Report Documentation Page				Form Approved OMB No. 0704-0188	
Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

This document has been prepared as
a reference source of factual information
about the Naval Research Laboratory.

December 31, 1977

The Naval Research Laboratory has a continuing need for physical scientists, mathematicians, engineers, and supporting personnel. Vacancies are filled without regard to race, creed, color, sex, or national origin. Information concerning current vacancies will be gladly furnished upon request. Address all such inquiries to the Civilian Personnel Office (Code 1800), Naval Research Laboratory, Washington, D.C. 20375.

Mission . . .

To conduct a broadly based multidisciplinary program of scientific research and advanced technological development directed toward new and improved materials, equipment, techniques, systems, and related operational procedures for the Navy. In fulfillment of this mission, the Naval Research Laboratory:

(a) Initiates and conducts scientific research of a basic and long-range nature in scientific areas of special interest to the Navy.

(b) Conducts exploratory and advanced technological development deriving from or appropriate to the scientific program areas.

(c) Within areas of technological expertise, develops prototype systems applicable to specific projects.

(d) Performs scientific research and development for other Naval commands and, where specially qualified, for other agencies of the Department of Defense and, in defense-related efforts, for other Government agencies.

(e) Upon request from appropriate Naval commands, assumes responsibility as the Navy's principal R&D center in areas of unique professional competence.

(f) Provides to the Navy and its contractors standardized techniques and procedures for measurements and the accurate calibration of standard instruments in areas of special Navy needs.

(g) Furnishes scientific consultative services for the Navy and, where specially qualified, for other agencies of the Department of Defense and, in defense-related efforts, for other Government agencies.

(h) Provides to the Navy determinations of performance characteristics of developmental and prototype devices through limited engineering test and evaluation services.

Introduction to NRL . . .

The Naval Research Laboratory (NRL) was officially established on July 2, 1923, as the Naval Experimental and Research Laboratory. NRL still occupies its original site on the banks of the Potomac River in the southwest sector of Washington, D.C. Over the past 54 years, the facility has grown from a modest beginning of five buildings and a few hand-picked scientists representing two major research areas--radio and underwater sound--to its present status as the "Corporate Laboratory of the Navy." Current resources include a Main Laboratory expanded to some 52.2 hectares (129 acres), about 20 field sites, more than 400 buildings and structures, and a work force in the neighborhood of 3600.

The Laboratory exists today as it was originally conceived more than a half century ago--that is, with the overall management under the direction of a naval officer, designated the Commanding Officer; and with the scientific research performed under the guidance of a civilian, the Director of Research. The organization chart shows the internal structure of the Laboratory to be divided into three main areas: the Office of the Commanding Officer with its staff functions; the Support Services Department with its staff functions and five supporting divisions; and the Research Department with its four major areas of research--each headed by an Associate Director of Research--comprising 16 research divisions.

Current Research . . .

The following 14 headings represent broad fields of NRL research. Underneath each are more specific topics that are being investigated for the benefit of the Navy and other sponsoring organizations. Some details of this work are given in NRL's Review, published annually, and in the Report of NRL Progress, published monthly. More specific details are published in reports on individual projects provided to sponsors and presented when feasible as papers for professional societies or their journals.

Communications

- Satellite Communications
- Secure Communications
- Computer Architecture
- Communication Intercept and Jamming

Countermeasures

- Decoys (RF and IR)
- Repeaters
- Laser Countermeasures
- Optical Guidance Systems
- Jammers

Device Technology

- Integrated Optics
- Radiation-Hardened Electronics
- Microelectronics

Directed Energy Devices

- High-Energy Lasers
- Chemical Laser
- Laser Propagation
- Radiation Damage
- High-Power Microwave Sources
- Charged-Particle Devices

Energy Conversion

- Kinetics of Combustion Processes
- Electrochemical Power Sources
- Fusion

Environmental Effects

- Oceanography
- Underwater Acoustic Propagation
- Meteorological Effects on Electro-optical Systems
- Air Quality in Confined Spaces
- Extravisible Optical and Radio Background in Space.
- Solar Activity
- Ionospheric Behavior

Hydrodynamics

- Low-Drag Bodies
- Numerical Simulation of Naval Platforms
- Magnetohydrodynamics Code Generation

Materials

- Electronic Properties
- Special Purpose Polymers
- Failure Criteria
- High-Flux Environments
- High-Temperature Environments

Navigation

- Clock Development
- Navigation Technology Satellite - 2
- Global Positioning System (GPS) Support

Sensor Systems

- Acoustic & Electromagnetic COMINT, ELINT & ESM
- Focal Plane Imagers
- Microwave Remote Sensing

Sonar Standards

- Calibration
- Secondary Standards

Surveillance Systems

- Properties of the Medium
- Target Characteristics
- Sensors

Undersea Technology

- Autonomous Vehicles
- Deep Ocean Search
- Bathymetric Technology
- Anechoic Coatings

Weapons Guidance

- Global Positioning System (GPS) Guidance
- Optimized Optical Seeker
- Radar Guidance

Recent Accomplishments in Science and Technology . . .

Acoustics

Developed and validated a normal-mode propagation program to predict sonar performance in acoustically shallow water.

Communications

Delivered a Fleet Satellite Communications (FLTSATCOM) Onboard Processor space qualification model.

Selected the linear predictive filter for the Army-Navy-Air Force Narrowband Terminal.

Developed technology used by Army/Navy Committee to select commercial instruction set for new military computers.

Countermeasures

Developed the Navy's Ultraviolet Technology Program.

Developed the infrared countermeasures technique and showed it to be effective against a broad class of electrooptically guided, air-to-air missile scanners.

Developed advanced radar-reflective materials and deployment methods for ship and aircraft protection.

Designed lightweight electronic countermeasures payload for ship-deployable remotely piloted vehicles.

Device Technology

Radiation-hardened the FLTSATCOM System Onboard Processor.

Explained the intrinsic optical losses in laser optics at room temperature in terms of the thermodynamic properties at the glass transition temperature.

Produced first ion-implanted indium phosphide field-effect transistor.

Developed single TRAPATT which produced 63 W with 30 to 35% efficiency at 2 GHz by using 50- μ s pulses--highest efficiency achieved with this pulse width.

Developed and tested a new type of thermionic dispenser cathode having controlled porosity surface produced by photolithography techniques.

Developed a new low-energy electron reflection (LEER) technique which separates semiconductor wall function changes into surface dipole effects and band structure effects.

Completed a comprehensive characterization of neutron irradiation effects in charge-coupled devices.

Developed and demonstrated the first rugged single-mode optical fiber-to-integrated optical circuit coupler.

Demonstrated the first microoptic branching wave-guide modulator.

Directed Energy Devices

Measured the thermal coupling coefficients for a variety of metals and ceramics subjected to high-powered continuous-wave and pulsed infrared lasers.

Achieved pulses of 4 GW of power at S band with a 30% device efficiency by using a new experimental device with relativistic electron beams in a magnetron configuration.

Completed and put into operation a new high-current electron-beam accelerator based on a novel auto-accelerator concept. The concept promises major reduction in size and weight for high-current, high-voltage electron accelerators.

Developed UV-preionized rare-gas-halide lasers in XeF, KrF, and AtF.

Demonstrated 1- μ s pulses in electron-beam pumped rare-gas-halide lasers.

Measured and calculated the first₁ long-path high-resolution (0.08 cm^{-1}) absorption spectrum of the atmosphere.

Operated a gas filter correlation spectrometer as a measure of total water content along a transmission path.

Energy Conversion

Developed a laboratory combustion system for measuring combustion species, efficiencies, and temperatures as a prelude to a full-scale jet engine testing facility.

Environment

Mapped soft x-ray background and detected gamma-ray sources in space.

Determined sources of atmospheric, interplanetary, cometary, and astronomical ultraviolet emission.

Achieved precise time transfer and detailed mapping of radio sources with VLBI (very long baseline interferometry).

Demonstrated response of geomagnetic fluctuations to solar coronal events.

Habitability

Developed a central atmosphere monitor system which allows submarine crews to maintain their ambient atmosphere reliably; it is being installed in all nuclear-powered submarines.

Hydrodynamics

Developed criteria and efficiency design methodology for optimum laminar flow body profiles.

Developed computational methods to predict accurately the flow-induced motions of mooring stays.

Developed a 2-D triangular mesh hydrocode which makes it possible to handle the problem of breaking surface waves in a practical numerical simulation of the passage of a semisubmerged object through the water.

Developed an improved magnetohydrodynamics code to predict effects of high-altitude nuclear bursts.

Developed and is now testing a multi-dimensional, "slow flow" algorithm that retains fluid compressibility effects without sound-speed computational limitations.

Lasers

Showed that a glass laser, suitable for demonstrating the feasibility of laser-initiated fusion, can now be built at about one-third the cost of the previous best design; this laser has much higher pulse repetition rates and makes lower demands on the capacity of the optics industry.

Developed a high-efficiency repetitive-pulse 16- μm CO_2 laser, key element for laser separation of uranium isotopes.

