ASSESSMENT OF DISASTER RELIEF PREPAREDNESS CAPABILITIES NETWORKS IN THE EUCOM, PACOM, AND SOUTHCOM AREAS OF RESPONSIBILITY

ABSTRACT

Prior MBA projects have analyzed the capabilities of various in-theater non-government organizations (NGOs) and their interactive efforts with the U.S. military toward rapid and effective humanitarian assistance and disaster relief. Those works, which focused on three Areas of Responsibility (AOR) (European Command, Pacific Command, and Southern Command), encompassed dozens of independent countries, thousands of miles of land and ocean, and 88 different NGOs, intended to provide guidance for decision makers to avoid redundancy in efforts and achieve more effective distribution of essential resources. However, inconsistent research methods and differing standards were applied across AOR, causing a lack of convenience and comparability of the data when evaluated as a whole.

Our work systematically evaluated each NGO for the three AOR and universally applied a standardized financial and capabilities analysis to provide consistent and comparable results for decision makers. Commanders can now readily determine which NGO is best suited to perform the type of assistance required in the AOR based on financial stability and internationally accepted definitions of competency.

I. INTRODUCTION

A. BACKGROUND

Natural disasters affect every continent in the world, and under the right conditions, can result in widespread devastation. In the aftermath of such an event, the trail of human suffering and misery can be immense. In 2012 alone, 357 natural disasters were reported in 120 countries around the world, resulting in the deaths of 9,655 people (Guha-Sapir, Hoyois & Below, 2013). An additional 122.9 million people were victimized by these events and the resulting damages topped US \$157.3 billion (Guha-Sapir, Hoyois & Below, 2013). By contrast, the disaster frequency observed in 2012 was well below the annual average observed from 2002 to 2011, and represented the lowest level of associated human impact recorded over the same time period (Guha-Sapir, Hoyois, & Below, 2013). Even the relatively low volume of activity in 2012 demonstrates just how damaging natural disasters can be. Additionally, as the effects of climate change become more pronounced, the projected frequency of rapid-onset climate related disasters such as those created by hurricanes and flooding is expected to rise (Ferris, 2012).

The destruction and human suffering that follows a large-scale natural disaster can be profound. An immediate and appropriately scaled response is crucial in alleviating suffering and avoiding additional casualties. When disaster occurs, it is the responsibility of a country's government to respond to the basic needs of its citizens. However, a government's ability to act can be diminished by the impact of a natural disaster and in a large scale catastrophe limited resources can become quickly scarce. A natural disaster, especially if it has a sudden onset and affects large areas, is the most difficult and complex in terms of humanitarian operations (Apte, 2009), and as a result, the host country can be completely overwhelmed. Typically, it is the international community that fills the void when local authorities are unable to adequately respond.

Over the last several decades, an international humanitarian network composed of various and diverse actors has gradually taken form. UN agencies, government

departments, national and international non-government organizations (NGO), civil groups, military organizations, and less traditional participants such as businesses have melded into a humanitarian patchwork that brings to bear extensive resources and capabilities (Ferris, 2012).

While collectively these organizations represent substantial means, in a complex humanitarian effort a high degree of organization and cooperation is also required. What is needed is an understanding of the competencies and capabilities of military as well as non-military organizations (Apte and Yoho, 2011), so that the DOD can effectively and efficiently respond to humanitarian crises. Most humanitarian agencies lack the resources and experience to coordinate a large scale relief effort on their own. In her piece on the future of civil-military response to natural disasters, Ferris (2012) noted that, “in the aftermath of the earthquake in Haiti... hundreds of community groups and NGOs arrived in the country, most of them with the best intentions but with little experience in disaster response” (p. 2). Major disasters like Haiti in 2010 have demonstrated the need for greater coordination between humanitarian actors and have highlighted unfamiliarity with the capabilities and competencies that each provides. Because no single humanitarian organization has the know-how or resources to respond to all the needs that arise in a humanitarian crisis, collaboration between actors must exist. As Waugh and Streib (2006) note, “collaborative networks are a fundamental component of any emergency response” (p. 134). Responding humanitarian agencies can improve efficiencies while avoiding wasteful duplication of efforts through sufficient knowledge of and effective collaboration with the other actors involved. For this reason, it is critical that all humanitarian actors open lines of communication with potential partners and actively participate in the establishment of collaborative networks.

B. MOTIVATION

It is the policy of the United States Department of Defense (DOD) to conduct and support stability operations both domestically and internationally. This policy requirement acknowledges that an integrated civil-military effort is essential in successful stability operations and authorizes U.S. military forces to collaborate with “foreign

governments and security forces, international governmental organizations, nongovernmental organizations, and private sector firms as appropriate to plan, prepare for, and conduct stability operations” (Under Secretary of Defense for Policy, 2009, p. 2). Stability operations are a core competency of the U.S. military and are expected to be conducted with the same proficiency and effectiveness as combat missions (Under Secretary of Defense for Policy, 2009).

In the last decade alone the U.S. military has been thrust into numerous humanitarian aid and disaster relief (HA/DR) missions, both at home and abroad. From earthquakes in the Middle East to tsunamis in the Indian Ocean and from drought in Africa to hurricanes at home, the U.S. military is routinely called upon to play a significant role in humanitarian operations. While relieving human suffering is a key objective in any HA/DR mission, U.S. participation also provides important strategic benefits. Military and diplomatic relationships with other countries are strengthened through U.S. involvement and foreign public opinion of the United States generally improves. Additionally, humanitarian participation enhances U.S. influence abroad and provides valuable opportunities for U.S. military personnel to gain knowledge of foreign societies and customs in key geographical areas (Bergin & Yates, 2011). However, in the fiscally strained environment in which the U.S. military currently operates, the benefits of these “soft missions” are being called into question. Former Chief of Naval Operations (CNO) Admiral Gary Roughead (USN Ret.) along with his colleagues Morrison, Cullison and Gannon (2013) responded to critics by noting that “among U.S. diplomats posted in countries that have received U.S. Navy humanitarian assistance, there is wide agreement that humanitarian missions expand U.S. access and influence, improve foreign opinion of the United States, and strengthen relationships with other countries and partner organizations” (p. 2). Even if the benefits of stability operations are assumed there is no denying that, in this era of austerity, operational efficiencies must be realized in order for the U.S. military to conduct effective HA/DR missions in the future.

Additional pressure on humanitarian resources could come from the effects of climate change. Rapid-onset disasters that might be impacted by climate change include tropical storms, flash floods, wild fires, dust and ice storms, and emerging infectious

diseases (McGrady, Stewart, & Kingsley, 2010). While the U.S. military does not respond to all these types of disasters, it has played significant roles in humanitarian efforts following large scale cyclones. Though no clear link has been discovered between rising temperatures and increased tropical storm frequency it is clear that higher temperatures lead to elevated levels of water vapor in the atmosphere. While this decreases large-scale tropical circulation, increased atmospheric water vapor can intensify cyclones when conditions are right for them to form (Bengtsson, 2007). As McGrady et al. (2010) point out in their report on the potential impacts of global warming on U.S Military HA/DR operations:

Between the 20th and 21st centuries there was a 12% decrease in number of storms, but there was an increase, from 12 to 17, in cyclones with maximum winds > 112 mph (50 m/s). Overall maximum wind speed increased from 181 to 195 (81 to 87 m/s). This seems to apply to all regions. (p. 17)

Because the U.S. has committed military forces in the past when local governance has become overwhelmed; an upsurge in the number of category 4/5 cyclones as determined by the Saffir-Simpson scale could dramatically increase the need for future military involvement. What is needed is an understanding of competencies and capabilities of military as well as non-military organizations (Apte & Yoho, 2011) so that DOD can effectively and efficiently respond to a humanitarian crisis.

The United States has a long standing history of lending support to fellow nations in times of natural disaster and humanitarian crisis. This stance was further solidified when the DOD enacted policy that established stability operations as one of the military's core missions. However, in an era of fiscal austerity and considering the impact global warming could have on the frequency and intensity of future rapid-onset natural disasters, it is more critical now than ever that the U.S. Military actively seek to develop a highly collaborative network of humanitarian aid providers that can be utilized to maximize the resources and abilities of all those involved when disaster strikes.

C. RESEARCH PURPOSE

When the U.S. military is asked to respond to a natural disaster, the humanitarian effort can involve numerous civilian NGOs and international government organizations (IGOs). Command relationships between these organizations may be unclearly defined and appropriate coordination and cooperation will be critical to achieve an effective operation. Military decision makers are challenged not only with ensuring compliance with existing DOD policies and guidance, but must also decide when and how to access the resources and competencies of other stakeholders in order to achieve commonly held goals. Military planners should recognize that these stakeholders exist outside the military's command and control structure and will likely continue humanitarian activities within the operational area long-after U.S. military forces depart (Joint Chiefs of Staff, 2014). According to the latest guidance released by the Joint Chiefs (2014):

Coordination and collaboration are essential in dealing with these organizations. The strategic goals or operating procedures of all concerned may not be identical, or even compatible; however, with thorough collaboration and planning with concerned entities everyone can contribute to successful operations. (pp. II-1)

In order for the U.S. military to effectively conduct HA/DR operations within an AOR they must develop an understanding of the organizations currently operating there.

This basic requirement lead to the works of Daniels (2012), Nguyen and Curley (2013), and Harper, Koelkebeck and Fitz-Gerald (2013), each of which developed a catalog of actively operating NGOs that the U.S. military could potentially collaborate with in the European Command (EUCOM), Pacific Command (PACOM) and Southern Command (SOUTHCOM) areas of responsibility (AOR), respectively. Nguyen and Curley (2013) furthered the application by providing an objective fiscal analysis that highlighted the financial efficiency of each of the NGO's operating in the PACOM AOR. To this, Harper et al. (2013) added an additional layer of analysis to the SOUTHCOM NGOs by implementing an internationally recognized set of minimum-capability standards criteria for humanitarian response. The application of these criteria, established by a voluntary initiative known as The Sphere Project, provides a clearer assessment of each NGO's capabilities and limitations.

In this project, we will advance the existing work of Daniels (2012), Nguyen and Curley (2013), and Harper et al. (2013) by applying the financial efficiency and Sphere analysis to all NGOs identified by the afore mentioned authors in the EUCOM, PACOM and SOUTHCOM AORs. The goal of this project will be to provide military planners with a broad based breakdown of the core capabilities and competencies of NGOs operating in their AOR as well as the financial efficiency of each to carry out its mission. This comprehensive analysis will provide planners the necessary foundation on which to build a strong humanitarian network that can be utilized to effectively and efficiently respond to future HA/DR needs.

D. METHODOLOGY

The NGOs analyzed in this project were identified in Daniels (2013), Nguyen and Curley (2013), and Harper et al. (2013). The authors started with a comprehensive list of NGOs for their respective AOR obtained from The World Bank. These organizations were then systematically reduced to include only those that possessed HA/DR support capabilities. From there, further financial analysis was conducted to narrow the remaining NGOs down to the final list. The remaining NGOs were then vetted against five criteria that included; core mission, capabilities, religious affiliation, training, and willingness to liaise with military forces (Daniels, 2012; Nguyen and Curley, 2013; Harper et al., 2013). The analysis identified 88 NGOs across the EUCOM, PACOM and SOUTHCOM AORs that make up the basis for this project.

