LONG-TERM GOAL

The goal of the workshop series is to review the state-of-the-art, to identify areas of ignorance, and to make recommendations for future research on a topic or topics relevant to the Office of Naval Research.

SCIENTIFIC OBJECTIVES

The participants of the 1997 workshop were tasked to assess the merits of Monte Carlo simulations in oceanography, especially in the fields of data assimilation, turbulent transport, population dynamics, and wave propagation through random media.

APPROACH

WORK COMPLETED

A four-day workshop on “Monte Carlo Simulations in Oceanography” was held from January 14 - 17, 1997, in Honolulu, Hawaii. The workshop brought together oceanographers, climatologists, physicists, statisticians and probabilists. The lectures of the participants are published in Muller and Henderson (1997). A summary of the workshop is given in Muller and Henyey (1997)

RESULTS

Models in oceanography and elsewhere contain uncertainties that need to be understood and quantified in order to assess the skill of the model. Monte Carlo simulations become the method of choice when the high dimensionality or nonlinearity of the problem renders the more traditional moment-based methods either theoretically or computationally intractable. Monte Carlo simulation directly give the evolution of the probability density function from which the moments or any other desired statistics can be derived. When using Monte Carlo simulations, it is imperative to choose a random process that adequately models the underlying uncertainties. This requires insight and intuition of the modeler. Processes other than Gaussian white noise might be called for. Computational aspects can also be nontrivial and are often daunting. However, when properly applied, Monte Carlo simulations offer an economic, and often the only, way to make headway on a problem, as shown by the many examples discussed at the workshop.

Report Documentation Page				Form Approved OMB No. 0704-0188	
Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.
