Defense Acquisition Executive (DAE) Approved Acquisition Program Baseline (APB) dated December 19, 2008

Approved APB

Defense Acquisition Executive (DAE) Approved Acquisition Program Baseline (APB) dated December 19, 2008

Mission and Description

The Joint Precision Approach and Landing System (JPALS) is a joint interest program with the Navy as the DoD lead component. JPALS is a Global Positioning System (GPS)-based precision approach and landing system that will replace several aging and obsolete aircraft landing systems with a family of systems that is more affordable, will function in more operational environments, and support all DoD Land and Sea Based applications. The National Defense Strategy of the United States of America calls for highly mobile forces that can rapidly respond to crises worldwide. Success in meeting this challenge requires the ability to land aviation assets virtually anywhere, at any time. JPALS will provide this capability by being rapidly deployable, survivable, and interoperable among the U.S. Services and with U.S. allies, as well as with civil aircraft and landing facilities. JPALS will eventually support unmanned and highly automated aircraft and will be able to operate during restricted Emission Control conditions.

The approved JPALS Acquisition Strategy defines seven acquisition increments, based on technology maturity and Service needs. Inc 1, Sea Based JPALS, is separated into two phases: Inc 1A ship based systems and Inc 1B aircraft integration.

The JPALS Inc 1 Capability Development Document (CDD) approved by a Joint Requirements Oversight Council (JROC) Memorandum on March 16, 2007, directs the U.S. Navy to be the lead Service for JPALS.

Inc 2 encompasses all Fixed and Mobile Systems that support 200 feet Decision Height (DH) and ½ Statute Mile (SM) visibility for auto-land of properly equipped aircraft. The JPALS Inc 2 CDD was signed on January 19, 2010.

Inc 3 encompasses Fixed and Mobile Systems to support Federal Aviation Administration certification to 100 feet DH and ¼ SM visibility and a Sea Based system for auto-land of properly equipped aircraft.

Inc 4 will provide a Sea Based JPALS capability that supports 100 feet DH and ¼ Nautical Mile visibility, including auto-land and Unmanned Aerial Vehicle support.

Inc 5 will encompass Land Based man-pack systems certified to minimums based on Service needs.

Inc 6 will support Special Operations Forces, mobility missions, and subsequent combat operations with an autonomous approach and landing capability.

Inc 7 is an upgrade to the Sea Based back-up capability, involving reliability, maintainability, and life-cycle improvements to the AN/SPN-41 Instrument Carrier Landing System.

Currently, only Inc 1 and 2 have been approved by the JROC.

Executive Summary

The program initiated at Milestone B and reporting in this SAR reflects JPALS Inc 1A.

JPALS Inc 1A demonstrated auto-land capability in the first Quarter FY 2014. This compressed three-month at-sea effort resulted in over 70 coupled approaches using F/A-18 aircraft flying against a JPALS Inc 1A ship system installed on the USS Theodore Roosevelt (CVN 71). This capability demonstration was one of the culminating phases of the current JPALS Inc 1A ship system Engineering and Manufacturing Development contract and has accrued significant risk reduction benefits. This effort also provided valuable data that demonstrated the potential to provide an objective, certifiable auto-land capability. Additionally, the test program will complete and all test data analysis efforts will close out in early third Quarter FY 2014.

Due to DoD budget constraints and affordability concerns, the Navy performed an internal analysis of the overall Department of Navy Precision Approach and Landing Capability (PALC) requirement. The result of the internal analysis was a PALC roadmap and a Navy proposal to accelerate the incorporation of capabilities planned for future increments into the JPALS Inc 1A program. Under this concept, the JPALS Inc 1A ship system would continue to be developed and procured for use on United States Navy aircraft carriers (CVN-type) and amphibious assault ships (LH-type) in support of the F-35B/C and Unmanned Carrier-Launched Airborne Surveillance and Strike (UCLASS) programs. JPALS would not be integrated into legacy CVN aircraft (JPALS Inc 1B aircraft integration), nor would JPALS be developed and procured for Navy and Marine Corps fixed based air stations or expeditionary airfields (JPALS Inc 2 land-based capability). JPALS would, however, support auto-land for manned and unmanned aircraft (planned future JPALS Inc 3 and Inc 4 capabilities). Separate from JPALS, civil Instrument Landing System capability will be procured and deployed at Navy and Marine Corps fixed based air stations and integrated into legacy aircraft to address joint and civil interoperability gaps. Further, legacy shipboard landing systems will be recapitalized and/or sustained.

These proposed changes to JPALS Inc 1A extend the development program in order to conduct risk reduction activities for manned and unmanned auto-land capability improvements in support of F-35B/C and UCLASS test and deployment schedules, thereby deferring the production decision (Milestone C) by approximately three years to FY 2017.

