A

A

Steven R. Appleton, chairman and chief executive of [Micron Technology Inc.](#) MU 0.00% and one of the most prominent figures in the semiconductor industry, died Friday when the high-performance airplane he was piloting crashed at Boise, Idaho's airport.

The death of the 51-year-old stunned Micron, the well-known maker of memory chips based in the same city, and comes at a time of rapid change for the company and its industry.

The National Transportation Safety Board is investigating the accident, which happened soon after Mr. Appleton took off alone in a single-engine Lancair. The plane, from a maker of aircraft kits, had taken off and landed once and was

Tornadoes Hamper Boeing Supplier

Spirit Says Output Suspended 'At Least' Through Tuesday, Deliveries Could Resume by End of Week

Article

Stock Quotes

Comments

By JON OSTROWER

WICHITA, Kan.—A key Boeing Co. [BA +2.51%](#) supplier said it aims to resume deliveries by the end of the week after tornadoes battered its factories here, highlighting the fragility and resilience of the aerospace giant's global supply chain as it works to sharply increase production.

The storms late Saturday caused significant-to-major damage to 10 buildings at the flagship campus of Spirit AeroSystems Inc., which makes fuselages and other parts for Boeing's hot-selling 737, 777 and 787 Dreamliner passenger jets. Spirit said production—which normally runs seven days a week—would be suspended "at least" through Tuesday, and that it expects "near-term production disruptions including delivery impacts" to customers.

Spirit spokesman Ken Evans said initial damage assessments found most of its machinery and inventory intact. "We believe we can use the facilities we've got," he said in an interview here in Wichita, a major manufacturing hub for the aerospace industry. "We don't

Comments (9)

By JEFF BENNETT And JAN HROMADKO

Production shortfalls at a single German auto-parts supplier are beginning to ripple through the global auto business.

More than 200 auto executives met in a Detroit suburb on Tuesday to evaluate a looming shortage of a relatively obscure resin essential to modern auto production.

Inventories of the resin are being depleted at Evonik Industries AG plant in Marl, Germany, that markets itself as the only integrated maker of the resin for auto lines.

Chemical plant explosion brakes car makers

The explosion at a German chemicals plant two weeks ago which killed two workers, has thrown the global [car industry](#) into turmoil as manufacturers run short of a vital component, prompting an emergency meeting in Detroit.

test claims

WHAT 'OBSCURE' BUT ESSENTIAL COMPOUND SHORTAGE HAS THE AUTO INDUSTRY WORRIED ABOUT PRODUCTION?

production before the winter this year and expect that the works to fully repair the plant will take at least three months," an Evonik spokeswoman said. Several Evonik executives attended the meeting on Tuesday.

By SAURABH CHATURVEDI And SANTANU CHOUDHURY

NEW DELHI—Much of India's electricity supply network collapsed Tuesday in the country's second major outage in two days, affecting more than 680 million people—double the population of the U.S.—and causing business losses estimated to run into the hundreds of millions of dollars.

Thousands of offices and factories had to switch to generators or shut shop, more than 200 trains were brought to a standstill while hospitals had to ask nurses to manually work critical equipment such as ventilators as 21 provinces experienced a near-total

Chinese Hackers Hit U.S. Media

Wall Street Journal, New York Times Are Breached in Campaign That Stretches Back Several Years

By SIOBHAN GORMAN, DEVLIN BARRETT and DANNY YADRON

WASHINGTON—Chinese hackers believed to have government links have been conducting wide-ranging electronic surveillance of media companies including The Wall Street Journal, apparently to spy on reporters covering China and other issues, people familiar with the incidents said.

Journal publisher Dow Jones & Co. said Thursday that the paper's computer systems had been infiltrated by Chinese hackers, apparently to monitor its China coverage.

[New York Times](#) Co. NYSE:NYT +0.11% disclosed Wednesday that its newspaper also had been the victim of cyberespionage.

WHY GARTNER | ANALYSTS | RESEARCH | EVENTS | CONSULTING | ABOUT

Are the ongoing DDoS attacks against U.S. banks just the calm before the storm?

by Avivah Litan | March 14, 2013 | 1 Comment

That's a viable hypothesis after hearing that the attackers only used one third of the bandwidth they had staged for their latest round of attacks against U.S. banks last Tuesday. Reportedly, on Tuesday the total size of the DDoS attack was 190 gigabits at one time, with the largest attack against a single bank at 110 gigabits.

Interestingly, the attackers could have easily done even more damage but they chose not to. 9200 bots were identified as attack-capable but the total number of bots actually involved in sending the DDoS traffic to the banks numbered only about 3200. The other 6000 bots sat there doing nothing.

against U.S. banks last fall. The intent of the attacks has been to simply cause

False AP Twitter Message Sparks Stock-Market Selloff

By SHIRA OVIDE

The Associated Press said Tuesday its Twitter account was compromised, resulting in a false message on the service that explosions in the White House had injured President [Barack Obama](#). The message briefly sparked selloff on U.S. stock markets.