In the first part of this project, we took the methodology developed by Harper et al. (2013) to assess the capabilities of NGOs in the SOUTHCOM AOR and applied it to the EUCOM and PACOM AORs. Their analysis was developed around a voluntary humanitarian initiative known as The Sphere Project. This initiative established “internationally recognized sets of common principles and universal minimal standards in life-saving areas of humanitarian response” (Harper et al., 2013, p. 5). The primary areas where minimal standards were developed include: “(1) water supply, sanitation and hygiene promotion; (2) food security and nutrition; (3) shelter, settlement and non-food items; (4) and health action” (Harper et al., p. 64). Using information attained from the

NGOs' websites we analyzed each organization against the Sphere Project criteria. This analysis was conducted and compiled using the scorecard model developed by Harper et al. in 2013. The information was then condensed into a decision-making tool that provides military planners a quick reference summary of the capabilities and limitations of each NGO within the AOR. NGOs are scored on the four core competency criteria identified by the Sphere Project and a color coded assessment is provided to each. Green represents a NGO's full capability in a respective core competency, while yellow and red represent partial and no capability respectively (Harper et al., 2013).

The second part of this project involved replicating the financial analysis conducted by Nguyen and Curley (2013) in the PACOM AOR and applying it to both the EUCOM and SOUTHCOM AORs. To do this, we collected the most recent financial data from each NGO's website. These data primarily came in the form of an organization's annual report, IRS Form 990, or a self-reported financial statement. All financial data reported in foreign currencies was converted to U.S. dollars. We then examined the revenue sources and expense categories for each organization. Revenues were aggregated across all funding sources and expenses were organized into one of two categories, mission expense or support expense. We determined mission efficiency by calculating the percentage of total expenditures that the NGO applied directly towards its stated primary mission (Nguyen & Curley, 2013). We determined an overall financial efficiency by comparing total expenses to revenues generated during the period. Using these ratios we are able to evaluate how well an NGO is able to provide mission services while remaining financially viable. This information is added to the color coded SPHERE assessment described previously to provide a similar quick-reference to financial efficiency.

E. LIMITATIONS

The goal of this project is to provide military planners within EUCOM, PACOM and SOUTHCOM with information on the humanitarian NGOs operating in their AORs. While these AORs cover a significant geographical area, this catalogue of NGOs is by no means comprehensive due to the limitations of this project.

The first limitation is that this project focuses on only half of the current U.S. Unified Combatant Commands (UCCs). The DOD has organized the world into six UCCs that include Africa Command (AFRICOM), Central Command (CENTCOM), European Command (EUCOM), Northern Command (NORTHCOM), Pacific Command (PACOM) and Southern Command (SOUTHCOM). While all UCCs support disaster relief efforts, this project will focus only on the EUCOM, PACOM and SOUTHCOM AORs (Daniels, 2012).

Second, the NGOs selected in each AOR represent only a fraction of the total NGOs presently operating in these regions. The time and resources required to study the competencies and limitations of all NGOs operating in even a single AOR are outside the scope of this project. To narrow the focus within each region, organizations were considered based upon their effectiveness, funding and size. The organizations total annual revenue was established as the primary determining measure because of a strong correlation between and the amount of funding an NGO receives and its capacity to provide (Daniels, 2012). By applying this criterion, the number of NGOs being considered was reduced to 88; however, the total number of NGOs operating in these three AORs exceeds 500 organizations.

II. LITERATURE REVIEW

A. FOCUSED LITERATURE

A focused literature review of each of the 88 NGO's websites was conducted in previous works. For the readers' convenience, we summarize that information by Unified Combatant Command AOR in Tables 1-3.

Table 1. Humanitarian NGOs in the EUCOM AOR

NGO	Description	Source
Action Against Hunger	ACF International, a global humanitarian organization committed to ending world hunger, works to save the lives of malnourished children while providing communities with access to safe water and sustainable solutions to hunger.	(Daniels, 2012, p. 11) http://www.actionagainsthunger.org
Adventist Development Relief Agency	ADRA seeks to identify and address social injustice and deprivation in developing countries. The agency's work seeks to improve the quality of life of those in need. ADRA invests in the potential of these individuals through community development initiatives targeting Food Security, Economic Development, Primary Health and Basic Education. ADRA's emergency management initiatives provide aid to disaster survivors.	(Daniels, 2012, p. 11) http://www.adra.org
Care International	CARE is a leading humanitarian organization fighting global poverty. We place special focus on working alongside poor women because, equipped with the proper resources, women have the power to help whole families and entire communities escape poverty. Women are at the heart of CARE's community-based efforts to improve basic education, prevent the spread of disease, increase access to clean water and sanitation, expand economic opportunity and protect natural resources. CARE also delivers emergency aid to survivors of war and natural disasters, and helps people rebuild their lives.	(Daniels, 2012, p. 11) http://www.care.org
Catholic Relief Services	CRS assists impoverished and disadvantaged people overseas, working in the spirit of Catholic Social Teaching to promote the sacredness of human life and the dignity of the human person. Although our mission is rooted in the Catholic faith, our operations serve people based solely on need, regardless of their race, religion or ethnicity. Within the United States, CRS engages Catholics to live their faith in solidarity with the poor and suffering of the world.	(Daniels, 2012, p. 12) http://crs.org
Child Fund International	Implementing child development, protection and emergency assistance programs through local communities. No other child development agency has such a recognized history of establishing lasting relationships with local community leaders and people in power who can affect change. Child Fund began in 1938 as China's Children Fund, an emergency relief organization for those displaced by conflict. From these origins, the value of trusted on-the-ground networks became our guiding principle.	(Daniels, 2012, p. 12) http://www.childfund.org

NGO	Description	Source
Church World Service	Church World Service is people reaching out to neighbors in need near and far-- not with a hand out, but a hand up. So, if you're looking to help build a better world—a world where there's enough for all—you've come to the right place! We're working with partners in the U.S. and around the world to build interfaith and intercultural coalitions to eradicate hunger and poverty and promote peace and justice. Together, we're supporting sustainable grassroots development, disaster relief, and refugee assistance.	(Daniels, 2012, p. 12) http://www.churchworldservice.org
Counterpart International	Counterpart International's Humanitarian Assistance Program has mobilized both communities and diverse donor resources to help the world's most vulnerable populations: children, orphans, the poor, the elderly, the disabled, refugees from war and victims of disasters. Counterpart provides a bridge between immediate, basic needs and long-term development. Ensuring that people have homes and food may only be the first step in developing a prospering society, but it is an essential one in helping communities help themselves long after the foreign aid withdraws.	(Daniels, 2012, p. 13) http://www.counterpart.org
Direct Relief International	Direct Relief works daily to equip healthcare providers who care for vulnerable people on an ongoing basis and during emergencies. Our strong network of trusted partners enables Direct Relief to assess immediate healthcare needs, understand the situation on the ground, and respond quickly and efficiently when a disaster strikes. This solid and extensive network is the foundation of our emergency principles and preparedness work. Each emergency is unique and has specific characteristics that are dependent upon local facts and circumstances.	(Daniels, 2012, p. 13) http://www.directrelief.org
Heart to Heart International	Heart to Heart International has been creating a healthier world since 1992. Our mission is to improve global health through initiatives that connect people and resources to a world in need. Through our mobilization efforts, we provide medical education, deliver medical aid, respond to people in crisis and address community-health concerns around the globe.	(Daniels, 2012, p. 13) http://www.hearttoheart.org
International Federation of the Red Cross and Red Crescent	The IFRC carries out relief operations to assist victims of disasters, and combines this with development work to strengthen the capacities of its member National Societies. The IFRC's work focuses on four core areas: promoting humanitarian values, disaster response, disaster preparedness, and health and community care.	(Daniels, 2012, p. 14) http://www.ifrc.org
International Orthodox Christian Charities	In seeking to provide assistance to those in need, either in response to emergencies or to meet long-term socioeconomic development needs, IOCC's fundamental policy is to develop a sustainable indigenous capacity to carry out such programs. All programs are guided by program integrity and the highest standards of stewardship and accountability to donors. Overseas offices are established by IOCC if the Orthodox hierarchy of the country in question have made a request; if there is a need to use IOCC skills to enhance the capacity of the Church and other institutions to reach the poor more effectively; and if the scale of the program requires an on-site presence to monitor targeting of beneficiaries, program implementation and reporting.	(Daniels, 2012, p. 14) http://www.iocc.org

NGO	Description	Source
International Rescue Committee	A natural disaster or an outbreak of war or violence can turn lives upside down in an instant, killing or driving millions of people from their homes and devastating communities. When catastrophe strikes, the International Rescue Committee delivers rapid, lifesaving aid that reduces suffering, restores dignity and jump starts economic recovery.	(Daniels, 2012, p. 15) http://www.rescue.org
International Relief Teams	Natural and man-made disasters can occur without warning anywhere in the world. International Relief Teams (IRT) offers both immediate and long-term relief to disaster victims. IRT is vigilant in choosing appropriate responses to emergency situations, so that its resources can be leveraged to their highest effectiveness. IRT medical teams rush to aid victims of earthquakes, hurricanes, and floods, as well as those caught in the turmoil of war and genocidal conflict.	(Daniels, 2012, p. 15) http://www.irteams.org
Islamic Relief USA	Since its inception, one of Islamic Relief's primary goals has been to provide rapid relief for disaster victims. Partnerships in some three dozen countries maximize Islamic Relief's ability to respond to urgent situations with speed and efficiency, as well as cultural sensitivity. Islamic Relief's emergency aid efforts often include the distribution of food, water and clothing; the construction of temporary shelters; and the administration of vital medical care.	(Daniels, 2012, p. 15) http://www.irusa.org
Médecins Sans Frontières/Doctors Without Borders	Médecins Sans Frontières (MSF) is an international, independent, medical humanitarian organization that delivers emergency aid to people affected by armed conflict, epidemics, natural disasters and exclusion from healthcare. MSF offers assistance to people based on need, irrespective of race, religion, gender or political affiliation.	(Daniels, 2012, p. 16) http://www.msf.org
Mennonite Central Committee	MCC responds to the needs of communities facing disasters or war, often launching projects that continue over months or even years. While MCC provides funds, MCC workers and partners often comment on the faith, hope and courage of communities themselves to rebuild, despite the challenges. In addition to disaster or emergency response, MCC also strives to meet long-term needs and make communities stronger.	(Daniels, 2012, p. 16) http://www.mcc.org
Mercy Corps International	Today, Mercy Corps is helping 19 million people recover from disasters, build stronger communities and find their own solutions to poverty. Since its founding in 1979, Mercy Corps has provided \$2.2 billion in assistance to people in 114 countries. The agency consistently ranks as one of America's most effective and efficient charitable organizations. Over the last five years, more than 88 percent of resources have been allocated directly to programs that help families turn crisis into opportunity in some of the world's most challenging places.	(Daniels, 2012, p. 16) http://www.mercycorps.org
Medical Teams International	Emergencies are unpredictable and life-changing. The best outcomes demand a swift, coordinated effort. In collaboration with field staff, partners, government agencies and volunteers, Medical Teams International responds to natural and man-made disasters within 48 hours. When disasters strike, we are there. We have responded to dozens of man-made and natural disasters since 1979. Our work has reached survivors of genocide, floods, tsunamis, hurricanes, earthquakes and complex humanitarian crises.	(Daniels, 2012, p. 17) http://www.medicalteams.org