A reduction in total planned quantities due to the elimination of previously required shore-based training systems, an extension of the development program to include capability improvements, a lower and longer procurement profile, and increases in material costs have resulted in a critical Nunn-McCurdy unit cost breach to the PAUC and APUC in the current JPALS Inc 1A APB. A program deviation report was signed by the program manager on January 28, 2014, and was endorsed by the Navy Acquisition Executive and forwarded to the Milestone Decision Authority on March 12, 2014. The Secretary of the Navy notified Congress of the breach on March 19, 2014.

There are no significant software-related issues with this program at this time.

Explanation of Breach

The schedule and procurement cost breaches were previously reported in the June 2012 SAR.

Proposed changes to JPALS Inc 1A extend the development program in order to conduct risk reduction activities for manned and unmanned auto-land capability improvements in support of F-35B/C and UCLASS test and deployment schedules, thereby further delaying the production decision (Milestone C) by approximately three years to FY 2017.

A reduction in total planned quantities due to the elimination of previously required shore-based training systems, an extension of the development program to include capability improvements, a lower and longer procurement profile, and increases in material costs have resulted in a critical Nunn-McCurdy unit cost breach to the PAUC and APUC in the current JPALS Inc 1A APB. A program deviation report was signed by the program manager on January 28, 2014, and was endorsed by the Navy Acquisition Executive and forwarded to the Milestone Decision Authority on March 12, 2014. The Secretary of the Navy notified Congress of the breach on March 19, 2014.

¹APB Breach

Change Explanations

(Ch-1) The current estimate for Milestone C has changed from November 2013 to February 2017 due to an extension of the development program in order to conduct risk reduction activities for manned and unmanned auto-land capability improvements in support of F-35B/C and UCLASS test and deployment schedules.

(Ch-2) The current estimates for IOT&E, IOC, and FRP will be established upon certification of the program following completion of the Nunn-McCurdy process.

| Initial SAR Information | BY \$M | TY \$M |
|--------------------------|--------|--------|
| Program Acquisition Cost | 963.2 | 1031.9 |

Unit Cost PAUC Changes

PAUC increased due to a reduction in total planned quantities, an extension of the development program to include capability improvements, and increases in material costs.

Unit Cost APUC Changes

APUC increased due to increases in material costs, a lower and longer procurement profile, and a reduction in total planned quantities.

Impact of Performance or Schedule Changes

An extension of the development program to include capability improvements has resulted in a delay in production. The production schedule is closely tied to CVN and LH type ship availability schedules. Lower production quantities spread over a longer number of years than previously planned has increased cost.

Program Management or Control

Pending the outcome of the Nunn-McCurdy process, the Navy will work closely with OSD to manage and control cost growth.

Cost Control Actions

Pending the outcome of the Nunn-McCurdy process, the Navy will work closely with OSD to manage and control cost growth.

Nunn-McCurdy Comments

A reduction in total planned quantities due to the elimination of previously required shore-based training systems, an extension of the development program to include capability improvements, a lower and longer procurement profile, and increases in material costs have resulted in a critical Nunn-McCurdy unit cost breach to the PAUC and APUC in the current JPALS Inc 1A APB.

Contracts

Appropriation: RDT&E

| | |
|-----------------------|---|
| Contract Name | JPALS Development Contract |
| Contractor | Raytheon Company |
| Contractor Location | 1801 Hughes Drive Fullerton, CA 92833-2200 |
| Contract Number, Type | N00019-08-C-0034, CPAF/CPIF |
| Award Date | September 15, 2008 |
| Definitization Date | September 15, 2008 |

| Initial Contract Price (\$M) | | | Current Contract Price (\$M) | | | Estimated Price at Completion (\$M) | |
|------------------------------|---------|-----|------------------------------|---------|-----|-------------------------------------|-----------------|
| Target | Ceiling | Qty | Target | Ceiling | Qty | Contractor | Program Manager |
| 232.8 | N/A | 12 | 368.0 | N/A | 10 | 291.7 | 292.3 |

Target Price Change Explanation

The difference between the Initial Contract Price Target and the Current Contract Price Target is due to Engineering and Manufacturing Development (EMD) contract completion and the Phase I 19-month JPALS Inc 1A EMD contract extension being awarded for risk reduction activities in support of manned and unmanned auto-land capability improvements.

| Variance | Cost Variance | Schedule Variance |
|---|---------------|-------------------|
| Cumulative Variances To Date (11/22/2013) | -21.0 | -1.0 |
| Previous Cumulative Variances | -23.4 | -1.4 |
| Net Change | +2.4 | +0.4 |
| Percent Variance | -8.19% | -0.39% |
| Percent Complete | +97.68% | |

Cost and Schedule Variance Explanations

The favorable net change in the cost variance is due to a decrease in labor hours (especially related to level of effort) across several Work Breakdown Structure elements. Other areas attributing to the favorable variance include experienced personnel and leveraging lessons learned from prior ship trips during system test.

