

**Annual Report
Fiscal Year 2002
of the Secretary of the Army
On Civil Works Activities
(1 October 2001 - 30 September 2002)**

Report Documentation Page				Form Approved OMB No. 0704-0188	
Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

**DEPARTMENT OF THE ARMY
OFFICE OF THE ASSISTANT SECRETARY
CIVIL WORKS
108 ARMY PENTAGON
WASHINGTON DC 20310-0108**

REPLY TO
ATTENTION OF

4 August 2003

Honorable Richard B. Cheney
President of the Senate
Washington, D.C. 20510-0010

Dear Mr. President:

I am submitting the Annual Report on Civil Works Activities for Fiscal Year 2002, in accordance with Section 8 of the Rivers and Harbors Act of 1888 and Section 925(b) of the Water Resources Development Act of 1986.

This field report contains narrative summaries and statistics on water resources development projects of the Army Corps of Engineers where there has been activity between October 1, 2001, and September 30, 2002.

Sincerely,

A handwritten signature in black ink, reading "R. L. Brownlee", is positioned below the word "Sincerely,".

R. L. Brownlee
Acting Assistant Secretary
of the Army (Civil Works)

**DEPARTMENT OF THE ARMY
OFFICE OF THE ASSISTANT SECRETARY
CIVIL WORKS
108 ARMY PENTAGON
WASHINGTON DC 20310-0108**

REPLY TO
ATTENTION OF

4 August 2003

Honorable J. Dennis Hastert
Speaker of the House of Representatives
Washington, D.C. 20515-6501

Dear Mr. Speaker:

I am submitting the Annual Report on Civil Works Activities for Fiscal Year 2002, in accordance with Section 8 of the Rivers and Harbors Act of 1888 and Section 925(b) of the Water Resources Development Act of 1986.

This field report contains narrative summaries and statistics on water resources development projects of the Army Corps of Engineers where there has been activity between October 1, 2001, and September 30, 2002.

Sincerely,

A handwritten signature in cursive script, reading "R. L. Brownlee", is positioned below the word "Sincerely,".

R. L. Brownlee
Acting Assistant Secretary
of the Army (Civil Works)

I-1

NEW ENGLAND DISTRICT

The New England District comprises all of New England except western Vermont and small portions of Massachusetts and Connecticut along their western boundaries, and includes small portions of southeastern New York. These areas are all embraced in the drainage basins tributary to Long Island Sound and the Atlantic Ocean east of the New York-Connecticut State line. The District also includes Fishers Island, NY.

Navigation

1. ANDREW'S RIVER, MA

Location. The Andrews River is located on the western shore of Nantucket Sound in the Town of Harwich, Massachusetts, about 84 miles southeast of Boston, Massachusetts. (See National Ocean Service Coast Survey Chart 13229.)

Existing project. The project provides for a channel 6 feet deep and 75 feet wide, extending about 2,900 feet from deep water in Nantucket Sound to a public marina, two jetties on the east and west sides of the harbor entrance, and a three-acre maneuvering and anchorage basin. The east jetty was completed in June 1967. Dredging was completed in April 1968. Construction of the west jetty was completed in May 1973. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. Fully complied with for completed work.

Terminal facilities. None.

Operations during fiscal year. Maintenance: Dredging of the Federal channel was performed by the Government-owned dredge CURRITUCK from June 9 to 13, 2002. About 9,820 cubic yards of sand were removed and placed east of the entrance channel in a near shore area in Nantucket Sound. Plant rental cost was \$48,000. Hired labor costs were \$16,405 for performing and plotting pre- and after-dredge surveys and \$10,664 for project coordination and management.

2. AUNT LYDIA'S COVE, CHATHAM, MA

Location. Aunt Lydia's Cove is located in Chatham Harbor, Chatham, Massachusetts. The cove is located on the "elbow" of Cape Cod approximately 90 miles southeast of Boston, Massachusetts. (See National Ocean Service Coast Survey Chart 13248.)

Existing project. Provides for an entrance channel 8 feet deep and 100 feet wide for a length of 900 feet and a 9.5-acre anchorage also to a depth of 8 feet. Work was completed in June 1995. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. Fully complied with for completed work.

Terminal facilities. The Chatham Municipal Fish Pier is the only terminal facility in Aunt Lydia's Cove. Initially constructed in 1945, the pier is used to offload catch, access

boats, load supplies and perform some repairs. Two independent fish companies lease space at the pier's main packing facility where fish are offloaded, packed in ice and shipped to various distributors. The pier provides diesel fuel, gasoline, parking and restroom facilities. Transient and recreational boaters use the pier for loading, offloading, and refueling. This facility is adequate for existing commerce.

Operations during fiscal year. Maintenance: Dredging of the Federal channel was performed by the Government-owned dredge CURRITUCK from May 21 to June 8, 2002 at a plant rental cost of \$252,000. A total of 60,500 cubic yards of sand were removed and placed in a near shore disposal area southeast of the dredging area and outside the outer bar. A minor amount of material was placed at a near shore area off Andrews Harding Beach. Associated costs included \$10,000 for the Waterways Experiment Station's (WES) continuing evaluation of coastal processes as they relate to dredging. Hired labor costs were \$23,035 for performing and plotting pre- and after-dredge surveys and \$14,210 for project coordination and management.

3. BELFAST HARBOR, ME

Location. Belfast Harbor is located at the mouth of the Passagasaweg River along the northwest side of Penobscot Bay, about 25 miles north of Rockland Harbor, Maine. (See National Ocean Service Coast Survey Chart 13309.)

Previous project. For details see Annual Report for 1897.

Existing project. Provides for a channel 15 feet deep and 220 feet wide, extending about 1,000 feet from deep water in Penobscot Bay to the wharves on the south side of Belfast Harbor. The project also includes two anchorage areas on the east and west sides of the channel, 8 and 13 feet deep respectively. Dredging was completed in 1897. (See Table 1-B for Act authorizing the existing project.)

Terminal facilities. There are nine wharves located along the south side of Belfast Harbor below the highway bridge. None of these wharves are publicly owned. Facilities are adequate for existing commerce.

Operations during fiscal year. Maintenance: A continuing contract for maintenance dredging of the 15-foot channel and 8-foot anchorage area was awarded on September 28, 2002. Work is expected to begin next FY. A dredging window from November 15 to April 14 was established to avoid potential adverse impacts to lobster resources and migrating Atlantic salmon. Hired labor costs were \$18,615 for survey work including plotting and quantities estimate, \$15,754 for the preparation of plans and specifications, \$10,968 for project coordination and management, and \$3,013 for contract processing.

4. BOSTON HARBOR, MA

Location. Boston Harbor includes all expanse of tidewater lying within a line from Point Allerton to Point Shirley and extending from that line westward to the mainland. This comprises an area of about 47 square miles, exclusive of the islands. (See National Ocean Service Coast Survey Charts 13270 and 13272.)

Previous project. For details see the Annual Reports for 1915, 1917, and 1938.

Existing project. Completed work at Boston Harbor, adopted in 1825 and supplemented by enactments through 1958, provides for the improvement of the harbor proper and its approaches - Fort Point Channel, Reserved Channel, Chelsea River and Weir River. For a more detailed description see page 3 of the Annual Report for 1974. These improvements were completed in May 1966 with the construction of the Chelsea River 35-foot channel and maneuvering basin. New work involves deepening the Mystic River and Reserved Channels from 35 to 40 feet and the Chelsea River Channel from 35 to 38 feet; widening and deepening to 40 feet the Inner Confluence Area which provides access to the Mystic and Chelsea River Channels; and widening at the entrance to the Reserved Channel. The proposed project would increase the navigational efficiency and safety of harbor operations and reduce tidal delays for larger vessels. New work was completed in December 2001. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. Fully complied with for completed work. A Project Cooperation Agreement was signed on February 13, 1998 between the Corps and the Massachusetts Port Authority for the new work. Consistent with the cost sharing and financing concepts reflected in the Water Resources Development Act of 1986, the non-Federal sponsor must pay 25 percent of the costs allocated to deep draft navigation during construction; reimburse an additional ten percent of the costs allocated to deep draft navigation within a period of 30 years following completion of construction (partially offset by a credit allowed for the value of lands, easements, rights-of-way, relocations and dredged material disposal areas); relocate utilities necessary for construction of the project; and deepen berthing areas at the terminals of project beneficiaries.

Terminal facilities. There are 156 wharves and piers in the harbor, not including Mystic, Weymouth-Fore, and Town Rivers, which are reported elsewhere. Of the terminals, 28 are publicly owned, 13 are open to public use, 73 have mechanical-handling facilities, and 70 have railroad connections. Facilities are considered adequate for existing commerce. For a full description of channel facilities in Chelsea River, refer to House Document 350, 87th

Congress, 2nd session. (See Port Series No. 3, Part 2, Port of Boston, MA dated 1967.)

Operations during fiscal year. New work: A contract for improvement dredging was awarded May 18, 1998. Work began in August 1998 and was completed in December 2001, except for backfilling of the McArdle Bridge cable trench. Final contract amount has been determined and will be paid following completion of backfilling work next FY. Meetings were held with the project sponsor to review their costs of lands, easements, rights-of-way, and utility relocations (LERR), and to discuss final project cost sharing.

Maintenance: Maintenance dredging was performed in conjunction with improvement work. Final payment items were identified and a summary report on project activities was completed in accordance with the Water Quality Certificate. Funds in the amount of \$82,854 were expended on a sampling and testing contract for proposed maintenance dredging of the 40-foot North Channel. Hired labor costs of \$6,684 were incurred to prepare an Environmental Assessment for proposed maintenance work.

5. BRIDGEPORT HARBOR, CT

Location. Bridgeport Harbor is located on the north shore of Long Island Sound, about 51 miles east of New York City. (See National Ocean Service Coast Survey Chart 12369.)

Previous project. For details the Annual Reports for 1915 and 1938.

Existing project. For a description of the completed improvements see the Annual Report for 1668. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. Fully complied with for completed work. There is no reasonable prospect that required cooperation will be forthcoming from local interests for the breakwaters at Black Rock Harbor and the Burr and Cedar Creek anchorages. For further details see the Annual Report for 1968.

Terminal facilities. There are 35 waterfront facilities serving the port of Bridgeport. Three wharves are owned by the City of Bridgeport. (See Port and Terminal Facilities of Southern New England No. 4, revised in 1952.) Facilities are adequate for existing commerce.

Operations during fiscal year. Maintenance: Contract costs of \$103,499 were incurred for additional sampling and testing of entrance channel sediment to re-evaluate its suitability for unconfined open water disposal. Hired labor costs in association with proposed maintenance dredging of the Federal project included \$1,503 for completing the

Preliminary Environmental Assessment, \$9,542 to initiate economic evaluation efforts as part of the Dredged Material Management Plan (DMMP), and \$8,318 project management including coordination with EPA for the suitability determination

6. CAPE COD CANAL, MA

Location. This waterway is a sea level canal; extending from the head of Buzzards Bay, Massachusetts, easterly to a point on Cape Cod Bay about 15 miles southeast of Plymouth Harbor, Massachusetts. (See National Ocean Service Coast Survey Chart 13246.)

Existing project. For a description of existing project see the Annual Report for 1975. Navigational improvements were completed in April 1963, with completion of the East Boat Basin extension. Initial recreational development consists of public use facilities at various locations, which were completed in February 1965. Improvements to public use facilities at the East Boat Basin were completed in May 1974. Construction of public use facilities at Bourne Scenic Park were completed in May 1976. Cape Cod Canal is crossed by two high-level highway bridges and a vertical-lift railroad bridge. Major rehabilitation of Bourne Highway Bridge was completed in December 1965 and major rehabilitation of the Sagamore Highway Bridge was completed in 1982. Minor rehabilitation of the stone breakwater was completed in October 1963. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. Fully complied with for completed work. Local interests must also bear 50 percent of future recreational development in accordance with the 1965 Federal Water Project Recreation Act.

Terminal facilities. There are seven terminals on the canal, of which three are privately owned. Four are used for receipt and freezing of fish and two are used for receipt and storage of oil. The seventh terminal is the State pier, which is owned by the Commonwealth of Massachusetts, and is located on the north bank of the canal at Bourne Neck. Terminals are adequate for existing commerce.

Operations during fiscal year. Major rehabilitation: A contract for Phase I rehabilitation of the Buzzards Bay Railroad Bridge was awarded on August 4, 2000. Phase I work involves repairing or replacing steel members and painting of the superstructure. Work began in April 2001 and was about 90 percent complete at FY end with total contractor earnings of \$11,992,589. A contract for Phase II rehabilitation work was awarded on June 28, 2002. Phase II work involves replacing the counterweight cables, trunion bearings, electrical control system and main switchboard. This work requires the bridge to be inoperable for a 90-day shut down period. The contractor had begun fabrication of

counterweight cables, bearings, and electrical switchboard by FY end. Contractor earnings for Phase II work were \$150,000.

Maintenance: The cost of operation and maintenance work at the Cape Cod Canal totaled \$9,354,993. Operation and maintenance work included \$4,680,612 for navigation features, \$2,067,488 for recreational facilities, \$107,620 for natural resources, and \$350,000 for the Buzzards Bay Railroad Bridge. Other costs include \$56,609 for general real estate activities, \$368,402 for inspection of the Bourne and Sagamore Highway Bridges, \$91,526 for engineering and design, \$113,269 for force protection, \$1,873 for safety support, \$103,215 for pre-dredge surveys, \$34,708 for contract administration, and \$32,081 for supervision and inspection of contracts, including those described below. A contract to repair docks and mooring dolphins was awarded on 8 September 2000. Work began in late September 2000 and was completed in February 2002. Contractor earned \$31,057 this FY, for a contract total of \$713,271. A contract for concrete and pavement repairs on the Bourne and Sagamore Highway Bridges was awarded on 27 September 1999. Work began in October 1999 and was about 90 complete at FY end. Contractor earnings total \$2,640,239, of which \$23,361 was earned this FY. A contract for deck repairs and paving of the Bourne and Sagamore Highway Bridges was awarded 31 March 2000. Work began in April 2000 and was about 65 percent complete at FY end with contractor earnings of \$2,228,757, of which \$93,174 was earned this FY. A contract for maintenance dredging of the Cape Cod Canal was awarded on August 8, 2002. Work began in September and was about 45 percent complete at FY end with contractor earnings of \$1,199,998.

7. COCHECO RIVER, NH

Location. The Cocheco River is located about 9 miles northwest of Portsmouth, New Hampshire. (See National Ocean Service Coast Survey Chart 13285.)

Existing project. Provides for a 7-foot tidewater channel 60 to 75 feet wide (7.5 feet deep and 50 feet wide in rock), extending from the confluence of the Cocheco and Piscataqua Rivers to the head of navigation at the Upper Narrows in Dover, New Hampshire. Work was completed in 1906. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. Fully complied with for completed work.

Terminal facilities. The channel is used primarily by recreational craft based at a marina located near the head of the waterway.

Operations during fiscal year. Maintenance: Hired labor costs incurred in association with proposed

maintenance dredging of the Federal channel were \$5,600 for continued work on an Environmental Assessment, \$1,500 for preparation of plans and specifications, \$2,700 for rock probes, and \$11,700 for project coordination and management.

8. CONNECTICUT RIVER BELOW HARTFORD, CT

Location. The Connecticut River has its source at Connecticut Lake in northern New Hampshire, then flows southerly about 380 miles to Long Island Sound. Navigation extends about 52 miles upstream from the mouth of the river in Saybrook to Hartford, Connecticut. (See National Ocean Survey Charts 12373 and 12377.)

Previous project. For details see the Annual Reports for 1915 and 1938.

Existing project. For a description of the existing project and authorizing legislation, see the Annual Report for 1995.

Local cooperation. Fully complied with for completed work.

Terminal facilities. Along both the Connecticut and Eightmile Rivers there are two or three wharves at each river town, one or more of which are open to public use. Facilities are adequate for existing commerce.

Operations during fiscal year. Maintenance: Dredging of the Federal channel at Pistol Point Bar was performed by the Government-owned hopper dredge CURRITUCK from August 15 to September 8, 2002. A total of 49,600 cubic yards of sand were removed and placed in a nearby site, downstream of Gildersleeve Island in the Connecticut River. Plant rental cost was \$334,999. Environmental restrictions to protect Shortnose sturgeon limited work to the period of August 15 to April 1. Hired labor costs incurred in association with this work were \$35,020 for pre- and after-dredge surveys.

9. GREAT SALT POND, BLOCK ISLAND, RI

Location. Great Salt Pond is located on the west shore of Block Island, about 11 miles southwest from Point Judith Harbor, Rhode Island and 18 miles southeasterly from Stonington Harbor, Connecticut. (See National Ocean Service Coast Survey Chart 13217.)

Existing project. Provides for an entrance channel 18 to 25 feet deep and 150 to 300 feet wide from the Atlantic Ocean to Block Island Pond; a riprap jetty extending 1,691 feet along the southerly side of the entrance channel; and a

stone revetment and sand fences to protect the shoreline and beaches. The south jetty was completed in 1905. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. None required for completed work.

Operations during fiscal year. Maintenance: Contract costs of \$1,903 were incurred for boat rental and benthic analysis on samples for a proposed near shore disposal site. Hired labor costs included \$6,073 for collection of benthic information and work on an Environmental Assessment.

10. GREEN HARBOR, MA

Location. Green Harbor is located within the town of Marshfield on the west-side of Massachusetts Bay, about 30 miles southeast of Boston, Massachusetts, and 9 miles north of Plymouth Harbor, Massachusetts. (See National Ocean Service Coast Survey Chart 13253.)

Existing project. For a description of the existing project see the Annual Report for 1995. Construction was completed in October 1969. The Water Resources Development Act of 1999 deauthorizes a portion of project. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. Fully complied with for completed work.

Terminal facilities. The major terminal facility is the Town Pier in the village of Brant Rock. The facility is an earth-filled bulkhead with landing and parking area about 290 feet wide, extending 210 feet into harbor. A marina service is south of the Town Pier; and a facility for recreational craft has been developed on the south side of the harbor near the head of navigation.

Operations during fiscal year. Maintenance: Dredging of the entrance channel was performed by the Government-owned dredge CURRITUCK from May 6 to 20, 2002 at a plant rental cost of \$177,000. About 16,070 cubic yards of sand and cobbles were removed and placed in a near shore site off Green Harbor Beach. Associated hired labor costs included \$17,255 for performing and plotting pre- and after-dredge hydrographic surveys, \$1,760 for preparation of an Environmental Assessment and \$7,973 for project coordination and management.

11. HARBOR OF REFUGE, BLOCK ISLAND, RI

Location. The Block Island Harbor of Refuge is located on the east side of Block Island, about 13 miles southwest from Point Judith Harbor, Rhode Island, and about 25 miles

southeasterly from Stonington Harbor, Connecticut. (See National Ocean Survey Chart 13217.)

Existing project. For a description of the existing project, see the Annual Report for 1967. The project was completed in 1916 except for dredging of two 15-foot anchorages in the outer harbor west of the entrance channel, which were deauthorized in November 1986. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. None required.

Terminal facilities. There are two wharves in the harbor, both steel sheet pile bulkhead, which comprise the southern and eastern limits of the basin. Total docking space amounts to 500 feet. No mechanical-handling facilities are available. One wharf, owned by the town and open to the public, is considered inadequate for present general needs of boating in the harbor. There is limited room for expansion of terminal facilities.

Operations during fiscal year. Maintenance: Work consisted of investigations in anticipation of maintenance dredging. Hired labor costs included \$9,745 for hydrographic surveys and \$2,300 for project management and coordination. Surveys showed there was no need for maintenance dredging at this time.

12. KENNEBEC RIVER, ME

Location. The Kennebec River flows from Moosehead Lake in northern Maine about 150 miles southerly and discharges into the Atlantic Ocean at Popham Beach in Phippsburg, about 25 miles east of Portland, Maine. (See National Ocean Service Coast Survey Chart 13298.)

Previous project. For details see the Annual Reports for 1915 and 1938.

Existing project. For a description of the existing project and authorizing legislation, see the Annual Report for 1992.

Local cooperation. None required.

Terminal facilities. Wharves suitable for landing or loading are at Bath, Woolwich, Richmond, Randolph, Gardiner, Hallowell and Augusta. Rail connections are available at some wharves. Depths range from 12 to 25 feet. Many facilities are equipped with a mechanism for handling passengers and freight. Facilities are considered adequate for existing commerce.

Operations during fiscal year. Maintenance: A contract for maintenance dredging of the Doubling Point and North Sugarloaf Island reaches of the 27-foot Federal channel was

awarded on March 27, 2002. Work by the hopper dredge ATCHAFALAYA began on April 21, 2002 and was completed eight days later. A total of 21,582 cubic yards of sand were removed and placed in a deep area of the river near Bluff Head and in a near shore area off Jackknife Ledge. Contract costs were \$439,841. Hired labor costs included \$7,997 for preparation of plans and specifications, \$8,072 for preparation of a Biological Assessment, \$46,495 for performing and plotting pre- and after-dredge surveys, \$14,085 for contract supervision and inspection, \$1,926 for contract administration, and \$9,662 for project coordination and management.

13. LITTLE HARBOR, NH

Location. Little Harbor is located on the west side of Portsmouth Harbor between New Castle Island and the New Hampshire mainland. (See National Ocean Service Coast Survey Chart 13278.)

Existing project. For a description of the existing project and authorizing legislation, see the Annual Report for 1976.

Local cooperation. None required.

Terminal facilities. One dock owned by Wentworth Hotel, but not available to public. Tentative State plans include a small boat landing and shore facilities.

Operations during fiscal year. Maintenance: To mitigate for eelgrass losses resulting from maintenance dredging performed during FY 2001, a contract was awarded on July 9, 2001 to replant 5.5 acres of eelgrass. Eelgrass planting was done at three sites, 2.5 acres in Little Harbor, 1.5 acres at Kittery Point and 1.5 acres north of Pierce Island. Work was initiated in August 2001 and completed the following month. The contract includes monitoring of eelgrass plantings during FY 2002. Eelgrass monitoring was conducted at the three sites during FY 2002 at a cost of \$75,399. Interim results indicate the replanting program met specified goals and that additional planting is not required.

14. LYNN HARBOR, MA

Location. Lynn Harbor is located about 8 miles northeast of Boston Harbor. It is a natural harbor at the head of Broad Sound and is about 3 miles long and 1.5 miles wide. (See National Ocean Service Coast Survey Chart 13275.)

Previous project. For details see page 37 of the Annual Report for 1934 and page 52 of the Annual Report for 1994.

Existing project. Provides for a channel 22 feet deep and 300 feet wide from deep water west of Bass Point, Nahant, to and including a turning basin 550 feet wide at the head of the harbor. The project also provides for a Western Channel

leading to the Saugus River 8 feet deep and 150 feet wide. Construction of the project was completed in 1935. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. Conditions of local cooperation in connection with the existing project have not been complied with. Local interests must deepen to 25 feet the channel previously dredged by them to a depth of 22 feet; and contribute \$8,000 towards the cost of deepening the widened the turn into the Municipal Channel to that depth.

Terminal facilities. There are seven marinas in the harbor, one that is open to the public. There are also four public launching ramps and two town docks.

Operations during fiscal year. Maintenance: An adjustment of \$-45,078 was made to previously reported expenditures for maintenance dredging of the 8-foot Western Channel completed in FY 2001.

15. NARRAGUAGUS RIVER, ME

Location. Rises in Eagle Lake and flows southeasterly for about 49 miles to Narraguagus Bay and the Atlantic Ocean. (See National Ocean Service Coast Survey Chart 13324.)

Previous projects. For details see the Annual Reports for 1907.

Existing project. Provides for a channel 11 feet deep and 150 feet wide from deep water in Narraguagus Bay to Wyman, then 9 feet deep and 100 feet wide to Milbridge, and then 6 feet deep and 100 feet wide the landing downstream from the Route 1A Highway Bridge. The project includes three 6-foot anchorage areas adjacent to the 6-foot channel in Milbridge, widening at the turn in Wyman, and a turning basin near the landing in Milbridge. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. Fully complied with for completed work.

Terminal facilities. There are four major wharves along the Narraguagus River. One is on the east bank, a short distance downstream of the Route 1A Highway Bridge, two are on the west bank in Milbridge, and the fourth is near the mouth of the river at Wyman. All are privately owned and in fair condition. Facilities are adequate for existing commerce.

Operations during fiscal year. Maintenance: Work consisted of investigations in preparation for proposed maintenance dredging of the Federal channels. Contract costs of \$88,929 were incurred for investigation of a new disposal site in Narraguagus Bay. Hired labor costs included

\$2,300 for plotting survey drawings, \$4,991 for geotechnical support, \$23,400 for preparation of an Environmental Assessment, and \$16,634 for project management.

16. NEWBURYPORT HARBOR, MA

Location. Newburyport Harbor is located at the mouth of the Merrimack River, about 4 miles south of the Massachusetts and New Hampshire state line and about 48 miles north of Boston, Massachusetts. (See National Ocean Service Coast Survey Chart 13282.)

Existing project. See the Annual Report for 1994 for a description of the existing project. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. Fully complied with for completed work.

Terminal facilities. Facilities extending along the south bank of the Merrimack River below the Route 1 highway bridge include several marinas, a yacht club, public landing and a commercial fish pier. There are 4 marinas and one town pier located along the north side of the river. Terminal facilities are considered adequate for existing commerce.

Operations during fiscal year. Maintenance: Work consisted of investigations in anticipation of maintenance dredging. Hired labor costs included \$21,600 for surveys, \$6,756 for preparation of plans and specifications, and \$22,700 for project management. Maintenance dredging was deferred pending receipt of local permits.

17. PENOBSCOT RIVER, ME

Location. The Penobscot River drains a large number of lakes and small streams in north, central and eastern Maine, then flows southerly about 100 miles through the middle of the state to Penobscot Bay, about 90 miles northeast of Portland, Maine. (See National Ocean Service Coast Survey Chart 13309.)

Previous projects. For details see the Annual Reports for 1915, 1938 and 1949.

Existing project. Provides for a channel 22 feet deep and 350 feet wide between Bucksport and Winterport, 15 feet deep near Stearns Mill and Crosby's Narrows with some widening and straightening of the channel in these areas, and 14 feet deep and 100 to 300 feet wide at Bangor Harbor. The existing project was completed in 1913. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. Fully complied with for completed work.

Terminal facilities. The riverfront at Bangor has 12 wharves, most of which are timber crib with stone ballast. Eleven wharves have railroad connections. On the east side of the river opposite Bangor, there is one water terminal, a coal handling plant having mechanical appliances and three petroleum products storage plants. At South Brewer there is a large pulp and paper plant, which has water connections, oil pumping and storage facilities. A number of private wharves are open to the public at moderate charges. At Bucksport along the north side of the river there are three important terminals, one a coal handling plant and two used by a large paper manufacturing plant which has terminal facilities for receipt and storage of oil products and pulpwood. Facilities are adequate for existing commerce.

Operations during fiscal year. Maintenance: Contract costs of \$83,288 were incurred to probe hard areas as a preliminary step of proposed maintenance dredging of the Federal channel. Hired labor costs associated with the probing contract included \$17,021 for surveys, \$6,551 for geotechnical support, and \$6,850 for project management and coordination.

18. PLYMOUTH HARBOR, MA

Location. Plymouth Harbor is located about 45 miles south of Boston, Massachusetts. Its outer anchorage, the "Cow Yard" is common to Plymouth, Duxbury, and Kingston, Massachusetts. (See National Ocean Service Coast Survey Chart 13253.)

Previous projects. For details see the Annual Reports for 1915 and 1938.

Existing project. Provides for riprap along sections of Long Beach damaged by the storm of November 1898 and restoring the Eel River to its former course; a channel 18 feet deep and 200 feet wide, increased at the entrance and on curves, from the bay to the town wharves, a distance of about 2.5 miles, with a suitable turning basin at the inner end; a channel 15 feet deep and 150 feet wide extending northwesterly about 0.3 miles from the State Pier with a 15-foot turning basin 300 feet square at its northwesterly end; maintenance of the area dredged by the Commonwealth of Massachusetts to 18 feet deep connecting the 15-foot and 18-foot channels in the vicinity of the State Pier; a rubble stone breakwater extending 1,400 feet easterly thence 2,100 feet southeasterly from the town wharf; an 8-foot anchorage, 60 acres in area, inside the breakwater; and recreational development to provide for sport fishing from the breakwater, consisting of a stone causeway about 360 feet long extending from the westerly end of the breakwater to land, a guardrail along the top of the breakwater, a footbridge spanning the navigation opening through the breakwater, parking and sanitary facilities. Construction of the 8-foot anchorage was completed in 1967. Construction

of the breakwater along with rehabilitation of Long Beach Dike was completed in 1971. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. Fully complied with for completed work.

Terminal facilities. There are 3 wharves of pile and timber construction; one is owned by the State, one by the town and one by the Plymouth Yacht Club. The State and town wharves are open to the public. In addition there are two boatyards with marine railway facilities along the waterfront, equipped for boat building and repairs. Local interests maintain the existing public landings open to all on equal terms and provide all necessary mooring facilities in the anchorage. Facilities are considered adequate for existing commerce.

Operations during fiscal year. Maintenance: Hired labor costs incurred in connection with proposed repairs to the Long Beach Dike were \$11,002 for project coordination and management. Construction activities proposed for this FY were deferred pending receipt of local permits from the town.

19. PORTLAND HARBOR, ME

Location. Portland Harbor is located on the southwestern coast of Maine, about 100 miles northeast of Boston, Massachusetts. (See National Ocean Service Coast Survey Chart 13292.)

Previous projects. For details see the Annual Reports for 1915 and 1936.

Existing project. For a description of the existing project and authorizing legislation, see the Annual Report for 1978. The project was completed in 1966, except for ledge removal that was completed in 1968.

Local cooperation. Fully complied with for completed work.

Terminal facilities. There are 37 waterfront facilities, seven of these facilities are publicly owned; the U.S. Government owns four, the State of Maine owns two, and the City of South Portland owns one. Mechanical-handling facilities are available at 24 wharves and railroad connections have been made to 27 wharves. The facilities are adequate for existing commerce.

Operations during fiscal year. Maintenance: The contractor who performed the last maintenance dredging work, which was completed in FY 1999, submitted a request for equitable adjustment based on contract delays and final contract quantities. Although, negotiations were still

ongoing at FY end, an adjustment of \$150,000 was made to previous expenditures in anticipation of contract settlement. A contract to probe hard areas encountered during the last maintenance dredging was completed at a cost of \$124,129. Hired labor costs associated with this contract were \$8,032 for surveys, \$4,936 for geotechnical support, and \$5,020 for project management and coordination.

20. PROVIDENCE RIVER AND HARBOR, RI

Location. The Providence River originates in Providence, Rhode Island at the junction of two small streams, the Woonasquatucket and Moshassuck Rivers. It then flows southerly about a mile to the head of Providence Harbor at Fox Point where it is joined by the Seekonk River and continues southerly another 8 miles to Narragansett Bay. (See National Ocean Service Coast Survey Charts 13224 and 13225.)

Previous projects. For details see the Annual Reports for 1915, 1936, and 1938.