NGO	Description	Source
Norwegian People's Aid	Norwegian People's Aid Health and Rescue Service save lives and is active in prevention work and damage limitation. We work actively to strengthen the position of volunteer work in the country's rescue services and to secure good framework conditions, and demand that operative personnel are not exposed to loss of earnings. Norwegian People's Aid Health and Rescue Service stands prepared to assist the national Search and Rescue service. Whatever the time of day or night, crews are deployed to assist search and rescue operations across the country. Such preparedness makes great demands of our volunteers.	(Daniels, 2012, p. 17) http://www.npaid.org
Norwegian Refugee Council	A situation that involves a conflict or natural disaster often affects the population's access to food and water. Conflict, with its associated collapse of social, political and economic systems, is a major cause of food insecurity for households. Agricultural production is disrupted, employment opportunities are decreased and livelihoods assets are looted or destroyed. Consistent with saving lives and curbing malnutrition, the overall objective of this core activity is to support the food security and livelihoods of people affected by displacement.	(Daniels, 2012, p. 17) http://www.nrc.no
Relief International	Relief International meets the immediate needs of victims of natural disasters and civil conflicts worldwide with the provision of food rations, clean water, non-food items, transitional shelter and emergency medical services. Beyond emergency situations, Relief International's field teams provide long term health and nutrition services to communities in need by operating clinics and training health workers. Relief International also provides water and sanitation programming, providing communities with access to clean water, decreasing the incidence of communicable diseases, and improving quality of life.	(Daniels, 2012, p. 18) http://www.ri.org
The Salvation Army International	From sites of natural and man-made disasters to places of human conflict, the Salvation Army is there to provide compassion and practical support to those in real and sudden need. The Army strives to provide first for the immediate physical needs but beyond that, ministry for the aching heart and the weary soul.	(Daniels, 2012, p. 18) http://www.salvationarmy.org
United Methodist Committee on Relief (UMCOR)	When a natural or human-caused disaster strikes outside of the United States, UMCOR serves as the primary channel for United Methodist assistance. In the short term, UMCOR steps in to ease human suffering. In the long term, we work in accompaniment with local partners toward capacity building and Disaster Risk Reduction. In the aftermath of a disaster, UMCOR cooperates with local bishops, district superintendents, and church leaders to help them develop their own response mechanisms.	(Daniels, 2012, p. 18) http://www.umcor.org

NGO	Description	Source
World Relief	As a relief organization with a mission to love others as we love God, our Disaster Response team operates out of a commitment to serve our neighbors experiencing crisis. The way we respond depends deeply on the nature of the disaster, the country, the economic and geo-political situation at hand. We immediately begin to assess the situation to determine the most appropriate actions. This response takes on several forms including empowering the local church, empowering our teams already on the ground, or empowering an indigenous organization. Our Disaster Response team prioritizes interventions devoted to empowering local churches to provide effective post-disaster and disaster mitigation assistance to their communities. Eligibility for assistance is not limited to churches, but may, depending on the situation, apply to networks, indigenous organizations and local evangelical humanitarian organizations.	(Daniels, 2012, p. 19) http://worldrelief.org
World Vision International	World Vision identifies places at risk of disaster, prepares resources and staff in high-risk zones, and builds capacity and resilience among communities to help them protect themselves before an emergency and rebuild afterwards. Each year, World Vision sets aside a certain amount of money that can be made available very quickly to launch urgent disaster responses.	(Daniels, 2012, p. 19) http://www.wvi.org

Table 2. Humanitarian NGOs in the PACOM AOR

NGO	Description	Source
Action Against Hunger	Leader in the fight against malnutrition, Action Against Hunger International saves the lives of malnourished children while providing communities with access to safe water and sustainable solutions to hunger.	(Nguyen & Curley, 2013, p. 5) http://www.actionagainsthunger.org
Adventist Development and Relief Agency	ADRA seeks to identify and address social injustice and deprivation in developing countries. The agency's work seeks to improve the quality of life of those in need. ADRA invests in the potential of these individuals through community development initiatives targeting Food Security, Economic Development, Primary Health and Basic Education. ADRA's emergency management initiatives provide aid to disaster survivors.	(Nguyen & Curley, 2013, p. 6) http://www.adra.org
Care International	CARE is a leading humanitarian organization fighting global poverty. We place special focus on working alongside poor women because, equipped with the proper resources, women have the power to help whole families and entire communities escape poverty. Women are at the heart of CARE's community-based efforts to improve basic education, prevent the spread of disease, increase access to clean water and sanitation, expand economic opportunity, and protect natural resources. CARE also delivers emergency aid to survivors of war and natural disasters, and helps people rebuild their lives.	(Nguyen & Curley, 2013, p. 6) http://www.care.org

NGO	Description	Source
Catholic Relief Services	Promote human development by responding to major emergencies, fighting disease and poverty, and nurturing peaceful and just societies; and, serve Catholics in the United States as they live their faith in solidarity with their brothers and sisters around the world.	(Nguyen & Curley, 2013, p. 6) http://www.crs.org/asia
Church World Service	The Mission: Feed the hungry, clothe the naked, heal the sick, comfort the aged, and shelter the homeless.	(Nguyen & Curley, 2013, p. 7) http://www.cwsglobal.org
Concern Worldwide U.S.	Concern Worldwide is a non-governmental, international, humanitarian organization dedicated to the reduction of suffering and working towards the ultimate elimination of extreme poverty in the world's poorest countries.	(Nguyen & Curley, 2013, p. 7) http://www.concernusa.org
Counterpart International	Counterpart International's Humanitarian Assistance Program has mobilized both communities and diverse donor resources to help the world's most vulnerable populations: children, orphans, the poor, the elderly, the disabled, refugees from war and victims of disasters. Counterpart provides a bridge between immediate, basic needs and long-term development. Ensuring that people have homes and food may only be the first step in developing a prospering society, but it is an essential one in helping communities help themselves long after the foreign aid withdraws.	(Nguyen & Curley, 2013, p. 7) http://www.counterpart.org
Direct Relief International	Direct Relief International provides medical assistance to improve the quality of life for people affected by poverty, disaster, and civil unrest at home and around the world. Direct Relief works to support the work of healthcare providers in the USA and in more than 70 countries, equipping them with the medicines, supplies, and equipment so they can care for their patients.	(Nguyen & Curley, 2013, p. 8) http://directrelief.org
Episcopal Relief and Development	Episcopal Relief & Development is an international relief and development agency and a compassionate response to human suffering on behalf of The Episcopal Church of the United States. Our work to heal a hurting world is guided by the principles of compassion, dignity and generosity.	(Nguyen & Curley, 2013, p. 8) http://www.erd.org
Food for the Hungry	When you partner with Food for the Hungry (FH), you'll be serving the poor in two ways. FH responds to help shelter, feed and clothe survivors of natural disasters. FH also does long-term development work with the poor to transform impoverished communities into healthy, productive places for children to grow.	(Nguyen & Curley, 2013, p. 8) https://fh.org
Habitat for Humanity International	The mission of Habitat's Disaster Response [is] "To develop innovative housing and shelter assistance models that generate sustainable interventions for people vulnerable to or affected by disasters or conflicts."	(Nguyen & Curley, 2013, p. 9) http://www.habitat.org
International Aid	International Aid glorifies Christ by providing medical and health resources to global partners serving people in need.	(Nguyen & Curley, 2013, p. 9) http://www.internationalaid.org
International Federation of Red Cross and Red Crescent Societies	The IFRC carries out relief operations to assist victims of disasters, and combines this with development work to strengthen the capacities of its member National Societies. The IFRC's work focuses on four core areas: promoting humanitarian values, disaster response, disaster preparedness, and health and community care.	(Nguyen & Curley, 2013, p. 9) http://www.ifrc.org

NGO	Description	Source
International Orthodox Christian Charities	IOCC, in the spirit of Christ's love, offers emergency relief and development programs to those in need worldwide, without discrimination, and strengthens the capacity of the Orthodox Church to so respond.	(Nguyen & Curley, 2013, p. 10) http://www.iocc.org
International Relief & Development	A nonprofit humanitarian and development organization, IRD improves lives and livelihoods through inclusion, engagement, and empowerment. We build lasting relationships and strengthen our beneficiaries' capabilities to create sustainable change and direct their own development. These principles are at the core of IRD's mission to reduce the suffering of the world's most vulnerable groups and provide the tools and resources needed to increase their self-sufficiency.	(Nguyen & Curley, 2013, p. 10) http://www.ird.org
International Relief Team	International Relief Teams is a trusted relief organization that assists victims of disaster, poverty and neglect. Serving those in need with efficiency and integrity, International Relief Teams focuses on four core areas – medical training, surgical outreach, health promotion and disaster relief – that combine short-term relief efforts and long-term programs to save and change lives.	(Nguyen & Curley, 2013, p. 10) http://irteams.org
International Rescue Committee	The International Rescue Committee responds to the world's worst humanitarian crises and helps people to survive and rebuild their lives. Founded in 1933 at the request of Albert Einstein, the IRC offers lifesaving care and life-changing assistance to refugees forced to flee from war or disaster.	(Nguyen & Curley, 2013, p. 11) http://www.rescue.org
Lutheran World Relief	We focus on attacking the root causes of poverty and breaking the cycles that keep people from being healthy, productive and self-supporting. Most often, all people need is a helping hand to provide a resource they have not been able to access on their own. LWR responds to that need efficiently and effectively by providing resources to local partner organizations — groups who are already there in the trenches and are therefore best equipped to get the right help to the right people	(Nguyen & Curley, 2013, p. 11) http://lwr.org
Médecins Sans Frontières	Médecins Sans Frontières provides assistance to populations in distress, to victims of natural or man-made disasters and to victims of armed conflict.	(Nguyen & Curley, 2013, p. 11) http://www.msf.org
Medical Teams International	Medical Teams International conducts the following during disaster response: • Develop high-impact relief, rehabilitation and risk-reduction programs that provide emergency health care to vulnerable populations. • Build local partner and health personnel capacity through training and support to community based health and development programs. • Ship containers of essential medicines and medical supplies to hospitals and clinics, increasing access and quality of health services.	(Nguyen & Curley, 2013, p. 12) http://www.medicalteams.org