Produced a laser-induced separation of rare earth mixtures in the liquid phase; major implications occur in management processes for nuclear waste.

Materials

Developed fluorepoxy and fluorourethane polymers as coatings for Navy ships and vehicles.

Demonstrated that addition of very small quantities of saligenin to high-energy explosives results in significant desensitization.

Used ion implantation to harden infrared window materials against effects of high-energy lasers.

Used laser welding to increase considerably the fracture toughness of welds.

Developed a new high-temperature ferritic alloy for use in a new liquid-metal fast breeder reactor.

Developed ceramic fractography to determine the causes of failure in acoustic source transducers, ceramic turbine materials, and MgF_2 IR dome materials.

Navigation

Will deliver engineering development model cesium-beam frequency standards, based on the Navigation Technology Satellite-2 (NTS-2) flight prototypes, to the Air Force contractor in 1977 for flight on the GPS satellites.

Will deliver competitive advanced development model hydrogen maser frequency standards in late 1977 for evaluation as flight candidates for advanced GPS satellites.

Launched NTS-2 in mid-August 1977.

Ocean Thermodynamics

Obtained the first near real-time, three-dimensional description of the thermal variability of the upper kilometer of the ocean.

Sonar Standards

Developed and installed computer-controlled high-power pulsed-emittance measurement system for calibration and evaluation of underwater transducers.

Designed and evaluated a longitudinal resonance magnetostrictive transducer

by using an alloy of iron and rare earth.

Surveillance Systems

Demonstrated that HF over-the-horizon (OTH) radar can measure ocean wave height and delineate storms.

Developed 90-GHz remote imaging system.

Weapons Guidance

Developed a novel concept for hardening TV guided missiles against electrooptical countermeasures.

Patents and Papers

In breaking new ground during many of these projects, NRL scientists and engineers developed many improved devices and techniques. For such innovations, the Laboratory was awarded 67 patents during 1976. Since its founding, NRL has earned 2590 patents.

The practical results of work on the projects listed above and on others that are undertaken in response to sponsor requests are made known and available not only to various Navy units, but also

to the Army, Air Force, the Defense Research Projects Agency, the Nuclear Regulatory Commission, and other Federal organizations. Moreover, NRL's research is reported to the scientific community in hundreds of presentations, journal articles, and reports every year. During the year ending December 31, 1976, NRL staff members delivered approximately 2000 presentations and published more than 1300 reports and other kinds of publications at NRL and in periodicals and books.

Major Facilities and Capabilities

Listed by Divisions and Specialized Units

Research Department

Research Computation Center

Texas Instruments Advanced Scientific Computer, an extremely large, fast, and powerful data processing system
Off-Line CRT Plotter Facility
DEC-10 Timesharing Computer
Analog-to-Digital Data Translation Facility

Electronics Technology Division

Silicon Integrated Circuit Processing Facility
Microscopes and electrooptical devices
Crystal-growing facilities
A variety of electronic testing and analysis facilities

Radar Division

MADRE Over-the-Horizon Radar
Radar Area Measurement System
Airborne Multifrequency Microwave Radiometer
Air-to-Ground Simulation Facility
SEA-ECHO HF Radar Facility (San Clemente, Calif.)
Interpretation Facility for Satellite Aperture Radar (SAR)
Radar Research and Development Activity
Roll and Pitch Platform

Communications Sciences Division

IFF Ground Station
Microwave Space Research Facility
Satellite Communications Antenna Facility
Computer Architecture Research Facility
HF Modem and Channel Simulation Facility
SIGINT Analysis Facility
Narrow-Band Special Processive Development and Simulation Facility

Optical Sciences Division

Optical Warfare Laboratory (including CYCLOPS)
Infrared Mobile Optical Radiation Laboratory
Micrometeorological Equipment Barge

Tactical Electronic Warfare Division

Mobile Infrared Signature Measuring and Recording Facility
Hybrid RF/IR Missile Seeker Simulation Facility
Central Target Simulation Facility for developing, testing and evaluating EW systems and techniques (under construction)

Laboratory for Structure of Matter

Two x-ray diffractometers
Electron diffractometer

Radiological and Environmental Protection Staff

Neutron Irradiation Facility
X-Ray and Gamma-Ray Irradiation Facility

Chemistry Division

Analytical Chemistry Facility
Laser Chemistry Facility
Surface Analysis and Lubrication Research Facility
Paint and Coating Facility
Filament Winding Facility
Mechanical Characterization of Polymers Facility
Alternate and Petroleum-Derived Fuels Facility
Combustion Research Facilities
Facilities for research in colloids, adhesion, aerosols and filters, gas absorption, plastics, and other aspects of chemistry

Engineering Materials Division

High-Level Radiation Laboratory
Computerized Mechanical Test Laboratory
Electron microscopes and other microanalytical equipment

Material Sciences Division

High-Field Magnet Facility
High-pressure, low-temperature facilities
Laser Hardening/Processing Test Facility (expected to be on-line in January 1978)
Extensive facilities for synthesis and characterization of optical glass compositions and for the fabrication of optical fibers

Radiation Technology Division

1.93-m (6.3-ft), 75-MeV Sector-Focusing Cyclotron
60-MeV Linear Electron Accelerator (Linac)
5-MeV Electrostatic Charged Particle Accelerator (Van de Graaff)
2-MeV Van de Graaff Accelerator

Laboratory for Cosmic Ray Physics

Cosmic Ray Physics Laboratory
Nuclear Emulsion Processing Facility

Spacecraft Technology Center

Anechoic Chamber (for satellite checkout)
Thermal Vacuum Chamber
Two smaller thermal vacuum chambers
Two miscellaneous vacuum chambers
Spin Balance Facility
Acoustics Facility (for testing)
Vibration Facility
Clean-room facilities

Space Science Division

E. O. Hulburt Center for Space Research
Radio telescope with 25.6-m (84-ft) antenna at Maryland Point
Other antennas for radio astronomy

Plasma Physics Division

Gamble I and II High-Voltage Pulsed Power Generators
PHAROS II Two-Beam Neodymium-Glass Laser and Target Facility

Space Systems Division

Hypervelocity Gun (listed under Chesapeake Bay Division)

Two other high-power guns for ballistics research
Navigation Technology Satellite tracking stations
Digital Optical Processing Laboratory

Acoustics Division

Large tank (a former pool nuclear reactor) instrumented for investigating target acoustic echo characteristics
Tank 9.1 m (30 ft) in diameter by 6.7-m (22-ft) deep for precise studies of transducer and other underwater devices
USNS HAYES. The Division is a major user of this oceanographic ship, which is listed later under "Mobile Platforms."

Underwater Sound Reference Division

2.8-hectare (7-acre) lake with a large pier and instrumentation for underwater acoustic studies
Anechoic tank for simulating ocean depths up to 700 m (2297 ft)
Smaller pressure vessels for simulating depths to 7000 m (22,966 ft)
Field station at Bugg Spring with floating platform and instrumentation for acoustic measurements

Ocean Technology Division

Shock and Vibration Laboratory Wave Channel: a 30-m (98-ft) tunnel with fan and mechanical wave-maker instrumented for generating and studying waves and their effects

Support Services Department

Engineering Services Division

Mechanical, electronic, and project engineering and design
Manual and computer-aided drafting
Shops for machining, sheet metal, welding, casting, plating, plastics, printed circuits, electronic assembly, and other fabrication services
A wide variety of testing and repair capabilities
Vendor liaison and surveillance

Supply Division

Procurement, storage, distribution, and disposal of materials and equipment required by the Research Department

Public Works Division

Construction, engineering, repair, and other services to maintain and improve NRL's physical facilities

Technical Information Division

Editorial, graphic, photographic, printing, and exhibit services
Technical Library

Chesapeake Bay Division (CBD)

Radar Experimental Test Site, which includes a variety of radars; ancillary equipment for test and evaluation of equipment, concepts and techniques; and over-water ranges
Radio telescope with 45.7-m (150-ft) antenna dish
Communications facilities for transmission to and from land, sea, and air
Hypervelocity gun for ballistics research
Ship Motion Simulator with 11-metric-ton (12-ton) payload capacity
Fire Test Facility for fire extinguishment research

Mobile Research Platforms

Oceanographic ship USNS HAYES, a 3475-metric ton catamaran
Two-engine S-2D "Tracker" aircraft
Two four-engine turboprop P-3A "Orions"
Four-engine EC-121K Super Constellation instrumented for electronic warfare research

Office of the Commanding Officer

The Commanding Officer of the Naval Research Laboratory is responsible for the overall management of the Laboratory; he exercises the usual functions of command including compliance with legal and regulatory requirements and liaison with other military activities, as well as general supervision of the timeliness and effectiveness of the technical work and of the support services.

The Directors of the Laboratory's two major departments, Research and Support Services, report to the Commanding Officer, and he is further assisted by the Laboratory's major staff offices: the Chief Staff Officer, the Comptroller, the Civilian Personnel Officer, the Management Officer, the Deputy Equal Employment Officer, the Public Affairs Officer, and an Executive Assistant.

