

NEW ORLEANS, LA, DISTRICT

This district comprises a portion of Louisiana that is embraced in drainage basins that are tributary to the Mississippi River and Gulf of Mexico, except the Mississippi River above mile 325.5 above Head of Passes (AHP), the drainage area of Ouachita-Black River Basin, and small eastern and western portions of Louisiana that are tributary to Pearl River and Sabine River and Lake. The New Orleans District territory encompasses 30,000 square miles.

It includes sections of the Gulf Intracoastal Waterway from Lake Borgne Light 29 at the mouth of Pearl

River to Sabine River, and the Passes of the Mississippi River. It exercises jurisdiction over flood control work on the Mississippi River from mile 325.5 AHP to the Gulf of Mexico; the Atchafalaya River; the Atchafalaya Basin; and maintenance of the project navigation channel of the Mississippi River below mile 325.5 AHP, under supervision of the President, Mississippi River Commission (MRC), and the Division Engineer, Mississippi Valley Division.

1. INNER HARBOR NAVIGATION CANAL LOCK, LA

Location. The project is located within the City of New Orleans, Louisiana. It is a deep and shallow draft canal extending northward from the Mississippi River to Lake Pontchartrain.

Existing project. The existing Inner Harbor Navigation Canal Lock, completed in 1921 by the Port of New Orleans, has dimensions of 31.5 feet deep, 75 feet wide, and 600 feet long (usable length). It passes barge traffic between the Mississippi River and the Gulf Intracoastal Waterway and is a vital link in the nation's Inland Waterway System. Delays to the navigation traffic since 2004 average 12.5 hours. The latest 5-year average (2005-2009) yearly tonnage through the lock is almost 15.2 million tons. Major commodities include coal, petroleum products, and crude petroleum. Two major vehicular roadway bridges (Claiborne and St. Claude Avenues) and one railroad/roadway bridge (Florida Avenue) cross the canal in the vicinity of the existing lock. The Corps of Engineers bought the lock from the Port of New Orleans in 1985.

Local cooperation. The cost sharing for the replacement lock is specified in the Water Resources Development Act (WRDA) of 1986. The costs of the new lock were apportioned between general cargo navigation and inland navigation. Costs assigned to inland navigation are shared 50 percent from the Inland Waterway Trust Fund and 50 percent from regular Corps of Engineer's appropriations. Those costs assigned to general cargo navigation will be cost shared 65 percent Federal and 35 percent non-Federal with the Port of New Orleans, who signed a non-Federal Project Cooperation Agreement (PCA) in September 2001. The Recommended Plan is 40 feet deep by 110 feet wide by 1,200 feet long (usable length) and is estimated to cost \$1,264,000,000.

Terminal facilities. Two container ship berths and one other ship wharf are located on the canal in the vicinity of the existing lock.

Operations and results during the fiscal year. Replacement lock construction methods were being examined when the U.S. Federal District Court enjoined the project in FY 2007. In May 2009, the Record of Decision was signed completing the Supplemental Environmental Impact Statement (SEIS) and lifting the Federal injunction.

Condition as of September 30. Design of the lock structure was to resume with the completion of the Supplemental Environmental Impact Statement (SEIS); however, on September 9, the project was enjoined by the United States District Court, Eastern District of LA, pending preparation of an amendment to the SEIS.

2. MISSISSIPPI RIVER-GULF OUTLET, LA

Location. In State of Louisiana and the territorial waters of the United States and extends from existing Inner Harbor Navigation Canal at a point 7,500 feet north of existing IHNC lock and about 11,000 feet from Mississippi River, to a turning basin south of Michoud, LA, and then as a land and water cut from turning basin south of Michoud, LA, southeasterly to and along south shore of Lake Borgne and through marshes to and through Chandeleur Sound to 38-foot contour in Gulf of Mexico. (Refer to NOAA Coast Charts Nos. 11340, 11360, 11363, 11369, 11371, and 11373. Also, see MRC 1989 (57th edition) folio of maps, Mississippi River-Cairo, IL, to Gulf of Mexico, LA.) The portion of the navigation channel between the Gulf Intracoastal Waterway and the Gulf of Mexico was deauthorized by Congress in June 2008 in accordance with a Report of the Chief of Engineers.

Existing project. Provided for a seaway canal, 36 by 500 feet, extending from the Inner Harbor Navigation Canal to 6 miles eastward contiguously with the GIWW to Michoud. It also provides for an inner tidewater harbor consisting of 1,000- by 2,000-foot turning basin 36 feet deep at landward end of seaway canal (completed), and a connecting channel 36 by 500 feet wide extending easterly along GIWW from turning basin (completed), including construction of a suitable highway bridge with approaches to carry Louisiana State Highway 47 (formerly 61) over channel. Construction was initiated March 1958. The channel unit was 90 percent complete at the time of deauthorization, and the ship lock unit is 8 percent complete. The channel was opened to navigation July 25, 1963, and completed January 20, 1968. Paris Road Bridge was completed November 14, 1967. The plan further provides for future construction of a channel and lock in the vicinity of the existing lock to furnish an additional connection between the tidewater harbor and Mississippi River (construction started). (See "Inner Harbor Navigation Canal Lock, LA" for more details). The project was deauthorized in 2008 (see details below).

A reevaluation study to determine the economic feasibility of continuing to maintain the 36-foot depth in the channel was initiated in FY 1999, at Federal expense. Concerns about increased maintenance dredging costs and ecosystem deterioration prompted the study. Hurricane Katrina struck Louisiana in August 2005 prior to completion of the reevaluation effort. Katrina significantly impacted the economic factors used in developing the economic analysis portion of the reevaluation study.

In June 2006, Congress passed P.L. 109-234 directing the Secretary of the Army, acting through the Chief of Engineers, to plan for deauthorization of the Mississippi River Gulf Outlet (MRGO) from GIWW to the Gulf of Mexico. The plan was developed in consultation with St. Bernard Parish, the State of Louisiana, and affected Federal Agencies. The goals of the study were to develop a comprehensive plan to deauthorize deep-draft navigation, evaluate any navigation functions that should be maintained, identify measures for hurricane and storm damage reduction, and refine the plan to be fully integrated and consistent with the Louisiana Coastal Protection and Restoration Plan (LACPR) Final Report to Congress.

As directed by Congress, USACE submitted an interim report in December 2006 highlighting a viable plan to completely close the MRGO to all navigation from the GIWW to the Gulf. The report indicated that both the deep-draft and shallow-draft navigation channels are not cost effective and recommended an earthen closure constructed at the Bayou LaLoutre Ridge.

In January 2008, the Chief of Engineers signed a report recommending deauthorization of the MRGO channel, construction of a closure structure across the channel at Bayou La Loutre, and development of a supplemental report to provide an ecosystem restoration plan for the areas affected by the MRGO. On June 5, 2008, the Assistant Secretary of the Army for Civil Works forwarded the Final MRGO Deep-Draft Deauthorization Report to Congress, officially deauthorizing the MRGO from the GIWW to the Gulf of Mexico as a Federal navigation project. The recommended plan deauthorized the channel from mile 60 to 9.4 (GIWW to Gulf); authorized a total channel closure structure at Bayou LaLoutre; and called for removing relic aids to navigation and deauthorizing

in-place jetties and bank protection. A contract to close the channel at Bayou La Loutre was awarded in August 2008 in the amount of \$13,616,500. Construction of the rock closure was completed in July 2009.

P.L. 109-148 (the 3rd Supplemental), as modified by P.L. 109-234, provided \$75,000,000 to be used for the repair, construction, or provision of measures or structures necessary to protect, restore, or increase wetlands and prevent saltwater intrusion or storm surge. A plan was developed to utilize this funding to create more than 3,345 acres of wetland fronting protection levees and 9.3 miles of shoreline protection on the thin land bridge separating Lake Borgne and MRGO. To date, projects have been constructed along the southeast shoreline of Lake Borgne and multiple sites along the north bank of the MRGO.

The MRGO Ecosystem Restoration Plan is being developed by the U.S. Army Corps of Engineers (USACE) as a supplement to the MRGO Deep-Draft Deauthorization Report. Currently, the USACE is conducting a feasibility study that will result in a comprehensive ecosystem restoration plan to restore the Lake Borgne ecosystem and areas affected by the MRGO channel. This restoration plan is being developed in accordance with Section 7013 of WRDA 2007. It is fully funded by the Federal Government. The purpose of the study is to address systematic ecosystem restoration with consideration of measures to reduce or prevent damages from storm surge.

The study area includes portions of the Mississippi River Deltaic Plain within coastal southeast Louisiana and parts of southwest Mississippi. The study area encompasses approximately 3.8 million acres (over 6,000 square miles) of land and open water. In Louisiana, the study area includes the Upper, Middle, and Lower Lake Pontchartrain Sub-basins. In Mississippi, the study area includes the Western Mississippi Sound, its bordering wetlands, and Cat Island. These areas include portions of the Pearl River and the Coastal Stream hydrologic basins in Mississippi. The study area was developed to encompass the Lake Borgne ecosystem and areas that may have been affected by the MRGO navigation channel. The MRGO channel may have affected salinities as far west as Lake Maurepas. To the east, the MRGO channel was dredged through open water

between the Breton and Grand Gossier Islands. The MRGO channel affected portions of the Lake Borgne ecosystem to the north and altered hydrology potentially as far south as the River Aux Chenes ridge.

Louisiana parishes in the study area include Ascension, Jefferson, Livingston, Orleans, Plaquemines, St. Bernard, St. Tammany, St. Charles, St. James, St. John the Baptist, and Tangipahoa. Mississippi counties in the study area include Hancock and Harrison.

The study will evaluate the following issues: decreased freshwater, sediment, and nutrient inputs; hydrologic modifications; saltwater intrusion; wetland loss; ridge habitat degradation and destruction; retreating and eroding barrier islands; bank and shoreline erosion; human development susceptible to storm surge; subsidence; sea level rise; altered circulation and water quality; and loss of shallow ponds. Alternative plan components for the ecosystem restoration plan may include shoreline protection, marsh creation, cypress reforestation, barrier island rebuilding, ridge restoration, and freshwater diversion from the Mississippi River at Violet, LA.

Local cooperation. Requirements of local cooperation are fully described on page 11-4 of FY 1986 Annual Report. A new Memorandum of Agreement between USACE and the State of Louisiana covering the closure and ecosystem restoration projects was executed in October 2008. Completion of the supplemental report for ecosystem restoration and EIS is in jeopardy due to a disagreement over a requirement to provide the necessary cost-sharing commitment in the construction and operation, maintenance, repair, replacement, and rehabilitation of the project.

Terminal facilities. Most of the terminal facilities located on the MRGO are no longer in operation since Hurricane Katrina. The local sponsor and private wharf tenants are relocating some business to the Mississippi River.

Operations and results during fiscal year. No dredging contracts were awarded in FY 2009. Funds provided in Public Law (P.L.) 109-62 (commonly referred to as the 2nd Supplemental) were used to award one bank stabilization and two foreshore protection contracts in FY 2006 at a total cost of \$27,854,000 and one foreshore protection contract in FY 2007 in the amount of \$4,765,000. P.L. 109-234 (commonly referred to as the 4th Supplemental) provided \$3,300,000 to develop a comprehensive plan to deauthorize deep draft navigation.

Condition as of September 30. The USACE has completed construction for shore protection along Lake Borgne (18,500-linear-foot rock dike along the southeast shore of the lake from Doullut's Canal to Jahncke's Ditch) and along segments of the MRGO channel north bank from Channel miles 39.9 to 44.4 and from 47 to 60. These efforts were completed in 2008 at a cost of \$6.12 million. The USACE has also completed construction of a rock structure across the ship channel near Hopedale, LA, in July 2009, with a completion cost of approximately \$15.47 million. The Record of Decision (ROD) for the MRGO-Lake Borgne Wetland Creation and Shoreline Protection Environmental Impact Statement was signed on March 18, 2010. Subsequently, the construction of South Lake Borgne shore protection along reaches in the vicinity of Bayou Bienvenue, Bayou Dupre, and Shell Beach were granted the final rights-of-entry from the local sponsor on June 2, 2011, for \$6.9 million, and the Bayou Bienville reach was awarded on September 19, 2011, for \$6.5 million. The West of Shell Beach shoreline protection contract is scheduled to be awarded in early February 2012. Additionally, a contract to utilize dredged material to create marsh in degraded areas located near West of Shell Beach will be awarded in late May 2012. These awarded and scheduled construction efforts are estimated to have a completion cost of \$35 million.

3. MISSISSIPPI RIVER SHIP CHANNEL, GULF TO BATON ROUGE, LA

Location. The project is located in the southeastern portion of Louisiana below Baton Rouge, and consists of the Mississippi River and its major outlet to the Gulf of Mexico, Southwest Pass.

Existing project. The Supplemental Appropriations Act of 1985 (P.L. 99-88 dated August 15, 1985) authorizes a more efficient deep-draft navigation access to the New Orleans and Baton Rouge reaches of the Mississippi River via Southwest Pass by enlarging the existing channel to a project depth of 55 feet and enlarging the adjacent channel along the left descending bank in New Orleans Harbor to a 40-foot depth, a turning basin at Baton Rouge, and training works in the passes to reduce maintenance.

Local cooperation. Requirements are described in full on pages 11-2 and 11-3 of the FY 1992 Annual Report.

A Project Cooperation Agreement (PCA) between the Government and the State of Louisiana was executed on September 3, 1993, which provides for the dredging of a 45-foot channel from Mile 181 AHP to Baton Rouge.

Operations and results during fiscal year. Due to limited funding, the Mississippi River navigation channel from Baton Rouge to the Gulf of Mexico (via Southwest Pass) is not maintained to the full project dimensions (project depth is 45 feet). Channel restrictions were implemented by the river pilot associations during FY 2011 due to the reduced dimensions in the navigation channel.

Condition as of September 30. Due to limited funding, the Mississippi River navigation channel from Baton Rouge to the Gulf of Mexico (via Southwest Pass) is not maintained to the full project dimensions.

Flood Control

4. COMITE RIVER (DIVERSION), LA

Location. In East Baton Rouge Parish, LA, between the Comite River and the Profit Island Chute of the Mississippi River, north of the town of Baker, LA, and south of the town of Zachary, LA.

Existing project. The project will provide protection for residents of the Comite River Basin by reducing stages in the river below the diversion point for events up to the 100-year flood event and containing within-banks events up to the 10-year flood event. The authorized project consists of construction of an 8-mile diversion channel from the Comite River to an outfall into Lilly Bayou and then a 4-mile diversion along Lilly and Cooper Bayous to the Profit Island Chute of the Mississippi River. The project also includes a diversion structure in the new channel near the diversion point; an outfall structure near and at the outfall into Lilly Bayou; and four control structures at the intersections of Whites, Cypress, and Baton Rouge Bayous and the fourth near McHugh Road. Disposal areas will be constructed along both banks of the new channel to retain the floodwaters from the Comite River along both sides of the new channel, and clearing and snagging of White, Cypress, and Baton Rouge Bayous north of the diversion channel will also be done. Mitigation for the project includes planting of trees

on cleared land near the diversion point and on portions of the disposal area and the protection and management of existing forested lands near the diversion point. Upgrading two gaging stations and installing six new gaging stations to assist in flood prediction are also included in the project. The current approved cost of the project is \$193,000,000, including \$138,000,000 Federal cost and \$55,000,000 non-Federal cost. The WRDA 1999 authorized the Secretary to include the costs of highway relocations to be cost shared as project construction features.

Local cooperation. The cost-sharing provisions contained in WRDA 1986 require that local interests shall: (a) Provide to the Federal Government all lands, easements, rights-of-way, and dredged material disposal areas, and perform the necessary relocations required for construction, operation, and maintenance of the project (Current estimate is \$45,350,000); and (b) Provide to the Federal Government a cash contribution equal to 5 percent of the total cost of the project, excluding cultural resources (Current estimate is \$9,650,000). The total cost of items (a) and (b) mentioned above is limited to 50 percent of the total cost of the project.

Operations and results during the fiscal year. In FY 2004, the Lilly Bayou control structure contract was awarded to a small business contractor in the amount of \$27.6 million for duration of 3 years. Federal funding restraints slowed construction; however, advancing non-Federal funds allowed the contract to continue in FY 2006. Funds received in FY 2007 fully funded the Lilly Bayou control structure contract.

Condition as of September 30. Construction for the Lilly Bayou control structure, Phase II, is complete. The non-Federal sponsor is beginning acquisition of mitigation property. Plans and specifications for Highways 67 and 964 and Brooks Closure are ongoing. There has been a significant population increase in the lower part of the Comite River Basin which is benefited by the project.

5. GRAND ISLE AND VICINITY, LA

Location. In south Jefferson Parish, LA, along the Gulf of Mexico, about 50 miles south of New Orleans and 45 miles northwest of Southwest Pass (Mississippi River).

Existing project. The project provides protection from waves driven by hurricanes that have a frequency of recurrence of up to once in every 50 years. The plan consists of a berm and vegetated dune constructive with a geotextile tube core extending the length of Grand Isle's gulf shore and a jetty to stabilize the western end of the island at Caminada Pass. The dune has a 10-foot-wide crown at an elevation of 13.5 feet, National Geodetic Vertical Datum (NGVD), 1 on 5 side slopes, and protective vegetation. The sandfill berm slopes from an elevation of 8.5 feet, NGVD, at the toe of the dune 150 feet gulfward to an elevation of 5 feet, NGVD, and, from this point, assumes its natural slope to the offshore bottom. The jetty provided by the plan has a top width of 6 feet at an elevation of 4 feet, NGVD, 1 on 2 side slopes, and extends approximately 3,600 feet along the western end of the island at Caminada Pass. Estimated cost of project (October 1991) is \$20,933,000 Federal and \$12,567,000 non-Federal, including \$7,157,484 contributed funds. The repair and restoration of Grand Isle were accomplished by two separate contracts. The jetty extensions and sand bar removal contract (partial fix), was completed in early 1988. The dune repair and structural reinforcement contract was physically completed September 4, 1991. The project has been turned over to the State of Louisiana for operation and maintenance.

The 1992 Dire Emergency Supplemental Appropriations Act provided funds to repair damage to the wave berm and dune caused by Hurricane Andrew and to add offshore breakwaters to the project as an integral part of the repair. The original plan was to construct 27 breakwater segments; however, only 23 breakwater segments were constructed due to limited Federal funds. 19 additional breakwater segments were built in the summer of 1999 by the local sponsor.

Local cooperation. The existing sand and beach dune have been damaged as a result of a series of storms between 1998 and 2002. P.L. 99 Federal assistance was approved to repair the damages caused by Hurricane Lili and Tropical Storm Isadora. A sponsor's contractor accomplished the renourishment and the Corps will reimburse the 12 percent cost share. Renourishment was completed in March 2005. On August 29, 2005, Hurricane Katrina caused extensive damage to the island. Funding to repair the storm damage to the sand and beach dune, breakwaters, and other island features has been approved.

Emergency supplemental funding. Supplemental (P.L. 109-148) funding in the amount of \$9,350,000 was expended for emergency repairs in FY 2010

Operations and results during fiscal year. Emergency supplemental Public Law funding in the amount of \$20,892,538 was expended on the overall project in FY 2010. During FY 2010, one contract was awarded and two contracts were completed. Expenditures included \$20,883,188 for repairs to damages caused by Hurricanes Gustav and Ike.

6. LAKE PONTCHARTRAIN AND VICINITY, LA (HURRICANE PROTECTION)

Location. In southeastern Louisiana, vicinity of New Orleans, in St. Charles, Jefferson, Orleans, St. Bernard, and St. Tammany Parishes, comprising lower land and water area between the Mississippi River alluvial ridge and the Pleistocene escarpment to north and west. The dominant topographic feature is Lake Pontchartrain, a shallow tidal basin, about 640 square miles in area and averaging 12 feet deep, connecting with lesser Lake Maurepas to the west and through Lake Borgne and Mississippi Sound to the Gulf to the east. The lake drains about 4,700 square miles of tributary area. (Refer to Geological Survey quadrangles Yscloskey and Malheureaux Point, Drum Bay, Door Point, Lake Eugenie, Oak Mound Bayou, Mitchell Keys, Lake Eloi, and Morgan Harbor; Engineer quadrangles Slidell, Covington, Ponchatoula, Springfield, Denham Springs, Donaldsonville, Mt. Airy, Bonnet Carre', Spanish Fort, Chef Menteur, Rigolets, St. Bernard, New Orleans, and Hahnville; and Coast and Geodetic Survey Charts Nos. 1115 and 1116.

Existing project prior to the emergency funding supplement of 2006. The project provided protection to that part of the greater New Orleans area east of the Mississippi River and other communities that border Lake Pontchartrain from the effects of hurricane-generated floods. The project is comprised of two major features: The Chalmette Area Plan and the High Level Plan. The Chalmette Area Plan consisted of a levee and floodwall system around the Chalmette area and along the Mississippi River-Gulf Outlet, with connections to the Mississippi River levees. The High Level Plan provided for heightening and strengthening the existing hurricane protection levee systems in Orleans Parish and the east bank of Jefferson Parish, repairing and rehabilitating the Mandeville Seawall in St. Tammany Parish; building a new mainline hurricane levee on the east bank of the St. Charles Parish just north of U.S. Highway 61 (Airline Highway); raising and strengthening the existing levee which extends along the Jefferson-St. Charles Parish boundary between Lake Pontchartrain and Airline Highway; and deferring construction of the proposed navigation

structure at Seabrook lock. Areas enclosed by the levee and floodwall construction were to be provided protection against tidal surge resulting from the Standard Project Hurricane (SPH). The estimated project cost for work (October 2005) is \$533,000,000 Federal and \$211,000,000 non-Federal.

Local cooperation prior to 2006. Requirements are described in full on page 11-5 of the FY 1992 Annual Report.

Changes to the project as a result of Hurricane Katrina. Hurricane Katrina devastated the project on August 29, 2005. The storm surge resulted in numerous levee and floodwall failures. Intensive efforts to reinstate the project protection by June 1, 2006, were completed. Additional efforts have been completed to restore the project design elevation in undamaged portions of the project. Funding and authority have been provided to construct permanent closures of the outfall canals in Orleans Parish, new structures to close off the Inner Harbor Navigation Canal at Seabrook, the GIWW and MRGO at Lake Borgne, armoring at critical reaches, and increasing design elevations to provide 100-year level of protection, necessary because of wetland loss, subsidence and sea-level rise. The Coastal Protection and Restoration Authority executed a Project Partnership Agreement in September 2008 for work performed through the Emergency Supplemental.

Emergency supplemental funding. Supplemental (P.L. 109-148) FCCE funding in the amount of \$15,459,000 was expended in FY 2011. Of that amount, \$7,830,000 was expended on repairs, \$240,000 to rebuild the system to authorized design elevation, and \$12,581,000 to accelerate the completion work, an additional \$33,584,000 (P.L. 110-329) on damages from Hurricane Gustav. Additional repair funds of \$5,192,000 (P.L. 110-252) were expended on temporary pumps at the outfall canals and \$128,619,000 (P.L. 110-28) and \$18,600,000 (P.L. 110-252) were used to rebuild the system to authorized design elevation. In addition, \$574,177,000 of Supplemental (P.L. 109-234) and \$181,284,000 (P.L. 110-252) FCCE funds were expended as follows: (\$5,840,000) on outfall canal closures, (\$286,328,000) on improvements to IHNC, (\$15,489,000) on armoring of levees, and (\$447,804,000) on replacing floodwalls. Supplemental (P.L. 109-234, P.L. 110-252, and P.L. 110-329) Construction funds in the amount of \$719,468,000 were also expended in FY 2011 on efforts to provide 100-year flood protection.

Additional FCCE funds in the amount of \$108,668,000 were expended on non-Federal pump stations.

Condition as of September 30. Major reconstruction of the project to provide a 1 percent level of hurricane and storm damage risk reduction is nearly complete. Repairs of damage caused by Hurricane Katrina have been completed. Construction is underway to provide 100-year level of protection. During FY 2011, 16 contracts were awarded: 5 LPV, 3 outfall canal, 1 St. Bernard pump station, 3 Orleans pump stations, and 4 Jefferson pump stations. A total of 32 were completed.

7. LAROSE TO GOLDEN MEADOW, LA (HURRICANE PROTECTION)

Location. In coastal section of Louisiana, along Bayou Lafourche, and includes lands on both banks of the bayou from Larose to 2 miles south of Golden Meadow. (Refer to Geological Survey quadrangles Cutoff, Lake Felicity, Bay Dosgris, Golden Meadow Farms, Bay Tambour, Mink Bayou, Caminada Pass, Leeville, Belle Pass, Pelican Pass, and Calumet Island; Engineer quadrangles New Orleans, Hahnville, and Point a la Hache, Barataria, and Fort Livingston; and Coast and Geodetic Survey Charts Nos. 1115 and 1116.)

Existing project. Provides a loop levee approximately 48 miles long along both banks of Bayou Lafourche from Larose to South Golden Meadow; enlargement of 3 miles of existing levee at Golden Meadow; floodgate and lock for navigation and hurricane risk reduction along Bayou Lafourche at upper and lower bayou crossings; and about 8 miles of low interior levees to regulate intercepted drainage. The non-Federal sponsor constructed pump stations in lieu of the gravity drainage structures that were included in the original project authorization. The Leon Theriot Lock evaluation report was approved by the ASA (CW) in August 2005 and is now an authorized feature of the project. The Leon Theriot Lock replaced the Golden Meadow floodgate in 2009.

Local cooperation. Requirements are described in full on page 11-6 of the FY 1992 Annual Report.

Operations and results during fiscal year. As a result of ongoing unapproved construction activities, the Larose to Golden Meadow Hurricane Levee System received an unacceptable operation and maintenance (O&M) compliance rating for the 2010 annual levee inspection.

Due to the post-Katrina design criteria and associated costs escalation, a Postauthorization Change (PAC) report is required. Alternatives for the PAC report were developed, and design work for the alternatives is ongoing. American Recovery and Reinvestment Act (ARRA) funds were received in the amount of \$6,370,000. Funds were used to take borings and surveys and for structural and economic analysis. Construction work consisted of contract awards for the Louisiana Offshore Oil Port (LOOP) Access Ramp, the Golden Meadow Pump Station Floodwall, and Phase I of the Gulf Intracoastal Waterway (GIWW)/Larose Floodwall.

Emergency supplemental funding. Emergency supplemental funding in the amount of \$7,254,500 was expended in FY 2011. Of that, \$2,797,000 was used for repairs, including \$2,792,000 of Hurricane Gustav funds; \$5,000 was used for accelerate to complete work and \$1,585,000 was used in data collection and analysis for preparation of the PAC report. The remaining \$4,457,000 was used to analyze the levee system's structures for stability and design and initiate construction of the LOOP Access Ramp, Golden Meadow Pump Station Floodwall, and the GIWW/Larose Floodwall.

Condition as of September 30. The South Lafourche Levee District continued their construction efforts to elevate the levee system without approval from the Corps. Repairs to damages caused by Hurricane Gustav were completed with the E-North levee repairs in FY 2011. The Golden Meadow Pump Station Discharge Pipe Floodwall and the LOOP Floodgate and Floodwall were below authorized elevation. The LOOP floodgate and floodwall were replaced with an access ramp, and the floodwall at Golden Meadow Pump Station was replaced with an elevated floodwall. Construction of these remedial measures will be completed in early FY 2012. The GIWW/Larose Floodwall will be completed in late FY 2012. The majority of the Larose to Golden Meadow Hurricane Protection System is below 1965 authorized level of risk reduction. The USACE continues to work with the South Lafourche Levee District on improving the current condition of the levee system.

8. NEW ORLEANS TO VENICE, LA, (HURRICANE PROTECTION)

Location. Includes land subject to inundation by hurricane tides extending along both banks of the Mississippi River below New Orleans from vicinity of Phoenix to Venice, LA.

Existing project. Provides for improvements along Mississippi River below New Orleans, LA, for prevention of hurricane tidal flood damages by increasing heights of existing back levees and modifying existing drainage facilities where necessary in three separate reaches: Reach A, on the west bank from St. Jude to Tropical Bend, 18 miles, 4,340 acres protected; Reach B, on the west bank from Tropical Bend to Venice, 21 miles, 4,900 acres protected; and Reach C, on the east bank from Phoenix to Bohemia 16 miles, 5,470 acres protected, and raising the river levee on the west bank (MR&T levee) from City Price to Venice, to a grade high enough to prevent overtopping by tidal surges from the east, generally called the West Bank River Plan. Reach B was later divided into two units, Reach B-1 from Tropical Bend to Fort Jackson and Reach B-2 from Fort Jackson to Venice, LA, as a result of a request made by the local agency.

Local cooperation. Provide all lands, easements, and rights-of-way including borrow areas and spoil disposal areas necessary for the construction of the project; accomplish all necessary alterations and relocations to roads, pipelines, cables, wharves, and other facilities required by the construction of the project; bear 30 percent of the first cost, and cash contribution or equivalent work to be paid either in a lump sum prior to initiation of construction or in installments prior to start of pertinent work items.

The local sponsor has requested that an area extending from the upstream limits of Reach A at City Price to St. Jude, Louisiana be incorporated into the project. This work involves upgrading 3.3 miles of existing non-Federal levees to project standards. The local sponsor has elected to pay all of the costs of this reach of levee. While the sponsor will not receive credit for these costs, the increased protected area is eligible for Federally subsidized flood insurance. Savings to the project achieved by a portion of levee no longer being required at the upstream end of Reach A are creditable to the local sponsor. A Post Authorization Change report was prepared for this reach and was approved by the Lower Mississippi Valley Division on March 6, 1992. Supplemental assurances for the City Price to St. Jude reach were accepted on February 18, 1993.