"The Twitter account has been hacked," the AP said in a statement Tuesday about an attack on the White House is false."

Other Twitter accounts associated with Associated Press were quick to correct the false Twitter message, which was posted just after 1 p.m. Eastern time. Afterward, the news organization's main Twitter account was suspended to prevent further damage.

Patients Put at Risk By Computer Viruses

By CHRISTOPHER WEAVER

The Food and Drug Administration is warning makers of heart monitors, mammogram machines and myriad other medical devices that their gear is at risk of

Challenges to Organizational Mission

Operational mission of organizations is under stress on a minute-by-minute basis.

The stress comes from

- pervasive use of technology
- globalization
- complexity of business processes
- operational complexity
- movement toward intangible assets
- global economic pressures
- open borders
- geo-political pressures
- regulatory and legal boundaries
- intertwining of cyber and physical domains
- terrorists & professional hackers

...and is exasperated by increased intertwining of cyber and physical domains.

Disruptive Events

Yesterday vs. Today

Ever-Increasing Capability & Complexity

SLOC = Source Lines of Code

Yesterday's mission success would have been...

Today mission success is about ...

and more...

Yesterday's Mission Protection

Today's Mission Protection

Today's Business Environment

Business Consequences of
Operational Glitches

Today's Business Environment Is Much Less Forgiving

Operational Resilience

Operational Risk

A form of risk affecting day-to-day business operations

A very broad risk category

- from high-frequency low-impact to low-frequency high-impact

Exacerbated by

- actions of people
- systems and technology failures
- failed internal processes
- external events
- bad decisions

Why do operational risks matter?

Trust and confidence of employees and customers

Reputation and image

Regulatory compliance, fines, and legal penalties

Customer retention and growth

Life, safety, and health of customers and employees

Productivity and profitability

Organizational survival

... because they have explicit and direct IMPACT

re·sil·ience *noun* [ri-'zil-yəns]

Operational Resilience

The emergent property of an entity

- that can continue to carry out its mission in the presence of operational stress and disruption that does not exceed its limit
- to meet its mission under times of disruption or stress *and* return to normalcy when the disruption or stress is eliminated

Operational Resilience

The emergent property of an entity

- that can continue to carry out its mission in the presence of operational stress and disruption that does not exceed its limit
- to meet its mission under times of disruption or stress *and* return to normalcy when the disruption or stress is eliminated

- 
- Organization
 - Nation
 - Armed Forces
 - Critical Infrastructure
 - System
 - Network
 - Supply Chain
 - Community
 - An Ecosystem
 - Cyberspace

An Analogy: Health

Is there a place that you can purchase health?

Is there a place where health is manufactured?

How do you become healthy?

Health & Resilience: They are both emergent properties.

Operational Resilience & Mission Success

To be operationally resilient, cyber- and/or kinetic-enabled missions must address operational risk on a number of “planes.”

Operational Efforts Must Consider and Enable Such Multidimensionality

Organizational Mission - Revisited

Services and Products

Outputs of an organization
can be internally or externally focused.
Collectively they enable an organization's mission.

Example: U.S. Postal Service

Productive Activities or Business Processes

Activities that the organization (and/or its suppliers) perform to ensure that services and products are generated

A service or product is made up of one or more business processes.

Example: U.S. Postal Service

Assets

Something of value to the organization

Asset value relates to the importance of the asset in meeting the service mission.

Asset Types of Importance to Operational Resilience

People

Information

Facilities

Technology

Supply Chain / Raw Material

Asset Types

Something of value to the organization

Asset value relates to the importance of the asset in meeting the service mission.

Example: U.S. Postal Service

Operational Resilience Starts at Asset Level

Operational Resilience Starts at Asset Level

Analogy - Protection and Sustainment Strategies

Protection Activities

- Translate into activities designed to keep assets from exposure to disruption
- Example: “security” activities, but may also be embedded in IT operations activities

Sustainability Activities

- Translate into activities designed to keep assets productive during adversity
- Example: “business continuity” activities

Asset Disruption

Organizational Context for Resilience Activities

Is there one place that I can go to see what are all the right things that an organization should do in order to improve and manage its operational resilience in a systematic, practical, and proven manner?

CERT Resilience Management Model (CERT-RMM)

Framework for managing and improving operational resilience

“...an extensive super-set of the things an organization could do to be more resilient.”

—CERT-RMM adopter

<http://www.cert.org/resilience/>

Desired Integrated Approach

Pull for Integrated Cyber Resilience

Research on new approaches to achieving security and resiliency in information and communications infrastructures is insufficient. The government needs to increase investment in research that will help address cybersecurity vulnerabilities while also meeting our economic needs and national security requirements.