Commanding Officer Naval Research Laboratory

Captain L. M. Noel

CAPTAIN L.M. NOEL [REDACTED], [REDACTED] He attended Cornell University in Ithaca, New York, before entering the U.S. Naval Academy in 1945. He was graduated and commissioned an Ensign in June 1949.

CAPTAIN NOEL began graduate education in electronics at the U.S. Naval Postgraduate School at Monterey, California, but then shifted to an applied science program under ONR sponsorship at Princeton University, Princeton, N.J., where he received an M.A. Degree in mathematical statistics in 1956.

He has served in various shipboard assignments on carriers and minesweepers including duty in Korean waters during the Korean War. In 1958, CAPTAIN NOEL was designated for engineering duty and assigned to the Mare Island Naval Shipyard as Fleet Ballistic Missile (FBM) Project Officer in the construction of USS THEODORE ROOSEVELT (SSBN-600) and USS ANDREW JACKSON (SSBN-619). Additional assignments in the FBM program included: Design Project Officer for SSBN-616 and 640 Classes at Supervisor of Shipbuilding, Groton, Conn. (1961-1965), and Senior Special Projects Representative at Cammell-Laird's Shipyard, Birkenhead, England (1965-1968) in connection with installation and test of the POLARIS Weapon System on British FBM submarines HMS RENOWN (SSBN-02) and HMS REVENGE (SSBN-04).

In 1968, CAPTAIN NOEL reported to the Strategic Systems Project Office as Deputy Technical Director. In this capacity, he served during development and deployment of the POSEIDON Weapon System and development of the TRIDENT Weapon System.

CAPTAIN NOEL assumed command of the Naval Research Laboratory on 30 June 1976. He is a member of the Institute of Mathematical Statistics, Tau Beta Pi, and Eta Kappa Nu, and an associate member of Sigma Xi. For his work with the Fleet Ballistic Missile Program he was awarded the Meritorious Service Medal, and for the POSEIDON and TRIDENT Strategic Weapons Systems, the Legion of Merit.

CAPTAIN NOEL is married to the former Sally Gibson of Ithaca, N.Y. The Noels have four children, Lionel Jr., Dorothy, Andrew, and David, and reside in Falls Church, Va.

OFFICE OF THE COMMANDING OFFICER

Key Personnel

<u>Name</u>	<u>Title</u>	<u>Code</u>
CAPT L.M. Noel, USN	Commanding Officer	1000
Mr. S.L. Cohen	Executive Assistant	1001
Mr. W.H. Webster	DEEO Officer	1003
Mr. J.E. Sullivan	Public Affairs Officer	1005
Mr. A.M. Toscano	Director, Management Office	1100
CAPT E.L. Ebbert, USN	Chief Staff Officer	1200
Mr. P.F. Kennedy	Comptroller	1300
Mr. F.D. Wallace	Director of Civilian Personnel	1800
CAPT K.P. Hughes, USN	Director of Support Services	2000
Dr. A. Berman	Director of Research	4000

EXECUTIVE ASSISTANT

Basic Responsibilities

The Executive Assistant provides the Commanding Officer with executive-level staff and managerial support in connection with the duties, interests, and activities of the Commanding Officer.

Mr. S. L. Cohen

DEPUTY EQUAL EMPLOYMENT OPPORTUNITY OFFICER

Basic Responsibilities

The Deputy Equal Employment Opportunity Officer serves as an advisor to the Commanding Officer on EEO matters; conducts surveys and studies relating to NRL's Affirmative Action Plan and recommends methods for achieving its goals of a fully integrated work force; acts as ex officio member of the EEO Committee; and assists the EEO counselors in settling initial complaints of alleged discrimination.

Mr. W. H. Webster

PUBLIC AFFAIRS OFFICER

Basic Responsibilities

The Public Affairs Officer advises the Commanding Officer and staff on all public affairs matters including external and internal relations; serves as the Commanding Officer's principal assistant in public affairs matters; supervises the Laboratory's public affairs programs, and serves as the focal point for Laboratory implementation of the Freedom of Information Act.

Mr. J. E. Sullivan

MANAGEMENT OFFICE

Basic Responsibilities

The Management Office provides to the Commanding Officer, Director of Research, Director of Support Services, and all other managers, analysis and advice on concepts, systems, procedures, and techniques that improve the way broad management functions are carried out at the Laboratory. The Office is further responsible for (1) interpreting directives from higher authorities and preparing documentation or recommending appropriate action for responses, (2) ensuring that Laboratory directives are consistent with the policies of NRL and higher authorities, and that they are written to convey the meanings intended, (3) conducting programs such as Cost Reduction, Position Management, and Commercial/Industrial Activities, (4) providing Congressional and OMB liaison, (5) conducting in-house surveys, (6) coordinating and maintaining logistic support agreements, and (7) coordinating inspections and audits of NRL by outside groups.

Key Personnel

<u>Name</u>	<u>Title</u>
Mr. A.M. Toscano	Director, Management Office

Mr. A. M. Toscano

Civilian Personnel

Full-Time Permanent: 9

CAPT E. L. Ebbert, USN

Chief Staff Office

- OPERATIONAL SERVICES
- SECURITY
- CLASSIFIED MATERIAL CONTROL
- SCIENTIFIC AND TECHNICAL LIAISON

Basic Responsibilities

The Chief Staff Officer provides a military staff to the Commanding Officer, Naval Research Laboratory, for the purpose of assisting the Commanding Officer in the military aspects of the management of the Laboratory. He conducts liaison with DOD and Navy Commands and activities and the operating forces of the Navy in support of NRL research and development operations and the coordination of the military application of the scientific work of the Laboratory. The staff supports four multiengine Laboratory aircraft and obtains and coordinates such additional air, surface, and subsurface services as are required. The Chief Staff Office is also responsible for personnel and plant security, communications, and control of classified material.

Key Personnel

<u>Name</u>	<u>Title</u>
CAPT E.L. Ebbert, USN	Chief Staff Officer
Mr. J.R. Gallagher	Administrative Officer
LT R.S. Cross, USN	Communications/Military Personnel Officer
CDR W.A. Janes, USN	Operational Services Officer
CDR C.L. Hanson, USN	Administrative/Security Officer
Mr. W.C. Bryan	Head, Special Activities Office
Mr. R.E. Abercrombie	Head, Security Section
Mr. G.L. Berkin	Classified Material Control Officer
CDR R.N. Featherston, USN	Scientific and Technical Liaison Officer
CDR R.F. Carlson, USN	OIC, NRL Flight Detachment (Patuxent)

Civilian Personnel

Full-Time Permanent: 81

Military: 81

Mr. P. F. Kennedy

Office of the Comptroller

INTERNAL
REVIEW

BUDGET OFFICE

COMPUTER

- BUDGET
- ACCOUNTING
- DISBURSING
- DATA PROCESSING

Basic Responsibilities

The Comptroller is the financial adviser to the Commanding Officer and other officials of the Laboratory. He administers the financial program of the Laboratory.

Key Personnel

<u>Name</u>	<u>Title</u>
Mr. P.F. Kennedy	Comptroller
Mrs. L.M. Boehlert	Administrative Officer
Mr. R.A. Showman	Head, Internal Review Staff
Mr. D.M. Johnson	Budget Officer
Mr. E.S. York	Accounting Officer
Mr. A.E. Thomas	Disbursing Officer
Mr. R.L. Guest	Data Processing Officer

Civilian Personnel

Full-Time Permanent: 85

Mr. F. D. Wallace

Civilian Personnel Office

- PERSONNEL OPERATIONS
- EMPLOYEE DEVELOPMENT
- EMPLOYEE RELATIONS

Basic Responsibilities

The Civilian Personnel Office administers the Laboratory's personnel program, which includes selection, development, promotion, utilization, appropriate recognition, and employee counseling and services for all civilian personnel.

Key Personnel

<u>Name</u>	<u>Title</u>
Mr. F.D. Wallace	Director of Civilian Personnel
Mrs. J. Gandy	Administrative Assistant
Mr. A.F. Osborne	Information Systems Analyst
Mr. D.J. Blome	Head, Personnel Operations Branch
Dr. O.J. Doty	Head, Employee Development Branch
Mr. F. Carter	Head, Employee Relations Branch

Civilian Personnel

Full-Time Permanent: 43

Director of Research

Dr. Alan Berman

Dr. Berman [REDACTED] He received the A.B. degree in physics from Columbia College in 1947 and the Ph.D. degree in physics from Columbia University in 1952.

He began his scientific career in 1952 as a research scientist at the Hudson Laboratories of Columbia University. He became Assistant Director of Hudson Laboratories in 1955, Associate Director in 1957, and Director in 1963. Dr. Berman became Director of Research for the Naval Research Laboratory in May 1967.

Dr. Berman's personal research specialties include the areas of underwater acoustics, oceanography, and signal processing. He has published numerous papers on these and related subjects and has served on many Navy and national-level advisory groups. In addition to providing consultative services for a number of Department of Defense and other Government agencies, he has led several interagency study groups and has served as a consultant to the National Security Council and the Office of Science and Technology Policy.