Assuring Agency: Plaquemines Parish Government. Remaining assurances to be executed for the supplemental work in FY 2012.

Operations and results during fiscal year. Hurricane Katrina devastated the project on August 29, 2005. The storm surge overtopped the protection and resulted in numerous levee and floodwall failures. Intensive efforts to reinstate the project protection are underway funded under Flood Control and Coastal Emergencies Appropriation, P.L. 109-148, which provided full Federal funding with no local share required.

Condition as of September 30. All repair work was completed except for remaining Task Force Guardian work required on reaches P14-a and P-17a. Restoration and accelerated completion work will continue, along with incorporating non-Federal levees in Plaquemines Parish.

9. SOUTHEAST LOUISIANA URBAN FLOOD CONTROL PROJECT (FLOOD CONTROL)

Location. The authorized project is located in Orleans, Jefferson, and St. Tammany Parishes. Features in Orleans and Jefferson Parishes are located on the east and west banks of the Mississippi River. St. Tammany Parish features are located in the southern portion of the parish, near Lake Pontchartrain, in and around the communities of Slidell, Mandeville, Madisonville, Abita Springs, and Lacomb, LA.

Project features. The work in Orleans Parish consists of enlargement of a major pumping station, construction of a new station, and improvements to 16 drainage canals and underground drainage lines. Jefferson Parish features include improvements to 5 pumping stations, construction of 2 new pump stations, and improvements to approximately 30 drainage canals. Work in St. Tammany includes: channel improvements, retention ponds, levees, and structure raising.

Local cooperation. The project requires that the local sponsor(s) provide all lands, easements, rights-of-way, relocations, and disposal areas (LERRD) needed for project construction, as well as a minimum 5 percent cash contribution. The total (value) of the locals share must be a minimum of 25 percent of the project total, but not exceed 50 percent of the project total. Jefferson Parish and the Sewerage and Water Board of New Orleans executed the Project Cost-sharing Agreements (PCAs) in January 1997. No agreement has yet been executed for St. Tammany Parish work.

In March 2005, a PCA amendment was executed with Jefferson Parish incorporating the East Bank Basin project and the East of Harvey Canal project on the basis of studies done under Sec. 533(d) of the WRDA of 1996. The Uptown Sec. 533(d) report was approved in October 2006. A Project Partnership Agreement (PPA) for all authorized and approved SELA work in Jefferson and Orleans Parishes at a 65 percent Federal and 35 percent non-Federal cost share was executed with the State of Louisiana in January 2009. The Algiers Sec. 533(d) report was approved in September 2011 which will require a new partnership agreement. Additional Sec. 533(d) investigations continue in an attempt to determine whether there are more Federally justified plans for improving drainage in Jefferson, Orleans, and St. Tammany Parishes.

Operations and results during fiscal year. Federal construction began in March 1997. Since then, 63 construction contracts have been awarded and 53 have been completed.

Emergency supplemental funding. Emergency supplemental (P.L. 109-148) funding in the amount of \$28,656,000 was expended in FY 2011 to accelerate the completion of contracts. In addition, \$21,949,000 of Construction funds (P.L. 110-28, P.L. 110-252, P.L. 110-329) were expended in FY 2011.

Condition as of September 30. In FY 2010, emergency supplemental funds were used to complete three contracts and award one new contract.

10. WEST BANK AND VICINITY, NEW ORLEANS, LA (HURRICANE PROTECTION)

Location. The project is located in Jefferson, Orleans and Plaquemines parishes on the West Bank of the Mississippi River in the vicinity of New Orleans, Louisiana.

The project area generally extends from the Jefferson-St. Charles Parish line to the community of Oakville in Plaquemines Parish and is bounded by the Mississippi River on the north and east and Lakes Cataouatche and Salvador and the GIWW on the south and west. The original project was from Westwego to Harvey Canal and was authorized by WRDA 1986. WRDA 1996 modified the project by adding the Lake Cataouatche area to the project and also authorized the East of Harvey Canal Hurricane Protection Project. WRDA 1999 combined the three projects under the current name.

Existing project prior to the emergency funding supplement of 2006. The total project consists of about 57 miles of new and enlarged earthen levee, 9 miles of floodwall, a navigable floodgate in the Harvey Canal below Lapalco Boulevard, a discharge channel and 1,000 cfs capacity increase at the Cousins pump station. The protection was originally designed to protect against tidal floodwaters resulting from the Standard Project Hurricane (SPH) storm used at the time of original authorization.

The elevation of the SPH protection varies from 9 to 12 feet, NGVD. The project plan includes mitigation which consists of the construction of a timber pile and tire breakwater on the west bank of Lake Cataouatche adjacent to the Salvador Wildlife Management Area and the acquisition of approximately 1,300 acres of forested wetlands which will be managed to improve habitat quality.

Local cooperation. The project requires that the local sponsor provide all LERRDs needed for project construction. The total (value) of the sponsors share must be a minimum 35 percent of the total project costs, in cash or creditable work.

Funds provided by non-Federal interests for inter-im hurricane protection on the Westwego to Harvey Canal area may be considered beneficial expenditures and may be credited as part of the non-Federal contribution of the project pursuant to the WRDA of 1986.

The Louisiana Department of Transportation and Development and West Jefferson Levee District executed amendment number 1 of the local cooperation agreement in April 1999. Amendment 2 to the PCA was executed on March 30, 2007.

Operations and results during fiscal year. Flood Control and Coastal Emergency (P.L. 109-148) funds were received in FY 2006 in the wake of Hurricane Katrina. The funds are being used to accelerate the original project completion and restore original design elevations. Supplemental (P.L. 109-234, P.L. 110-252, P.L. 110-329) Construction funds are being used to increase design elevations to provide a minimum of 100-year level of protection required because of wetlands loss, subsidence, and sea level change. The Coastal Protection and Restoration Authority executed a PPA in November 2008 for work performed through the Emergency Supplementals.

Emergency supplemental funding. Supplemental funding (P.L. 109-148, P.L. 109-234, P.L. 110-28, P.L. 110-252) in the amount of \$330,516,000 was

expended in FY 2011. Of that, \$45,605,000 was expended on restoration to authorized design elevations. In addition, \$148,353,000 was expended to accelerate completion and \$136,558,000 was expended on armoring and floodwall reinforcing or replacement. Supplemental (P.L. 109-234, P.L. 110-252, P.L. 110-329) Construction funds in the amount of \$635,020 were expended on efforts to provide 100-year flood protection.

Conditions as of September 30. Major design and construction efforts continue to support the advance completion of all features of the project. A total of 19 contracts were awarded in FY 2011.

11. AMITE RIVER AND TRIBUTARIES, EAST BATON ROUGE PARISH, LA (FLOOD DAMAGE REDUCTION)

Location. The project lies between the Mississippi River and Amite Rivers and the area is approximately 66 miles of channels in five sub-basins within East Baton Rouge Parish, LA. The five sub-basins are Blackwater Bayou and tributaries; Beaver Bayou; Jones Creek and tributaries; Ward Creek and tributaries; and Bayou Fountain. The project was authorized by P.L. 101-21, WRDA 1999, and modified by P.L. 108-116.

Existing project. The project purpose is to reduce flood risk by channel modifications within five watersheds, including the Baton Rouge and City of Central, LA, metropolitan area. The current approved cost of the project is \$187,000,000, including \$140,000,000 Federal cost and \$47,000,000 non-Federal cost.

Local Cooperation. A 75/25 cost share and work-in-kind have been authorized in WRDA 2007. Since the City of Central incorporated and is outside the jurisdictional limits of East Baton Rouge Parish government, two of the five channels (Blackwater and Beaver Bayous) are located entirely within the city limits of Central. Therefore, two PPAs will be prepared for signature. One PPA will be signed with East Baton Rouge Parish to include Jones Creek, Ward Creek, and Bayou Fountain at a total project cost of \$130,000,000. The second PPA will be signed with the City of Central to include Beaver and Blackwater Bayous for a total project cost of \$57,000,000. A PAC report was prepared as the basis for reauthorization with a revision to the work-in-kind features. Work-in-kind will be in accordance with EC 1165-2-208.

Operations and results during fiscal year. ARRA funds were received in the amount of \$674,544 for force main restoration.

Condition as of September 30. Construction of the project has not yet begun.

12. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Various hurricane protection projects, as well as small flood control projects, were inspected during FY 2011. Also, periodic inspection and continuing evaluation of completed Civil Works structures was conducted in accordance with ER 1110-2-100, at various times during the year on an as needed basis.

Fiscal year costs for 2011 were \$548,608. Total costs to September 30, 2011, were \$11,510,470.

13. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Emergency flood control activities—repair, flood fighting, and rescue work. P.L.s 109-62, 109-148, 110-28, 110-252, and 110-329.)

During FY 2011, the following funds were provided for Emergency Management at the New Orleans District: \$13,573,043 for Emergency Preparedness Operations.

In addition, \$257,587,000 was expended in FY 2011 supplemental funding to continue restoration from major damages sustained from Hurricanes Katrina, Rita, and Gustav to the Greater New Orleans Storm Hurricane Reduction System (Lake Pontchartrain and Vicinity, LA (HPP); Southeast Louisiana, LA; New Orleans to Venice, LA (HPP); Larose to Golden Meadow, LA; and Grand Isle and Vicinity, LA). The FY 2011 funds were utilized for repair and restoration of projects to pre-Katrina levels and improvements to the Hurricane and Storm Damage Risk Reduction System.

Condition as of September 30. Contract awards for repairs began in FY 2005 and were completed in FY 2006. Ongoing and future work includes: additional levee lifts and construction of new floodwalls to 100-year level of protection, construction of additional pump plants, storm proofing of existing pump plants, armoring of levees, and installation of gated structures.

As of September 2011, 287 construction contracts were awarded for approximately \$7.40 billion. The repairs and rehabilitation of the catastrophic damaged areas within the 220 miles of levees and floodwalls, to close the gaps in the perimeter protection, were complete as of June 1, 2006. Additional repairs and rehabilitation have continued to lesser damaged areas.

14. PROTECTION OF NAVIGATION

During FY 2011, \$55,159 was expended on operation and maintenance for Project Condition Surveys.

15. CATASTROPHIC DISASTER PREPAREDNESS PROGRAM

During FY 2011, \$475,328 was expended for Emergency Management at the New Orleans District.

16. COASTAL WETLANDS PLANNING, PROTECTION, AND RESTORATION ACT

Location. The coastal parishes of Louisiana.

Authority. Activities were authorized by the Coastal Wetlands Planning, Protection and Restoration Act (CWPPRA) (Title III of P.L. 101-646, dated November 29, 1990), which established the Louisiana Coastal Wetlands Conservation and Restoration Task Force. The Task Force consists of the Secretary of the Army as chairman, the Administrator of the Environmental Protection Agency, the Governor of the State of Louisiana, the Secretary of the Interior, the Secretary of Agriculture, and the Secretary of Commerce.

Local cooperation. The conditions of local cooperation were established by P.L. 101-646, as amended.

Project features. The Task Force approves projects to be developed for the long-term conservation of Louisiana's coastal wetlands. Projects are added to Priority Project lists (PPLs) on an annual basis. Projects approved on previous PPLs can be found in the 2009 Evaluation Report to Congress (pages 10 through 11). The Task Force approved the 20th PPL on January 19, 2011. Funds in the amount of \$10,363,337 were made available for construction of the following projects: Bayou Bonfouca Marsh Creation, Coast-wide Planting, Cameron-Creole Watershed Grand Bayou Marsh Creation, Kelso Bayou Marsh Creation and Hydrologic Restoration, and Terrebonne Bay Marsh Creation-Nourishment.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2011

Operations and Results during fiscal year. See Table 11-I for projects completed, continued, and initiated in FY 2011.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2011

TABLE 11-B		AUTHORIZING LEGISLATION	
------------	--	-------------------------	--

Acts	Work Authorized	Documents
Water Resources Development Act, 1986	LAKE CHARLES, LA The project for deepening of the project for navigation, Lake Charles, Louisiana, to a depth of 45 feet, at a total cost of \$1,070,000.	P.L. 99-662, November 17, 1986
March 2, 1945	MISSISSIPPI RIVER, BATON ROUGE TO GULF OF MEXICO, LA Combines projects of Mississippi River, Baton Rouge to New Orleans, Mississippi River, South Pass, and Southwest Pass, adding thereto project for Mississippi River from New Orleans to Head of Passes, to provide a single project, "Mississippi River, Baton Rouge to the Gulf of Mexico," with channel dimensions as follows: Baton Rouge to New Orleans, 35 by 500 feet; port limits of New Orleans, 35 by 1,500 feet; New Orleans to Head of Passes, 40 by 1,000 feet; Southwest Pass, 40 by 800 feet; Southwest Pass Bar Channel, 40 by 600 feet; South Pass, 30 by 450 feet; South Pass Bar Channel, 30 by 600 feet.	H. Doc. 215, 76th Cong., 1st sess.
October 23, 1962	Deepen existing channel from 35 to 40 feet by 500 feet wide from one-tenth mile below Louisiana Highway Commission bridge at Baton Rouge to upper limits of Port of New Orleans, and also 40 by 500 feet within presently authorized 35- by 1,500-foot channel in port limits of New Orleans.	S. Doc. 36, 87th Cong., 1st sess.
March 29, 1956	MISSISSIPPI RIVER-GULF OUTLET, LA (See Sec. 2 of Text) Construct a seaway canal 36 feet deep and 500 feet wide from Michoud to 38-foot contour in gulf and an inner tidewater harbor consisting of a 1,000- by 2,000-foot turning basin 36 feet deep and a connecting channel 36 feet deep and 500 feet wide to Inner Harbor Navigation Canal and provides, when economically justified, for construction of a lock to Mississippi River in the vicinity of Meraux, LA.	H. Doc. 245, 82d Cong., 1st sess.
October 22, 1976	Amends above Act making the construction of bridge relocations a Federal responsibility when required by the the construction of the Mississippi River-Gulf Outlet channel.	Sec. 186, Water Resources Development Act of 1976 (P.L. 94-587) 2d sess.
Water Resources Development Act, 1986	The Mississippi River-Gulf Outlet feature is modified to provide that the replacement and expansion of the existing industrial canal lock and connecting channels or the construction of an additional lock and connecting channels shall be in the area of the existing lock or at the Violet site.	P.L. 99-662, November 17, 1986
Water Resources Development Act, 1996	Amends above Act of 1986 to include a Community Impact Mitigation Plan as an authorized feature of the project to replace the Inner Harbor Navigation Canal Lock.	P.L. 104-303 October 12, 1996

	MISSISSIPPI RIVER SHIP CHANNEL, GULF TO BATON ROUGE, LA (See Sec. 3 of Text)	
Approp. Act of 1985, dated July 2, 1986 (P.L. 99-88)	Will provide more efficient deep-draft navigation access to the New Orleans and Baton Rouge reaches of the Mississippi River via Southwest Pass by enlarging the existing channel to a project depth of 55 feet and enlarging the adjacent channel along the left descending bank in New Orleans Harbor to a 40-foot depth, a turning basin at Baton Rouge, and training works in the passes to reduce maintenance.	H. Doc. 2577, 99th Cong., 1st sess.
November 17, 1986 (P.L. 99-662)	Formalizes the cost sharing provisions of the project, permits the State of Louisiana to enact user fees to defray their portion of the project costs, and implements harbor maintenance fees to help pay for the Federal cost of the project. It also provides an option to the local sponsor to defer their initial payment for one year following initiation of construction. In terms of channel depths up to 45 feet, the cost sharing requirements are 75 percent Federal and 25 percent non-Federal for construction and 100 percent Federal for maintenance. For channels deeper than 45 feet, the cost sharing requirements are 50 percent Federal and 50 percent non-Federal for both construction and maintenance.	Water Resources Development Act of 1986, 99th Cong., 2d sess.
	PORT FOURCHON, LA	
Water Resources Development Act, 1996	Provides a Federal navigation channel with a project depth of 24 feet MLLW in Bayou Lafourche, Belle Pass, and the Gulf of Mexico to improve navigation access to Port Fourchon at a total cost of \$4,440,000, with an estimated Federal cost of \$2,300,000 and an estimated non-Federal cost of \$2,140,000.	P.L. 104-303, 104th Congress (See Section 101) October 12, 1996
	WATERWAY FROM INTRACOASTAL WATERWAY TO BAYOU DULAC, LA (Bayous Grand Caillou and LeCarpe, LA)	
August 30, 1985	Channel 5 by 40 feet from Intracoastal Waterway at Houma through Bayou LeCarpe, Bayou Pelton, and Bayou Grand Caillou to Bayou Dulac, about 16.3 miles.	H. Doc. 206, 72d Cong., 1st sess.
October 23, 1962	Channel 10 by 45 feet in Bayou LeCarpe from Gulf Intracoastal Waterway to Houma navigation canal.	
	BAYOU RIGOLETTE, LA	
Water Resources Development Act, 1986	A project to construct six additional floodgates at Bayou Rigolette, LA, adjacent to the existing drainage structure, at a total cost of \$2,300,000.	P.L. 99-662, November 17, 1986
	AMITE RIVER AND TRIBUTARIES, LOUISIANA, EAST BATON ROUGE PARISH WATERSHED	
Water Resources Development Act, 1999 August 17, 1999	Amite River and Tributaries, Louisiana, East Baton Rouge Parish Watershed. The project for flood damage reduction and recreation, Amite River and tributaries, Louisiana, East Baton Rouge Parish Watershed.	P.L. 106-53 August 17, 1999

1. Transferred to Department of Transportation. Authorized under Truman-Hobbs Act.
2. Completed. Date will be furnished when available.
3. Includes previous project costs.
4. No commerce reported.
5. Abandonment recommended in H. Doc. 467, 69th Cong., 1st sess.
6. By P.L. 88-404, that portion of Bayou Terrebonne between point where Barrow Street crosses said stream and a line determined by prolonging and extending eastern right-of-way line of New Orleans Boulevard southerly to south bank of said stream was declared nonnavigable.
7. Includes \$66,000 contributed funds.
8. Operation and maintenance of the structure reported under project "Calcasieu River and Pass, LA."
9. Excludes \$50,000 contributed funds.
10. Not completed; incorporated in navigation project "Mermentau River, LA."
11. Not completed; superseded for most of its length by present 12- by 125-foot Gulf Intracoastal Waterway, which coincides with or parallels it.
12. Maintenance project; no future work schedules.
13. Includes \$57,555 (\$29,974 of which was from Public Works funds) for new work on previous project. Includes \$114,519 for maintenance of previous project.
14. Work is under continuing authority.
15. Includes \$1,729,989 for previous project.
16. Does not include expenditures for Dredge *WHEELER*.

VICKSBURG, MS, DISTRICT

This district comprises western and central Mississippi, southern Arkansas, northern Louisiana, and a very small portion of southwestern Tennessee, embraced in drainage basins of eastern tributaries of Mississippi River south of Horn Lake Creek to and including Buffalo River; Pearl River Basin in Mississippi; independent tributaries of the Gulf of Mexico south of the Buffalo River Basin to the Mississippi-Louisiana state line; western tributaries of

Mississippi River between White and Atchafalaya Rivers including Arkansas River Basin below a point 3 miles upstream from Pine Bluff and Arkansas River below mile 36.1 near Pendleton, AR; Ouachita and Black Rivers in Arkansas and Louisiana; and Red River in Louisiana and Arkansas to the Texas-Arkansas state line. The Vicksburg District territory encompasses 68,000 square miles.

Navigation

1. J. BENNETT JOHNSTON WATERWAY, LA (FORMERLY RED RIVER WATERWAY PROJECT)

Location. From east-central to northwest Louisiana along the Red and Old Rivers between the Mississippi River and Shreveport, LA.

Existing project. Provides a navigation route from the Mississippi River at the junction with Old River via Old and Red Rivers to Shreveport, LA, developing a channel approximately 236 miles long, 9 feet deep, and 200 feet wide. The development includes five locks and dams, realignment, and contraction of the river as necessary to develop an efficient navigation channel. Facilities to provide recreation and fish and wildlife development are an integral part of the project.

Local cooperation. For details, see page 11-21, Annual Report, FY 1980. The Red River Waterway Commission is the non-Federal sponsor. The Red River Waterway Commission, governing body of the Red River Waterway District, executed an act of assurance for all project features in Louisiana on February 26, 1969, supported by resolution dated January 30, 1969. The assurances were accepted for, and on behalf of, the United States on April 15, 1969. The Commission furnished amended assurances covering the provisions of P.L. 91-646 and 91-611 on May 23, 1973, for the portion of the project within Louisiana. These were accepted for, and on behalf of, the United States on November 14, 1973. A Local Cooperation Agreement between the Department of the Army and the Red River Waterway Commission for the acquisition of mitigation lands in the vicinity of Loggy Bayou Wildlife Management Area was executed on June 16, 1993, and a Project Cooperation Agreement (PCA) between the same agencies for the acquisition of mitigation lands in the vicinity of Bayou Bodcau was executed on July 17, 1996.

Terminal facilities. Local interests are to provide adequate terminal facilities along the waterway. Construction of the realignment and port fill is complete. Construction of the Alexandria, Shreveport—Bossier, Natchitoches Parish, and Red River Parish Ports is complete. Avoyelles Parish Port is under construction.

Operations and results during fiscal year.

Construction was initiated in July 1973, and the project opened for navigation in 1995. The project is 94 percent complete and provides navigation for a six-barge tow (two abreast) as far upstream as Shreveport, LA. All five lock and dam facilities are complete and in operation. During FY 2011, construction of one revetment project was completed. Finished design work on another revetment project, but due to lack of funding, the contract was not awarded. Entered into a contract to continue land mitigation acquisition. Continued land development of previously acquired mitigation tracts.

Maintenance dredging was performed along the waterway by the contract Dredge *BUTCHER* during FY 2011; 1,080,000 cubic yards of material were removed from the navigation channel. Supplemental funding in the amount of \$780,702 was expended in FY 2011 for dredging of shoaling below Lindy C. Boggs Lock and Dam. **American Recovery and Reinvestment Act (ARRA) of 2009, P.L. 111-5.** ARRA funding in the amount of \$98,700 was expended in FY 2011 for construction of backlog maintenance items on locks and dams and recreation sites.

2. OUACHITA AND BLACK RIVERS BELOW CAMDEN, AR

Location. Ouachita River rises in Polk County, AR, and flows southeasterly and southerly about 600 miles. Below its confluence with the Tensas and Little Rivers at Jonesville, LA, it is called Black River, which enters Red River 34.5 miles from the Mississippi River.

Previous projects. See page 683 of Annual Report for 1962 for details.

Existing project. See page 684 of Annual Report for 1962 for details of the old 6.5-foot navigation project. Modified project and project for Red River below Fulton, AR, provide for a channel 9 feet deep and 100 feet wide in Red River between Old River and mouth of Black River, and in Black and Ouachita Rivers from mouth of Black River to Camden, AR. Authorized features for the modified project include four new locks and dams, in-river construction dredging to achieve a 9-foot navigation channel depth, and channel realignment. All 4 locks and dams are complete and in operation and initial channel dredging is

complete providing 9-foot navigation depth. Remaining work consists of realignment of 25 restricted bendway sites between river miles 195 at Sterlington, LA, and river mile 335 at Camden, AR, on the Ouachita River. With these improvements in place the river system will be navigable by a four-barge tow (two abreast) to Crossett, AR, river mile 237, and a two-barge tow (abreast) to Camden, AR. Mitigation features include the 65,000-acre Felsenthal National Wildlife Refuge in Arkansas, the 18,000-acre D'Arbonne National Wildlife Refuge in Louisiana, a series of recreation facilities along the waterway, and improvements to Catahoula Lake to preserve it for migratory waterfowl.

Local cooperation. Local interests are required to furnish the construction rights-of-way for the realignment work. Seven of the 25 sites are within the Felsenthal National Wildlife Refuge and are already owned by the Federal Government. However, there have been no indications that the land for the remaining 18 sites will be forthcoming because of strong opposition to the realignment work by local environmental groups. The six remaining recreation facilities are unscheduled at this time due to the lack of required cost-sharing agreements.

Terminal facilities. Public loading docks are at Columbia, LA, and Camden and Crossett, AR. Privately owned docks and loading and unloading facilities are at Columbia, Monroe, and Sterlington, LA, and El Dorado, Calion, and Camden, AR. Two grain-handling facilities and a petroleum-loading facility are in the vicinity of Jonesville, LA, a grain-handling facility is in the vicinity of Acme, LA, and a petroleum-loading facility is in the vicinity of Smackover, AR.

Operations and results during fiscal year. The project is 92 percent complete and provides limited navigation as far north as Camden, AR. All four locks and dams associated with the project are complete and in operation. Design and construction of the remaining features are on hold pending a consensus between the States of Arkansas and Louisiana concerning the type of development desired or the additional studies needed to reach a decision. In FY 2011, maintenance dredging was performed from Felsenthal Lock & Dam to the mouth of the Black River by the contract Cutterhead Dredge IOWA, removing 1,500,000 cubic yards of material from the navigation channel. Supplemental funding in the amount of \$1,494,000 was expended in FY 2011 for dredging on the Ouachita/Black Navigation project to remove shoaling that was not

dredged due to minimal maintenance dredging funds received. ARRA funding in the amount of \$1,418,385 was expended in FY 2011 for construction of backlog maintenance items on the locks and dams and recreation areas to include a construction contract at Felsenthal Lock and Dam for cutting lock stoplog slots.

3. RED RIVER EMERGENCY BANK PROTECTION

Location. In northwest Louisiana, southwest Arkansas, and northeast Texas, along the Red and Old Rivers between the Mississippi River and the head of the levee system above Index, AR.

Existing project. Provides for realigning the banks by means of cutoffs and training works and for stabilizing banks by means of revetments, dikes, and other methods as emergency conditions may require in advance of developing the design for the entire Red River Waterway project.

Local cooperation. Fully complied with. For details see pages 11-19 to 11-20, Annual Report FY 1980.

Operations and results during fiscal year. Completed design work on one revetment item. Due to lack of funding, the contract was not awarded.

4. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Navigation activities pursuant to Sec. 107, P.L. 87-645, as amended.

In FY 2011, \$10,006 was expended on Section 107 Coordination Accounts.

Flood Control

5. OUACHITA RIVER LEVEES, LA

Location. East bank of Ouachita River between Bastrop, LA, and Sandy Bayou. Loop levees on the west bank at West Monroe, Columbia, and Bawcomville.

Existing project. There are 105.8 miles of levee on the east bank and 11.6 miles of levee in the three loops on the west bank. A Summary Report authorized

gravel surfacing 117.4 miles of levee, and enlarging 36.6 miles of levee. Estimated Federal cost is \$36,500,000. Estimated non-Federal cost is \$1,767,000.

Local cooperation. Requirements and assurances of local cooperation are fully described on page 12-6 of FY 1980 Annual Report.

The 1991 Water and Energy Appropriations Act gave the Federal government responsibility for the repair and/or replacement of the deteriorated drainage structures. The Assurances Agreement for Local Cooperation was supplemented to reflect this change in responsibility. The supplemental agreement covered work performed since FY 1992 with follow on agreements for additional levee work.

Operations and results during fiscal year. Item 2 was awarded on December 2, 2003, and designated complete October 3, 2006. A contract for Phase I gravel surfacing from Monroe to Sandy Bayou was awarded August 29, 2006, and designated complete October 10, 2006. A contract for Phase II gravel surfacing was awarded on June 16, 2008, and completed August 4, 2008. A contract for Phase III gravel surfacing was awarded on July 28, 2009, and completed April 26, 2010.

6. RED RIVER BELOW DENISON DAM, AR, LA, TX (VICKSBURG DISTRICT)

Location. On Red River and its tributaries below Denison Dam, in Oklahoma, Arkansas, Texas, and Louisiana. (Refer to Geological Survey State maps and folio "Maps of Red River" - 1958 edition.) Along the main stem of the Red River from the head of the levee system immediately above Index, AR, through the southwest corner of Arkansas to the vicinity of Boyce, LA, on the right bank, and Pineville, LA, on the left bank.

Existing project. Raising and strengthening existing and authorized Red River levees to provide protection against flooding and bank protection works at locations where levee setbacks are impossible or uneconomical. The plan consists of raising and strengthening existing and authorized Red River levees to provide against a flood approximately 20 percent greater than the flood of 1945, the flood of record, as modified by authorized reservoirs. Bank protection works are to be constructed at locations where levee setbacks are impossible or uneconomical.

Local cooperation. Requirements of local cooperation are fully described on page 12-10 of FY 1984 Annual Report.

Operations and results during fiscal year. Construction was initiated in February 1948, and the levee and bank stabilization are complete with the exception of levee rehabilitation within the State of Arkansas and gravel surfacing on the levees in Louisiana. Construction continued on levee rehabilitation in Arkansas.

7. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Inspection of completed work was accomplished at a cost of \$436,347 for the fiscal year. Total cost as of September 30, 2011, is \$10, 560,750.

8. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Emergency flood control activities—repair, flood fighting, and rescue work. (P.L. 99, 84th Cong., and antecedent legislation.)

FY 2011 Federal costs for the period were \$9,863,013 for disaster preparedness, emergency operations, and operational support and \$6,277,181 reimbursable Work for Others.

Snagging and clearing of navigable streams and tributaries in the interest of flood control (Sec. 208 of 1954 Flood Control Act, P.L. 780, 83rd Cong.)

In FY 2011, \$0 was expended on Section 208 coordination account.

Emergency bank protection (Sec. 14 of 1956 Flood Control Act, P.L. 780, 83rd Cong.)