CYBERSPACE POLICY REVIEW

Assuring a Trusted and Resilient Information and Communications Infrastructure

Federal Computer WEEK

Strategy and business management for government leaders

Updated homeland security strategy
emphasizes resilience

Blueprint for a Secure Cyber Future

The Blueprint lists four goals for protecting critical information infrastructure:

- Reduce Exposure to Cyber Risk
- Ensure Priority Response and Recovery
- Maintain Shared Situational Awareness
- Increase Resilience

Department of Defense S&T Emphasis Areas

The Department has identified seven priorities:

- Defense Strategic Guidance
- Autonomy
- Counter Weapons of Mass Destruction
- Cyber Sciences
- Data-to-Decisions
- Electronic Warfare
- Engineered Resilient Systems
- Human Systems

Success Stories

A Sampling of CERT-RMM Applications and Derivatives

Department of Homeland Security

Homeland
Security

Cyber Resilience Review

The Cyber Security Evaluation Program (CSEP), within the Department of Homeland Security's (DHS) National Cyber Security Division (NCS), conducts a no-cost, voluntary Cyber Resilience Review (CRR) to evaluate and enhance cyber security capacities and capabilities within all 18 Critical Infrastructure and Key Resources (CIKR) Sectors, as well as State, Local, Tribal, and Territorial (SLTT) governments. The CRR seeks to understand cyber security management of services (and associated assets) critical for an organization's mission success by focusing on protection and sustainment practices within ten key domains that contribute to the overall cyber resilience of an organization.

Overview

The CRR is based on the CERT Resilience Management Model (CERT-RMM) developed by Carnegie Mellon University's Software Engineering Institute [www.cert.org/resilience/rmm.html]. The goal of the CRR is to develop an understanding of an organization's operational resilience and ability to manage cyber risk to its critical services and assets during normal operations and during times of operational stress and crises.

The CRR seeks to elicit the current state of cyber security management practices from key cyber security personnel—Chief Information Officers, Chief Information Security Officers, and those responsible for management of IT Security, IT Operations, and Business Continuity.

The CRR results in a report that summarizes observed strengths and weaknesses in each domain and provides options for consideration containing general guidance or activities aimed at improving the cyber security posture and preparedness of an organization.

CRR Domains & Asset Types

The CRR focuses on the following ten domains:

1. Asset Management
2. Configuration and Change Management
3. Risk Management
4. Controls Management
5. Vulnerability Management
6. Incident Management
7. Service Continuity Management
8. External Dependencies Management
9. Training and Awareness
10. Situational Awareness

The CRR addresses the following four asset types:

1. People
2. Information
3. Technology
4. Facilities

What to Expect

- The CRR is a one-day, on-site facilitation and interview of key cyber security personnel.
- The participants will receive a draft report within 45 calendar days to review and provide feedback report results. DHS will subsequently issue a final CRR Report.
- CRR results are afforded protections under the DHS Protected Critical Infrastructure Information (PCII) Program [www.dhs.gov/PCII]—the results are for organization use and DHS does not share results.

Contact Information for CRR-related Inquiries

Please address inquiries regarding the CRR to:
CSE@hq.dhs.gov (Cyber Security Evaluations).

About DHS and NCS

DHS is responsible for safeguarding our Nation's critical infrastructure from physical and cyber threats that can affect national security, public safety, and economic prosperity. NCS leads DHS's efforts to secure cyberspace and cyber infrastructure. For additional information, please visit www.dhs.gov/cyber.

Is this the most important question to ask?

A better question to ask: *How has the national risk environment changed?*

Movement from traditional wireline telephony to cell phones and broadband cable telephony

Cutting The Lifeline

The percentage of cellphone-only households is growing

Source: CDC/NCHS surveys of 136,228 households conducted Jan. 2008-Dec 2011; 95% confidence interval
The Wall Street Journal

Dependency on large number of mobile devices needing frequent recharging

“... As of 2003, 153 million Americans lived in coastal counties – an increase of 33 million since 1980 – and 3.7 million lived within a few feet of high tide...”

—Bryan Walsh, *Time Magazine*, November 12, 2012

... and there are many more.

Expansion of National Risk Environment

Successful management of operational risk may require a (significant) shift in thinking and approach.

*Protecting the enterprise
remains a complex and
multifaceted challenge.*

***Disruptive events, through
which risks are realized, will
continue to surprise us.***

*Traditional tools, techniques,
and methods may not work as
well in this environment.*

*How should an enterprise
deal with (and plan for) such
surprises?*

*How should an enterprise
operate in such an
environment?*

Promising Approaches

Next generation of integrated cyber-resilience management frameworks?

MODELS

**Resilience Engineering –
A new engineering discipline?**

EDUCATION

Re-shaping (not fighting with) the risk landscape?

RISK MGMT

Should organizations be legally allowed to fight back when under cyber attack?

POLICY

Mechanisms to compose resilient systems from brittle components?

TECHNOLOGY

“The oak fought the wind and was broken,
the willow bent when it must and survived.”

Robert Jordan, The Fires of Heaven

Thank you for your attention...