Existing project. Provides for a channel 16.8 miles long and 40 feet deep, generally 600 feet wide from deep water in Narragansett Bay just south of Prudence Island Light to the turn below Field Point at Providence, thence up to 1,700 feet wide to Fox Point. The existing 40-foot channel was completed in January 1976. Dredging of a 30-foot channel, 150 feet wide from the upper end of the existing project to India Point at the mouth of the Seekonk River was deauthorized in November 1986. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. Local interests have yet to provide berthing areas commensurate to channel depths.

Terminal facilities. There are 27 water terminal facilities serving the port of Providence, Rhode Island. Three-fourths of all facilities have railway connections. The City of Providence owns four of these facilities and the State of Rhode Island owns two others. Facilities are adequate for existing commerce.

Operations during fiscal year. Maintenance: Costs incurred for various contracts associated with completion of the Final Environmental Impact Statement (FEIS) and Record of Decision (ROD) addressing proposed dredging of the 40-foot Federal channel were \$5,586 for printing the FEIS and ROD, \$2,031 for holding public meetings, \$168,005 for Confined Aquatic Disposal (CAD) cell borings, \$36,240 for subsurface investigations of the Providence and Worcester Railroad upland disposal site, and \$4,000 for completion of a Fisheries Assessment for open water disposal. Hired labor costs included \$105,030 for

preparation of a Decision Document, \$158,030 for preparation of the FEIS and ROD, \$208,082 for preparation of plans and specifications, \$67,945 for hydrographic and topographic surveys, \$1,855 for Real Estate efforts, \$4,298 for project travel, and \$86,477 for project coordination and management. The FEIS was completed in August 2001 and the ROD was issued on March 18, 2002. The Chief, Planning and Policy Division, HQUSACE approved the Decision Document on September 25, 2002.

21. ROCKLAND HARBOR, ME

Location. Rockland Harbor is located on the westerly side and near the mouth of Penobscot Bay, about 80 miles northeast of Portland, Maine. (See National Ocean Service Coast Survey Chart 13307.)

Previous projects. Adopted by the River and Harbor Act of June 3, 1896. For details see Annual Report for 1906.

Existing project. Provides for a breakwater extending 4,346 feet southerly from Jameson Point, a short approach channel 18 feet deep and 200 feet wide, and three branch channels 14 feet deep and 100 to 150 feet wide with turning basins. The breakwater was completed in 1904. The channels and turning basins were completed in 1959. (See Table 1-B at end of chapter for Acts authorizing the existing project).

Local cooperation. Fully complied with for completed work.

Terminal facilities. About 15,000 feet of waterfront has been developed with over 20 wharves. Wharf construction varies from timber cribs filled with stones or earth, to granite faced fills with wooden-pile additions. The Rockland Port District has constructed a public pier and terminal at the entrance to Lermond Cove. Ships using this terminal include ferries and supply ships servicing the Penobscot Bay islands. Facilities are adequate for existing commerce.

Operations during fiscal year. Maintenance: A continuing contract for maintenance dredging of the Federal project was awarded on September 21, 2002. Dredging had not begun by FY end as environmental restrictions to protect lobster resources and migrating Atlantic salmon limit work to the period of November 15 to April 14. Hired labor costs were \$9,500 for preparation of plans and specifications, \$9,945 for pre-dredge surveys, \$2,291 for contract supervision and administration, and \$14,511 for project coordination and management.

22. SALEM HARBOR, MA

Location. Salem Harbor is located on the north shore of Massachusetts Bay, about 12 miles north of the entrance to

Boston Harbor, Massachusetts. (See National Ocean Service Coast Survey Charts 13275 and 13276.)

Previous projects. For details see Annual Report of 1915.

Existing project. Provides for a channel 32 feet deep and generally 300 feet wide, widened to 400 feet at bends and at the inner end, extending about 1.5 miles from deep water in the outer harbor to a point about 1,500 feet from Salem Terminal wharf, where it joins locally dredged approach channel of same depth leading to wharf. Project also provides for a channel 10 feet deep in South River, 300 feet wide and gradually narrowing to 50 feet wide at the upstream end of Pickering Wharf, and for a branch channel on the east side of Derby Wharf, 8 feet deep, 100 feet wide, and about 700 feet long, which widens into a basin of the same depth, 500 feet long and 200 feet wide. Existing project was completed in November 1967. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. Fully complied with for completed work.

Terminal facilities. The extensively developed waterfront of Salem Harbor and the South River is about 1 mile in extent and includes 9 wharves owned by private interests. The Salem Terminal is the largest of these and serves the New England Power Company's generating station. It is also the principal terminal for receipt and distribution of coal and petroleum products in Salem and tributary area. The Navy uses one of the two wharves owned by the National Park Service as a training center. Nine other wharves in the harbor are outside of the extensively developed area.

Operations during fiscal year. Maintenance: Work consisted of investigations in preparation for maintenance dredging of the Federal channels. Hired labor costs included \$58,900 for performing and plotting pre-dredge surveys, \$2,389 for preparation of and Environmental Assessment, \$3,384 for engineering support, and \$76,379 for project coordination and management.

23. SAUGUS RIVER, MA

Location. The mouth of the Saugus River is located along the western shore of Lynn Harbor in Broad Sound, about 5 miles northeast of Boston Harbor, Massachusetts. The river forms the boundary between the communities of Saugus and Lynn, Massachusetts. (See National Ocean Service Coast Survey Chart 13275.)

Existing project. Provides for an entrance channel 80 to 150 feet wide and 18,400 feet long from deep water in Broad Sound, through the Western Channel of Lynn Harbor and upstream in the Saugus River to the harbor area and

commercial facilities. The first 17,700 feet of the channel is 8 feet deep and extends to the uppermost commercial shore facilities. The final 700 feet of the channel is 6 feet deep and provides access to the uppermost anchorage. The project also provides for 2 anchorage areas, both 6 feet deep and totaling 4.3 acres, to accommodate the commercial fleet. Construction of the project was completed in March 2001. (See Table 1-B for Act authorizing the project.)

Local cooperation. A Project Cooperation Agreement was signed on May 22, 2000 between the Corps and the Commonwealth of Massachusetts Department of Environmental Management. The project sponsor must provide all lands, easements, rights-of-way, and perform all relocations determined by the Government to be necessary for project construction; provide 10 percent of total General Navigation Feature (GNF) costs during construction; reimburse an additional 10 percent of total GNF costs within a period not to exceed 30 years following completion of construction (partially offset by a credit allowed for the value of lands, easements, rights-of-way, and relocations); and deepen and maintain all berthing areas and local access channels commensurate with project features.

Terminal facilities. General Electric and a few marinas and yacht clubs line the eastern shore of the Saugus River. The western bank includes Refuse Energy Systems Company (RESCO), the Atlantic Lobstermen's Cooperative, a public landing and a few yacht clubs, marinas and boat yards. Most local fishermen moor their vessels opposite the town landing above the Fox Hill (Route 107) Bridge. Some fishermen, whose residences line the shore on both sides upstream of the town landing, berth their vessels at their own docks and floats during loading and off-loading operations conducted at higher tidal stages. There are about 20 such facilities along the river's edge. Facilities are considered adequate for present harbor activities.

Operations during fiscal year. New Work: Additional work to facilitate de-watering of the upland disposal site was completed in May 2002 and final contract payment was made on September 29, 2002. An adjustment of \$74,454 was made to proportion project costs between the Federal and non-Federal accounts.

24. SCITUATE HARBOR, MA

Location. Scituate Harbor is located on the Atlantic coast about 14 miles southeast of the entrance to Boston Harbor and 33 miles northwest of the Massachusetts Bay entrance to the Cape Cod Canal. (See National Ocean Service Coast Survey Chart 13269.)

Previous projects. For details see the Annual Reports of 1931 and 1938.

Existing project. For description of the existing project and authorizing legislation see the Annual Report for 1995.

Local cooperation. Fully complied with for completed work.

Terminal facilities. There are three wharves, one formerly used for the receipt of coal and lumber, one owned by the town and used as a public landing, and one used as a yacht pier. None of these wharves have any railroad connections or elaborate freight-handling machinery, but each has good highway facilities. Facilities are adequate for existing commerce.

Operations during fiscal year. Maintenance: A continuing contract for maintenance dredging of Scituate Harbor was awarded on June 19, 2002. Work began on September 3, 2002 and was about 40 percent complete at FY end with contractor earnings of \$1,071,258. The contractor used a mechanical bucket dredge to remove about 97,228 cubic yards of primarily silt and clay material. All material was disposed in open water at the Massachusetts Bay Disposal Site. A dredging window from July 15 to January 31 was established to reduce disruption of harbor operations in the summer and to avoid potential impacts to spawning winter flounder. Work during the FY included preparation for repairs to the north and south breakwaters. Hired labor costs associated with maintenance dredging and breakwater repairs were \$24,528 for pre-dredge surveys, \$53,518 for contract supervision and inspection, \$2,928 for contract administration, \$12,442 to evaluate dredging impacts to eelgrass beds, \$21,044 for preparation of plans and specifications for breakwater repairs, and \$23,011 for project coordination and management.

25. SEEKONK RIVER, PROVIDENCE, RI

Location. The India Point Railroad Bridge is located at the mouth of the Seekonk River in Providence, Rhode Island.

Existing project. Provides for the removal of the abandoned India Point Railroad Bridge at a currently estimated cost of \$1,400,000. Removal of the bridge was completed in February 2002. (See Table 1-B for Acts authorizing the project.)

Local cooperation. A Project Cooperation Agreement was signed on December 21, 2000 between the Corps and the City of Providence, Rhode Island. The City must transfer title of the bridge to the United States and provide 50 percent of construction costs. Revenue derived from the sale of scrap from the bridge shall be credited toward the non-Federal share of project costs. A Memorandum of Agreement was signed on September 26, 2000 between the Corps and the Rhode Island State Historic Preservation

Office, stipulating the Corps will market the India Point Railroad Bridge for reuse.

Operations during fiscal year. New work: A contract to remove the India Point Railroad Bridge and center pier was awarded on May 10, 2001. Work began in late June 2001 and was completed in February 2002. Final contract amount was \$1,091,225. The cost of lands, easements, and rights-of-way provided by the project sponsor were under review at FY end.

26. SESUIT HARBOR, MA

Location. Sesuit Harbor is located on the north shore of Dennis in Barnstable County, about 85 miles southeast of Boston, Massachusetts. (See National Ocean Service Coast Survey Chart 13250.)

Existing project. Provides for a channel 6 feet deep and 100 feet wide from deep water in Cape Cod Bay to a point opposite the Dennis Yacht Club, thence reducing in width to 80 feet at the entrance to the inner harbor basin, for a total channel length of 2,400 feet. Project was completed in August 1982. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. Fully complied with for completed work.

Operations during fiscal year. Maintenance: Dredging of the entrance channel was performed by the Government-owned dredge CURRITUCK from June 14 to 19, 2002 at a plant rental cost of \$72,000. About 8,890 cubic yards of sand were removed and placed east of the entrance channel in a near shore area off Cold Storage Beach. An environmental window of June 1 to January 30 was established to protect winter flounder. Hired labor costs included \$6,205 for performing and plotting pre- and after-dredge surveys, and \$6,767 for project coordination and management.

27. UNION RIVER, ME

Location. Union River connects a series of lakes and ponds in east central Maine, flows about 50 miles in a southerly direction, and discharges into Union River Bay just west of Mount Desert Island. (See National Ocean Service Coast Survey Chart 13312.)

Existing project. Provides for a channel 6 feet deep and generally 100 to 125 feet wide, with widening of up to 150 feet along bends in the channel and at the mouth of Union River, extending from deep water in Union River Bay 3.75 miles upstream to a 5.4 acre turning basin of the same depth at the wharves at Ellsworth, Maine. Project was completed

in 1902. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. None required.

Terminal facilities. Facilities are adequate for existing commerce.

Operations during fiscal year. Maintenance: Work under a continuing contract for maintenance dredging of the project to 5 feet, awarded on November 1, 2000, resumed in December 2001 and continued through April 15, 2002 when work was suspended. Environmental restrictions to protect the Atlantic salmon and other fish species limit work to the period of November 1 through April 15. Channel widths were reduced through the upper reaches of the project because of ledge. The contractor used an excavator dredge to remove hard material, sawmill waste and boulders from the upper channel and basin. About 22,500 cubic yards of material and 987 tons of boulders were removed from the upper basin during the FY. All material was disposed in open water in Union River Bay west of Tupper's Ledge. After-dredge surveys found that the outer channel had experienced bank failure, which deposited a considerable amount of material in the channel. A large boulder shoal was also identified in the upper channel through the narrows. Removal of material from these two areas is planned to be accomplished next FY. Contract costs for maintenance dredging during the FY were \$862,412. Hired labor costs incurred in association with maintenance dredging of the Federal project were \$14,422 for coordinating and plotting subsurface investigations, \$70,938 for performing and plotting pre-dredge and progress surveys, \$25,604 for project coordination and management, \$94,447 for supervision and inspection, and \$3,171 for contract administration.

28. WELLS HARBOR, ME

Location. Wells Harbor is located in the town of Wells at the mouth of the Webhannet River, about 20 miles northeast of Portsmouth Harbor, New Hampshire and about 34 miles southwest of Portland Harbor, Maine. (See National Ocean Service Coast Survey Chart 13286.)

Previous project. For a description of the previous project, see the Annual Report for 1991. This project was completed in April 1967.

Existing project. The project, as modified by the Water Resources Development Act of 1999, provides for two stone jetties controlling the inlet, an entrance channel 8 feet deep and 100 feet wide from deep water in the Atlantic Ocean through the jetties into the outer harbor, a channel 6 feet deep and 80 to 150 feet wide into the inner harbor to the town wharf, a 6-foot deep anchorage area in the inner

harbor, a settling basin relocated to the outer harbor, and revetment of the municipal parking area. (See Table 1-B for Acts authorizing the existing project.)

Local cooperation. Fully complied with for completed work.

Terminal facilities. There is one wharf of pile and timber construction on the north side of the anchorage. The facility is owned and operated by the town of Wells and is considered adequate.

Operations during fiscal year. Maintenance: Dredging of a portion of the 8-foot entrance channel was performed by the Government-owned dredge CURRITUCK from June 21 to 26, 2002. Approximately 9,745 cubic yards of sand were removed and placed in a near shore disposal area off Wells Beach, about one mile southwest of the dredging area. Plant rental cost was \$84,000. Hired labor costs included \$24,480 for performing and plotting pre-, progress, and after-dredge surveys and \$6,163 for project coordination and management.

29. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Navigation activities pursuant to Section 107. Public Law 86-645, as amended (preauthorization).

(See Table 1-I)

Mitigation of damages caused by Federal navigation projects pursuant to Section 111. Public Law 90-483 as amended (preauthorization).

(See Table 1-J)

Beach Erosion Control

30. POINT BEACH, MILFORD, CT

Location. The city of Milford is located in south-central Connecticut along the northern shore of Long Island Sound. Point Beach is a residential subdivision located in Milford about 75 miles northeast of New York City and 10 miles southwest of New Haven, Connecticut.

Existing project. The proposed project involves raising the first floor of 58 shorefront and backshore residential structures above the estimated 100-year flood elevation. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. A Project Cooperation Agreement was signed on January 14, 1997 between the Corps and the Connecticut Department of Environmental Protection. This agreement was amended on September 18, 2000 to reflect

the increased Federal cost limitation. The project sponsor must pay 35 percent of all costs allocated to storm damage reduction, assume all costs above the Federal cost limitation of \$3,000,000 and assume all costs for the maintenance and repair of the project after completion.

Operations during fiscal year. New work: A contract to elevate residential structures was awarded on March 29, 2001. Work began in May 2001 and was about 60 percent complete at FY end with total contractor earnings of \$1,591,019.

31. INSPECTION OF COMPLETED BEACH EROSION CONTROL PROJECTS

An inspection of Revere Beach in Massachusetts was conducted in October 2001. The inspection revealed that the beach has remained relatively stable.

32. BEACH EROSION CONTROL WORK UNDER SPECIAL AUTHORIZATION

Beach erosion control activities pursuant to Section 103, Public Law 87-874, as amended (preauthorization).

(See Table 1-K)

Flood Control

33. AROOSTOOK RIVER, FORT FAIRFIELD, ME

Location. The Town of Fort Fairfield is located in northern Maine along the border with New Brunswick, Canada, about 140 miles northeast of Bangor, Maine. The central business district is located along the south side of the Aroostook River in downtown Fort Fairfield.

Existing project. Provides for the construction of approximately 2,800 linear feet of earthen dike and concrete floodwall along the south side of the Aroostook River to protect the central business district of Fort Fairfield from future ice jam flooding. The project also includes construction of a pumping station to remove interior drainage, along with environmental and cultural resource mitigation measures involving planting shrubs over a 5,000 square foot area and relocation of an historic railroad station. The project was completed in January 2002. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. A Project Cooperation Agreement was signed on May 25, 1999 between the Corps and the town of Fort Fairfield, Maine. The project sponsor shall provide all lands, easements, rights-of-way, and perform all

relocations and alterations of buildings, utilities, highways, railroads, and bridges determined by the Government to be necessary for construction of the project; pay a cash contribution in the amount necessary to bring the non-Federal share of project costs to 35 percent (a minimum cash contribution of 5 percent is required); assume all costs in excess of the Federal statutory limitation of \$5,000,000; and bear all operation, maintenance and repair costs of the project after completion.

Operations during fiscal year. A contract to construct the project was awarded July 8, 1999. Work began in August 1999 and was completed in January 2001. Potential ice problems were discovered at the pumping station during winter testing. Work to modify the intake structure and discharge line to preclude ice from interfering with pump operations was initiated in June 2001 and completed in January 2001. Final contract amount was \$4,677,466.

34. BLACKSTONE RIVER BASIN, MA AND RI

Works covered by this plan include a dam and reservoir on West River and local protection works at three cities on Blackstone River. Flood Control Act of 1944 authorized plan for a reservoir on West River and local protection works at Worcester, Massachusetts, and Woonsocket and Pawtucket, Rhode Island, substantially in accordance with House Document 624, 78th Congress, 2nd session. Flood Control Act of 1960 authorized a local flood protection project at lower Woonsocket, Rhode Island, substantially in accordance with Senate Document 87, 85th Congress, 2nd Session. Local protection nonstructural project authorized in 1982 for Belmont Park section of Warwick, Rhode Island, along the Pawtuxet River. Streambank protection projects on the Blackstone River in Millbury, Massachusetts, and on the Clear River in Burrillville, Rhode Island, were authorized in 1985. (See Table 1-N for projects comprising the authorized plan.)

34A. WEST HILL DAM, MA

Location. West Hill Dam is located on the West River in Massachusetts, about three miles above its confluence with Blackstone River and 2.5 miles northeast of Uxbridge, Massachusetts. (See Geological Survey maps Blackstone, MA and RI, Milford, MA, and Grafton, MA.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant structures was initiated in June 1959 and completed in June 1961. Construction of recreational facilities was completed in June 1967.

Local cooperation. Section 3, Flood Control Act of 1944 applies.

Operations during fiscal year. Major rehabilitation: A contract to rehabilitate West Hill Dam was awarded June 8, 2001. Work began in July 2001 and was about 90 percent complete at FY end with contractor earnings of \$11,838,540.

Maintenance: Ordinary operation and maintenance activities were conducted.

35. CHARLES RIVER (NATURAL VALLEY STORAGE AREAS), MA

Location. The Charles River extends inland from Boston Harbor southwesterly toward the Massachusetts-Rhode Island border and is some 80 miles long with a watershed covering 307 square miles.

Existing project. For a description of the existing project and authorizing legislation, see the Annual Report for 1995. Land acquisition was completed in 1990.

Local cooperation. Local interests are required to prevent modifications or alteration of existing roadways, utilities, bridges, culverts, and any other improvements that might affect the drainage characteristics of the natural storage areas; adopt and enforce regulations to restrict development of flood plain lands; and operate and maintain the existing dams along the Charles River. Local assurances were provided by the Commonwealth of Massachusetts.

Operations during fiscal year. Maintenance: Hired labor costs for ordinary maintenance activities, project surveillance and inspection, and land use administration were \$230,940.

36. CONNECTICUT RIVER BASIN, VT, NH, MA AND CT

Location. Works covered by this project are a series of dams and reservoirs located on tributaries of the Connecticut River in Vermont, New Hampshire and Massachusetts, within a radius of 230 miles from Hartford, Connecticut, and local protection works at several cities in the basin.

Existing project. Flood Control Act of 1936, as amended by Act of May 25, 1937, authorized construction of ten reservoirs on tributaries of Connecticut River in accordance with plans in House Document 412, 74th Congress, 2nd session, as the same may be revised upon further investigation of 1936 flood. Flood Control Act of 1938 approved a general comprehensive plan for control of floods and other purposes in Connecticut River Valley, as set forth in House Document 455, 75th Congress, 2nd session, and authorized \$11,524,000 for construction of local

flood protection projects in the plan. Act of October 15, 1940, modified Act of June 18, 1938, to provide additional protection at East Hartford, CT, as set forth in House Document 653, 76th Congress, 3rd session. Act of August 18, 1941, modified comprehensive plan approved in 1938 to include improvements recommended in House Document 653, 76th Congress, 3rd session, and House Document 724, 76th Congress, 3rd session, with such further modifications as may be found justifiable in discretion of Secretary of the Army and Chief of Engineers. Latter Act also authorized to be appropriated additional \$6 million for local protection works and \$10 million for reservoirs. Act of October 26, 1942, further modified plan by including construction of Gully Brook conduit at Hartford, CT. Flood Control Act of 1944 authorized expenditure of \$30 million in addition to previous authorization for comprehensive plan approved in 1938 and modified plan by directing specific consideration of an alternative plan of Vermont State Water Conservation Board instead of Williamsville Reservoir in West River Basin, VT; directing consultation with affected States during course of investigations and transmission of proposal and plans to each affected State for written views and recommendations for reservoir projects heretofore authorized for construction at Cambridgeport, Ludlow, South Tunbridge, and Gaysville, and resubmission of projects or modifications for construction of Sugar Hill site. Flood Control Act of 1950 modified project for flood control at Hartford, CT, authorized by Flood Control Act of 1938, as amended to include Folly Brook dike and conduit. Flood Control Act of 1954 modified plan for flood control in Connecticut River Basin to provide for construction of a reservoir on Otter Brook at South Keene, NH, in lieu of any reservoir or reservoirs heretofore authorized. This Act further modified plan for West River Basin of Connecticut River in Vermont to consist of three reservoirs at Ball Mountain, The Island, and Townshend sites, in lieu of plan of eight reservoirs authorized in Flood Control Act of 1944. Flood Control Act of 1958 modified plan for flood control in Connecticut River Basin to include construction of Littleville Reservoir on Middle Branch of Westfield River, MA, and Mad River Reservoir on Mad River, above Winsted, CT. Flood Control Act of 1960 included authorization in Connecticut River Basin of plan for flood protection on Chicopee River, MA, substantially in accordance with House Document 434, 86th Congress; plan for flood protection on Westfield River, MA, substantially in accordance with Senate Document 109, 86th Congress; plan for flood control and related purposes on Farmington River, Connecticut, substantially in accordance with House Document 443, 86th Congress. Flood Control Act of 1968 included authorization in Connecticut River Basin of plan for construction of Beaver Brook Reservoir, on Beaver Brook in Keene, NH, substantially in accordance with Senate Document 60, 90th Congress; and plan for protection on Park River, Connecticut, substantially in accordance with Senate Document 43, 90th Congress. Flood Control Act of

1970 deauthorized the construction of a reservoir at Claremont, NH. The Water Resources Development Act of 1976 deauthorized the construction of Gaysville Lake, VT project. Flood control projects at Cambridgeport Lake, Brockway Lake, Victory Lake, South Tunbridge Lake, Ludlow Lake and The Island Lake, Vermont; Honey Hill Lake, West Canaan Lake, and the Alternative to Sugar Hill Reservoir, NH, were deauthorized in August 1977 in accordance with Section 12 of the Water Resources Development Act of 1974. The authorization for Beaver Brook Lake, NH project expired in April 1978 due to lack of local cooperation. Local protection projects at Gardner, MA, West Springfield, MA, Hartford, VT, Wethersfield, CT, and Keene, NH authorized and constructed in accordance with Section 205 of 1948 Flood Control Act. Emergency streambank erosion control projects at Brownsville, VT; Conway, MA; Huntington, MA; Charlestown, NH; North Stratford, NH; Colchester, CT; Middletown, CT; Milford, CT; Simsbury, CT; and two projects in Leominster, MA authorized in accordance with Section 14 of the 1946 Flood Control Act were completed. (See Table 1-M at end of chapter for reservoirs and local protection works for Connecticut River Basin.) The Water Resources Development Act of 1986 modified the comprehensive plan for the control of flood-waters in the Connecticut River Basin, Vermont, New Hampshire, Massachusetts, and Connecticut, authorized by Section 5 of the Act of June 22, 1936 (49 Stat. 1572) by authorizing the design, construction, operation, and maintenance of facilities at Townshend Dam, West River, VT to enable upstream migrant adult Atlantic salmon to bypass that dam and Ball Mountain Dam, VT, and to provide at both Townshend and Ball Mountain Dams facilities as necessary for the downstream passage of juvenile Atlantic salmon. This work was completed in February 1993.

36A. BALL MOUNTAIN LAKE, VT

Location. The Dam is on West River, 29 miles above its junction with Connecticut River at Brattleboro, Vermont. It is two miles north of Jamaica, VT. (See Geological Survey map for Londonderry, VT.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1994. Construction of the dam and appurtenant works was initiated in May 1957 and completed in November 1961. Cost of work was \$10,448,000 for construction and \$350,000 for lands and damages, a total of \$10,798,000. Construction of recreation facilities was initiated in June 1975 and completed in June 1977. Fish passage facility work began in June 1992 and was completed in February 1993. The project is a unit of comprehensive plan for flood control and other purposes in Connecticut River Basin.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted. A contract to pave the access road was awarded May 3, 2001. Work began in August 2001 and was completed in October 2001. Final contract amount was \$334,175, of which \$121,790 was earned this FY. A purchase order to widen and realign the existing roadway to Winhall Brook Campground was awarded last FY. Work began in October 2001 and was completed in May 2002. Final contract amount was \$88,283.

36B. BARRE FALLS DAM, MA

Location. The Dam is on Ware River in the Town of Barre, Massachusetts, 31.9 miles above confluence of Ware and Swift Rivers. It is 13 miles northwest of Worcester, MA. (See Geological Survey maps for Barre, MA and Wachusett Mountain, MA.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant works was initiated in May 1956 and completed in May 1958.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

36C. BIRCH HILL DAM, MA

Location. Dam is on Millers River, 27.3 miles above its junction with the Connecticut River. It is 1.3 miles east of South Royalston, Massachusetts and 7.5 miles northwest of Gardner, MA. (See Geological Survey maps for Royalston and Winchendon, MA-NH and Templeton, MA.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant works was initiated in June 1940 and completed in February 1942.

Local cooperation. Section 2, Flood Control Act of 1938 applies. Local interests have contributed \$32,000 as their required 50 percent cost sharing of recreational development in accordance with 1965 Federal Water Project Recreation Act.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities.

36D. COLEBROOK RIVER LAKE, CT

Location. Colebrook River Dam is located in the Town of Colebrook, Litchfield County, Connecticut, on the West Branch of the Farmington River about 3.9 miles upstream from its confluence with the Still River at Riverton, Connecticut, and about 1.5 miles upstream from Goodwin (Hogback) Dam. (See Geological Survey map for Winsted, CT.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant works was initiated in May 1965 and completed in June 1969. Construction of recreation facilities was initiated in August 1969 and completed in June 1970.

Local cooperation. A water supply contract was signed by the Hartford Connecticut Metropolitan Water District. Repayment is being made in accordance with provisions of the 1958 Water Supply Act.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

36E. CONANT BROOK DAM, MA

Location. Site is in south central part of Massachusetts in Town of Monson. Damsite, across Conant Brook, is about two miles southeast of the community of Monson, MA. (See Geological Survey map for Monson, MA.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam, highway relocations, and appurtenant works was initiated in June 1964 and completed in December 1966.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

36F. KNIGHTVILLE DAM, MA

Location. Dam is on Westfield River, 27.5 miles above its confluence with Connecticut River. It is four miles north of the Town of Huntington, Massachusetts, and about 12 miles west of the City of Northampton, MA. (See Geological Survey map for Westhampton, MA.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant

works was initiated in August 1939 and completed in December 1941.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted. A contract for masonry repairs to the gatehouse was awarded July 25, 2000. Work began in August 2000, but little progress was made and the contract was terminated for default on October 19, 2001. A contract for concrete repairs was awarded on June 11, 2001. Work began in July 2001 and was completed in August 2002. Final contract amount was \$415,110, of which \$238,594 was earned this FY.

36G. LITTLEVILLE LAKE, MA

Location. Dam is on Middle Branch of Westfield River, one mile above its confluence with main stem of Westfield River and 25.2 miles above confluence of Westfield River with Connecticut River, in the Town of Chester, Massachusetts. (See Geological Survey map for Chester, MA.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant works was initiated under a multi-component contract in June 1962 and completed in September 1965.

Local cooperation. Section 2, Flood Control Act of June 28, 1938, and Title III, Water Supply Act of 1958 apply and were fully complied with.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

36H. NORTH HARTLAND LAKE, VT

Location. Dam is on Ottauquechee River, 1.5 miles above its junction with Connecticut River, and one-mile northwest of North Hartland, Vermont. Reservoir extends upstream 5.5 miles. (See Geological Survey map for Hanover NH-VT.)

Existing project. For a description of completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam was initiated in June 1958 and completed in June 1961.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

36I. NORTH SPRINGFIELD LAKE, VT

Location. North Springfield Dam is located in the Town of Springfield, Vermont, on the Black River, about 8.7 miles above its junction with the Connecticut River, and about three miles northwest of Springfield, Vermont. (See Geological Survey maps for Ludlow, Vermont, and Claremont, New Hampshire.)

Existing project. For a description of completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam was initiated in May 1958 and completed in November 1960.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted. A contract to pave the dam crest road was awarded June 4, 2001. Work began in September 2001 and was completed the following month. Final contract amount was \$293,045, of which \$237,493 was earned this FY.

36J. OTTER BROOK LAKE, NH

Location. Otter Brook Dam is located on Otter Brook, about 2.4 miles upstream from its junction with the Branch, which flows about 2.5 miles to the Ashuelot River at Keene, New Hampshire. (See National Ocean Survey maps for Keene, NH-VT, and Monadnock, NH.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant works was initiated in September 1956 and completed in August 1958.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

36K. SURRY MOUNTAIN LAKE, NH

Location. Dam is on Ashuelot River, 34.6 miles above its junction with Connecticut River and five miles north of Keene, New Hampshire. (See Geological Survey maps for Keene and Bellows Falls, NH-VT.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant works was initiated in August 1939 and completed in June

1942. Additional recreational facilities were completed in September 1969 and 1980.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted. A contract to paint the spillway bridge was awarded September 10, 2002. Work had not begun by FY end.

36L. TOWNSHEND LAKE, VT

Location. Townshend Lake Dam is located on the West River, about 19.1 miles above its junction with the Connecticut River at Brattleboro, Vermont, and about two miles west of Townshend, Vermont. The reservoir extends upstream about four miles. (See Geological Survey maps for Saxtons River, VT, and Londonderry, VT.)

