

TECHNOLOGY DRIVEN. WARFIGHTER FOCUSED.

Intelligent Vehicle Mobility M&S Capability Development (FY13 Innovation Project)

P. Jayakumar and J. Raymond, Analytics

19 May 2014

Report Documentation Page				Form Approved OMB No. 0704-0188	
Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.					
1. REPORT DATE 19 MAY 2014		2. REPORT TYPE Briefing		3. DATES COVERED 06-03-2014 to 15-05-2014	
4. TITLE AND SUBTITLE Intelligent Vehicle Mobility M&S Capability Development FY13 Innovation Project				5a. CONTRACT NUMBER	
				5b. GRANT NUMBER	
				5c. PROGRAM ELEMENT NUMBER	
6. AUTHOR(S) Paramsithy Jayakumar; J Raymond				5d. PROJECT NUMBER	
				5e. TASK NUMBER	
				5f. WORK UNIT NUMBER	
7. PERFORMING ORGANIZATION NAME(S) AND ADDRESS(ES) U.S. Army TARDEC, 6501 East Eleven Mile Rd, Warren, Mi, 48397-5000				8. PERFORMING ORGANIZATION REPORT NUMBER #24563	
9. SPONSORING/MONITORING AGENCY NAME(S) AND ADDRESS(ES) U.S. Army TARDEC, 6501 East Eleven Mile Rd, Warren, Mi, 48397-5000				10. SPONSOR/MONITOR'S ACRONYM(S) TARDEC	
				11. SPONSOR/MONITOR'S REPORT NUMBER(S) #24563	
12. DISTRIBUTION/AVAILABILITY STATEMENT Approved for public release; distribution unlimited					
13. SUPPLEMENTARY NOTES					
14. ABSTRACT An integrated modeling and simulation capability for intelligent vehicles that can model desired mobility scenarios of interest, on-road or off-road, and is High fidelity Fast Scalable Flexible Adaptable Helps enhance mobility i.e., goes faster and farther					
15. SUBJECT TERMS					
16. SECURITY CLASSIFICATION OF:			17. LIMITATION OF ABSTRACT Public Release	18. NUMBER OF PAGES 38	19a. NAME OF RESPONSIBLE PERSON
a. REPORT unclassified	b. ABSTRACT unclassified	c. THIS PAGE unclassified			

- An integrated modeling and simulation capability for intelligent vehicles that can model desired mobility scenarios of interest, on-road or off-road, and is
 - High fidelity
 - Fast
 - Scalable
 - Flexible
 - Adaptable
 - Helps enhance mobility
 - i.e., goes faster and farther
- Funding: \$50K

Delays:

- Network
- Sensing
- Processing
- Operator

u : Control Signal: Steer Angle, Braking Pressure, Throttle Angle

KO: 1.1.1, 1.1.4

TECHNOLOGY D

Vehicle mobility is mainly a function of the vehicle mechanical platform irrespective of whether manned or unmanned.

- **Predefined path**
 - Detailed track model
 - Predefined avoidance path
- **High-Fidelity**
 - Detailed track model
 - Autonomous operation
- **Simplified**
 - Simplified wheel model
 - Autonomous operation
- **Co-simulation of RecurDyn, PreScan, and Simulink**

- Trajectory differences based on simulation type

- Motor torque differences based on simulation type

- Average power requirements (W)

– **High Fidelity: 86.4**

Simplified: 42.8

Predefined: 27.6

Robotic simulations look cool and realistic so they must be real.

Robotic Mobility M&S Tool Environment

Usage Rights			
Commercial	Government Rights	Government Owned	Open Source
Program Classification / Sponsor			
CML	ERDC ¹ , ARL ² , FCS ³	SOURCE ¹ , NASA ²	DARPA
PI / Organization			
CML	QS ¹ , GDRS ^{2,3}	ERDC ¹ , JPL ²	OSRF
Timeline			
Exists	Exists	Exists	Exists
Program Information			
VORTEX	ANVEL ¹ RIVET ² MODSIM ³	VANE ¹ ROAMS ²	Gazebo

IVE

ED.