NGO	Description	Source
Mennonite Central Committee	MCC responds to the needs of communities facing disasters or war, often launching projects that continue over months or even years. While MCC provides funds, MCC workers and partners often comment on the faith, hope and courage of communities themselves to rebuild, despite the challenges. In addition to disaster or emergency response, MCC also strives to meet long-term needs and make communities stronger.	(Nguyen & Curley, 2013, p. 12) http://www.mcc.org
Mercy Corps International	Life can change for millions of families in an instant: natural disasters can take loved ones and the outbreak of war drive families from their homes. When the unthinkable happens, Mercy Corps delivers rapid, lifesaving aid to hard-hit communities.	(Nguyen & Curley, 2013, p. 13) http://www.mercycorps.org
Norwegian Refugee Council	The Norwegian Refugee Council (NRC) is an independent, humanitarian, nonprofit, non-governmental organization which provides assistance, protection and durable solutions to refugees and internally displaced persons worldwide.	(Nguyen & Curley, 2013, p. 13) http://www.nrc.no
Plan International	Plan aims to achieve lasting improvements in the quality of life of deprived children in developing countries, through a process that unites people across cultures and adds meaning and value to their lives, by: • Enabling deprived children, their families and their communities to meet their basic needs and to increase their ability to participate in and benefit from their societies. • Building relationships to increase understanding and unity among peoples of different cultures and countries. • Promoting the rights and interests of the world's children.	(Nguyen & Curley, 2013, p. 13) http://plan-international.org
Relief International	Relief International meets the immediate needs of victims of natural disasters and civil conflicts worldwide with the provision of food rations, clean water, non-food items, transitional shelter and emergency medical services. Beyond emergency situations, Relief International's field teams provide long term health and nutrition services to communities in need by operating clinics and training health workers. Relief International also provides water and sanitation programming, providing communities with access to clean water, decreasing the incidence of communicable diseases, and improving quality of life.	(Nguyen & Curley, 2013, p. 14) http://www.ri.org
World Concern	World Concern partners to transform the lives of poor and marginalized people through disaster response and sustainable community development. The love of Christ compels us to pursue reconciliation and equip those we serve, so that they may in turn share with others.	(Nguyen & Curley, 2013, p. 14) http://www.worldconcern.org
World Vision International	World Vision is globally positioned to help with immediate needs like food, water and shelter when disaster strikes and to help communities to recover and prevent future catastrophes.	(Nguyen & Curley, 2013, p. 14) http://www.wvi.org

Table 3. Humanitarian NGOs in the SOUTHCOM AOR

NGO	Description	Source
Aero Bridge	Aero Bridge is a group of aviation specialists who coordinate emergency aviation response during disasters. Our primary mission is to assist governments and NGOs by moving people and supplies to where they are most needed	(Harper et al. , 2013, p. 8) http://aerobridge.org/
American Red Cross	The Red Cross was chartered by the U.S. Congress to ...carry on a system of national and international relief in time of peace and apply the same in mitigating the sufferings caused by pestilence, famine, fire, floods, and other great national calamities, and to devise and carry on measures for preventing the same. The Charter is unique to the Red Cross because it assigns duties and obligations to the nation, to disaster survivors, and to the people who generously support our work through donations	(Harper et al. , 2013, p. 8) http://www.redcross.org
Americas Relief Team	Americas Relief Team (ART) offers transportation and logistics assistance to non-profit organizations. The organization's specialty is the aid and relief sector, where it has served for many years by air and sea following crises in the Caribbean and Central America	(Harper et al. , 2013, p. 8) http://americasrelief.org
Baptist Health South Florida	Baptist Health Medical Group is a non-profit organization of more than 100 physicians "who provide comprehensive, high quality medical care to patients of all ages."	(Harper et al. , 2013, p. 9) http://baptisthealth.net
Children International	For over 75 years, Children International has been providing critical assistance to children and families struggling in terrible poverty. Through our one-to-one child sponsorship program, we reduce the burden of poverty on impoverished children, invest in their potential and provide them with opportunities to grow up healthy, educated and prepared to succeed and contribute to society	(Harper et al. , 2013, p. 9) https://www.children.org
Courtland Humanitarian Outreach Worldwide	Courtland Humanitarian Outreach Worldwide (CHOW) is a nondenominational organization incorporated in the State of Ohio, dedicated to helping relief efforts worldwide. The organized attempt by the community to collect humanitarian aid not only benefits the world's poor, but our planet as well.	(Harper et al. , 2013, p. 9) http://www.chowohio.org
EDGE Outreach (WaterStep)	EDGE Outreach, also known as WaterStep, distributes and installs water treatment systems for use in developing communities. "They seek to prevent waterborne illness through sustainable solutions by training local people, solving problems creatively, and improving developing communities' self-sufficiency"	(Harper et al. , 2013, p. 10) http://edgeoutreach.com
Florida Association for Volunteer Action in the Caribbean and the Americas	The Florida Association for Volunteer Action in the Caribbean and the Americas (FAVACA) is a private not for profit organization formed in 1982 by Florida Governor (now former U.S. Senator) Bob Graham. FAVACA's Florida International Volunteer Corps is the only program of its kind in the country and enjoys statutory authority under Section 288.0251 Florida Statutes. A state appropriation, voted annually since 1986, provides a funding base for an estimated 100 volunteer missions to Latin America and the Caribbean each year.	(Harper et al. , 2013, p. 10) http://www.favaca.org

Food for the Poor	Food for the Poor is an interdenominational Christian ministry that “serves the poorest of the poor in 17 countries throughout the Caribbean and Latin America”. They are the third largest international relief and development charity in the United States, feeding two million poor every day. They also provide food, housing, health care, education, water projects, and emergency relief to Caribbean and Latin America	(Harper et al. , 2013, p. 10) http://www.foodforthe poor.org
Foundation for the Advancement of Children’s Esthetics	The Foundation for the Advancement of Children’s Esthetics is dedicated to providing “free facial reconstructive surgery to underprivileged children”	(Harper et al. , 2013, p. 11) http://www.corporationwiki.com/Florida/Neptune-Beach/foundation-for-the-advancement-of-childrens-esthetics/92776031.aspx
Give a Kid a Backpack	In much of the world, education is only technically free. Children may attend school for free but they need to pay registration fees and supply their own uniforms and school supplies. These modest requirements are simply beyond the reach of most poor children in these countries. Give a Kid a Backpack targets children who live in severe conditions of poverty who are eager to go to school but don’t have the funds to fulfill these requirements.	(Harper et al. , 2013, p. 11) http://www.giveakidabackpack.org
Heart to Heart International	Heart to Heart International is a global volunteer movement. Its core purpose is to transform lives through service—one volunteer and one community at a time. All activities are geared to improve health in underserved communities. We fulfill our mission by connecting people and resources to a world in need.	(Harper et al. , 2013, p. 11) http://www.hearttoheart.org
Hope Haven	Hope Haven is a community committed to the special creation of God that is the human being; encouraging the realization of dreams, desires, and aspirations, valuing gifts, talents, and contributions, sharing accountability for individual and community growth.	(Harper et al. , 2013, p. 12) http://hopehaven.org
Hospital Sisters Mission Outreach	The 501(c) (3) not-for-profit organization, whose Main Office is in Springfield, IL, addresses the serious unmet medical needs of people in developing countries and promotes a more green-friendly environment through a medical recovery and responsible redistribution program.	(Harper et al. , 2013, p. 12) http://www.mission-outreach.org
InterAction	Inter Action serves as a convener, thought leader and voice of our community. Because we want real, long-term change, we work smarter: We mobilize our members to think and act collectively, because we know more is possible that way. We also know that how we get there matters. So we set high standards. We insist on respecting human dignity. We work in partnerships.	(Harper et al. , 2013, p. 12) http://interaction.org
International Relief and Development (IRD)	A nonprofit humanitarian and development organization, IRD improves lives and livelihoods through inclusion, engagement, and empowerment. We build lasting relationships and strengthen our beneficiaries’ capabilities to create sustainable change and direct their own development.	(Harper et al. , 2013, p. 13) http://www.ird.org/about-us
Johns Hopkins Office of Critical Preparedness and Response (CEPAR)	CEPAR combines the talents of Johns Hopkins Medicine with the tactical planning capabilities of the Applied Physics Laboratory, the investigative skills of the School of Public Health, and the faculty and facilities of the Johns Hopkins University.	(Harper et al. , 2013, p. 13) http://www.hopkins-cepar.org

Latter-day Saints (LDS) Charities	LDS Charities sponsor[s] relief and development projects in 179 countries. The organization provide[s] emergency relief assistance in times of disaster as well as primary community development programs such as clean water, neonatal resuscitation training, vision care, wheelchairs, immunizations, and food production.	(Harper et al. , 2013, p. 13) http://ldscharities.org
Lions Clubs International Foundation	The Lions Clubs International Foundation provides sight programs, youth programs, services for children, health programs, and disaster relief.	(Harper et al. , 2013, p. 14) http://www.lionsclubs.org
Loving Hugs	Loving Hugs collects stuffed animals and distributes them to children in war zones, orphanages, refugee and IDP [internally displaced person] camps, and medical/hospital facilities around the world.	(Harper et al. , 2013, p. 14) http://lovinghugs.org
Miami Children's Hospital	Miami Children's Hospital is a world leader in pediatric healthcare. With a medical staff of more than 650 physicians and over 3,500 employees, the hospital is renowned for excellence in all aspects of pediatric medical care from birth through adolescence. Miami Children's Hospital offers more than 40 pediatric specialties and subspecialties, and is home to Florida's only free-standing pediatric trauma center.	(Harper et al. , 2013, p. 14) http://www.mch.com
Midwest Mission Distribution Center	Midwest Mission Distribution Center (MMDC) is a disaster relief facility located on an 8 acre campus, 4 miles south of Springfield, Illinois. Construction began in October of 1999 and opened for ministry in the year 2000. MMDC is a caring ministry related to the Illinois Great Rivers Conference and the North Central Jurisdiction of the United Methodist Church. MMDC is also a cooperating depot in the UMCOR (United Methodist Committee on Relief) Relief Supply Network as of January 2010. Help God's people in need locally, nationally, and around the world.	(Harper et al. , 2013, p. 15) http://www.midwestmissiondc.org
Operation Smile	Operation Smile is an international children's medical charity that heals children's smiles, forever changing their lives. As an international charity for children, we measure ourselves by the joy we see on all of the faces we help. At Operation Smile, we're more than a charity. More than an NGO, we're a mobilized force of medical professionals and caring hearts that provide safe, effective reconstructive surgery and related medical care for children born with facial deformities such as cleft lip and cleft palate.	(Harper et al. , 2013, p. 15) http://www.operationsmile.org
Partners in Health	We draw on the resources of the world's leading medical and academic institutions and on the lived experience of the world's poorest and sickest communities. At its root, our mission is both medical and moral. It is based on solidarity, rather than charity alone. When our patients are ill and have no access to care, our team of health professionals, scholars, and activists will do whatever it takes to make them well—just as we would do if a member of our own families or we ourselves were ill.	(Harper et al. , 2013, p. 16) http://www.pih.org
People to People International (PTPI)	People to People International (PTPI) is dedicated to enhancing cross cultural communication within and across communities and nations. Tolerance and mutual understanding are central themes. While not a partisan or political institution, PTPI supports the basic values and goals of its founder, President Dwight D. Eisenhower.	(Harper et al. , 2013, p. 16) http://peopletopeopleinc.org