Existing project. For a description of completed improvements and authorizing legislation see the Annual Report for 1994. Townshend Lake Reservoir is operated as a unit of a coordinated system for flood control in Connecticut River Basin. Construction of the dam and appurtenant works was initiated in November 1958 and completed in June 1961. Additional recreational facilities were completed in October 1969 and September 1971. Fish passage facility work began in June 1992 and was completed in February 1993.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

36M. TULLY LAKE, MA

Location. Tully Lake Dam is located on the East Branch of Tully River, about 3.9 miles above its junction with the Millers River. The dam lies about one mile north of Fryville, Massachusetts, and 3.5 miles north of Athol, MA. (See Geological Survey map for Royalston, MA-NH.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam was initiated in March 1947 and completed in September 1949.

Local cooperation. Section 2, Flood Control Act of 1938 applies. Local interests must also bear 50 percent of future recreational development, in accordance with 1965 Federal Water Project Recreational Act.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

36N. UNION VILLAGE DAM, VT

Location. Union Village Dam is located on the Ompompanoosuc River, about four miles above its junction with the Connecticut River. The dam lies about one-fourth mile north of Union Village, Vermont, and 11 miles north of White River Junction, Vermont. (See Geological Survey maps for Strafford, VT and Mount Cube, NH-VT.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam was initiated in March 1947 and completed in June 1950.

Local Cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

37. FAULKNER ISLAND, CT

Location. Faulkner Island is located in Long Island Sound about 3 miles south of Guilford, Connecticut. Faulkner Lighthouse is located about 35 feet from the cliff edge along the eastern side of the island.

Existing project. Provides for the construction of shoreline protection measures along the east side of the island adjacent to Faulkner Lighthouse. Construction of Phase I shoreline protection was initiated in September 2000 and completed in April 2001. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. A Memorandum of Understanding (MOU) was signed September 14, 1998, between the Corps and the U.S. Fish and Wildlife Service. The island is owned and operated by the U.S. Fish and Wildlife Service as a National Wildlife Refuge. In accordance with the MOU, the U.S. Fish and Wildlife Service must agree to maintain the project after completion.

Operations during fiscal year. New work: U.S. Fish and Wildlife Services began monitoring the effectiveness of Phase I work and will continue to assess its impacts on tern nesting over the next few years. Findings will help determine if additional shoreline protection is needed and the best way to accomplish this work. FY 2002 work included restoration of natural tern habitat and creation of artificial habitat by placement of old tires and boxes.

38. FOX POINT BARRIER, RI

Location. The Fox Point Barrier is located on the Providence River at Fox Point, in the City of Providence, Rhode Island.

Existing project. For description of completed project see the Annual Report for 1974. Construction of the barrier was completed in January 1966. The Water Resources Development Act of 1999 directs the Secretary to undertake necessary repairs to the barrier as identified in the Condition Survey and Technical Assessment dated April 1998, with Supplemental dated August 1998. Necessary repairs include overhauling pumps, replacing tainter gate roller chains, cleaning and painting tainter gates and repairing lower guide bearing diffuser cracks. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. Fully complied with for completed work. A Project Cooperation Agreement was signed on April 8, 2002 between the Corps and the City of Providence. The City must provide 35 percent of total repair costs and assume all costs in excess of Federal appropriations, which total \$1,950,000 to date.

Operations during fiscal year. Major rehabilitation: The Assistant Secretary of the Army for Civil Works approved the Decision Document on October 23, 2001. The City of Providence initiated repair work in January 1998 and was about 50 percent complete at FY end. Reimbursements by the Corps to the City of Providence for eligible repair work completed by the City totaled \$994,728 during FY 2002.

39. HOUSATONIC RIVER BASIN, CT AND MA

Seven flood control reservoirs on tributaries of the Naugatuck River, principal tributary of the Housatonic River, and three local protection projects have been specifically authorized as part of an overall plan for flood control in the Housatonic River Basin. The Naugatuck and Housatonic Rivers converge 12 miles above mouth of Housatonic River. A project for emergency snagging and clearing of the Blackberry River, a tributary of the Housatonic River, was authorized under authority contained in Section 208 of the 1954 Flood Control Act. Emergency streambank protection projects at: Alford, Green River, MA; Hoosic River, Williamstown, MA; Sheffield, MA; Salisbury, CT; and Squantz Pond, Fairfield, CT were authorized under authority provided by Section 14 of the 1946 Flood Control Act. Projects for local flood protection for: West Branch, Torrington, CT; East Branch, Torrington, CT; Mad River, Waterbury (Woodtick Area), CT; Pittsfield, MA; and Waterbury-Watertown, CT, were authorized under authority provided by Section 205 of the 1948 Flood Control Act. (See

Table 1-P at end of chapter on dams, reservoirs, and local protection projects for Housatonic River Basin.)

39A. BLACK ROCK LAKE, CT

Location. Damsite is on Branch Brook, about two miles upstream from its confluence with Naugatuck River, in the Towns of Thomaston and Watertown, Connecticut. (See Geological Survey map for Thomaston, CT.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Road relocation was completed in November 1967. Construction of the dam and appurtenant works was initiated in July 1967 and completed in July 1971.

Local cooperation. Section 2, Flood Control Act of 1938 applies. State legislation requires local interests to establish encroachment lines downstream of dam to permit efficient reservoir operation.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted. A contract to repair and paint the service bridges at Black Rock and Hop Brook Lakes was awarded on April 5, 2002. Work began in May 2002 and was completed in October 2002. Final contract amount was \$407,480, of which \$212,815 was for work at Black Rock Lake.

39B. HANCOCK BROOK LAKE, CT

Location. Dam is on Hancock Brook, in the Town of Plymouth, Connecticut, about 3.4 miles above its confluence with Naugatuck River. (See Geological Survey map for Waterbury, CT.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant structures was initiated in July 1963 and completed in August 1966.

Local cooperation. Section 2, Flood Control Act of 1938 applies. State legislation requires local interests to establish encroachment lines downstream of dam to permit efficient reservoir operation.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

39C. HOOSIC RIVER, SYNDICATE ROAD, WILLIAMSTOWN, MA

Location. The Town of Williamstown is located in the northwest corner of Massachusetts, approximately 20 miles

north of Pittsfield, Massachusetts. The erosion site is located along the Hoosic River off Syndicate Road.

Existing project. Provides for the construction of approximately 300 linear feet of stone slope protection along the western bank of the Hoosic River adjacent to Syndicate Road. The project will protect two main sewer interceptor lines from erosion damage. Project was completed in August 2002. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. A Project Cooperation Agreement was signed August 30, 2001 between the Corps and the Massachusetts Department of Environmental Management. The project sponsor must provide all lands, easements, rights-of-way, including suitable borrow and dredged material disposal areas, and perform all relocations determined by the Government to be necessary for project construction. The project sponsor must also pay a minimum cash contribution of 5 percent of total project costs during construction; pay an additional cash contribution during construction so that the total contribution including lands equals 35 percent of total project costs; assume all costs in excess of the Federal statutory cost limitation of \$1,000,000; and bear all costs for maintenance and repair of the project after completion.

Operations during fiscal year. New work: A contract to construct emergency stream bank protection measures along the Hoosic River was awarded on January 15, 2002. Work began in February 2002 and was completed in August 2002. Final contract amount was \$279,808.

39D. HOP BROOK LAKE, CT

Location. Damsite is on Hop Brook, in city of Waterbury and towns of Middlebury and Naugatuck, Connecticut, about 1.4 miles upstream of confluence of Naugatuck River and Hop Brook. (See Geological Survey map for Waterbury, CT.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant structures was initiated in December 1965 and completed in December 1968. Construction of a public use facility was completed in November 1973. Construction of an additional restroom was completed in 1980.

Local cooperation. Section 2, Flood Control Act of 1938 applies. State legislation requires local interests to establish encroachment lines downstream of dam to permit efficient reservoir operation.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted. A

contract to repair and paint the service bridges at Black Rock and Hop Brook Lakes was awarded on April 5 2002. Work began in May 2002 and was completed in October 2002. Final contract amount was \$407,480, of which \$194,665 was for work at Hop Brook Lake.

39E. NORTHFIELD BROOK LAKE, CT

Location. Dam is on Northfield Brook, about 1.3 miles upstream from its confluence with Naugatuck River, in town of Thomaston, Connecticut. (See Geological Survey map for Thomaston, CT.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of dam and appurtenances was initiated in May 1963 and completed in October 1965. Construction of recreation facilities was initiated in November 1966 and completed in August 1967.

Local cooperation. Section 2, Flood Control Act of 1938 applies. State legislation requires local interests to establish encroachment lines downstream of dam to permit efficient reservoir operation.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

39F. THOMASTON DAM, CT

Location. On Naugatuck River, about 30.4 miles above its junction with Housatonic River, and about 1.6 miles north of Thomaston, Connecticut. Reservoir extends upstream about 6.4 miles. (See Geological Survey map for Thomaston, CT.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant works was initiated in May 1958 and completed in November 1960.

Local cooperation. Section 3, Flood Control Act of 1944 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

40. MERRIMACK RIVER BASIN, NH AND MA

Works covered by comprehensive plan are on Merrimack River and its tributaries in New Hampshire and Massachusetts. Flood Control Act of 1936 authorized construction of a system of flood control reservoirs in Merrimack River Basin for reduction of flood heights in

Merrimack Valley. Flood Control Act of 1938 approved general comprehensive plan for flood control and other purposes as approved by Chief of Engineers pursuant to preliminary examinations and surveys authorized by Act of June 22, 1936, and modified project to provide in addition to construction of a system of flood control reservoirs, related flood control works which may be found justified by the Chief of Engineers. All operations pertaining to flood control in Merrimack River Basin are now carried on under and reported under projects for individual units of comprehensive plan referred to above. No further expenditures are contemplated under general project for flood control in Merrimack River Basin. For final cost and financial summary, see The Annual Report for 1946.

A comprehensive plan for development of water resources of the North Nashua River Basin, a principal tributary of the Merrimack River, was authorized by 1966 Flood Control Act substantially in accordance with Senate Document 113, 89th Congress. Plan provides for construction of coordinated system of four reservoirs and three local protection projects for flood protection, water supply, recreation and allied purposes. Water Resources Development Act of 1986 deauthorized two of the reservoirs and one of the local protection projects.

The 1966 Flood Control Act also authorized construction of Saxonville local protection project substantially in accordance with Senate Document 61, 89th Congress. Emergency streambank protection projects at Amesbury, Massachusetts, two in Leominster, MA and two in Lancaster, MA were authorized under authority provided by Section 14 of the 1946 Flood Control Act. (See Table 1-Q at end of chapter for reservoirs and related flood control works for Merrimack River Basin.)

40A. BLACKWATER DAM, NH

Location. Dam is on Blackwater River, 8.2 miles above confluence with Contoocook River, and 118.8 miles above mouth of Merrimack River. It is in the town of Webster, New Hampshire, just above village of Swetts Mills, NH, 18 miles by highway northwest of Concord, NH. (See Geological Survey maps for Penacook and Mount Kearsarge, NH.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Project is complete except for construction of public facilities. Construction of the dam and appurtenant works was initiated in May 1940 and completed in November 1941.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted. A

contract for concrete repairs was awarded on September 17, 2002. Work had not begun by FY end.

40B. EDWARD MACDOWELL LAKE, NH

Location. Edward MacDowell Dam is located on Nubanusit Brook, a tributary of the Contoocook River, about one-half mile upstream from the village of West Peterborough, New Hampshire, and about 14 miles east of Keene, New Hampshire. (See Geological Survey map for Peterboro and Monadnock, NH.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant works was initiated in March 1948 and completed in March 1950.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

40C. FRANKLIN FALLS DAM, NH

Location. Franklin Falls Dam is located on the Pemigewasset River, a main tributary of the Merrimack River, about 2.5 miles upstream of Franklin, New Hampshire. (See Geological Survey maps for Penacook and Holderness, NH.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant works was initiated in November 1939 and completed in October 1943.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted. A contract for concrete repairs to the inlet was awarded May 23, 2001. Work began in July 2001 and was completed in September 2002. Final contract amount was \$828,562, of which \$582,461 was earned during this FY.

40D. HOPKINTON-EVERETT LAKES, NH

Location. Hopkinton Dam is on Contoocook River, 17.3 miles above its junction with Merrimack River and about one-half mile upstream from village of West Hopkinton, New Hampshire. Everett Dam is on Piscataquog River, 16 miles above its junction with Merrimack River, and about 1.3 miles southeast of village of East Weare, NH. Two

interconnecting canals were provided to enable the two reservoir areas to function as one. (See Geological Survey map for Hillsboro, NH, and Concord, NH.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of two dams and appurtenant works was initiated in November 1959 and completed in December 1962. Construction of recreation facilities was initiated in November 1974 and completed in September 1975.

Local cooperation. Section 2, Flood Control Act of 1938 applies. Local interests must also bear 50 percent of future recreational development in accordance with 1965 Federal Water Project Recreation Act.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted. A purchase order for hydraulic repairs at Everett Dam was awarded last FY. Work began in May 2001 and was completed in January 2002. Final contract amount was \$44,018, of which \$7,854 was earned this FY. A purchase order to replace the control tower roofs at Hopkinton and Everett Dams was awarded on September 5, 2002. The contractor began to mobilize the last week of September 2002.

40E. NORTH NASHUA RIVER, LANCASTER, MA

Location. The Town of Lancaster is located in Worcester County in north central Massachusetts, approximately 40 miles west of Boston, Massachusetts and 18 miles north of Worcester, Massachusetts. The erosion site is located along the North Nashua River adjacent to State Highway Route 70.

Existing project. Provides for the construction of approximately 500 linear feet of stone slope protection along the stream bank of the North Nashua River adjacent to State Highway Route 70. Project was completed in August 2000. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. Fully complied with for completed work.

Operations during fiscal year. New work: Requested additional sponsor funds to financially close out project.

41. NEW BEDFORD, FAIRHAVEN AND ACUSHNET, MA

Location. Main harbor barrier is across New Bedford and Fairhaven Harbor in vicinity of Palmer Island. Supplemental dikes and walls are provided in Clark Cove area of New Bedford and Fairhaven. (See Geological survey

maps for New Bedford North, New Bedford South, Marion, and Sconticut Neck, MA and National Ocean Service Coast Survey Charts 13230, 13070 and 13218.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the barrier and appurtenances was initiated in October 1962 and completed in January 1966. Construction of the pumping station was initiated in October 1962 and completed in June 1964.

Local cooperation. Fully complied with.

Operations during fiscal year. Maintenance: Ordinary operations and maintenance activities were conducted.

42. QUONSET POINT, DAVISVILLE, RI

Location. Quonset Point is located in east central Rhode Island along the west shore of Narragansett Bay in the village of Davisville and Town of North Kingstown, about 15 miles south of Providence, Rhode Island.

Existing project. Provides for the construction of two elevated water storage towers and relocation of 6,000 feet of sewer line. Construction of the water towers was completed in September 1998 and work on the sewer line was completed in July 1998. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. For description of local cooperation, see Annual Report for 2001.

Operations during fiscal year. New work: Awaiting additional sponsor funds to financially close out project.

43. ROUGHANS POINT, REVERE, MA

Location. The city of Revere is a coastal community located in Suffolk County about five miles northeast of Boston, Massachusetts. Roughans Point is a low-lying, ocean front neighborhood of Revere. The area has 55 acres and about 300 structures, mostly residential homes.

Existing project. Project consists of 3,125 feet of stone revetment to dissipate incoming waves, prevent overtopping and stabilize existing facilities along the shoreline. The revetment extends from a point about 250 feet south of Eliot Circle southerly to a point 200 feet south of the intersection of Winthrop Parkway and Leverett Avenue. The project also provides for "backwater" protection by raising the ground elevation one-foot at the intersection of Bennington Street and State Road and installing a sluice gate on the 42-inch drain from the Roughans area to Sales Creek. Interior drainage improvements consist of a new intake

structure at the existing pump station and a new gravity drain with a sluice gate. Project was completed in November 2001. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. A Project Cooperation Agreement was signed April 25, 1997 between the Corps and the Commonwealth of Massachusetts Department of Environmental Management. The project sponsor must provide without cost to the United States all lands, easements, rights-of-way, and relocations necessary for construction of the structural elements of the project, including ponding areas, borrow areas, and disposal areas for excavated material; hold and save the United States free from damages due to construction, operation, and maintenance of the project, not including damages due to the fault or negligence of the United States or its contractors; bear all costs of operation, maintenance and replacements; pay an amount in cash to bring the total non-Federal share to 35 percent of project costs allocated to storm damage reduction.

Operations during fiscal year. New work: A contract to construct the stone revetment project was awarded September 17, 1997. Work began in December 1997 and was completed in September 2000. Minor punch list items were accomplished in FY 2001. Contractor earnings total \$7,897,364 with final payment still pending at FY end. A contract to upgrade the existing pump station was awarded June 15, 2000. Work began in July 2000 and was completed in November 2001. Contractor earnings total \$545,493 with final payment still pending at FY end.

44. SAINT JOHN RIVER BASIN, ME

Location. The project is located in Aroostook County in northern Maine, and lies within the Saint John River Basin.

Existing project. The project involves a research and demonstration program of cropland irrigation and soil conservation techniques for increasing potato yield and quality. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. A Local Cooperation Agreement (LCA) for a two-year research and demonstration program was signed on April 22, 1991 between the Corps and the Maine Aroostook Water and Soil Management Board. The project sponsor must obtain all interests in real estate as determined by the Government and the project sponsor to be necessary for project implementation. The Government will reimburse the project sponsor 65 percent of project costs as work is accomplished, up to the Federal cost limit of \$300,000. The LCA was amended on June 6, 1994 to include a third year of research and demonstration at an estimated Federal cost of \$252,000.

Operations during fiscal year. New work: Efforts have been deferred for the last few years as the Aroostook Water and Soil Management Board has not requested any further research at the University of Maine's farm in Presque Isle, Maine.

45. STAMFORD, CT

Location. The Stamford Hurricane Barrier is located in Fairfield County on the north shore of Long Island Sound, about 30 miles east of New York City and 20 miles southwest of Bridgeport, Connecticut. (See Geological Survey map for Stamford, CT.)

Existing project. For a description of the completed improvements and authorizing legislation, see the Annual Report for 1974. Project was completed in 1969. Local interests still owe a substantial amount based on claims settlements, including interest payment under the Contract Disputes Act.

Local cooperation. Fully complied with except for \$662,000 outstanding which is local share of final claims settlement including interest payment.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

46. THAMES RIVER BASIN, CT, RI, AND MA

Works covered by this plan are a series of dams and reservoirs on tributaries of Thames River in Massachusetts and Connecticut, within a radius of 45 miles from Norwich, CT, and a channel enlargement on Shetucket River where it discharges into Thames River at Norwich. Flood Control Act of August 18, 1941, approved plan for a system of reservoirs and channel improvements in Thames River Basin in accordance with House Document 885, 76th Congress, 3rd session, and authorized \$6 million for initiation and partial accomplishment of project. Flood Control Act of December 22, 1944, authorized completion of approved plan. Flood Control Act of July 14, 1960, authorized project for West Thompson Reservoir, substantially as recommended in Senate Document 41, 86th Congress, 2nd session. Local flood protection project for West River, New Haven, CT was authorized under authority provided by Section 205 of the 1948 Flood Control Act. (See Table 1-P on reservoirs and local protection projects, Thames River Basin, for projects comprising approved plan.)

46A. BUFFUMVILLE LAKE, MA

Location. Dam is on Little River, 1.3 miles above its junction with French River, and eight miles northeast of Southbridge, MA. Reservoir extends upstream about 1.7

miles northerly and 1.9 miles southerly. (See Geological Survey maps for Webster, MA and CT, and Leicester, MA.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant works was initiated in September 1956 and completed in June 1958.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted. A contract to repave the dam crest road was awarded on December 26, 2001. Work began in April 2002 and was completed in June 2002. Final contract amount was \$296,969.

46B. EAST BRIMFIELD LAKE, MA

Location. Dam is on Quinebaug River, 64.5 miles above its confluence with Shetucket River, and one-mile southwest of the village of Fiskdale, Massachusetts. (See Geological Survey maps for Whales, MA and CT, Southbridge, MA and CT, East Brookfield, MA, and Warren, MA.)

Existing project. For a description of the completed improvements and authorizing legislation see Annual Report for 1975. Construction of the dam and appurtenant works was initiated in May 1958 and completed in June 1960.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

46C. HODGES VILLAGE DAM, MA

Location. Dam is on French River, 15 miles above its confluence with Quinebaug River, at Hodges Village in the Town of Oxford, Massachusetts, about five miles north of Webster, MA. (See Geological Survey maps for Webster, MA, and CT, Leicester, MA, Worcester South, MA, and Oxford, MA.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of the dam and appurtenant works, initiated in March 1958, was completed in December 1959. Major rehabilitation of the dam was initiated in October 1997 and completed in July 2000.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

46D. MANSFIELD HOLLOW LAKE, CT

Location. Dam is at Mansfield Hollow, Connecticut, on Natchaug River, 5.3 miles above its confluence with Willimantic River. It is four miles northeast of the City of Willimantic, CT. (See Geological Survey maps for Spring Hill and Willimantic, CT.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of dam, initiated in 1949, was completed in May 1952.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

46E. WEST THOMPSON LAKE, CT

Location. Dam is on Quinebaug River, in the Town of Thompson, Connecticut. Site is in the village of West Thompson, two miles upstream from the City of Putnam, CT. (See Geological Survey map, for Putnam, CT.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual Report for 1975. Construction of dam, road relocation, and appurtenances was initiated in August 1963 and completed in October 1965. Initial phase of recreation facilities was completed in May 1976.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted. A contract to paint the spillway bridge at West Thompson Lake was awarded on March 26, 2002. Work began in May 2002 and was completed in September 2002. Final contract amount was \$336,409.

46F. WESTVILLE LAKE, MA

Location. Dam is on Quinebaug River, 56.7 miles above its confluence with Shetucket River, in the Towns of Sturbridge and Southbridge, Massachusetts, and 1.3 miles west of center of Southbridge. (See Geological Survey maps for Southbridge, MA and RI, and East Brookfield, MA.)

Existing project. For a description of the completed improvements and authorizing legislation see the Annual

Report for 1975. Construction of the dam and appurtenant works was initiated in April 1960 and completed in August 1962.

Local cooperation. Section 2, Flood Control Act of 1938 applies.

Operations during fiscal year. Maintenance: Ordinary operation and maintenance activities were conducted.

47. TOWN BROOK, QUINCY AND BRAINTREE, MA

Location. The project is located in the City of Quincy and the Town of Braintree on the south side of Massachusetts Bay, along the eastern shore of Massachusetts, seven miles south of Boston in Norfolk County. The watershed is approximately 4.5 square miles.

Existing project. Project provides for the construction of a 12-foot diameter, 4,060-foot long, concrete lined tunnel in bedrock approximately 140 to 180 feet below ground, intake and outlet structures, and improvements to the Town River downstream of the outlet shaft. The tunnel and its appurtenances will be supplemented by reconstruction of the Old Quincy Reservoir Dam, located at the headwaters of Town Brook. Reconstruction work includes a new spillway and outlet structure. The project includes \$6,100,000 in approved credit for compatible work that has been accomplished by the project sponsor. Dam safety measures at Old Quincy Dam, which are estimated at \$9,000,000, are a non-Federal responsibility. Construction of Town River improvements was completed in December 1994. Construction of the tunnel was completed in January 1997. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. A Local Cooperation Agreement (LCA) was signed on July 7, 1992 between the Corps and the Metropolitan District Commission (MDC). The MDC is required to provide all lands, easements, and rights-of-way; pay all cost for dam safety measures at Old Quincy Dam to insure its structural integrity; pay a cash contribution for the costs allocated to flood control so that the total contribution of local interests is equal to 25 percent of costs allocated to flood control; and bear all costs of operation, maintenance, and replacements. In addition, local interests must do the following: prescribe and enforce regulations to prevent encroachment on both the improvements and unimproved channels, and manage all project-related channels to preserve capacities for local drainage as well as for project functions.

Operations during fiscal year. New work: A contract for construction of the tunnel was awarded September 15, 1993. Work on this contract began in January 1994 and was

completed in January 1997. Final contract amount was \$23,740,717. A contract for reconstruction of Old Quincy Dam was awarded September 25, 1998. Work began in February 1999 and was about 95 percent complete at FY end with contractor earnings of \$9,704,011.

48. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

In accordance with provisions of the Flood Control Act of 1936, as amended, local flood protection works constructed with Federal funds are transferred to local interests to operate and maintain. To insure compliance with regulations prescribed for their operation and maintenance, regular inspections of the following projects were made during the FY at a total cost of \$159,246:

CONNECTICUT: August 02 – Bridgeport, Danbury, Hartford, Middletown, Milford, New Fairfield, New Haven, North Canaan, Salisbury, Simsbury, Waterbury, Winsted, Woodbury; September 02 – Ansonia, Colechester/East Hampton, Derby, East Branch Dam, East Hartford, Hall River Dam, Mad River Dam, Norwalk, Stamford, Sucker Brook Dam, Torrington, Waterbury.

MAINE: August 02 – Machiasport, Millbridge, Whiting; September 02 – Beals, Belfast, Blaine, Campobello Island, Castine, Cherryfield, Fort Kent, Fort Kent (Perley Brook), Gouldsboro, Harpswell, Hartland, Islesboro, Lubec, Machias, Old Town.

MASSACHUSETTS: October 01 – Chicopee, Conway, Fitchburg, Gardner, Northampton, Springfield, West Springfield; November 01 – Charles River; May 02 – Chicopee, Conway, Fitchburg, Gardner, Huntington, Lancaster, Three Rivers, West Springfield; June 02 – Charles River Dam, Holyoke, Westfield; July 02 – Braintree (Hayward Creek), Braintree (Town River Bay), Quincy (Hayward Creek), Quincy (Island Ave.), Quincy (Town River Bay), Ware, West Warren, Weymouth/Braintree; August 02 – Alford, Lee, Pittsfield, Sheffield (covered bridge), Sheffield (state highway); September 02 – Canton, Scituate.

NEW HAMPSHIRE: October 01 – Keene (Ashuelot River), Keene (Beaver Brook).

RHODE ISLAND: November 01 – Providence; July 02 – Woonsocket; August 02 – Woonsocket; September 02 – Burrillville.

VERMONT: No inspections in FY 2002.

49. FLOOD CONTROL RESERVOIR OPERATIONS

A coordinated system of flood control dams, all of which have flood control as primary storage available with recreation and/or water supply as secondary storage in most of the projects, has been established in five major flood producing basins in New England. During periods of flood flows, regulation of reservoirs is fully coordinated within each basin dependent upon its location in the watershed, its available storage capacity and origin of the flood. In addition to flood control releases, water supply, flow augmentation and hydropower releases were made from selected reservoirs. Winter pools are maintained at many projects to submerge the flood control gates and keep them from freezing.

During FY 2002 there were only minor events requiring reservoir regulation activities. Although some reservoirs experienced flood storage impoundments, downstream runoff was not significant enough to cause river levels to approach flood stage. No “damages prevented” were attributable to reservoir regulation activities during FY 2002.

CONNECTICUT RIVER BASIN

Regulation for canoe and kayak activities occurred during FY 2002 at Otter Brook in March and April; Birch Hill, Tully, Littleville and Knightville in April; Ball Mountain and Townshend in April and September; and at Surry Mountain in May. The Hartford MDC controlled releases for hydropower from Colebrook Lake during non-flood periods of FY 2002.

MERRIMACK RIVER BASIN

Blackwater Dam was regulated for canoe races in April 2002.

THAMES RIVER BASIN

Regulation for canoe and kayak activities occurred during FY 2002 at East Brimfield in April and at Mansfield Hollow Lake in June. East Brimfield also supplied small releases for low flow augmentation to American Optical Co. during the summer months.

50. HURRICANE BARRIER OPERATIONS

Five hurricane barriers are situated along the southern coast of New England, protecting coastal communities from tidal flooding associated with hurricanes and severe coastal storms. The Corps operates the navigational elements of the Stamford, CT and New Bedford-Fairhaven, MA barriers. The hurricane barriers at Fox Point, Rhode Island; Pawcatuck, Connecticut; and New London, Connecticut are operated by the local communities. A brief resume of operations for the FY follows:

STAMFORD BARRIER. The barrier gates were operated on 7 occasions for coastal storms and hurricanes during FY 2002. There were no benefits associated with gate operations during FY 2002.

NEW BEDFORD BARRIER. During FY 2002, the New Bedford Barrier was operated on 6 different occasions resulting in a total of \$195,000 in benefits.

FOX POINT HURRICANE BARRIER. The Fox Point Hurricane Barrier was not operated during FY 2002, as tides did not reach damaging levels.

PAWCATUCK HURRICANE BARRIER. No operations occurred at the Pawcatuck Hurricane Barrier during FY 2002, as tides did not reach damaging levels.

NEW LONDON HURRICANE BARRIER. The New London Hurricane Barrier was not operated during FY 2002, as tides did not reach damaging levels

51. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Flood control activities pursuant to Section 205. Public Law 80-858, as amended (preauthorization).

(See Table 1-L)

Snagging and clearing activities pursuant to Section 208 of the 1954 Flood Control Act.

(None)

Emergency Bank Protection activities pursuant to Section 14 of the 1946 Flood Control Act (preauthorization).

(See Table 1-M)

Emergency flood control activities--repair, flood fighting, and rescue work (Public Law 99, 84th Cong., and antecedent legislation.)

Federal costs for FY were \$72,422 for disaster preparedness and \$287,558 for emergency operations.

Environmental

52. LEBANON, NH

Location. The City of Lebanon is located in west central New Hampshire along the Connecticut River and state border with Vermont.

Existing project. Environmental infrastructure project, consisting of twelve functional portions, to eliminate combined sanitary waste and storm water systems. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. A Project Cooperation Agreement was signed on June 24, 2002 between the Corps and the City of Lebanon, New Hampshire. The sponsor must provide 35 percent of total project costs.

Operations during fiscal year. New work: North Atlantic Division approved the Decision Document on March 29, 2002. The city of Lebanon awarded a contract for construction of the first functional portion of the project in May 2001. Work began the following month and was completed in November 2002. The city is receiving credit for the Federal share of eligible work performed by the city on the first function portion of the project. The Corps awarded a contract for construction of the second functional portion of the project on July 29, 2002. Work began in September 2002 and was less than 5 percent complete at FY end with contractor earnings of \$115,273.

53. LONSDLE DRIVE-IN, LINCOLN, RI

Location. The project is located along the Blackstone River in the Town of Lincoln, Rhode Island, about 5 miles north of Providence, Rhode Island. The site is within the Blackstone River Valley National Heritage Corridor

Existing project. Restoration measures involve the demolition and removal of movie screens, concession stand and associated structures; removal of asphalt and gravel base; excavation of about 7 acres of the site to create emergent marsh and open water habitat; seeding the remaining 7 acres of the site with a mix of perennial grasses native to New England to create grassland habitat; and planting a variety of trees and shrubs to provide shelter and nesting habitat for songbirds. The project includes a 3-year monitoring period to ensure establishment of uplands and wetlands vegetation. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. A Project Cooperation Agreement was signed on May 16, 2002 between the Corps and the State of Rhode Island, Department of Environmental Management. The project sponsor must provide all lands, easements, rights-of-way, including suitable borrow and dredged material disposal areas, and perform all relocations determined by the Government to be necessary for project construction; pay a cash contribution in the amount necessary to bring the non-Federal share of study and project costs including lands to 25 percent; and bear all operation, maintenance and repair costs of the project after completion.