- **Developed for ERDC since 2007**
 - Original intent: real-time, desktop “front end” to support high-fidelity, off-line HPC-based simulations in VANE
 - Evolved into desktop UGV simulation package
- **Modular, flexible simulation tool and easy-to-use environment**
 - Real-time interactivity
 - Ability to incorporate models and code and customize
 - Import and drag-and-drop build environments
 - Instrument, record, and export data
- **Developed by Quantum Signal in Saline, Michigan**
- **No-cost government and academic versions**
 - All source code available to government

TECHNOLOGY DRIVEN. WARFIGHTER FOCUSED.

- The JPL DARTS lab team has been involved in vehicle modeling and simulation for over 20 years
- Many key JPL/NASA missions require high-fidelity simulations
 - Spacecraft missions (Cassini, MER, MSL)
 - Planetary rovers (Pathfinder, MER, MSL, research rovers)
- The DARTS lab team created ROAMS for vehicle simulations of planetary rovers (<http://dartslab.jpl.nasa.gov>)

ARFIGHTER FOCUSED.

Platform Mobility

- Vehicle Modeling
- Terrain interaction
- Physics Engine
- Scenario Development

Autonomy

- Sensor Models
- Control Algorithm
- User Cognitive Model
- Shared Control Framework

Hardware / Software

- Compute Power
- Visualization

Benchmark Feature	ANVEL	ROAMS
Wheel Vehicle Modeling	Simplified	Yes
Tracked Vehicle Modeling	No	No
Suspension Modeling	Simplified	Detailed
Tire Modeling	Rigid Wheel/Tire Pacejka Slip Model	Rigid Wheel/Tire
Kinematic Joint Modeling	Limited: 4 Joint Types	Larger Library: 10+ Joints
Internal Force Modeling	Limited: Linear Spring/ Damper	Linear & Nonlinear Spring/ Damper
Collision Detection	Uses <i>OpenDE</i>	Uses <i>Bullet</i>
Contact Modeling	Hard Contacts: Constraints	Hard Contacts: Constraints Soft Contacts: Penalty
Scalability	No: $O(N^3)$	Yes: $O(N)$

ANVEL: Simplified

- Only vertical suspension motion

ROAMS: Realistic

- Detailed suspension model

Compute Cost vs. Problem Size

Benchmark: Terrain Interaction

Benchmark Feature	ANVEL	ROAMS
On-Road Terrain (Rigid)	Uses <i>OpenDE Hard Contacts</i> Pacejka Slip Model	N/A for Planetary Missions
Off-Road Terrain (Deformable)	Bekker and Janosi-Hanamoto ERDC GCE Model	F_N : Hunt-Crossley Model F_T : Mohr-Coulomb Model

Benchmark: Scenario Development

Benchmark Feature	ANVEL	ROAMS
Urban	Native or Import	<i>City Engine</i> Import
Off Road	Native or Import	Surface Height Map & Textures Import

Benchmark: Physics Engine

Benchmark Feature	ANVEL	ROAMS
Formulation	“Open Dynamics Engine” (<i>OpenDE</i>) Newton-Euler Equations Lagrange Multiplier Constraints DAE $O(N^3)$ Interactive Solver	Minimal Coordinates; Recursive; DE; $O(N)$; Constraint Embedding for Loops; Spatial Operator Algebra – No Mass Matrix Inversion
Integrator	Euler Algorithm Explicit: Conditionally Stable	CVODE from Lawrence Livermore Adams-Moulton Implicit Algorithm for Non-Stiff Systems, BDF Implicit for Stiff Systems: Unconditionally Stable
Integration Order	1	Variable: 1-5 for Stiff Systems 1-12 for Non-Stiff
Integration Step Size	Fixed	Variable
Simulation Fidelity	Low: Good Enough for Gaming Not Accurate for Engineering	High: Required for NASA applications
Simulation Speed Expected	Real Time	Real Time