In FY 2011, \$11,002 was expended on Section 14 coordination account; and \$2,344 on West Madison Utility District to complete.

Flood control activities pursuant to Sec. 205, P.L. 858, 80th Cong., as amended (preauthorization).

In FY 2011, \$9,993 was expended on Section 205 coordination account; and \$195,230 Federal on McKinney Bayou, Tunica County, MS.

Environmental

**9. MISSISSIPPI ENVIRONMENTAL
SECTION 592**

Location: The Mississippi (Section 592) project provides environmental infrastructure assistance to communities throughout the State of Mississippi.

Existing project: The Mississippi (Section 592) project provides environmental infrastructure assistance to communities throughout the State of Mississippi. This includes project design and construction assistance for wastewater treatment and related facilities, combined sewer overflows, water supply and storage and related facilities, environmental restoration, and surface water resource protection and development.

Local cooperation. Local sponsors are reimbursed 75 percent of their costs.

Operations and results during fiscal year. Eight projects have been completed, 2 terminated, and 33 are ongoing. ARRA funding in the amount of \$31,598,733 was received in FY 2009 and FY 2010 and is being used for 17 ongoing projects.

**10. PEARL RIVER WALKIAH BLUFF,
MS AND LA**

Location. The Lower Pearl River Basin lies within the States of Mississippi and Louisiana with the Pearl River forming part of the boundary between the two states. The Basin extends from near Bogalusa, LA, to the mouth--a linear distance of approximately 45 miles. The Pearl and West Pearl Rivers are distinct river systems connected by numerous sloughs, bayous, and distributaries.

Existing project. The project consists of a rock weir in the old bendway of the Pearl River above the inlet of Wilson Slough to provide a 50/50 low-flow distribution between that bendway and the Pearl River and other improvements. The primary purpose of this project was to restore low flows in an 18-mile reach of the Pearl River and Holmes Bayou, thus providing a net gain in the wetland resource value. Prior to this project, essentially all flows in the Pearl River eventually entered the West Pearl River during low-flow periods. This reach extends along the Pearl River from near the head of Wilson Slough, down the Pearl River and

Holmes Bayou, to the confluence of Holmes Bayou and the West Pearl River. The project was designed to restore low flows in the Pearl River system to the nearly equal distribution that existed between the Pearl River and Wilson Slough in the late 1970s. The last construction on the project was accomplished in December 1999. In October 2001, approximately 30 percent of the low flows were going down the Pearl River (as opposed to 5 to 10 percent prior to the project).

Operations and results during fiscal year. The rock weir portion of the project was damaged by high flows and was further damaged by Hurricane Katrina to the extent that the percentage of low flows going down the Pearl River dropped to approximately 20 percent. Repairs were needed to ensure the project continues to develop as originally planned. The needed repair work was funded in P.L. 109-148 (FY 2006 Supplemental Appropriations). Repairs are complete. Non-Federal funds of \$18,611 and \$-13,749 Federal funds were expended in FY 2011 to finalize and close out.

**11. ECOSYSTEM RESTORATION WORK
UNDER SPECIAL AUTHORIZATION**

Project modifications for improvement of environment pursuant to Sec. 1135, P.L. 99-662, as amended (preauthorization).

In FY 2011, \$9,995 was expended on Section 1135 coordination account; \$5,974 on Bayou DeSiard, Monroe, LA; \$-138,983 supplemental funds were revoked pending additional sponsor funding for project closeout on Sulphur River Wildlife Management Area, AR; \$-64,199 Federal and \$64,199 non-Federal on completing Lake George Restoration, Yazoo County project; and \$-20,000 Federal and \$20,000 non-Federal on completing Lake Whittington weir project.

Aquatic Restoration pursuant to Section 206, P.L. 104-303.

In FY 2011, \$10,019 was expended on Section 206 coordination account.

Ecosystem Restoration in Connection with Dredging pursuant to Section 204, P.L. 102-560.

In FY 2011, \$5,009 was expended on Section 204 coordination account.

Miscellaneous

**12. DAM SAFETY ASSURANCE AND
SEEPAGE/STABILITY CORRECTION
PROGRAM**

During FY 2011, \$231,324 was expended on Blakely Mountain Dam-Lake Ouachita and \$1,208 on Arkabutla Lake Seepage Instability Correction Study. Due to national prioritization, the Blakely Mountain Dam Issue Evaluation Study has currently been put on hold. \$1,620,415 was received for the Modeling, Mapping and Consequences Production Center (MMC) to complete Dam Safety MMC analysis on 20 projects across USACE.

13. EMPLOYEE COMPENSATION FUND

During FY 2011, \$1,179,968 was expended on Employee Compensation Fraud Investigation.

**14. CATASTROPHIC DISASTER PREPARED-
NESS PROGRAM**

During FY 2011, \$12,490 was expended on continuity of Government, \$0 on EOC Support and Facilities, \$14,789 on Catastrophic Disaster Preparedness, and \$0 Anti-Terrorism/Force Protection. Total costs for FY 2011 were \$27,279.

15. REGULATORY PROGRAM

During FY 2011, \$2,965,689 was expended on Permit Evaluation; \$286,352 on Enforcement; \$415,327 on Compliance-Authorized Activities and Mitigation; and \$0 on appeals. A total of \$3,667,369 was expended in FY 2011.

1. Includes \$674,068 for new work on previous projects.

2. Includes \$3,312,000 P.L. 98-8 Jobs Bill. Excludes \$47,854,000 previously allocated to New Orleans District.

3. Includes \$1,000,000 supplemental funds (P.L. 109-148).

TABLE 12-B AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
	OUACHITA AND BLACK RIVERS BELOW CAMDEN, AR (See Section 1 of Text)	
May 17, 1950	Modification of existing project to provide for 9-foot channel and deepening canal to Felsenthal, AR.	S. Doc. 117, 81st Cong., 1st sess.
July 14, 1960	Modification of 9-foot project to provide four new locks and dams and channel improvements.	S. Doc. 112, 86th Cong., 2d sess.
December 31, 1970	Migratory waterfowl refuges on Bayou D'Arbonne in connection with the pool of the Columbia Lock and Dam and in the pool of the Felsenthal Lock and Dam.	Report of the Chief of Engineers dated November 25, 1970, and H. Doc. 92-109, 92d Cong., 1st sess.
	RED RIVER EMERGENCY BANK PROTECTION (See Section 2 of Text).	
August 13, 1968	Realigning the banks by dredging cut-offs and training works and stabilizing banks by means of revetments and dikes.	H. Doc. 304, 90th Cong., 2d sess.
	ALOHA-RIGOLETTE AREA, LA (See Section 5 of Text)	
August 18, 1941	Original authorization incorporated into RRBW Protection FCA 1946 project modified to provide Bayou Darrow outlet.	P.L. 101-101 Cong., 2nd sess.
	BAYOU BODCAU AND TRIBUTARIES, AR AND LA	
October 27, 1965	Extend Cypress Bayou-Red Chute Bayou levee, construct stream closure landside drainage channel and three culverts on Red Chute Bayou and clearing and snagging channel; extend Flat River-Loggy Bayou levee, close Flat River near junction with Cutoff Bayou, and construct control structures on Flat River near junction with Red Chute Bayou; and enlarge Flat River channel to 20 to 35 feet, a distance of 11.6 miles.	H. Doc. 203, 89th Cong., 1st sess.
	CANAL 43, AR	
June 30, 1948	Channel enlargement	Sec. 205 of the Flood Control Act of 1948, as amended Authorized by Chief of Engineers, October 31, 1988.
	CANEY CREEK, MS	
November 17, 1986	Authorizes construction of such bank stabilization measures for Caney Creek in the vicinity of Jackson, MS, between McDowell Road and Raymond Road as the Secretary determines necessary for flood damage prevention and erosion control along approximately 3,000 feet of the creek.	P.L. 99-662, 99th Cong., 2d sess.

TABLE 12-B
(Continued) **AUTHORIZING LEGISLATION**

Acts	Work Authorized	Documents
WRDA of 1996	NATCHEZ BLUFFS, MS Authorizes bluff stabilization in accordance with the Natchez Bluff study at a total cost of \$17,200,000, estimated Federal cost of \$12,900,000 and non-Federal cost of \$4,300,000.	P.L. 104-303
June 30, 1948, as amended	CHAUVIN BAYOU, LA Construction of a 250-cfs pumping plant located adjacent to Chauvin Bayou at the Ouachita River levee and a water control structure in Canal L-11.	Sec. 205 of the Flood Control Act of 1948, as amended. Authorized by the Chief of Engineers February 6, 1990.
June 30, 1948, as amended	LEAD BAYOU, MS Channel enlargement.	Sec. 205 of the Flood Control Act of 1948, as amended. Authorized by Chief of Engineers June 10, 1980.
July 29, 1983	MCKINNEY BAYOU, AR AND TX (See Section 6 of text) Authorizes a comprehensive study and recommendations for development and efficient utilization of water and related resources for the McKinney Bayou area, a tributary of Red River.	P.L. 98-63 98th Cong., 1st sess.
November 17, 1986	MONROE AND WEST MONROE, LA, AND OUACHITA PARISH, LA Authorizes such structural and nonstructural measures as the Secretary deems feasible to prevent flood damage to the Cities of Monroe and West Monroe, LA, and Ouachita Parish, LA.	P.L. 99-662, 99th Cong., 2d sess.
May 17, 1950	OUACHITA RIVER AND TRIBUTARIES, AR AND LA Authorized DeGray Lake; Murfreesboro Lake; extension of floodwall at Monroe to partially close the existing gap; local protection at Bawcomville, LA (subsequently constructed under Sec. 6, Act of May 15, 1928, with local interests contributing one third of cost); Bayou Bartholomew channel improvement, including Deep Bayou and Overflow Creek; Pine Bluff local protection; local protection at Calion, AR; and incorporation, into the Ouachita River and Tributaries project, of all existing projects and portions thereof in the basin above the lower end of the levees on the east bank of the Ouachita River. In addition, the Chief of Engineers authorized on November 14, 1966, additional work on the levees.	S. Doc. 117, 81st Cong., 1st sess.
WRDA of 2007	WRDA of 2007 modifies the portion of Ouachita River Levees project authorized by Section 1 of Flood Control Act of May 15, 1928, to be reinstated as part of Mississippi River and Tributaries project with major maintenance. Includes levees and associated drainage on east bank from Bastrop, LA, to below Monroe, LA, and west bank at West Monroe.	Section 3013, P.L. 110-114

**TABLE 12-B
(Continued)**

AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
July 14, 1960	PEARL RIVER, MS AND LA (See Section 9 of Text) Construction of levee system and channel rectification, Pearl River, vicinity of Jackson, MS.	H. Doc. 441, 86th Cong., 1st sess.
June 13, 1983	Accomplish the clearing and channel improvements at Hwy 25 bridge on the Pearl River in the vicinity of Jackson, MS.	S. Doc. 153, 98th Cong., 1st sess.
July 29, 1983	Design and construct protection to prevent flooding along the Pearl River in the vicinity of Jackson, MS.	P.L. 98-63, 98th Cong., 1st sess.
August 15, 1985	Planning, design, engineering, and construction of a levee system for Slidell, LA, pending binding cost-sharing arrangements acceptable to the Secretary of the Army or under terms and conditions provided in subsequent legislation when enacted into law.	P.L. 99-88, 99th Cong., 2d sess.
November 17, 1986	Authorizes the Pearl River Basin, including Shoccoe, MS, for the construction of the Shoccoe Dam plus upstream flood control measures at east-central Leake County, south part of Carthage, MS, Highway 35 vicinity, upstream reservoirs on the Pearl River and upstream channels on the Pearl River and elsewhere in Leake County.	P.L. 99-662, 99th Cong., 2d sess.
WRDA of 2007	WRDA of 2007 modifies the Pearl River Basin project authorized by WRDA of 1986 to allow the construction of the National Economic Development Plan (NED), the Locally Preferred Plan (LPP), or some combination thereof subject to a determination that the LPP provides the same level of flood protection as the NED plan and that the LPP is environmentally acceptable and technically feasible. Total cost of \$205,800,000 with estimated Federal cost of \$133,700,000 and estimated non-Federal cost of \$72,030,000.	Section 3104, P.L. 110-114
November 17, 1986	PEARL RIVER, SLIDELL, ST. TAMMANY PARISH, LA Authorizes flood control improvements for Pearl River Basin, St. Tammany, LA, subject to a favorable Chief's report and approval by the Secretary of the Army for Civil Works.	P.L. 99-662 99th Cong., 2d sess.
June 30, 1948, as amended	PORTER BAYOU, MS Selective snagging and clearing of Porter Bayou, MS, from mile 12.5 to mile 32.3.	Sec. 205 of the Flood Control Act of 1948, as amended. Authorized by Chief of Engineers, February 18, 1982.
August 13, 1968	RED RIVER WATERWAY-MISSISSIPPI RIVER TO SHREVEPORT, LA (See Section 3 of Text) Develop a 9- by 200- foot channel, approximately 236 miles long from Mississippi River at junction of Old River via Old River and Red River to Shreveport, LA, consisting of realignment, bank stabilization, and construction of five locks and dams.	H. Doc. 304, 90th Cong., 2d sess.

TABLE 12-B AUTHORIZING LEGISLATION
(Continued)

Acts	Work Authorized	Documents
December 1, 1983	Provide replacement bridge for Louisiana and Arkansas Railway Company. Federal Limit: \$24,300,000.	P.L. 98-181 98th Cong., 2d sess.
November 17, 1986	WRDA of 1986 authorized for construction the project for mitigation of wildlife losses, Red River Waterway, LA, which may include all or such portion of any land adjacent to the Loggy Bayou Wildlife Management Area.	P.L. 99-662, 99th Cong., 2d sess.
November 17, 1988	WRDA of 1988 modified the mitigation project to authorize the Secretary to acquire up to 300 acres in the area of Stumpy Lake.	P.L. 100-676 100th Cong., 2d sess.
September 7, 1989	Provide for acquisition of up to 5,000 acres of land in the vicinity of Stumpy Lake/Swan Lake/Loggy Bayou Wildlife Management Area at a cost not to exceed \$2,500,000. Also increased L&A Railroad Bridge ceiling to \$25,800,000.	P.L. 101-101 101st Cong., 2d sess
November 28, 1990	WRDA of 1990 modified the mitigation project to authorize the Secretary to acquire an additional 12,000 acres adjacent to or close to the Bayou Bodcau Wildlife Management Area.	P.L. 101-640, 101st Cong., 2d sess.
December 18, 1991	Lock and Dam 1 designated as Lindy Claiborne Boggs Lock and Dam	P.L. 102-240 102nd Cong.
October 31, 1992	Lock and Dam 5 designated as Joe D. Waggoner, Jr. Lock and Dam	P.L. 102-580 102nd Cong
WRDA of 1996	WRDA of 1996 modified the mitigation project to authorize the Secretary to acquire lands adjacent to Loggy Bayou Wildlife Management Area in Caddo and Red River Parishes and increasing the authorized cost to \$10,500,000.	Section 301, P.L.104-303
WRDA of 1996	WRDA of 1996 modified the project to include dredging of the entrance to the Oxbow Lakes designated for preservation in project documentation and stated that the cost-sharing for this dredging should be the same as the general navigation features.	Section 301, P.L. 104-303
WRDA of 2000	WRDA of 2000 modified the mitigation project to authorize the acquisition of lands in any of the parishes that comprise the Red River Waterway District, consisting of Avoyelles, Bossier, Caddo, Grant, Natchitoches, Rapides, and Red River Parishes.	
WRDA of 2007	WRDA of 2007 modified the mitigation project to increase the cost to \$33,912,000, authorized the purchase and reforestation of lands that have been cleared or converted to agricultural uses and incorporate wildlife and forestry management practices to improve species diversity on mitigation lands.	Section 3080, P.L. 110-114
	RED RIVER BELOW DENISON DAM LEVEES AND BANK STABILIZATION (VICKSBURG DIST.) (See Section 10 of Text)	
July 24, 1946	Levee and bank stabilization.	H. Doc. 602, 79th Cong., 2d sess.

TABLE 12-B

Environmental Infrastructure

1. DE SOTO COUNTY, MS

Location. De Soto County is located in north Mississippi, just south of Memphis, TN. The county's rapid growth demands expansion of existing sewer systems and the development of new systems into one unified county-wide system.

Existing project. Section 219 of WRDA 1992, as amended in Section 502 of WRDA 1999 and Section 108 of the Consolidated Appropriations Act, 2001; Section 6006 of the Emergency Supplemental Appropriations Act for Defense, the Global War on Terror and Tsunami, 2005; and Section 501, to amend the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users to make technical corrections, and for other purposes (P.L. 110 244), 2008 authorized \$75,000,000 for the design and construction of a regional wastewater system in De Soto County, Mississippi, and

Section 123 of the Energy and Water Development Appropriations Act of 2006 amended project authorization so as to allow future work to be carried out primarily by the non-Federal sponsor with the 75 percent Federal share to be in the form of grants or reimbursements.

Local cooperation. De Soto County Regional Utility Authority (DCRUA) is the local sponsor for the project. On September 29, 2006, a new PCA was executed for future work. Under the new PCA the sponsor assumes primary responsibility for all phases of work and the Corps' role is to provide general oversight. The Federal cost share is being provided to the sponsor on a cost reimbursable basis. The September 2006 PCA was amended on December 17, 2008, to reflect the increase in authorization.

Operations during fiscal year. All work accomplished was completed by the sponsor under the Corps general oversight. Reimbursements to the local sponsor continue utilizing prior year funds

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2011

(\$20,817,106). Reimbursements were made for the 75 percent Federal share of multiple contracts awarded by the sponsor in FY 2011 and prior years having a cumulative value of \$8,097,000. Funds were also used as reimbursements for the local interest to develop plans and specifications for future items of work (\$65,000); and for administrative costs (\$53,000). Funds in the amount of \$126,000 were rescinded.

Other Activities

2. EMERGENCY RESPONSE ACTIVITIES

Emergency flood control activities, P.L. 99, 84th Cong.

During this period, Federal cost was \$415,349 for disaster preparedness.

Catastrophic Disaster Preparedness Program

National Emergency Preparedness Prog	\$34,852
National Preparedness	6,728
National Emergency Facilities	
Readiness Training & Exercise	<u>0</u>
Total	\$41,580

3. REGULATORY PROGRAM

Permit Evaluation	\$1,573,700
Enforcement	59,400
Appeals	0
Compliance Authorized Activities and Mitigation	<u>23,700</u>
Total	\$1,656,800

4. INSPECTION OF COMPLETED WORKS

Completed projects were inspected at a cost of \$475,404 during this period. Total cost as of September 30, 2011, was \$7,675,564. This included in-depth inspection of projects.

TABLE 13-A **COST AND FINANCIAL STATEMENT**

WRDA 1992	New Madrid Harbor, Missouri Directed the Secretary of the Army to assume responsibility for maintenance of the New Madrid County Harbor constructed by non-Federal interests before that date of the enactment of this Act in lieu of maintaining the existing Federal channel.	P.L. 102-580 October 31, 1992
WRDA 1996	White River, Arkansas The project for navigation, White river Navigation to Batesville, Arkansas, authorized by Section 601(a) of WRDA 1986 (100 Stat 4139) and deauthorized by Section 52(b) of WRDA 1988 (102 Stat. 4044), is authorized to be carried out by the Secretary.	P.L. 104-303 October 12, 1996
WRDA 1999	Memphis Harbor, Memphis, Tennessee Authorized to be carried out by the Secretary if the Secretary determines that the project is technically sound, environmentally acceptable, and economically justified, as appropriate.	P.L. 106-53 August 17, 1999

ST. LOUIS, MO, DISTRICT

This district comprises those portions of southwestern Illinois and eastern Missouri which lie in the drainage basin of Mississippi River and its western tributaries, exclusive of the Missouri River, from the mouth of the Ohio River to mile 300, and of its eastern tributaries to Hamburg Bay at mile 261 on the left bank, exclusive of tributary basin of Illinois Waterway upstream of new La Grange Lock and Dam at mile 80.15 above confluence of the Illinois and Mississippi Rivers. The St. Louis District territory encompasses 27,000 square

miles. The District also includes a drainage basin in Missouri tributary to the Little River diversion channel. The Mississippi River between the Missouri River and mile 300 is included in a separate report on the Mississippi River between the Missouri River and Minneapolis, MN. The portion of the Illinois River downstream of new La Grange Lock and Dam is included in the report of the Chicago District on the Illinois Waterway, Illinois and Indiana.

Navigation

1. ILLINOIS WATERWAY, IL (ST. LOUIS DISTRICT)

See report on Illinois Waterway, IL and IN, under Rock Island District.

2. KASKASKIA RIVER, IL

Location. The Kaskaskia River rises in Champaign County, IL, about 5 miles northwest of Urbana, in the east-central part of the state. It flows southwesterly about 325 miles and empties into the Mississippi River about 8 miles above Chester, IL, or about 118 miles above the mouth of the Ohio River.

Previous project. For details, see Annual Report for 1986.

Existing project. Improvement for navigation provides a 36-mile channel 9 feet deep and 225 feet wide from the mouth to Fayetteville, IL. Improvements included channel enlargement and a dam at mile 0.8 with a single lock 84 feet wide and 600 feet long. Federal cost totaled \$147,387,000; non-Federal cost totaled \$7,665,000, which included \$1,118,160 local contributions. Fish and wildlife and habitat restoration added in 1996 and recreation in 2000 as project purposes.

Local cooperation. State of Illinois passed legislation authorizing Illinois Department of Public Works and Buildings to enter into assurances of local cooperation with the United States. These assurances have been furnished and were accepted on behalf of the United States on September 10, 1965; these assurances were supplemented on August 7, 1972, to incorporate the provisions of P.L. 91-646.

Operations and results during fiscal year. Operation and maintenance costs totaled \$6,659,070 (includes \$3,627,641 in American Recovery and Reinvestment Act (ARRA) funds) expended on critical maintenance to lock and dam, potable water, complete dredging of channel between New Athens and Fayetteville, and cleanout of side channels. Culvert valve replacement was accomplished with FY 2010 Supplemental Appropriation funds of \$534,992 and FY 2009 CRA Supplemental funds of \$559,682.

3. MISSISSIPPI RIVER BETWEEN MISSOURI RIVER AND MINNEAPOLIS, MN (ST. LOUIS DISTRICT)

See separate chapter entitled "Mississippi River between Missouri River and Minneapolis, MN," printed in the Annual Report of the Chief of Engineers. This section includes Lock & Dam 24 Major Rehabilitation, Lock & Dam 25 Major Rehabilitation, and Melvin Price Locks & Dam.

4. MISSISSIPPI RIVER BETWEEN OHIO AND MISSOURI RIVERS, MO AND IL

Location. The Mississippi River rises in Lake Itasca, MN, and from there flows southerly about 2,340 miles and empties into the Gulf of Mexico. This portion of the river is the 195-mile section known as "Middle Mississippi," between tributaries Ohio and Missouri Rivers about 974 to 1,169 miles from the gulf. (See folder by Corps of Engineers Navigation Charts, Middle and Upper Mississippi River, Cairo, IL, to Minneapolis, MN.)

Previous projects. For details, see page 1879 of Annual Report for 1915 and page 1014 of Annual Report for 1938.

Existing project. The existing project provides for dredging and maintaining a minimum channel depth of not less than 9 feet, a minimum width of not less than 300 feet at low water, with additional widths in bends from mouth of Ohio River (about 974 miles from gulf) to northern boundary of City of St. Louis, mile 191, thence 200 feet wide, with additional width in bends to mouth of Missouri River, mile 195; to be obtained: (1) by regulating works, for closing secondary channels, contracting river by building new banks where river width is excessive and protecting new and old banks from erosion where necessary to secure permanency at an estimated total Federal cost (October 2009 price level) of \$350,000,000; (2) by dredging to maintain project channels; (3) by construction of works for Chain of Rocks reach authorized in 1945 River and Harbor Act, which approved a comprehensive plan for development of the river at Chain of Rocks to provide for construction of a lateral canal at a cost of \$59,720,600; and (4) by construction of a fixed-crest rock-fill dam about 900 feet below Chain of Rocks Bridge, authorized by 1958 River and Harbor Act, at a

cost of \$4,353,000, excluding \$7,000 costs to Coast Guard for aids to navigation. A small boat harbor opposite Chester, IL, was deauthorized and excluded from foregoing cost estimate. See H. Doc. 669 (76th Cong., 3rd sess.) for report of Chief of Engineers dated February 27, 1940, containing a general plan for improvement of Mississippi River between Coon Rapids Dam and mouth of Ohio River for purposes of navigation, power development, flood control, and needs of irrigation.

Local cooperation. None required.

Terminal facilities. Existing facilities are considered adequate for existing commerce.

Operations and results during fiscal year. Regulating Works: continued tree planting contract for the Thompson Bend riparian corridor; completed Mosenstein Reach/Ivory Landing Dike and Revetment (Phase 3) contract; and completed the Eliza Point Greenfield Bend Dike and Revetment (Phase 3) contract. Construction on existing project began in 1881 and project has been in beneficial use practically from its inception. Projects on Dam 27 and Chain of Rocks are complete. Channel as a whole has been greatly improved by the work completed to date. Dredging is required at low stages to remove temporary shoals and maintain required channel depths. River is generally above 10-foot stage, St. Louis gage, from latter part of February to the latter part of August, during which time project channel depths generally prevail without dredging.

Following the great Mississippi River flood of 1993, it became apparent that the Chain of Rocks, East Canal Levee, was not performing as intended. Sand boils developed within a sizeable reach at flood elevations considerably below design height. Emergency repairs were completed in FY 1997. Deficiency corrections (additional berms, relief wells, and a pump station) are estimated at \$54,800,000 (October 2009 price level). These corrections were initiated in FY 1999 and continued in FY 2011 with the award of a contract to construct the pump station. ARRA funds were used to complete the dredging requirements for the north seepage berms, complete development of mitigation lands, continue construction to complete the north seepage berms, complete two contracts for relief well construction, and continue construction of the south seepage berms.

Maintenance. Work consists of approximately 2,000 feet of dike repair and 5,000 feet of revetment repair annually. U.S. plant and hired labor plus contract dredging perform channel maintenance by dredging 5,000,000 to 10,000,000 cubic yards of material (average year) from main channel. Condition and operation studies, recreation planning, engineering and design, and operation and maintenance of Locks 27 continue. During FY 2011, the following funds were expended: \$10,326,939 Regulating Works; \$7,767,385 Chain of Rocks; and \$12,664,512 Locks 27, Rehabilitation for a total cost of \$30,758,836. FY 2008 War Supplemental funds \$1,000, FY 2009 CRA Supplemental funds \$1,103,249 and FY 2010 Supplemental funds \$8,999,391 were used to repair existing dike and revetment and dredging.

5. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Projects not specifically authorized by Congress pursuant to Sec. 107, 1960 Act and Modifications.

During FY 2011, funds were expended as follows: \$3,127 CAP Section 107.

Mitigation of Shore Damages Attributable to Navigation Projects (Sec. 111).

In FY 2011, funds were expended as follows: \$5,558 CAP Section 111 Coordination Account.

Flood Control

6. ALTON TO GALE ORGANIZED LEVEE DISTRICTS, IL and MO

Location. The levee system is located adjacent to the Mississippi River between Alton and Gale, Illinois.

Existing project. The project is authorized by the Flood Control Acts of 1936, 1938 and 1946. Construction of the Alton to Gale levee system was completed in 1977. Some reaches of this levee system have, for many years, been experiencing a significant number of slides associated with design deficiencies increasing the probability of levee failure during flood events.

Local cooperation. The cost-sharing applicable for the Alton to Gale Levee Slide repairs is in accordance with policies established for the Water Resources Development Act (WRDA) of 1986, P.L. 99-662. The local sponsor is required to operate and maintain all works after completion. In November 2000, ASA (CW) granted an exception to the policy requiring non-Federal cost-sharing for deficiency corrections to repair slides in 12.4 miles of levee. As a result, 44 levee slides were repaired at 100 percent Federal cost. This portion of work was completed in 2002.

Operations and results during fiscal year. Work continued on a Letter Report to address design deficiencies. An Environmental Assessment (EA) was completed in response to the Class C Fly Ash material public meetings in FY 2010 and to support the Letter Report. Following the 30-day public review and a public open house to publish the findings of the EA, the EA was submitted to the Mississippi Valley Division. The completed Letter Report, addressing a long-term solution for levee slides over the entire levee system, was submitted for approval in December 2010. An Issue Paper was also completed to support the Letter Report and submitted in April 2011.

7. BOIS BRULE, MO

Location. The Bois Brule project is located on the right descending bank of the Mississippi River, and is predominately in Perry County, Missouri, but has a small part in Randolph County, Illinois.

Existing project. The existing project was authorized by the Flood Control Acts of 1936 and 1965. It consists of 33.1 miles of levee, 341 relief wells, and 4 pump stations. The Energy and Water Development Appropriations Act of 2002 provided authority and funding to undertake design deficiency repairs with cost-sharing consistent with the original project authorization. The deficiency correction project consists of 297 relief wells, seepage berms, a seepage cutoff trench, ditching, 3 pump stations, and restoration of 4.2 miles of the back levee to its design grade. The deficiency correction project is approximately 49 percent complete.

Local cooperation. The Bois Brule Levee and Drainage District is the local sponsor and is responsible for land acquisition and relocations. The design and construction will be 100 percent Federal. The Project Cooperation Agreement (PCA) was executed in April 2004.

Operations and results during fiscal year. Construction is complete on the two seepage berms and cutoff trench/north berms contract. Construction continues on the Missouri Chute pump station contract, the Mechanical Supply contract, and the Relief Wells #3 contract.