Operations during fiscal year. New work: Project plans and specifications were completed and negotiations were initiated with an 8A Hub Zone contractor for construction of the project. Award of a construction contract was still pending at FY end.

54. PRESUMPCOT RIVER (SMELT HILL DAM), FALMOUTH, ME

Location. Smelt Hill Dam is located in southwestern Maine, along the Presumpscot River in the Town of Falmouth. The dam is located at the head-of-tide, about one mile upstream from the mouth of the river.

Existing project. Provides for the complete removal of Smelt Hill Dam. The project will restore about 7 miles of warm-water habitat to riffles and pools, and provide unimpeded passage of anadromous fish through this reach of the river. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. A Project Cooperation Agreement was signed on June 6, 2002 between the Corps and the State of Maine Department of Marine Resources. The project sponsor must provide all lands, easements, rights-of-way, including suitable borrow and dredged material disposal areas, and perform all relocations determined by the Government to be necessary for project construction; pay a cash contribution in the amount necessary to bring the non-Federal share of study and project costs including lands to 25 percent; and bear all operation, maintenance and repair costs of the project after completion.

Operations during fiscal year. New work: A contract for removal of Smelt Hill Dam was awarded on August 19, 2002. Work began the next month and was about 40 percent complete at FY end with contractor earnings of \$99,200.

55. SAGAMORE MARSH, CAPE COD CANAL, MA

Location. Sagamore Marsh is located in southeastern Massachusetts in the Towns of Bourne and Sandwich, approximately 50 miles southeast of Boston, Massachusetts. The marsh lies on the north side of the Cape Cod Canal, near the canal's east end.

Existing project. Provides for enlarging culverts beneath Scussett Beach and Cape Cod Canal Service Roads, installing sluice gates and excavating channels to increase tidal flows. Tidal flushing of Sagamore Marsh was restricted in the 1930s when the Cape Cod Canal was widened. Restoration of about 50 acres of salt marsh and estuarine habitat was completed in August 2002. (See Table 1-B for Act authorizing the existing project.)

Local cooperation. A Project Cooperation Agreement was signed on September 22, 1999 between the Corps and the Commonwealth of Massachusetts Department of Environmental Management. The project sponsor must provide all lands, easements, rights-of-way, including suitable borrow and dredged material disposal areas, and perform all relocations determined by the Government to be necessary for project construction; pay a cash contribution in the amount necessary to bring the non-Federal share of study and project costs including lands to 25 percent; and bear all operation, maintenance and repair costs of the project after completion.

Operations during fiscal year. New work: A contract for restoration of the salt marsh was awarded on January 10, 2000. Work began in May 2000 and was completed in August 2002. Contractor earnings total \$1,580,312 with final contract payment still pending at FY end. The project includes three years of monitoring, which will begin next FY.

56. ENVIRONMENTAL RESTORATION WORK UNDER SPECIAL AUTHORIZATION

Project modifications for the improvement of the environment pursuant to Section 1135, Public Law 99-662, as amended (preauthorization).

(See Table 1-N)

Aquatic ecosystem restoration activities pursuant to Section 206, Public Law 99-662, as amended (preauthorization).

(See Table 1 - O)

General Investigations

57. SURVEYS

Costs for the FY for surveys from regular funds were \$856,022 of which \$192,138 was for two navigation studies; \$381,500 for six special studies; \$81,712 for one comprehensive study; and \$200,672 for coordination studies.

58. COLLECTION AND STUDY OF BASIC DATA

The District Engineer is the U.S. member on the Saint Croix River Board of Control. Annual inspections are made of conditions on the Saint Croix River and basic hydrologic information is compiled. A report of operations and development in the basin was prepared in cooperation with

Canadian counterparts. Total costs for the FY were \$32,455. Total costs to September 30, 2002 are \$445,694.

The Gulf of Maine Council on the Marine Environment was established in 1989 under an agreement signed by the Governors of Maine, New Hampshire and Massachusetts, and the Premiers of Nova Scotia and New Brunswick. The Council was tasked under this agreement to develop consistent policies, initiatives and programs designed to protect and conserve the shared natural resources of the Gulf of Maine. In April 1993, the Council requested the New England District Engineer to participate in this international program as an "observer" to the Council. In this capacity, the District Engineer is expected to attend Council meetings and support their initiatives to the extent possible. In addition to the District Engineer's direct participation, a representative of the Corps is a member of the Working Group to the Council, which implements directives of the Council. The Corps representative on the Working Group is assisting the Habitat Sub-Group to establish policies, set priorities and identify lead agencies for implementing habitat restoration projects in the Gulf of Maine. This effort includes investigating potential habitat restoration sites eligible for Corps participation under Section 1135 and coordination of input from other Federal agencies. Total costs for the FY were \$8,149. Total costs to September 30, 2002 are \$151,405.

Flood plain studies comprise compilation and dissemination, upon responsible local request, of information on floods and potential flood damages. Studies identify areas subject to inundation by floods of various magnitudes and frequencies, and provide general criteria for guidance in the conservation and limited use of flood plain areas, along with engineering advice in planning to ameliorate the flood hazard. Total costs for the FY were \$280,127. Total costs to September 30, 2002 are \$10,942,345.

The April 1987 flood was one of the largest of recent times in New England, resulting in spillway discharge at six Corps flood control reservoirs. A comprehensive hydrologic analysis of this flood event is needed to develop a base of information for use in future planning and design studies, as well as reservoir operation. Fiscal year 2002 funds were used to conduct hydrologic analysis of the 1987 flood within the Merrimack River Basin. Total costs for the FY were \$12,036. Total costs to September 30, 2002 are \$141,981.

59. PLANNING, ENGINEERING AND DESIGN

(None.)

60. PRECONSTRUCTION ENGINEERING AND DESIGN

Pre-construction Engineering and Design costs were \$557,687 for work on the Muddy River, Massachusetts flood control and ecosystem restoration project.

TABLE 1-A (Continued) COST AND FINANCIAL STATEMENT

- ¹ Excludes \$ 6,138,157 from Public Works Funds and \$4,849,740 from Emergency Relief Funds.
- ² Includes \$389,929 Code 711 funds and \$511,089 Code 713 funds.
- ³ Excludes \$935,303 Emergency Relief Funds and \$1,030,806 Public Works Funds.
- ⁴ Excludes \$17,767 Contributed Funds.
- ⁵ Excludes \$245,000 expended for land condemnation.
- ⁶ Includes \$18,310 Code 711 funds.
- ⁷ Includes \$504,062 Code 711 funds and \$67,066 for fish passage facility.
- ⁸ Includes \$618,469 Code 711 funds and \$32,000 Code 713 Funds.
- ⁹ Recreational cost sharing.
- ¹⁰ Includes \$199,303 Code 711 funds.
- ¹¹ Includes \$229,436 Code 711 funds.
- ¹² Includes \$59,536 Code 711 funds.
- ¹³ Includes \$364,688 Code 711 funds.
- ¹⁴ Includes \$470,077 Code 711 funds.
- ¹⁵ Includes \$245,168 Code 711 funds and \$1,117,494 for fish passage facility.
- ¹⁶ Includes \$3,695 Code 711 funds and \$115,138 Code 713 funds.
- ¹⁷ Includes \$88,931 Code 711 funds.
- ¹⁸ Includes \$143,538 Code 711 funds.
- ¹⁹ Includes \$20,000 Code 711 funds.
- ²⁰ Includes \$2,881 Code 711 funds.
- ²¹ Includes \$6,432 Code 711 funds.
- ²² Includes \$4,671 Code 711 funds.
- ²³ Includes \$179,727 Code 711 funds.
- ²⁴ Excludes \$146,020 expended to date for land condemnation.
- ²⁵ Excludes \$199,410 expended to date for land condemnations.
- ²⁶ Includes \$71,943 Code 711 funds.
- ²⁷ Includes \$207,700 Code 711 funds.
- ²⁸ Includes \$6,255 Code 711 funds and \$40,353 Code 713 funds.
- ²⁹ Includes \$68,717 Code 711 funds.
- ³⁰ Includes \$315,420 Code 711 funds.
- ³¹ Includes \$67,667 Code 711 funds.
- ³² Excludes about \$225,000 expended by local interest in terminal and transfer facilities.

TABLE 1-B **AUTHORIZING LEGISLATION**

Acts	Work Authorized	Documents
July 14, 1960 as amended	ANDREWS RIVER, MA (See Section 1 of Text.) Channel 6 feet deep, 75 feet wide from deep water in Nantucket Sound to public marina, 2 jetties, 3-acre maneuvering and anchorage	P.L. 86-645, Section 107. Authorized by the Chief of Engineers May 2, 1966.
July 14, 1960 as amended	AUNT LYDIA'S COVE, CHATHAM, MA (See Section 2 of Text.) Entrance channel 100 feet wide by 900 feet long and 9.5 acre anchorage area, both 8 feet deep.	P.L. 86-645, Section 107. Authorized by the Chief of Engineers August 31, 1994.
September 19, 1890	BELFAST HARBOR, ME (See Section 3 of Text.) Main channel 15 feet deep, 220 feet wide, and anchorage areas east and west side 8 and 13 feet deep respectively.	H. Doc. 81, 51 st Cong. 1 st sess.
March 2, 1825 June 14, 1880	BOSTON HARBOR, MA (See Section 4 of Text.) Preservation of islands and seawalls. Weir River (Nantucket Beach Channel) 9.5 ft. deep. 100 ft. wide to Steamboat Wharf at Nantasket.	Annual Report, 1881, p. 518
August 5, 1886	Fort Point Channel. ¹	H. Ex. Doc. 206, 48 th Cong., 2 nd sess., Annual Report, 1885, p. 543.
September 19, 1890	Weir River (Nantucket Beach Channel) 9.5 ft. deep. 150 ft. wide to Steamboat Wharf at Nantasket.	Annual Report, 1890, p. 503
July 25, 1892	Weir River (Nantucket Beach Channel) from mouth of Weir River to Steamboat Wharf at Nantasket Beach 12 ft. deep, 150 ft. wide. Channel 15 feet deep from Long Island to Nixes Mate Shoal (Nixes Mate to Nubble Channel).	Annual Report, 1893, p. 769 Annual Report, 1887, p. 517
July 13, 1892 June 3, 1896	Channel 27 feet from Nantasket Roads to President Roads. Dredge Chelsea River Channel to 18 feet.	Annual Report, 1893, p. 766 H. Ex. Doc. No. 162, 53 rd Cong., 3 rd sess., Annual Report, 1895, p. 648
March 3, 1899	For 30-foot channel from sea to President Roads through Broad Sound by less direct route than 35 and 40-foot channels.	H. Doc. 133, 55 th Cong., 2 nd sess. Annual Report, 1898, p. 886.
June 13, 1902	For 35-foot channel from sea to Boston Naval Shipyard. Chelsea and Charles River Bridges. Elimination from project of removal of Finns Ledge at outer entrance.	H. Doc. 119, 56 th Cong., 2 nd sess. Annual Report, 1901, p. 1096 Authorized by Chief of Engineers. March 11, 1913.
July 25, 1912 August 8, 1917 August 30, 1935 ³	Dredge Chelsea River channel 25 ft. Depth of 40 feet (45 feet in rock) in Broad Sound Channel. Present project dimensions of channel from President Roads to Commonwealth pier No. 1, East Boston and anchorage area north side of President Roads.	H. Doc. 272, 62 nd Cong., 2 nd sess. ² H. Doc. 931, 63 rd Cong., 2 nd sess. ² H. Doc. 244, 72 nd Cong., 1 st sess. ²
Do.	Present project dimensions of that part of approach channel to U.S. Navy dry-dock No.3 at South Boston between Main Ship Channel and U.S. harbor line.	Rivers and Harbors Committee Doc. 29, 74 th Cong., 1 st sess. ²
August 26, 1937	Chelsea River, channel 30 feet deep.	Rivers and Harbors Committee Doc. 24, 75 th Cong., 1 st sess. ²
October 17, 1940 September 7, 1940	Reserved channel 30 feet deep. Abandons seaplane channel authorized in 1940 River and Harbor Act (H.Doc.262, 76th Cong., 1st sess.)	H. Doc. 225, 76 th Cong., 1 st sess. ² Public Law 420, 78 th Cong.
March 2, 1945 July 24, 1946 July 3, 1958	Extension of 40-foot channel. Extension of President Roads anchorage. Reserved channel 35 feet deep, 430 feet wide, extending one	H. Doc. 733, 79 th Cong., 2 nd sess. H. Doc. 244, 80 th Cong., 1 st sess. ² H. Doc. 349, 84 th Cong., 2 nd sess. ²
October 23, 1962	Chelsea River Channel and Maneuvering Basin 35 feet deep.	H. Doc. 350, 87 th Cong., 2 nd sess. ²

TABLE 1-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
January 1, 1990	Deauthorizes 1945 Act.	Federal Register Volume 55, No. 194, October 5, 1990.
November 28, 1990	Deepen Mystic River and Reserved Channels to 40 feet; Chelsea River Channel to 38 feet; widen and deepen Inner Confluence Area to 40 feet; mark Presidents Roads Channel and expand Presidents Roads Anchorage from 353 to 420 acres.	Section 101, Public Law 101-640.
October 31, 1992	Deauthorizes portion of the 35-foot channel in Boston Inner Harbor lying easterly of the Charlestown waterfront authorized in 1902 River and Harbor Act.	Section 116(2), P.L. 102-580
October 12, 1996	Deauthorizes portion of the 35-foot Chelsea River Channel authorized in the 1962 Act.	Section 364(12), P.L. 104-303
October 12, 1996	Deauthorizes portion of the 40-foot Reserved Channel authorized in the 1990 Act.	Section 364(16), P.L. 104-303
BRIDGEPORT HARBOR, CT (See Section 5 of Text.)		
July 4, 1836	Fayerweather Island seawall.	
March 3, 1899	Shore protection of Fayerweather Island.	Annual Report, 1899, page 1173
March 2, 1907	West breakwater and present project dimensions of east breakwater.	H. Docs. 275 and 521, 59 th Cong., 2 nd sess.
March 2, 1919	Present project depths of 18-and 12-foot anchorage basins.	H. Doc. 898, 63 rd Cong., 2 nd sess.
July 3, 1930	25-foot entrance channel, 25-foot anchorage and an 18-foot channel through Johnsons River, present project dimensions of channels through Poquonock River, Yellow Mill Pond, Black Rock Harbor and Cedar Creek.	H. Doc. 281, 71 st Cong., 2 nd sess.
August 26, 1937	25-foot channel through main harbor, and present Project location and extent of 18- and 12-foot anchorage basins.	H. Doc. 232, 75 th Cong., 1 st sess.
March 2, 1945	30-foot channel; elimination of 12-foot anchorage.	H. Doc. 819, 76 th Cong., 3 rd sess.
July 24, 1946	30-foot turning basin and 15- and 9-foot channels in Johnsons River	H. Doc. 680, 79 th Cong., 2 nd sess. ⁴
July 3, 1958	Present depth and extend of main channel, and turning Basin south and southeast of Cilco Terminal; Black Rock Harbor breakwater; Burr and Cedar Creek anchorage. Upper Johnsons River anchorage; lower Johnsons River anchorage.	H. Doc. 136, 85 th Cong.
November 2, 1979	Deauthorizes the removal of rock in Yellow Mill Pond authorized in the 1930 Act.	H. Doc. 157, 96 th Cong., 1 st sess.
November 17, 1986	Deauthorizes construction of two rubble-mound breakwaters at the entrance to Black Rock Harbor and dredging a 28-acre anchorage 6 feet deep in Burr and Cedar Creeks at the head of Black Rock Harbor authorized In the 1958 Act.	Sec, 1002, P. L. 99-662
October 12, 1996	Deauthorizes two-acre anchorage area at the head of the Johnsons River authorized in the 1958 Act, and portion of the Johnsons River navigation channel authorized in the 1946 Act.	Section 364 (2) (A) & (B), P.L. 104-303
August 17, 1999	Deauthorizes a 2.4-acre anchorage area, 9 feet deep , and an adjacent 0.6-acre anchorage area, 6 feet deep, located on the west side of the Johnsons River authorized in the 1958 Act.	Section 365 (a) (1), P.L. 106-53
CAPE COD CANAL, MA (See Section 6 of Text.)		
January 21, 1927 (Section 2)	Purchase canal from Boston, Cape Cod & New York Canal Co., in accordance with contract dated July 29, 1921, executed by that company.	H. Doc. 139, 67 th Cong., 2 nd sess.

TABLE 1-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Included in Public Works Administration program, September 6, 1933	Construct three bridges and widen canal to 250 feet.	H. Doc. 795, 71 st Cong., 3 rd sess.
June 26, 1934 (Permanent Appropriations Repeal Act)	Operation and care of works of improvement provided for the funds from War Department appropriations for rivers and harbors.	Do.
Included in Public Works Administration program, April 29, 1935	Construct a mooring basin.	Do.
Included in Emergency Relief Program, May 28, 1935.	Dredging and bank protection.	Do.
August 30, 1935	Existing project for main canal adopted.	Rivers and Harbor Committee Doc. 15, 74 th Cong., 1 st sess.
March 2, 1945	Channel and turning basin 15-feet deep in Onset Bay.	H. Doc. 431, 77 th Cong., 1 st sess.
July 3, 1958	Extend East Boat Basin for an area of about 4.3 acres to a depth of eight feet.	H. Doc. 168, 85 th Cong., 1 st sess.
August 17, 1999	Authorizes Secretary to pay up to \$300,000 for alternate transportation during rehabilitation of the Railroad Bridge.	Section 536, P.L. 106-53.
September 19, 1890	COCHECO RIVER, NH (See Section 7 of Text.) Provides for a 3 mile long tidewater channel 7 feet deep and 60 to 70 feet wide.	H. Doc. 74, 51 st Cong. 1 st sess.
October 12, 1996	Deauthorizes portion of 1890 Act and directs maintenance dredging of the remaining project.	Section 365(18), P.L. 104-303
June 3, 1896	GREAT SALT POND, BLOCK ISLAND, RI (See Section 9 of Text.) Channel and jetties.	H. Doc. 57, 54 th Cong., 1 st sess.
June 13, 1902	Extending south jetty and dredging.	Specified in Act. Annual Report for 1900, p. 1276.
March 2, 1945	Channel and basin in inner harbor.	H. Doc. 330, 77 th Cong., 1 st sess.
November 17, 1986	Deauthorizes the 1,200-foot long north jetty at the entrance to Great Salt Pond, authorized in the 1896 Act, and the 12-foot Access channel and basin in the inner harbor authorized in the 1945 Act.	Sec. 1002, P.L. 99-662.
July 14, 1960 as amended	GREEN HARBOR, MA (See Section 10 of Text.) Channel six feet deep, 100 feet wide from deep water to head of navigation; anchorage near town pier; sealing, rebuilding in part and extension of existing west jetty.	Section 107, P.L. 86-645 Authorized by the Chief of Engineers December 15, 1965.
August 17, 1999	Deauthorizes portion of the 6-foot channel and turning basin, and redesignates portion of 6-foot channel as an anchorage area.	Section 365 (a)(11) & (d), P.L. 106-53.
July 11, 1870	HARBOR OF REFUGE, BLOCK ISLAND, RI (See Section 11 of Text.) Main breakwater.	Annual report 1868, p. 785 and S. Misc. Doc. 81, 40 th Cong., 2 nd sess.
August 2, 1882	Repairs to basin walls and cliff protection east of harbor.	S. Ex. Doc. 26, 47 th Cong., 1 st sess.
August 5, 1886	Breakwater enclosing inner harbor.	S. Doc. 27, 48 th Cong., 2 nd sess. and Annual Report 1885, p. 610
June 3, 1896	Raising crest of main breakwater and making it sandtight.	H. Doc. 83, 54 th Cong., 1 st sess.
July 25, 1912	Rebuilding basin walls and present project dimensions of dredged area.	H. Doc. 828, 60 th Cong., 1 st sess.

TABLE 1-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
November 17, 1986	Deauthorizes two 15-foot anchorages in the outer harbor authorized by the River and Harbor Act of 1912. Inner Harbor.	Section 1002, P.L. 99-662.
August 2, 1882 August 11, 1888 July 13, 1892 June 13, 1902	LYNN HARBOR, MA (See Section 14 of Text.) Lynn Channel 200 feet wide and 10 feet deep. Extends the inner channel 400 feet and provides for an anchorage basin 500 feet by 300 feet, also to 10 feet deep. Western Channel leading to the Saugus River 8 feet deep and 150 feet wide. Deepen Lynn Channel and anchorage basin to 15 feet deep.	
June 25, 1910	Widen Lynn Channel to 300 feet, straighten the curve and enlarge the anchorage basin to 500 feet square.	H. Doc. 948, 60 th Cong., 1 st sess.
July 3, 1930	Deepen Lynn Channel to 22 feet and widen turning basin to 550 feet.	Rivers and Harbors Committee Doc. 7, 71 st Cong., 1 st sess.
August 30, 1935	Deepen Lynn Channel to 25 feet.	Rivers and Harbors Committee Doc. 7, 71 st Cong., 1 st sess.
September 3, 1954 November 17, 1986	Provides for the easterly 300 feet of the Municipal Channel. Deauthorizes the easterly 300 feet of the Municipal Channel and Deepening of the Lynn Channel from 22 to 25 feet.	H. Doc. 568, 81 st Cong., 2 nd sess. Section 1002, P. L. 99-662.
October 23, 1962	NARRAGUAGUS RIVER, ME (See Section 15 of Text.) Channel 11 feet deep and 150 feet wide from deep water to Wyman, thence 9 feet deep and 100 feet wide to Milbridge with widening opposite Milbridge for an anchorage, and thence 6 feet deep and 100 feet wide to proposed town landing with widening near landing for an anchorage.	H. Doc. 530, 87 th Cong., 2 nd sess.
June 14, 1880 June 25, 1910 March 2, 1945	NEWBURYPORT HARBOR, MA (See Section 16 of Text.) Construction of rubble stone jetties. Dredging the bar at the entrance to harbor. Dredging channel from deep water to wharves and a widened turning basin.	Annual Report for 1910, p. 59. H. Doc. 703, 76 th Cong., 3 rd sess.
November 17, 1986 October 31, 1992	Deauthorizes uncompleted portions of the 1945 Act. Deauthorizes small portion of 1910 Act.	Section 1002, P. L. 99-662. Section 116(3), P.L. 102-580
July 5, 1884	PENOBSCOT RIVER, ME (See Section 17 of Text.) Widening channel at Bangor and Crosby's Narrows.	S. Ex. Doc. 44, 48 th Cong., 1 st sess. Annual Rpt. 1884, p. 475
August 11, 1888	Dredging between Winterport and Bucksport.	H. Ex. Doc. 133, 50 nd Cong., 1 st sess. Annual Rpt. 1888, p. 425
July 31, 1892	Widening the channel at Bangor.	H. Ex. Doc. 37, 52 nd Cong., 1 st sess. Annual Rpt. 1892, p. 553
March 2, 1907	Further widening of the harbor at Bangor.	H. Doc. 739, 59 th Cong., 1 st sess. (other maps are in H. Doc. 652, 71 st Cong., 3 rd sess.)
March 3, 1899 March 4, 1913 September 22, 1922 October 23, 1962	PLYMOUTH HARBOR, MA (See Section 18 of Text.) Beach Protection. Dredging 18-foot channel. Dredging 15-foot extension, including turning basin. Rubblestone breakwater. Anchorages are eight feet deep inside breakwater. Elimination of authorized 18-foot anchorage from existing project.	Annual Report for 1899, p. 1089. H. Doc. 1194, 62 nd Cong., 3 rd sess. H. Doc. 996, 66 th Cong., 3 rd sess. H. Doc. 124, 87 th Cong., 2 nd sess.
July 9, 1965	Recreational development.	

TABLE 1-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
August 26, 1937	PROVIDENCE RIVER AND HARBOR, RI (See Section 20 of Text.) Channel 35 feet deep from deep water in Narragansett Bay to Fox Point.	H. Doc. 173, 75 th Cong., 1 st sess.
October 18, 1965	Deepen 35-foot channel to 40 feet, and provide a 30-foot channel from the upper end of the existing project to India Point at the mouth of the Seekonk River. (The India Point channel was deauthorized in November 1986.)	S. Doc. 93, 88 th Cong., 2 nd sess.
June 14, 1880	ROCKLAND HARBOR, ME (See Section 21 of Text.) Breakwater	
June 29, 1956	Approach channel 18 feet deep and branch channels.	S. Doc. 82, 82 nd Cong., 1 st sess.
November 17, 1986	Deauthorizes uncompleted portions of the 1956 Act.	Section 1002, P. L. 99-662.
March 3, 1873	SALEM HARBOR, MA (See Section 22 of Text.) Channel 8 feet deep and 300 feet wide at entrance to South River, and construction of a seawall and breakwater for the protection of Long Point.	S. Ex. Doc. 25, 42 nd Cong., 3 rd sess.
September 19, 1890	Extends channel 6 to 8 feet deep and 50 to 150 feet wide up South River.	H. Ex. Doc. 28, 51 st Cong., 1 st sess.
March 3, 1905	Channel 10 feet deep and 200 to 300 feet wide at entrance to South River.	H. Doc. 303, 58 th Cong., 2 nd sess.
July 3, 1930	Main Ship Channel 25 feet deep and 300 feet wide, and removal of shoal near Abbot Rock Beacon.	H. Doc. 112, 70 th Cong., 1 st sess.
March 2, 1945	Main Ship Channel 30 feet deep.	H. Doc. 701, 76 th Cong., 3 rd sess.
July 3, 1958	Main Ship Channel 32 feet deep and 300 to 400 feet wide and South River Channel 8 to 10 feet deep and 50 to 300 feet wide.	H. Doc. 31, 85 th Cong., 1 st sess.
November 17, 1986	Deauthorizes uncompleted portions of the 1945 Act consisting of extending the 10-foot channel in the South River.	Section 1002, P. L. 99-662.
July 9, 1995	Deauthorizes uncompleted portions of the 1905 Act.	Federal Register Vol. 61, No. 244
July 14, 1960	SAUGUS RIVER, MA (See Section 23 of Text.) Entrance Channel 8 feet deep and 80 to 150 feet wide, and two anchorage areas 6 feet deep and totaling 4.3 acres	P. L. 86-645, Section 107. Authorized by the Chief of Engineers on May 15, 2000
November 17, 1986	SEEKONK RIVER, PROVIDENCE, RI (See Section 25 of Text.) Removal of abandoned India Point Railroad Bridge.	Section 1166(c), P.L. 99-662.
December 18, 1991	Extends project authorization.	Section 1085, P.L. 102-240 of the Intermodal Surface Transportation Infrastructure Act of 1991.
October 12, 1996	Increases total project cost.	Section 301 (a) (13), P.L. 104-303
July 14, 1960 as amended	SESUIT HARBOR, MA (See Section 26 of Text.) Channel 6 feet deep and 100 feet wide.	Section 107, P.L. 86-645 Authorized by the Chief of Engineers February 6, 1980.
June 3, 1896	UNION RIVER, ME (See Section 27 of Text.) Provides for the removal of ledge, boulders and mill waste to create a channel 3 to 4 feet deep from the mouth of the Union River to the wharves at Ellsworth; along with installing navigation beacons. Channel 6 feet deep, 100 to 1500 feet wide from the head of Union River Bay to the wharves at Ellsworth, and construction of a jetty and training wall at the mouth of Union River near Norton's Rocks. (Funds for construction of the jetty and the training wall were never appropriated and this work was subsequently omitted from the project.)	Report of District Engineer dated June 30, 1867. H. Doc. 138, 51 st Cong., 1 st sess.

TABLE 1-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
WELLS HARBOR, ME (See Section 28 of Text.)		
1835 June 10, 1872	Stone-filled timber crib pier (jetty) at the mouth of the Wells Inlet. Repairs to old government cribwork pier, about 750 feet long, at north side of harbor entrance.	River & Harbor Act of 1872
July 14, 1960	Construction of two stones jetties at inlet (south-940 feet long, north-640 feet long), 8-foot entrance channel, 6-foot inner channel, 6-foot by 7.4-acre anchorage.	P.L. 86-645, Section 101. H. Doc. 202, 86th Cong., 2nd sess.
July 14, 1960	Extend north jetty 100 feet. Increase design elevations of both jetties. 680-foot long stone revetment for tip of Wells beach at municipal parking area. Add rough stone wave absorber to inner 100 feet of south jetty.	Design Modification Authorized by the Chief of Engineers September 24, 1962.
July 14, 1960	Further extend north jetty by 1,225 feet. Extend south jetty by 1,300 feet. Dredge 10-foot by 3.1-acre inner harbor settling basin.	Design Modification Authorized by the Chief of Engineers September 20, 1965.
August 17, 1999	Modified dredged features of existing project to deauthorize portions of the inner harbor channel, anchorage and settling basin, realign the inner access channel, redesignate portions of the inner channel and settling basin as part of the 6-foot anchorage, and relocated settling basin to outer harbor.	Section 365(a)(9) & (c), P.L. 106-53.
POINT BEACH, MILFORD, CT (See Section 30 of Text.)		
October 23, 1962	Project involves raising the first floor of 58 shorefront and back shore residential structures above the estimated 100 year flood elevation.	Section 103, P.L. 87-874. Authorized by the Chief of Engineers November 6, 1995.
AROOSTOOK RIVER, FORT FAIRFIELD, ME (See Section 33 of Text.)		
June 30, 1948, as amended	Construct 2,800 linear feet of earth dike and concrete floodwall along the side of the Aroostook River.	Section 205, P.L. 80-858. Authorized by the Chief of Engineers May 7, 1999.
November 12, 2001	Costs to design and construct modifications to the pump station to preclude ice from interfering with pump operations are at 100 percent Federal expense.	Section 111, P.L. 107-66.
FAULKNER ISLAND, CT (See Section 37 of Text.)		
October 12, 1996	Construct 2,000 linear feet of stone revetment running along the entire east side of the Island and wrapping around the north and south ends.	Section 527, P.L. 104-303
FOX POINT BARRIER, RI (See Section 38 of Text.)		
July 3, 1958	Construction of concrete hurricane barrier across Providence River at Fox Point in the City of Providence.	H. Doc. 230, 85 th Cong., 1st Sess.
August 17, 1999	Directs Secretary to undertake repairs of the barrier as identified in Condition Survey and Technical Assessment dated April 1998, with Supplemental dated August 1998.	Section 352, P.L. 106-53
HOOSIC RIVER, SYNDICATE ROAD, WILLIAMSTOWN, MA (See Section 37C of Text.)		
July 24, 1946, as amended	Construct 300 linear feet of stone slope protection along the western bank of the Hoosic River adjacent to Syndicate Road.	Section 14, P.L. 79-526. Authorized by the Chief of Engineers July 10, 2001
NORTH NASHUA RIVER, LANCASTER, MA (See Section 40E of Text.)		
July 24, 1946, as amended	Construct 500 linear feet of stone slope protection along the streambank of the North Nashua River adjacent to Massachusetts Highway Route 70.	Section 14, P.L. 79-526. Authorized by the Chief of Engineers May 21, 1999

TABLE 1-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
October 31, 1992	QUONSET POINT, DAVISVILLE, RI (See Section 42 of Text.) Construction of two elevated water storage towers and extension, rehabilitation and relocation of 6,000 feet of sewer line.	Section 362, P.L. 102-580.
November 17, 1986	ROUGHANS POINT, REVERE, MA (See Section 43 of Text.) Stabilize existing facilities along the shore with a 4,080-foot long armor stone revetment. Construct earth berm one-foot high and 200 feet long on existing median strip between Bennington Street and State Road.	Section 401, P.L. 99-662.
November 17, 1986	SAINT JOHN RIVER BASIN, ME (See Section 44 of Text.) Ten-year research and demonstration program of cropland irrigation and soil conservation techniques for increasing potato yield and quality.	Section 1108, P.L. 99-662.
November 17, 1986	TOWN BROOK, QUINCY AND BRAINTREE, MA (See Section 47 of Text.) Construct 12-foot diameter, 4,060-foot long, concrete lined tunnel in bedrock approximately 140 to 180 feet below ground; channel improvements downstream of the tunnel outlet; and reconstruction of Old Quincy Reservoir Dam located at the headwaters of Town Brook.	H. Doc. 39, 99 th Cong., 1 st sess.
August 17, 1999	LEBANON, NH (See Section 52 of Text.) Amends Section 219 of the Water Resources Development Act of 1992 to include a combined sewer overflow project in Lebanon, New Hampshire.	Section 502, P.L. 106-53.
November 12, 2001	Non-Federal interests shall receive credit toward the non-Federal share of the cost of the project for work performed before the date of execution of the project cooperation agreement, if the Secretary determines the work is integral to the project.	Title I, P.L. 107-66
October 12, 1996	LONSDALE DRIVE-IN, LINCOLN, RI (See Section 53 of Text.) Restoration of 7 acres of open water and 7 acres of upland habitat by demolishing and excavating former drive-in.	Section 206, P. L. 104-303, Authorized by the Chief of Engineers May 3, 2002.
October 12, 1996	PRESUMPCOT RIVER (SMELT HILL), FALMOUTH, ME (See Section 54 of Text.) Removal of Smelt Hill Dam.	Section 206, P. L. 104-303, Authorized by the Chief of Engineers May 6, 2002.
November 17, 1986	SAGAMORE MARSH, CAPE COD CANAL, MA (See Section 55 of Text.) Restoration of 50 acres of salt marsh by installing larger culverts beneath Scussett Beach and Cape Cod Canal Service Roads and excavating channels.	Section 1135, P.L. 99-662. Authorized by the Chief of Engineers September 5, 1996.