Project C.U.R.E.	Project C.U.R.E. operates distribution centers in Colorado, Tennessee, Texas and Arizona and collects excess supplies and specialized equipment from hundreds of U.S. hospitals and medical manufacturers, giving them the opportunity to “green” their operations and redirect their surplus in an environmentally friendly way. In addition, Project C.U.R.E. sends volunteer medical teams to underserved facilities abroad to provide free care and train local healthcare staff. Today, Project C.U.R.E. is the world’s largest distributor of donated medical supplies to limited communities across the globe, touching the lives of patients, families, and children in more than 130 countries.	(Harper et al. , 2013, p. 16) http://www.projectcure.org
Project Handclasp Foundation	Since the inception of Project Handclasp in 1959, distribution of humanitarian, educational, and goodwill material to disadvantaged people in foreign countries has greatly enhanced perceptions of the United States and the U.S. Navy. Through direct person-to-person contact in the conduct of community relations endeavors, Project Handclasp plays a vital role in enabling the Navy to carry out its mission of fostering peace and goodwill by promoting international friendship and trust. It has simultaneously allowed U.S. Navy personnel to gain insight and appreciation of diverse cultures and quality of life of people of other nations.	(Harper et al. , 2013, p. 17) http://www.guidestar.org
Project HOPE	Founded in 1958, Project HOPE (Health Opportunities for People Everywhere) is dedicated to providing lasting solutions to health problems with the mission of helping people to help themselves. Identifiable to many by the SS HOPE, the world’s first peacetime hospital ship, Project HOPE now provides medical training and health education, as well as conducts humanitarian assistance programs in more than 35 countries.	(Harper et al. , 2013, p. 17) http://www.projecthope.org
Registered Nurse Response Network (RNRN)	The RNRN is a national network of direct-care RNs powered by National Nurses United that coordinates sending volunteer RNs to disaster stricken areas where and when they are needed most	(Harper et al. , 2013, p. 18)
Rotary International	Rotary International is a worldwide organization whose volunteers combat hunger, improve health and sanitation, provide education and job training, promote peace, and eradicate polio.	(Harper et al. , 2013, p. 18) https://www.rotary.org
Spirit of America	Spirit of America is a non-profit company that assists Americans serving in Afghanistan, Iraq, and Africa to help the local people of those areas. The organization was founded in 2003	(Harper et al. , 2013, p. 18) http://www.spiritofamerica.net
The MESSAGE Program	The MESSAGE program secures donations of supplies and equipment in the U.S. for distribution to providers in other countries. We distribute donated items based on an evaluation of the recipients’ actual need. It ensures that the recipients receiving the donations have the adequate training and capacity to use the donations responsibly.	(Harper et al. , 2013, p. 18) http://thessageprogram.org
University of California San Diego Pre-Dental Society	The University of California San Diego Pre-Dental Society (UCSD PDS) is a student organization that promotes student interest in the field of dentistry. Perhaps the most unique quality of the UCSD PDS is the UCSD Student-run Free Dental Clinic Project. Our program is unique in that we are the only undergraduate program not affiliated with a dental school that manages and runs three free dental clinics with the help of dental professionals.	(Harper et al. , 2013, p. 19) http://fdc-pds.cliffence.com

Veterinarians Without Borders	Veterinarians Without Borders advances human health and livelihoods in underserved areas by sustainably improving veterinary care and animal husbandry, working toward preventing, controlling and eliminating priority diseases. The organization explains its objectives as follows: • To be excellent teachers of veterinary service and care measured by our ability to communicate and transfer knowledge that results in the enhancement of veterinary skills in underserved areas; • To be a leading non-profit organization by building global and local capacity in high quality veterinary education, service and care. • To develop and strengthen value chains for the producer and veterinary care providers that improves animal and human health as well as economic growth.	(Harper et al. , 2013, p. 19) http://vetswithoutbordersus.org
Wheelchair Foundation	The Wheelchair Foundation delivers brand new manual wheelchairs to people in need in 150+ countries worldwide. Established on June 6th, 2000 by Philanthropist Kenneth E. Behring, the Wheelchair Foundation has delivered more than 780,000 wheelchairs to people in need, free of charge.	(Harper et al. , 2013, p. 20) https://www.wheelchairfoundation.org
World Vets	World Vets develops, implements, and manages international veterinary and disaster relief programs to help animals, educate people and have a positive impact on communities. Improving animal welfare and alleviating suffering are high on our priority list but our work extends beyond that. Our programs help to prevent the spread of diseases from animals to humans; our livestock programs help small farmers to pull themselves out of poverty, and our disaster relief efforts for animals directly impact people who might otherwise remain in dangerous situations if the needs of their animals are not addressed.	(Harper et al. , 2013, p. 20) http://worldvets.org

The previous tables were provided as a summary of the 88 NGOs considered in this project. For more information on a specific NGO, please refer to the works of Daniels (2012), Nguyen and Curley (2013), and Harper, Koelkebeck and Fitz-Gerald (2013).

THIS PAGE INTENTIONALLY LEFT BLANK

III. DATA COLLECTION AND OBSERVATIONS

This chapter describes the data collection methodologies employed for this study and presents the raw data used for analysis in Chapter IV and conclusions in chapter five. The Sphere Project section of this chapter begins with describing techniques for amassing the data used, a discussion on grading criteria, and then concludes with a comprehensive listing of the definitions used in describing the standards evaluated for each NGO's core competency functions. The second section to this chapter describes collection and arrangement of pertinent financial data used in this study, including sources of both revenues and expenses for each NGO.

A. THE SPHERE PROJECT

This section provides a description of the techniques used to analyze and evaluate the capabilities of NGOs investigated. Results for SOUTHCOM are derived from Harper et al. in 2013, while the results for EUCOM and PACOM are original to this study and use the same methodology Harper et al. applied to SOUTHCOM for standardization across all three AORs. This technique, described below, can be replicated for NGOs that were not studied in the respective AORs in this report and likewise for NGOs in any AOR that this report does not include.

From the outset, the desired outcome of our work evaluating NGOs in this fashion was to measure and quantify capabilities inherent to the questioned NGOs. As published in the Department of Defense Support to Foreign Disaster Relief (Handbook for JTF Commanders and Below):

Metrics matter. Metrics are the means by which operational progress is measured. Metrics capture and demonstrate level of effort/need and measures of performance/effectiveness. Relevant metrics facilitate accurate and timely reporting to higher echelon commands and national authorities. It is important that the metrics utilized by the JTF be consistent with those used by the US Embassy and USAID/OFDA. Data collection requirements and the associated standardized metrics should be disseminated to deploying forces as early as possible.

The JTF Commander and Staff should not develop their own metrics, but instead use internationally accepted metrics. The SPHERE Project developed a handbook entitled the “Humanitarian Charter and Minimum Standards in Disaster Response” (Department Of Defense Support To Foreign Disaster Relief (Handbook For JTF Commanders And Below), 2011).

The DOD chose to use the Sphere Project criteria for standardization and metrics because of Sphere’s “widely known and internationally recognized sets of common principles and universal minimum standards in lifesaving areas of humanitarian response” (The Sphere Project Humanitarian Charter And Minimum Standards In Humanitarian Response, 2011, p. 5).

1. DATA COLLECTION METHODOLOGY

The primary method used to collect information pertaining to an NGO’s capabilities was through investigation of each NGO’s website for the AORs of EUCOM and PACOM. Data used in a prior work for SOUTHCOM was replicated in this report to broaden the scope as this is a follow-on to previous studies.

2. SPHERE PROJECT PERFORMANCE MEASURES

The Sphere Project established four core competencies deemed critical that must be evaluated and if necessary addressed for disaster response to ensure stable conditions exist for the population to survive and recover. The core competencies are: 1) water supply, sanitation and hygiene promotion; 2) food security and nutrition; 3) shelter, settlement and non-food items; and 4) health action (The Sphere Project Humanitarian Charter And Minimum Standards In Humanitarian Response, 2011, pp. 4, 5). Each competency has a set of primary functions and sometimes secondary functions. Each function has detailed standards defined in the Sphere Handbook.

During the analysis of each NGO, the goal was to determine if that NGO was capable of satisfactorily accomplishing the standards used to define each core competency function. Using the scorecard model developed by Harper et al. (2013), if an NGO was deemed capable of meeting at least 50% of standards used to define a function, as determined by research conducted on the NGO website, we denoted on the scorecard a

“1” for that function/sub-function (see Tables 4-13). If the NGO was deemed unable to meet at least 50% of the specific standards, then a score of “0” was denoted. On the scorecard, at least 50% of the secondary sub-functions must have been satisfactorily met in order to award a “1” to the primary function. Likewise, at least 50% of the primary functions must have been satisfactorily met in order to award a “1” to the overarching core competency category (Water, Food, Shelter, Health) and is denoted under the heading of “Total” on the scorecard.

There were several cases in which an NGO made reference to providing a HADR core competency, however, the research team was unable to determine from the respective NGO website that enough standards were met to grant a score of “1”, indicating that at least 50% of the standards were met in accordance with SPHERE Handbook definitions used to define the functions. In these cases, the authors reached out to the NGO in question asking for clarification. Not all NGO’s chose to respond to the authors’ inquiry. In these cases, the functions/core competencies are annotated with an asterisk (“*”).

Specific standards for each function of the competencies were evaluated by the work of Harper, et al. (2013) which investigated SOUTHCOM, as well as to the NGOs presented here as new work in both PACOM and EUCOM. As denoted in the Sphere Project (2011) and Harper et al. (2013), the standards that define these functions are as follows:

a. Competency: Water Supply, Sanitation, and Hygiene Promotion

1. Function: Hygiene Promotion

Standard 1: Hygiene promotion implementation. Affected men, women and children of all ages are aware of key public health risks and are mobilized to adopt measures to prevent the deterioration in hygienic conditions and to use and maintain the facilities provided (The Sphere Project, 2011, p. 91).

Standard 2: Identification and use of hygiene items. The disaster-affected population has access to and is involved in identifying and

promoting the use of hygiene items to ensure personal hygiene, health, dignity and well-being (The Sphere Project, 2011, p. 94).

2. Function: Water Supply

Standard 1: Access and water quantity. All people have safe and equitable access to a sufficient quantity of water for drinking, cooking and personal and domestic hygiene. Public water points are sufficiently close to households to enable use of the minimum water requirement (The Sphere Project, 2011, p. 97).

Standard 2: Water quality. Water is palatable and of sufficient quality to be drunk and used for cooking and personal and domestic hygiene without causing risk to health (The Sphere Project, 2011, p. 100).

Standard 3: Water facilities. People have adequate facilities to collect, store and use sufficient quantities of water for drinking, cooking and personal hygiene, and to ensure that drinking water remains safe until it is consumed (The Sphere Project, 2011, p. 103).

3. Function: Excreta Disposal

Standard 1: Environment free from human feces. The living environment in general and specifically the habitat, food production areas, public centers and surroundings of drinking water sources are free from human fecal contamination (The Sphere Project, 2011, p.105).

Standard 2: Appropriate and adequate toilet facilities. People have adequate, appropriate and acceptable toilet facilities, sufficiently close to their dwellings, to allow rapid, safe and secure access, day and night (The Sphere Project, 2011, p. 107).

4. Function: Vector Control

Standard 1: Individual and family protection. All disaster-affected people have the knowledge and the means to protect themselves from disease and nuisance vectors that are likely to cause a significant risk to health or well-being (The Sphere Project, 2011, p. 111).