8. CAPE GIRARDEAU FLOODWALL PROTECTION SYSTEM RECONSTRUCTION PROJECT

Location. Missouri, along the right descending bank of the Mississippi River flood plain between river miles 51.6 and 52.8 above the Ohio River.

Existing project. The area protected by the Cape Girardeau flood protection project lies within the corporate limits of the City of Cape Girardeau, Missouri. The overall length of the project is 8,240 feet consisting of 2,175 feet of levee; 6,065 feet of floodwall; 2 pumping stations; 5 closure structures; and other appurtenant structures. The reconstruction includes rock berm to stabilize existing retaining wall; floodwall work (joint repairs, toe drain replacement, soil stabilization and closure gate seal replacement); and pump stations (mechanical, electrical, and miscellaneous structural and culvert work).

Local cooperation. The City of Cape Girardeau assumed sponsorship for the project in June 2008 from the previous sponsors, the Main Street Levee District and the North Main Street Levee District. A Project Partnership Agreement (PPA) was executed on September 18, 2008.

Operations and results during fiscal year. Continued floodwall design and railroad coordination for the floodwall reconstruction work and construction oversight for retaining wall stabilization and pump station. ARRA funds expended to complete floodwall repairs associated with Phases 1, 2a, and 2b and begin toe drain repairs.

9. CHESTERFIELD, MO

Location. The Chesterfield, Missouri project includes the Monarch-Chesterfield Levee, which is located in St. Louis County along the right descending bank of the Missouri River between river miles 46 and 38.5.

Existing project. The project was authorized by Section 101(b)(18) of WRDA 2000 (P.L. 106-541), and amended by Sec. 3107 of WRDA 2007 (P.L. 110-114). The project includes a 5- to 7-foot levee raise, approximately 12 miles long; seepage berms; relief wells; closure structures; floodwalls, pump stations; and several gravity drains.

Local cooperation. The Monarch-Chesterfield Levee District and the Corps signed a PPA on February 1, 2008.

Operations and results during fiscal year.

ARRA construction for the Baxter Road Phases 2 and 3 and Centaur Road Railroad Closure are substantially complete. ARRA construction continues for the Walnut Grove Levee and Walnut Grove Railroad Closure. Construction contract for the Watershed 5 ponding area is substantially complete.

10. EAST ST. LOUIS, IL

Location. Project is in St. Clair and Madison Counties, IL, on the left descending bank of the Mississippi River between river miles 175 and 195 above the Ohio River. Project includes all bottom lands between bluffs on the east and Mississippi River and Chain of Rocks Canal on the west, and extends from Cahokia diversion channel on the north to Prairie du Pont Creek on the south. (See Corps of Engineers Navigation Charts, Middle and Upper Mississippi River, Cairo, IL, to Minneapolis, MN.)

Existing project. The 1936 Flood Control Act authorized raising and enlarging existing levee systems by construction or reconstruction of 19.8 miles of levee, including 3.1 miles of floodwall, together with necessary appurtenant works consisting of gravity drainage structures, highway and railroad closure structures, alterations and reconstruction of existing pumping plants, alterations to railroad bridges and approaches at levee crossings, service roads on levee crown, and seepage control measures. The completed 10 miles of levee along Chain of Rocks Canal and Lock 27 provide flood protection on the landward side integral with and to the same degree as the East St. Louis levee. Final cost of work under this authorization is \$22,550,100. The Flood Control Act of 1965 modified existing project to provide for channel

improvements, diversion ditches, flood plain detention areas, a reservoir on Little Canteen Creek, and a pumping plant to considerably reduce damages resulting from interior flooding. This act also authorized reconstruction of a channel stabilization dam in Cahokia Creek diversion channel to provide protection to adjacent levees and bridges from scour and eventual loss. Post authorization studies in the early 1980's justified a project that was constructed for the Blue Waters Ditch area, which included channel improvements and a pumping station with a final project cost of \$11,530,000 Federal and \$2,950,000 non-Federal. However, flood plain detention areas, the reservoir on Little Canteen Creek and other related flood control measures in the Cahokia-Harding Ditch Area are not economically feasible.

The 1988 Energy and Water Development Appropriations Act authorized repair and rehabilitation of pump stations and appurtenant works, channels and bridge structures. The estimated total cost of this work (October 2009 price level) is \$40,651,000 Federal and \$17,367,000 non-Federal.

A design deficiency correction project was recommended by the Limited Reevaluation Report (LRR) approved June 28, 2011. Authorization for design deficiency for underseepage and through-seepage is provided by the original project authorization. New geotechnical data analysis indicates that additional underseepage control measures are required. The design deficiency project will be a new project.

Local cooperation. For work under the Energy and Water Development Appropriations Act of 1988, P.L. 100-202, local interests have entered into three Local Cooperation Agreements (LCA) which cover all of the work in the Flood Protection Rehabilitation project. Construction work under the first two LCAs is complete, and construction work under the third LCA is underway. In May 1998, a PED agreement was executed by the local interests to cover costs associated with the reevaluation of the Cahokia-Harding Ditch area.

A new PPA will be executed for the design deficiency project.

Operations and results during fiscal year.

Awarded contracts for grouting and relief wells at North pump station, the last construction item for the rehabilitation project. Completed and received approval of the LRR and LRR Supplement on design deficiency corrections based on new subsurface investigations and underseepage analyses. Completed the Phase II hazardous and toxic waste study for the design deficiency correction project.

11. EAST ST. LOUIS AND VICINITY, IL (ECOSYSTEM RESTORATION)

Location. Project is in St. Clair and Madison Counties, IL, on the left descending bank of the Mississippi River between river miles 175 and 195 above the Ohio River. Project includes all bottom lands between bluffs on the east and Mississippi River and Chain of Rocks Canal on the west, including the tributary watershed, and extends from Cahokia diversion channel on the north to Prairie du Pont Creek on the south. (See Corps of Engineers Navigation Charts, Middle and Upper Mississippi River, Cairo, IL, to Minneapolis, MN.)

Existing project. The 1936 Flood Control Act authorized raising and enlarging existing levee systems by construction or reconstruction of 19.8 miles of levee, including 3.1 miles of floodwall, together with necessary appurtenant works consisting of gravity drainage structures, highway and railroad closure structures, alterations and reconstruction of existing pumping plants, alterations to railroad bridges and approaches at levee crossings, service roads on levee crown, and seepage control measures. The completed 10 miles of levee along Chain of Rocks Canal and Lock 27 provide flood protection on the landward side integral with and to the same degree as the East St. Louis levee. Final cost of work under this authorization is \$22,550,100. The Flood Control Act of 1965 modified existing project to provide for channel improvements, diversion ditches, flood plain detention areas, a reservoir on Little Canteen Creek, and a pumping plant to considerably reduce damages resulting from interior flooding. This act also authorized reconstruction of a channel stabilization dam in Cahokia Creek diversion channel to provide protection to adjacent levees and bridges from scour and eventual loss. Postauthorization studies in the early 1980's justified a project that was constructed for the Blue Waters Ditch area, which included channel improvements and a pumping station with a final project cost of \$11,530,000 Federal and \$2,950,000 non-Federal. However, flood plain detention areas, the

reservoir on Little Canteen Creek and other related flood control measures in the Cahokia-Harding Ditch Area are not economically feasible.

Severe flooding, which has resulted in National Disaster Declarations each year from 1993 to 1996, resulted in a new Congressional appropriation in FY 1997 to restart a cost-shared general reevaluation of the interior area. Congress added funds each year since FY 1997 to continue this effort. The project has been reformulated as an ecosystem restoration project that provides incidental flood damage reduction. Chief's Report was signed on December 22, 2004. The General Reevaluation Report was reviewed by the Office of the Assistant Secretary of the Army for Civil Works in 2006 and was returned for revision in September 2006. The recommended plan for the report is being reevaluated.

The project described by the Chief's Report was authorized by the WRDA of 2007.

Local cooperation. In May 1998, a Preconstruction Engineering and Design agreement was executed by the local interests to cover costs associated with the reevaluation.

Operations and results during fiscal year. Conducted reconnaissance and project review to develop alternatives to address ASA(CW) concerns with a new unsteady flow hydraulic model and ecological model.

12. LAKE SHELBYVILLE DAM SAFETY, IL

Location. The lake extends northeastward to approximately river mile 275 through Shelby, Moultrie, Douglas, and Cole Counties, IL.

Existing project. The project was authorized for construction by the Flood Control Acts of 1944 and 1958. It provides flood control, water supply, recreation, conservation of fish and wildlife, and water quality control and augments navigation flows downstream on the Kaskaskia River. The Shelbyville Lake Dam is currently assessed as a DSAC II dam in the Screening Portfolio Risk Assessment (SPRA). Significant concerns include reoccurring sinkholes and a slide condition during original construction.

Local cooperation. The project is 100 percent Federally funded. For the sewer connection, the City of Sullivan, IL, is a local partner.

Operations and results during fiscal year. Review and analysis of subsurface information and installation of instrumentation to monitor embankments began in 2008 under the SPRA program. Funds were expended for continuing analysis to better identify the extent of the underseepage issue and monitoring piezometers previously installed at the project. Data and analysis are being assembled into a dam safety report.

13. MERAMEC RIVER BASIN (VALLEY PARK), MO

Location. The project is located in St. Louis County, Missouri, adjacent to the left descending bank of the Meramec River between miles 20.7 and 22.1 above the confluence with the Mississippi River.

Existing project. The project was authorized for construction by Section 2(h), P.L. 97-128, December 29, 1981, and the WRDAs of 1986 and 1999. It protects Valley Park from the 100-year flood on the Meramec River. The project includes 3.2 miles of earthen levee with six gravity drains, three closure structures, interior ponding areas and 41 relief wells required for underseepage control. Estimated total project cost (October 2007) \$50,211,000; \$37,484,000 Federal, and \$12,727,000 non-Federal.

Local cooperation. The City of Valley Park, Missouri is the local sponsor. A Local Cooperation Agreement was executed on August 12, 1992.

Operations and results during fiscal year. In March 2008, the levee protected Valley Park from a major flood and prevented damages to properties valued at \$94,700,000, including homes, businesses, industry, and all buildings in the Valley Park school district. Seepage entered the protected area through a railroad embankment during the flood and erosion occurred along the toe of the east flank of the levee. During FY 2011, plans and specifications for a contract to protect the railroad embankment seepage were completed.

14. NUTWOOD DRAINAGE AND LEVEE DISTRICT, IL

Location. The levee district is in Green and Jersey Counties, IL, on the left descending bank of the Illinois River between miles 15.2 and 23.7 above the Mississippi River. (See Quincy, IL-MO, sheet of maps

of the United States, published by Army Map Service, scale 1:250,000.)

Existing project. Project was authorized by the 1962 Flood Control Act (H. Doc. 472, 87th Cong., 2d sess.). Project provides for raising and enlarging 11.4 miles of levee, construction of 1.0 miles of new levee, altering a pumping station and construction of seepage control measures. This project would provide protection to 10,360 acres of land, 9,365 of which are highly productive agricultural lands. A General Design Memorandum (GDM), completed in 1986, indicated that the plan was not economically justified at the interest rate used at the time. The project was declared inactive on June 3, 1987. As a result of the Great Flood of 1993 and the inundation of Illinois State Highway 16/100 within the project area, the 1995 Energy and Water Development Appropriations Bill included funding to perform a flood damage reduction study.

Local cooperation. Requirements of local cooperation are described on page 14-11 of FY 1980 Annual Report except that cost-sharing policies established by the WRDA of 1986, P.L.-99-662, will also apply. The Nutwood Drainage and Levee District is the local sponsor. The cost-sharing agreement for Preconstruction Engineering and Design (PED) was executed in July 1997.

Operations and results during fiscal year. Construction funding was received in FY 2002. Work efforts in FY 2011 resulted in the acquisition of surveying and mapping data needed to determine borrow requirements, evaluate the need for additional real estate and environmental mitigation, and continue to draft General Reevaluation Report (GRR). Modifying the GRR, needed for construction, requires revising the design of the levee due to updated underseepage and stability criteria. Also in FY 2011, the St. Louis District conducted a comprehensive project review with the sponsor and concluded that the revised GRR work be suspended pending additional sponsor funds. The present total Federal project cost (October 2003) is \$12,043,000; non-Federal cost is \$4,015,000.

15. RIVER DES PERES, MO

Location. River des Peres drains a 111-square mile area in the City of St. Louis and St. Louis County, Missouri, and empties into the Mississippi River.

Existing project. The project was authorized by the WRDA of 1990 (P.L. 101-640). The authorized project consists of two subprojects, Deer Creek and University City. The Deer Creek portion consists of 2.5 miles of channel widening and stabilization improvements through the Cities of Rock Hill, Webster Groves, Brentwood, and Maplewood. The University City portion consists of channel enlargement and stabilization along about 2.5 miles of the University City branch of upper River des Peres, a 2.53-mile recreation trail, and a small recreation park to be constructed by non-Federal interests on nonproject lands.

Local cooperation. The Metropolitan St. Louis Sewer District (MSD) and the mayors of Brentwood, Rock Hill, Webster Groves, and Maplewood signed a Design Agreement on May 17, 2001, to serve as the local sponsors for the Deer Creek portion of the project. The Deer Creek portion is currently deferred as the Cities of Rock Hill and Brentwood withdrew their support in FY 2003. The City of University City signed a Design Agreement on June 30, 2004.

Operation and results during fiscal year. The General Reevaluation for the University City portion of the project; the focus of the study had been a nonstructural approach including buy outs and flood-proofing. This study was suspended in FY 2010 due to non-Federal sponsor's lack of funding to continue study.

16. ST. LOUIS FLOOD PROTECTION, MO

Location. The St. Louis Flood Protection project is located in St. Louis, Missouri, on the right descending bank of the Mississippi River between miles 176.3 and 187.2 above the mouth of the Ohio River.

Existing project. The project was authorized by P.L. 84-256, August 9, 1955, and was completed in 1974. The reevaluation of the project consists of analyzing possible structural deficiencies and geotechnical concerns and the enhancement of recreation features within the project area.

Local cooperation. The City of St. Louis signed the Design Agreement on February 2, 2000. The PPA was executed on February 29, 2008.

Operations and results during fiscal year. Construction of relief wells and gate closure structures is ongoing. Fifty relief wells and 14 gates have been completed.

17. STE. GENEVIEVE, MO

Location. The City of Ste. Genevieve is located in Ste. Genevieve County at the edge of the Mississippi River flood plain about 54 miles south of St. Louis, MO.

Existing project. The project was authorized by the WRDA of 1986 (P.L. 99-662). The authorizing language states "Congress finds that, in view of the historic preservation benefits resulting from the project, the overall benefits of the project exceed the costs of the project." The overall project consists of a major levee and associated features that will protect the town from the Urban Design Flood on the Mississippi River channel improvements on tributary streams that flow through the town and recreation features on flood control lands. Estimated total project cost (2005) is \$49,374,000; \$35,967,000 Federal, and \$13,407,000 is non-Federal.

Local cooperation. The project sponsor for the Urban Design Levee is the Ste. Genevieve Joint Levee Commission. The City of Ste. Genevieve, Ste. Genevieve County Levee District Number 2, and Ste. Genevieve County Levee District Number 3 hold membership on the Commission. In May 2005, a design agreement was executed with the City of Ste. Genevieve for the tributary and recreation features.

Operations and results during fiscal year. Continued preparation of the GRR of the headwater flooding along North and South Gabouri Creeks. Design efforts for North Gabouri Creek features have been completed.

18. WOOD RIVER DRAINAGE AND LEVEE DISTRICT, IL

Location. The Wood River Drainage and Levee District project, "the Grassy Lake Pump Station," is located in the Mississippi River flood plain of Madison County, IL, near the intersection of Route 111 and Canal Road in Roxana, IL, just upstream of the City of St. Louis between river miles 195 and 203 above the Ohio River.

Existing project. The project was authorized by the Flood Control Act of 1938 and modified by the Flood Control Act of 1965. The original project provided for local flood protection works. The modified project provides for construction of a new 45-cfs pump station with collector ditches and necessary appurtenant facilities for removal of water impounded by the

existing levees in the southern area of the D&LD known as Grassy Lake.

Local cooperation. The Wood River Drainage and Levee District signed a Project Cooperation Agreement on October 28, 2005, with cost-sharing being 25 percent non-Federal and 75 percent Federal. The Project Cooperation Agreement was amended on June 29, 2006.

Operations and results during fiscal year. Construction of the pump station and relief wells was completed in November 2007. Preparation of the draft O&M manual for the Grassy Lake pump station and coordination with the sponsor continues.

19. WOOD RIVER LEVEE, IL

Location. The Wood River Levee project is located in the Mississippi River flood plain of Madison County, IL, just upstream of the City of St. Louis.

Existing project. The project was authorized by the Flood Control Act of 1938 and constructed in the 1950s. The reconstruction portion of the project was authorized by WRDA 2007. The existing project provides urban level protection for the 500-year Mississippi River flood stage. A reconstruction evaluation report to address the aging infrastructure and determine Federal interest was completed. The recommended project includes the rehabilitation of the levee system to bring it into original performance compliance. Estimated total project cost (October 2009) is \$37,581,000; \$24,427,000 Federal and \$13,154,000 non-Federal.

Local cooperation. The Wood River Drainage and Levee District signed a Design Agreement on April 6, 2000. The PPA was executed on June 30, 2008.

Operations and result during fiscal year. Developed plans and specifications and awarded contracts for Phases 1 and 2 gravity drain repairs and awarded additional structural and trash rake repair work. Awarded an additional contract to facilitate the emergency repair of the collapsing Grassy Lake 72-inch gravity drain. ARRA funds used for Phase 2 relief well construction, pump station reconstruction, and closure structure reconstruction.

20. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Inspection of completed work was accomplished at a cost of \$1,347,705 for FY 2011. Total cost as of end of fiscal year is \$18,659,311.

21. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Flood control activities pursuant to Sec. 205, P.L. 858, 80th Cong., as amended (preauthorization).

See Table 14-F.

Emergency bank stabilization activities pursuant to Sec. 14, P.L. 526, 79th Cong., as amended.

See Table 14-F.

Emergency flood control activities - repair flood fighting, and rescue work (P.L. 99, 84th Cong., and antecedent legislation).

See Section 27.

Environmental

22. MADISON AND ST. CLAIR COUNTIES, IL

Location. The environmental infrastructure project is located in Madison and St. Clair Counties, Illinois.

Existing project. The project was authorized by the WRDAs of 1992, 1996, and 1999 and the Consolidated Appropriations Act of 2001. The project consists of providing water-related environmental infrastructure and resource protection. Projects include separating out combined sanitary and stormwater sewers and design and construction of sewer systems to improve quality and reduce sewer backups into homes. Some of the systems exceed 100 years of performance. Problems created by this compromised infrastructure impact the health, water quality, and economic development potential of the area. Completed rehabilitation includes a portion of the combined sewer system in the downtown area of East St. Louis, Illinois. Belleville is upgrading its infrastructure in order to remain in compliance with environmental regulations regarding the overflow of combined sewers. Future work is planned for Madison County, including Eagle Park Acres, Glen Carbon, and Maryville.

Local cooperation. Project cooperation agreements have been executed for sewer rehabilitation work in East St. Louis, Belleville, Eagle Park Acres, and Glen Carbon.

Operation and results during fiscal year. Design of the Glen Carbon sewer project was completed in April 2011. ARRA funds were used to complete construction of the separation of combined sewers in Belleville, IL, in May 2011 and continue construction of the installation of a collector sanitary sewer system in Eagle Park Acres.

23. ST. LOUIS, MO (COMBINED SEWER OVERFLOWS)

Location. The project is limited to work within the City of St. Louis, MO.

Existing project. The project was authorized by the WRDAs of 1992, 1999, and 2007. The purpose is to eliminate or control combined sewer overflows in the City of St. Louis.

Local cooperation. Project cooperation agreements have been executed with the Metropolitan St. Louis Sewer District for work on the Old Mill Creek sewer.

Operation and results during fiscal year. Construction of Phase 1 of Old Mill Creek sewer (located from Ranken Avenue to Ohio Street) was completed in November 2010. Initiated work on a Letter Report to provide construction assistance for the separation of combined sewers for the Harlem-Baden project (pka Hebert Mars). ARRA funds were used to continue construction of Phase 2 of Old Mill Creek sewer (located from Ohio Street to 14th Street).

Miscellaneous

24. MISSOURI & MIDDLE MISSISSIPPI RIVER ENHANCEMENT (CHOUTEAU ISLAND PROJECT)

Location. The study area includes 1,500 acres on Chouteau and Gabaret Islands in Madison County, IL.

Existing project. The project is authorized under Section 514 of WRDA 1999. The purpose is to restore flood plain ecosystems within the Missouri and Middle Mississippi River Watersheds.

Local cooperation. The Illinois Department of Natural Resources will sponsor the project after the study is completed.

Operation and results during fiscal year. Results from the hydrologic model developed in FY 2010 were used to determine the most effective features for water delivery to the project area.

25. ECOSYSTEM RESTORATION WORK UNDER SPECIAL AUTHORIZATION

Project Modifications for improvement of environment pursuant to Sec. 1135, P.L. 99-662, as amended (preauthorization).

See Table 14G.

Aquatic Ecosystem Restoration P.L. 104-303, Sec. 206.

See Table 14G.

Wetland and Other Aquatic Habit Creation P.L. 102-580, Sec 204.

See Table 14G.

26. REGULATORY PROGRAM

Permit Evaluations	\$1,959,883
Enforcement	98,902
Studies	0
Environmental Impact Statement	0
Appeals	0
Compliance and Mitigation	129,229
Total Regulatory	\$2,188,014

27. FLOOD CONTROL AND COASTAL EMERGENCIES (FC&CE)

Disaster Preparedness	\$ 412,464
Emergency Operations	1,316,719
Rehabilitation and Inspection Program	2,284,920
Hazard Mitigation	15,703
Total FC&CE	\$4,029,806

The Emergency Operations Center was activated once in support of flooding in the St. Louis District. Federal costs for work in support of FEMA under the Stafford Act/Federal Response Plan totaled \$469,670.

**28. CATASTROPHIC DISASTER
PREPAREDNESS PROGRAM**

Local Preparedness	\$0
National Preparedness	0
National Emergency Facilities	0
Readiness Training	<u>0</u>
Total	\$0

29. OTHER PROGRAMS AND ACTIVITIES

In FY 2011, \$12,331,168 (\$7,954,077 ARRA funds) was expended on cultural resource compliance under the Native American Graves Protection and Repatriation Act (NAGPRA), 36 CFR Part 79 (Curation of Federally Owned and Administered Archaeological Collections, and the National Historic Preservation Act (NHPA) for operation, maintenance, and compliance. USACE is 100 percent complete with Section 6 Summary submittals. Districts continued Section 5 compliance activities, consulted with Federally recognized Native American tribes, conducted cultural affiliation studies, and repatriated NAGPRA materials. St. Louis District staff drafted guidance for Corps-wide compliance with a newly promulgated NAGPRA regulation. The Corps NAGPRA program, managed by the St. Louis District, was cited by the GAO as one of the successful programs within the Federal Government during testimony before the Senate Indian Affairs Committee.

St. Louis District staff provided oversight and direction to Corps districts on curation and collections management per 36 CFR Part 79. St. Louis staff worked with districts on curatorial plans and actions and directly rehabilitated collections from two Corps districts.

ARRA funds were expended for completion of a NHPA Section 110 project that employed 19 cultural resources management firms to survey nearly 69,000 acres of Corps fee-title lands and prepare 1,354 new or updated site forms for numerous state historic preservation offices. Forty-nine different district GIS layers were prepared to generate a cultural layer for CorpsMap, and nearly 32,000 historic maps and aerial photographs were scanned and georeferenced. This is the largest Federal historic properties project undertaken nationwide since the 1960s.

The Veterans Curation Program (VCP) provides veterans with job training through the rehabilitation and preservation of archeological collections owned or

administered by the Corps, transitioned from an ARRA funded initiative to an O&M supported line item. The program is managed by St. Louis staff and two contracted firms. During the third year of the program, 33 veterans completed training, bringing the total for the program to 83 veterans. Of these, 77 percent have attained employment or chosen to continue their education at colleges and universities. The VCP has rehabilitated 464 cubic feet of archeological collections from four Corps districts.

**30. UPPER MISSISSIPPI RIVER
RESTORATION (UMRR)**

Location. The portion of the Upper Mississippi River within the boundaries of the St. Louis District extends from the mouth of the Ohio River (river mile 0) to river mile 300, downstream of Lock and Dam 22.

Existing project. The project is composed of five elements: Habitat Rehabilitation and Enhancement Projects, Long-term Resource Monitoring, Recreation Projects, Studies of Recreation Impacts and Navigation Traffic Monitoring. (The St. Louis District's involvement has been limited to Habitat Rehabilitation and Enhancement Projects and Long-Term Resource Monitoring.) The overall program, involving five states and three engineer districts, is administered by the Mississippi Valley Division. In the St. Louis District, seven habitat rehabilitation projects have been completed. These are Clarksville Management Area, Dresser Island, Pharris Island, Stag Island, and Cuivre Island in Missouri and Stump Lake and Swan Lake in Illinois. Through FY 2011, funds allocated to the St. Louis District have amounted to \$61,601,000 for design and construction of Habitat Rehabilitation and Enhancement Projects (HREP); \$2,674,716 for Long-Term Resource Monitoring (LTRM); \$2,991,385 for Program Management; and \$967,800 for Habitat Needs Assessment. ARRA allocations for HREP total \$4,833,000.

During FY 2011, expenditures of \$5,313,353 included the following:

Batchtown	\$1,623,008
Calhoun Point	561,548
Clarence Cannon NWR	121,860
Eagles Nest & Piasa	28,859
Harlow Island	4,962
Pools 25/26	35,617
Program Management	255,171
Project Evaluation and Monitoring	76,641

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2011

Riprap Landing	\$ 163,159
Swan Lake	1,498,866
Ted Shanks	851,330
West Alton	2,662
Wilkinson Island	89,670

Local cooperation. The terms of local cooperation, as established by P.L. 99-662, will vary according to the nature of the project, land ownership and preexisting management responsibilities. The local sponsor for Habitat Rehabilitation and Enhancement projects is usually the U.S. Fish and Wildlife Service in coordination with the State of Missouri or the State of Illinois. A Project Cost-Sharing Agreement with the State of Missouri was completed in FY 1997 for the Cuivre Island project.

Operations and results during the fiscal year. During FY 2011, continued design on Ted Shanks, MO; Wilkinson Island, MO; Riprap Landing, IL; Clarence Cannon Refuge, MO; Pool 24 Islands, MO; Eagles Nest and Piasa Islands, IL; West Alton Missouri Islands, MO; and Godar Wetlands, IL. Construction continued on Batchtown, IL, Phases III and IV; Swan Lake, IL; and Pools 25 & 26, MO. Construction initiated on Ted Shanks, MO. Completed construction on Calhoun Point, IL. ARRA funds were used to continue construction on Batchtown floating pump station and Swan Lake pump station.

A small event was held in Dubuque, IA, to celebrate the 25th anniversary of the UMRR program.

31. FORMERLY UTILIZED SITES REMEDIAL ACTION PROGRAM (FUSRAP)

Location. FUSRAP applies to former Manhattan Engineer District/Atomic Energy Commission sites used in the Nation's early atomic weapons program. Sites that have been assigned to MVS by HQUSACE.

Existing project. On October 13, 1997, Congress transferred the management of the Formerly Utilized Sites Remedial Action Program (FUSRAP) to the

Corps of Engineers via the Energy and Water Development Appropriations Act, 1998. The St. Louis District was chosen to remediate low-level radioactive contamination, which resulted from activities conducted by the Manhattan Engineer District/Atomic Energy Commission, at the five St. Louis area sites. These sites include the Madison Site in Madison, Illinois, Hazelwood Interim Storage Site (HISS)/Latty Avenue Vicinity Properties (VPs), St. Louis Airport Site (SLAPS), St. Louis Airport Site Vicinity Properties (SLAPS VPs), and St. Louis Downtown (SLDS), in St. Louis, Missouri. A sixth site, the Iowa Army Ammunition Plant (IAAAP), was declared eligible for inclusion in FUSRAP in FY 2001. Cleanup follows the provisions of the Comprehensive Environmental Response, Compensation, and Liability Act.

Local cooperation. Projects under this program are not cost-shared. They are funded entirely by the Federal Government. However, because several sites are on the National Priority List (NPL), Federal Facility Agreements which specify legally binding coordination procedures between USACE and USEPA are applicable. Extensive coordination among USACE, EPA, the States of Missouri and Iowa, and various local stakeholders occurs.

Operations and results during fiscal year. In FY 2011, over 50,000 cubic yards of material were disposed of from the sites. The Corps of Engineers continued its remediation efforts at both SLDS and the North County sites under approved Records of Decision. In addition, funds were used at SLDS to complete sampling of the Inaccessibles Operable Unit Areas and to complete a draft Remedial Investigation Report. At the St. Louis Airport Site, which was completed in FY 2007, postremediation monitoring continued. At IAAAP, funds were used to complete remediation at the West Burn Pad South; resume remediation at isolated areas of Line 1; and issue a final feasibility report, proposed plan, and Record of Decision for other areas at the site.