¹ A portion has been abandoned pursuant to P.L. 624, December 31, 1970.

² Contains latest published maps. See also Annual Report, 1911, p. 1178 (seawalls and Nixes Mate Channel) and Annual Report, 1903, p. 770 (Fort Point Channel.)

³ Authorized in part by Public Works Administration, Sept. 6, 1933.

⁴ Contains latest maps.

TABLE 1-C (Continued) OTHER AUTHORIZED NAVIGATION PROJECTS

Projects are complete unless otherwise noted.

¹ Complete except for inactive portion.

² Inactive.

³ Abandonment recommended in H. Doc. 467, 69th Congress, 1st session.

⁴ No commerce reported.

⁵ Portion or project authorized by Chief of Engineers (Public Law 86-645, Sec. 107).

⁶ Authorized by the Chief of Engineers (Public Law 86-645, Sec. 107).

⁷ Construction of a public landing by local interests has not been completed.

⁸ Excludes \$5,000 Contributed Funds.

⁹ Excludes \$37,200 Contributed Funds, Other.

¹⁰ Excludes \$582,188 Contributed Funds, Other.

¹¹ Excludes \$114,327 expended for rehabilitation; breakwater repaired in 1962.

¹² Excludes \$173,425 Contributed Funds, Other.

¹³ Excludes \$211,649 expended for minor rehabilitation; jetty repaired in 1963.

¹⁴ Public landing at Black Cove has not been constructed.

¹⁵ Costs to local interests for berth improvements are estimated to be \$60,000.

¹⁶ Excludes \$81,548 Contributed Funds, Other.

¹⁷ Abandonment recommended in H. Doc. 411, 64th Congress, 1st session, and in River and Harbor Committee Doc. 3, 65th Congress, 1st session.

¹⁸ Excludes \$37,714 Emergency Relief Funds.

¹⁹ Under State maintenance.

²⁰ Excludes \$10,000 Contributed Funds, Other.

²¹ Lack of local sponsor. (Project authorized by Section 361 of WRDA 1992.)

²² Excludes \$17,495 non-project cost for removal of mooring chains, of which the project sponsor still owes \$12,198.

²³ Excludes \$10,000 Contributed Funds.

²⁴ Excludes \$129,757 expended for minor rehabilitation work.

²⁵ Excludes \$1,926,000 expended for rehabilitation.

²⁶ Excludes \$65,000 consisting of \$13,000 for public wharf and \$52,000 for additional construction.

²⁷ Excludes \$571,401 Contributed Funds.

²⁸ Excludes \$20,000 Contributed Funds, Other.

²⁹ Excludes \$18,000 Contributed Funds, Other.

³⁰ Excludes \$476,782 Contributed Funds, Other.

³¹ Excludes \$83,476 Contributed Funds, Other.

³² Excludes \$50,000 Contributed Funds.

TABLE 1-U (Continued) RECONNAISSANCE AND CONDITION SURVEYS

Dredged Material Management Program

Major activities for fiscal year 2002 were (1) monitoring surveys at the Massachusetts Bay, Mark Island, Machias Bay, Boston Harbor, and Morris Cove disposal sites (2) maintenance, replacement, and repositioning of disposal site buoys. Additionally, seven monitoring study reports were completed and distributed to the public and regional resource agencies, and a public symposium was held in April 2002. Total cost of contracts was \$890,091. Labor costs of \$290,251 for program management, sampling and testing, and environmental analysis were incurred.

Long Island Sound

New England and New York Districts have an ongoing responsibility for maintenance of the 55 existing Federal Navigation Projects in Long Island Sound and adjacent waters. Work this FY consisted of continuing a Dredged Material Disposal Site Designation study in cooperation with EPA. A total of \$1,659,992 was expended this FY on continuing contracts for the preparation of an Environmental Impact Statement. In-house efforts included \$128,029 for environmental work, \$67,492 for project coordination and management, \$1,368 for cultural resource investigation and coordination, \$4,483 for economic impact analysis, and \$1,394 for contract administration. Work next FY will consist of completion of study efforts and preparation and publication of a draft Environmental Impact Statement for agency and public review.

Rhode Island Long-Term Disposal

At the request of the State of Rhode Island, the New England District is working in partnership with the US Environmental Protection Agency to evaluate the feasibility of designating a long-term dredged material disposal site in the Rhode Island Region. Designation of a permanent disposal site will assist the New England District in maintaining the 25 federal navigation projects in Rhode Island and southeastern Massachusetts. Work this FY consisted of continuing the site designation investigation. A total of \$1,394,9123 was expended on a continuing contract to collect field data, perform a dredging needs survey, conduct public workshops and initiate EIS documentation efforts. In-house efforts included \$40,206 for survey efforts, \$64,785 for environmental work, and \$14,637 for economic analysis and \$81,700 for public involvement, project coordination and management.

NEW YORK, NY DISTRICT

NEW YORK, NY DISTRICT

This District comprises western Vermont, small portions of western Massachusetts and Connecticut, eastern New York including Long Island, and northeastern New Jersey, embraced in the drainage basins tributary to Lake Champlain and St. Lawrence River system east thereof and to the Atlantic Ocean from New York – Connecticut State Line to, but not including Manasquan Inlet, NJ. In addition it

exercises jurisdiction over matters pertaining to improvement of Great Lakes to Hudson River waterway. Under the direction of the Secretary of Army, the District Engineer, as Supervisor of New York Harbor, also exercises jurisdiction under the laws enacted for the preservation of the tidal waters of New York Harbor, its adjacent or tributary waters, and the waters of Long Island Sound.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

1. AQUATIC PLANT CONTROL

Location. Navigable waters, tributary streams, connecting channels, and other allied waters in New York District.

Existing Project. Provides for control and progressive eradication of water chestnut. Eurasian water milfoil, and other obnoxious aquatic plant growths from the navigable waters, tributary streams, connecting channels, and other allied waters of the United States, in the combined interest of navigation, flood control, drainage, agriculture, fish and wildlife conservation, public health and related purposes, including continued research for development of the most effective and economic control measures. (See Table 2-B for Authorizing Legislation.)

Local cooperation. Local interests were required to provide 30 percent of the cost of the program except as modified by 1962 River and Harbor Act and agree to hold the United States free from damages. The Water Resources Development Act of 1986 changed the local responsibility from 30% to 50%. In FY 87 the States involved in the program were permitted to keep the cost sharing at 30% by order of the Secretary of the Army. Starting FY 88, However, Local sponsors contributed 50% of the costs. The FY 2002 APC Project Cooperation Agreement was executed in June 2002.

Operations and results during period. The purpose of the control program, started in FY 1982, is for the removal of nuisance aquatic plants in the Lake Champlain Basin, Vermont. Recent work continued the removal of water chestnut and Eurasian milfoil from portions of the basin.

Condition as of September 30. Reconnaissance report covering the aquatic plant problems of the North Atlantic Division areas was complete in August 1967. The General Design Memorandum for this program was completed in March 1982 by the State of Vermont. The total Federal cost of this control program to date is \$3,237,857 in FY 2002, the New York District did cost-share a FY 2001 program with the State Vermont, as Federal funds were available. In October 1991, Waterways Experiment Station was directed to conduct a multi-year study which would identify and test potential biocontrol agents of water chestnuts. No successful biocontrol agents of water chestnut were identified. FY 2002 funds in the amount of \$300,000 was used by New York District to continue the Aquatic Plant Control Program with the State of Vermont.

2. ARTHUR KILL CHANNEL, HOWLAND HOOK MARINE TERMINAL, NY & NJ

Location. The project includes the Arthur Kill Channel from its confluence with the Kill Van Kull and Newark Bay Channels westerly for about 2.2 miles to the Howland Hook Marine Terminal in Staten Island, NY, and thence southwesterly for about 1.1 miles to the Tosco Oil Refining Company and GATX facilities in NJ and NY, respectively. (See National Ocean Survey Chart 12333.)

Existing Project. Deepening the existing 35 foot Arthur Kill channel to 41 feet MLW from its confluence with the Kill Van Kull and Newark Bay Channels to the Howland Hook Marine Terminal in Staten Island. New

York and to 40 feet MLW from Howland Hook Marine Terminal to the Tosco Oil Refining Company and GATX facilities in NJ and NY, respectively. Also included are

selected widenings and realignments of the channel, as well as the removal of the U.S. dike north of Shooters Island. Project also provides for mitigation consisting of restoration and enhancement of approximately 23 acres of intertidal salt march. The current estimate of the total project cost at Oct.02P.L.S, and inflated to the midpoint of construction, is \$402,050,000 of which the Federal cost is estimated at \$257,700,000 and the non-Federal cost is estimated at \$144,350,000.

Local Cooperation. The Port Authority of New York and New Jersey is the non-Federal sponsor for the project, A Project Cooperation Agreement (PCA) for the project was executed on 25 July 2002.

Terminal Facilities. See Port Series No.5

Operations and results during period, and conditions as of Sept. 30. The existing Arthur Kill Channel has a channel depth of 35 feet MLW. The current project, which has not yet been initiated, will deepen the channel from its confluence with the Kill Van Kull and Newark Bay Channels to Howland Hook Marine Terminal to 41 feet MLW, and from Howland Hook Marine Terminal to the Tosco Oil Refining Comp[any and GATX facilities to 40 feet MLW.

3. BURLINGTON HARBOR, VT.

Location. About 100 acres in extent, is in a half-moon-shaped indentation in eastern shore of Lake Champlain, about 40 statute miles south of international boundary line, 70 statute miles north of southern end or head of lake, and 20 statute miles southeast of harbor at Plattsburg, N.Y. (See Lake Survey Chart 172.)

Existing project. A breakwater 6,000 feet long about 1,000 feet from shore and practically parallel with it, to be built of stone-filled timber cribs capped with large stone or concrete. Completed breakwater is in two sections, northerly 500 feet being separated from southerly 5,500 feet by a gap 200 feet wide for purpose of safety in entering harbor during storms. Reference plane of low lake level is 93 feet above mean sea level. Level of lake has varied from 0.6 foot below up to 8.8 feet above low lake level. Usual annual variation is 5.8 feet. New work for completed project cost \$706,414.

Terminal facilities. Bulkhead shore front and open pile and solid filled piers having a total dockage of 6,520 feet. Of the terminals, 5 wharves, 2 piers, and 1 ferry slip are in use. Five terminals have railroad connections. Facilities are considered adequate for present needs of commerce.

Local cooperation. None required.

Operations and results during the period. A continuing contract for repair of the end segments of the breakwater, Lake Champlain, Burlington, Vermont was awarded on 6 June 2001 to Durocher Dock and Dredge, Inc. FY 02 funds were expended completing this continuing contract. In addition, a continuing contract to

NEW YORK, NY DISTRICT

perform repairs to the midsection of the breakwater was awarded to MCM Marine, Inc. on 17 June 2002. Operations and maintenance funds in the amount of \$2,296,603 was expended performing breakwater repairs under two contracts including engineering, design, supervision and inspection on during FY 2002

Condition as of September 30. Existing project was practically completed in 1890; part of breakwater originally proposed was not built, the work completed being considered sufficient for needs of navigation. Breakwater was built in two section.

4. EAST RIVER, NY

Location. A tidal strait about 16 miles long and 600 to 4,000 feet wide, connecting Hudson River and the Upper Bay at the Battery, New York City, with Long Island Sound at Throgs Neck, New York City, and separating Long Island from Manhattan Island and the mainland. (See National Ocean Survey Chart 12335, 12339, and 12366.)

Previous Project. For details see page 210 of Annual Report for 1932.

Existing Project. Channels of following dimensions (depths refer to mean low water): From deep water in Upper New York Bay to Wallabout Channel, 40 feet deep and 1,000 feet wide; from Wallabout Channel to Throgs Neck, 35 feet deep, with widths varying from about 550 to 1,000 feet according to locality: east of F.D. Roosevelt Island up to English Place (43d Dr.), Long Island City, 30 feet deep and varying in width from 500 to 900 feet, with widening in approach from main channel: between South Brother and Berrian Island, 20 feet and 300 feet wide, with widening in approach from main channel: from East River channel to Astoria waterfront, a flared 0.31 mile entrance channel 1,600 to 400 feet wide, a 0.64 mile channel 400 feet wide, and a turning basin 1,000 feet wide and 1,600 feet long, all 37 feet deep in rock and 35 feet in soft material (South Brother Island Channel): removal of Coenties Reef to a depth of 40 feet, also removal of following rocks and reefs lying outside of limiting lines of main channels to give access to wharves: Along Brooklyn shore, Brooklyn Bridge to Manhattan Bridge (Fulton Ferry Reef), to a depth of 25 feet: Jay Street Reef, 25 feet; Corlears Reef, 35 feet; Shell Reef, 25 feet; Horns Hook, 40 feet; Rhinelander Reef, 26 feet; and reef off Oak Point, 30 feet; and construction of a dike in Pot Cove in Hell Gate. Section included in improvement is about 17.8 miles long. Mean range of tide varies according to locality from 4 feet at North Third Street, Brooklyn, and 4.4 feet at the Battery to 4.9 feet at Hallets Point, 6.3 feet at Port Morris, and 7.1 feet at eastern entrance at Throgs Neck; mean range of spring tides 4.8, 5.3, 5.9, 7.6 and 8.5 feet respectively; irregular fluctuations due to wind and atmospheric pressure vary according to locality from 3.8 feet below mean low water at the Battery, 2.4 feet at North Third Street, Brooklyn, and 3.8 feet at Throgs Neck up to about 5.2 feet above mean high water at the Battery and 8.4 feet above mean high water at Throgs Neck; extreme fluctuations do not seriously affect navigations.

Local Cooperation. Resolutions of 1970 require local interests to furnish lands, easements and rights-of-way for construction and maintenance; hold the United States free from damages; provide and maintain depths in berthing areas and local access channels serving the terminals commensurate with project depth; provide upon transfer to the United States, a depth in the existing South Brother Island Channel and turning basin of not less than 30 feet; and establish regulations prohibiting discharge of untreated sewage, garbage, and other pollutants in the waters of the harbor, which shall be in accordance with regulations of Federal State and local authorities responsible for pollution control. Assurances of local cooperation were furnished by the Port Authority of New York and New Jersey under the date of April 9, 1974.

Terminal Facilities. See Port Series No. 5. revised 1988. Vol. 2.

Operations and results during the period. A contract for the removal and disposal of all material except ledge rock lying above the plane of 35 feet below mean low water in specified areas of South Brother Island Channel, East River, NY was awarded 25 April 2002 to Great Lakes Dredge & Dock Company. Approximately 245,700 cubic yards of material was removed and placed in the ocean as remediation material. The dredging was completed in June 2002. Operations and maintenance funds in the amount of \$1,727,374.75 was expended during FY 2002.

Conditions as of September 30. Work under existing project was commenced June 1916 and was essentially completed. Construction of dike at Pot Cove in Hell Gate and a part widening near pierhead line in Jay Street Reef are considered unnecessary for the needs of current navigation.

5. EAST ROCKAWAY INLET, NY

Location. On the south shore of Long Island between main body of island and western end of Long Beach. It is 10 miles east of Rockaway Inlet and about 27 miles by water south and east from the Battery, New York City. (See National Ocean Survey Chart 12353.)

Existing Project. A channel 12 feet deep at mean low water and 250 feet wide from 12 foot contour in Long Beach Channel protected by a jetty. Mean tidal range, 4.3 feet: mean range of spring tides. 5.2 feet above mean high water. New work for completed project cost \$603,969, including \$100,000 contributed funds. (See Table 2-B for Authorization Legislation.)

Local Cooperation. Complied with

Terminal Facilities. There are numerous terminals in Oceanside, Island Park, Long Beach, and East Rockaway, including oil terminals. Other terminals are repair and mooring docks with mechanical handling facilities. There are public wharves at East Rockaway and Woodmere. Waterfront on north side of Long Beach has bulkheaded. Facilities are considered adequate for existing commerce.

Operations and results during the period. A combined maintenance dredging and beach nourishment continuing contract for East Rockaway Inlet/Rockaway

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

Beach was awarded on September 23, 2002 to Great Lakes Dock & Dredge Co. The Maintenance dredging phase of the project involved the dredging of 120,000 cubic yards of material from East Rockaway Inlet federal navigation channel with placement at Rockaway Beach. Dredging was completed during the 1st quarter of FY 2003. Operations and Maintenance funds in the amount of \$446,454.75 was expended on this project during FY 2002.

Conditions as of September 30. Work under existing project began February 1933 and is 10 percent complete. East jetty, 4,250 feet long was completed in July 1934. Project channel was completed in May 1935.

6. FIRE ISLAND TO JONES INLET, NY

Location. On south shore of Long Island, about 50 miles by water south and east of Battery, New York City. Fire Island Inlet is the main entrance into Great South Bay from the Atlantic Ocean. (See National Ocean Survey Chart 12352.)

Existing Project. A jetty at Fire Island Inlet extending generally southward and south for 5,000 feet from high ground on Democrat Point at the west end of Fire Island and a channel 14 feet deep and 450 feet wide along the northern edge of the Inlet's shoaling area connecting the ocean to the deep water in the Inlet. Mean tidal ranges at the ocean and inlet ends of Democrat Point are 4.1 feet and 2.4 feet respectively. Irregular fluctuations due to wind and atmospheric pressure vary from 2.5 feet below mean low water up to 6.2 feet above mean high water on the ocean side. (See Table 2-B for Authorizing Legislation.)

Local Cooperation. Requires cost sharing and lands, easements and rights-of-way.

Terminal Facilities. Great South Bay has extensive public and private facilities for mooring and servicing recreational boats. Much of this traffic uses the inlet during the boating season and some traffic (Coast Guard craft and party head fishing boats) continues throughout the year.

Operations and results during the period. The sixth scheduled nourishment cycle was awarded on 21 September 2001. The maintenance dredging and beach nourishment project involves the dredging of Fire Island Inlet Channel and deposition basin with placement of 1,000,000 cubic yards of sand as nourishment along the designated feeder beach (Gilgo). In addition, the project also involves options which call for additional beach placement at Gilgo, and an option for beach placement at Robert Moses State Park. Approximately 1,441,831 cubic yards of sand was dredged and placed as nourishment along Gilgo Beach Shoreline, a direct contract cost (cost shared) of \$11,762,239.50. In addition 164,794 cubic yards of dredged sand was placed as nourishment along Robert Moses State Park Beach, at a direct contract cost (100% State) of \$1,509,176. Operations and maintenance funds in the amount of \$3,527,849.50 was expended on this project during FY 2002.

Condition as of September 30. The jetty completed in 1941 surpassed its capacity as a sand entrapping agent in a little over a decade. Since the extensive sand bars and shoals continued to form west of the jetty and in the inlet

throat. Hydraulic dredging in the inlet was undertaken in 1959 and again in 1969 under a combined beach erosion control and navigation authorization (1958 Act). Since then 3 more hydraulic dredging operations were conducted starting 1973 and completed in 1977 under provision of the 1962 Act (See Table 2B). Maintenance dredging using a small hopper dredges has also been done from time to time. Due to local concerns about inlet dredging and consequent erosion at Oak Beach maintenance had been deferred since 1979 which allowed the complete shoaling of the authorized project channel. To facilitate the navigation in this period the existing natural channel was dredged in FY 1985 and in FY 1987. In FY 1987 sand was deposited offshore of Gilgo Beach by hopper dredge using operations and maintenance funds. O&M funds were also used during FY 1987 and 1988 to make repairs to the inner portion of the jetty.

In March 1988 the District recommended to plan to maintain a realigned channel in the vicinity of the natural channel to a depth of 14 feet (plus 2 feet of allowable overdepth) and a width of 450 feet. The plan also recommended placement of the dredged material along Gilgo Beach for shore protection purposes. The recommended plan was approved by the Assistant Secretary of the Army for Civil Works on 2 August 1988.

Since FY 1990, the realigned channel was dredged to project every two years with placement of material along Gilgo Beach for shore protection purpose.

7. GLEN COVE, NY

Location. A narrow tidal inlet extending eastwardly about 1 mile from east side of Hempstead Harbor on the north shore of Long Island, 26 miles northeast of the Battery, New York City. (See National Ocean Survey Chart 12366).

Existing Project. Provides for a channel 100 feet wide and 8 feet deep at mean low from deep water in Hempstead Harbor about 1 mile to the head of navigation at city of Glen Cove. Mean tidal range, 7.5 feet; mean range of spring tides, 8.7 feet; irregular fluctuations due to wind and barometric pressure vary from 3.6 feet below mean low water up to 8.4 feet above mean high water. New work for completed project cost \$29,760, exclusive of \$29,774 expended from contributed funds. Widening to 100 feet the upper 1,630 feet of channel where it crosses to foregoing description and cost estimate. Existing project adopted by 1925 River and Harbor Act (H. Doc. 207, 68th Cong., 1st sess.). Latest published map is in project document.

Local cooperation. River and Harbor Act of March 3, 1925 provides that local interests pay one-half of first cost of the work, provided rights-of-way, spoil disposal areas, and bulkheads, and give assurances that adequate terminals will be built. Complied with as to contribution of one-half of first cost of work done to date, ceding of rights-of-way, provision of disposal areas, and the construction of terminals. Pending construction of bulkheads by local interests along southerly section of channel in the upper 1,600 feet of the improvement, a channel of less than project width has been evacuated. In a letter dated

NEW YORK, NY DISTRICT

February 4, 1948, the Commissioner, Department of Public Works, City of Glen Cove, was notified of the conditions affecting the remaining work. There is no indication as to when compliance with these conditions may be expected.

Terminal Facilities. There are 1,875 feet of bulkheads along northerly side of waterway. Terminals are adequate for present needs and there is ample waterfront, both public and private, for additional terminals as needs arise.

Operations and results during the period. The outer portion of the channel was maintained in FY 1997. Maintenance dredging of the remaining portion of the creek was awarded to Bullard Lindsay Contracting on 30 August 2000. The basic work under the contract included the dredging with upland placement of approximately 35,000 cubic yards of material. Options within the contract allowed for the removal of up to 15,000 additional cubic yards of material based on the available capacity of the upland site. Mobilization and disposal site preparation commenced on 19 Sept 2000; and dredging started on 18 October 2000. On November 10th, the contractor informed the Corps that a large amount of debris and pilings were encountered and concluded that it was increasingly non-productive to try to finish the project hydraulically. Subsequently, the contract was modified to use an excavator dredge. Dredging resumed in late February 2001 and was suspended again in April 2001 due to the discovery of an oil layer sediment in the creek and radiation in dredged material at the upland dewatering site in May 2001. A stop work order was issued and radiological contamination signs were posted. The work site was immediately secured by the Corps and EPA. The maintenance dredging contract with Bullard-Lindsay was subsequently terminated in February 2002 for the convenience of the Government under the "Termination for the Convenience of the Government" contract clause. The radiological contaminated dredged material in the dewatering site was disposed of by USEPA. In July 2002, the contractor submitted a Request for Equitable Adjustment (REA) on differing site conditions and costs for Termination for Convenience (T4C), which is being audited by DCAA. The Corps has suspended the navigational dredging of Glen Cove Creek pending resolution of the radioactive material issue, indicating that environmental (rather than navigational) dredging may be required in the creek. Authority for such dredging is presently not available. USEPA has initiated an assessment to determine if the environmental dredging could be undertaken with CERCLA remedial funds. Operations and maintenance funds in the amount of \$1,572,002.41 was expended on Glen Cove Creek during FY 2002.

Conditions as of September 30. Entire existing project is about 55 percent complete. Work under the active portion of existing project was commenced on August 1933 and completed August 1934. The work done provided a channel 100 feet wide from deep water in Hempstead Harbor for 3,470 feet, thence gradually decreasing to 50 feet wide for 180 feet, and 50 feet wide for about 1,450 feet to the head of the improvement. Head of navigation is at City of Glen Cove, about 1 mile above the mouth. Work remaining to complete existing project consists of widening to 100 feet the upper 1,630 feet of channel and building a

sand fence along the north side of channel where it crosses the beach. The Glen Cove Creek maintenance dredging project consists of the removal of total, 45,000 c.y. of sediment from the creek with the placement of the dredged material an upland site for dewatering and temporary storage. The dredged material would be removed later by the City of Glen Cove for beneficial use, if feasible, and/or final disposal at an approved upland site.

6. 8.GREAT KILLS HARBOR, NY

Location. Great Kills is a small harbor contiguous to lower New York Bay, located on the southeasterly shore of Staten Island NY, about 8 miles northwest of Sandy Hook, NJ and 16 ½ miles southwest of the Battery, New York City. (See U.S. Coast and Geodetic Survey Chart No. 369)

Existing projects. This provides for an entrance channel 10 feet wide and 150 feet wide from water in lower New York Bay through the entrance to the harbor in the vicinity of the present westerly end of Crooks Island, thence of same depth and width along the west side of the harbor and anchorage area of 138 acres and 8 foot depth. The length of the section included in the project is about 1.9 miles. The mean range of tide is 4.7 feet, mean range of spring tides, 5.6 feet; irregular fluctuations due to wind and barometric pressure vary from 3.9 feet below mean low water up to 5.2 feet above mean high water.

Local cooperation. Fully complied with except that local interests are required to furnish suitable spoil-disposal areas for maintenance.

Terminal facilities. No terminals suitable for commercial purposes have been established. There are 11 small piers used for mooring and landing purposes. Six commercial boatyards and one public terminal are located at Great Kills. The terminals are considered adequate for present needs.

Operations and results during period. A continuing contract for maintenance dredging was awarded to Wickberg Marine Contracting Inc. on 3 September 2002 for maintenance dredging of the outer (entrance) channel to Great Kills Harbor for removal of all material except ledge rock lying above the plane of 10 feet below mean low water with placement of dredged material on the nearby beaches at Great Kills Park New York. Approximately 130,000 cubic yards of material will be removed. The dredging will be completed in March 2003. Operations and maintenance funds in the amount of \$1,120,000 was expended maintenance dredging in FY 2002.

Government plant and hired labor were employed through the fiscal year performing project condition surveys at a total cost including supervision and administration, of \$204,178 during FY 2001.

Conditions as of September 30. Work under existing project was commenced in December 1934 and completed in September 1934. Under a permit issued by the Secretary of the Army, the city of New York dredged a portion of the anchorage and channel along the west side of the harbor in order to obtain fill for park improvement purposes. When examined intermittently from July 1948, to June 1962, 10

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

feet for widths of 90 to 150 feet in the entrance channel from lower New York Bay to Crooks Point, thence of same depth for a width of 150 feet to the head of the project, and 8 feet in the anchorage.

7. HUDSON RIVER, NY

Location. Originates in Adirondack Mountains, about 250 miles in a direct line and 315 miles along its course from the Battery, New York City, and flows generally southerly into New York Bay-Section under improvement extends from New York City about 156 miles to Waterford. (See National Ocean Survey Charts 12335, 12341, 12343, 12347, 12348, and 14786.)

Previous project. For details see Annual Reports for 1915 and 1938, pages 164 and 226, respectively.

Existing projects. A channel 600 feet wide from New York City to Kingston, and thence 400 feet wide to Albany, with widening at bends, a turning basin 700 feet wide and 1,200 feet long at Albany, and 2 anchorages, 1 near Hudson and 1 near Stuyvesant, each 400 feet wide and an average length of 2,400 feet; all with depth of 32 feet in soft material and 34 feet in rock to 2,200 feet south of the Mall Bridge; thence 27 feet deep and 400 feet wide to 900 feet south of Mall Bridge, thence 14 feet deep at lower low water and generally 400 feet wide to Federal lock at Troy; and thence of same depth and 200 feet wide to southern limit of State barge canal at Waterford; and removal of State dam at Troy and construction of a lock and dam about 2.5 miles below Waterford. Channel is to be formed by dredging and rock excavation, and maintained by dredging and constructing new and raising and repairing old, longitudinal dikes, built partly under previous projects and partly by the State of NY.

In the tidal section below the Federal dam at Troy, the assumed lowest low water plane downstream to Albany is 3 feet below mean sea level. Mean tidal range is about 5 feet below the dam and about 4.9 feet at Albany. The normal pool level above the dam from Troy to Waterford is 14.3 feet above mean sea level, with the mean range of pool level in seasons of moderate rains being 2.2 feet. (See Table 2-C for features of lock and dam included in existing project.) New work for completed project cost \$39,050,019 exclusive of amounts of expended on previous projects. Widening to form harbors at Albany and Troy, NY, to 12 feet deep at a cost of \$522,000 (1954) and completion of 27 foot channel at Albany at a cost of \$642,000 (1957) was placed in deferred for restudy category, and has since been deauthorized. All three features of work are excluded from foregoing description of existing project and cost estimate. Construction of mooring facilities has been authorized (See Table 2-B for Authorizing Legislation.)