Standard 2: Physical, environmental and chemical protection measures. The environment where the disaster-affected people are placed does not expose them to disease-causing and nuisance vectors, and those vectors are kept to a reduced level where possible (The Sphere Project, 2011, p. 114).

Standard 3: Chemical control safety. Chemical vector control measures are carried out in a manner that ensures that staff, the disaster affected population and the local environment are adequately protected, and avoids creating chemical resistance to the substances used (The Sphere Project, 2011, p. 116).

5. Function: Solid Waste Management

Standard 1: Collection and disposal. The affected population has an environment not littered by solid waste, including medical waste, and has the means to dispose of their domestic waste conveniently and effectively (The Sphere Project, 2011, p. 117).

6. Function: Drainage

Standard 1: Drainage work. People have an environment in which health risks and other risks posed by water erosion and standing water, including storm-water, floodwater, domestic wastewater and wastewater from medical facilities, are minimized (The Sphere Project, 2011, p. 121).

b. Competency: Food Security and Nutrition

1. Function: Food Security and Nutrition Assessment

Standard 1: Food security. Where people are at increased risk of food insecurity, assessments are conducted using accepted methods to understand the type, degree and extent of food insecurity, to identify those most affected and to define the most appropriate response (The Sphere Project, 2011, p. 150).

Standard 2: Nutrition. Where people are at increased risk of malnutrition, assessments are conducted using internationally accepted methods to understand the type, degree and extent of malnutrition and identify those most affected, those most at risk, and the appropriate response (The Sphere Project, 2011, p. 154).

2. Function: Infant and Young Child Feeding

Standard 1: Policy guidance and coordination. Safe and appropriate infant and young child feeding for the population is protected through implementation of key policy guidance and strong coordination (The Sphere Project, 2011, p. 159).

Standard 2: Basic and skilled support. Mothers and caregivers of infants and young children have access to timely and appropriate feeding support that minimizes risks and optimizes nutrition, health and survival outcomes (The Sphere Project, 2011, p. 160).

3. Function: Management of Acute Malnutrition and Micronutrient Deficiencies

Standard 1: Moderate acute malnutrition. Moderate acute malnutrition is addressed (The Sphere Project, 2011, p. 165).

Standard 2: Severe acute malnutrition. Severe acute malnutrition is addressed (The Sphere Project, 2011, p. 169).

Standard 3: Micronutrient deficiencies. Micronutrient interventions accompany public health and other nutrition interventions to reduce common diseases associated with emergencies and address micronutrient deficiencies (The Sphere Project, 2011, p. 173).

4. Function: Food Security

Standard 1: General Food Security. People have a right to humanitarian food assistance that ensures their survival and upholds their dignity, and as far as possible prevents the erosion of their assets and builds resilience (The Sphere Project, 2011, p. 176).

4.a Sub-Function Food Transfers

Standard 1: General nutrition requirements. Ensure the nutritional needs of the disaster-affected population, including those most at risk, are met (The Sphere Project, 2011, p. 180).

Standard 2: Appropriateness and acceptability. The food items provided are appropriate and acceptable to recipients so that they can be used efficiently and effectively at the household level (The Sphere Project, 2011, p. 184).

Standard 3: Food quality and safety. Food distributed is fit for human consumption and of appropriate quality (The Sphere Project, 2011, p. 186).

Standard 4: Supply chain management (SCM). Commodities and associated costs are well-managed using impartial, transparent and responsive systems (The Sphere Project, 2011, p. 188).

Standard 5: Targeting and distribution. The method of targeted food distribution is responsive, timely, transparent and safe, supports dignity and is appropriate to local conditions (The Sphere Project, 2011, p. 192).

Standard 6: Food use. Food is stored, prepared and consumed in a safe and appropriate manner at both household and community levels (The Sphere Project, 2011, p. 194).

4.b. Sub-Function: Cash and Voucher Transfers

Standard 1: Access to available goods and services. Cash and vouchers are considered as ways to address basic needs and to protect and re-establish livelihoods (The Sphere Project, 2011, p. 200).

4.c. Sub-Function: Livelihoods

Standard 1: Primary production. Primary production mechanisms are protected and supported (The Sphere Project, 2011, p. 204).

Standard 2: Income and employment. Where income generation and employment are feasible livelihood strategies, women and men have equal access to appropriate income-earning opportunities (The Sphere Project, 2011, p. 208).

Standard 3: Access to markets. The disaster-affected population's safe access to market goods and services as producers, consumers and traders is protected and promoted (The Sphere Project, 2011, p. 211).

c. **Competency: Shelter, Settlements, and Non-food Items**

1. Function: Shelter and Settlement

Standard 1: Strategic planning. Shelter and settlement strategies contribute to the security, safety, health and well-being of both displaced and non-displaced affected populations and promote recovery and reconstruction where possible (The Sphere Project, 2011, p. 249).

Standard 2: Settlement planning. The planning of return, host or temporary communal settlements enables the safe and secure use of accommodation and essential services by the affected population (The Sphere Project, 2011, p. 254).

Standard 3: Covered living space. People have sufficient covered living space providing thermal comfort, fresh air and protection from the climate ensuring their privacy, safety and health and enabling essential household and livelihood activities to be undertaken (The Sphere Project, 2011, p. 258).

Standard 4: Construction. Local safe building practices, materials, expertise and capacities are used where appropriate, maximizing the involvement of the affected population and local livelihood opportunities (The Sphere Project, 2011, p. 262).

Standard 5: Environmental impact. Shelter and settlement solutions and the material sourcing and construction techniques used minimize adverse impact on the local natural environment (The Sphere Project, 2011, p. 265).

2. Function: Non-Food Items

2a. Sub-Function: Clothing and Bedding

Clothing and bedding as published in the Sphere Handbook are defined with only one standard, provided below. However, in the Scorecards presented in Tables 4 through 13, clothing and bedding are treated as separate substandards in keeping with the original rubric of Harper et al. This methodology provides more clarity in assessing the capabilities of the NGO.

Standard 1: Clothing and bedding. The disaster-affected population has sufficient clothing, blankets and bedding to ensure their

personal comfort, dignity, health and well-being (The Sphere Project, 2011, p. 271).

2b. Sub-Function: Household Items

Standard 1: Cooking and eating utensils. The disaster-affected population has access to culturally appropriate items for preparing and storing food, and for cooking, eating and drinking (The Sphere Project, 2011, p. 273).

Standard 2: Stoves, fuel and lighting. The disaster-affected population has access to a safe, fuel-efficient stove and an accessible supply of fuel or domestic energy, or to communal cooking facilities. Each household also has access to appropriate means of providing sustainable artificial lighting to ensure personal safety (The Sphere Project, 2011, p. 275).

Standard 3: Tools and fixings. The affected population, when responsible for the construction or maintenance of their shelter or for debris removal, has access to the necessary tools, fixings and complementary training (The Sphere Project, 2011, p. 276).

Standard 4: Individual, general household and shelter support items. The affected population has sufficient individual, general household and shelter support items to ensure their health, dignity, safety and well-being (The Sphere Project, 2011, p. 269).

d. Competency: Health Action

1. Health Systems

Standard 1: Health service delivery. People have equal access to effective, safe and quality health services that are standardized and follow accepted protocols and guidelines (The Sphere Project, 2011, p. 296).

Standard 2: Human resources. Health services are provided by trained and competent health workforces who have an adequate mix of knowledge and skills to meet the health needs of the population (The Sphere Project, 2011, p. 301).

Standard 3: Drugs and medical supplies. People have access to a consistent supply of essential medicines and consumables (The Sphere Project, 2011, p. 302).

Standard 4: Health financing. People have access to free primary healthcare services for the duration of the disaster (The Sphere Project, 2011, p. 304).

Standard 5: Health information management. The design and delivery of health services are guided by the collection, analysis, interpretation and utilization of relevant public health data (The Sphere Project, 2011, p. 305).

Standard 6: Leadership and coordination. People have access to health services that are coordinated across agencies and sectors to achieve maximum impact (The Sphere Project, 2011, p. 307).

2. Essential Health Services

Standard 1: Prioritizing health services. People have access to health services that are prioritized to address the main causes of excess mortality and morbidity (The Sphere Project, 2011, p. 309).

Standard 2: Communicable disease prevention. People have access to information and services that are designed to prevent the communicable diseases that contribute most significantly to excess morbidity and mortality (The Sphere Project, 2011, p. 312).

Standard 3: Communicable disease diagnosis and case management. People have access to effective diagnosis and treatment for those infectious diseases that contribute most

significantly to preventable excess morbidity and mortality (The Sphere Project, 2011, p. 314).

Standard 4: Outbreak detection and response. Outbreaks are prepared for, detected, investigated and controlled in a timely and effective manner (The Sphere Project, 2011, p. 316).

Standard 5: Prevention of vaccine-preventable diseases. Children aged 6 months to 15 years have immunity against measles and access to routine Expanded Program on Immunization (EPI) services once the situation stabilized (The Sphere Project, 2011, p. 321).

Standard 6: Management of newborn and childhood illness. Children have access to priority health services that are designed to address the major causes of newborn and childhood morbidity and mortality (The Sphere Project, 2011, p. 323).

Standard 7: People have access to the priority reproductive health services of the Minimum Initial Service Package (MISP) at the onset of an emergency and comprehensive RH as the situation stabilizes (The Sphere Project, 2011, p. 324).

Standard 8: People have access to the minimum set of HIV prevention, treatment, and care and support services during disasters (The Sphere Project, 2011, p. 327).

Standard 9: People have access to effective injury care during disasters to prevent avoidable morbidity, mortality and disability (The Sphere Project, 2011, p. 331).

Standard 10: People have access to health services that prevent or reduce mental health problems and associated impaired functioning (The Sphere Project, 2011, p. 333).

Standard 11: People have access to essential therapies to reduce morbidity and mortality due to acute complications or exacerbation of their chronic health condition (The Sphere Project, 2011, p. 336).

3. Sphere Scorecards

The following tables exhibit the results of analysis of each of the NGOs investigated according to Sphere Project criteria as described above.

a. EUCOM AOR Sphere Scorecards

The Scorecards for EUCOM are presented in Tables four through six. Each NGO was evaluated and marked to indicate ability to meet the standards which define sub-functions, functions, and ultimately core competencies.

Table 4. EUCOM AOR Sphere Scorecard: NGOs 1-8 (after Harper et al., 2013)

c. SOUTHCOM AOR Sphere Scorecards

The Scorecards for SOUTHCOM are presented in Tables 10 through 13. Each NGO was evaluated and marked to indicate ability to meet the standards which define sub-functions, functions, and ultimately core competencies.

Table 10. SOUTHCOM AOR Sphere Scorecard: NGOs 1-9 (from Harper et al., 2013)

SOUTHCOM NGOs 1-9											
Performance Measures			Aerobridge	American Red Cross	America's Relief Team	Baptist Health South Florida	Children's International	Chow	EDGE Outreach	FAVACA	Food for the Poor

B. FINANCIAL DATA BY NGO

The first step in replicating and expanding the financial analysis conducted by Nguyen and Curley (2013) was to collect the most current financial data available for each of the 88 NGOs to be studied. The ideal source for financial data is an audited financial statement and, wherever possible, this was the source chosen. However, when audited financials were not available, the second preferable source was an annual report prepared by the NGO or an unaudited presentation of financial data. Finally, if the NGO did not provide any form of financial reporting, we obtained the entity's IRS Form 990 from Guidestar.org, an organization that provides information on non-profit entities (Guidestar, n.d.). Financial reporting in foreign currencies was converted to U.S. dollars.