1. Excludes previous project cost of \$1,416,620.

2. In addition \$1,139,000 was expended for rehabilitation.

3. Includes \$8,072,326 for work authorized by Flood Control Act of 1965.

4. Includes \$7,921,939 for work authorized by Flood Control Act of 1965.

5. Includes \$8,608,000 FY 2008 War Supplemental funds.

6. Includes \$9,076,610 FY 2008 War Supplemental costs.

TABLE 14-B **AUTHORIZING LEGISLATION**

Acts	Work Authorized	Documents
October 23, 1962	KASKASKIA RIVER, IL (See Section 2 of Text) Construct canal, lock, and dam to provide a 9-foot navigation channel from mouth to Fayetteville, IL.	S. Doc. 44, 87th Cong., 1st sess.
October 12, 1996	Modified to add fish and wildlife and habitat restoration as project purpose.	P.L. 104-303
December 11, 2000	Modified to include recreation as a project purpose.	P.L. 106-541, Section 311
November 8, 2007	Develop a comprehensive plan for the purpose of restoring, preserving, and protecting the Kaskaskia River Basin. If a project or initiative will produce independent, immediate, and substantial benefits, the Secretary may proceed with the implementation of the project.	P.L. 110-113, Section 5073
June 3, 1896	MISSISSIPPI RIVER BETWEEN OHIO AND MISSOURI RIVERS (See Section 4 of Text) Project for regulating works in 1881. (To obtain a minimum depth of 8 feet.) Dredging introduced as part of the project.	Annual Report, 1881, p. 1536.
June 13, 1902 March 2, 1907 ¹ March 3, 1905 ¹	These acts practically abrogated that part of project for middle Mississippi which proposed regulating works.	
June 25, 1910	Regulating works restored to project and appropriations begun with a view to completion of improvement between Ohio and Missouri Rivers within 12 years at an estimated cost of \$21,000,000, exclusive of amounts previously expended.	
January 21, 1927	For 9 feet deep and 300 feet wide from Ohio River to northern Rivers and Harbors boundary of City of St. Louis.	Committee Doc. 9, 69th Cong., 2d sess.
July 3, 1930	Project between northern boundary of St. Louis and Grafton (mouth of Illinois River) modified to provide a channel 9 feet deep and generally 200 feet wide with additional width around bends.	Rivers and Harbors Committee Doc. 12, 70th Cong., 1st sess.
March 2, 1945	Modified to provide construction of a lateral canal with lock at Chain of Rocks.	H. Doc. 231, 76th Cong., 1st sess.
September 3, 1954 ²	Modified to provide construction of a small-boat harbor opposite Chester, IL.	H. Doc. 230, 83d Cong., 1st sess.
July 3, 1958 ³	Modified to provide construction of a fixed crest rockfill dam 900 feet below Chain of Rocks Bridge.	

TABLE 14-B
(Continued) **AUTHORIZING LEGISLATION**

Acts	Work Authorized	Documents
	MELVIN PRICE LOCKS & DAM (FORMERLY LOCK AND DAM NO. 26 (REPLACEMENT))	
October 21, 1978	Construct new dam and a 1,200-foot lock approximately 2 miles downstream of the existing structure.	P.L. 95-502, 95th Cong.
December 29, 1981	Change name from "Lock and Dam No. 26" to "Melvin Price Lock and Dam" upon termination of service in U.S. Congress.	P.L. 97-118, 97th Cong.
August 15, 1985 and November 17, 1986	Construct a second lock, 600 feet long at the Lock and Dam No. 26. (Replacement) Project.	P.L. 99-88 and P.L. 99-662, 99th Cong.
November 28, 1990	Modified to provide construction of cost-shared recreation facilities within the State of Illinois	P.L. 101-640, 101st Cong.
October 31, 1992	Modified to allow cost-shared recreation with other non-Federal interests and authorized a 24,000 square foot visitor center.	P.L. 102-580, 102nd Cong.
October 12, 1996	Amended project for recreation to include other contiguous nonproject lands, including those referred to as the Alton Commons.	P.L. 104-303
	SOUTHEAST MISSOURI PORT, MO	
1960 River and Harbor Act as amended. Section 107	Construct harbor channel with adjacent landfill.	
	ST. LOUIS HARBOR, MO & IL	
November 26, 1986	As outlined in the Report of the Chief of Engineers, dated April 30, 1984, the WRDA of 1986 authorizes navigation improvements.	P.L. 99-662 99th Cong., 2d sess.
October 12, 1996	The Secretary shall complete a limited reevaluation of the authorized St. Louis Harbor Project in the vicinity of the Chain of Rocks Canal, Illinois, consistent with the authorized purposes of that project, to include evacuation of waters collecting on the land side of the Chain of Rocks Canal East Levee	P.L. 104-303
	ALTON TO GALE ORGANIZED LEVEE DISTRICTS, IL & MO (See Section 6 of Text)	
June 22, 1936	Authorized construction of levees to protect area from flooding from the Mississippi River.	Special report on record in HQUSACE Flood Control Committee Doc. 1, 75th Cong., 1st sess.
June 28, 1938 1946		

TABLE 14-B

AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
June 22, 1936	BOIS BRULE, MO (See Section 7 of Text) Raising and enlarging existing levee system to improve protection.	
October 27, 1965	Amended Flood Control Act of 1936, Section 3.	P.L. 89-298
November 17, 1986	CAPE GIRARDEAU, JACKSON METROPOLITAN AREA, MO As outlined in the Report of the Chief of Engineers dated December 8, 1984, the WRDA of 1986 authorizes flood control and related recreational improvements in the Cape La Croix Creek Watershed.	P.L. 99-662, 99th Cong., 2d sess.
October 12, 1996	As outlined in the Report of the Chief of Engineers, dated July 18, 1994, the WRDA of 1996 authorizes construction, including nonstructural measures, at a total cost of \$45,414,000 (\$33,030,000 Federal; \$12,384,000 non-Federal)	P.L. 104-303, 104th Congress
May 17, 1950	CAPE GIRARDEAU FLOOD PROTECTION, MO (See Section 8 of Text) The project for flood protection at Cape Girardeau, Missouri, substantially in accordance with recommendations of the Chief of Engineers in House Document Numbered 204, Eighty-first Congress, first session.	P.L. 516-81st Congress, Chapter 188-2nd Session, H.R. 5472
December 1, 2003	Plan, design, and initiate reconstruction of the Cape Girardeau MO project, originally authorized by the FCA of 1950, at an estimated total cost of \$9,000,000, with cost-sharing on the same basis as cost-sharing of the project as originally authorized, if the Secretary determines that the reconstruction is technically sound and environmentally acceptable; Provided further, That the planned reconstruction shall be based on the most cost-effective Engineering solution and shall require no further economic justification.	P.L. 108-137 Energy and Water Development Approp. Act, 2004
December 11, 2000	CHESTERFIELD, MO (See Section 9 of Text) Authorized for construction, subject to completion of a favorable Chief of Engineers Report by December 31, 2000. (Report was signed December 29, 2000.)	P.L. 106-541 106th Congress
November 8, 2007	Credit toward the non-Federal share of the cost of the project the cost of the planning, design, and construction work carried out by the non-Federal interest for the project before the date of the partnership agreement for the project.	P.L. 110-114 Section 3107

TABLE 14-B
(Continued) **AUTHORIZING LEGISLATION**

Acts	Work Authorized	Documents
	EAST ST. LOUIS AND VICINITY, IL (See Sections 10 and 11 of Text)	
June 22, 1936	Raise and enlarge existing levee.	Special report on record in OCE.
October 27, 1965	Construct pumping plant and other modifications to reduce interior flooding.	H. Doc 329, 88th Cong., 2d sess.
October 22, 1976	Construct Blue Waters Ditch as independent section.	P.L. 94-587, 94th Cong.
December 22, 1987	Repair and rehabilitate pump stations and appurtenant works, channels, and bridges.	P.L. 100-202, 100th Cong.
November 8, 2007	Authorized for environmental restoration and recreation (Report of the Chief of Engineers dated December 22, 2004).	P.L. 110-114 Section 1001(18)
	ELDRED AND SPANKEY DRAINAGE AND LEVEE DISTRICT, IL	
October 23, 1962	Raise and enlarge existing levee and other modifications.	H. Doc. 472, 87th Cong., 2d sess.
	HARTWELL DRAINAGE AND LEVEE DISTRICT, IL	
October 23, 1962	Raise and enlarge existing levee and other modifications.	H. Doc. 472, 87th Cong., 2d sess.
	HILLVIEW DRAINAGE AND LEVEE DISTRICT, IL	
October 23, 1962	Raise and enlarge existing levee and other modifications.	H. Doc. 472, 87th Cong., 2d sess.
	KASKASKIA ISLAND DRAINAGE AND LEVEE DISTRICT, IL	
October 23, 1962	Raise and enlarge existing levee.	H. Doc. 519, 87th Cong., 2d sess.
	MAUVAISE TERRE DRAINAGE AND LEVEE DISTRICT, IL	
July 14, 1984	Raise and enlarge existing levee and other modifications.	Energy and Water Development Approp. Act of 1985, 98th Cong., 2nd sess.

TABLE 14-B
(Continued) **AUTHORIZING LEGISLATION**

Acts	Work Authorized	Documents
June 28, 1938	MERAMEC RIVER BASIN, MO (See Section 13 of Text) Construct reservoirs and local protection project.	Flood Control Committee, Doc. 1, 75th Cong., 1st sess.
November 7, 1966	Construct Pine Ford, Irondale, and I-38 dams and 19 Angler-use sites.	H. Doc. 525, 89th Cong., 2d sess.
December 29, 1981	Undertake structural and nonstructural flood control measures.	P.L. 97-128, 97th Cong. Amended Section 1128, P.L. 99-662, 99th Cong.
August 17, 1999	Modified to authorize construction at a maximum Federal expenditure of \$35,000,000	P.L. 106-53, 106th Cong., 1st sess.
December 1, 2003	Modified to authorize construction at a maximum Federal expenditure of \$50,000,000.	P.L. 108-137 108th Cong., 1st sess.
October 23, 1962	MCGEE CREEK DRAINAGE AND LEVEE DISTRICT, IL Reconstruct existing levee and construct pumping plant to reduce flooding.	H. Doc. 472, 87th Cong., 2d sess.
October 23, 1962	MEREDOSIA LAKE AND WILLOW CREEK DRAINAGE AND LEVEE DISTRICT, IL Raise and enlarge existing levee and other modifications.	H. Doc. 472, 87th Cong., 2d sess.
October 23, 1962	NUTWOOD DRAINAGE AND LEVEE DISTRICT, IL (See Section 14 of Text) Raise and enlarge existing levee and other modifications.	H. Doc. 472, 87th Cong., 2d sess.
October 23, 1962	REND LAKE, BIG MUDDY RIVER, IL Construct dam at Benton, IL, and subimpoundment dams on upper arms of reservoir.	H. Doc 541, 87th Cong., 2d sess.
November 28, 1990	RIVER DES PERES, MO (See Section 15 of Text) As outlined in the report of the Chief Engineers dated May 23, 1989, the WRDA of 1990 authorizes flood control.	P.L. 101-640 101st Cong.
November 8, 2007	Credit toward the non-Federal share of the cost of the project the cost of work carried out by the non-Federal interest for the project before the date of the partnership agreement for the project.	P.L. 110-114 Section 3108

ST. LOUIS, MO, DISTRICT

TABLE 14-B
(Continued) **AUTHORIZING LEGISLATION**

Acts	Work Authorized	Documents
	ST. LOUIS FLOOD PROTECTION, MO (See Section 16 of Text)	
August 9, 1955	Construct flood control improvements.	P.L. 84-256 84th Cong.
	STE. GENEVIEVE, MO (See Section 17 of Text)	
November 17, 1986	As outlined in the Report of the Board of Engineers for Rivers and Harbors dated April 16, 1985, the WRDA of 1986 authorizes construction of a levee and a pumping plant to protect the city from Mississippi River and Gabouri Creek floods.	P.L. 99-662, 99th Cong., 2d sess.
	WOOD RIVER DRAINAGE AND LEVEE DISTRICT, IL (See Section 18 of Text)	
June 28, 1938	Construct reservoirs and local protection projects.	Flood Control Committee Doc. 1, 75th Cong., 1st sess.
October 27, 1965	Authorized substantially as recommended by the Chief of Engineers.	H. Doc 150 88th Cong.
	WOOD RIVER LEVEE, IL (See Section 19 of Text)	
June 28, 1938	Construct reservoirs and local protection projects.	Flood Control Committee Doc. 1, 75th Cong., 1st sess.
November 8, 2007	Authorized reconstruction for flood damage reduction (Report of the Chief of Engineers dated July 18, 2006).	P.L. 110-114 Section 1001(20)
	MADISON AND ST. CLAIR COUNTIES, IL (See Section 22 of Text)	
October 31, 1992	Authorized assistance to non-Federal interests for carrying out water-related environmental infrastructure and resource protection and development projects.	P.L. 102-580 102d Cong.
December 21, 2000	Amended WRDA 1992 to include \$10,000,000 for water and wastewater assistance for Madison and St. Clair Counties.	P.L. 106-554 106th Cong.
	ST. LOUIS, MO (COMBINED SEWER OVERFLOWS) (See Section 23 of Text)	
October 31, 1992	Authorized assistance to non-Federal interests for carrying out water-related environmental infrastructure and resource protection and development projects.	P.L. 102-580 102d Cong.
August 17, 1999	Amended WRDA 1992 to include \$15,000,000 for a project to eliminate or control combined sewer overflows in the City of St. Louis, Missouri.	P.L. 106-53 106th Cong.
November 8, 2007	Amended WRDA 2007 to increase federal limit from \$15,000,000 To \$35,000,000.	P.L. 110-114 Section 5100

TABLE 14-B

1. Work complete, now performed under P.L. 99.

2. Excludes \$6,800,700 for previous project.

3. Includes \$5,235,927 for previous project.

4. Excludes \$550,000 Area Development Administration Funds allotted to the State of Illinois for increased construction costs of Interstate Highway 57 to meet project requirements, and excludes \$449,093 Area Redevelopment Administration Funds allotted to the Corps.

5. Includes \$6,103,711 credit to State of Illinois for work in kind.

6. Authorized by Chief of Engineers (Sec. 205, 1948 Flood Control Act, as amended).

7. Funds are for work authorized by Flood Control Act of 1938.

8. Includes \$2,494,252 FY 2008 War Supplemental funds.

9. Includes \$899,986 FY 2008 War Supplemental funds.

10. Includes \$809,983 FY 2008 War Supplemental funds.

11. Includes ARRA funds of \$6,694,519 warranty and punchlist items at the M.W. Boudreaux Visitor Center.

12. ARRA funds of \$27,062,713 expended for completion of replacement and consolidation of 16 block comfort stations, completion of new pedestrian bridge, completion of riprap at Keyesport Levy, and modernization of water/sewer systems.

13. ARRA funds of \$12,244,335 expended for new administration building and visitor center, repair to recreation areas and other flood damaged facilities, repair main dam gallery spiral stairway, perform suppression of terrestrial invasive plant species on 1,000 acres of project lands, and perform backlog maintenance in recreational and environmental areas.

14. Includes ARRA funds of \$26,381,108 expended for repairs to flood damaged shoreline revetment and breakwaters, purchased and constructed small craft barriers, developed sewer system plans and specifications, fee booths removed and replaced, spillway bridge repaired and repainted, railroad bridge removed and sedimentation survey performed.

15. Lake Shelbyville Dam Safety, see Section 12 of text; original construction funds expended \$44,000,000.

ROCK ISLAND, IL, DISTRICT

This district comprises most of the northern half of Illinois, portions of southern Wisconsin, southern and southwestern Minnesota, eastern and central Iowa, and northeastern Missouri, embraced in drainage basin of Mississippi River and its eastern and western tributaries between mile 300 (above mouth of Ohio River) and 614, and of its eastern tributaries only, between

Hamburg Bay, at mile 261 and 300. This district also includes the Illinois Waterway above mile 80 with its tributaries and drainage basins. The section of the Mississippi River between river miles 300 and 614 is included in the report on Mississippi River between Missouri River and Minneapolis, MN.

Navigation

1. ILLINOIS AND MISSISSIPPI CANAL, IL

Location. This canal extends for 75 miles from the Illinois River near LaSalle, IL, to the Mississippi River at Rock Island, IL. A feeder canal, 29 miles in length, extends from the summit level of the canal to the Rock River at Rock Falls, IL.

Existing project. See pages 1306-1308 of Annual Report for 1962 for details regarding project. The canal was constructed in the period 1892-1918. The canal has not been operated for navigation since June 1951 in accordance with Corps policy to discontinue operation of waterways affording little or no benefit to navigation. The River and Harbor Act of 1958 authorized the appropriation of \$2,000,000 for the purpose of placing the canal in proper condition for public recreational use and to convey and transfer the canal to the State of Illinois as part of the State park system.

The repair and modification program was initiated in 1961, and a number of canal features have been repaired or modified. In connection with this program, fee title of 1,062 acres and recreational flowage easements over 309 acres of land in Rock River at Rock Falls, formerly under navigation flowage easement, have been acquired. The State of Illinois accepted title to the canal as of August 1, 1970. The River and Harbor Act of 1970 authorized the additional appropriation of \$6,528,000 to be expended for the repair, modification, and maintenance of bridges, title transfer, modification or rehabilitation of hydraulic structures, fencing, clearing auxiliary ditches, and for the repair and modification of other canal property appurtenances.

The repair and modification work was underway until a suit was filed by three Illinois counties and their Commissioners of Highway against the Federal Government and the State in 1974 over maintenance of highway bridges crossing the canal. After the lawsuit was filed, further rehabilitation work by the Federal Government on the canal was suspended.

On November 4, 1981, the Corps of Engineers deposited \$3,722,572 with the Clerk of the U.S. District Court in Chicago in full satisfaction of the Court's judgment. These funds were used by the counties to complete rehabilitation work as directed in the court order. Rehabilitation work by the Federal Government in coordination with the state was

resumed in 1984 with the remaining authorization expended in 1987.

The Water Resources Development Act (WRDA) of 1986 authorized an additional appropriation of \$8,472,000 to accomplish the work described in the 1970 River and Harbor Act.

The State of Illinois filed an additional lawsuit against the United States on July 6, 1987 in the U.S. Claims Court in the amount of \$8,472,572. In a preliminary decision on September 22, 1988, the court dismissed the claim for \$3,722,572. A settlement agreement between the State of Illinois and the United States was signed on November 14, 1991. The agreement provided that Illinois release all claims against the United States as stipulated in the claims court and that the United States provide \$4,750,000 to Illinois as reimbursement for previous repair work performed upon the canal bridges by Illinois. On December 16, 1991, the U.S. Claims Court entered a judgment for \$4,750,000 in favor of the State of Illinois. This judgment was paid in FY 1992.

Once funds are received, principal work features to restore the canal to acceptable conditions consist of the repair or reconstruction of retaining walls, embankments, portions of the lock and dam structures, culverts, drainage ditches, and other related work features which the United States has maintained or has been obligated to maintain under previous agreements. These features are consistent with a Master Management Plan prepared by the Illinois Department of Conservation. NEPA documentation to assess remaining work items must be completed prior to initiation of construction.

Local cooperation. A revised Supplemental Agreement with all work items remaining was executed between the state of Illinois and the Federal Government in April 1996.

Operations during fiscal year. Operations and maintenance during fiscal year. There were no programmed dollars allotted for this project in FY 2010.

2. ILLINOIS WATERWAY, IL AND IN

Location. Illinois River (entirely within State of Illinois), formed by confluence of Kankakee and Des Plaines River, flows southwesterly and enters the Mississippi River at Grafton, IL, about 38 miles above St. Louis. Illinois Waterway is comprised of the Illinois River from its mouth to confluence of the

ROCK ISLAND, IL, DISTRICT

Kankakee and Des Plaines Rivers (273 miles), Des Plaines River to Lockport (18.1 miles) and Chicago Sanitary and Ship Canal and South Branch of Chicago River to Lake Street, Chicago (34.5 miles). Also from a point 12.4 miles above Lockport, IL, the waterway is comprised of the Calumet-Sag Channel and Little Calumet and Calumet Rivers to turning basin 5, near entrance to Lake Calumet (23.8 miles); and Grand Calumet River from junction to 141st Street, deep (lake) draft navigation (9 miles) and to Clark Street, Gary, IN (4.2 miles).

Previous projects. For details, see page 1945 of Annual Report for 1915 and page 1172 of Annual Report for 1932.

Existing project. See Table 23-K and page 1255 of Annual Report for 1963. Cost of new work was \$124,041,436 and includes \$445,000 for Recreation Facilities under Code 711. Calumet-Sag Modification, Part III, placed in the deferred-for-study category in March 1972, cost of \$33,000,000 (July 1971) Federal and \$20,700,000 (July 1971) non-Federal; is excluded from present cost estimate. Land acquired for the project consisted 909.407 acres in fee and 701.48 acres in easement. See Table 23-B for authorizing legislation.

(See Table 15-J through 15-N on existing locks and dams; lock and dam construction, foundations, cost; additional features entering into cost of project; existing project and total cost of existing project.)

Local cooperation. Complied with for completed modifications and Part I of Calumet-Sag Modification.

All pools above Alton Pool:

Maintenance: Hydraulic dredges, provided by the contractors Bayshore and SAF, performed channel dredging at various locations in Peoria and LaGrange Pools for a total of approximately 300,000 cubic yards of material removed. Mechanical dredging was performed in Marseilles, Starved Rock, Peoria, and LaGrange Pools for a total of approximately 50,000 cubic yards of material being removed. Nonroutine maintenance contract repairs include high mast lighting installation, Peoria base yard repairs, hull repairs to MV *Hercules*, Starved Rock control stand and visitor center repairs, replace TJ O'Brien heating and cooling system, lock chamber dewatering bulkheads, Starved Rock steam line repair, and bulkhead recesses.

Operation and Care: Locks and dams were operated as required, and necessary repairs were made to those and appurtenant structures. Other studies, reports, and miscellaneous engineering work were also accomplished. In June 2008, extraordinary flooding occurred at various locations along the Illinois Waterway, and flood recovery work continued, funded by FY 2008 War Supplemental with costs of \$2,909,885 and by FY 2009 Continuing Resolution Authority (CRA) Supplemental with costs of \$534,903; American Recovery and Reinvestment Act (ARRA) funds were received to install high mast lighting and procure work barges for the lock and dam sites at a cost of \$1,714,159. Federal Energy Regulatory Commission (FERC) coordination costs were \$15,600. Routine operation and maintenance, dredging, and nonroutine maintenance contract costs to Rock Island District were \$31,112,756.

Rehabilitation Project: The Lockport Upper Pool on the Illinois Waterway just southwest of Chicago is a perched pool (38 feet above surrounding area). Both left and right embankments require significant rehabilitation to ensure continued structural integrity, retention of navigation pool, and continued safe use of the Stage 2 controlling works that regulate water levels in the canal. The Stage 3 canal wall and the Stage 2 controlling works rehabilitation projects are under construction. In FY 2011, this program expended \$19,840,915 ARRA and \$7,364,968 Regular Construction funding preparing plans and specifications for Stage 2 controlling works and completing 40 percent of the construction for Stage 3 canal wall.

Alton Pool Operation: Costs for the year were \$224,928 for management of natural resources (\$94,159 FY 2009 Supplemental funds and \$8,867 ARRA), \$131,938 for water control management, \$78,164 for studies and surveys, \$14,985 for environmental compliance management, and \$38,971 for total FY 2011 operation costs expended \$488,985.

Alton Pool Maintenance: Maintenance costs for the year included \$3,073 for maintenance of natural resources, \$99,772 for maintenance for navigation functions, \$10,000 for water control management, and \$2,010,527 for dredging. Total FY 2011 maintenance costs expended \$2,123,372.

Total operation and maintenance costs for all pools above Alton Pool were \$31,983,518. Alton Pool operation and maintenance costs were \$2,612,357. Total costs incurred were \$32,441,343.

3. MISSISSIPPI RIVER BETWEEN MISSOURI RIVER AND MINNEAPOLIS, MN

For report on this improvement, see chapter on “Mississippi River between Missouri River and Minneapolis, MN.”

4. UPPER MISSISSIPPI RIVER – ILLINOIS WATERWAY SYSTEM, IL, IA, MN, MO, AND WI

Location. The program area comprises the Upper Mississippi River System, as defined by Congress in the WRDA of 1986, which includes the Upper Mississippi River from Minneapolis, Minnesota, to Cairo, Illinois; the Illinois Waterway from Chicago to Grafton, Illinois; and navigable portions of the Minnesota, St. Croix, Black and Kaskaskia Rivers. This multi-use resource supports an extensive navigation system (made up of 1200 miles of 9-foot channel and 37 lock and dam sites), a diverse ecosystem (2.7 million acres of habitat supporting hundreds of fish and wildlife species), flood plain agriculture, recreation and tourism.

Existing project. The Upper Mississippi River-Illinois Waterway System Navigation Study was completed in Sept 2004 after more than 14 years of intensive study and evaluation of the navigation improvement and ecological restoration needs for the UMR-IWW system for the years 2000-2050. The system is a vital part of our national economy and a valuable ecological resource. The 1,200 miles of 9-foot channel created by the 37 lock and dam sites allow waterway traffic to move from one pool to another providing an integral regional, national, and international transportation network. The system is significant for certain key exports and the Nation’s balance of trade. The UMRS ecosystem consists of 2.7 million acres of bottom-land forest, islands, backwaters, side channels and wetlands—all of which support more than 300 species of birds, 57 species of mammals, 45 species of amphibians and reptiles, 150 species of fish, and nearly 50 species of mussels. More than 40 percent of North America’s migratory waterfowl and shorebirds depend on the food resources and other life requisites (shelter, nesting habitats, etc.) that the system provides. It also provides boating, camping, hunting, trapping, and other recreational opportunities. The study final recommendation included a program of incremental implementation and comprehensive adaptive management to achieve the dual purposes of

ensuring a sustainable natural ecosystem and navigation system. The WRDA of 2007, Title VIII, authorized the project for construction as recommended in the UMR-IWWS: Report of the Chief of Engineers, December 15, 2004.

Local cooperation. None required.

Operations during fiscal year. FY 2011 program implementation has proceeded since 2005 under congressional add General Investigations funding for preconstruction engineering and design (PED). To date, a total of \$62,000,000 has been effectively executed to prepare some 20 initial navigation and ecosystem restoration projects for near-term construction and advance planning/design for Locks 22, 25, LaGrange, and many ecosystem restoration projects. With incremental funding received in FY 2011 of less than \$1,000,000, all work was suspended between July and September. Effort was made to reach logical stopping points. Program is set for a modest (\$15,000,000 to \$20,000,000) or accelerated (\$60,000,000 to \$83,000,000) construction implementation of navigation and ecosystem projects that have been planned and designed since 2005.

5. OTHER AUTHORIZED NAVIGATION PROJECTS

See Table 15-C.

Ecosystem Restoration

6. ILLINOIS RIVER BASIN RESTORATION

Location: The project area is the Illinois River Basin defined as the Illinois River, Illinois, its backwaters, its side channels, and all tributaries, including their watersheds, draining into the Illinois River.

Existing project: The purpose of the Illinois River Basin Restoration project is to restore and protect the Illinois River Basin through the development of a restoration program, long-term resource monitoring program, computerized inventory and analysis system, and innovative dredging technology and beneficial use of sediments. These efforts are part of the State’s Illinois Rivers 2020 initiative, a proposed 20-year, \$2,500,000,000, Federal-state effort to restore and enhance the Illinois River Basin. The project involves four districts (Rock Island, St. Louis, Chicago and Detroit).

A major initial focus is work on Critical Restoration Projects. Restoration of the Illinois River Basin requires the identification and implementation of projects, within the watershed and along the course of the river that repair past and ongoing ecological damage so that a more highly functioning, self-regulating ecosystem can be sustained within the existing basin context. Critical Restoration Projects will produce immediate habitat and sediment reduction benefits; will help evaluate the effectiveness of various restoration methods prior to application system wide; and make best use of the current strong local and State interest in ecosystem restoration within the basin. The Corps of Engineers will implement these Critical Restoration Projects in collaboration with the non-Federal sponsor and other Federal and local agencies. Currently sixteen Critical Restoration Projects are in various states of completion. These projects include: Peoria Riverfront Upper Island, Pekin Lake Northern Unit, Pekin Lake Southern Unit, Waubonsie Creek, Blackberry Creek, Kankakee River, Iroquois River, McKee Creek, Starved Rock Pool, Alton Pool, LaGrange Pool, Senachwine Creek, Tenmile Creek, Crow Creek West, Fox River-Batavia Dam, and Yellow River.

Critical Restoration Projects: Projects have been initiated at 16 locations in the river basin.

Operations during fiscal year: Progress was made on six critical restoration projects focused on ecosystem restoration and sustainability in the Illinois River Basin. Construction of the Peoria Upper Island project advanced and construction of the Waubonsie Creek Fish Passage project was completed using ARRA funds. Planning proceeded on the Blackberry Creek, Alton Pool Side Channel, Starved Rock Pool Backwaters, and Pekin Lake South Projects. Expenditures during FY 2011 were \$2,560,142--this amount includes \$1,125,497 of ARRA.

7. UPPER MISSISSIPPI RIVER RESTORATION (UMRR)

Location. The project is authorized for those river reaches having commercial navigation channels on the Upper Mississippi River, Illinois River, Minnesota River, St. Croix River, and Kaskaskia River in the States of Illinois, Iowa, Minnesota, Missouri, and Wisconsin.