Dr. Berman has on three occasions served as a visiting scientist at the Admiralty Research Laboratory, Teddington, England (1955, 1957, 1960), and once at the SACLANC ASW Research Center, La Spezia, Italy (1960). He is a fellow of the American Physical Society and the Acoustical Society of America, and is a member of the American Institute of Physics and Sigma Xi.

In 1969 Dr. Berman was awarded the Department of the Navy Superior Civilian Service Award. In 1973 he received the Department of Defense Distinguished Civilian Service Award, and in 1977 he received a personal letter of commendation from the President for his services as a technical advisor to the National Security Council.

Dr. Berman and his wife Charlotte live in Alexandria, Virginia. They have three daughters and two sons.

Key Personnel

<u>Name</u>	<u>Title</u>	<u>Code</u>
Dr. A. Berman	Director of Research	4000
Mr. A.J. Hollings	Head, Research Program Office	4010

Dr. H.Q. North	Associate Director of Research for Electronics	5000
Dr. A.I. Schindler	Associate Director of Research for Materials and General Sciences	6000
Dr. H. Rabin	Associate Director of Research for Space Science and Technology	7000
Mr. R.R. Rojas	Associate Director of Research for Oceanology	8000

RESEARCH PROGRAM OFFICE

Basic Responsibilities

The Research Program Office serves as staff to the research directorate of the Laboratory. It provides an orderly plan for coordinating NRL research programs with those of ONR and other sponsors or potential sponsors throughout the Departments of the Navy, the Army, and the Air Force, the Defense Advanced Research Projects Agency, and other agencies of the government. It also serves as a focal point for program information, for project managers, and other key personnel of sponsoring activities on work in progress or in various stages of planning. The Research Program Office maintains a management information center which serves as a working tool for the Laboratory directorate, and it maintains appropriate records of the Laboratory's research programs.

Key Personnel

<u>Name</u>	<u>Title</u>
Mr. A.J. Hollings	Head, Research Program Office
Mr. R.C. Spragg	Deputy Head, Research Program Office, and Head, Management Information Center Section
Mr. R. Donley	Head, Program Planning and Administration Section
Mr. N. Moglen	Staff Assistant -- ADP

Mr. A. J. Hollings

Civilian Personnel

Full-Time Permanent: 10

SPECIAL PROJECTS ORGANIZATION

Basic Responsibilities

The primary function of the Special Projects Organization is to provide technical support to the Director of Research. This support falls into approximately four general categories. One of these is an individual or small group conducting a special theoretical analysis or study, usually on a short duration basis, that is assigned by the Director of Research. Another category of support is project responsibility for work that does not logically fall within the area of responsibility of one of the Line Divisions. A third category of support involves project responsibility for programs that involve the coordinated efforts of a number of NRL Line Divisions or Branches. The last broad category involves new project starts. This concerns projects which are not currently on-going in the Laboratory but those which management feels may have future potential.

In addition, the Special Projects Organization serves as a facility and basic staff to conduct special highly classified projects.

Key Personnel

<u>Name</u>	<u>Title</u>
Mr. R.E. Ellis	Head, Special Projects Organization
Dr. A.H. Aitken	Associate Head, Special Projects Org.
Mrs. B.A. Maag	Administrative Officer
Dr. P.B. Richards	Fleet Medical Support Project Staff

Dr. S. Teitler	Advanced Concepts Staff
Dr. A.H. Aitken	Laser CM/CCM Program Office
Dr. J.M. MacCallum	EOTPO Head
Dr. J.C. Kershenstein	Liaison Representative to NAVMAT 08TE1
Mr. C.L. Tipton	Head, Special Applications Branch
Mrs. E.E. Wald	Head, Software Systems Development Branch

Mr. R. E. Ellis

Civilian Personnel

Full-Time Permanent: 42
Military: 1

Total Estimated R&D Funding

Fiscal Year 1977: \$2,500,000

RESEARCH COMPUTATION CENTER

Basic Responsibilities

The Research Computation Center (RCC) provides for the operation and maintenance of the Laboratory's central computer facilities for the benefit of all Divisions of the Laboratory; develops and maintains equipment for data collection purposes and for converting field-collected data to a form suitable for efficient processing; provides system software support services for its computers; and provides a variety of user support and applications programming services. The RCC also provides appropriate ADP technical logistic support services for NRL; identifies ADP requirements and secures and administers contractual ADP support services; and supports the NRL Computation Committee and the Navy Laboratories Computing Committee. The Head of the RCC provides the principal support to the Director of Research in ADP management and planning and is, by additional duty assignment, the ONR Special Assistant for ADP Coordination.

Key Personnel

<u>Name</u>	<u>Title</u>
Mr. A.B. Bligh	Head, Research Computation Center
Ms. D.E. Gossett	Deputy Head
Ms. J.C. McCullough	Administrative Officer
Mr. J.B. Smith	External Relations Staff

Mr. I.J. Levy	Head, Operations and Engineering Branch
Mr. G.J. Flenner	Head, Software Systems and Support Branch

Mr. A. B. Bligh

Civilian Personnel

Full-Time Permanent: 47

Electronics Area

The Navy's operational effectiveness depends greatly on its ability to make optimum use of the electromagnetic spectrum ranging from the very low to the extremely high frequencies. Accordingly, most of this Area's work is directed toward extending both the knowledge and the technological applications of the electromagnetic spectrum. The effort includes investigation of electronic devices, the phenomenology and advanced instrumentation associated with radio communications, radar, and related sensors, and digital computation and information processing.

Associate Director of Research for Electronics

Dr. Harper Q. North

Dr. North [REDACTED], [REDACTED], [REDACTED]. He graduated from the California Institute of Technology in 1938 with a B.S. degree in science. He obtained his M.A. and Ph.D., both in physics, from the University of California at Los Angeles, in 1940 and 1947, respectively. He completed the University of California at Los Angeles Executive Program in Business Management in 1958.

Dr. North joined the Research Department of NRL as the Associate Director of Research for Electronics on 17 March 1975. He came to NRL from the Northrop Corporation where, since 1973, he had been the Consultant to the Division General Manager. From 1969 to 1973, as Head of the Electro Optical Department of Northrop, he was responsible for developing a family of digitally addressed, flat cathode-ray tubes for military applications.

From 1962 to 1969 Dr. North was Corporate Vice President, Research and Development, for TRW, Inc. In 1954 he founded Pacific Semi-Conductors, Inc. (now the TRW Semi-Conductor Division) and was the Company's President from 1954 to 1962.

From 1949 to 1954, he was Director of the Semi-Conductor Division of the Hughes Aircraft Company, and he holds patents on the familiar miniature glass diode which has been manufactured throughout the world.

From 1940 to 1949, Dr. North worked as a Research Associate in the General Electric Research Laboratory, where he was involved in various research and development projects, including the development of radar mixer crystals, and the discovery of the "varactor diode" principle in germanium.

Dr. North served for two years as Chairman of the Board of Governors of the Electronic Industries Association, and he received the Organization's Medal of Honor in 1966. He has written numerous articles and papers on a variety of technical subjects, technological forecasting, and management. He also holds a number of patents.

Dr. North is a Fellow of the Institute of Electrical and Electronic Engineers and a Fellow of the American Physical Society. He served for several years as Chairman of the Advisory Group on Electron Devices, Office of the Department of Defense Research and Engineering.

- MICROELECTRONICS
- SEMICONDUCTORS

FABRICATION OF SOLID STATE DEVICES

MICROWAVE DEVICES AND CIRCUITS

ARC PLASMA GROWTH OF MAGNETIC CRYSTALS

SURFACE ACOUSTIC WAVE DELAY LINES FABRICATED ON SILICON WAFER WITH THE USE OF ZINC OXIDE LAYERS

Basic Responsibilities

The Electronics Technology Division carries out programs of basic and applied research and development in the fields of electronic properties of solid materials, materials development, surface physics, microwave techniques, microelectronic devices research and fabrication, high-power microwave generation, and basic research in electronic materials, especially semiconductors. The activities of the Division couple device research both to basic materials investigations and to systems research and development needs.