In most cases, financial data for each NGO was directly obtained from the NGO website or Guidestar.org to ensure use of the most current information available. There were only 6 exceptions to this practice (7% of the NGOs observed). For Latter-Day Saints Charities, no current or historic financial information could be located due to discontinuation of public access to the government database that contained this information. As such, we resorted to using financial data reported in the Harper, et al. report (2013). For Cortland Humanitarian Outreach Worldwide and Foundation for the Advancement of Children's Esthetics, no financial data could be located by reasonable means. Three NGOs, Johns Hopkins Office of Critical Preparedness and Response (CEPAR), Registered Nurse Response Network (RNRN), and the University of California San Diego Pre-Dental Society, were observed to operate as a subsidiary or function as an arm of a larger organization. In these cases, individual financial reporting is not made as they operate with access to the parent organization's resources. Presentation of the parent organization's financial information would be misleading in determining the efficiency of the subsidiary organization and was therefore omitted from this report.

Revenues are presented in four key categories: grants, contributions, investments, and other. Grant revenue is any revenue derived from a government source. Contributions include both cash and the dollar value of in-kind services and goods.

Investment revenues are generally interest and some gains and losses from investment transactions. Other revenue includes not only those revenues categorized as miscellaneous or other in the financial resource documents, but also service revenue, rental income, gains on sales of assets, and other earned amounts ranging from the sale of t-shirts to the provision of laboratory testing and beyond. Although other income is ancillary for most NGOs, it can comprise a significant portion of an NGO's income and support in some cases.

Expenses are presented in two categories: program services and supporting services. Program service expenses are any and all expenses related to the delivery of that NGO's primary mission. This can include salaries, supplies, travel, and other expenses so long as they are used directly in the execution of the mission. Supporting services are all those expenditures that could be considered necessary to run the business and support the provision of the primary mission. This would include home office supplies, accountants, lawyers, management, and fund-raising costs.

The categories were chosen to convey an accurate depiction of the results of operating and program activities. As such, non-operating revenues such as foreign currency exchanges and unrealized gain/losses were omitted from this report as they are essentially unrelated to the normal course of business for a non-profit, and were immaterial in all cases.

Presented below is financial data for each NGO organized by AOR. In some cases the same NGO is included for multiple AORs and a reference to the first presentation of data is included rather than repeating data.

1. EUCOM NGOs

Detailed financial information follows for each of the NGOs in the EUCOM AOR.

Action Against Hunger 2012

Revenues:

Grant	56,088,595
Contribution	7,458,058
Interest	2,700
Other	672,123
Total Revenue	<u>64,221,476</u>

Expenses:

Program Services	44,106,036
Supporting Services	7,669,395

This chapter consisted of our assembly and presentation of raw data used for analysis in chapter four and conclusions in chapter five. The Sphere Project section described the methodology used to define capabilities and our findings for each of the NGOs. The second section to this chapter described collection of financial information, discussion of categories of financial data used in this study, and a presentation of collected financial data for each NGO.

IV. ANALYSIS

This chapter analyzes the data collected in chapter three and presents the information in a format useful for commanders confronted with an HA/DR situation. The Sphere Project section presents the Aggregate Scorecard to facilitate a quick glance indication of capabilities inherent with each NGO. The Financial Analysis section presents a visual analysis of NGO revenue sources, mission efficiency, and budget efficiency. Finally, this chapter presents the Commander's Cut Cards that tie the two sections together by providing the reader with a tool for rapidly accessing NGO capabilities as well as mission and budgetary financial efficiencies.

A. THE SPHERE PROJECT

Understanding that the Sphere *Scorecard* used to annotate NGO capabilities and presented in chapter 3 is difficult to read and interpret, a synopsis of each NGO's ability to meet requirements for each categorical core competency (Water, Food, Shelter, Health) has been summarized into an *Aggregate Scorecard* for each COCOM in this chapter (see Tables 14-16). These tables omit the specific functions that define the core competencies and provide the reader with a quick glance indication of capabilities by NGO.

A "1" indicates that at least 50% of all functions defining a core competency are met by the respective NGO. A "0" indicates that less than 50% of the functions are met. An "*" indicates that the authors of this report were unable to find relevant data to draw a conclusion about the NGO's capability. Further investigation would be required by a Commander to determine the usefulness of any NGO with an "*" in any core competency or function thereof.

The reader will note that many NGOs do not specialize in all four core competencies. In fact, some only specialize in one area. There can be many reasons why, but the specific rationale of each NGO is not provided in this report. In general, many NGOs have mission statements that focus on only certain capabilities. This is frequently because of inherent expertise; for example, *Doctors Without Borders* naturally

has a specialty in *Health* and channels their talent into competencies where it can make the most impact. It is logical for the Doctors to focus on *Health* rather than *Shelter*. An NGO with a score of “0” does not mean that a particular NGO is not a worthwhile NGO, only that the authors were not able to find proof that the respective NGO can perform at least 50% of the functions that define that particular competency. It is quite possible that the NGO in question does provide essential services (functions), perhaps with best-in-class levels that could be beneficial to the Commander. In order to determine the specific details of capabilities the reader is directed to the Scorecard in chapter 3, as the tables in this chapter are designed for a more high level, quick glance indication of capabilities.

1. EUCOM AOR Sphere Aggregate Scorecard

Table 14 presents the Sphere Aggregate Scorecard for the EUCOM AOR NGOs and is useful in determining HA/DR capabilities.

Table 14. EUCOM AOR Aggregate Scorecard (after Harper et al., 2013)

	Score

B. FINANCIAL ANALYSIS

Unlike a for-profit business, an NGO is not expected to generate revenues in order to continue functioning. Alternatively, NGO's must raise funds via donations and grants, primarily. Moreover, they are expected to use those funds for the benefit of their stated mission. If an NGO is unable to raise funds or is seen to inefficiently use the funds that are raised, it will be unable to provide mission services and donors would see no benefit in further donations. This becomes a cycle of failure in that poorly managed funds results in fewer funds raised and higher expenditures in the pursuit of fund raising. As a partner in HA/DR, a preferable NGO would be one that is successful in fund raising, effective in the delivery of their mission, and efficient in the overall management of their organization.

1. NGO Revenue Sources

We began our financial assessment using the same analysis as Nguyen and Curley (2013), in that we created pie charts depicting revenue sources of the various NGOs, organized by AOR. Using expenditure categories as described in Chapter 3, Figures 1 through 3 were created to depict our initial findings of revenue sources.

Figure 1. EUCOM AOR Revenue Sources (after Nguyen & Curley, 2013)

Figure 2. PACOM AOR Revenue Sources (after Nguyen & Curley, 2013)

Figure 3. SOUTHCOM AOR Revenue Sources (after Nguyen & Curley, 2013)

Figures 1 and 2 depict a revenue source distribution for EUROM and PACOM AOR NGOs in line with our expectations for sources of funds. It is reasonable to see that a majority of revenues are sourced via contributions and government grants (86% and 95% for EUROM and PACOM AOR NGOs, respectively). A much smaller portion of revenue sources would be expected from investments and any of the various items that comprise the other category as these are not generally primary sources of revenue for non-profit entities (14% and 5% for EUROM and PACOM AOR NGOs, respectively). However, the result for the SOUTHCOM AOR NGOs in Figure 3 was not as expected. These NGOs derive only 41% of revenues from contributions and grants and 59% from other and investments. Upon closer investigation this is apparently due to 2 significant outliers in the data: the American Red Cross and Baptist Health South Florida. In particular, the American Red Cross earned 65% of their revenue, over \$2.2 billion, from activities such as blood banks and laboratory services. Baptist Health South Florida is a working hospital that earned 91% of its revenue, over \$2.4 billion, from providing reimbursable healthcare. These are not unreasonable results given the nature of these two

organizations. If we remove these two outliers from the data as in Figure 4, we see a revenue source distribution much more in line with our expectations and those of the other two AOR NGOs.

Figure 4. Adjusted SOUTHCOM AOR Rev. Sources (after Nguyen & Curley, 2013)

2. NGO Mission Efficiency

Mission efficiency of the examined NGOs was determined using the methodology applied by Nguyen and Curley (2013), in that we evaluated the ratio of total expenditures made in the provision of the NGOs' mission services, as opposed to management of the organization and fundraising, in light of criteria as set forth by the organization CharityWatch. CharityWatch stipulates that at least 60% of expenditures should be made in the provision of program services to achieve a "satisfactory" rating; an organization directing at least 75% of its expenditures toward program services would be considered "highly efficient" (CharityWatch, n.d.). Figures 5 through 7 depict the percentage of program (mission) expenditures and support expenditures for each of the NGOs, organized by AOR.

Figure 5. EUCOM AOR NGO Mission Efficiency (after Nguyen & Curley, 2013)

Figure 6. PACOM AOR NGO Mission Efficiency (after Nguyen & Curley, 2013)

Figure 7. SOUTHCOM AOR NGO Mission Efficiency (after Nguyen & Curley, 2013)

The average mission efficiencies for EUCOM, PACOM, and SOUTHCOM AOR NGOs are 90%, 89%, and 86%, respectively. As such, the overall mission efficiency in all three AORs is “highly efficient.” Moreover, as depicted by the green line in Figures 5 and 6, all of the NGOs observed in EUCOM and PACOM are individually above the 75% threshold that earns them the “highly efficient” title. Of the 31 NGOs with reported financial data in the SOUTHCOM AOR, 90% of them are above the 75% “highly efficient” threshold as depicted by the green line in Figure 7. The remaining 10% (three NGOs), are above the 60% threshold to be considered “satisfactory” as depicted by the orange line in Figure 7. As such, none of the NGOs observed in the three AORs would be considered unsatisfactory in the efficient use of funds according to criteria set forth by CharityWatch. Conversely, a vast majority of the NGOs observed are “highly efficient.”

3. Budget Efficiency

The final analysis we performed concerning the financial information of the NGOs is their overall efficiency. For this analysis we took a different approach from that of Nguyen and Curley (2013). Their work evaluated NGO mission expenditures against the total revenue for the period to determine mission efficiency with respect to revenues generated. However, we feel that such an analysis does not provide meaningfully different information from our previous analysis of mission efficiency and somewhat overlooks the fact that revenues generated must also be applied to support activities if an organization is to continue as a going concern. In fact, an organization that applies nearly 100% of its revenues toward mission services could be showing signs of poor management and may be engaged in unsustainable activities. As such, we chose to analyze overall budget efficiency by comparing total expenses to total revenues for each of the NGO to determine if the NGOs are potentially operating in excess of their means. Figures 8 through 10 depict total expenses as a percentage of revenues for each of the NGOs, organized by AOR.