Existing project. The purpose of the UMRR as stated in the authorizing legislation is to ensure the coordinated development and enhancement of the Upper Mississippi River system, recognizing its several purposes. The program includes habitat rehabilitation and enhancement projects (HREP) and long-term resource monitoring (LTRMP). HREPs improve habitat through site-specific modifications of the natural landscape, and LTRMP monitors certain natural resource changes and conducts research as a means for more informed management of the UMRS. Also authorized was a study of the economic impacts of completed recreation, completed navigation traffic monitoring, and recreation projects (currently unfunded). The program was initiated in 1986 utilizing funds provided by P.L. 99-88, FY 1985 Supplemental Appropriation Act. P.L. 99-662, WRDA of 1986, further defined the program and provided for a 10-year implementation period and was extended to 15 years by P.L. 101-640, WRDA of 1990. The WRDA of 1999, P.L. 106-53, amended the previous authority by deleting recreation as a project purpose; removing the sunset provision; increasing annual appropriation limits available to the program; authorizing an independent technical advisory committee; and requiring submission of a report to Congress on a 6-year cycle that evaluates programs, accomplishments, assesses systemic habitat needs, and identifies any needed changes to the Program authorization. The three reports to Congress detailing the program's activities since the program's inception were completed and were submitted to Congress in 1998, 2004, and 2010. A Habitat Needs Assessment was submitted to Congress in September 2000. This assessment addressed the ecosystem needs along the UMRR's reaches of the Upper Mississippi River.

Local cooperation: Local cooperation agreements are obtained for habitat projects for such projects not located on lands managed as a national wildlife refuge, within the meaning of Section 906(e) of the 1986 WRDA. WRDA of 1999 establishes a cost sharing percentage of 35 percent for such projects.

Operations during fiscal year. Obligations during the year totaled \$16,251,873 (Rock Island District only). The majority of funds were expended on two primary program elements: habitat rehabilitation and enhancement projects and

long-term resource monitoring. FY 2011 funds were used for construction on 10 habitat projects and for design activities on 19 habitat projects, as well as applied research and long-term resource monitoring. Construction has essentially been completed on a total of 54 projects (with multiple phases) benefiting 100,000 acres of habitat since the program was initiated. Data collection, analysis of data, and production of technical and special reports were continued by contract with the Upper Midwest Environmental Sciences Center in La Crosse, WI.

Flood Control

8. CORALVILLE LAKE, IA

Location. Coralville Lake is formed by the Coralville Dam on the Iowa River, several miles upstream from Iowa City, Johnson County, IA, about 83 miles above the confluence of the Iowa River with the Mississippi River.

Existing project. See page 28-4, Annual Report for 1981, for project details. Construction began in July 1949 and the project has been in operation since February 1958. About 25,035.76 acres in fee of land were acquired and 3,673.113 acres in flowage easements. The project was modified to provide for construction of a highway bridge crossing the lake at the Mehaffey site, which was begun in June 1964 and completed in October 1966. See Table 15-B for authorizing legislation.

Operations during fiscal year. Total FY 2011 operation and maintenance costs at Coralville Lake were \$7,795,025. In June 2008, extraordinary flooding occurred in the State of Iowa, and flood recovery work continued in FY 2011, funded by FY 2008 War Supplemental and FY 2009 CRA Supplemental. Routine operation and maintenance costs for FY 2011 were \$4,119,260. FY 2008 War Supplemental costs were \$4,876; FY 2009 CRA Supplemental costs were \$3,670,888. The flood-related work included repairs to the main dam, spillway, roads, campgrounds, and Amana levee.

9. DAVENPORT, IA

Location: The flood risk management project is located at Davenport, IA, in Scott County, on the right descending bank of the Mississippi River and will protect a local water treatment facility from a 0.5 percent chance flood event.

Existing Project: Plans were developed in the 1970s and the early 1980s for structural flood control for the city. The project was deferred at the request of the city. After experiencing three significant flood events over an 8-year period (1993, 1997, and 2001), the City of Davenport officials requested that the project be restudied to evaluate current alternatives and benefits for flood damage reduction. A Limited Reevaluation Report (LRR) was developed and approved in June 2002 and determined that flood protection for Reach 1 was economically justified. An Engineering Documentation Report (EDR) was developed and approved in January 2006. The project consists of approximately 2,200 feet of floodwall, approximately 200 feet of earthen levee, stormwater sewer gateways, two railroad closure gates, a road closure gate, and an access road. The Project Partnership Agreement (PPA) was executed with the City of Davenport on November 17, 2008.

Operations during fiscal year. Construction funding was initially appropriated in FY 2008. Appropriations for FY 2011 were \$409,999. Expenditures for FY 2011 totaled \$198,184. In 2011, the city acquired the necessary real estate interests for the project, a construction contract for Stage 1 of the project was awarded, and construction of Stage 1 began. Stage 1 involves the earthen embankment section, road and railroad closure gates, gateways, and two reaches of floodwall. An additional \$2,300,000 in Federal funding is necessary to award the Stage 2 contract and complete the project.

10. DES MOINES RECREATIONAL RIVER AND GREENBELT, IA

Location. The Greenbelt Project area is located along the Des Moines, Boone, and Raccoon Rivers in central Iowa. Fort Dodge, IA, marks the upstream limit of the project area; the downstream terminus of the project area is Harvey, IA, a total distance of 170 river miles. The boundary includes portions of nine counties and many other communities, along with a number of Federal, state, county, and local parks. Two major Corps of Engineers reservoirs, Saylorville Lake and Lake Red Rock, are located within the Greenbelt Project area. The boundary encompasses an area of roughly 410,000 acres.

Existing project. The Des Moines Recreational River and Greenbelt Project was authorized on August 15, 1985, by P.L. 99-88, the 1985 Supplemental Appropriations Act. Legislation pertaining to the Greenbelt project has been contained in

numerous other pieces of legislation culminating most recently in the 2010 Energy and Water Development Appropriations Act, P.L. 111-85.

As authorized by P.L. 99-88, the project will include: (1) the construction, operation, and maintenance of recreational facilities and streambank stabilization structures; (2) maintenance of all structures constructed before the date of authorization of this project; (3) tree plantings, trails, vegetation, and wildlife protection and development for recreational purposes; and (4) the prohibition or limitation by the Secretary of the killing, wounding, or capturing at any time of any wild bird or animal in such areas as may be directed by the Secretary.

The authorization further requires that an Advisory Committee be established for consultation with the Department of the Army consisting of 47 members. The composition of the Advisory Committee is as follows: three Corps of Engineers appointees, one person from each incorporated municipality, two from each of the nine counties, and five from the State of Iowa. See Table 15-B for authorizing legislation. Twelve Federally funded projects were completed under the Greenbelt authority prior to FY 2002, and the total number of projects completed to date are 17. Congress appropriated funds from FY 2003 through FY 2010 to develop priority Greenbelt projects. The Greenbelt Advisory Committee has recommended development of the following priority projects: Fort Dodge Riverfront, Des Moines Riverwalk, Marion County Cordova Center at Lake Red Rock and Red Rock Multipurpose Trail Segment 4B.

Local cooperation. Cost-sharing agreements were executed for all Greenbelt projects. Letters of Assurance have been received for the cost-shared projects recommended for inclusion in the Greenbelt by the 2008 Annual Program Management Report. The Greenbelt authority is currently operating under a Design Agreement (DA) with the City of Fort Dodge and a PPA with the City of Des Moines.

Operations during fiscal year. Activities during FY 2011 included approval of the EDR, submission of the PPA package and Stage I design for the Fort Dodge Riverfront project; construction of Stage I of the Des Moines Riverwalk project (65 percent complete – includes construction of trails, sidewalks, a kiosk building, and the incorporation of a floodwall system with closure structures along

the right descending bank of the Des Moines River in downtown Des Moines) and design for Stage II; and management of the Greenbelt program. FY 2011 expenditures totaled \$5,157,644.

11. RED ROCK DAM AND LAKE RED ROCK, IA

Location. The site of this project is on the Des Moines River, chiefly in Marion County, but extending into Jasper, Warren, and Polk Counties. The dam is 142.9 miles above the mouth of the Des Moines River, which empties into the Mississippi River at mile 361.4 above the mouth of the Ohio River. The City of Des Moines lies northwesterly from the site, about 60 miles upstream.

Existing project. See page 28-6, Annual Report for 1981 for description of the project. Construction began in May 1960, and the dam was placed in beneficial use for storage of flood water in January 1969. Land acquired for the project consisted of 50,207.860 acres in fee and 26,353.645 acres in flowage easement. Landowner complaints, that lake operation have flooded their lands more frequently than what they were told to expect when flowage easements were initially acquired, led Congress to modify the project authorization. Language in P.L. 99-190 authorizes acquisition from willing sellers fee simple title in real property, which is subject to periodic flooding in connection with the operation of the project. Potentially there are approximately 1,000 tracts consisting of about 30,000 acres. Estimated Federal cost is \$43,500,000. See Table 15-B for authorizing legislation.

Local cooperation. None required.

Operations during fiscal year. Total operation and maintenance costs during FY 2011 were \$16,786,042. In June 2008, extraordinary flooding occurred in the State of Iowa, and flood recovery work continued in FY 2011, funded by the FY 2008 War Supplemental and the FY 2009 CRA Supplemental. Routine operation and maintenance costs for FY 2011 were \$5,358,902; FY 2008 War Supplemental costs were \$221,799; and FY 2009 CRA Supplemental costs were \$11,059,483. The flood-related work included repairs to the levee, main dam, roads, sewage utilities, and shoreline and recreation area recovery. The FERC coordination costs were \$15,225. The ARRA funds were received and used for procurement of equipment. Costs were \$130,633.

12. SAYLORVILLE LAKE, IA

Location. The project site is chiefly in Polk County, IA, but portions extend into Dallas and Boone Counties. The dam is about 213.7 miles above the mouth of the Des Moines River and about 5 miles upstream from the City of Des Moines, IA.

Existing project. The dam is an earth embankment 6,750 feet long at crest with a height of 120 feet. Outlet works are a single circular concrete conduit, 22 feet in diameter, located at the toe of the west bluff. Control structure is at upstream end of conduit and uses three gates. A stilling basin is provided to dissipate energy of discharge from outlet conduit. Spillway is in the west bluff, weir 430 feet long. Water flows over the spillway which discharges into a paved chute and thence into an excavated earth channel to the Des Moines River. Top of spillway is about 31 feet below top of earth embankment section, and flow over weir is uncontrolled when water in reservoir reaches its crest. Watershed area above dam site is 5,823 square miles. With pool at spillway crest elevation, lake area is 16,700 acres and contains about 676,000 acre-feet of water at that height (602,000 for flood control and 74,000 for a conservation pool to maintain minimum flows at downstream points). Lake supplements capacity of downstream Lake Red Rock at river mile 142.9. The two lakes provide a high degree of flood protection to the lower Des Moines River Valley. Reach along the Mississippi River downstream from the mouth of the Des Moines River are also benefited.

A project modification plan to minimize the adverse environmental effects at Ledges State Park, located upstream from the dam, was authorized in 1976. The project modification included relocation of affected park facilities, acquisition of additional park land, and the development of a floodway corridor, with recreational facilities, from the dam downstream to Sixth Avenue in Des Moines. Improvements to Highway 415, the main access road to existing facilities on the east side of the reservoir, were added to the project by Congress in 1984. Segments A and B of Highway 415 have been completed. Segment C of Highway 415 was completed in 1994.

Construction began in June 1965, and the dam was placed in operation for the storage of flood water in April 1977. Remedial work in Big Creek Valley, consisting of diversion dam and channel and a barrier dam, for the protection of the Town of Polk City was completed in December 1974. The land acquisition program involved 25,529.397 acres in fee and

1,498.444 acres in flowage easements. The estimated project cost is \$116,470,000 including \$2,820,000 in non-Federal costs from the State of Iowa and the City of Des Moines, for recreational development. See Table 15-B for authorizing legislation.

Local cooperation. Fully complied with.

Operations during fiscal year. Total operation and maintenance costs during FY 2011 were \$18,725,128. In June 2008, extraordinary flooding occurred in the State of Iowa, and flood recovery work continued in FY 2011, funded by FY 2008 War Supplemental and FY 2009 CRA Supplemental. Routine operation and maintenance costs for FY 2010 were \$4,763,309; FY 2008 War Supplemental costs were \$3,205,470; and FY 2009 CRA Supplemental costs were \$7,950,533. FY 2010 Supplemental funds were received to begin work on Crest Gate Replacement and a modification to the Spillway Gorge repair contract, and costs were \$1,593,543. Flood-related work included repairs to the main dam, control tower, roads, barrier dam pump station, diversion dam, and campgrounds. The ARRA funds were received to perform boundary maintenance, repair portions of the Neal Smith Trail, and repair campgrounds, and costs were \$1,212,273.

13. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Federal flood control regulations (part 208 of title 33, Code of Federal Regulations) provide that the structures and facilities constructed by the United States for local flood protection shall be continuously maintained in such a manner and operated at such times and for such periods as may be necessary to obtain the maximum benefits. Costs during the period for inspections of projects turned over to local interests to ascertain compliance with Federal requirements were \$609,611.49. (See Table 15-H for list of completed flood control projects inspected.)

14. OTHER AUTHORIZED FLOOD CONTROL PROJECTS

See Table 15-E.

15. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION – CONTINUING AUTHORITIES PROGRAM

Emergency Bank Protection (Section 14 of the 1946 Flood Control Act, P.L. 526.) See Table 15-I.

Flood Control Activities (Section 205, P.L. 84-685.) See Table 15-I.

1. Illinois Waterway, IL and IN, see Table 15-N for breakdown of costs.

2. Illinois River Basin Restoration, IL, includes \$1,106,264 ARRA appropriations and \$739,473 ARRA costs.

3. Coralville Lake, IA, Maintenance includes \$986,300 ARRA appropriations and \$813,684 ARRA costs.

4. Red Rock Dam and Lake, IA, includes \$4,767,244 ARRA appropriations and \$459,879 ARRA costs.

5. Saylorville Lake, IA, includes \$819,594 ARRA appropriations and \$2,102,291 ARRA costs.

TABLE 15-B AUTHORIZING LEGISLATION

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
2	January 21, 1927	ILLINOIS WATERWAY, IL AND IN Channel 9 feet deep and 200 feet wide from mouth of Illinois River to Utica, 231 miles, modification of 2 U.S. locks and dams, removal of 2 State dams. (Act authorized appropriation of not to exceed \$3,500,000 for carrying on work.)	Rivers and Harbors Committee Doc. 69th Cong., 1st sess., and S. Doc. 130, 69th Cong., 1st sess.
	July 3, 1930	Channel 9 feet deep from Utica, IL, to heads of present Federal projects on Chicago and Calumet Rivers 94.6 miles to Lake Street, and 96.3 miles to turning basin 5, respectively, to be secured by means of completed dams, locks, lateral canals, and dredging begun by State of Illinois in general accordance with present plans of State for that work. Act adopting project authorized appropriation of not to exceed \$7,500,000 for carrying on work.	S. Doc. 126, 71st Cong., 2nd sess.
	June 26, 1934 ¹	Operation and care of locks and dams provided for with funds from War Department appropriation for rivers and harbors.	
	August 30, 1935	Construct modern locks and dams at LaGrange and Peoria and a channel 9 feet deep and 300 feet wide below Lockport, exact location and details of design of all structures to be left to discretion of Chief of Engineers, and for time being, that no change be made in water authorized for navigation of Illinois River by act of July 3, 1930.	H. Doc. 184, 73rd Cong., 2nd sess. ²
	August 30, 1935 ³	Also provides for 3 passing places along Sag Channel and authorized channel in Calumet-Sag route to turning basin 5, and dredging at entrance of Lake Calumet.	H. Doc. 180, 73rd Cong., 2nd sess.
	June 14, 1937	Realign portion of Calumet River and abandonment of bypassed section of Calumet River.	Rivers and Harbors Committee Doc. 19, 75th Cong., 1st sess.
	June 20, 1938	Modifies local cooperation requirements in 1935 act.	
	October 23, 1943	Pay damages to levee and drainage districts due to seepage and other factors, not to exceed \$503,500.	H. Doc. 711, 77th Cong., 2nd sess.
	March 2, 1945	Enlarge Calumet-Sag Channel to 160 feet wide and a usable depth of 9 feet. Dredge a barge channel 160 feet wide with a usable depth of 9 feet in Grand Calumet and Little Calumet River Branch of Indiana Harbor Canal to deep (lake) draft through 141st St., East Chicago, IN. Construct in Little Calumet River a lock of suitable dimensions for large navigation. Rebuild or otherwise alter at Federal expense all obstructive railroad bridges across Calumet-Sag Channel, Little Calumet River, Calumet River, Grand Calumet River, and Indiana Harbor Canal, so as to provide suitable clearance, except that no Federal funds shall be expended for removal or alteration of Illinois Central RR bridge at mile 11.20 of Little Calumet River.	H. Doc. 145, 76th Cong., 1st sess.

AUTHORIZING LEGISLATION

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
	July 24, 1946	Substitute following work for that authorized by act of March 2, 1945; replace emergency dam in Chicago Sanitary and Ship Canal; enlargement of that canal thence to Sag Junction and of Calumet-Sag Channel to afford channels 225 feet wide and usable depth of 9 feet; construct along general route depth of 9 feet to 225 feet wide between Little Calumet River and junction with Indiana Harbor Canal and 160 feet wide thence to Clark St., Gary, IN, with a turning basin at Clark St., enlarge Indiana Harbor Canal to 225 feet wide and usable depth of 9 feet between Grand Calumet River and vicinity of 141st St., inclusive; remove Blue Island lock and construct a lock and control works in Calumet River near its head, and similar structures in proposed Grand Calumet Channel west of Indiana Harbor Canal; alter or eliminate railroad bridges across three channels lakeward of Chicago Sanitary and Ship Canal, or construct new railroad bridges to provide suitable clearance.	H. Doc. 677, 79th Cong., 2nd sess.
	July 24, 1946	Muscooten Bay, a small-boat harbor in vicinity of Peoria, IL, by construction of a basin 510 by 250 feet, dredged to 7 feet deep.	H. Doc. 698, 79th Cong., 2nd sess.
	July 17, 1953	\$48,933 to reimburse Nutwood Drainage and Levee District for additional pumping operation; supplementing \$58,750 authorized in October 1943 act.	H. Doc. 144, 81st Cong., 1st sess.
	July 3, 1958	Federal participation in alteration of highway bridges, Calumet-Sag Modification, Part I, which constitute unreasonable obstructions to navigation, in accordance with P.L. 647, 76th Cong., as amended.	H. Doc. 45, 85th Cong., 1st sess. ⁴
	August 18, 1968	Federal participation in alteration of highway bridges, Calumet-Sag Modification, Part II, which constitute unreasonable obstructions to navigation, in accordance with the P.L. 647, 76th Cong., as amended.	Specified in Act. Also H. Doc. 45, 85th Cong., 1st sess.
	November 17, 1986	Illinois River at Peoria, IL modification of navigation project to include an adjacent downstream water area.	Sec. 857, H.R.6, Water Resources Development Act of 1986.
	October 5, 1992	The project for inland navigation, Illinois River, Illinois, authorized by the Rivers and Harbors Act of 1935 (49 Stat. 1035), is modified to direct the Secretary to acquire dredge material disposal areas for such project, at a total Federal cost of not to exceed \$70,000,000.	Sec. 102, Water Resources Development Act of 1992.

AUTHORIZING LEGISLATION

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
7		UPPER MISSISSIPPI RIVER RESTORATION (UPPER MISSISSIPPI RIVER SYSTEM ENVIRONMENTAL MANAGEMENT PROGRAM), IL, IA, MN, MO, WI Provide for a 10-year environmental program to include habitat rehabilitation and enhancement; long-term resource monitoring with computerized inventory and analysis; recreational development; assessment of economic benefits from recreational activities; and navigation system traffic monitoring.	
	August 15, 1985 (P.L. 99-88)		H. Doc. 2577, 99 th Cong., 1 st sess.
	November 17, 1986	Approves 1982 Upper Mississippi River Master Plan, authorizes interstate agreements between Upper Mississippi River states, directs Secretary to implement GREAT II recommendations for disposal of dredged material and facilitate the productive use of dredge material, directs an interagency agreement with the Department of Interior for its participation in the plan, authorizes second lock at Lock and Dam No. 6.	Sec. 1103, H.R. 6, WRDA of 1986.
	November 28, 1990 (P.L. 101-640)	Extending authorization for EMP program an additional 5 years.	Sec. 405, WRDA of 1990.
	October 31, 1992 (P.L. 102-580)	Increase the HREP appropriation authority to a total of \$189,600,000. Sets limits on amounts which could be transferred between authorities. Operations and Maintenance costs were specified to be the responsibility of the State/Federal/ or local agency responsible for fish and wildlife management.	Sec. 102, WRDA of 1992.
	August 17, 1999 (P.L. 106-53)	Extended the program until perpetuity. Increase authorization limits and established a 20 percent transfer limit. Established an Advisory Committee for independent technical review that requires a Report to Congress NLT December 31, 2004, and every subsequent 6 years.	Sec. 509, WRDA of 1999.
	November 8, 2007 (P.L. 110-114)	Expanded the project purpose to include water quality issues.	Sec. 3177, WRDA of 2007
6		IL RIVER BASIN RESTORATION (519) Provide for a 4-year, \$100,000,000 IL River Basin Restoration Program to include habitat rehabilitation and enhancement; development of long-term resource monitoring with computerized inventory and analysis; complete a comprehensive plan, evaluate new technologies and innovative approaches, and evaluate and complete critical restoration projects.	
	October 2000 (P.L. 106-541)		Sec. 519, WRDA of 2000.

ST. PAUL, MN, DISTRICT

District comprises western Wisconsin, major portion of Minnesota, northern and eastern North Dakota, and small portions of northeastern South Dakota, and northern and northeastern Iowa embracing drainage basins of Mississippi River and tributaries from its source to mile 614 above mouth of Ohio River;

Red River of the North and tributaries; those streams north of Missouri River Basin in North Dakota; and U.S. waters of Lake of the Woods and its tributaries. That section of Mississippi River above mile 614 is included in the report on the Mississippi River between the Missouri River and Minneapolis, Minnesota.

Navigation

1. MISSISSIPPI RIVER BETWEEN MISSOURI RIVER AND MINNEAPOLIS, MN

For report on this improvement see chapter on Mississippi River between Missouri River and Minneapolis, Minnesota.

2. RESERVOIRS AT HEADWATERS OF MISSISSIPPI RIVER, MN

Location. Reservoirs are on the Mississippi River and several of its tributaries in Itasca, Beltrami, Hubbard, Aitkin, Cass and Crow Wing Counties, MN. (See Table 16-H on reservoirs.)

Previous projects. For details see page 1888 of Annual Report for 1915, and page 1098 of Annual Report for 1938.

Existing project. Provides for reconstruction from timber to concrete at Winnibigoshish, Leech Lake, Pokegama, Sandy Lake and Pine River Dams, and construction of a concrete dam at Gull Lake. Pokegama was built on bedrock and the others on pile foundations. A portion of Leech Lake Dam from piers 26 to 39 was replaced with an earth fill. Constructed three dikes at Winnibigoshish, four at Pokegama, two at Sandy Lake, and 16 at Pine River. Sandy Lake Dam includes a lock 160 feet long, 30 feet wide, with a maximum lift of 9.5 feet and a depth of 2.5 feet on lower sill at low water which was converted to use as a spillway. (See Table 16-B for authorizing legislation.) The Pine River Dam main embankment consists of a timber diaphragm core and earth fill. The Pine River Dam control structure is made of reinforced concrete with a steel sheet pile cutoff and is supported on a timber substructure. Pine River Dam was modified during the period 1999-2002 to pass 70 percent of the Probable Maximum Flood. During this period, the 13 gate openings were enlarged and outfitted with new gates; the wing walls were modified; the existing dam and embankment was raised via addition of a parapet wall and a concrete-capped sheet pile wall, to provide 5 feet of freeboard over the design flood; the foundation was grouted to stop seepage and fill voids; and the perimeter dikes were improved. Total Federal cost to the United States for new Dam Safety Assurance work at the Pine River Dam is \$11,058,967.

Local cooperation. Fully complied with.

Terminal facilities. None.

Operation and results during fiscal year. Reservoirs were operated as required, recreation facilities and equipment maintained, and surveys, repairs, reports and data collection cost \$5,684,578 Federal, including \$1,976,742 in costs associated with the American Recovery and Reinvestment Act (ARRA) and \$0 non-Federal.

Condition at end of fiscal year. Existing project was completed in 1937. Flowage rights were acquired on all lands affected by construction, maintenance, and operation of reservoirs. A total of 1,672.26 acres in fee are owned by the United States. The United States has easements, flowage rights, and other rights of use on another 296,334.44 acres. Structures are in fair condition. Recreation facilities for public use are being constructed intermittently at all reservoir areas. (See Table 16-H for capacities and costs by reservoir.) The Corps operated control structures at Lake Winnibigoshish, Leech Lake, and Pokegama are classified as significant hazard dams under the national Dam Safety Program and require substantial investments to reduce the associated risks. Construction of dam safety modifications is substantially complete at Lake Winnibigoshish Dam. Work on the remaining two sites is unscheduled due to funding constraints.

3. UPPER MISSISSIPPI RIVER RESTORATION (UMRR) (Formerly EMP)

Location. The program is authorized for the commercially navigable portions of the Upper Mississippi River System. In the St. Paul District, this includes the Mississippi, Minnesota, Black, and St. Croix Rivers in the States of Minnesota, Wisconsin and Iowa.

Existing project. The purpose of the UMRR as stated in the authorizing legislation is to ensure the coordinated development and enhancement of the Upper Mississippi River System, recognizing its several purposes. It is intended to protect and/or enhance the river resources and guide future river management. The primary emphasis of the program is on habitat rehabilitation and enhancement projects. The other primary component, long-term resource monitoring, provides the means for more informed management of the UMRR. The program was initiated by WRDA in 1986 and the 1999 WRDA extended the UMRR on a continuing basis with higher authorized funding levels. The execution of the program is closely coordinated with the Upper Mississippi River Basin Association, the U.S. Fish and Wildlife Service, the U.S. Geological Survey, and the three affected states (MN, WI, and IA) in the St. Paul District. See Rock Island District Tables 15-A and 15-B for total program costs and authorizing legislation.

Local cooperation. Local cooperation agreements are obtained for habitat project features not located on lands managed as a national wildlife refuge, as specified in Section 906(e) of the 1986 WRDA. Cost-sharing is 65 percent Federal and 35 percent non-Federal for those projects.

Operations and results during fiscal year. In the St. Paul District, costs during the year totaled \$2,578,514 Federal including \$2,094,269 in ARRA funding and \$0 non-Federal. Funds were expended on the planning, design, construction and monitoring of habitat projects. Construction was completed at Pool 8 Islands, Phase III, Stage 3A, WI. Planning and design was completed on Capoli Slough, and construction was initiated on Capoli Slough Stage 1, WI. Planning and design continued on Harpers Slough, IA, and L/D 3 Fish Passage, WI/MN. Eight additional projects are approved for planning.

Condition at end of fiscal year. In the St. Paul District, construction of 24 habitat projects has been completed. These are the Guttenberg Waterfowl Ponds (IA), Island 42 (MN), Lake Onalaska (WI), Blackhawk Park (WI), Pool 8 Islands Phases I and II (WI), Indian Slough (WI), Finger Lakes (MN), Lansing Big Lake (IA), Cold Springs (WI), Pool 9 Island (WI), Spring Lake Peninsula (WI), Bussey Lake (IA), Peterson Lake (MN), Polander Lake (MN), East Channel (WI/MN), Rice Lake (MN), Small Scale Drawdown (WI), Trempealeau (WI), Bank Stabilization (IA, WI, MN), Long Lake (WI), Ambrough Slough (WI), Spring Lake Islands (WI), Long Meadow Lake (MN), Pool Slough (IA). Most of the projects are operated and maintained by the U.S. Fish and Wildlife Service. However, projects not located on lands managed as a national wildlife refuge are maintained by the applicable state department of natural resources. Through FY 2011, funds expended by the St. Paul District have amounted to \$61,243,929 for planning, design, construction, and monitoring of habitat rehabilitation and enhancement projects; \$970,000 for long-term resource monitoring; and \$4,155,250 for program management. The annual authorized funding level for the overall program is about \$33,000,000.

4. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Navigation activities pursuant to Sec. 107, P.L. 87-645, as amended.

In FY 2011, \$7,154 was expended on Section 107.

Flood Control

5. BRECKENRIDGE, MN

Location. Breckenridge, Minnesota, is located in Wilkin County in western Minnesota, approximately 200 miles north and west of the Minneapolis-St. Paul metropolitan area. The city is bounded on the west by the Red River of the North and the Bois de Sioux River. The Ottertail River flows from the east, bisecting the city. The City of Wahpeton, ND, lies across the Red River from Breckenridge.

Existing project. A feasibility study recommended implementation of a flood damage reduction project consisting of a high-flow diversion channel located to the north of the Ottertail River and entering into the Red River and two separable permanent levee reaches that would protect all of Breckenridge. The project was authorized by WRDA of 2000.

Local cooperation. A Feasibility Cost-Sharing Agreement was executed between the Federal Government and the City of Breckenridge on June 29, 1999. This agreement required the city to provide 50 percent of the costs of performing the feasibility study. A Project Cooperation Agreement (PCA), negotiated between the Federal Government and the city was signed on August 15, 2002.

Operations and results during fiscal year. The first two phases of in-town levees (Stages 2B1/2B2) are substantially complete. Continued construction on the third phase (Stage 2B3) and awarded the fourth and final phase (Stage 2A) of levee construction. Total FY 2011 Federal costs were \$5,037,354 and \$228,710 non-Federal.

