

North Atlantic and Global HYCOM Evaluation

J.F. Shriver¹, W.J. Schmitz, Jr², T.L. Townsend¹, H.E. Hurlburt¹

¹ Naval Research Laboratory, Stennis Space Center, MS

² Harte Research Institute, TAMU-Corpus Christi, TX

HYCOM NOPP GODAE Meeting
FSU, Tallahassee, FL
7-9 Nov 2006

Report Documentation Page			Form Approved OMB No. 0704-0188		
Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.					
1. REPORT DATE NOV 2006		2. REPORT TYPE		3. DATES COVERED 00-00-2006 to 00-00-2006	
4. TITLE AND SUBTITLE North Atlantic and Global HYCOM Evaluation			5a. CONTRACT NUMBER		
			5b. GRANT NUMBER		
			5c. PROGRAM ELEMENT NUMBER		
6. AUTHOR(S)			5d. PROJECT NUMBER		
			5e. TASK NUMBER		
			5f. WORK UNIT NUMBER		
7. PERFORMING ORGANIZATION NAME(S) AND ADDRESS(ES) Naval Research Laboratory,Stennis Space Center,MS,39529			8. PERFORMING ORGANIZATION REPORT NUMBER		
9. SPONSORING/MONITORING AGENCY NAME(S) AND ADDRESS(ES)			10. SPONSOR/MONITOR'S ACRONYM(S)		
			11. SPONSOR/MONITOR'S REPORT NUMBER(S)		
12. DISTRIBUTION/AVAILABILITY STATEMENT Approved for public release; distribution unlimited					
13. SUPPLEMENTARY NOTES					
14. ABSTRACT					
15. SUBJECT TERMS					
16. SECURITY CLASSIFICATION OF:			17. LIMITATION OF ABSTRACT Same as Report (SAR)	18. NUMBER OF PAGES 13	19a. NAME OF RESPONSIBLE PERSON

Motivation: Improved Model Component in 1/12° Global-HYCOM Nowcast/Forecast System

SSH date: Mar 16, 2004

Present Data-assimilative Run

Model Developments Impacting Simulation of The Gulf Stream System (GSS)

Boundary relaxation time scale

Impact on MOC amplitude – Key component of GSS

Advection scheme (MPDATA vs FCT2)

Impact on subpolar gyre mixed layer depth – affects MOC amplitude

Impact on MOC amplitude – Key component of GSS

Bottom topography (sills)

Impact on flow pathways – Critical for both thermohaline- and
Wind-driven components of GSS

Turbulent mixing scheme

Impact on diffusion which in turn impacts the structure within the GSS

Diffusion parameterization

Impact on strength, pathway, and energy levels of GSS

Wind Forcing

Impact on strength, pathway, and energy levels of GSS

Atlantic/Global HYCOM Experiments Used in Analysis

Experiment	Smag. Diffusion	A	Biharmonic Dissipation	Mixed Layer	Wind Forcing	Model Years
ATLd0.08-11.4	0.1	53 @ 38N	.01	KPP	ERA15	10-11
ATLd0.08-11.8	.05	20	.01	KPP	ERA15	09-10
ATLd0.08-12.0	.05	25	.01	KPP	ERA15	11-13
ATLd0.08-12.1	.1	30	.01	KPP	ERA15	12-13/12-15
ATLd0.08-12.2	.05	30	.01	KPP	ERA15	11-13
ATLd0.08-12.3	.1	30	.01	KPP	1.2 x ERA15	11-13
ATLd0.08-12.4	.1	30	.01	GISS	ERA15	12-13
ATLg0.04-01.2	.05	15	.01	KPP	ERA15	11-12
GLBa0.08-05.2	.1	30	.01	GISS	ERA15	8-9
GLBa0.08-05.6	.05	20	.02	GISS	ERA15	9-10/9-12
GLBa0.08-07.1	.05	20	.02	GISS	QuikSCAT scaled ERA40	4

Simulated vs. Observed Surface EKE

GLB a0.08 - 5.6, years 9-10

Fratantoni (JGR – 2001)

- High EKE in the Gulf Stream doesn't extend far enough to the east
- EKE in North Atlantic Current and its extension is too high

Locations of Simulated EKE Profiles vs. Observations Comparisons in the Gulf Stream System

Simulated EKE Profiles vs. Observations @ 55W – Gulf Stream Extension (GSE)

ATL d0.08 – 12.1, years 12-15

ATL g0.04 – 01.2, years 11-12

- Modeled EKE is too low in comparison to observations, especially deep
- Doubling the resolution didn't have much effect on upper or deep/abyssal EKE

Simulated EKE Profiles vs. Observations – Gulf Stream @ 68W

ATL d0.08 – 11.4, years 9-10

ATL g0.04 – 01.2, years 11-12

Varying degrees of agreement with observations, depending on simulation

Locations of Simulated EKE Profiles vs. Observations Comparisons in the North Atlantic Current Region

North Atlantic Current Extension (NACE)

Simulated EKE Profile vs. Observations – NAC Extension

Generally good agreement below 350m depth
Divergence near surface

Improving the Wind Forcing

Global HYCOM experiment (in progress on Cray XT3 @ ERDC MSRC) forced by ERA40 winds corrected using QuikSCAT wind speed globally (ERA-40 winds are generally too weak) is expected to improve results in the Gulf Stream system

Section	Obs. In Sv	GLBa0.08 – 05.2	Linear ERA15	Linear ERA40	Linear-C ERA40
Florida Current + Abaco	37	32.0	34.2	34.4	37.5

- ERA = ECMWF reanalysis
- HYCOM was forced by ERA15
- Linear = linear NLOM solution based on Sverdrup (1947) interior flow with Munk (1950) western boundary currents, and islands added
- Allows efficient comparison and evaluation of ocean currents forced by different wind products, 26 different wind sets tested so far.
- Linear-C is ERA40 with annual mean winds corrected by a QuikScat climatology

Simulated Surface EKEs

GLB a0.08 - 5.6, years 9-10

cm²/sec²

GLB a0.08 – 7.1, year 4

Too early to see improvement (statistics are from second completed year using QuikSCAT scaled ERA-40 winds), stay tuned ...

Future Work

More diverse intercomparisons in the Atlantic and expanding into other basins

- We've already done some intercomparisons in the Kuroshio and Agulhas