Branches

Solid State Devices

- Ion implantation technology
- High- and low-power devices for energy conversion
- Field effect transistor reliability and failure analysis
- MIS failure physics; radiation vulnerability and hardening
- High-frequency microwave devices

Electronic Material Technology

- Preparation and development of magnetic dielectric, optic, and semiconductor materials
- Optical components and coatings, glass-blowing, and microwave tube assembly

Surface Physics

- Surface and interface physics
- Cathode research and development
- Characterization of and growth of semiconductor, metal, and insulator films and surfaces
- Bonding and adhesion studies
- Thermionic energy conversion

Microwave Techniques

- Surface acoustic waves
- Microwave and millimeter wave integrated circuits
- Surface magnetostatic waves
- Microwave solid state sources
- Microwave ferrimagnetic and ferromagnetic components
- Millimeter wave device research

Microelectronics

- Silicon device processing
- Microelectronic fabrications
- Integrated circuit technology

Semiconductors

- Solid state theory
- Electrical and optical characterization of materials
- Impurity and defect studies
- Structural and electronic properties of amorphous semiconductors
- Optical and magnetooptical studies of surface and interfaces

Radar Division

- RADAR TECHNIQUES
- SEARCH RADAR
- TARGET CHARACTERISTICS
- AIRBORNE RADAR

AIRBORNE EARLY WARNING RADAR
SYNTHETIC APERTURE RADAR

OVER THE HORIZON RADAR "MADRE"

SHIPBOARD SURVEILLANCE
AND WEAPON CONTROL RADAR

AIRBORNE-INTERCEPTOR RADAR

Basic Responsibilities

The Radar Division conducts research on basic physical phenomena of importance to radar and related sensors, investigates new engineering techniques applicable to radar, demonstrates the feasibility of new radar concepts and systems, performs related systems analysis and evaluation of radar, and provides special consultative services. The emphasis is on new and advanced concepts and technology in radar and related sensors which are applicable to enhancing the Navy's ability to fulfill its mission.

Staff Activities

Radar Analysis

Automatic detection and tracking
Radar systems simulations

Antenna Systems

Microwave antenna research
Electromechanical design

Systems Analysis

Airborne weapon systems simulation
Anti-air weapons countermeasures
Air combat research

Systems Research

Conceptual studies of new radar systems
Overview radar research investigations for the Fleet

Branches

Radar Techniques

High-frequency radar
Signal processing
Ionospheric radio-wave transmission

Search Radar

Shipboard and range instrumentation radar
Phased array techniques
Precision tracking techniques
Low probability of intercept radar

Target Characteristics

Adaptive signal processing
Systems development
Shipboard radar concepts
Target signature analysis
Radar counter-countermeasures

Airborne Radar

Airborne radar
Airborne early warning radar
Moving target indication
Synthetic aperture radar (SAR)
Remote sensing

- APPLIED OPTICS
- LASER PHYSICS
- OPTICAL WARFARE
- OPTICAL RADIATION
- OPTICAL TECHNIQUES

Basic Responsibilities

The Optical Sciences Division carries out a variety of research, development, and application-oriented activities in the generation, propagation, detection, and use of radiation in the wavelength region between near-ultraviolet and far-infrared wavelengths. The research, both theoretical and experimental, is concerned with discovering and understanding the basic physical principles and mechanisms involved in optical devices and phenomena. The development effort is aimed at extending this understanding in the direction of device engineering and advanced operational techniques. The applications activities include systems analysis and prototype system development and exploitation of research and development for the solution of optically related military problems. In addition to its internal program activities, the Division serves the Laboratory specifically and the Navy generally as a consulting body of experts in optical sciences. The work in the Division includes studies in quantum optics, laser physics, infrared physics, laser-matter interactions, atmospheric propagation, optical technology, holography, optical warfare, optical data processing, optical systems, and optical diagnostic techniques. A variety of field measurement programs on optical problems of specific interest are also conducted.

Staff Activities

Senior Scientific and Consultant Staff

- Special systems analysis

Materials and General Sciences Area

The Materials and General Sciences Area consists of chemists, metallurgists, and solid-state, optical, and nuclear scientists who (a) carry on interdisciplinary basic and applied research on the mechanical, electrical, thermal, magnetic, optical, and nuclear properties of matter, and (b) develop components, devices, and systems based on the phenomena and principles of the several disciplines involved.

Associate Director of Research for Materials and General Sciences

Dr. Albert I. Schindler

Dr. Schindler was born in Pittsburgh, Pennsylvania, on June 24, 1927. He received the degrees of B.S. (1947), M.S. (1948), and D.Sc. (1950), all in physics, from Carnegie Institute of Technology.

He came to the Naval Research Laboratory in 1951 and has, as Head, Metal Physics Branch, Material Sciences Division, conducted and directed research on the physical properties of metallic alloys. Dr. Schindler has authored or coauthored over 90 papers in solid state physics on topics including galvanomagnetic effects in alloys, electronic specific heat of transition metals, and irradiation effects in magnetic materials. In this latter area, he holds several patents. He is an Adjunct Professor of Physics at Howard University, and has supervised thesis research there as well as at Catholic University, the University of Maryland, and American University. During a sabbatical year, Dr. Schindler was a visiting scientist at Imperial College of Science and Technology in London, England.

For his distinguished research Dr. Schindler has received numerous awards including the E.O. Hulbert Science Award for 1956, the National Capital Award in Applied Science for 1962, the 1965 Pure Science Award of the NRL Branch of the Scientific Research Society of America and the 1966 Award for Scientific Achievement presented by the Washington Academy of Science, and the Distinguished Achievement in Science Award, April 1975.

Dr. Schindler is a fellow of the American Physical Society and of the Washington Academy of Sciences. He also is a member of the Philosophical Society of Washington and Sigma Xi, the Scientific Research Society of North America. In this latter organization, Dr. Schindler was a member of the Board of Directors from 1974 to 1976.

LABORATORY FOR STRUCTURE OF MATTER

Basic Responsibilities

The Laboratory for Structure of Matter carries out experimental and theoretical investigations of the atomic, molecular, glassy, and crystalline structures of materials. The methods of x-ray, electron, and neutron diffraction are used in a broad program of structure studies which can form the basis for understanding and interpreting the results of research investigations in a wide variety of scientific disciplines. Applications are made to device materials and other substances whose chemical and physical properties are of interest.

Key Personnel

Full-Time Permanent: 10	Fiscal Year 1977: \$600,000

RADIOLOGICAL AND ENVIRONMENTAL PROTECTION STAFF

Basic Responsibilities

The Radiological & Environmental Protection Staff provides a Laboratory-wide protection program for the possession and use of all sources of ionizing radiation and microwave radiation. The Staff performs technical monitoring, evaluations, and research to assure that NRL radiological and microwave operations are safe and in compliance with federal, state, and Navy regulations. It provides employees with the instructions, instruments, assistance, and controls needed to carry out the protection responsibilities.

For environmental protection (pollution control) the Staff must: review Laboratory programs and plans to identify potential sources of pollution at NRL; recommend preventative or corrective measures necessary to reduce or eliminate unnecessary pollution; and monitor the air and water to determine compliance with applicable rules and regulations.

Dr. F. E. Saalfeld

Chemistry Division

STUDY OF "COOL FLAMES"

HIGH-TEMPERATURE MASS SPECTROMETER

- CHEMICAL DIAGNOSTICS
- POLYMERIC MATERIALS
- INORGANIC AND ELECTROCHEMISTRY
- SURFACE CHEMISTRY
- COMBUSTION AND FUELS

FAST SCAN ELECTRON SPIN RESONANCE

CHEMICAL LASER

Basic Responsibilities

The Chemistry Division conducts basic and applied research and development studies in the broad fields of chemical diagnostics, polymeric materials, inorganic and electrochemistry, surface chemistry, and combustion and fuels chemistry. Specialized programs currently within these fields include lubricants, composite materials, coatings, adhesives, dynamics, chemical lasers, molecular structure determinations, submarine atmosphere analysis and control, corrosion, personnel protection, and fire suppression.

Branches

Chemical Diagnostics

Optical diagnostics of chemical reactions
Kinetics of gas phase reactions
Chemical lasers and energy transfer
Trace analysis
Atmosphere analysis and control

Polymeric Materials

Synthesis of unique polymers
Functional organic coatings
High-strength composites
Photophysical processes in polymers
Polymer characterization
Adhesion and structural adhesives

Inorganic & Electrochemistry

Solid state chemistry
Fundamental electrode reactions
Electrochemical power sources
Solution chemistry

Inorganic & Electrochemistry (cont'd)

Synthesis and characterization of novel inorganic compounds

Surface Chemistry

Lubricants
Surface properties of fibers
Rheology
Surface analysis
Corrosion prevention

Combustion & Fuels

Distillate fuels research
Autoxidation and combustion dynamics
Fire suppression
Personnel protection in fires
Modeling and scaling of combustion systems

Key Personnel

LASER WELDING

X-SECTION of W/SUPERALLOY
1mm
ADVANCED COMPOSITE MATERIALS FOR NAVAL APPLICATIONS

CERAMIC DEVELOPMENT FOR THERMOSTRUCTURAL AND DEVICE APPLICATIONS

OBSERVATION OF RADIATION PRODUCED MICROVOIDS (500 Å DIA) IN METALS

Basic Responsibilities

The Engineering Materials Division is concerned with basic and applied research in the advanced characterization and development of materials for naval structures and devices. Emphasis is given to the effects of composition, processing, and microstructure on the service performance of metals, alloys, ceramics, and composites, particularly the strength and fracture behaviors of these materials in benign, corrosive, and radiation environments. Analytical considerations range from engineering reliability procedures to mechanistic modeling of microseparation processes. Other interests include thermomechanical shock response, high-temperature effects and equation-of-state, ballistic phenomena, and piezoelectric applications. This diversity of activities is carried out by an interdisciplinary staff of material scientists, metallurgists, ceramists, physicists, chemists, and engineers, utilizing the most advanced testing and diagnostic facilities.

