TITLE: Blister Packaging Medication to Increase Treatment Adherence and Clinical Response: Impact on Suicide-related Morbidity and Mortality

PRINCIPAL INVESTIGATOR: Peter M. Gutierrez, Ph.D.

CONTRACTING ORGANIZATION: Denver Research Institute
Denver, CO 80220

REPORT DATE: September 2012

TYPE OF REPORT: Annual

PREPARED FOR: U.S. Army Medical Research and Materiel Command
Fort Detrick, Maryland 21702-5012

DISTRIBUTION STATEMENT: Approved for Public Release;
Distribution Unlimited

The views, opinions and/or findings contained in this report are those of the author(s) and should not be construed as an official Department of the Army position, policy or decision unless so designated by other documentation.

REPORT DOCUMENTATION PAGE				<i>Form Approved</i> <i>OMB No. 0704-0188</i>	
Public reporting burden for this collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing this collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to Department of Defense, Washington Headquarters Services, Directorate for Information Operations and Reports (0704-0188), 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to any penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number. PLEASE DO NOT RETURN YOUR FORM TO THE ABOVE ADDRESS.

Introduction:

The focus of this study is to see if recently discharged psychiatric inpatients will have better treatment adherence and subsequently clinical outcomes as a result of having their medications placed into blister packs as opposed to standard pill bottle packaging. Previous research supports a range of benefits to blister packaging medications for at-risk patients (Llorca, 2008; Bosworth et al., 2005; Dolder, Lacro, & Jeste, 2003). Non-adherence, defined as "not having a prescription filled, not taking enough medication, taking too much medication, not observing the correct interval between doses, not observing the correct duration of treatment and taking additional non-prescribed medication" (Bosworth, Oddone, & Weinberger, 2005, p. 149), is a significant issue for those with psychiatric illness. Moreover, studies suggest that psychiatric symptoms interfere with adherence and partial adherence is associated with poorer psychiatric outcomes, including suicide. Specifically, those who are non-adherent are at 4-7 times greater risk of death (Llorca, 2008). Blister packaging, a structured means of dispensing medications (Bosworth et al., 2005) is expected to increase adherence, and decrease subsequent poor outcomes in the high risk population of psychiatric inpatients. Furthermore, this relatively simple intervention can be accomplished in any treatment setting and does not require any specialized training on the part of those administering the program. The specific aims of this study are to: examine if blister packaging medication significantly increases medication adherence; determine if Blister Packaging decreases self-poisoning behavior; determine if Blister Packaging medications decrease overall symptom distress; determine if Blister Packaging medications reduces additional negative medical and psychiatric outcomes; and finally to see if Blister Packaging medications reduces health care utilization.

Body:

Statement of Work

Task 1. Project Start-up (months 1-3) Completed

- 1a. Hire research assistant, pharmacy technician, and pharmacist (month 1)
 - All study personnel were hired by January 2010 (month 4)
- 1b. Train staff (month 2)
 - All study personnel were trained by April 2010 (month 7)
- 1c. Orient inpatient staff to study logistics (month 3)
 - Accomplished by month 7

Task 2. Participant recruitment (months 4-27) in progress:

- 2a. Introducing study to appropriate patients being discharged from the psychiatric inpatient unit at the Denver VA Medical Center (VAMC) (months 4-27)
 - Participant recruitment began in month 9
- 2b. Securing consent to participate (months 4-27)
 - Participant consent process began in month 9
- 2c. Recording contact information (months 4-27)
 - Participant contact information collected and recorded immediately after consent signed; begun in month 9
- 2d. Creating participant data base (month 4)

- The master database was set up in month 6

Task 3. Baseline assessment (months 4-27) in progress:

- 3a. Administering assessment protocol to all participants prior to discharge from hospital (months 4-27)
 - Baseline assessments began in month 9
- 3b. Creating assessment data base (month 4)
 - The database was set up in month 6.
- 3c. Entering baseline assessment data (months 4-27)
 - Process begun in month 9

Task 4. Preparing year one quarterly reports (months 3, 6, 9, 12) completed

- We submitted our 1st and 2nd quarterly reports and were exempt from the 3rd.

Task 5. Follow-up assessments (months 5-39) in progress:

- 5a. Making phone calls to administer follow-up protocols to each participant at one month intervals post-discharge (months. 5-39)
 - A feasibility phase was added to the protocol and initiated in month 9. Five participants were recruited, but one dropped out. Follow-up assessments by phone were conducted at 2 and 4 weeks post-discharge. Only one of these participants completed both assessments. The others did not return phone calls, had pharmacy issues, or were readmitted to the hospital. As a result, a second feasibility phase to address these identified challenges was added in month 11 and has been completed.
- 5b. Mailing checks or making checks available to participants following each completed assessment phone call (months 5-39)
 - Checks were mailed beginning in month 9.
- 5c. Reviewing participants' VA medical records for clinic visits and in-patient admissions on a monthly basis (months 5-39)
 - Initiated in month 9.
- 5d. Entering follow-up assessment data (months 5-39)
 - Initiated in month 10.
- 5e. Checking entered data against raw data (months 9, 13, 17, 21, 25, 29, 33, 37, 39)
 - Initiated in month 10.
- 5f. Correcting data entry errors identified in 5e (months 10, 14, 18, 22, 26, 30, 34, 38, 40)
 - Initiated in month 11.

