Report Title

Final Report -- Structured and Collaborative Signal Models:
Theory and Applications in Image, Video, and
Audio Analysis

ABSTRACT

In this report we describe the core results of this project on the topic of novel structured sparse models and its applications to image, video, and audio processing. As reflected in the publications list, we have accomplished all the basic expected results from the original proposal, presenting both new theory and state-of-the-art practical results, including numerous technology transfers.

Enter List of papers submitted or published that acknowledge ARO support from the start of the project to the date of this printing. List the papers, including journal references, in the following categories:

(a) Papers published in peer-reviewed journals (N/A for none)

<u>Received</u>	<u>Paper</u>
02/22/2012	5.00 I. Ramirez, G. Sapiro. An MDL framework for sparse coding and dictionary learning, IEEE Transactions on Signal Processing, (03 2012): 0. doi: 10.1109/TSP.2012.2187203

Student Metrics

This section only applies to graduating undergraduates supported by this agreement in this reporting period

The number of undergraduates funded by this agreement who graduated during this period:	1.00
The number of undergraduates funded by this agreement who graduated during this period with a degree in science, mathematics, engineering, or technology fields:.....	1.00
The number of undergraduates funded by your agreement who graduated during this period and will continue to pursue a graduate or Ph.D. degree in science, mathematics, engineering, or technology fields:.....	1.00
Number of graduating undergraduates who achieved a 3.5 GPA to 4.0 (4.0 max scale):.....	1.00
Number of graduating undergraduates funded by a DoD funded Center of Excellence grant for Education, Research and Engineering:.....	0.00
The number of undergraduates funded by your agreement who graduated during this period and intend to work for the Department of Defense	0.00
The number of undergraduates funded by your agreement who graduated during this period and will receive scholarships or fellowships for further studies in science, mathematics, engineering or technology fields:	1.00

Inventions (DD882)

Scientific Progress

The complete description of the accomplishments can be found in the uploaded papers, and they include:

- * Complete connection between sparse modeling and information theory via MDL and universal modeling.
- * New hierarchical collaborative and structured sparse model with applications in source separation and recovery guarantee.
- * Full theory of statistical compressed sensing for structured GMM and its applications to state-of-the-art inverse problems in image and audio processing.
- * State-of-the-art applications of structured sparse modeling for activity recognition and hyperspectral imaging classification.