Branches

Advanced Materials Technology

Microstructural characterization
Weldability of advanced alloys
Thermomechanical effects
Micromechanisms of crack growth
Novel fabrication and processing

Ceramics

Processing and fabrication
Microstructural development and characterization
Strength and fracture behavior
Plastic deformation; study and application
Ceramics for electronic, piezoelectric, optical, and other nonmechanical applications

Metals Performance

Subcritical crack growth and fracture
Failure-safe design parameters
Metallurgical optimization for high-strength metals
Corrosion science related to advanced alloys
Marine corrosion and cathodic protection

Thermostructural Materials

Elevated temperature behavior of materials
Influence of environment on high-temperature materials
Basic mechanisms of radiation damage
Criteria for improved structural design using high-temperature materials

Composite Materials

Physical, mechanical and failure characterizations
Fabrication and processing techniques
Mechanical and failure analyses
High-temperature structural and ordnance applications

Basic Responsibilities

The Material Sciences Division conducts basic and applied research and engages in exploratory and advanced development of broad categories of materials having substantive scientific and/or technological interest to the Navy. R&D programs encompass the full range of materials, i.e., from metallics to insulators, from simple crystalline solids to complex polymeric substances. Program objectives include achieving enhanced fundamental understanding of the physical properties and phenomena displayed by materials pursuant to improved control and application in advanced naval systems, thereby providing a corps of scientific materials experts for the Laboratory and the Navy. Programs are pursued on interesting and important resistive, superconducting, insulating, and magnetic materials, with investigations on all levels from the quantum mechanical to the microstructural. Exploitable phenomena in materials such as phase transformations, lattice defects, x-ray production, and interactions with magnetic, electromagnetic, thermal, and radiation fields are of interest and under investigation by various groups within the Division. Representative of current divisional programs are: laser/materials interactions and responses, magnetic and photochromic memories in solids, glass-fiber optical materials, ultrasensitive magnetic detectors and low-frequency radio detectors, submarine magnetization, x rays for environmental monitoring, and development of practical high-temperature high-field superconductors for motors and generators. Application areas of these and other divisional programs cover immense areas of naval technology and underscore the unique expertise and broad purview of the Division.

Branches

Metal Physics

Electronic and magnetic properties
Thermal and optical properties
Laser material interactions
Optical radiation vulnerability
Magnetostriiction
Advanced structural materials

Cryogenics and Superconductivity

High-pressure effects
Superconducting materials
Superconducting electronics

Insulator Physics

Electronic properties of nonmetallic crystals and glasses
Radiation-induced defects, color centers
Optical properties: fibers, windows, data processing materials

Magnetism

Resonance in magnetic materials
Spin-ordered magnetic phenomena
Rare earth - transition metal magnetic materials
Magnetic properties of amorphous materials

X-Ray Optics

X-ray spectrochemical analysis
X-ray diffraction
Band structure and superconductivity
Plasma diagnostics

Alloy Transformations and Kinetics

Phase transformations
Crystalline defect states
Microstructural effects in superconductors
Elasticity, plasticity, mechanical phenomena

- RADIOBIOLOGY
- RADIATION-MATTER INTERACTION
- MATERIALS MODIFICATION AND ANALYSIS

VAN DE GRAAFF

LINAC

CYCLOTRON

Basic Responsibilities

The Radiation Technology Division conducts a broad program of basic and applied research in radiation technology and related areas. Both theoretical and experimental research are performed in areas such as: radiation sources, accelerators, radiation detection and analysis, radiation dosimetry, interaction of various radiations with materials and devices, vulnerability of military equipment to radiations, modification of materials by radiations, analysis of materials by radiations, biomedical applications of radiations, and advanced nuclear power sources. Major facilities include: a 75-MeV sector-focusing cyclotron, a 60-MeV electron Linac, a 5-MV Van de Graaff, and several smaller radiation sources.

Staff Activities

Consultant Staff

Radiation instrumentation
Ion-solid interactions
Radiation detection
Radiation theory

Branches

Radiation Effects

Radiation effects on infrared detectors, optical and electronic materials, and satellite components
Solar cells
Radiation belts
Hardening satellite components against laser beams
Radiation vulnerability
Radiation curing of polymers
Photographic Image Enhancement

2-MV electron Van de Graaff
Cobalt-60 source
60-MeV electron Linac

Radiobiology

Radiations for biological and medical purposes
Neutron beams for cancer therapy
Radioisotope production
Ion-induced x rays

75-MeV cyclotron

Radiation - Matter Interactions

Measurements on targets bombarded by MeV electron beams
Deposition of energy by charged particles
Neutron transport
Neutron reactions in tissue resident elements
Initiation of explosives by electron beam

Materials Modification and Analysis

Materials analysis by means of charged-particle beams
Implantation of ions into solids
Radiation effects caused by high-energy charged-particle beams
Radiation damage in reactor materials
Crystal studies by means of particle channeling techniques
Ion-induced x rays
Modification of surface and subsurface properties by ion implantation

5-MV Van de Graaff

Space Science and Technology Area

The Naval Research Laboratory conducts basic and applied research in upper air physics, astronomy, and astrophysics to improve naval capabilities in communications, navigation, detection, surveillance, and other fields; the investigations are made by means of several radio telescopes and a wide variety of space probes. Both experimental and theoretical techniques are used to conduct plasma research, to understand more fully natural and man-made plasma phenomena, and to develop controlled thermonuclear power sources. The area is involved also in the study and application of advanced mathematical techniques and in the many approaches afforded by the computer sciences.

Associate Director of Research for Space Science and Technology

Dr. Herbert Rabin

Dr. Rabin [REDACTED] He received a B.S. degree in physics from the University of Wisconsin in 1950, an M.S. degree in physics from the University of Illinois in 1951, and a Ph.D. degree in physics from the University of Maryland in 1959.

He has been employed at the Naval Research Laboratory since 1952, working in the fields of high-energy gamma-ray and electron facilities, radiation dosimetry, solid state studies of lattice defects, and nonlinear optics and laser physics. In these research areas Dr. Rabin has authored or coauthored well over a hundred papers and conference presentations. Dr. Rabin currently serves as a coeditor of a series of technical volumes on quantum electronics. In addition, Dr. Rabin holds six patents.

Prior to his present appointment, Dr. Rabin held several supervisory positions at NRL, the most recent being Head, Quantum Optics Branch, Optical Sciences Division. He has taught courses in the Physics Department at George Washington University; he was a visiting scientist at the Technische Hochschule in Stuttgart, Germany; and he was a consultant to the school of Engineering of the University of Sao Paulo, Sao Carlos, Brazil, under sponsorship of the Pan American Union.

Dr. Rabin is a Fellow of the American Physical Society and holds membership in the Optical Society of America, the Philosophical Society of Washington, the American Association for the Advancement of Science, the American Institute of Aeronautics and Astronautics, and several honorary societies. He is also a corresponding member of the Brazilian Academy of Sciences. Dr. Rabin received the Navy Meritorious Civilian Service Award in 1969, the E.O. Hulburt Annual Science Award in 1970, and the Navy Distinguished Civilian Service Award in 1976.

LABORATORY FOR COSMIC RAY PHYSICS

Basic Responsibilities

The Laboratory for Cosmic Ray Physics conducts several interrelated programs: (a) investigating the high-energy radiation environment at satellite orbits and at altitudes of high-flying airplanes, (b) determining radiation damage to men, electronic components, and materials, using high-energy heavy-ion accelerators, (c) studying neutrino interactions, and (d) exploring the acoustic detection of charged particles. Program (a) includes studies of the nature and interactions of both solar-flare and galactic high-energy particles. In Program (b) the nuclear fragmentations and energy deposition in biological tissue-like materials are investigated; this work yields data for exploratory heavy-ion cancer therapy. Energetic heavy ions are also used to simulate neutron damage to components and materials of future high-flux reactors. The entire program is designed to be responsive to anticipated technical requirements of the Navy and the general research and development program of the Department of Defense.

ADVANCED PROJECTS OFFICE

Basic Responsibilities

The Advanced Projects Office has NRL Program Management responsibility for an advanced space project. This involves system concept generation, system design, design implementation, fabrication, testing, and deployment of the total space system which includes both the operational overseas data collection systems as well as the satellite payloads. In addition, systems analysis, mathematical modeling, technical system integration, and operational evaluation of advanced space/ground systems is performed. The Advanced Projects Office also develops Future System Concepts and Future System Proposals and Designs in the areas of Space Science and Technology.

SPACECRAFT TECHNOLOGY CENTER

Basic Responsibilities

The Spacecraft Technology Center is responsible for providing complete spacecraft systems for purposes of conducting research and development in the space environment. This involves a broad and complete spectrum of activities ranging from system concept formulation, preliminary and detailed design, and prototype development to complete flight systems. The Center maintains all of the necessary special facilities for aerospace-type fabrication and environmental testing and the expertise which is generally required in the spacecraft system. The Center also maintains dedicated ground stations for the purpose of transmitting command/control signals to, and receiving and analyzing telemetered data from, those of its spacecraft which have been placed into orbit.