Task 6. Preparing year two quarterly reports (months 15, 18, 21, 24) completed

Task 7. Data analyses (months 39-43): in progress:

- 7a. Correcting data entry errors identified in 5e (month 40)
- 7b. Conducting statistical analyses to test primary and secondary hypotheses (months 40 - 43)

We re-entered 25% of our data to date to ensure that data entry was accurate; no major issues came up and we made necessary adjustments.

Task 8 Preparing year three quarterly reports (months 27, 30, 33, 36): In Progress

Overall project timeline:

Year 1 — Complete Task 1; initiate Tasks 2-5

- Task 1 accomplished by month 7; tasks 2-5 initiated by month 11.

Year 2 — Complete Tasks 4 and 6; Continue Tasks 2, 3, and 5

Year 3 — Complete Tasks 2, 3, and 8; Continue Task 5

Year 4 — Complete Tasks 5, 7, and 9

The initial feasibility phase resulted in a number of changes to the study protocol, all of which have been approved by local regulatory bodies as well as HRPO. Problems with the pharmacy's packaging and dispensing of medications also needed to be addressed. Specifically, the original procedures did not allow enough time to accomplish these tasks prior to patient discharge. Changes made in communication flow now allow the pharmacy adequate time to package an initial 2-week (second feasibility phase, completed) or one month supply (full trial, under way) of their prescribed medications. Participants are then sent home with a pre-paid envelope in which they are to return all old prescriptions to the pharmacy. After making these changes, we decided that it would be important to test out our new procedures and processes by adding a second feasibility phase and extending it to an additional 20 participants. Although this second feasibility phase made the timeframe before full recruitment began longer than anticipated, it proved to be a good investment of time.

In the recent amendments, we added the Denver Research Institute to the current HIPAA B form because they will be receiving participant's PHI in order to send out checks for participant payments. We also listed the SafeVet, Lithium, Window to Hope, and accounted for any other interventional studies that may be funded as exclusionary criteria for our study; these studies are also interventional, therefore we cannot have participants overlap in these studies. In addition, several of the forms that the local IRB review group, COMIRB, uses have been updated, so we updated our documents so that they are consistent with the current versions. Additionally, we added a measure that is given at the final follow-up assessment the Narrative Evaluation of Intervention Interview (NEII). Finally, we have had personnel changes in order to help with participant recruitment and removed Dr. Rings as a study coordinator because his fellowship ended and he left the VA.

Recruiting participants for the full-phase trial of the study is underway as is baseline and follow-up assessment. To-date we have recruited 118 participants into the study. Some of the participants have completed the full year of study enrollment and other participants are over half way through completing the year-long follow-up assessments. Additionally, we have brought on several team members who will help with follow-up assessments and data entry which will also allow us to continue recruiting new participants.

Key Research Accomplishments:

- Finished recruiting participants for the feasibility phase of the study.
- Recognized important procedural issues that would be helpful to fix and received regulatory approval on these minor modifications.

- Began recruiting for the full-phase trial of the study.
- Baseline and follow-up assessments underway.
- Participants completing study participation.

Reportable Outcomes:

Insufficient data have been collected to test study hypotheses. No presentations at professional meetings have been made on the study during this reporting period although we are working on a submission for the 46th American Association of Suicidology Annual Conference in Austin, TX, April 2012. A book chapter describing the background for the study, methodological overview, and potential impact of the findings has been published:

Gutierrez, P. M., Brenner, L. A., Wortzel, H., Harwood, J. E. F., Leitner, R., Rings, J., & Bartlett, S. (2012). Blister packaging medication to increase treatment adherence and clinical response: Impact on suicide-related morbidity and mortality. In J. Lavigne & J. Kemp (Eds.), *Frontiers in suicide prevention and research*. Hauppauge, NY: Nova Science Publishers, Inc.

ABSTRACT:

Medication overdoses account for substantial numbers of cases of self-directed violence (SDV) in several segments of the United States (US) population. The purpose of the study described in this chapter is to determine if medication administration via blister packaging is associated with an increase in treatment adherence and a decrease in intentional overdoses among a high risk population of patients either discharged from psychiatric inpatient units or receiving care in outpatient mental health or substance abuse clinics. As such the research aims of the project to be described are as follows: 1) To explore whether blister packaging medication decreases overall symptom distress; 2) To explore whether blister packaging medication reduces additional negative medical and psychiatric outcomes (e.g., emergency department admissions, psychiatric hospitalizations); and 3) To explore whether blister packaging medication reduces health care utilization (e.g., clinic visits). If hypotheses are supported, findings from this study will provide evidence that this means of dispensing prescription medications decreases suicide risk through two mechanisms. Specifically, it is expected that increasing adherence will result in a decrease in symptoms reported as well as overall psychological distress. This alone would be expected to decrease an individual's suicide risk. Also, creating appropriate means restriction should result in reduced morbidity and mortality resulting from intentional and accidental overdoses. The theoretical and empirical background, rationale, methods, and measures described in this chapter should help clinicians to appreciate the potential utility of blister packaging medications for their high-risk patients and provide researchers with a promising line of study in the realm of suicide means restriction.

Conclusion:

Participant recruitment for the feasibility phase of the clinical trial is complete. Necessary changes to the protocol based on those findings have been made and approved by all regulatory bodies. Full trial recruitment and data collection are underway. Interest from the field in the project is strong, and information about this work is being disseminated.