Condition at end of fiscal year. The project is divided into five stages: Stage 1 – the diversion channel, and Stages 2b1, 2b2, 2b3 and 2a – the levee work in the city. The Stage 1 construction contract was awarded in May 2003 and completed in June 2005; the diversion channel was used for the first time in summer 2005. During the 2006 and 2009 floods, the diversion channel prevented \$72,000,000 in damages. Sustained high flows and river stage in FY 2011 resulted in erosion and sedimentation of the diversion channel – a repair is planned. Construction of Stages 2B1 and 2B2 is substantially complete. Stages 2B3 and 2A are currently under construction and nearing completion.

6. CHIPPEWA RIVER AT MONTEVIDEO, MN

Location. Montevideo, MN, is located in western Minnesota in Chippewa County. The city is located at the confluence of the Chippewa and Minnesota Rivers.

Existing project. Overland flooding from the main stem Minnesota River and Chippewa River causes frequent flood-related problems for the city. A feasibility study evaluated structural and nonstructural alternatives for resolving the flood-related problems. The recommended plan includes construction of a new levee along Highway 7/29, an upgrade of an existing levee along the western edge of the city, a closure structure, and a new levee/road raise at Highway 212 along the southern edge of the city. The project is authorized by Section 205 of the 1948 Flood Control Act, as amended.

Local cooperation. See Annual Report for 2007 for requirements. A PCA was executed between the Federal Government and the City of Montevideo on August 17, 2007.

Operations and results during fiscal year. New Work: Total Federal costs were \$782,220 and \$222,700 non-Federal for Stage 2 construction and Stage 3 design work.

Condition at end of fiscal year. Stage 2 construction ongoing; Stage 3 design work ongoing.

7. ELK RIVER, SHERBURNE COUNTY, MN

Location. The project is located approximately 1 mile west of the City of Elk River, MN, approximately 25 miles northwest of Minneapolis, MN.

Existing project. The emergency streambank protection project involves protection of County Road 35 that is adjacent to the north bank of Elk River in Sherburne County approximately 0.5 mile east of the intersection with County State Aid Highway 15 and approximately 1 mile north of U.S. Highway 10. The project is authorized by Section 14 of the 1946 Flood Control Act, as amended.

Local cooperation. See Annual Report for 2008 for requirements. The Project Partnership Agreement (PPA) was executed in February 2010 between Sherburne County and the Federal Government.

Operations and results during fiscal year. Total Federal costs were \$125,384 for project design and environmental documentation.

Condition at end of fiscal year. Construction of the project is substantially complete.

8. FARGO, ND – MOORHEAD, MN, METRO

Location. The Cities of Fargo, ND, and Moorhead, MN, are located on the Red River of the north in eastern North Dakota and western Minnesota. The study area is between the Red River of the north and Wild Rice, Sheyenne, Maple, Rush, and Lower Rush Rivers.

Existing project. The Fargo-Moorhead metropolitan area has a relatively high risk of flooding. A Section 905(b) analysis recommended a feasibility study for a flood risk management project. The Report of the Chief of Engineers (Chief's Report) was signed on December 19, 2011. The Federally Recommended Plan is a 36-mile diversion channel with upstream staging and storage built in North Dakota.

Local cooperation. The Feasibility Cost-Sharing Agreement was executed in September 2008 with the sponsors being the cities of Fargo and Moorhead. The Design Agreement (DA) was executed in September 2011 with the sponsors being the Cities of Fargo and Moorhead. Once the project is authorized and funds are appropriated, a Project Partnership Agreement (PPA) will be executed.

Operations and results during fiscal year. No current operations because the project is still in the design phase.

Condition at end of fiscal year. Construction of the Federally Recommended Plan is pending until authorized by Congress.

9. FARGO – RIDGEWOOD ADDITION, ND

Location. Fargo, ND, is located in eastern North Dakota in Cass County. The project is located in the Ridgewood Addition of the city adjacent to the Red River of the North.

Existing project. Overland flooding from the Red River of the North causes frequent flood-related problems for the city. A feasibility study evaluated structural and nonstructural alternatives for resolving the flood-related problems. The recommended plan includes construction of a new levee and floodwall system starting at the south edge of the VA Medical Center property, continuing along Woodland Drive, Elm Street, and 15th Avenue; a closure structure at Elm Street; and a new pump station and other interior

drainage features. The project is authorized by Section 205 of the 1948 Flood Control Act, as amended.

Local cooperation. See Annual Report for 2008 for requirements. A Project Partnership Agreement was executed between the Federal Government and the City of Fargo on April 2, 2008.

Operations and results during fiscal year. Project Closeout; financial closeout; and development of operation, maintenance, repair, replacement, and rehabilitation manual were initiated. Total Federal costs were \$-127,315 and non-Federal \$196,424.

Condition at end of fiscal year. Construction is complete.

10. GRAND FORKS, ND, AND EAST GRAND FORKS, MN

Location. Grand Forks, North Dakota, is located in Grand Forks County in eastern North Dakota about 70 miles south of the Canadian border. East Grand Forks, MN, is located at the outlet of the Red Lake River to the Red River of the North, immediately across the river from Grand Forks. (For General Location see Geological Survey map of either North Dakota or Minnesota.)

Existing project. Project was authorized by P.L. 105-277, Omnibus Appropriation Bill FY 1999. Estimated cost (2010) of the entire flood damage reduction project is \$412,451,000 total cost to the United States is estimated at \$227,050,000 and total cost to the non-Federal sponsors (cities of Grand Forks and East Grand Forks) is estimated at \$185,401,000. The flood damage reduction project consists of 30 miles of levees, floodwalls and road raises in and around both communities providing protection against a flood equivalent to the peak discharge that occurred during the devastating flood of 1997 (136,900 cubic feet per second). A secondary purpose of recreation is also included in the authorized project.

Local cooperation. A PCA was signed with both communities in January 2000.

Operations and results during fiscal year. All contracts are substantially complete. All contracts are substantially complete. Work completed this year included small contracts to correct deficiencies and project closeout. Total Federal construction costs for FY 2010 were \$817,020 and non-Federal costs were \$5,615.

Condition at end of fiscal year. The project was certified to the 100-year level of protection in January 2007 (Grand Forks) and June 2007 (East Grand Forks). The final lift of the East Grand Forks bank stabilization was completed in September 2008, which completes the project to the 250-year level of protection.

11. HOMME LAKE AND DAM, ND

Location. The dam is on the South Branch of Park River approximately 4 miles upstream from Park River, ND, and 62.1 miles above mouth of Park River. South, Middle, and North Branches, headwater streams of Park River, rise in Cavalier County in northeastern North Dakota and flow easterly 35 miles to join Red River of the North approximately 35 miles south of the international boundary. (For general location, see Geological Survey map of North Dakota.)

Existing project. See Annual Report for 1962. Project was authorized as Park River Reservoir by 1944 Flood Control Act (S. Doc. 194, 78th Cong., 2d sess.) and redesignated Homme Reservoir and Dam by P.L. 435, 80th Congress, 2d session. Project restoration of wetland habitat conditions is taking place under the authority contained in Section 1135 of the 1986 WRDA, as amended. Latest published maps are in the project document. A reconnaissance report was completed in 1994 under the Dam Safety Assurance Program. The report recommended adding a new spillway to increase the dam's discharge capacity to the Probable Maximum flood level. Estimated cost to the United States for new Dam Safety Assurance work is \$11,600,000 and \$77,000 is to be contributed by local interests.

Local cooperation. Fully complied with. Total costs for all requirements of local cooperation under terms of project authorization, including required non-Federal contributions, were \$62,800. In addition, local interests contributed \$16,220 for construction of a water supply outlet through dam and incurred other costs of \$19,600. The North Dakota Game and Fish Department has agreed to serve as the non-Federal sponsor for the environmental improvement to the project.

According to current dam safety cost-sharing guidance, local sponsors are required to fund 15 percent of the dam safety improvement costs in the same proportion as the original construction was cost-shared. The local sponsors would therefore pay for 4.5 percent of 15 percent or 0.68 percent of the dam safety costs.

The North Dakota Office of the State Engineer has supported the proposed modifications identified in the Reconnaissance Report.

Operations and results during fiscal year.

Maintenance: Structure was operated, maintained, and inspected, and evaluations were performed at a cost of \$253,193. Dam Safety: Total Federal costs of \$0 and non-Federal costs of \$0.

Condition at end of fiscal year.

Project completed in June 1956 except for additional recreational facilities which have been done intermittently since that time. Construction began in April 1948 and major structures were completed in May 1951. Structures are in good condition. Government has acquired 395 acres of land in fee and easements over 7.8 acres of land for project. An additional 6.3 acres of land have been donated for recreational development and 3.75 acres have been acquired due to bank erosion bordering the project. Construction of a habitat improvement project (under Section 1135 authority) was completed, and the project was turned over to the local sponsor, the North Dakota Fish and Game Department. Homme Dam has been classified as a high hazard dam under the National Dam Safety Program due to inadequate spillway capacity which could lead to dam failure during a flood event. Engineering and design of dam safety modifications has been completed, and construction of a new concrete spillway was completed in October 2003.

12. LAC QUI PARLE RIVER, DAWSON, MN

Location.

The project is located in the City of Dawson, MN, in Lac qui Parle County in west-central Minnesota, approximately 150 miles west of Minneapolis, MN.

Existing project.

A large segment of Dawson would be protected against a 200-year flood on the West Branch by a levee constructed across the southeastern portion of the community. This levee would prevent flows from the West Branch from backing up into the county ditch. Interior runoff would be collected and pumped into the West Branch via a pump station. The project is authorized by Section 205 of the 1948 Flood Control Act, P.L. 80-858, as amended (33 U.S.C. 701s).

Local cooperation.

See Annual Report for 2008 for requirements. The PCA was executed with the City of Dawson on October 26, 2007.

Operations and results during fiscal year.

Total Federal costs were \$63,222 and non-Federal costs \$0. Principal work features of a construction contract awarded in September 2008 included demolition, approximately 1,845 feet of levee, a combination pump station/gravity outlet structure, road raises, ramps, culverts, ditch excavation, removal of an abandoned sanitary line, riprap, top soil, and seeding and associated items. Work also included the provision of pumps and a trailerable emergency generator. Substantial construction completion occurred in December 2009. A Notice of Project Completion was sent to the City of Dawson in March 2010 stating they are responsible for operation and maintenance of the project. A draft of O&M manual was also provided.

Condition at end of fiscal year.

Construction of the project is complete, and the city now operates and maintains the project.

13. RED RIVER OF THE NORTH DRAINAGE BASIN, MN, SD & ND

Location.

Red River of the North Basin, within the United States, includes the northeastern corner of South Dakota and much of eastern North Dakota and northwestern Minnesota. Red River of the North Basin, formed by confluence of Otter Tail and Bois de Sioux Rivers, flows northward through this region, forming a boundary between North Dakota and Minnesota. (For general location of basin, see Geological Survey maps of Minnesota and South Dakota.)

Existing project.

See Annual Report for 1962 for navigation and flood control projects in the basin, not part of this project. Project was authorized by Flood Control Acts of 1948 and 1950. The combined Grand Forks-East Grand Forks project was authorized in 1999. See Section 9 and Table 16-A for project description and costs. Project also includes updating a Seepage and Uplift Report for Orwell Dam due to the results of a Screening Portfolio Risk Assessment (SPRA) that was completed in 2007. The SPRA identified a potential seepage problem at the dam. The Design Agreement for the Fargo-Moorhead Metro project was signed in September 2011.

Local cooperation.

Project includes improvements for local protection in interests of flood control and major drainage accomplished by channel improvement, levees, etc., in addition to construction of a multiple purpose reservoir on Otter Tail River to control floods and, in conjunction with previously authorized Federal reservoir project at Baldhill site of

Sheyenne River and at Red Lake, to increase low flows for water supply and pollution abatement. (See Table 16-I for active units in comprehensive basin plan and Table 16-E for projects completed under separate authorities.) The MN Red River Watershed Management Board and the ND Red River Joint Water Resource District are the local sponsors on an ongoing specifically authorized feasibility study. The City of Valley City, ND, is the sponsor on a Section 905(b) study for Valley City, ND. The Upper and Lower Sheyenne Joint Water Resource Districts are local sponsors on a Section 905(b) study for the Sheyenne River, ND.

Operations and results during fiscal year. Maintenance: Orwell Dam was operated, maintained, and inspected, and evaluations performed at a cost of \$1,002,133 including \$527,928 associated with ARRA. The project was also evaluated as part of the Corps-wide dam safety relative risk screening assessment. Total Federal costs for dam safety were \$68,184. The specifically authorized feasibility study has contributed to the Red River Long-Term Flood Solutions Report, updated the Red River Decision-Information Network, and continued the effort to complete hydrologic modeling on the Red River subbasins.

Condition at end of fiscal year. Major construction for all active units is complete. Dam Safety: Additional subsurface information and analysis for Orwell Dam was obtained to update a 1976 report.

14. ROSEAU, MN

Location. Roseau, MN, is located in Roseau County in northwestern Minnesota approximately 10 miles south of the Canadian border and 65 miles east of the North Dakota border.

Existing project. The city was devastated by a major flood in 2002 that had a duration of several weeks and heavily impacted 80 percent of the town. The recommended locally preferred plan consists of a 150-foot-wide east side diversion channel, three bridges, a restriction structure, and two storage areas designed to reduce flood stages in the city with stage decreases upstream of Roseau to Malung. This plan will remove almost the entire city from the 100-year regulatory flood plain and reduces future flood damages by nearly 86 percent. Project was authorized by WRDA of 2007 (P.L. 110-114).

Local cooperation. A PPA, executed between the Federal Government and the City of Roseau, on June 15, 2009, required the city to contribute a minimum of 35 percent, but not to exceed 50 percent of total National Economic Development (NED) flood risk management costs, contribute 50 percent of total recreation costs, contribute 100 percent of incremental costs, and upon notification of completion by the District Commander, to operate and maintain the project.

Operations and results during fiscal year. New Work: The local sponsor substantially completed all necessary land acquisitions. The first of three anticipated construction contracts was completed. The initial construction activity included the northernmost 0.8 mile of the diversion channel and its outlet to the Roseau River. A solicitation was issued for the second construction contract and plans completed for the third. Total Federal costs were \$474,673, including \$1,349,766 in ARRA funding. Non-Federal costs were \$319.

Condition at end of fiscal year. Construction of this project is ongoing. Plans and specifications are being completed for remaining portions of the project.

15. SHEYENNE RIVER, ND

Location. The Sheyenne River Basin is included in 16 counties in the southeastern portion of North Dakota and drains an area of 7,140 square miles into the Red River of the North near Fargo, North Dakota. The principal area of flood damages in the basin is located at the lower end within Cass County and the City of West Fargo. (For general location, see Geological Survey map of North Dakota.)

Existing project. The project as authorized by the 1986 WRDA consists of three major components for Federal implementation: 1) 11.9 miles of levee and a 6.7 mile flood diversion channel at West Fargo; 2) 7.5 miles of flood diversion channel from Horace to West Fargo; and 3) a five-foot raise of the Baldhill Dam flood control pool. The WRDA of 1986 stipulated that the project shall also include a dam and reservoir of approximately 35,000 acre-feet of storage for the purpose of flood protection on the Maple River. This component was deauthorized April 16, 2002. There are several items of local cooperation required to implement the plan, and several components identified for non-Federal implementation which would supplement the recommended plan.

Local cooperation. See Annual Report for 1988 for requirements. Project consists of three separable components each requiring a local cooperation agreement. The Southeast Cass Water Resource District is the local sponsor for the West Fargo Unit and the Horace to West Fargo Unit. The local cooperation agreement for the West Fargo Unit was executed on July 25, 1988 (amended on June 4, 2001), and for the Horace to West Fargo unit on March 6, 1990. The Sheyenne River Joint Water Resource District is the local sponsor for the Baldhill Pool Raise Unit. The Local Cooperation Agreement for the Baldhill Pool Raise Unit was executed on May 31, 2000. The Maple River Reservoir Unit was deleted from the project.

Operations and results during fiscal year. Preparation of draft Flood Insurance Rate Maps was completed. Work continued on acquisition of lands. Total Federal costs were \$30,945 and non-Federal costs were \$0.

Condition at end of fiscal year. Construction of the West Fargo Unit is essentially complete, including the installation of emergency generators for the two pump stations; and construction is complete on the Horace to West Fargo Unit. Both of these units were operated during the spring and summer floods of 1993 and the spring floods in 1994, 1995, 1996, and 1997 and performed very well although some erosion damage was sustained on both projects. Plans and specifications were completed to repair 6,000 feet of the failed slope sections of the West Fargo diversion channel. Construction repair began in June 2008 and will continue into 2011. Construction of the Baldhill Pool Raise Unit is complete.

16. ST. CROIX RIVER, STILLWATER, MN

Location. In Washington County in eastern Minnesota along the St. Croix River about 18 miles northeast of St. Paul, (For general location, see Geological Survey map of Minnesota).

Existing project. The project provided for Stage 1 repair and reconstruction of the existing 1,000-foot retaining wall system; Stage 2 for construction of a 1,000-foot extension to the wall and expansion of the wall system to include a new secondary landward floodwall to aid in erosion protection for the downtown area; and Stage 3 for expansion of the floodwall system by constructing a low floodwall / levee along the western side of Lowell Park. Estimated Federal cost for new work is

\$13,125,000 and \$4,375,000 is to be contributed by local interests. Project was authorized by the WRDA of 1992 (P.L. 102-580) as amended by the WRDA of 1996 (P.L. 104-303). The Consolidated Appropriations Act of 2004 directed the Corps to proceed with design and initiate construction for Stage 3 of the Stillwater project using previously appropriated funds. Due to limited available Federal funds, Stage 3 has been broken into smaller components. Stage 3A consists of interior flood control in order to accommodate a future floodwall/levee which will be part of future work.

Local cooperation. See Annual Report for 1996 for requirements. A PCA was executed between the Federal Government and the City of Stillwater, MN, on April 22, 1996, which covered Stage 1 of the project. An amendment to the PCA to encompass Stage 2 was executed on September 29, 1998. A second amendment to the PCA to encompass Stage 3 will be required.

Operations and results during fiscal year. Revised project scope to spend remaining Federal funds and limit extent of response to hazardous materials. Continued work on Stage 3A plans and specifications. Total Federal costs were \$465,770.

Condition at end of fiscal year. Construction of Stages 1 and 2 are complete. Insufficient funds to complete all features of Stage 3. Working with sponsor to revise project scope to utilize remaining funds and minimize sponsor response to hazardous materials on the site. Plans and specifications for Stage 3A will be changed to reflect revised scope.

17. WAHPETON, ND

Location. Wahpeton, ND, is located in Richland County in eastern North Dakota, approximately 55 miles south of Fargo, ND. The Red River of the North and the Bois de Sioux River bound the city on the east. The confluence of the Ottetail River with the Red River of the North is located at Wahpeton. The City of Breckenridge, MN, lies across the Red River of the North from Wahpeton.

Existing project. A feasibility study recommended implementation of a flood reduction project that consists of a permanent levee system protecting most of the city and a flood easement to keep the breakout floodflows from being blocked in the future. The project is authorized by Section 205 of the 1948 Flood Control Act, as amended.

Local cooperation. See Annual Report for 2001 for requirements. The PCA was executed between the Federal Government and the City of Wahpeton on 18 June 2002. A PCA amendment was executed in FY 2008 implementing WRDA of 2007 which raised the Federal limit on the Wahpeton project from \$7,000,000 to \$12,000,000.

Operations and results during fiscal year. Awarded contract for Stage 3B levees and initiated construction. Continued construction of Stage 3A levees and Stage 3B plans and specifications. Total FY 2011 Federal costs were \$687,667 and non-Federal \$417,731.

Condition at end of fiscal year. Project construction began in the summer of 2003 with award of the Stage 1 construction contract for interior flood control features; this construction stage is complete. Construction for Stage 2, the first stage of levees, is complete. Stages 3A and 3B are currently under construction and nearing completion.

Environmental

18. MILLE LACS REGIONAL WASTEWATER, MN

Location: Project is located in the City of Garrison and the townships of Kathio and West Mille Lacs (GKWML). Existing development along the western shoreline of Mille Lacs Lake, one of the largest and most popular trophy fishing lakes in Minnesota, consists of a mixture of residential, commercial, and Mille Lacs Band of Ojibwe housing and casino structures. Most of the structures' wastewater is treated by individual unreliable septic systems.

Existing project: The GKWML Sanitary District and the Mille Lacs Band entered into an agreement to design, construct, and operate a regional wastewater treatment project. The Band completed construction of the Regional Sewage Treatment Plant. The GKWML Sanitary District constructed a sanitary sewer line to collect and transfer wastewater within its jurisdiction that is connected to the Band's Regional Sewage Treatment Plant.

Local cooperation: The estimated total cost of the GKWML portion of the project is \$16,500,000. Section 219 funds were used to assist the Sanitary District in the construction of a "functional" portion of the GKWML project. A Design Section 219 Project Cooperation Agreement was signed in April 2005, and the design of the project has been completed. A

Construction PCA was signed on 16 December 2006 for construction of the project, and a construction contract was awarded on June 17, 2007.

Operations and results during fiscal year. The project is substantially complete and is currently being closed out. Federal costs were \$110,884 and non-Federal were \$7,438.

Condition at end of fiscal year. Construction of all contracted areas was substantially complete at the end of FY 2009.

19. NORTHEASTERN MINNESOTA

Location. Northeastern Minnesota is defined as the counties of Aitkin, Beltrami, Carlton, Cass, Chisago, Cook, Crow Wing, Hubbard, Itasca, Kanabec, Koochiching, Lake, Mille Lacs, Morrison, Pine, St. Louis, and Wadena, Minnesota. Areas within the 18 counties essentially comprise Minnesota Congressional District 8.

Existing project. Section 569 of WRDA of 1999 provided the Corps authority to assist Northeastern Minnesota communities with their environmental infrastructure projects. Over 64 projects have been selected in 44 communities. Energy and Water Appropriations Act funds available in FY 2010 were used to support one project in the Detroit District and two projects in the St. Paul District. FY 2009 ARRA funds were used to support 2 projects in the Detroit District and 10 projects in the St. Paul District.

Local cooperation. The PPAs for the above listed projects require the local sponsor to provide lands, easements, and rights of way, as well as the required 25 percent local sponsor cost-share funding. The program is operated on a reimbursable basis. The government and local sponsor agree on a Project cost estimate and Scope of Work. The sponsor retains a contractor to perform the work. Upon receipt of a proper invoice and Government construction inspector verification that the work was performed, the Government reimburses the sponsor for 75 percent of the invoice billing.

Operations and results during fiscal year. Two PPAs were signed within the St. Paul District in FY 2010 with the communities of Tower and Riverton. Construction inspection activities and reimbursements were made to the non-Federal project sponsors as appropriate. Federal costs were \$3,893,340, including \$3,661,860 funded under the ARRA.

Condition at end of fiscal year. Construction was completed on the Riverton project; the Tower project is nearing completion.

20. NORTHERN WISCONSIN

Location: Northern Wisconsin is defined as the Counties of Douglas, Bayfield, Ashland and Iron, Wisconsin. These four counties are located within Wisconsin Congressional District 7.

Existing project: Section 154 of the Consolidated Appropriations Act of 2001 (P.L. 106-554) provided authorization for the Corps of Engineers to assist northern Wisconsin communities with their environmental infrastructure and water resource projects. Fourteen projects were selected in FY 2009 for implementation using Omnibus funds of which 3 projects were located in the St. Paul District. Two additional ARRA funded projects were also pursued in the St. Paul District.

Local cooperation. The PCAs require the local sponsor to provide lands, easements, and rights-of-way, as well as the required 25 percent local sponsor cost-share funding. The program is operated on a reimbursable basis. The government and local sponsor agree on Project cost and work. The sponsor retains a contractor to perform the work. Upon receipt of proper invoice and Government construction inspector verification that the work was performed, the Government reimburses the sponsor 75 percent of the invoice billing.

Operation and results during fiscal year. Two PCAs were signed in FY 2010 for projects with the Villages of Solon Springs and Mercer, WI. In FY 2011, \$100,000 in additional funds were provided to the Solon Springs project to maintain the 75/25 cost-share balance with the village. Federal costs were \$1,266,150, including \$189,516 funded under the ARRA.

Condition at end of fiscal year. Work on the Solon Springs, Gordon, and Mercer projects has been completed.

21. OHIO AND NORTH DAKOTA ENVIRONMENTAL INFRASTRUCTURE, ND

Location. The area from which potential projects may be initiated includes the entire State of North Dakota.

Existing project. Section 111 of the Consolidated Appropriations Act of 2008 amends WRDA of 1999 by striking "Sec. 594. Ohio." and inserting in lieu thereof "Sec. 594 Ohio and North Dakota." This Act established an authorization of \$100,000,000 for North Dakota. It provided the Corps authority to assist North Dakota communities with their environmental infrastructure projects. Energy and Water Appropriation Act funds available in FY 2010 were used to support six water supply and one wastewater project in the St. Paul District. In addition, ARRA funds in the amount of \$7,050,000 were used to support the City of Valley City, Cass Rural Water Users District, and the Southeast Rural Water Users District within the St. Paul District.

Local cooperation. The PCAs for projects under this authority require the local sponsor to provide lands, easements, and rights-of-way, as well as the required 25 percent local sponsor cost-share funding. The program is operated on a reimbursable basis. The Government and local sponsor agree on project cost and work. The sponsor retains a contractor to perform the work. Upon receipt of proper invoice and Government construction inspector verification that the work was performed, the Government reimburses the sponsor for 75 percent of the invoice billing.

Operations and results during fiscal year. A water supply PPA was signed with the City of Minnewaukan. In FY 2011, \$100,000 in additional funds was provided to the Minnewaukan project to better assist the city with its water supply problems. Federal costs were \$5,982,638, including \$1,668,322 funded under the ARRA.

Condition at end of fiscal year. Project design and/or construction work has been initiated on all projects. The projects with Drayton, Southeast Rural Water Users, and the Greater Ramsey Rural Water District have been completed.

22. ST. CROIX FALLS, SEWAGE TREATMENT PLANT, WI

Location. The project is located in the City of St. Croix Falls, Polk County, WI, in the Wisconsin 7th Congressional District.

Existing project. Project was authorized by Section 120 of the Consolidated Appropriations Act (CAA) of 2005. Section 120 of the CAA, 2005, amended Section 219 of WRDA of 1992 to include St. Croix Falls (\$5,000,000 for wastewater infrastructure). The project was initially funded in the amount of \$350,000 in the Emergency Appropriations Act of 2005. The city is in the process of replacing its aging wastewater treatment plant. The city's existing wastewater treatments plant (WWTP) is 50 years old. It currently discharges 350,000 gallons of treated wastewater to the St. Croix River daily. While technically the WWTP meets current discharge requirements, aging equipment and changing water quality standards seriously compromise its ability to perform. The city spent \$700,000, in local funds in the year 2000 to make major repairs on the WWTP and keep it running until it can be reconstructed.

Local cooperation. A Design Agreement was signed between the Federal Government and the City of St. Croix Falls on July 19, 2005. The estimated total cost of the St. Croix Falls wastewater project is over \$6,000,000. Congress has authorized and appropriated \$5,000,000 of Federal funds for the project. The PCA for the Section 219 program requires 25 percent local sponsor cost-share funding. The Federal share under the agreement is not more than 75 percent.

Operations and results during fiscal year. The design was halted as the sponsor provided a third amendment to the facility plan. This amendment was approved by the Wisconsin Department of Natural Resources in May 2011. The plan splits the project into two portions; a cost-shared portion with the Corps and a noncost-shared, sponsor-controlled portion. The facility plan amendment No. 3 identified building a new headworks building as well as remodeling the existing treatment plant. The majority of the Corps project is the construction of the headworks building. At this time, the Corps is back on schedule designing the project with the applicable engineering firms. Federal costs were \$34,771, and non-Federal costs were \$54,437.

Condition at end of fiscal year. After the approval of Facility Plan #3, construction is scheduled to start in the summer of 2012. Currently, the Corps is finalizing the design of the project.

Miscellaneous

23. LOWER ST. ANTHONY FALLS RAPIDS RESTORATION, MN

Location. The project is located on the Mississippi River, within the City of Minneapolis, MN. The LSAF restoration would include development of a formal whitewater rapids channel and trail/park on the east bank of the Mississippi River, adjacent to the U.S. Army Corps of Engineers LSAF Lock and Dam.

Existing project. The project was authorized by Section 527 of WRDA of 2000. The facility would include a recreational whitewater course for kayaking, canoeing, and rafting, as well as improved public access to the river and formal shore fishing opportunities. The facility would utilize the vertical drop created by the LSAF dam and include a new river channel approximately 2,000 feet long and 40 feet wide, with a vertical drop of 25 feet. The channel would flow parallel to the Mississippi River main stem in a park setting.

Local cooperation. A design agreement was executed between the Federal Government and the State of Minnesota Department of Natural Resources (MnDNR) on 28 February 2002. For much of FY 2007, the project was on hold pending MnDNR resolution of key project design issues, including fill in the riverbed, disposition of the Corps dredged material site, and prevention of invasion species migration. At MnDNR request, the draft EDR and EA were tabled and a reassessment of alternatives was requested. Upon approval of the EDR and NEPA documentation, the PPA will be prepared for execution with MnDNR.

Operation and results during fiscal year. In 2011, using available Federal and non-Federal funds, the Corps completed work with the MnDNR and other project stakeholders to redesign the project based on MnDNR concerns regarding avoidance of upland creation in the riverbed, prevention of the spread of invasive aquatic species, and accommodation of the dredged material currently placed on the project site.

The redesign also accounted for changed site conditions related to the collapse and reconstruction of the I-35W bridge. The design team that the Corps contracted with for the development of alternatives included whitewater park design experts. A final report of findings was presented to the non-Federal sponsor in June 2011. The alternative that best meets the criteria presented by MnDNR has an estimated cost of \$37,900,000. The Corps is awaiting confirmation that the State of Minnesota is interested in continuing engineering and design prior to proceeding with preparation of a new EDR and EA.