The favorable net change in the schedule variance is due to prior delinquent activities that have been worked and/or completed as well as the contract nearing completion. As the contract nears completion, the schedule variance will naturally trend towards \$0, as all the work scheduled to complete will be completed. As of November 2013, the Integrated Master Schedule (IMS) was 98% complete, with approximately 100 discrete tasks still remaining.

General Contract Variance Explanation

The Naval Air Systems Command granted Raytheon a waiver of delivery for the Earned Value Management (EVM) Contract Data Requirements Lists A106 and A109 (Contract Performance Report and IMS). In doing so, the last EVM deliverable was the submission reporting the November 2013 month end data. At that point, the contract was approximately 98% performed and 106% spent, resulting in a Cost Performance Index of 0.92 and Schedule Performance Index of 1.00 with approximately \$6.1M of remaining work.

Contract Comments

This contract is more than 90% complete; therefore, this is the final report for this contract.

Deliveries and Expenditures

| Delivered to Date | Plan to Date | Actual to Date | Total Quantity | Percent Delivered |

Operating and Support Cost

JPALS Inc 1A

Assumptions and Ground Rules

Cost Estimate Reference:

This section has not been updated from the previous SAR. The O&S cost estimate will be updated as part of the Nunn-McCurdy certification process and will be revised to reflect significant program quantity, schedule, and scope changes.

The Office of the Secretary of Defense Cost Assessment and Program Evaluation organization conducted an estimate in support of the Milestone B decision on July 14, 2008. Since then the Base Year values have decreased and time phasing has been adjusted resulting in lower Then Year values. Updated reliability projections resulted in a reduction from the 2008 estimate including the addition of a 3% Cost Growth Above Inflation factor to the Depot Level Repairables. In-Service Engineering Activity (ISEA) has been added as part of the Supply Chain Management under Sustaining Support due to its current cost benefit to legacy landing systems. Hardware modifications and software maintenance have been refined resulting in a reduction from the 2008 estimate. The hardware modifications and software maintenance have been removed from the Sustaining Support section in the initial estimate and placed in the Continuing System Improvements section in the new estimate. The estimate was updated in December 2011 based on the revised JPALS Cost Analysis Requirements Description.

Sustainment Strategy:

This section has not been updated from the previous SAR. The O&S cost estimate will be updated as part of the Nunn-McCurdy certification process and will be revised to reflect significant program quantity, schedule, and scope changes.

The sustainment strategy is still being analyzed, which includes using Performance Based Logistics. There will be a total of 29 retrofit ship and sea-based ashore units; this is not including the O&S costs for the seven Shipbuilding and Conversion (SCN) funded ships. Each SCN funded ship accounts for its own O&S cost. The system is planned to have a 20-year life after introduction to the fleet with an operational tempo of 4,000 hours per year per ship and 3,500 hours per year per sea-based-ashore.

Antecedent Information:

This section has not been updated from the previous SAR. The O&S cost estimate will be updated as part of the Nunn-McCurdy certification process and will be revised to reflect significant program quantity, schedule, and scope changes.

The antecedent system associated with this estimate is the AN/SPN-46(V)3. Legacy systems continue to experience service life adjustments and system modifications that make Total O&S Costs compilation in a static service life (e.g., 25 years) to be not credible. In addition, the capture of O&S data in available reporting systems has changed significantly over time. The Visibility and Management of Operating and Support Costs database, the Navy's official system for collecting and reporting O&S costs, provides costs from 1997-present. The cost data for platforms in existence prior to 1997 is either unavailable or incomplete. Sufficient historical data and resources do not exist to create comparable, credible Total O&S Costs.

| Unitized O&S Costs BY2008 \$K | | | |
|--------------------------------|---|---|--|
| Cost Element | JPALS Inc 1A Average Annual Cost Per System | AN/SPN-46(V)3 (Antecedent) Average Annual Cost Per System | |
| Unit-Level Manpower | 0.005 | 0.716 | |
| Unit Operations | 0.000 | 0.000 | |
| Maintenance | 0.310 | 0.051 | |
| Sustaining Support | 0.210 | 0.027 | |
| Continuing System Improvements | 0.100 | 0.408 | |
| Indirect Support | 0.000 | 0.000 | |
| Other | 0.000 | 0.000 | |
| Total | 0.625 | 1.202 | |

Unitized Cost Comments:

This section has not been updated from the previous SAR. The O&S cost estimate will be updated as part of the Nunn-McCurdy process and will be revised to reflect significant program quantity, schedule, and scope changes.

The unitized costs are based on 29 retrofit ship and sea-based-ashore units with a 20-year life. $\$362.5 = \$0.625 * 29 \text{ units} * 20 \text{ year life cycle}$. The small delta between this calculated value and the total O&S cost shown is due to rounding. The unitized costs do not include the O&S for seven SCN funded ships.

| | Total O&S Cost \$M | | | |