Local cooperation. Complied with except that local interests must furnish suitable soil disposal areas for future maintenance as required.

Terminal facilities. See Port Series No.6

Operations and results during period. A continuing contract for maintenance dredging of approximately

250,000 cubic yards of material was awarded to B+B Dredging Company on 10 September 2002 to restore project dimensions in the Hudson to Germantown reaches. FY 02 funds were used to complete the contract work. In addition, FY 02 funds were used to complete the contract work. In addition, FY 02 funds were used to perform sediment sampling and testing for proposed maintenance dredging FY 03. Operations and maintenance funds in the amount of \$ 201,192 was expended maintenance dredging in FY 2002.

A continuing contract for maintenance repairs to Troy Lock and Dam was awarded to Structural Associates, Inc. on 14 September 2002. Operations and maintenance funds in the amount of \$134,443 were expended for repair contract activities during FY 2002.

Government plant and hired labor were employed through the fiscal year performing project condition surveys at a total cost including supervision and administration, of \$264,826 during FY 2002.

Government plant and hired labor were employed through the fiscal year in the removal of snags and other obstructions which constituted a potential hazard to navigation at a total cost of \$543,321.

Government plant and hired labor were employed through the fiscal year performing operation and maintenance of the Troy Lock and Dam and associated buildings and grounds. Total funds in the amount of \$1,352,045 were expended during FY 2002 for operation and maintenance of the Troy Lock and Dam and associated buildings and grounds including supervision and administration.

Condition as of September 30. Work under existing project began in July 1910 and was substantially completed in November 1965. New lock and dam at Troy, removal of dam at Troy and construction of 15,545 linear feet of dikes also are complete. In reconstruction of old dikes 39,676 linear feet are raised to adopted crest height. Channel from New York City to Albany is complete to a depth of 32 feet except for the 1,500 linear foot section at the northern end of the 32 foot project which has never been dredged to project depth. Channel from Albany to Waterford is complete to a depth of 14 feet.

8. HUDSON RIVER AT ATHENS, NY

Location. Athens, New York is along the west bank of the Hudson River approximately 116 miles above the Battery, New York City and approximately 29 miles downstream of Albany, New York. (See Geological Survey, Hudson North, NY quadrangle).

Existing project. No constructed project has ever been done in Athens. The main Hudson River navigation channel runs along the east bank of the Hudson River, Hudson, New York opposite Middle Ground Flats. The proposed project for Athens consists of the design and construction of a 300 foot wide channel to a depth of 24 feet (mean low water) extending from the existing Federal in the vicinity of the Hudson City Light to the north dock at Union Street in Athens. The project was authorized in Section 110 of the September 1996 Energy and Water

NEW YORK, NY DISTRICT

Appropriations Act. Preliminary surveys, geologic, and sediment chemical tests have been carried out. A preliminary channel alignment has been prepared with accompanying dredge quantities. The preliminary cost is \$21,500,000 with additional cost needed for improvements at the existing terminal docks. The Design Agreement and Project Management Plan have been completed and were approved to by the non-Federal sponsor, Green County Industrial Development Agency.

Local cooperation. The non-Federal sponsor has signed the Design Agreement and provided the 25% cost share of the design, studies can be initiated. If the project is found to be viable, then another non-Federal sponsor would cost share in the construction.

Operation and results during the period, and condition as of Sept. 30. Preliminary studies have been completed and the engineering design and environmental assessment activities have been initiated.

11. JAMAICA BAY, NY

Location. Inside south shore of Long Island, the entrance being about 17 miles by water south and east of the Battery, New York City. (See National Ocean Survey Chart No.12350).

Previous projects. For details see page 1770 of Annual Report for 1915, and page 185 of Annual Report for 1938

Existing Project. Provides for an interior channel extending from vicinity of Marine Parkway Bridge along west and north shores of the bay, 18 feet deep at mean low water and 300 feet wide to Mill Basin, with a swinging basin, 1,000 feet wide and 1,000 feet long at the point – thence 12 feet deep and 200 feet wide to Fresh Creek Basin; and interior channel extending from the same locality along south shore to Head of Bay, 15 feet deep and 200 feet wide, a channel in Mott Basin, 15 feet deep and 200 feet wide extending from the channel along the south shore, 3,000 feet to junction of the two branches, thence 200 feet in north branch (Inwood Creek) and 3,200 feet in south branch; and an entrance channel connecting the two interior channels with deep water in Atlantic Ocean, of suitable hydraulic dimensions to maintain present tidal prism in the bay, but not less than 18 feet deep and 500 feet wide from opposite Barren Island to Rockaway Point, Thence enlarging to not less than 20 feet deep and 1,000 feet wide to the sea, protected by one riprap jetty. Length of section included in project is 19.7 miles. Mean tidal range, 4.9 feet at Barren Island, and 5.1 feet at Head of Bay; mean range of spring tides, 5.9 and 6.1 feet, respectively; irregular fluctuations due to wind and atmospheric pressure vary from 4 feet below mean low water to 4.9 feet above mean high water.

Cost for new work for completed project is \$4,466,421 (July 1961), excluding amounts expended on previous projects.

Legal cooperation. River and Harbor Act of 1945 provides that in lieu of conditions heretofore prescribed local interest furnish suitable areas for disposal of dredge materials for new work and subsequent maintenance, and hold the

United States free from damages. City of New York was notified of conditions of local cooperation in letter dated January 15, 1946. In letter dated February 7, 1946, the Mayor of New York advised disposal areas are available and necessary document holding the United States free from claims for damages” would be executed.

River and Harbor Act of 1950 provides local interests furnish lands, easements, rights-of-way, and suitable areas for disposal of dredged material during construction and subsequent maintenance, hold the United States free from damages and perform all necessary alterations to existing terminals and bulkheads, and dredge adequate approaches thereto. These conditions have been fulfilled.

Terminal facilities. See Port Series No.5.

Operations and results during the period. A continuing contract was awarded to Great Lakes Dredge & Dock Company on 26 September 2002 for maintenance dredging of the Outer Entrance Channel of Jamaica Bay for removal of all material except ledge rock lying above the plane of 20 feet below mean low water with placement of the dredged material on the nearby bay beaches at Breezy Point, New York. Approximately 300,000 cubic yards of material will be removed. The dredging will be completed in March 2003. Operation and maintenance funds in the amount of \$140,493.23 was expended on this project during FY 2002.

Conditions as of September 30. Work under existing project was commenced in August 1912 and completed in June 1961. Westerly interior channel from Barren Island to Fresh Creek Basin and swinging basin at Mill Basin were completed in April 1929. Southerly interior channel and channel in Mott Basin, including its two branches were completed in June 1961. No new work dredging of entrance channel, was done, since depths provided under previous project were greater than those required under existing project. East jetty was restored to project dimensions in August 1963.

12. KILL VAN KULL – NEWARK BAY CHANNEL, NJ & NY

Location. The project includes Kill Van Kull connecting upper New York Bay with Newark Bay, and channels in lower Newark Bay serving Port Newark and Elizabeth Marine Terminal. These terminals are located on the west shore of Newark Bay. (See national Ocean Survey Chart 12333.)

Existing project. Deepening the existing Kill Van Kull channel and channels in lower Newark Bay, including turning and maneuvering areas, as well as deepening the Elizabeth and Port Newark channels. The deepening to be done from the existing 35 foot depth incrementally to 40 feet and then 45 feet. The Federal cost of construction is estimated at \$582,500,000 with an additional \$436,600,000 to be contributed by local interests.

Local cooperation. The Port Authority of New York and New Jersey, the local cooperating agency, has entered into a local cooperation agreement with the Government which was executed on 30 May 1986. A supplemental agreement was executed on 21 May 1987, for Phase I. A

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

new project cooperating agreement will be entered into on 30 January 1999 for Phase II (40 feet to 45 feet).

Terminal facilities. See Port Series No. 5, Vol. 2.

Operations and results during period, and condition as of Sept. 30. Stage 1, channel deepening to 40 feet in seven contracts was substantially completed. Contract No. 1, awarded in June 1987, is completed. Contract No.2 was awarded in July 1988 and is completed. Contract No.3 was awarded in Sept. 1988 and is completed. Removal of rock and hard material in the Kill Van Kull and Newark Bay was divided in three contracts 4A, 4B, and 4C. Contract 4A was awarded in April 1991 and was completed in Sept. 1995. Contract No. 5 was awarded in May 1988 and is complete. Contract 4C was awarded in Sept. 1994 and was completed in July 1995. Stage 2, channel deepening to 45 feet has commenced with start of work on a Limited Re-evaluation Report, which was approved Oct., 1997. First construction contract for Area 2 was awarded 16 March 1999, May, 1999 and was completed September 2000. The second construction control for Area 1 was awarded 4 Aug. 1999 and completed July 2001. The third construction control for Area 4A was awarded 28 Feb. 2000 and was completed Feb. 2002. The fourth construction control for Area 7 was awarded 12 March 2001 and was completed August 2002. Area 5 was awarded December 2001 and scheduled to be completed February 2004. The sixth contract for Area 3 was awarded August 2001 and was completed October 2002. The seventh contract Area 6 was awarded July 2002 and has a completion date September 2003. The eight contract Area 8 has Plans and specifications issued and has a Bid Opening scheduled for late March 2003.

11. NARROWS OF LAKE CHAMPLAIN, NY & VT

Location. This waterway, 37 miles long, comprises southern end of Lake Champlain and extends from Whitehall to Crown Point, NY at southern extremity of lake, northerly to Benson Landing, VT. (See N.O.S. Chart 14784).

Previous projects. For details, see Annual Reports for 1931, and 1963, pages 256 and 177 respectively.

Existing project. A channel extending from Whitehall, NY at head of Lake Champlain to Benson Landing, 12 feet deep at low lake level and generally 150 feet wide, and installation of fender booms at Putts Rock, Putts Leap, Narrows near Dresden, Pulpit Point and, Cedar Mountain. Reference plan of low lake level is 93 feet above mean sea level. Section included in project is about 13.5 miles. Usual annual variation of lake level is 5.8 feet and extreme variation varies from 0.6 foot below up to 8.8 feet above low lake level.

Widening channel throughout its entire length to project width of 200 feet is inactive and excluded from foregoing description of existing project and cost estimate. (See Tale 2-B for Authorizing Legislation.

Local cooperation. None required.

Operations and results during the period. A continuing contract for maintenance dredging of approximately 65,000 cubic yards of sediment was awarded to Inner Space Services, Inc. on 20 July 2001. Operations and maintenance funds in the amount of \$286,475 were expended on maintenance dredging activities during FY 2002. Government plant and hired labor were employed in the removal of snags and obstructions that constituted a potential hazard to navigation and in the repair and replacement of deteriorated fender booms during the fiscal year. Operations and maintenance funds in the amount of \$47,348 was expended for this work during FY 2002.

Condition as of September 30. Work under the existing project was commenced June 1919 and is about 77 percent complete. A channel 12 feet deep at low lake level and least width of 150 feet has been excavated throughout the length of the improvement, except at the Elbow, where the width is 110 feet. Fender booms have been placed at the elbow. (Putts Leap and Putts Rock.)

12. NEW YORK HARBOR AND ADJACENT CHANNELS, (PORT JERSEY CHANNEL), NJ

Location. The Port Jersey Channel is the navigation channel located in the Upper Bay of New York Harbor. The Channel runs from its confluence with Anchorage Channel to its head of navigation in Bayonne, where Global Terminal & Container Services, Inc. provides berthing facilities for container commerce within the Port of New York and New Jersey.

Existing Project. The Federal Port Jersey Channel Project will deepen and widen the existing (non-Federal) Port Jersey Channel and add a turning basin at the head of navigation. The authorized project provides for deepening the existing 35 to 38 foot deep channel to a depth of 41 feet deep below mean low water and generally 450 feet wide with suitable bends and turning areas to extend from deep water in the Anchorage Channel in the Upper Bay of New York Harbor, westward approximately 12,000 feet along the southern boundary of the Port Jersey peninsula, to the head of navigation in Jersey City/Bayonne, New Jersey. The Federal cost of construction is estimated at \$88,782,000 with an additional \$29,592,000 to be contributed by the primary non-Federal sponsor, the State of New Jersey Department of Transportation.

Local Cooperation. The State of New Jersey Department of Transportation is the primary non-Federal sponsor for the Port Jersey Channel Project. The Port Authority of New York and New Jersey also serves as a limited project sponsor for the single purpose of providing indemnification to the Federal government for the project.

Operations and results during period, and conditions as of September 30. On October 23, 2000, the Record of Decision for the Project was signed. On March 28, 2001, the Assistant Secretary of the Army for Civil Works submitted the Chief of Engineers report formally to Congress. The State of New Jersey and the Port Authority executed a Project Cooperation Agreement (PCA) with the Government on July 23, 2002. The first construction contract was awarded on October 28, 2002, with work now

NEW YORK, NY DISTRICT

underway.. Plans for the remaining construction contracts are now under development.

15. NEW YORK HARBOR-COLLECTION AND REMOVAL OF DRIFT

Location. Applies to Lower and Upper Bays, New York Harbor; East River, Harlem River, Lower Hudson River Channel, New York, NY and New Jersey Channels, Newark Bay, NJ, Passaic and Hackensack Rivers, NJ, Raritan and Sandy Hook Bays, NJ, Jamaica Bay, NY, the Western Portion of Long Island Sound, and their tributaries.

Existing project. Provides for collection, removal and disposal of drift, derelict vessels, deteriorated shore structures and debris along shores of New York Harbor and tributary waters, and for the repair of certain other in-use piers, wharves and shore structures. Work authorized before Act of 1974 was restricted solely to removal of drift from waterway and was funded as maintenance activity. The current estimate of first cost is \$292,000,000 (October 1997 P.L.) including \$68,000,000, cash contribution from local interests plus \$89,000,000 to be contributed for repair of deteriorated shore structures in use. (See Table 2-B for Authorizing Legislation.)

Local cooperation. Local cooperation conditions provide that local interests must furnish all lands, easements and rights-of-way required for the improvement; hold the United States free from damages; enact and enforce local legislation to prevent creation of sources of drift, contribute in cash one third of the first cost of the Federal work, and make necessary repairs to deteriorated structures in use so as to eliminate them as a source of drift. These conditions are subject to approval by the Secretary of the Army and the President, as stipulated in Section 113 of the authorizing law, Public Law 91-611.

Operations and results (New work-cumulative to date). A total of five Liberty State Park contracts have been completed at a cost of \$10,321,112. East River-Manhattan Waterfront contract was completed at a cost of \$1,477,806. A contract for the removal of pier 17 and 18 on the East River was completed at a cost of \$219,604. The City of Elizabeth contract was completed at a cost of \$791,656. The Stapleton, Staten Island contract was completed at a cost of \$2,910,400. A contract for the city of Hoboken was completed at a cost of \$2,123,404. Work along the Jersey City South waterfront was completed at the cost of \$979,580. Contract Number One at Weehawken to Edgewater was completed at a cost of \$1,697,487. The Brooklyn Reach One contract was completed at a cost of \$5,057,920. Work was completed on the Weehawken to Edgewater Contract No. 2 at a cost of \$8,490,000, and Jersey City North Contract No. 2 at a cost of \$1,800,000. The Bayonne One contract has been completed at a cost of \$735,800. Hoboken Pier B was completed at a cost of \$973,590, and Jersey City North 1 was completed at a cost of \$2,358,000. Weehawken-Edgewater Contract 2A was completed at a cost of \$4,550,000. The Brooklyn 2A Reach removal contract was completed in October 1999 at a cost of \$4,878,022. The Passaic River, Newark, Kearny and Passaic, NJ Reach was completed in May 1999 at a cost of \$109,907. Engineering and design is in progress for the Shooters Island Reach, the Arthur Kill, NY & NJ

Reaches, the Bayonne 2 Reach, and the Kill Van Kull Reach.

Maintenance. U.S. Debris Boats Driftmaster, Gelberman and Hayward and auxiliary plant were assigned the task of removing and disposing of floating debris that is a hazard to navigation. Removal and disposal of 528,875 cubic feet (4,132 cords) of floating debris consisting mainly of driftwood, ranging in size from small blocks to large timbers, including pilings, pieces of wreckage, derelict vessels and sections of deteriorated pier structure was accomplished at a cost of \$4,868,000 during FY 2002.

Conditions as of September 30. For work authorized by Water Resources Development Act, removal of drift sources has been completed in New Jersey at Liberty State Park, the City of Elizabeth, Hoboken, and parts of Jersey City, Bayonne, Weehawken to Edgewater, and Passaic River in Newark, Kearney and Passaic. The New York City work has been completed along the Manhattan side of the East River (South Street Seaport), along part of the Brooklyn waterfront, and at Stapleton, Staten Island.

16. NEW YORK HARBOR-ENTRANCE CHANNELS AND ANCHORAGE AREA

Location. In Upper and Lower Bays, New York Harbor is 330 miles southwest by water of Boston Harbor, Mass., and 165 miles northwest of entrance to Delaware Bay, NJ. The Upper Bay extends about 5.5 miles southerly from junction of Hudson and East River opposite the Battery, New York City to the Narrow. (See National Ocean Survey charts 12334,12335 and 12349.)

Existing project. Ambrose Channel 45 feet deep and 2,000 feet wide, extending about 10.2 miles from sea to deep water in the Lower bay; Anchorage Channel, and extension of Ambrose Channel, with same depth and width, in the Upper bay opposite anchorage grounds, about 5.7 miles long; and southerly entrance channel. Sandy Hook Channel (East Section) 35 feet deep and generally 800 feet wide extending 3.4 miles from 35 foot ocean contour to Bayside Channel along an alignment generally west of the South Channel; and elimination from authorized project of that portion of Bayside-Gedney Channel east of junction with new southerly entrance Gedney Channel east of junction with new southerly entrance channel; for bayside Channel 35 deep and 800 feet wide, extending about 5.3 miles from Bayside Channel to deep water in Lower Bay; a channel along New Jersey pierhead line connecting Kill Van Kull with deep water in anchorage Channel, south of Liberty Island anchorage. 20 feet deep from 500 feet wide with sidening at bends to 800 feet and about 3 miles long; anchorage in vicinity of Liberty (Bedloes) Island (about 160 acres in extent) 20 feet deep; and for removal of craven shoal to 30 feet deep; for a channel 16 feet deep, 200 feet wide, and about 2.3 miles long, extending from bell buoy 23 to Hoffman and Seinburne Island; for an anchorage area in Red Hooks Flats to depths of 45, 40 and 35 feet and an anchorage area in Gravesand Bay to 47 feet deep. Project depths refer to mean low water. mean tidal range is 4.7 at Fort Hamilton; mean range of spring tides, 5.7 feet; irregular fluctuations due to wind and atmospheric pressure vary from 3.9 feet below mean low water up to 6.2 feet above mean high water.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

Location cooperation Fully complied with.

Terminal facilities. See Port Series No.5, Vol.2.

Operations and results during the period. A continuing contract was awarded to Weeks Marine, Inc. on 5 September 2001 for removal of all material except ledge rock lying above the plane of 35 feet below mean in specified areas of Red Hook Flats Anchorage, NY. Approximately 487,500 cubic yards of material was dredged and transported to Historical Area Remediation Site (HARS). Dredging was completed on 28 November 2001. Total operations and maintenance funds expended on Red Hook Flats during FY 2002 was \$1,020,939.

Condition as of September 30. Work under existing projects began in 1885 and is 100 percent complete. Main Ship and Bayside-Gedney Channels were completed to 30 feet deep in February 1891. Deepening of Bayside-Gedney Channel to 35 feet for a width of 800 feet was completed in June 1939. Ambrose Channel was completed to 40 feet deep for a width of 2,000 feet in April 1914 and substantially completed to 45 feet for a width of 2,000 feet in 1951. Relocation of Anchorage Channel was completed to 40 feet deep in October 1932. Center 800 feet was dredged to 45 feet in June 1947 and westerly 600 foot strip in April 1948. Easterly 600 foot strip was substantially completed in June 1953. Channel between Staten Island and Hoffman and Swinburne Islands was completed in December 1920 up to within 300 feet of southerly limits of the project. Dredged channel meets all needs of navigation and no further work of improvement is contemplated for the present. Channel along New Jersey pierhead line from Kill Van Kull to Anchorage Channel was completed in March 1939. Widening at bends nearly southerly and northerly ends authorized in 1948 was completed to depths of 45 and 35 feet in October 1976. Anchorage Channel was relocated to the westward in 1982. Red Hook Flats Anchorage was accordingly increased in area. No dredging was required. Liberty (Bedloes) Island anchorage was completed to 20 feet in Oct. 1944. Sandy Hook Channel (east section) was Gravesend Bay was completed to 47 Foot depth in November 1977.

17. NEW YORK AND NEW JERSEY HARBOR, NY&NJ

Location. Extends from deep water northwest of Sandy Hook, through Lower New York Bay to the Verrazano Bridge, then slits northeast along the Brooklyn waterfront, north in the Upper New York Bay to Port Jersey, and west along the Kill Van Kull, and portions of the Newark Bay and Arthur Kill Channels. (See National Ocean Survey Charts 12333, 12331 and 12327.)

Previous projects. See New York and New Jersey Channels, Newark Bay Channels, Bay Ridge Channel.

Existing project. The plan requires deepening the entire 10.6 nautical miles of Ambrose Channel extending from deep water in the Atlantic Ocean to the Narrows to a depth of 53ft MLW and 2,000 feet wide. The Anchorage Channel will be dredged to 50 ft MLW for 19,000 feet from the Narrows to the point 1,000 feet north of the junction with the Port Jersey Channel at a width of 2,000 feet. The

Port Jersey Channel is to be deepened to 52 ft MLW in the rock or otherwise hard material and maintained at a depth of 50 ft MLW. The channel will be deepened for a distance of 10,000 feet from its juncture with the Anchorage Channel through the berthing areas at the Global Marine Terminal and the former MOTBY. The Kill Van Kull is to be deepened to a depth of 52 ft MLW in rock or otherwise hard material and maintained at a depth of 50 ft MLW, extending from its junction with the Anchorage Channel to its junction with the Newark Bay Channel near Bergen Point, and will be 800 foot wide. The Newark Bay Channels are comprised of the Main Channel (South, Middle and North Reaches) plus numerous access channels (South Elizabeth Channel, Elizabeth Channel, Elizabeth Pierhead Channel, Port Newark Pierhead Channel and Port Newark Channel). The main Newark Bay Channel will be dredged from its juncture with the Kill Van Kull near Bergen Point to a point located 1,500 feet north of north of the Elizabeth Channel. The channel will extend north of the Elizabeth Channel to aid vessels in turning and backing into berth. The 14,000 LF of improvement proposed for the main Newark Bay Channel will not change the present width, which varies from 2,200 feet at its northern terminus 800 feet near Bergen Point. Similarly, the 8,800 foot long Elizabeth Channel will also remain at its present width, which varies from 500 to 800 feet, and its present alignment. The 2,700 long South Elizabeth Channel will be significantly widened from its present 290 feet to 500 feet. Each of the aforementioned channels will be dredged to 52 ft MLW in rock or otherwise hard material and maintained at 50 ft. MLW. The Arthur Kill Channel will be deepened from its junction with the Kill Van Kull near Bergen Point to the Howland Hook Marine Terminal. This 2.4 nautical mile segment of channel will be dredged to a depth of 52 ft MLW in rock or otherwise hard material and maintained at 50 ft MLW. The existing channel varies in width from 500 feet to 800 feet, but will be widened to 800 ft as part of the 41 ft MLW project. This width will be maintained for this project. The nearly 3 nautical mile long Bay Ridge Channel will be improved and maintained to a depth of 50 ft MLW. The proposed channel will parallel the eastern side of current channel at a width of 600 feet, reduced from the current width of 1,200 to 1,750 feet. A proposed turning basin, with a diameter of 1,600 feet, is to be located at the north end of the channel.

Local cooperation. Fully complied with for the Design Phase. Execution of the Project Cooperation Agreement is scheduled for May 2004.

Terminal facilities. See Port Series No.5, revised 1999.

Operations and results during the period. Under the provisions of Section 101, WRDA 2000, the Port Authority of New York and New Jersey has undertaken the deepening of a portion of the project located near Bergen Point to its authorized depth. This area is primarily rock which will be placed at artificial fishing reefs. The work is being done concurrently with work on Kill Van Kull and Newark Bay channels project, which is deepening that area to 45 feet MLW. The Port Authority is expecting that their costs for this effort will be credited towards the overall project once the Project Cooperation Agreement is executed.

NEW YORK, NY DISTRICT

Condition as of September 30. Work remains on all portions of the project, except as noted above.

18. NEWARK BAY, HACKENSACK AND PASSAIC RIVERS, NJ

Location. Newark Bay is an estuary about 1.25 miles wide and 6 miles long extending southerly from confluence of Hackensack and Passaic Rivers to New York and New Jersey Channels. Hackensack River rises near Haverstraw, Rockland County, NY and flows about 45 miles into Newark Bay. Passaic River rises in highlands of northeastern New Jersey and flows about 80 miles into Newark Bay. (See National Ocean Survey Charts 12333 and 12337)

Previous projects. For details, see 1926 Annual Report, pages 265 and 266; and Annual Reports for 1929, 1938, 1954, and 1976, pages 301, 244, 124, and 2-11 respectively.

Existing project. A main channel 700 feet wide to the branch channel to Port Newark, thence 500 feet wide to a turning basin 1,300 feet long and 900 feet wide at the junction of the Hackensack and Passaic River channels, length about 4.7 miles; a maneuvering area south of the removed Central Railroad of New Jersey Bridge 2,200 feet long and 300 feet wide with depths of 38 feet in the south half and 35 feet in the north half; a combined bend cutoff and maneuvering area at the south side of the junction with Elizabeth branch channel; and widening bends at the Kill Van Kull and Port Newark Channels. (Authorized depth 35 feet except as noted above). (adopted 1966); including a triangular area east of Shooters Island with a depth of 37 feet.

At Port Newark – A branch channel 500 feet wide, leading to an inshore channel 400 feet wide 1.6 miles (adopted 1945). Authorized depth 37 feet in rock and 35 feet in soft material; a pierhead channel 200 feet wide along the east bulkhead between the Port Newark and Elizabeth branch channels, between 4,100 feet. Authorized depth 35 feet (adopted 1962).

At Elizabeth marine Terminal - A branch channel 500 feet wide, length about 1.4 miles; a pierhead channel along the east bulkhead 290 feet wide, length about 2,600 feet, southern approach area just above former Central Railroad of New Jersey Bridge enlarged for turning and maneuvering, with a maximum length of about 2,700 feet and width (between the pierhead channel and Newark Bay channel) of about 800 feet. Authorized depth 35 feet (adopted 1962).

Location cooperation. River and Harbor Act of 1954 provides local interests, furnish lands, right-of-way, the suitable spoil-disposal areas for initial construction and future maintenance; provide depths commensurate with channel depth in approaches and berths at terminals of companies which would use improvement; and hold the United States free from damages. River and Harbor Act of 1962 provides that local interests must provide lands, easements and right-of-way for maintenance and construction, hold United States free from damages, provide and maintain adequate public terminal and transfer facilities, and accomplish without cost to the United States,

removal or relocation of pipelines, cable and other utilities. Assurances were furnished by Port of New York Authority and accepted June 12, 1964. Local cooperation required by previous modifications is fully complied with.

Terminal facilities. See Port Series No.5, revised 1978, Vol.2.

Operations and results during the period. A continuing contract for the removal of all material except ledge rock lying above the plane of 40 feet and 41 feet, below mean low water was awarded on 10 September 2002 to Don Jon Marine Co. Inc., for maintenance dredging of Newark Bay Main Channel. The contract was financed jointly by the Government and the Port Authority of New York and New Jersey. The PA provided the specified disposal site for the removal of approximately 65,000 cubic yards of material. Operations and maintenance funds in the amount of \$387,368.86 was expended during FY 2002.

Condition as of September 30. Work under the active portion of the original project began June 1976 and is 100 percent complete. Work remaining to complete existing original project consists of deepening the Hackensack River channel to depths of 32 feet and 15 feet.

19. PLATTSBURGH HARBOR, NY

Location. An area of about 25 areas along the westerly Shore of Cumberland Bay, an arm of Lake Champlain. The Harbor is that portion of the bay between wharf front of Plattsburgh, NY and the breakwater constructed by the United States.(See Lake Surveys Chart 172)

Existing Projects. Provides for a breakwater 1,565 feet long built of timber cribs filled with rubble stone and capped with large stone and extending from a point 750 feet south of outer face of South dock generally northeasterly to a point about 1,400 feet from shore; and for dredging to a depth of 9 feet at low lake level between the breakwater and the wharves. Reference plane of low lake level is 93.0 feet above mean sea level at Sandy Hook, NJ. Usual variation of lake level is 5.8 feet, and extreme variation from 0.6 feet below up to 8.8 feet above low lake level.

Local cooperation. None required.

Terminal Facilities. Four timber wharves, aggregating 1,780 feet in length, 400 feet of which are open to the public; all are privately owned. The State of New York has constructed a barge canal terminal about 1 mile north of the breakwater. These appear adequate for the existing commerce.

Operations and results during the period. A continuing contract to perform repairs to approximately fifty percent of the breakwater was awarded to Tug Hill Construction, Inc. on 26 June 2002..Operations and maintenance funds in the amount of \$2,197,451 were expended on breakwater repair activities during FY 2002.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

Condition as of September 30. Work under existing project commenced 1836 and was completed in 1913. Breakwater was completed in 1893 and dredging in 1913.

20. SAG HARBOR, NY

Location. On northern shore of south fork of Long Island, about 24 miles west of Montauk Point. (See U.S. Coast and Geodetic Survey Chart No.298.)

Existing Project. Provides for a breakwater 3,180 feet long extending northerly from Conklin Point; and for an entrance channel 3,200 feet long, 100 feet wide, and 10 feet deep at mean low water from Shelter Island Sound by way of village wharf to mooring dolphins of Standard Oil Co.; for a turning in of same depth; for an anchorage area 8 feet deep at a small anchorage area 6 feet deep at mean low water between the village wharf and Sag Harbor Yacht Club pier. Length of section included in project is about five eighths mile. Mean tidal range, 2.5 feet; mean range of spring tides, 3 feet; irregular fluctuations due to wind and barometric pressure vary from 2 feet below mean low water up to 4.9 feet above mean high water. Cost for new work for completed project was \$121,805. The entrance channel anchorages and turning basin were deauthorized in 1992.

Local Cooperation. Fully Complied with.

Terminal Facilities. There are 7 terminals with a total available berthage of 4,250 feet located in harbor. Three of these terminals with berthage of 2,700 feet, and in addition two small basins, with suitable landing facilities, are open to the public. Mooring dolphins serve to tie up oil barges. One boatyard with storage space for 50 boats and equipped with two marine railways is available for pleasure craft. Facilities are considered adequate for existing commerce.

Operations and results during the period. A continuing contract (FY00/01/02) was awarded to Newborn Construction, Inc on 30 September 2000 for rehabilitation of the breakwater. The rehabilitated structure will have similar dimensions (length, crest width and elevation) as the authorized structure, however, the bayward facing slope will be flattened from 1 on 1 on 1.5 to correspond with Corps of Engineers standard breakwater design criteria. Approximately 2000 feet of a total of 2800 feet has been completed as of 30 September 2002. Operations and maintenance funds in the amount of \$3,187,979.76 was expended on this project during FY 2002.