Oceanology Area

The Naval Research Laboratory conducts research at sea and in the Laboratory in the fields of underwater acoustics, oceanography, marine geophysics, atmospheric physics, and ocean engineering and technology. Subjects of investigation include antisubmarine warfare, acoustic propagation and scattering, ambient noise in the ocean, signal processing, marine and atmospheric pollution, instrumentation systems for deep ocean search and inspection, and methods of design and installation of structures and apparatus for use in the ocean. NRL also serves as the focal point in the Navy for standardization of underwater sound measurements, and holds a major responsibility for research and development in undersea acoustic surveillance.

Associate Director of Research for Oceanology

Mr. Richard R. Rojas

Mr. Rojas [REDACTED] He attended the College of the City of New York, where in 1952 he received a BEE degree. In 1961 he received a MEE degree from Drexel Institute of Technology, Philadelphia. Further graduate studies in mathematics and engineering were taken at the University of Pennsylvania, Philadelphia.

From 1952 to 1960, Mr. Rojas was a project engineer in the Missile Department at Philco Corporation where he participated in the TALOS, TERRIER, and TARTAR missile fuze programs, and the Terrier missile guidance project. While at Philco, he received a company achievement award for his work on the design of specialized missile test equipment. From 1960 to 1969 he was manager of the Hydroacoustics Department at the Magnavox General Atronics Corporation. At General Atronics he was active in the area of signal processing techniques as applied to sonar, communication systems, and seismic detection systems. In 1969, he joined the Naval Research Laboratory as Head of the Advanced Undersea Surveillance Program. In this capacity he had the responsibility for directing an experimental and theoretical program whose purpose was to evaluate and develop advanced surveillance systems for the Navy. Mr. Rojas also was on the graduate teaching staff at the Pennsylvania State University.

Mr. Rojas' research interests are centered on signal processing and the physics of underwater acoustic propagation, ambient noise, and reverberation.

Mr. Rojas is a member of the Acoustical Society of America, Sigma Xi, the Institute of Electrical and Electronics Engineers, and a charter member of the Marine Technology Society.

Basic Responsibilities

The Acoustics Division has major responsibilities for basic and applied research and development in the Navy's undersea acoustic surveillance programs. The main thrust of the Division program is to measure and model the ocean environment as it pertains to the development and use of acoustic detection and classification systems. Accordingly, the program consists of analyses and model development of long-range propagation, coherency, wave-front behavior, ambient noise, and reverberation in the deep ocean. Special areas of interest include propagation and ambient noise in the Arctic and in acoustically shallow water. Models developed in this program are used in the performance prediction of operational or developmental acoustic detection systems or of proposed system concepts. Other research areas in the Division program include target strength measurement and modeling; diffraction, reflection, and scattering; and the use of acoustical techniques in measuring the thermodynamic properties of materials. The program is both theoretical and experimental and is supported by systems analyses and systems engineering, particularly in support of the extensive at-sea experimental part of the program. The Division interacts with research programs outside the Division and the Laboratory in areas such as materials, transducer development, oceanography, deep-ocean technology, systems analysis, and Fleet operations.

Staff Activities

Environmental Sciences
Research & development to establish geophysical & oceanographic parameters influencing underwater acoustics

System Analysis
Systems studies
Surveillance system concepts and evaluation

Advanced Projects
Advanced surveillance systems
Information processes for underwater acoustics

Branches

Applied Ocean Acoustics
Shallow-water acoustics
Mode analysis
Models of signal and noise fields
Long-range propagation
Very low frequency
Convergence zone stability
Arctic underwater acoustics
Propagation
Noise

Physical Acoustics
Ultrasonic investigation of liquids and amorphous solids
Reflection, diffraction, scattering by bodies
Target strength modeling
Schlieren visualization
Fiber optic acoustic sensors

Large Aperture Acoustics
Propagation, coherency, and wave-front behavior
Large-scale spatial and temporal integration
Array deformation
Ambient noise measurements and modeling
Low-frequency monostatic and bistatic reverberation

Systems Engineering
Engineering Research & Development
Develop/provide equipment for ocean-going program
Participate in at-sea experiments

Key Personnel

- ELECTRONICS
- SUPPLY AND FISCAL
- ENGINEERING SERVICES AND SAFETY

LEESBURG FACILITY-CALIBRATION BARGE

UNDERWATER SOUND REFERENCE DIVISION, ORLANDO, FLORIDA

USD TYPE G40 SHIPBOARD CALIBRATOR

HOLOGRAM OF VIBRATING TRANSDUCER DIAPHRAGM

Basic Responsibilities

The Underwater Sound Reference Division is the focal point in the Navy for standardization in the science and technology of underwater sound measurements. Its research and development program is aimed at expanding the state of the art and providing Navy in-house expertise. Reference calibration measurements in a large complex of specialized facilities and calibrated standard transducers are available to all naval activities and contractors in support of undersea warfare programs.

Research and Development Branches

Measurements

Calibration theory and accuracy
Measurement methods
Standard calibration services
Sonar transducer test and evaluation
Array and radiation theory

Computer

Computerized data reduction
Computation services

Standards

Acoustic materials
Electroacoustic standards
Acoustic sources
Specialized electroacoustic transducers
Standard loan services
Transduction research

Electronics

Digital systems
Analog systems
Signal analysis

Key Personnel

<u>Name</u>	<u>Title</u>

Fiscal Year 1977: \$2,800,000

†Additional duty as Associate Superintendent

Dr. V. J. Linnenbom

Ocean Sciences Division

- APPLIED OCEANOGRAPHY
- ATMOSPHERIC PHYSICS
- CHEMICAL OCEANOGRAPHY
- PHYSICAL OCEANOGRAPHY
- MARINE BIOLOGY AND BIOCHEMISTRY

OCEANOGRAPHY

ATMOSPHERIC PHYSICS AND CHEMISTRY

AIR-SEA INTERACTIONS

Basic Responsibilities

The primary responsibility of the Ocean Sciences Division is research on fundamental problems in oceanography and the atmospheric sciences. At present, the Division studies problems in physical, chemical, and biological oceanography and in atmospheric physics to gain a better understanding of the Navy's operational environment. This knowledge is applied to various Navy programs in antisubmarine warfare, protection of the marine environment, protection against biodegradation of naval materials, and prediction of oceanic and atmospheric phenomena affecting naval operations.

Staff Activity

Nonacoustic ASW (R&D) Task Group

Branches

Applied Oceanography

Antisubmarine warfare
Hydrodynamics of submerged bodies

Atmospheric Physics

Marine boundary layer meteorology
Aerosol and cloud physics
Atmospheric electricity
Electro-optics meteorology

Chemical Oceanography

Physical chemistry of seawater
Dissolved gases in seawater
Marine aerosols
Interface Chemistry

Physical Oceanography

Ocean dynamics
Mixed layer studies
Wave interactions
Mesoscale variability

Marine Biology & Biochemistry

Biodegradation of naval materials
Marine pollution
Bioluminescence
Chemosensing

Dr. J. P. Walsh

Ocean Technology Division

PHOTOELASTIC PATTERN OF THE STRESS DISTRIBUTION IN THE BLADE LUG REGION OF THE THIRD STAGE OF A TURBINE ENGINE

VORTEX SHEDDING FROM A VIBRATING CYLINDER

DEEP OCEAN SEARCH SYSTEM

UNDERWATER SHOCK TEST OF AN AIRCRAFT CARRIER

UNDERWATER FREE SWIMMING SUBMERSIBLE

- MECHANICS OF MATERIALS
- OCEAN INSTRUMENTATION
- APPLIED MECHANICS

Basic Responsibilities

The Ocean Technology Division conducts research and development in the following ocean engineering fields: the mechanics of materials in the ocean environment; hydromechanics with emphasis on fluid-structure interactions; structural mechanics; instrumentation, sensors, and robots for use in the ocean; and ocean system design. The Shock and Vibration Information Center provides a source of information on shock and vibration for engineers nationwide.

Staff Activities

S&V Information Center
Search and Inspection Group
Structures Group

Branches

Applied Mechanics

Shipboard shock fundamentals
Shock protection for weapons systems
Methods for design against shock
Fracture mechanics design studies
Developmental studies of prototypes
Shock strength of materials
Hydromechanic studies

Mechanics of Materials

Fracture mechanics and fracture strength
Plastic flowing
Compression failure mechanisms
Armor research and development
Deep submergence materials/structures
Missile component failure
Nondestructive testing

Ocean Instrumentation

Instrumentation analysis, research
and development
Sensors, detectors
Data and signal processing
Stress and kinematic quantities
measurement

The Support Services Department

The Director of Support Services is a Navy Captain with appropriate training and experience; he reports to the Commanding Officer of NRL. His primary responsibility is the supervision, coordination, and control of the administrative and service operations required in support of the work of the Research Department. Usually, he is the next senior officer to the Commanding Officer and assumes the responsibilities of and acts for the Commanding Officer in his absence.