Figure 8. EUCOM AOR Budget Efficiency (after Nguyen & Curley, 2013)

Figure 9. PACOM AOR Budget Efficiency (after Nguyen & Curley, 2013)

Figure 10. SOUTHCOM AOR Budget Efficiency (after Nguyen & Curley, 2013)

Undoubtedly, there are countless reasons why an NGO may expend more or less of its total revenue for a given period. Such reasons could include a lack or excess of disasters requiring assistance, exceptionally good or bad fund raising, legal troubles, reorganization, or startup costs causing larger than normal support costs. Moreover, such figures do not take into account the value of so-called “sweat equity” this is certainly exemplary in each of these NGOs. Nonetheless, we can make general presumptions about the financial health of an organization based on its overall budget efficiency. As a means of evaluation, we classified the results of this analysis into three categories. If an NGO expended less than 100% of its revenues during the period was perceived as, at the very least, operating within its means and was categorized as efficient overall. NGOs with expenditures in excess of 100% and up to 110% would have been required to use retained assets to operate. These NGOs were perceived as showing signs of an inability to operate within its means and categorized as marginal. NGOs with expenditures in excess of 110% were perceived as clearly operating outside of its means and categorized as at-risk.

Figure 8 shows that 14 NGOs (56%) were efficient, 10 NGOs (40%) were marginal, and only 1 NGO (4%), Relief International, was at-risk for the EUCOM AOR. Figure 9 shows that 13 NGOs (48%) were efficient, 12 NGOs (44%) were marginal, and 2 NGOs (8%), Relief International and Lutheran World Relief, were at-risk for the PACOM AOR. Figure 10 shows that 20 NGOs (65%) were efficient, 4 NGOs (13%) were marginal, and 7 NGOs (22%), Aero Bridge, Americas Relief Team, Hospital Sisters Mission Outreach, InterAction, LDS Charities, Miami Children’s Hospital, and Spirit of America, were at-risk for the SOUTHCOM AOR. As previously stated, there are a multitude of reasons for an NGO’s particular financial efficiency. However, SOUTHCOM’s apparently disproportionate amount of at-risk NGOs is likely due to the prevalence of earthquakes, hurricanes, and widespread poverty in SOUTHCOM. Consequently, this analysis has particular relevance in such an AOR where the demands on NGOs may easily exceed their capabilities. Across all AORs, 56% of NGOs are considered efficient, 32% are considered marginal, and 12% are considered at-risk.

C. COMMANDER’S CUT CARDS

Another method used to indicate Sphere and financial results to the user of this information, based on the work of Harper et al. (2013), is presented in the “Commander’s Cut Card” as provided in Tables 17-19 below. Here you will find, by COCOM, a listing of the four core competencies and each NGO’s capability to carry out standards defining those competencies. In this chart, green indicates the NGO is capable to meet at least 50% of the functions per competency. Yellow indicates the ability to meet some amount less than 50%, and red indicates no ability at all in the listed competency. For any particular NGO that we found insufficient evidence to determine capability, the cell remains white. Moreover, financial information in the form of mission efficiency and budget efficiency are presented so that a user can compare Sphere capabilities with financial health when assessing NGOs. For mission efficiency, green indicates “highly efficient” as defined above. Yellow indicates “satisfactory” and red indicates unsatisfactory. For budget efficiency, green indicates efficient, yellow indicates marginal, and red is at-risk. Please note that a larger percentage is desirable for mission efficiency, but a lower percentage (closer to 100%) is desirable for budget efficiency.

1. EUCOM AOR Commander's Cut Card

Presented in Table 17 is the EUCOM AOR Commander's Cut Card which provides a quick visual representation of both the Sphere competencies as well as financial efficiencies for each NGO evaluated.

Table 17. EUCOM AOR Commander's Cut Card (After Harper et al., 2013)

EUCOM NGO	Sphere Core Competency				Financial	
	WASH	Food security and nutrition	Shelter, settlement and non-food items	Health action	Program Efficiency	Budget Efficiency

*	Indicates insufficient data to determine capability or financial efficiency					

This chapter offers NGO data in a useful format for commanders confronted with an HA/DR situation. The Aggregate Scorecard facilitates a succinct indication of Sphere Project capabilities for each NGO. The graphic representation of financial resources and efficiencies provides a clear indication of NGO financial health. The Commander's Cut Cards tie the two sections together in a single reference.

V. CONCLUSIONS AND RECOMMENDATIONS

This chapter briefly summarizes the information found in chapter three and analyzed in chapter four for both the Sphere Model capabilities and NGO financial analytics. This report concludes with a discussion of potential avenues for future continuation of the work performed and provided here.

A. SUMMARY

This study sought to determine multiple Non-Governmental Organization (NGO) capabilities among the four core competencies defined by the Sphere Model for the Areas of Responsibility (AOR) including European Command (EUCOM), Pacific Command (PACOM), and Southern Command (SOUTHCOM). The four competencies are: 1) Water supply, sanitation, and hygiene promotion; 2) food security and nutrition; 3) shelter, settlement and non-food items; and 4) health action. The Sphere Handbook describes these competencies in terms of functions, some of which are subsequently broken into sub-functions. Each of these functions are composed of standards that define actions that must be accomplishable in order for an NGO to be considered capable of providing Humanitarian Assistance / Disaster Relief (HA/DR) in accordance with the Sphere Model.

The capabilities study followed the methodology used by a prior Navy Postgraduate School work, conducted by Harper et. al. (2013). The primary method used to determine capabilities of each NGO was via investigation of the respective NGO's published website. If the NGO website provided ample indication of being able to meet at least half of the Sphere Model standards used to define a (sub)function, then that NGO was considered capable of providing utility to a Commander for that *function*. If at least half of the functions that compose a core competency were accomplishable, then that NGO was considered capable of providing utility to a Commander for that particular *competency*.

Chapter 3 provides a detailed account of all research conducted on the determination of capabilities down to the level of breaking out sub-functions then

building up through functional capabilities, and ultimately determining an NGO's ability to provide broad usefulness to a commander if deemed capable of meeting 50% or more of a competency's functions. This information is displayed in the Score Card for each NGO (Tables 4-13).

Chapter 4 provides two different presentations of the capability results found in the Score Card of Chapter 3. The first is an Aggregate Score Card (Tables 14-16), which only presents whether or not each NGO is considered to be capable in each of the four core competencies. Capability for this report indicates that an NGO is able to meet at least 50% of the functions that define a competency. Finally, the results are presented in the Commanders Cut Cards (Tables 17-19), which presents a color coded quick reference to NGO core competency acumen. These tables also portray the NGOs' relevant financial information that may be useful in a Commander's decision making process.

Care must be given to the selection of a useful NGO dependent on the required HA/DR capabilities needed for each unique global situation. While the tabulations found in chapter four provide a quick guide for consideration of an NGO, caution is warranted to not completely ignore the fact that many NGO's do provide some level of capability toward a competency (water, food, shelter, health) but failed to meet the 50% cutoff used to define a "more likely to be capable than not" level of utility. Commanders are encouraged to use the results in chapter 4 as a high level starting point for NGO selection. However, should more capability be required in an emergent situation, delve through the information presented in the full Score Card of chapter 3 for nuanced albeit limited capacity to meet requirements for HA/DR.

Additionally, this project evaluated financial information reported by each of the 88 NGOs across three AORs and applied analysis techniques from Nguyen and Curley (2013). Our initial task was to review the sources of revenues and types of expenditures and categorize them into four revenue types and 2 expense types. Once this information was categorized it was possible to use it for various financial analyses.

First, we assessed the revenue sources for each NGO in each AOR. As expected for non-profit organizations, a vast majority of revenues were obtained from

contributions and government grants. To a much lesser degree, revenues were also sourced via investments and other activities such as product sales and services. However, such revenues were immaterial to the overall revenue streams for an overwhelming majority of NGOs.

Next, we compared expenditure categories for each NGO to determine mission efficiency, or the percentage of expenditures that was dedicated to the primary mission of the NGO. Using this information, we assessed the performance of each NGO in accordance with criteria as set forth by the organization CharityWatch. The average mission efficiency for all AORs qualified as “highly efficient” in accordance with these criteria, as did each NGO individually in EUROM and PACOM. In SOUTHCOM, 90% qualified as “highly efficient” with the remaining 10% achieving a “satisfactory” rating. These results provide a level of confidence that NGOs investigated in the observed AORs are generally efficient and legitimate with respect to delivery of program services.

Our final financial analysis broke from the techniques of Nguyen and Curley (2013), in that we compared total expenses to the total revenues for the observed period to determine a measure of overall budget efficiency, or a determination of whether the NGOs were operating within their means. As a means of evaluation, budget efficiency was categorized as efficient, marginal, or at-risk based on how much of current period revenues were expended in the current period. A total of 56% NGOs were considered efficient, 32% marginal, and 12% at-risk. Marginal and at-risk NGOs are certainly not to be dismissed as inefficient, but there may be cause to look closer at their ongoing efficiency if a relationship with the DOD is to be maintained.

B. RECOMMENDATIONS FOR FUTURE WORK

As this report focused specifically on the NGOs of three COCOMs, a clear area for expanded research would be to apply our procedures to the remaining COCOMs. Moreover, the research need not be limited to COCOMs and can be applied to any geographic or political region based upon intended users. For example, this methodology could be narrowed to just western Africa or New England to obtain a very specialized NGO network.

Due to limitations on the scope of this project, further investigation could be conducted to expand this project's utility. It is recommended that additional effort be placed on the NGOs whose information is incomplete. NGOs that did not present information pertaining to the functions and standards of competencies on their website were further investigated by attempting direct communication, frequently without success. Follow up attempts to derive information from these NGO's may provide additional resources relevant to Commanders.

Only a limited number of NGOs were included in each AOR presented in this report, and each of these NGOs investigated was determined from the prior works of NPS projects. We recommend that additional NGOs be considered in each of the three AORs that this report summarizes.

Future efforts to expand or replicate this report should consider direct interaction with the AOR of concern in order to determine if there are any particular NGOs that the commander is especially interested or, just as importantly, not interested in due to unique geo-political considerations.

For purposes of determining whether or not NGO's are able to meet the requirements of the Sphere Model's core competencies, future consideration should be made to directly interviewing the NGO as opposed to relying on that NGO's website as the primary source of documentation. During investigation of the NGO's for this report, the authors found that NGO websites are not necessarily designed to provide the level of detail required to determine if the standards are met that define the functions composing core competencies. Rightly, NGO websites are designed more for soliciting funds and volunteers than for listing technical and irrelevant information that an average reader of the website would find not useful.

This report looked at only a single financial reporting period for each of the NGOs. Although some conclusions can be reached from this information and the analysis is meaningful, it is somewhat incomplete in that it cannot demonstrate trends. A more comprehensive analysis of financial health and efficiency would include comparative data collected over three to five periods of financial reporting. This allows

assessment of trends, particularly in overall budget efficiency, which could confirm or assuage concerns over an organizations ability to operate.

The primary sources of revenues for NGOs are contributions and government grants. Although this report confirmed this fact by reviewing financial reporting documents, no assessment of contribution or grant sources was conducted. As NGOs rely heavily on these resources, an evaluation of primary sources of contributions and grants can reveal risk if they are concentrated in one or few donors. Furthermore, such a concentration could also imply undue influence asserted from contributors on the NGOs that may impact their ability to provide services under certain circumstances.