Condition at end of fiscal year. Finalizing EDR. At the end of the fiscal year, a draft report of findings from the whitewater design specialists was submitted for review. Following incorporation of comments, the findings are scheduled to be documented in a letter report to the Corps.

24. INSPECTION OF COMPLETED WORKS – FLOOD RISK MANAGEMENT PROJECTS

Flood Risk Management Projects transferred to local interests were inspected to verify that proper project operation, maintenance, and repairs have been conducted in accordance with the project Operation and Maintenance Manual or as directed by the Corps. Inspected items include levee embankments, floodwalls, interior drainage systems, pump stations, and flood risk management channels. Noted deficiencies were minor in nature unless noted. The St. Paul District had two (2) projects (Decorah, IA, and South St. Paul, MN) that were rated unacceptable in FY 2011. (See Table 16-J, Inspection of Flood Risk Management Projects.)

Cost for the period was \$1,745,870. Total cost to September 30, 2011, is \$7,701,484.

25. PROTECTION OF NAVIGATION

During FY 2011, operation and maintenance costs were \$43,006 for Project Condition Surveys and \$147,592 for Surveillance of Northern Boundary Waters.

26. OTHER WORK UNDER SPECIAL AUTHORITY

In the Sign Standards Programs (as described in Chapter 6, ER 1130-2-500), there were costs of \$132,247.

27. FLOOD CONTROL AND COASTAL EMERGENCIES (FC&CE)

Disaster Preparedness	\$ 307,405
Emergency Operations	16,220,387
Rehabilitation and Inspection Program	877,296
Advance Measures	<u>30,408,216</u>
Total FC&CE	\$47,813,304

28. CATASTROPHIC DISASTER PREPAREDNESS PROGRAM (CDPP)

Continuity Disaster Response Planning	\$36,682
---------------------------------------	----------

29. REGULATORY PROGRAM

Permit Evaluation	\$6,742,579 ¹
Enforcement	679,722
Studies	89,349 ²
Environmental Impact Statements	214,931
Compliance	<u>420,472³</u>
Total Regulatory	\$8,180,053

¹ Includes \$77,954 in costs attributed to ARRA of 2009.

² Includes \$57,343 in costs attributed to ARRA.

³ Includes \$58,533 in costs attributed to ARRA.

Investigations

30. SURVEYS

Fiscal year cost was \$7,461,022, including \$125,272 in costs attributed to the ARRA of 2010. Also included were 10 feasibility studies, miscellaneous activities, and coordination with both Federal and non-Federal agencies. Table 16-N provides a specific list and respective fiscal year expenditures.

31. COLLECTION AND STUDY OF BASIC DATA

Fiscal year cost was \$96,014 which included the items concerning international water studies, floodplain Management services and hydrologic studies. Table 16-N provides a specific list and respective fiscal year expenditures.

1. Includes \$681,805 for new work for previous project.
2. Includes \$100,857 for maintenance for previous projects and O&M of dams funds of \$126,391.
3. Excludes \$56,220 contributed funds. Includes \$23,000 expended during FY 1991-1995 under Section 1135, P.L. 99-662 authority.
4. Excludes \$1,150,000 sunk costs for deauthorized Kindred Lake unit (see Table 16-G). Excludes \$475,000 for costs associated with inactive Maple River unit.
5. Includes cost of the Wahpeton-Breckenridge unit \$11,239 which is classed as "deferred" and the units on which authorization has expired: Maple River, \$1,241; Moorhead, \$27,700; Sheyenne, \$37,956. In addition, \$203,874 special deposit funds and \$146,160 in other contributed funds have been expended for work under Government contract paid for by local interests. Includes \$184,352 expended on Orwell Lake between FY 1991-1996 under Section 1135, P.L. 99-662 authority. Excludes \$64,775 contributed funds under Section 1135, P.L. 99-662 authority.
6. Excludes \$17,469 contributed funds.

TABLE 16-B AUTHORIZING LEGISLATION

See Sec. in Text	Date of Authorizing Act	Project and Work Authorized	Documents
2.		RESERVOIRS AT HEADWATERS OF MISSISSIPPI RIVER, MN	
	March 3, 1899	Reconstruct 4 of the 5 original dams and surveys to determine extent of lands overflowed by reservoirs.	
	March 2, 1907	Reconstruct Sandy Lake Dam and construct Gull Lake Reservoir.	
	June 25, 1910	Construct an equalizing canal between Winnibigoshish and Leech Lake Reservoirs (no work was done and this part of the project abandoned in Act of March 4, 1915).	H. Doc. 363, 61 st Cong., 2 nd sess.
	July 27, 1916	Abandonment of ditches connecting Long Lake, Round Lake, and Gull Lake.	H. Doc. 413, 64 th Cong., 1 sess. ¹
	June 26, 1934 ²	Operation and maintenance provided for with funds from War Department appropriations for rivers and harbors.	
5.		BRECKENRIDGE, MN	
	June 30, 1948		Sec 205 1948 Flood Control Act, as amended (P.L. 80-858)
	December 11, 2000		WRDA of 2000 – P.L. 106-541
6.		CHIPPEWA RIVER AT MONTIVIDEO, MN	
	June 30, 1948		Sec 205, 1948 Flood Control Act, as amended (P.L. 80-858)
7.		ELK RIVER, SHERBURNE COUNTY, MN	
	July 24, 1946		Sec 14, 1946 Flood Control Act, as amended (P.L. 79-526)
9.		FARGO – RIDGEWOOD ADDITION, ND	
	June 30, 1948		Sec 205, 1948 Flood Control Act, as amended (P.L. 80-858)
10.		GRAND FORKS, ND AND EAST GRAND FORKS, MN	
	October 21, 1998		P.L. 105-277, Omnibus Appropriation Bill, FY 1999
11.		HOMME LAKE AND DAM, ND	
	December 22, 1944	Authorized as Park River Reservoir	1944 Flood Control Act (S. Doc. 194, 78 th Cong., 2d sess.)
		Redesignated Homme Reservoir and Dam	P.L. 435 (80 th Cong., 2d sess.)
	November 17, 1986	Project restoration of wetland habitat conditions	Sec 1135 1986 WRDA – P.L. 99-662
12.		LAC QUI PARLE RIVER, DAWSON, MN	
	June 30, 1948		Sec 205, 1948 Flood Control Act, as amended (P.L. 80-858)
13.		RED RIVER OF THE NORTH DRAINAGE BASIN, MN, SD & ND	
	June 30, 1948		1948 Flood Control Act (P.L. 80-858)
	May 17, 1950		1950 Flood Control Act (P.L. 81-516)

1. Excludes \$152,492 contributed funds. In addition, \$487,491 in other contributed funds have been expended for work under Government contract paid for by the Ottertail Power Company.
2. Project authorized by Chief of Engineers under small project authority, Section 14, Flood Control Act of 1946, as amended.
3. Project authorized by Chief of Engineers under small project authority, Section 205, Flood Control Act of 1948, as amended.
4. Project authorized by Chief of Engineers under small project authority, Section 208, Flood Control Act of 1954, as amended.
5. Preconstruction planning has not started. Phase I completed under General Investigations.
6. Excludes \$56,453 contributed funds.
7. Excludes \$18,362 contributed funds.
8. Excludes \$42,766 contributed funds.
9. In addition \$87,878 was expended from P.L. 99 funds in the spring of 1969 for emergency protection and incorporation into the permanent project.
10. Excludes \$201,544 contributed funds.
11. Excludes \$150,191 contributed funds.
12. Excludes \$12,749 contributed funds.
13. Excludes \$27,583 contributed funds.
14. Excludes \$77,290 contributed funds.
15. Excludes \$20,441 contributed funds.
16. Includes ARRA costs of \$300,263.
17. Excludes \$74,225 contributed funds.
18. Excludes \$46,034 for the Ruffy Brook unit for which authorization expired in April 1966 (see Table 16-G). Excludes \$246,911 contributed funds.
19. Excludes \$35,000 contributed funds.
20. Excludes \$79,749 contributed funds.
21. Excludes \$91,218 contributed funds.
22. Excludes \$59,855 contributed funds.
23. Excludes \$68,421 contributed funds.
24. Excludes \$307,239 contributed funds.
25. Excludes \$130,300 contributed funds.
26. Excludes \$4,167 contributed funds.
27. Excludes \$20,920 contributed funds.

**TABLE 16-E

CONTROL PROJECTS**

-
28. Excludes \$92,402 contributed funds.
 29. Excludes \$30,020 contributed funds.
 30. Excludes \$33,000 contributed funds.
 31. Excludes \$35,430 contributed funds.
 32. Excludes \$26,055 contributed funds.
 33. Includes ARRA costs of \$134,872; FY 2008 Supplemental costs, \$301,183; and FY 2009 Supplemental costs, \$719,978.
 34. Excludes \$61,895 contributed funds.
 35. Excludes \$67,014 contributed funds.
 36. Excludes \$65,902 contributed funds.
 37. Excludes \$175,357 contributed funds.
 38. Excludes \$62,620 contributed funds.
 39. Excludes \$100,000 contributed funds.
 40. Excludes \$5,253 contributed funds.
 41. Excludes \$225,000 sunk costs for inactive Ebner Coulee unit (see Table 16-E) and \$4,206,836 contributed funds.
 42. Excludes \$39,815 contributed funds.
 43. Excludes \$31,064 contributed funds.
 44. Excludes \$545,637 contributed funds for new work and \$38,000 expended by South St. Paul for work in lieu of required cash contribution. Excludes an additional \$206,629 expended for work done at request of local interests.
 45. Excludes \$73,619 contributed funds.
 46. Excludes \$37,631 contributed funds.
 47. Excludes \$184,709 contributed funds.
 48. Excludes \$97,800 contributed funds.
 49. Excludes \$589,316 contributed funds. In addition, \$717,809 in other contributed funds have been expended for work under Government contract paid for by local interests.
 50. Excludes \$11,066 contributed funds.
 51. Excludes \$38,173 contributed funds.
 52. Excludes \$20,000 contributed funds.
 53. Excludes \$777,070 contributed funds.
 54. Excludes \$7,628,650 contributed funds.
 55. Excludes \$177,500 contributed funds.
 56. Excludes \$114,000 contributed funds.
 57. Excludes \$2,083,373 contributed funds.
 58. Excludes \$460,800 contributed funds.
 59. Excludes \$674,000 contributed funds.
 60. Excludes \$670,000 contributed funds.
 61. Excludes \$53,233 contributed funds.
 62. Excludes \$3,418,460 contributed funds.
 63. Excludes \$106,800 contributed funds.
 64. Excludes \$8,180,000 contributed funds.
 65. Excludes \$3,968,267 contributed funds.
 66. Excludes \$1,719,613 contributed funds.
 67. Excludes \$1,858,000 contributed funds.
 68. Excludes \$351,000 contributed funds.
 69. Excludes \$2,373,000 contributed funds.
 70. Includes ARRA costs of \$1,107,876; FY 2009 Supplemental costs, \$65,833.
 71. Includes ARRA costs of \$7,318.; FY 2008 Supplemental costs, \$289,440; and FY 2009 Supplemental costs, \$367,172.
 72. Includes ARRA costs of \$193,658.

1. Portion of project for removal of obstructions at various points outside the dredged area to clear channel to full project width (see Table 16-C for costs for completed portion of the project).
2. Advance engineering and design costs only. The Senate Report 97-256 states that the Corps is to take no further action to construct Burlington Dam until directed to do so by Congress.
3. Grafton, ND, was reauthorized by Section 364 of WRDA in 1999.
4. Part of the St. Croix River, Minnesota and Wisconsin project.
5. Previously part of Sheyenne River, ND project (see Section 16 and Table 16-A for costs for active project).
6. Authorized for further study by a House Committee on Public Works Resolution dated March 15, 1988.
7. Advance engineering and design costs only.
8. Part of Red River of the North Drainage Basin (see Section 20 in text and Table 16-I for costs for active units of project).
9. Portion of dredging of entrance channel and turning basin to complete project width and depth (see Table 16-C for costs for completed portion of project).

Sand Hill River	Minnesota	Channel improvement	548,778	548,800
Mustinka River	Minnesota	Channel improvement	440,788	440,800
Otter Tail River	Minnesota	Channel improvement	174,768	174,800
Red River at Grand Forks	North Dakota	Levees and floodwall	948,895	948,900
Red River at East Grand Forks	Minnesota	Levees, floodwall, pumping plants	1,698,200 ²	1,698,200 ³
Red River at Fargo	North Dakota	Channel improvement	1,639,924	1,639,900 ⁴
Total Cost to Date			\$8,060,848 ⁵	
Total Estimate Cost				\$8,060,900 ⁶

1. Includes \$181,713 for lands and \$25,045 for recreation facilities.

2. Excludes cost for current planning, engineering and design work.

3. The East Grand Forks unit was reclassified from active to inactive on August 19, 1988; the project was reactivated in June 1997. The cost of this unit was last revised in 1987. A new flood control plan for a combined Grand Forks-East Grand Forks project was authorized in 1999. See Section 9 and Table 16-A for project description and costs.

4. Includes \$67,900 for lands.

5. Costs of \$11,239 for the Wahpeton-Breckenridge deauthorized unit not included. Authorization of the Sheyenne River, Moorhead, and Maple River units has expired. Cost of these units also not included total \$66,897.

6. The Wahpeton-Breckenridge unit of the project is classed as deauthorized and is excluded from the estimate. The cost of this unit, last revised in 1955, was estimated to be \$666,000. The Flood Control Act approved December 31, 1970 (H. Doc. 330-91-2) provided for deletion of the Sheyenne River unit, and authorization of the Maple River and Moorhead units expired at the end of the 5-year period within which local interests were required to furnish assurances of local cooperation. Authorization of these units, not included, expired on the dates indicated in Table 16-G. In FY 1989, the Wahpeton-Breckenridge unit was included as part of the Investigation program under Restudy of Deferred projects.

MISSISSIPPI RIVER BETWEEN THE MISSOURI RIVER AND MINNEAPOLIS, MN

Section of river covered in this report is divided into three reaches, under supervision and direction of District Engineers at St. Louis, Rock Island, and St. Paul. Section in St. Louis District extends 105 miles from Mouth of Missouri River to Upper Mississippi River mile 300 above Ohio River; Rock Island District extends about 314 miles from mile 300 to 614; and St. Paul District extends about 244 miles from mile 614 to Soo Line Railroad bridge, Minneapolis (mile 857.6).

Location. Mississippi River rises in northern Minnesota, flows about 2,360 miles southerly and empties into Gulf of Mexico. Portion included in this report extends about 663 miles from mouth of Missouri River to Soo Line Railroad bridge, Minneapolis. The latest map and profile showing this section of river are in House Document 669, 76th Congress, 3d session. A map showing Lake Pepin is in House Document 511, 79th Congress, 2d session. A map of section Minneapolis to Dubuque is in House Document 515, 79th Congress, 2d session. A map showing location of drainage districts (Bellevue, Iowa, to Missouri River) is in River and Harbors Committee Document 34, 75th Congress, 1st session.

Previous projects. See page 1199 of Annual Report for 1963.

Existing project. Provides a channel of 9-foot depth and adequate width between mouth of Missouri River (1,179 miles from the gulf) and Soo Line Railroad at Minneapolis, by construction of a system of locks and dams, supplemented by dredging. Project also provides for further improvements at St. Paul to provide a 2.7 mile basin extending downstream from Robert Street Bridge, and at Minneapolis to provide adequate terminal facilities, and for other harbor improvements and miscellaneous work. Pertinent data on locks and dams, harbor improvements, additional features entering into cost of project, and authorizing legislation are given in Tables 17-C, 17-D, 17-E, and 17-G. All dams are concrete. Three dams (Upper St. Anthony Falls, 1 and 19) are fixed, remainder are movable. See House Document 669, 76th Congress, 3d session, for a report of Chief of Engineers dated February 27, 1940, containing a general plan for improvement of Mississippi River between Coon Rapids Dam and mouth of Ohio River for purposes of navigation, power development, flood control, and irrigation needs.

Local cooperation. Small-boat harbors authorized in the River and Harbor Act of 1962 are subject to conditions that local interests make a cash contribution toward cost of construction (except in case of Quincy Harbor which involves maintenance only of an existing harbor); furnish lands and rights-of-way for construction and future maintenance; hold the United States free from damages; provide and maintain mooring facilities and utilities; reserve accommodations for transient small boats; accomplish all necessary relocations and alterations; and establish public bodies empowered to regulate use, growth and development of the harbors.

Rectification of seepage damages to privately owned lands in the Sny Island Levee Drainage District, IL, was contingent upon the conditions that local interests acquire all lands, easements, and rights-of-way necessary for construction and maintenance of the project; comply with applicable provisions of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970; accept, operate, and maintain the project upon its completion; and hold and save the United States free from damages arising from the construction and operation of the completed project; provided further that the local public entity shall be reimbursed by the Government in the amounts actually expended by it in the acquisition of real estate and for payments required under P.L. 91-646 if said amounts have been previously submitted to and approved by the Government.

Local cooperation requirements have been complied with for improvement of commercial harbor at Dubuque, IA; for improvement of Beaver Slough at Clinton, IA, for navigation; and for general navigation facilities at small-boat harbors at Rock Island, IL; Hannibal, MO; Fort Madison, IA; Davenport (Lindsay Park), IA; Muscatine, IA (including freight terminal approach channel); Andalusia, IL; Warsaw, IL; Moline, IL; Clinton, IA; and Savanna, IL.

Licenses. Federal Energy Regulatory Commission collects from non-Federal licensees annually to recompensate the United States for use of government dams for generation of hydroelectric power. Amounts collected are returned to U.S. Treasury. (See Table 17-F for license fees collected for the fiscal year.)

St. Paul District:

New Work: None.

Maintenance: During FY 2011, the Government pipeline Dredge *WILLIAM L. GOETZ* removed 650,593 cubic yards of material at 12 sites. Government Derrick Barge *HAUSER/WADE* removed 70,503 cubic yards of material at 10 sites. Government pipeline Dredge *DUBUQUE* removed 51,539 cubic yards of material at three sites. Mechanical dredging contractor removed 396,653 cubic yards of material from the main channel at 20 sites. Maintenance of temporary dredge material placement sites included the relocation of 837,711 cubic yards to permanent placement sites for beneficial use at two sites. Major maintenance projects included central control building and electrical controls at Lock 10 and stoplog slots at Lock 9.

Operations and Care: Locks and Dams were operated as required and necessary repairs were made to those and appurtenant structures. Other studies, reports, and miscellaneous engineering work were also accomplished.

Rehabilitation: The rehabilitation of the district's central control buildings is complete.

The related navigation safety and embankments problems at Lock and Dam (L/D) 3 were examined in separate reports in 1995 with recommended structural fixes for these problems. The proposed projects were approved by Corps Headquarters, but have not been implemented for a number of reasons including the presence of a diverse mussel bed with state-listed endangered species in the tailwater area. Construction of the first stage of the embankment project was completed in the summer of 1999. The St. Paul District decided to reevaluate these related problems in an effort to find more optimal solutions. A Notice of Intent to Prepare an Environmental Impact Statement for the L/D 3 navigation safety and embankments re-evaluation was published in the Federal Register in August 2000. Stakeholders helped the district set objectives, identify alternative measures and formulate alternative plans. Alternative plans have been evaluated and compared using a risk and benefit cost assessment. An effective and environmentally acceptable combination plan to improve navigation safety and to strengthen the Wisconsin embankments was identified. A Record of Decision was signed in April 2007 that identified a

recommended plan that includes an extended landward guidewall with channel modifications to improve navigation safety and to strengthen the Wisconsin embankments employing phased construction. The recommended plan was approved by the ASA(CW) and endorsed by OMB in May 2008.

In April 2010, the guide wall extension, a part of the Navigation Improvement project, was completed and turned over to Operations. The channel modifications portion will be completed in January 2012. The Upper Embankment project was completed in October 2011. The final project, Lower Embankments, was delayed due to extended high water in the fall/winter 2010. Work began in August 2011 and will be completed in September 2012.

Costs to St. Paul District were \$47,937,244 for operation and maintenance.

St. Paul District. Work completed: Locks and Dams at St. Anthony Falls and 1 to 10, inclusive, except for relatively minor appurtenant work; major improvements of channels and harbors at St. Paul and Minneapolis; small boat harbors and commercial harbors at Lake City, Red Wing, and Winona, MN; and Prairie du Chien, WI; small-boat harbors at St. Paul, Hastings, Red Wing, Wabasha, Lake City and Winona, MN; Lansing, IA; and Bay City, Alma, Pepin, and Prairie du Chien, WI; a remedial drainage ditch at Cochrane, WI; miscellaneous channel dredging and realignment; channel markers; pool clearing; and construction of various facilities for recreation use.

Status of land and flowage acquisition: Approximately 50,999.976 acres of land are held in fee, including 47,305 acres used by the Department of the Interior in accordance with a Cooperative Agreement that establishes the Upper Mississippi River Fish and Wildlife Refuge.

Easements for various access rights and flowage inundation are held over 13,627,379 acres. Additionally, the district holds perpetual easements over 244.43 acres of land for small boat/commercial harbors. All land interests lie between Upper St. Anthony Falls Lock and Dam located in Minneapolis, Minnesota, and L/D 10 in Guttenberg, Iowa. The Department of the Army also holds special rights to over 62,954.74 acres of land owned by Department of the Interior in pools 3 to 10, inclusive.

Work remaining to complete portion of project in St. Paul District: Dredged material site acquisitions anticipated for FY 2012 are one permitted site and two to four easement sites. L/D 3 projects completed the acquisition of an additional 230 acres for mitigation and 70.6 acres for easement/fee acquisition on the embankments and access road.

Condition of channel at end of fiscal year: The controlling depths of 9 feet at lower water and minimum depths for long-haul common carrier service were maintained in all pools.

Rock Island District:

New Work: None.

Maintenance: Channel dredging by Government cutter head pipeline Dredge *WILLIAM L. GOETZ* was performed at various locations in Pools 14, 17, 20, 21 and 22 for a total of approximately 605,000 cubic yards of material removed. Emergency channel dredging by Government cutter head pipeline Dredge *WILLIAM L. GOETZ* was performed at Montpelier Upper in Pool 16 for a total of approximately 38,000 cubic yards of material removed. Mechanical dredging was performed in Pools 11, 13, 16, 17, 18, 20, 21, and 22, for a total of approximately 247,000 cubic yards of material being removed. Nonroutine maintenance contract repairs include L/D 11 Major Maintenance, Bulkhead Recesses, Miter Gates, L/D 22 Monolith Concrete, Dam 18 Tainter Pier Structures, Bulkhead Lifter at L/D 15, L/D 20-21 Strut Arm Repairs, Tainter Gate Machinery Assemblies Procurement, and Pier House Roof Repairs.

Operations and Care: Locks and dams were operated as required, and necessary repairs were made to those and appurtenant structures. Other studies, reports, and miscellaneous engineering work were also accomplished. In June 2008, extraordinary flooding occurred at various locations along the Mississippi River and flood recovery work continued, funded by FY 2008 War Supplemental with costs of \$12,621,441. Flood-related work included repairs to storage yards, roads, control stands, and spillways. ARRA funds were received in FY 2009 and repairs continued on the following projects: Trunnion bearings at L/D 11 and replacement of equipment. ARRA costs were \$609,847. FERC coordination costs were \$21,493.

Operations and Care: Total FY 2011 operation and maintenance costs to Rock Island District were \$70,708,836, including the Supplemental and ARRA funds.

Rehabilitation: Rehabilitation work was continued at Locks and Dams 11 and 19 with costs of \$3,145,387 and \$330,708, respectively. Inland Waterway Trust Fund costs were \$3,476,096. Total rehabilitation and Inland Waterway Trust Fund (IWTF) costs were \$6,952,191.

Costs to the Rock Island District were \$70,708,836 for operation and maintenance.

Rock Island District. Work completed: Major construction items including all locks and dams, are completed and in operation. The following related work has also been completed: construction of small-boat harbors at Rock Island, IL; Moline, IL; Andalusia, IL; Warsaw, IL; Fort Madison, IA; Davenport (Lindsay Park), IA; Muscatine, IA; Clinton, IA; and Hannibal, MO; improvement of Beaver Slough at Clinton, IA, for navigation; improvement of commercial harbor at Dubuque, IA; rehabilitation of old auxiliary lock at L/D 14; permanent closure of old Lock 19 and dry dock; rock and conglomerate excavation in Pools 15 and 16; rectification of seepage damage in the Sny Island Levee Drainage District, IL; recreational facilities; and construction of visitor center at L/D 15.

Status of land and easement acquisition: Acquisition of land in Pools 11 to 22, inclusive consisting of 93,658.174 acres in fee and 11,694.94 acres in easement, has been completed.

Work remaining to complete portion of project in Rock Island District: None.

St. Louis District:

Costs incurred for Melvin Price Lock and Dam, formerly L/D 26 replacement, were \$1,754,455 for lock, \$677,515 for levees and floodwalls, \$585,848 for planning engineering and design (PED), and \$95,198 for supervision and administration. Cost for Melvin Price totaled \$3,113,016. Levee work included development of a report to address serious underseepage of the Wood River levee due to the Melvin Price pool. ARRA funds were used for Melvin Price for fabrication and installation of tainter gate

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2011

debris shields and repairs of various operation equipment. Costs incurred for the second lock totaled \$0. Total cost for new work was \$3,113,016.

Rehabilitation: The 1993 and 1997 L/D 24 Major Rehabilitation continued at a cost of \$9,827 for PED. Inland Waterways Trust Fund (IWTF) costs totaled \$0. For L/D 24, total major rehabilitation continued at a cost of \$9,827.

Under the Dam Safety program, L/D 25 expended \$177,097 for continuation of scour repairs (Phase I) which were partially funded with ARRA funds. The Dam Safety study (Phase II), now called the Major Rehabilitation Report, continues with formulation of alternative solutions and identification of a recommended plan.

Operations and Care: The locks and dams were operated as required and necessary repairs were made thereto. Other work accomplished was management of natural resources; operations of recreation areas; condition and operating studies; water control management; channel maintenance to include surveys, dredging, and training structures; and other studies and reports for a total cost of \$14,282,899, of which \$685,154 was ARRA funds.

Maintenance: Total maintenance cost was \$12,243,360, of which \$357,267 ARRA funds used to accomplish backlog dredging, maintenance to recreational access areas, replace gaging stations, remove damaged outgrant cabins, and perform critical backlog forest management work.

Costs to the St. Louis District were \$3,113,016 for new work on the Melvin Price Locks and Dam; \$9,827 for major rehabilitation; \$177,097 for L/D 25 Dam Safety; and \$26,526,260 for operation and maintenance for a total cost of \$29,826,200.

St. Louis District work completed: Major construction items, including all locks and dams, are completed and in operation with the exception of the remaining work at Melvin Price.

Status of land and flowage acquisition: Acquisitions of land in Pools 24, 25, and 26, involving 4,448 acres of land in fee and flowage easements over 6,600 acres, is complete. A total of 4,201 acres has been acquired for the Melvin Price L/D project.

Work remaining to complete portion of project in St. Louis District: Work remaining at the Melvin Price L/D project includes punch list items, continued operation of interim underseepage control measures, correction of Melvin Price induced underseepage issues for Wood River levee, and the implementation of remaining required fish and wildlife mitigation measures for the second lock. Also includes uncompleted portions of L/D 25 Dam Safety program scour repairs under WEDGE and ARRA funds.

Total Project: Total Federal costs of existing project to the end of the fiscal year for the three districts were \$987,387,158 for new work, \$583,558,889 regular funds for operation and maintenance, \$93,824,986 regular funds for rehabilitation, and \$0 for IWTF. Total costs for FY 2011 were \$1,664,771,033.

Condition of channel at end of fiscal year: The controlling depth of 9 feet at low water and minimum depths for long haul common carrier service were maintained in all pools.

Total, Locks and dams														\$1,196,556,000

1. Elevation of Pools 1 to 22 and at St. Anthony Falls are mean sea level 1912 adjustment; Pools 24, 26 are mean sea level 1929 adjustment.

2. Includes existing dam, owned by Northern States Power Co.

3. Includes dredging above upper lock. (Federal cost only.)

4. Based on pool elevation 723.1 in Pool 1 which is crest of dam. Pool is normally maintained at elevation 725.1 by flashboards.

5. Includes lower approach dredging and dredging between upper and lower rock. (Federal cost only.)

6. In addition \$1,948,000 expended from previous projects and \$1,349,600 from O & M appropriation for first of twin locks. Excludes lock and dam rehabilitation program.

7. Old upper guard sill.

8. Landward lock.

9. In addition, \$1,965,300 expended from previous projects.

10. Existing Le Claire Canal lock is used as auxiliary to lock 14; previous project cost \$540,000.

11. Depth over upper poiree sill. Depth over upper miter sill is 27 feet, at lock 15.

12. \$640,868 for first lock was reported by Mississippi River Power Company, transferred to Government free in lieu of improvements destroyed. (Annual Report, 1928, pp. 1118-1119.) Present estimate includes \$13,132,600 for main lock and appurtenant work.

13. Complete except for guidewall extensions.

14. L/D 26 has been replaced by the Melvin Price Locks and Dam at which full pool was raised 1 February 1990. L/D 26 has been removed.

15. Melvin Price Locks and Dam (2nd Lock) is complete except for the mitigation plan which is required to finalize environmental documentation. Actual cost to date is \$211,446,000. Present estimate includes \$104,000 for mitigation plan.
