr. A. S. Horton	Legal Counsel
Mr. L. Woods	Management Assistant
Mrs. P. Griffin	Head, Staff Services Branch
Lt J. R. Stafford, SC, USN	Head, Purchase Branch (Acting)
Mrs. V. S. Thomas	Head, Receipt Control Branch
Mr. H. W. Dickinson	Head, Material Branch
Mr. R. R. Black	Head, Technical Branch

Personnel Complement

On Board: 148

(Graded 89, Ungraded 57, Military 2)

Technical Information Division

Mr. E. L. Smith

- EDITORIAL
- LIBRARY
- GRAPHIC ARTS
- PERIODICALS
- PUBLIC AFFAIRS
- NAVY SCIENCES RESEARCH DATA - ONR
- CORRESPONDENCE AND RECORDS MANAGEMENT
- TECHNICAL EXHIBITS

Basic Responsibilities

The Technical Information Division plans and administers the Laboratory's program of preparing and disseminating the results of scientific research through official publications, scientific journals, presentations, films, exhibits, and news media. It provides centralized professional services to both NRL and ONR in writing, editing, printing, exhibits, photography, graphic arts, public affairs, documentation, language-translations, and mail-records services. It operates one of the Navy's largest integrated technical libraries with holdings of 200,000 bound volumes and 350,000 technical reports.

Key Personnel

<i>Name</i>	<i>Title</i>
Mr. E. L. Smith	Head, Technical Information Division

Personnel Complement

On Board: 392

(Graded 47, Ungraded 343, Military 2)

*On ceiling of Naval Facilities Engineering Command (Chesapeake Division)

Chesapeake Bay Division

CDR R. S. Mason, USN

Basic Responsibilities

The Chesapeake Bay Division provides and maintains facilities and services for test, development and evaluation of radar, radio, and fire control equipment. It also services and supports all research projects conducted at the Chesapeake Beach and Tilghman Island complexes of NRL.

The Physical Plant

Located in a relatively clear area away from any congestion or industrial interference, the main site, at Chesapeake Beach, covers 174.9 acres containing 197 structures of various size and construction, six of which are major laboratory buildings. There is over 200 feet of usable dock space with a water depth of 4 to 7 feet, located 2 miles north of the main site. Off-site facilities include the Tilghman Island Facility, located directly across the Bay from CBD at a distance of about 10 miles; the Theodolite House, at North Beach; and the Off-shore Platform, approximately 2 miles southeast of CBD in the Bay.

One 36-foot diesel-powered boat and five wherries are used in support of research projects and for transportation between off-site facilities. Housing includes 24 public quarters and one dormitory.