TECHNOLOGY DRIVEN. **WARFIGHTER FOCUSED.**

Accuracy

Blue: Exact solution
Red: Euler method

Stability

Black: Exact solution of $y' = -2.3y$
Blue: Euler method, step size = 1
Red: Euler method, step size = 0.7

Benchmark: Autonomy

Benchmark Feature	ANVEL	ROAMS
Sensors	LIDAR, IMU, GPS, Camera	LIDAR, IMU, GPS, Camera, Wheel Encoders
Control Algorithm	Native Solution (PID?)	Open Loop Closed Loop: PID
Obstacle Avoidance	No	No
Dynamic Stability	No	No
User Cognitive Model	No	No
Shared Control	Joystick Interface: Yes M&S: No	Joystick Interface: Yes M&S: No

Benchmark: Hardware / Software

Benchmark Feature	ANVEL	ROAMS
Compute Power	Desktop	Desktop
OS	Linux, Windows	Linux
Ease of Use	GUI	GUI
Language	C++ and XML	C++ and Python
Usage Rights	Government Rights	Government Owned
Maintenance	Contractor	Government

Benchmark: Visualization

Benchmark Feature	ANVEL	ROAMS
Geometry Import	OBJ, 3DS, OGRE Mesh Formats	Vehicle: Most CAD Formats Terrain: Most DEM and Mesh
Rendering Engine	OGRE	OGRE and GPU Shader

Simulation Results

Response		ADAMS		ANVEL		ROAMS	
		Max	Min	Max	Min	Max	Min
Tire Vertical Forces (g)	Left Front	1.5	0.5	10.0	0.0	1.6	0.5
	Right Front	1.5	0.5	3.1	0.0	1.6	0.5
	Left Rear	1.8	0.3	2.8	0.0	1.7	0.1
	Right Rear	1.7	0.2	3.2	0.0	1.7	0.1
Lateral Acceleration (g)		0.5	-0.5	1.1	-1.0	0.6	-0.6
Body Roll Angle (deg)		4.1	-3.7	3.2	-3.2	4.8	-4.8
Body Roll Rate (deg/s)		16.0	-17.8	31.1	-30.4	13.2	-14.4
CPU Time per Simulation Time (s/s)		8.8 ^a		10.2 ^b		3.4 ^c	

a: ADAMS simulated with a maximum step size of 0.001 sec (variable step size integrator); Error tolerance 0.01

b: ANVEL is capable of real time simulation, however, with the default step size of 0.01 sec, the simulation was unstable and crashed. Step size reduced to 0.001 sec

c: ROAMS simulated with the default maximum step size of 0.01 sec (variable step size integrator); Error tolerances: rel 10⁻⁴, abs 10⁻⁸

TECHNOLOGY DRIVEN. **WARFIGHTER FOCUSED.**

- **M&S Features**

- ANVEL offers intuitive user interface and is easy to generate models, but lacks necessary modeling components for accurate vehicle dynamic modeling
- ROAMS offers all necessary modeling components and can model suspensions

- **M&S Capabilities**

- ANVEL has an unstable and inaccurate dynamics solver which was not designed for engineering applications
- ROAMS has an advanced dynamics solver that is inherently stable, accurate, and efficient for near real time applications
- Both software lack high speed obstacle avoidance algorithm
- ADAMS is an off-line (non real-time) high fidelity mobility M&S tool, the gold standard to compare to

❖ Transition

- Both ANVEL and ROAMS have been transitioned to TARDEC including source code

❖ Recommendation

- NASA JPL software ROAMS is recommended for further consideration as UGV Mobility M&S tool for TARDEC

❖ Current Development / Next Steps

- Develop and integrate within ROAMS (JPL and TARDEC)
 - Human cognitive model (TARDEC)
 - High speed obstacle avoidance algorithm (UM/ARC)
 - Shared control algorithm (MIT)
 - Terramechanics model (TARDEC)
- Advanced training in ROAMS software
- Develop templates for suspensions, terrains, scenarios, etc.
- Investigate effect of latency and autonomy on mobility
- Understand Extreme Mobility