Conditions as of September 30. A continuing contract (FY00/01/02) was awarded to Newborn Construction, Inc on 30 September 2000 for rehabilitation of the breakwater. The rehabilitated structure will have similar dimensions (length, crest width and elevation) as the authorized structure, however, the bayward facing slope will be flattened from 1 on 1 on 1.5 to correspond with Corps of Engineers breakwater design. Operations and maintenance funds in the amount of \$366,263.30 was expended on this project during FY 2000.

21. SHINNECOCK INLET, NY

Location. On the south shore of Long Island, about 95 miles east of the Battery, New York City. It is an opening

through the sandy barrier beach, connecting Shinnecock Bay with the Atlantic Ocean. (See National Ocean Survey Chart 12352).

Existing project. Provides for a channel 10 feet deep (mlw) and 200 feet wide with a deposition basin, thence extending through the inlet to Shinnecock Bay for a distance of about 0.7 mile thence a channel 6 feet deep and 100 feet wide to the Long Island Intracoastal Waterway, a distance of about 1 mile; rehabilitation of the existing jetties and revetments. Estimate of cost for work is \$22,300,000(October 91 P.L.) of which the Federal share is \$16,900,000 and non-Federal share is \$5,400,000.

Local cooperation. The navigation improvement will accrue both recreational and commercial benefits which result in a first cost allocation of 69 percent Federal and 31 percent non-Federal. The authorizing document also requires that local authorities; provide without cost to the United States, all lands easements, right-of-way, and suitable disposal areas for the initial work and for subsequent maintenance, when and as required; hold and save the United States free from damages due to the construction and maintenance of the project; maintain and operate the works after completion in accordance with regulations prescribed by the Secretary of the Army; provide and maintain suitable terminal facilities when and as required for the accommodation of vessels that would navigate the inlet and adjacent bays, open to all on equal terms maintain, for the duration of the economic life of the project, continued public ownership of the publicly owned shores and their administration for public use, and continued availability for public use of the privately owned shores upon which a portion of the Federal share of the costs is based. A Local Cooperation Agreement for the dredging element of the project was executed with the New York State Department of Environmental Conservation on 7 June 90. A Local Cooperation Agreement for the jetty reconstruction phase of work is pending.

Terminal facilities. Shinnecock Bay, and adjacent ocean area, constitute an important marine fishery. The public fishing facility includes three docks, one of which, the Shinnecock Fishermens Cooperative, stores and market the catch for the fishermen.

Operations and results during period. A continuing contract for rehabilitation/revetment of the Western Jetty at Shinnecock Inlet was awarded on 20 June 2001 to Seaboard Marine Corporation for \$3,599,565 with the state contributing 31% of the cost. Mobilization commenced on 5 August 2001. On July 3, 2002 the Seaboard Marine Corporation was terminated for default. The surety company has taken over the project, and has contracted to complete the project with the Newborn Construction in November 2002. The project is expected to take fifteen months to complete.. At present Newborn Construction has partially completed 270 feet of repairs to the jetty, initiated work on another 100 feet of the jetty, and removed the sheet piles driven by the previous contractor in the inlet. Operations and maintenance funds in the amount of \$166,587.37 was expended during FY 2002.

NEW YORK, NY DISTRICT

Condition as of September 30. The initial dredging and reconstruction of the east and west jetties have been completed.

22. SUPERVISOR OF NEW YORK HARBOR (PREVENTION OF OBSTRUCTION AND INJURIOUS DEPOSITS)

The District Engineer, New York District, was designated Supervisor of New York Harbor under the provisions of the River and Harbor Act of June 29, 1888 (33 U.S.C. 441-451), as amended July 12, 1952. Under this Act, the Supervisor of New York Harbor is charged with the mission of preventing the deposit of obstructive and injurious materials in New York Harbor and its adjacent and tributary waters, including Long Island Sound. The River and Harbor Act of August 18, 1894 (33 U.S.C. 452) makes it unlawful for any person or persons to engage in fishing or dredging for shellfish in any of the channels leading to and from New York Harbor, or to interfere in any way with the safe navigation of deep draft traffic; the River and Harbor Act of March 3, 1899 (33 U.S.C. 403, 407, 409) prohibits obstructions to navigable waters such as unauthorized structures, unauthorized fill, deposit of refuse, and willful or negligent abandonment of vessels. Other laws relating to the supervision of New York Harbor and its tributary water are the Clean Water Act, the Marine Protection, Research and Sanctuaries Act of 1972, the Coastal Zone Management Act of 1969, the Fish and Wildlife Act of 1956, the Federal Power Act of 1920, the National Historic Preservation Act of 1966, the Endangered Species Act of 1973, the Deepwater Port Act of 1972, the Wild and Scenic Rivers Act and the Land and Water Conservation Fund Act.

Direct supervision of the waters under the jurisdiction of the New York District is accomplished by means of a patrol vessel whose scope of duty includes surveillance of the water front for unauthorized construction or fill, surveillance of tows enroute to dumping grounds in Atlantic Ocean to ensure that material is not illegally deposited in the waters of New York Harbor, and investigation of wrecks and abandoned vessels. In addition to the patrol vessels, whose range of patrol is limited to New York Harbor, inspectors utilizing government vehicles equipped with two-way radios patrol shorefront facilities and property. The inspectors operate out of the New York District Office. Their duties include inspection of authorized construction, fill or excavation in waterways, including wetland areas, to ensure that work is performed in accordance with the Corps permit, as well as investigation unauthorized construction activities. The inspectors also patrol all waterways in their respective area and inform the public of the Corps' role and jurisdiction as well as provide assistance in the preparation of permit application, (See Table 2-E at end of chapter).

23. RECONNAISSANCE AND CONDITION SURVEYS (See Table 2-F at end of chapter.)

24. OTHER AUTHORIZED NAVIGATION PROJECTS (See Table 2-G at end of the chapter.)

25. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Navigation Activities pursuant of Section 107, Public Law 645, 86th Congress as amended (Pre-Authorization). (See Table 2-N at end of chapter)

BEACH EROSION CONTROL 26. ATLANTIC COAST OF LONG ISLAND JONES INLET TO EAST ROCKAWAY INLET LONG BEACH ISLAND, NY

Location. Atlantic Coast of Long Island, in Nassau County, New York, between Jones Inlet and East Rockaway Inlet.

Existing project. The project feasibility study was conducted pursuant to a resolution by the Committee on Public Works and Transportation of the U.S. House of Representatives that was adopted October 1, 1986. Project construction was authorized by the Water Resources Development Act of 1996. The total Federal cost of the project is \$299,000,000 and total non-Federal cost is \$161,000,000. The authorized plan provides for storm damage protection for 7 miles of public shoreline against a 100 year storm event. Protection is provided by constructing a 110 foot wide protective beach berm at an elevation of 10 feet above sea level backed by a 25 foot wide dune system at an elevation 15 feet above sea level. The project also includes the rehabilitation of 16 existing groins and the construction of four new groins at the eastern end of the island. In addition, the project includes periodic nourishment of the restored beaches on a 5 year cycle for a period of 50 year following initial construction.

Local cooperation. The local sponsor is the New York State Department of Environmental Conservation, who funded 50 percent of the cost of the feasibility study. The Project Cooperation Agreement has not yet been negotiated, but the customary provisions are that local interests will provide, without cost to the United States, all lands, easements, and rights-of-way, including borrow areas, necessary for construction of the project, fund 35% of the total project cost, assure continued conditions of public ownership and use of the shore, maintain public use facilities open and available to all on equal terms, and maintain all improvements after completion of construction in accordance with Federal regulations for the economic life of the project.

Operations and results during the period and condition as of September 30. The Feasibility Report with Draft Environmental Impact Statement (EIS) was completed in February 1995. The Pre-construction, Engineering and Design (PED) phase was completed in September 1997. The final EIS was released for public comment in May 1998 and the record of decision was signed in December 1998. Congress added \$2 million in FY 1998 and 7.5 million in FY 1999 to continue the design of the project and initiate construction. The local sponsors requested that the Corps of Engineers reanalyze the area between the proposed new groins and existing groin field in the City of Long Beach before starting construction. A study was conducted which utilized new modeling techniques that were unavailable during the feasibility study to finalize the groin field design. The final report

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

summarizing the findings of the study was completed in March 2000. A reevaluation report that incorporates the design modifications made since the completion of the feasibility study is underway and is scheduled to be completed in March 2004. The reevaluation report will be used as a basis for the PCA.

27. EAST ROCKAWAY INLET TO ROCKAWAY INLET & JAMAICA BAY, NY

Location. Atlantic Coast of New York City, between East Rockaway and Rockaway Inlets, and the lands within and surrounding Jamaica Bay. The coastal area (about 10 miles long) is a peninsula in Queens County separating the ocean and the bay. (See National Ocean Survey Charts 12327, 12350 and 12326).

Existing project. The projects consists of nourishing 100 foot wide beach at an elevation of 10 feet above mean low water from Beach 149th Street to 19th Street. Initial beach replenishment (5 contracts) previously took place between 1979 and 1988. Construction of a stone groin at Beach 149th St. was completed in September 1982. A Section 934 Report approved in February 1994, recommended continued nourishment over a nine year period. The total Federal participation includes first cost and periodic beach nourishment, the total estimated at \$63,700,000 (Oct. 1996 P.L.) and non-Federal costs of \$45,900,000. The Section 934 Report also recommended a reformulation study to evaluate alternative methods of providing storm damage protection to the Rockaway area.

Local cooperation. Local interests have agreed to provide lands and rights-of-way, including borrow area: bear a portion of the total cost as a cash contribution; hold the United States freed from damages; maintain, during economic life of a project, continued public ownership and use of non-Federal publicly-owned shores upon which Federal participation in beach protection is based; maintain and operate all works after completion, control water pollution to the extent necessary to safeguard the health of bathers. The project cooperation agreement for additional renourishment over the nine year period was executed on 25 May 1995.

Operations and results during period and condition as of September 30. A final Environmental Impact Statement was filed with the Council of Environmental Quality on April 16, 1971. Initial beach restoration was completed in FY 1977. Contract for first increment of periodic nourishment was completed in August, 1982. Contract for construction of a stone groin at Beach 149th street was completed in September, 1982. Periodic nourishment contracts Nos. 3, 4, and 5 were completed between 1978 and 1988. Contract NO.6 was completed in 1997. The contract included beachfill placement of approximately 3 million cubic yards of sand from Beach 19th to Beach 149th Street. Contract No.7 was completed by Weeks Marine Inc. in February 2001. The contract included beachfill placement of approximately 1.01 million cubic yards of sand from beach 119 to beach 66th street and beach 40th to beach 19th street.

28. FIRE ISLAND INLET TO MONTAUK POINT, NY

Location. That portion of Atlantic Coast of Long Island in Suffolk County extending from Fire Island Inlet easterly to Montauk Point, NY about 83 miles long. This frontage comprises about 70 percent of total ocean frontage of Long Island. Fire Island Inlet is about 50 miles by water east of the Battery, New York. (See Coast and Geodetic Charts 13209, 12354 and 12353.)

Existing project. Provides for Federal participation in improvement to prevent beach erosion and hurricane damages by; widening beaches along developed areas between Kismet and Mecox Bay, to a minimum, width 100 feet at elevation 14 feet above mean sea level; raising dunes to an elevation of 20 feet above mean sea level from Fire Island Inlet to Hither Hills State Park, at Montauk and opposite Lake Montauk Harbor; planting grass on dunes; constructing gated interior drainage structures at Mecox Bay, Sagaponack Lake, and Georgica Pond; constructing up to 50 groins, if needed; and Federal participation in cost of beach nourishment.

Local cooperation. The New York State Department of Environmental Conservation is the local cooperating agency. The State agreed to provide necessary land, rights-of-way and borrow areas, and furnish 30 percent of the project costs for the Interim Project along the Moriches Inlet to Shinnecock Inlet reach of the authorized project. The State has also agreed to be the local sponsor for the comprehensive reformulation study of the authorized project and for interim project immediately west of Shinnecock Inlet.

Project history. On July 30, 1963, the State reflecting the desires of Suffolk County, requested the inclusion of a minimum of 13 groins in initial construction of Moriches-Shinnecock reach. Chief of Engineers concurred in inclusion of up to 13 groins. Assurances were executed by Superintendent of Public Works, State of New York, on August 14, and accepted by the District Engineer August 20, 1963. On February 5, 1964, the State requested consideration of a plan, as proposed by Suffolk County, for initial construction of 13 groins of which 11 would be in the Moriches-Shinnecock reach, and 2 in the Southampton-Beach Hampton reach vicinity of Georgica Pond, and that sandfill and dune construction be withheld for the present except for 1 mile on each side of Shinnecock Inlet. On February 27, 1964, the Chief of Engineers accepted the proposals, in part, and supplemental assurances were executed by State of New York on April 20, 1964, and accepted by District Engineer April 27, 1964, as follows: the State of New York now elects to proceed with authorized combined beach erosion control and hurricane protection project for South Shore of Long Island; that Superintendent of Public Works hereby reaffirms his assurance of August 14, 1963, relative to complete project; that State of New York, as cooperating agency, will now agree that artificial fills will be added when and to extent found necessary by the Chief of Engineers, but not earlier than 3 years after completion of groins unless both the State of New York and the Chief of Engineers mutually agree to an earlier placement; that the superintendent agrees for State of New York to contribute the full amount of any increase in Federal costs resulting from the separate construction of the groins and subsequent fill; and that the

NEW YORK, NY DISTRICT

State agree that construction of the two groins in the Georgica Pond area will depend on a favorable finding, following a study by the Chief of Engineers. Study was completed July 31, 1964, recommending construction, and approved by the Chief of Engineers on September 22, 1964. By letter dated November 5, 1964, the New York State Department of Public Works confirmed that title to all properties and interests in properties necessary for constructing the 11 groins was fully vested in Suffolk County.

By letter dated December 7, 1964, the Department stated that the county had obtained easements or fee title for the parcels necessary for constructing the two groins. New York State Department of Public Works furnished \$884,600 and \$830,330 required contributed funds October 30, 1964, and September 7, 1965, respectively, for construction of 11 groins in Moriches-Shinnecock reach and \$439,900 on January 22, 1965, for construction of 2 groins in Georgica Pond area of the Southampton-Beach Hampton reach. The completed 2 groins and 11 groins were accepted by the New York State Department of Public Works for maintenance on May 11, 1966 and April 10, 1967 respectively.

On March 22, 1965, the State Recommended that planning priority be in the order; Southampton-Beach Hampton (Drainage structures first); Shinnecock Inlet-Southampton; Beach Hampton-Montauk Point; and Fire Island-Moriches Inlet. Planning on the drainage structures was initiated but was suspended, based on; meeting of October 28, 1965 with Georgica Pond Association and the Preservation Society of East End wherein concern was indicated regarding the effects of the proposed drainage structure on ecology, salinity, pond level and aesthetic values; meeting with the Congressional representative, State legislators, Federal agencies and local officials held on May 26, 1966; and resolution of the Suffolk County Board of Supervisors adopted June 13, 1966 requesting advancement of the planning of the Fire Island-Moriches Inlet reach (Fire Island National Seashore). On June 16, 1967, the New York State Department of Public Works requested the following works undertaken as immediate priority items; in Moriches-Shinnecock reach, beach and dune fill at 11 groins, beach and dune fill east of the 11 groins; in Southampton-Beach Hampton reach (at East Hampton), construction of two additional groins, and the outlet structure at Georgica Pond. On March 18, 1968 the Suffolk County Board of Supervisors adopted a resolution supporting construction of 4 groin in Reach 2 (Moriches-Shinnecock) and 2 groins in Reach 4 (Southampton-Beach Hampton). On April 22, 1968 the Board adopted a more inclusive resolution authorizing participation in beach erosion and hurricane protection for the Moriches-Shinnecock reach and in the Georgica Pond area of the Southampton-Beach Hampton reach.

On December 24, 1968, the Commissioner of the New York State Conservation Department executed the second supplement to the assurances of local cooperation, which was accepted by the District Engineer on January 24, 1969. The reaffirmed previous assurances contained provisions for constructing for additional groins in an area extending 6,000 feet west from the most westerly groin in the existing levee-groin field in the Moriches Inlet to Shinnecock Inlet

Reach, and for placing beach and dune fill in this area to the full design cross section as defined in the authorized project report. A General Design Memo completed in 1980 recommended placement of sand fill in the existing 11 groin field and along 9,500 feet of shore to the west.

Condition as of September 30. Engineering and design began November 1962 and the project construction commenced in January 1965. Two groins in Reach 4; Southampton Beach Hampton, Section 3, were initiated in March, and completed in September 1964, at a total cost of \$720,950 of which \$382,109 were incurred against required contributed funds. Eleven groins in Reach 2: Moriches-Shinnecock, Section 2, were initiated in January 1965, and completed in October 1966 at a total cost of \$2,845,656 of which \$1,370,191 were incurred against required contributed funds. Initial beach fill placement for 750,000 cubic yards in Reach 2. Section 1A was completed on May 23, 1969. On August 4, 1969 work started on 4 groins and sandfill in Reach 2, section 1A and was completed November 14, 1970. 3,083 tons of stone and 1,111,000 cubic yards of sand was placed. Total cost for all Section 1A was \$3,663,455 including \$1,791,428 in required contributed funds. Funds in the amount of \$70,000 were allotted on April 14, 1977 for initiation of the Phase 1 study in Reach 1, Fire Island Inlet to Moriches Inlet. The Final Environmental Impact Statement was filed with Environmental Protection Agency on January 28, 1978. On March 7, 1978, the Department of the Interior, supported by the other environmental resource agencies referred the Environmental Impact Statement to Council on Environmental Quality as unacceptable. On June 6, 1978 the Council agreed and recommended project reformulation.

Public meetings were held in October 1979 to delineate the scope and level of effort needed to reformulate the project. A final scoping session was held January 17, 1980 and agreement was reached between the Federal agencies although New York State had strong objections. A plan of study was completed in July 1980. However, because of New York State's inability to financially participate in construction at Westhampton Beach, reformulation was postponed.

Two breaches (new inlets) occurred in the vulnerable Westhampton area during periods of storm tides, one in Jan. 1980, just east of the Moriches Inlet, and the most recent in Dec. 1992, at the eastern end of Moriches Bay. Both breaches were filled in by contract, the last one completed in Sept. 1993, at a cost of \$7 million.

In April 1993, the State provided a letter of intent to participate in an interim project for the Moriches Inlet to Shinnecock Inlet Reach. Based on this agreement in 1993 on a conceptual plan for the most critically eroded reach of the authorized project between Moriches and Shinnecock Inlets, the Westhampton Interim Project, the Reformulation Study was reinitiated.

A construction contract for the Westhampton Interim Project was awarded in May 1996 to Great Lakes Dredge & Dock Company in the amount of \$16 million. The contract was substantially completed in December 1997 and included beach placement of 4 million cubic yards of sand, dune creation, fencing and grass planting, groin

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

modifications and construction of public dune walkovers. The first renourishment was completed in February 2001 at a cost of \$5 million. Renourishment is scheduled to continue at 3 year intervals until 2027.

In January 1996, a Breach Contingency Plan was approved, which provides a mechanism for rapid response to breaches along the barrier island, within the authorized project.

The Reformulation Study, which has been consistently funded since 1993, is currently underway. Data has been collected including beach profile surveys and aerial topography maps of the entire 83 mile long shoreline. Scoping for the preparation of an Environmental Impact Statement has been conducted. The study is scheduled to be completed in November 2005.

Based on requests from local, state and congressional interests, evaluations are underway for separable interim measures immediately west of Shinnecock Inlet. Due to the lack of non-Federal support, efforts on the Fire Island interim project have been deferred. It is currently anticipated that construction of an interim project West of Shinnecock Inlet could begin in the fall of 2003.

29. RARITAN BAY AND SANDY HOOK BAY, NJ

Location. Situated at the southern end of Lower New York bay between the Raritan River and Sandy Hook, in Middlesex and Monmouth Counties, NJ. Shoreline area is typified by small developing communities built upon and near salt and freshwater marshes. The study area is largely located in low elevation regions with numerous small creeks providing drainage. Low-lying residential and commercial structures in the area are experiencing flooding caused by coastal storm inundation. Problem has progressively worsened due to loss of protective beaches and increased urbanization in the area with structures susceptible to flooding from rainfall and coastal storm surges, erosion and wave attack, combined with restrictions to channel flow in the tidal creek.

Existing project. Existing Federal project was authorized by the Flood Control Act of 12 October 1962 as a dual purpose Beach Erosion Control and Hurricane Protection Project in accordance with House Document No.464, 86th Congress, Second session. This project provided for beach fill, groins, and levees for various sections of the study area. The constructed project consists of segmented sections of beach fill and levees surrounding the communities at Old Bridge Township and Keanburg and East Keanburg. A study was authorized by a resolution of the Committee on Public Works and Transportation, U.S. House of Representatives, adopted August 1, 1990. The study seeks to determine the advisability to the recommendations in the authorizing report for Raritan Bay and Sandy Hook Bay, Section 506 of WRDA 1996 authorized periodic nourishment, if determined necessary, for a period of 50 years from initiation of construction of the project, in accordance with section 156 of WRDA 1976 and Section 934 of WRDA 1986.

Local cooperation. The non-Federal sponsor, NJDEP, is currently cost sharing a number of Raritan Bay and

Sandy Hook Bay, NJ feasibility studies with USACE: Port Monmouth, Union Beach, and Cliffwood Beach. The non-Federal sponsor would also be required to cost share in feasibility studies for the communities of Leonardo, Highlands and Keyport in order for them to proceed. (The non-Federal sponsor also operates and maintains the existing, constructed project).

Operation and results during period, and condition as of Sept. 30. Construction of the authorized project for Old Bridge Township was initiated in 1965 and completed in 1966. Construction of the shoreline portion of the authorized project for Keanburg and East Keanburg was initiated in 1968 and completed in 1969. Construction of the closure portion (levees, closure gate and pumping station) of the authorized project for Keanburg and East Keanburg was initiated in 1970 and completed in 1973. Cliffwood Beach and Union Beach were the only portions of the authorized project that were not constructed. After construction of the closure work all of the completed works were formally turned over to the State of New Jersey in 1974.

A reconnaissance study was completed in March 1993. Subsequently, a feasibility study for Port Monmouth was initiated in February 1994, and for Union Beach and Cliffwood Beach in April 1997. In FY 2002, the final feasibility report and EIS for Port Monmouth were issued. Feasibility study activities for Union Beach and Leonardo continued. The feasibility study for Cliffwood Beach was completed by the project was not recommended for continued Federal involvement. The pre-feasibility activities for Highlands were finalized in preparation for a scheduled FY 2001 FCSA execution. Pre-feasibility activities continued for Keyport. A design agreement was executed with the NJDEP for the Raritan 934 (Keanburg, East Keanburg, Old Bridge) reevaluation study in November 1999. The study was initiated in January 2000. This reevaluation report will serve as a basis for extension of periodic nourishment for the constructed portions of the existing project for Keanburg East Keanburg and Old Bridge Township.

30. ROCKAWAY INLET TO NORTON POINT (CONEY ISLAND AREA), NY

Location. Atlantic Coast of New York City, in Brooklyn (Kings County), approximately nine miles south of the Battery, New York City.

Authorized project. Authorized by the Water Resources Development Act of 1986. The authorized plan provides for beach erosion control by restoring the Coney Island public beach up to 250 feet beyond its historic shoreline; the extension of the westerly terminal groin; construction of a terminal groin at the easterly end of the restored beach, and a fillet of beachfill from the terminal groin at W. 37th Street extending approximately 2300 feet into the community of Sea Gate. The authorized plan also provides for restoration of the beach by periodic beach nourishment. The project was modified by the Intermodal Surface Transportation and Efficiency Act (ISTEA) of 1991 to include the relocation of existing comfort and lifeguard stations at full Federal expense. The total Federal cost of the project is \$112,200,000 and non-Federal cost is

NEW YORK, NY DISTRICT

\$56,600,000. The project was further modified by Section 329 of WRDA 2000, which authorized the construction of T-groins west of the West 37th Street groin.

Local cooperation. The local sponsor is the NY State Department of Environmental Conservation. In accordance with the provisions of the Project Cooperation Agreement, the sponsor will; provide without cost to the United States all lands easements, and rights-of-way including borrow areas necessary for construction of the project, hold and save the United States free from claims for damages which may result from the construction works and subsequent maintenance of the project; provide a cash contribution toward the total first cost; assure that water pollution that would affect the health of bathers will not be permitted; assure continued conditions of public ownership and use of the shore upon which the amount of Federal participation is based, during the economic life of the project; maintain public use facilities open and available to all on equal terms and maintain all improvements after completion in accordance with regulations prescribed by the Secretary of the Army, including periodic nourishment during the economic life of the project as may be required to serve the intended purpose, subject to Federal participation in the cost of periodic nourishment for the economic project life.

Operations and results during period, and condition as of September 30. Initial construction of the beach and the West 37th Street jetty was completed in January 1995. The design of the comfort and lifeguard stations was completed in 1996. Adequate funding is not available to proceed with construction. Post-construction monitoring continued in FY '01. A study was conducted that evaluated the causes of the accelerated beach erosion downdrift of the W. 37th Street groin and the sand accumulation along Gravesend Bay the study identified alternatives for a long-term solution. The report was completed in March 1998. The report recommended three alternative solutions. A draft limited re-evaluation report that includes an environment assessment of the alternatives is underway and scheduled to be completed in FY 2003. The report will recommend the construction of T-groins as a solution to the beach erosion and sand accumulative problems.. A interim sand nourishment contract was awarded in August 2000 to provide protection to this area while a long-term solution is being developed. Construction was completed in March 2001. Construction at the T-groins may begin in the fall of 2004 if Federal and State funds are available.

31. SANDY HOOK TO BARNEGAT INLET, NJ

Location. The northern portion of the Atlantic coast of New Jersey extending from Sandy Hook southerly to Barnegat Inlet-length about 48 miles. Erosion has seriously reduced the width of most beaches in the study area with consequent exposure of the shore to storm damage. Because of this erosion of the shore the area does not provide sufficient recreational beaches for the proper accommodation of the present and prospective tributary population.

SECTION I – SEA BRIGHT TO OCEAN TOWNSHIP, NJ

Location. That portion of the Atlantic coast of New Jersey in Monmouth County extending from Sea bright southerly to Ocean Township – length about 12 miles. Sea

Bright is about 30 miles by water south of the Battery, New York City.

Authorized project. The Water Resources Development Act of 1988 (PL 100-670) authorized a plan substantially in accordance with the plan recommended in the General Design Memorandum for the project dated May, 1988. In general the plan provides for beach erosion control along approximately 12 miles of coastline, extending from Sea Bright southward to Ocean Township, New Jersey, by artificial placement of sand to widen the beach berm to 100 feet at an elevation of 10 feet above mean low water with an additional 2 foot high berm cap to provide an extra increment of protection from overtopping. The project also provides for the notching of 15 existing stone groins, and periodic nourishment throughout the 50 year economic life of the project. Existing storm outfall pipes are extended beyond the new , wider beach. Total estimated Federal cost for Section 1 is \$461,200,000. Total estimated non-Federal cost for all requirements of local cooperation is \$248,400,000.

Local cooperation. Includes reconstruction of sea wall at Sea Bright and all lands easements, rights-of-way and drainage outfall extensions.

Operations and results during period and condition as of September 30. The Local Cooperation Agreement for Section I was executed with the State of New Jersey on July 30, 1992. Work under Contract 1A (Monmouth Beach) was completed in November 1995. Work under contract 1B (Sea Bright) was completed in October 1996. Construction on Contract 2 (Long Branch) began in May 1997 and was completed in September 1999. Plans and specifications for Contract 3 (Deal) are near completion but contract award is delayed indefinitely due to local real estate and funding issues. The first renourishment contract for Sea Bright and Monmouth Beach was awarded in August 2001. Sand placement commenced in Sea Bright in May 2002 and is continuing. The contract is scheduled to be completed in December 2002.

SECTION II – ASBURY PARK TO MANASQUAN, NJ

Location. That portion of the Atlantic coast of New Jersey in Monmouth County extending from Asbury Park southerly to Manasquan – length about 9 miles.

Authorized project. Provides for Federal participation in the restoration and protection of the shore from Asbury Park to Manasquan by artificial placement of sand to widen the beach berm to a minimum width of 100 feet at an elevation of 10 feet above mean low water with a 2 foot high berm cap. The project provides for the notching of 20 existing stone groins and periodic nourishment for a period of 50 years from construction. Existing outfall pipes are extended beyond the new wider beach. Total estimated Federal cost is \$457,600,000. Total estimated non-Federal costs for all requirements of local cooperation is \$246,400,000.

Operations and results during period and condition as of September 30. The local cooperation agreement for Section II was executed with the State of New Jersey on August 20, 1996. The contract for the Southern Reach

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

(Belmar to Manasquan) was awarded in March 1997. Construction began in June 1997 and was completed in August 1999. The award of the Northern Reach (Asbury Park to Avon-by-the-Sea) contract was in June 1999. Beachfill placement commenced in July 1999 and was completed in December 1999. Work on the groin notching and outfall extensions was completed in January 2001. The first renourishment contract is currently scheduled to start in the spring of 2004.

32. OTHER AUTHORIZED BEACH EROSION CONTROL PROJECTS

(See Table 2-H at end of chapter)

33. BEACH EROSION CONTROL WORK UNDER SPECIAL AUTHORIZATION

Beach Erosion Control activities pursuant to Section 103 Publ. Law 826, 84th Congress as amended (See Table 2-O at end of chapter).

FLOOD CONTROL

34. THE HACKENSACK MEADOWLANDS AREA, NJ

Location. The project location is the Hackensack Meadowlands River Basin in Bergen and Hudson Counties, New Jersey.

Existing project. The program was authorized by Section 324 of the Water Resources Development Act of 1992 and amended by Section 550 of the Water Resources Development Act of 1996. The program was authorized for \$5,000,000. The objective of the program is to provide design and construction assistance for the development of the Environmental Improvement Program within the Hackensack Meadowlands District of New Jersey. The intent of the program is to assist the New Jersey Meadowlands Commission in: tide gate improvements to control flooding in the Berry's Creek drainage basin, the mitigation, enhancement and acquisition of wetlands, the development and implementation of a system to provide for water quality monitoring and wetland control in the Hackensack Meadowlands River Basin. A hydraulic modeling study of the Hackensack River will be performed and it will also examine a proposed tide gate on Berry's Creek. The Corps of Engineers Waterways Experiment Station will be performing the modeling study.

Local cooperation. The non-Federal sponsor is the New Jersey Meadowlands Commission (NJMC).

Operations and results during the period and condition as of September 30. The General Management Plan, which outlines the management process for implementing the program, was completed in October 1998. A total of \$2.5 million was appropriated for the program in FY 1996. The design agreement was executed between the Corps of Engineers and the NJMC in March 2000. The parent model and two child models have been completed. Two additional child models are to be completed in April 2003.