The Director of Support Services is responsible for:

guiding and coordinating the service divisions of the Laboratory (Engineering Services, Supply, Public Works, Technical Information, and Chesapeake Bay) and also his staff functions (Safety Office and Patent Counsel) so that services rendered are adequate, prompt, accurate, and economical in the use of men and money.

exercising, for the Commanding Officer of NRL, approval authority for the NRL directives system, assuring that interests of all concerned components are taken into account, that staff work is complete, and that implementation is in a manner appropriate to the research environment.

being familiar with the scientific program and for following the progress of the scientific efforts of the Laboratory in sufficient detail to ensure that administrative decisions are made which support the scientific program.

assisting the Commanding Officer of NRL in maintaining overall short- and long-range organization plans for the support areas to best serve and advance the research mission. Advising on and participating in allocation of resources to meet support services mission and support research.

keeping the Commanding Officer of NRL advised of matters requiring his attention, decision, or other action; acting for the Commanding Officer of NRL in the approval of routine matters; for assisting the Commanding Officer of NRL generally with administrative detail, correspondence, reports, and similar matters.

issuing NRL directives and procedures for the Commanding Officer.

The Director of Support Services keeps in constant touch with the Director of Research to ensure that the service units of the Laboratory are providing complete support to the scientific divisions. He coordinates with the Director of Research in the planning and carrying out of administrative actions affecting Research Department organization and personnel; and he maintains a close working relationship with the Chief Staff Officer and officers assigned to him to assure provision of support services in operations conducted by the Chief Staff Officer. He also has direct "line" authority over the heads of special staff and service divisions of the Support Services Department.

Director, Support Services

Captain Kenneth P. Hughes

CAPTAIN KENNETH P. HUGHES, [REDACTED] [REDACTED] [REDACTED] is a 1953 graduate of the U.S. Naval Academy. He was also graduated from the U.S. Naval Postgraduate School, Ordnance Engineering Curriculum. In addition, he is a graduate of the Industrial College of the Armed Forces, Class of 1976.

CAPTAIN HUGHES served successive tours on the USS O'HARE (DDR-889), USS DONNER (LSD-20), and as Aide and Flag Lieutenant to Commander Amphibious Group Four. After Postgraduate School he served as Commanding Officer, USS LUISENO (AFT-156), and as Executive Officer on the USS STEINAKER (DD-863). His other assignments included a tour with the Undersea Directorate, Naval Ordnance Systems Command; as Commander, Task Group 115.3; as Senior Advisor, Third Coastal Zone, Vung Tau, Vietnam; and as Assistant to Commander, Anti-Submarine Warfare Projects for Test and Evaluation. CAPTAIN HUGHES was designated for Ordnance Engineering Duty in 1970 and for Engineering Duty in 1974. He assumed the position of Director of Support Services at NRL on 21 June 1976.

CAPTAIN HUGHES is married to the former Peggy J. Seawell of Norfolk, Virginia; they have one daughter.

OFFICE OF PATENT COUNSEL

Basic Responsibilities

The Office of Patent Counsel provides services concerning inventions, patents, trademarks, copyrights, and other related matters. Patent applications are prepared, filed, and prosecuted on NRL inventions of significance to the Government. The Patent Counsel serves as consultant and adviser on patent and data clauses in R&D and procurement contracts, claims of patent or copyright infringement involving NRL, and the provisions in interagency agreements relating to inventions, patents, trademarks, copyrights, and related matters. Assistance is provided the Research Department through state-of-the-art searches in the patent literature pertinent to particular research problems.

Key Personnel

Dr. P. Schneider	Patent Counsel

Dr. P. Schneider

Civilian Personnel

Full-Time Permanent: 9

ADMINISTRATIVE OFFICE

Basic Responsibilities

The Administrative Office provides staff support to administrative officials of the Laboratory in the areas of Travel Management, Records and Correspondence Management, Files Management, Mail and Messenger service, Forms Management, Design and Analysis, Report Management Analysis and Control, and Directives Management for all components of the Laboratory. The office also provides for the NRL Code Directory control, the administration of the Laboratory parking facilities, and management of the Administrative Paperwork Reduction Program. In addition, the office conducts direct routine administrative correspondence with other units of the Navy, DOD, and other governmental and civilian agencies.

SAFETY OFFICE

Basic Responsibilities

The Safety Office administers the Laboratory's safety and health program except in the fields of microwave and radiological safety. Its responsibilities include inspection, training, and education. It also conducts accident investigations, prepares directives, provides accident prevention information, directs the activities of Safety Representatives and Committees, reviews hazardous experiments, and guides management in matters of safety. Other activities include JAG investigations and waste-chemical disposal.

CDR R. W. Gunther

Supply Division

- STAFF SERVICES
- AUTOMATED INVENTORY MGT. SYSTEM
- PROCUREMENT
- RECEIPT CONTROL
- MATERIAL
- TECHNICAL

Basic Responsibilities

The Supply Division provides service functions to the Laboratory and its field activities, including the operation of Supply issue stores; procurement of equipment, material, and contractual services; receipt, inspection, and delivery of material and equipment; packing, shipping, and traffic management; and survey and disposal of excess and unusable property.

In addition, Supply offers technical and counseling services to the Research Departments, in the development of specifications for a complete procurement package; consultation as needed in the handling of claims against the Laboratory, guidance in the performance stages of contractual services, and material transportation services.

During FY 1976 the Supply Division occupied 14,924 m² (160,641 sq. ft.) of building space; its stores (six retail and one bulk warehouse) inventory averaged \$1,771,705; stores issues totalled \$2,350,000; and the Procurement Branch processed 51,350 procurement documents totaling \$55,700,000 on the open market with an additional 6950 documents totaling \$51,700,000 to other Government organizations for a grand total of 58,300 documents totaling \$107,400,000.

Public Works Division

CDR Victor Podbielski, CEC, USN

- ENGINEERING
- MAINTENANCE, UTILITIES, AND TRANSPORTATION
- MAINTENANCE CONTROL
- ADMINISTRATION
- CONSTRUCTION

Basic Responsibilities

The Public Works Division is responsible for the physical plant of NRL. This includes: (a) responsibility for the design, construction, maintenance, and repair of public works and utilities; (b) responsibility for the operation of these public works and utilities in accordance with the technical standards of the Naval Facilities Engineering Command; and (c) supporting the scientific program of the Laboratory by the construction, repair, and alteration of experimental and test equipment. In addition, the Division obtains required approvals for work for which the Division is responsible from CHESDIV of the Naval Facilities Engineering Command; the Office of Naval Research; the Secretary of the Navy; and other authorities as appropriate.

The Public Works Division also supports the Office of Naval Research for Facilities Coordination and supports the Officer in Charge of Construction/Resident Officer in Charge of Construction on all Naval Facilities Engineering Command and certain research and development contracts at NRL.

Mr. E. E. Kirkbride

Technical Information Division

- EDITORIAL
- LIBRARY
- GRAPHIC ARTS
- PHOTOGRAPHIC

CDR Bruce Bauer

Chesapeake Bay Division

Basic Responsibilities

The Technical Information Division plans and administers the Laboratory's program of preparing and disseminating the results of scientific research through official publications, scientific journals, presentations, films, and exhibits. It provides centralized professional services to both NRL and ONR in writing, editing, printing, exhibits, photography, graphic arts, documentation, and language translations. It operates one of the Navy's largest integrated technical libraries with holdings of 202,000 bound volumes and 400,000 technical reports.

Key Personnel

<u>Name</u>	<u>Title</u>
Mr. E.E. Kirkbride	Head, Technical Information Division
Mrs. D.E. Cameron	Administrative Officer
Mr. H. Poole	Head, Exhibits Staff

Mr. D. Darr	Head, Graphic Arts Branch
Mr. S.R. Smith	Head, Editorial Branch
Mr. J. Otto	Head, Photographic Branch

Civilian Personnel

Full-Time Permanent: 123

Basic Responsibilities

The Chesapeake Bay Division operates and maintains shops, plant facilities, and equipment in support of the variety of NRL research and development projects which can best be carried out there.

The Physical Plant

Located in a relatively clear area away from any congestion or industrial interference, the main site, at Chesapeake Beach, covers 68.8 hectares (170 acres) containing 200 structures of various sizes and construction, six of which are major laboratory buildings. There is over 61 m (200 ft.) of usable dock space with a controlling water depth of 2.1 m (7 ft.), located 3.2 km (2 mi.) north of the main site. Off-site facilities include the Tilghman Island Facility, located directly across the Bay from CBD at a range of 16 km (10 mi.).

Research watercraft available at CBD include one 19-m (63-ft.) catamaran, one 17-m (56-ft.) landing craft, one Jack-up-Barge, and one 11-m (36-ft.) motor boat. These are used in support of research projects and for transportation between off-site facilities.