35. JOSEPH G. MINISH PASSAIC RIVER WATERFRONT AND HISTORIC AREA, NJ

Location. The project area is located along the west bank of the Passaic River between Bridge and Brill Streets in the City of Newark, New Jersey. This reach of the Passaic River is eroded, deteriorated and environmentally degraded due to past heavy commercial and industrial use and flooding. The most recent flooding occurred in December 1992. In light of the renewal of the commercial downtown area of Newark near the Passaic River, the project area is viewed as an environmental resource to be restored.

Authorized project. The project was authorized in the Water Resources Development Act (WRDA) of 1990 (Public Law 101-640) as an element of the Passaic River Flood Damage Reduction Project on November 28, 1999, modified in the Water Resources Development Act of 1992 (Public Law 102-580) by extending the project area, and further modified in the Water Resources Development Act of 1996 (Public Law 104-303).

The project has three phases. The first phase will provide 6,000 feet of new bulkhead, 3,200 feet of restored riverbank and wetlands. The second phase adds a 9,200 foot waterfront walkway and the third phase adds park facilities, plazas and landscaping. Links to the Arts Center, Riverbank Park, and other sites will also be provided. The project will reduce the flooding and erosion and provide environmental restoration, recreation and economic development benefits. The cost of the first phase is \$37,300,000, adding the second phase increases the cost to \$60,000,000 and the third phase brings the total project cost to \$78,800,000. The sponsor of the first phase is the New Jersey Department of Environmental Protection and cost sharing is set a 75% Federal and 25% non-Federal. The State may reduce its share through credit provisions in WRDA 1992. The credit consists of the value of lands in the basin that the State puts into wetlands bank.

Local cooperation. Project will be operated and maintained by sponsor as each portion is completed.

Operations and results during period and condition as of September 30. Construction on the first phase started in September 1999. A formal ground breaking was held in November 1999. Additional appropriations will be required to complete the first phase. Interest is also being expressed by the city of Newark by its letter of March 7, 2000 will sponsor the second and third phases. Design efforts and a project cooperation agreement will be prepared.

36. NEW YORK CITY WATERSHED ENVIRONMENTAL ASSISTANCE PROGRAM, NY

Location. The project location is the New York City Watershed, which is located within the following counties in New York State: Delaware, Greene, Schoharie, Ulster, Sullivan, Westchester, Putnam and Dutchess.

Existing project. The program was authorized by Section 552 of the Water Resources Development Act (WRDA) of 1996 and amended in WRDA 1999. The program was authorized for \$42,500,000 in Federal funds.

NEW YORK, NY DISTRICT

The objective of the program is to provide design and construction assistance for water-related environmental infrastructure and resource protection and development projects in the New York City Watershed, including projects for water supply, storage, treatment and distribution facilities and surface water resource protection and development. Twenty-eight projects have been certified by the New York State Department of Environmental Conservation (NYSDEC) and recommended for implementation. The types of projects include stream restoration, installation of sanitary sewer lines, stormwater studies, pathogen monitoring, planning and implementation of agricultural non-point source pollution reduction and watershed protection training.

Local cooperation. The non-Federal sponsor is the NYDEC. The projects will be accomplished by the local sponsors, the New York City Department of Environmental Protection, municipalities and counties.

Operations and results during the period and condition as of September 30. The General Management Plan, which outlines the management process for implementing the program, was completed in September 1998. A total of \$13 million has been appropriated for the program in FY 1997 through 2002. The request for proposals, under which the proposed projects were submitted, evaluated and certified for implementation, was completed in February 1999. A total of 15 Project Cooperation Agreements have executed for 15 projects. Discussions with the local sponsors and negotiations of the PCA's for the other certified projects is underway.

37. PASSAIC RIVER BASIN, NJ & NY

Location. The Passaic Basin, comprising 787 square miles in northeastern New Jersey and 148 square miles in southern New York State, is located in the greater New York City Metropolitan area. The Passaic River Basin is roughly elliptical in shape 26 miles long and 56 miles wide – and contains portions of Bergen, Essex, Morris, Passaic, Hudson, Somerset, Sussex and Union Counties in New Jersey. The Basin also includes parts of Orange and Rockland Counties in New York.

Previous projects. Three Federal flood control projects have been completed by the Corps of Engineers in the Passaic River Basin. A \$67,400 de-snagging, debris removal, and channel restoration project was completed in 1951 along Beaver Brook and the Pequannock Township Ditch, tributaries of the Pompton River in Pequannock Township, NJ.

Along the Pompton River, a channel clearing project including shoal removal and channel restoration was implemented in the two mile reach from the Delaware, Lackawanna and Western Railroad Bridge to the Erie Railroad (Greenwood Lake Branch) Bridge. This work, in Pequannock Township, Wayne Township and Lincoln Park Borough, NJ, was completed in 1954 at a cost of \$50,000.

A \$1.5 million basin-wide project to improve the Flood Warning and Preparedness System was completed in 1988.

The project was implemented by the Corps of Engineers in conjunction with the National Weather Service and U.S. geological Survey, The State of New Jersey is the non-Federal sponsor of the project.

Project history. U.S. Army Corps of Engineers involvement in Passaic River planning was first authorized in the Flood Control Acts of 1936. Since then reports recommending plans of action were issued in 1939, 1948, 1962, 1972, and 1973. None of these plans were implemented because they did not receive widespread public support. In 1976, Congress authorized a Phase I Advanced Engineering and Design Study in Section 101(a) of the Water Resources Development Act of 1976. Congressional Guidance on the conduct of the study was provided in House Report 94-1702. Local protection plans were completed for tributary flood damage areas along the Ramapo and Mahwah Rivers at Mahwah, NJ, and Suffern, NY, Molly Ann's Brook at Haledon, Prospect Park and Paterson, NJ, the Ramapo River at Oakland, NJ, and the Lower Saddle River in Bergen County, NJ. These projects were authorized in the Water Resources Development Act of 1986. Construction began on the Molly Ann's Brook project in 1995. The Ramapo River at Oakland project received construction funds in Fiscal year 1995 and was reauthorized in WRDA 1996 and in the Energy and Water Development Appropriate Act of 2001.

In April 1984, the Passaic Basin experienced flooding estimated to be the worst in 40 years. In June 1984, the State of New Jersey selected a dual inlet diversion tunnel plan as the preferred Basin-wide alternative for detailed plan formulation. The Phase I General Design Memorandum and draft Environmental Impact Statement, (EIS), recommending the Pompton River/Passaic Dual Inlet Tunnel Diversion Plan, were completed during FY 1998. The final EIS was filed with EPA in December 1988.

Section 10(a) 18 of the Water Resources Development Act (WRDA) 1990 (PL 101-640), as modified by section 102(p) of WRDA '92 (PL 102-580) authorizes construction of the Passaic River Flood Protection Project for the Passaic River Basin which will address both environmental and engineering objectives of the Act. The Passaic River Flood Protection Project combines diversion tunnels, levees, flood walls channel modification, and natural flood storage to provide flood protection to about 35 towns in the Passaic River Basin.

Preconstruction, Engineering and Design for the Passaic River Flood Protection Project was initiated in FY 1989 and is continuing with preparation of a General Design Memorandum and Supplemental Environmental Impact Statement with accompanying project cost estimate, and update of buy-out plans. A draft report was completed in Sept. 1995.

The final report was completed in July 1996 with the State's decision to implement various separable clients as described below. Engineering and design for the Joseph G. Minish Passaic River Waterfront Part and Historic Area project element, consisting of environmental and streambank restoration measures in the city of Newark was completed in May 1996.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

Condition as of September 30. Construction is nearly complete on Molly Ann's Brook. Construction is continuing on the Ramapo River at Oakland and Joseph G. Minish Passaic River and Waterfront Park and Preservation of the Natural Storage Areas. The purchases of the national flood storage areas is underway. The Saddle River, Harrison Levee Project, and Mahwah River projects are in the design phase.

38. PRESERVATION OF NATURAL FLOOD STORAGE – PASSAIC RIVER FLOOD DAMAGE REDUCTION REPORT, NJ

Location. Flooding has long been a problem in the Passaic River Basin. Since colonial times, floods have claimed lives and damaged property. The most severe flood, the "flood of record", occurred in 1903, and more recent floods in 1968, 1971, 1972, 1973, two in 1975, 1984 and 1992 were sufficiently devastating to warrant Federal Disaster declarations. The flood of 1984 resulted in the loss of three lives and caused \$493 million in damages (October 1994 dollars).

Authorized project. The U.S. Army Corps of Engineers has been working on plans to reduce flooding in the basin since 1936, but no plan has yet been implemented. Congress authorized a new study of the Passaic River Basin for the State of New Jersey in the Water Resources Department Act (WRDA) of 1976 (Public Law 94-587) which led to a plan authorized in WRDA 1990 and modified in WRDA 1992. The project includes several elements (see separate fact sheet on Passaic River). The element described herein is the Preservation of Natural Flood Storage Areas which the State has asked to Corps to implement. The Preservation element includes the acquisition of 5,350 acres of natural storage areas. 5,200 acres of which are wetlands and could conceivably be developed, worsening existing flood problems. The State of New Jersey has an agreement with the Corps to continue to protect 6,300 floodway acre, thus avoiding any secondary development. About 9,500 acres of the Central Basin are already protected as designated parkland, bringing the total of natural storage areas that would be permanently protected with the project to 21,000 acres. The Preservation element will prevent flood damages from becoming worse. It will not reduce flooding in the Passaic River Basin. The cost sharing is set a 75% Federal and 25% State. The State may reduce its share by applying credits included in the authorization.

Local cooperation. Project lands will be operated and maintained by non-Federal sponsors as each parcel is acquired.

Operations and results during period and condition as of September 30. The General Design Memorandum for the element was completed in July 1996 and the State has requested that the Corps proceed with its implementation at a cost of \$21 million dollars. Currently, the Corps has completed a Real Estate Design Memorandum for purchasing the preservation lands and is negotiating a Project Cooperation Agreement with the State as a non-Federal sponsor. Funds are available to begin purchases once the Agreement is signed. Purchases started in spring 2000 and continue. Total estimated Federal cost

is \$20,400,000. Total non-Federal costs for all requirements of local cooperation is \$1,700,000.

39. RAMAPO RIVER AT MAHWAH, NEW JERSEY & SUFFERN, NY

Location. Flooding has occurred frequently on the Ramapo River, with flood events in 1968, 1971, 1973, 1977, 1979, 1980, 1983, 1984, 1987, 1996, and 1999. The 1977 and 1984 floods were the most severe causing extensive damages to the project area. Tropical Storm Floyd in September 1999 also cause significant damage.

Authorized project. The Ramapo River and Mahwah Rivers Flood Control Project is authorized for construction under the Water Resources Development Act (WRDA) of 1986 (Public Law 99-662). The authorized project involves the construction of features for flood protection along the Ramapo and Mahwah Rivers in Mahwah, NJ and Suffern, NY. The authorized plan for flood damage reduction includes channel modification to approximately 13,000 feet of the Ramapo River, Mahwah River, and Mazonicus Brook. The modifications would include the widening and deepening of the channels, sheet pile walls, and bridge modifications. The project will provide protection to residential, commercial, and industrial developments in Suffern and in Mahwah.

Local Cooperation. The non-Federal sponsors, New York and New Jersey will sign a project design agreement summer 2002. Assuming a favorable project is recommended and implemented, a construction project cooperation agreement would be executed and upon completion of construction the project would be turned over to the non-Federal sponsors for operation and maintenance. The sponsors will also provide all lands required for the project.

Condition as of September 30. The project design memorandum was completed and approved in September 1987. Plans and specifications were substantially complete in 1990. Construction funds were appropriated, but work was never initiated due to the lack of project cooperation agreements. After the flooding in 1999, the involved States, counties, and towns expressed interest in resuming the project. Letters of support from New York and New Jersey documented the interest and requested an update of the project to determine whether further interest is warranted. Funds were appropriated in Fiscal Year 2001 and coordination with the interested parties was initiated. A project management plan has been developed. A updated design is underway.

40. RAMAPO RIVER AT OAKLAND, NJ

Location. The project involves the construction of features for flood protection along the Ramapo River from Pompton Lake in Wayne Township and the Borough of Pompton Lakes, upstream through the Borough of Oakland to West Oakland Avenue, a distance of 3.3 miles.

The principal problem along the Ramapo River is flooding caused by backwater effect produced by the Pompton Lake Dam, the hydraulic construction produced by bridges crossing the river, and insufficient channel capacity. Flooding has occurred frequently, with the most recent

NEW YORK, NY DISTRICT

events in 1968, 1970, 1971, 1973, 1977, 1978, 1979, 1980, 1983, 1984, 1987, 1993 and as September 1999 from Tropical Storm Floyd..

Authorized project. The Ramapo River was studied as part of the Passaic River Basin Phase I Advanced Engineering and Design Study which was authorized by the Water Resources Development Act of 1976 (Public Law 94-587, October 22, 1976). Congressional guidance for the for the conduct of the study is included in House of Representatives report 94-1702. The study was authorized for construction under the Water Resources Development Act (WRDA) of 1986 (Public Law 99-62) and reauthorized in WRDA 1996 (PL 104-303). The sponsor is the New Jersey Department of Environmental Protection. The authorized plan for flood damage reduction along the study area includes channel modification of 5,800 feet of the Ramapo River. The authorized plan also calls for the installation of flood control gates at the existing Pompton Lake Dam. Mitigation for the environmental impacts of the plan includes the creation of a five acre wetland in Potash Lake. The recommended plan would provide a consistent 40 year level of protection to the project area. The plan has an estimated cost of \$18,000,000. The cost is shared by the Federal Government (75%) and the State (25%). The State share includes the cost for all lands easements, and right-of-way as well as a cash contribution. The State share may be reduced through the use of credits available for Passaic River Basin projects\

Local cooperation. Non-Federal sponsor will operate and maintain project once construction is complete and project is turned-over to sponsor.

Operations and results during period and condition as of September 30. Engineering and design commenced in October 1987. The final general Design Memorandum was completed in May 1994 and approved in July 1994. Permits were issued in January 1999. The Project Cooperation Agreement was executed in April 1999. Ongoing channel modification is substantially complete. This construction will be followed by the advertisement at the work to install the flood control gates. Total estimated Federal cost is \$13,500,000. Total estimated non-Federal costs for all requirements of local cooperation is \$4,500,000.

41. RARITAN RIVER BASIN GREEN BROOK SUB-BASIN, NJ

Location. The Green Brook Basin lies in central New Jersey within the counties of Somerset, Middlesex and Union and is one of the major tributaries in the Raritan River Basin. The Green Brook, which originates in the Watchung Mountains, has a 65 square mile watershed. The bell shaped basin widens markedly as Green Brook flows southwesterly to its mouth at the Raritan River.

Project History. The Green Brook Flood Control Project is the result of efforts over the past three decades by the U.S. Army Corps of Engineers, other Federal agencies, state and local agencies, civic organizations and the general public. In 1968, a reconnaissance investigation was conducted, under the Corps of Engineers Continuing Authority Program for small projects, for Ambrose, Bound and Bonygutt Brooks. The resulting report recommended

further study all three locations. Detailed project reports concluded that individual flood protection projects were not economically feasible at any of the locations. Subsequently, record floods occurred in 1971 and again in 1973, causing catastrophic damage throughout the basin. As a result of the devastating events, the need for basin-wide studies of the entire Green Brook Basin was apparent. The Corps of Engineers, North Atlantic Division (NAD) issued the *Feasibility Report for Flood Control, Green Brook Sub-Basin*, dated August 1980. The plan recommended in this report consisted of a system of levees and floodwalls to provide protection against a 150 year flood in the lower portion of the Green Brook Basin only. A more comprehensive, basin-wide solution would have also extended 150 year protection to the upper and Stony Brook portions of the basin. The Board of Engineers for Rivers and Harbors (BERH) reviewed the NAD report and issued its report on 16 March 1981, in which they endorsed all plan formulation decisions in the 1980 Feasibility Report. However, the BERH also stated the "the recommended 150 year level of protection is inadequate for this highly urbanized floodplain". To avoid catastrophic consequences of levee overtopping, the BERH recommended protection to 500 year level. The Chief of Engineers Report dated 4 September 1981. In February 1984, the Secretary of the Army expressed the administration's views in his letter transmitting the report to Congress in which he recommended that the August 1980 report should be authorized.

The Water Resources Act of 1986 authorized construction of a project, providing protection in all three portions of the Green Brook Basin. Section 401a of the Water Resources Development Act (WRDA) 1986 authorized construction of the Green Brook Flood Control Project for the Green Brook Sub-basin, which will address both environmental and engineering objectives of the Act. The Green Brook Flood Control Project combines levees, floodwalls, channel modification, flood proofing, and natural flood storage to provide flood protection to about 13 municipalities in the Green Brook Sub-basin.

On the basis of this authorization, funds were budgeted and appropriated for preconstruction engineering and design. Surveying, mapping and other studies necessary to provide the basis for actual construction commenced toward the end of 1986. However, delays were incurred due to conflict between the needs and desires of the non-Federal sponsor and national economic development which affected the quest for a comprehensible implementable plan. In January 1994, a general reevaluation study was initiated. Unfortunately, the area was hit with another record storm in September 1996 causing more damages, the draft General Reevaluation Report was issued in December 1996 and opened for public comment for the period between January 7 and March 7, 1997. As a result comments expressed with significant concerns over the flood protection plan proposed for the upper portion of the basin, the Corps and the NJDEP agree to defer action on the flood protection plan for the upper portion of the basin. The Final General Reevaluation Report and Supplemental Environmental Impact Statement was approved in May 1997 with the support of the New Jersey Department of Environmental Protection (NJDEP) who is the non-Federal sponsor for the project. In FY 1998, an Upper Basin Task Force (UBTF)

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

was formulated to develop potential plan alternatives to the upper basin. The UBTF released their final report on November 12, 1998. In September 1999, again the area saw another record storm which not only caused catastrophic damage but resulted in 3 deaths. The Corps of Engineers, New York District released a Project Study Plan (PSP) to determine the feasibility of the alternatives discussed in the UBTF report in June 2000.

Preconstruction Engineering and Design for the Green Brook Flood Control Project was initiated in FY 1997 and the Project Cooperation Agreement (PCA) between the NJDEP and the Federal Government was executed on June 24, 1999.

Condition as of September 30. The first construction contract was awarded on September 29, 2000 to begin work in the lower portion of the basin which includes a temporary bridge demolition, replacement of a bridge and demolition of 3 houses on East Street of Bound Brook. As a result of the 1999 storm event, a resolution was submitted by Middlesex Borough in October 1999 requesting buyouts along Prospect Place and Raritan Avenue. In August 2001, the Federal Emergency Management Agency (FEMA) purchased houses on Raritan Avenue under their Hazard Mitigation Program and are scheduled to be demolished by November 2001. The Corps of Engineers, New York District reviewed alternatives to the proposed flood proofing measures for the remaining structures and determined that the Locally Preferred Plan (LPP) of voluntary buyouts is the recommended alternative. Act language to authorize this project change is expected in WRDA 2002. Buyout offers were extended to 22 properties on Prospect Place in Middlesex Borough. 19 properties accepted the buyouts and these properties were obtained by 31 December 2002. Demolition began in December 2002 and to date 9 homes have been demolished. Demolitions are scheduled for completion by 4th quarter of FY 2003. In addition, the levee system in the Borough of Bound Brook was reanalyzed, and construction began 2nd quarter 2002.

42. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Inspections of the following completed flood control works and beach erosion and hurricane protection projects were performed to determine the extent of compliance by local interests with operation and maintenance requirements.

New England Inspection Date:

Adams, MA – Hoosie River	Sept. 00
Bennington, VT – Roaring Branch, Walloomsac River	Oct. 99
East Barre Dam, VT – Jail Branch Winooski River	Sept. 00
Montpelier Dam, VT – Winooski River	Sept. 00
North Adams, MA – Hoosie River	Sept. 00
Richford, VT – Missiquoi River	Sept. 00
Waterbury Dam, VT – Little River	Sept. 00
Wrightsville Dam, VT – North Branch Winooski River	Sept. 00

NY – NJ Areas

*E. Rockaway Inlet to Rockaway Inlet Elizabeth, NJ – Elizabeth River	Oct. 99 NI

43. OTHER AUTHORIZED FLOOD CONTROL PROJECT

(See Table 2-1 at end of chapter.)

44. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Flood Control activities pursuant to Section 205, Public Law 858, 80th Cong. As amended (Pre-authorization) See Table 2-P at end of chapter).

Chapter 1 Natural Disaster and Emergency Flood Control Activities. Pursuant to Public Law 84-99 and antecedent legislation provides for disaster preparedness, emergency operation, rehabilitation, advance measures, emergency water, and drought assistance.

Under disaster preparedness, the New York district initiated revisions to emergency response plans to include lessons learned from previous disasters, attended meetings and seminars dealing with emergency response planning and purchased supplies and equipment to maintain its' flood fight and response capability.

Under emergency operations, the New York District conducted field investigations, provided technical assistance and sandbags to local and county government in response to flooding events.

In response to Presidential disaster declarations under P.L. 93-288 the New York District received mission assignment from the Federal Emergency Management Agency (FEMA) for generator repair and servicing during the Jan. 1998 NY ice storm and environmental technical assistance during the June 1998 flash flooding in NY.

NEW YORK, NY DISTRICT

GENERAL INVESTIGATIONS

45. SURVEYS

(See Table 2-J at end of chapter.)

46. COLLECTION AND STUDY OF BASIC DATA

Costs for the period of \$143,839 for flood plain management services are set forth in Table 2-L at the end of chapter.

47. DEAUTHORIZED PROJECTS

Projects having all, or inactive or uncompleted portions deauthorized by Congressional Action pursuant to Water Resources Development Acts (See Table 2-M at end of chapter.)

1. Of which \$12,500 is for North Atlantic Division Accounts.	17. Includes \$\$487,500 from contributed funds.
2. Of which \$12,127 is for North Atlantic Division Accounts.	18. Includes \$222,500 contributed funds.
3. Excludes \$90,190 for new work expended from contributed funds. Additional NY State Funds were \$200,000 in 1990, \$581,000 in 1991, \$611,574 in 1996, \$2,093,194 in 1997, \$1,280,000 in 2000, \$1,468,734 in 2001 and \$3,654,000 in 2002.	19. Includes \$9,072,420 from contributed funds
4. Includes \$5,112,694 for new work for previous project.	
5. Includes \$238,350 for new work expended from public works funds and \$311,461 emergency relief funds. Excludes \$81,373 expended from contributed funds.	
6. Excludes \$454,273 expended between August 18, 1915 and June 30, 1935, for operation and care of lock and dam at Troy, NY, under permanent indefinite appropriation. Excludes \$23,735 reimbursement for repairs to Troy Lock.	
7. Includes \$346,797 for maintenance for previous project.	
8. Includes \$107,991,000 from contributed funds.	
9. Includes \$115,000 for new work for previous projects.	
10. Includes \$2,491,206 expended to date for construction of land-based overfire air pit incinerator (\$1,493,393 in maintenance funds and \$997,813 in O & M funds.) and \$116,500 applied to removing wrecks authorized by acts prior to adoption of existing projects.	
11. Includes\$26,117,300 from contributed funds.	
12. Includes \$9,700,000 from contributed funds.	
13. Includes \$10,650,000 from contributed funds.	
14. Includes \$438,000 from contributed funds.	
15. Includes \$12,792,100 from contributed funds.	
16. Includes \$50,550,000 from contributed funds.	

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS
ACTIVITIES FOR FY 2002

TABLE 2-B

Act	Work Authorized	Document
	AQUATIC PLANT CONTROL (See Section 1 of Text)	
River and Harbor Act of 1959	Control and progressive eradication of obnoxious Aquatic Plant growths	H. Doc. 37 85th Cong. 1st sess.
Section 104 and Harbor Act of 1958	Provided that all research and planning cost to be borne fully by the United States.	
Section 302 River and Harbor Act of 1965	Modified project to include control of waterchestnut	
	ARTHUR KILL CHANNEL, HOWLAND HOOK, MARINE TERMINAL, NY & NJ (See Section 2 OF TEXT)	
River and Harbor 23 June 1874	Original Project for a "channel between Staten Island and New Jersey"; 150 feet wide, 16 feet deep	Report of the Chief of Engineers 1873, S. x. 52 42 nd Cong., 3 rd Session
River and Harbor 14 August 1876	Indicated that improvements recommended in 1873 and actually commenced in 1874 were no longer necessary and that a Channel 11 feet deep and 500 feet wide would serve tows and sailing vessels most expeditiously	Report of the Chief of Engineers 1876, H. 44 44th Cong., 1 st Session
River and Harbor 13 June 1902	Recommended a channel between New York and New Jersey passing south of Shooters Island, 21 feet deep and 300 feet wide width would be 400 feet.	H.D. 393, 56 th Cong., 1st session
River and Harbor 25 June 1910	Authorized a channel north of Shooters Island 1 mile long, 300 feet wide, 16 feet deep.	H.D. 337, 59 th Cong., 2 nd sess
River and Harbor 22 September 1922	The original project for "New York and New Jersey" provided for a channel 400 feet wide and 30 feet deep	H.K. 653, 66 th Cong. 2nd Session
River and Harbor 30 August 1935	Provided for present project depth of 35 feet and channel 600 -800 feet wide.	H.K. 133, 74 th Cong. 1 st Session
None	Feasibility study for the rehabilitation of the dike north of Shooters Island initiated 1960.	District Engineers April 1964
River and Harbor 27 October 1965	Provided for widening and deepening entrance to Kill Van Kill at Robbin's Reef at a 35 foot depth.	H.D. 108, 89 th Cong., 1 st session
None	Investigation into the effects of the removal of Shooters Island And shore modifications on tides, currents, and shoaling in the Kill Van Kull channels. Study noted no detrimental effects.	Waterways Experiment Station U.S. Army Corps., Dec 1967
None	Investigation into widening and deepening NY and NJ Channels in response to House Committee on Public Works Resolutions 30 March 1995, and 27 June 1956 resulted in negative reports.	District Engineer, NY 9/21/73
28 May 1975	Investigation into the feasibility of deepening the triangular area Just east of Shooters Island to 35 feet MLW. Initiated in 1974. Built in 1976.	District Engineer, NY H.D. 494, 89 th Cong. 2 nd session

**NEW YORK, NY DISTRICT
AUTHORIZING LEGISLATION**

TABLE 2-B

Act	Work Authorized	Document
None	Investigation into the impacts caused by the removal of Shooters Island ; noted a lack of economic justification and significant potential environmental impacts. Chief of Engineers recommended 6 August 1979 that no Federal funds be provided.	District Engineer, Feb 1979
None	Investigation into widening and deepening Kill Van Kull and Newark Bay in response to House Committee on Public Works Resolution Dated 14 June 1972 . Currently under review by the Office of Management And Budget.	District Engineer, NY July 1980
House Committee On Public Works and Transportation Resolution 9 May 1979	Review the reports of the Chief of Engineers on NY and NJ Channel contained in H.D.133,74 th Cong., 1 st Sess., and H.D. 108,89 th Cong., 1 st Cong. To determine the feasibility of deepening and easing the bends of NY and NJ Channels from deep water in Upper Harbor westward to Howland Hook Marine Terminal, Howland Hook, Staten Island, NY, and creating a turning basin to serve that facility; all to accommodate Deeper draft and otherwise larger ongoing general cargo and container Vessels.	Final Feasibility Report Arthur Kill Channel, Howland Hook Terminal NY and NJ March 1986
Water Resources Development Act Of 1986 (PL99-662) Sec.202(b)	AK Channel deepening to 41 feet to Howland Hook Terminal, and to 40 feet to Exxon Bayway Gulfport facilities, as per the project for navigation , Report of BERH dated 31 March 1986.	
Water Resources Development Act Of 1996 (PL 1014-303) Sec.303(b)(11)	Modified WRDA 86 to authorize AK Channel deepening to a depth of not to exceed 45 feet , at cost \$83,000,000.	Final Limited Reevaluation Report , Arthur Kill Channel, Howland Hook Marine Terminal,NY&NJ Dec 1997.
Water Resources Development Act Of 1999 (PL106-53) Sec.338	Modified WRDA 86 and WRDA 96 to authorize AK Channel deepening at a total cost of \$315,700,000.	Addendum to Final Limited Reevaluation Report ,Arthur Kill Howland Hook Marine Terminal,NY&NJ May 2001.
BURLINGTON HARBOR,VT(See Section 3 of Text)		
July 4,1836	Construction of first 1,000 feet of breakwater	H. Doc. 131 ,23rd Cong. 1st sess.
June 23,1866	Extension of 1,500 feet to breakwater	H. Ex.Doc 56,39 th Cong 2ndsess.
March 3,1875	Extension of 2,000 feet to breakwater Chief of Engineers authorized extension southerly of 1,000 feet and northerly 500 feet.	Annual Report,1874, p274, Annual Report 1887,p2407

**REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS
ACTIVITIES FOR FY 2002**

TABLE 2-B

Act	Work Authorized	Document
EAST RIVER, NY (Section 4 of Text)		
March 2, 1915	Removal of Coenties Reef to 35 feet , conditional upon local Local interests increasing depth to 40 feet	H. Doc. 188 ,63 rd Cong. 1 st sess.
July 27, 1916	Channel across Diamond Reef 35 feet deep and 1,000 feet wide.	
August 8, 1917	Channel east of Blackwells Island to 20 feet; channel between South Brother and Berrian Islands, to 20 feet; channel between North and South Brother Islands to 26 feet. Channel 40 feet deep through East River and Hell Gate.	H. Doc. 140, 65 th Cong. 1 st sess
July 18, 1989	Secure a depth of 40 feet deep in channel through East River and Hell Gate as soon as practicable.	Specified in act
Sep. 22, 1922	Depth limited to 35 feet in through channel between Wallabout Channel and Throgs Neck, Channel east of Blackwells Island, 30 Feet to English pl. Eliminated channel between North and South Brother Islands except as authorized prior to existing project. Remove certain rocks and reefs and construct dike in Pot cove, Hell Gate.	Rivers & Harbor Com Doc. 3, 67 th Cong. 2 nd ses
E. Pub. Wks. Comm. Res., Dec. 15 1970 S. Pub. Wks. Comm Dec. 1970	Spur channel to Astoria waterfront 37 feet in rock, 35 feet in Material, for a length of 0.95 mile for varying widths, and Turning basin. (South Brother Channel).	S. Doc. 91-60, 91 st Cong. 2 nd sess
EAST ROCKAWAY INLET, NY (Section 5 of Text)		
July 3, 1930	Channel 12 feet deep and 250 feet wide, and a jetty.	H. Doc. 19 , 71 th Cong 1 st sess
FIRE ISLAND TO JONES INLET, NY (Section 6 of Text)		
August 26, 1937	Construction of jetty .	Rivers & Harbor Com Doc. 75 th Cong., 1 st sess
May 17, 1950	Channel 10 feet deep.	H. Doc. 762 , 80 th Cong 2 nd sess
1958 River & Harbor Act	Three dredging operations with sand serving as nourishment. to the beaches westerly of the inlet.	H. Doc. 411 , 84 th Cong 2 nd sess
1962 River & Harbor Act	Extension of existing jetty, a littoral reservoir, a navigation. channel and dikes, sand deposit on westerly beaches.	H. Doc. 115 , 89 th Cong 1 st sess
March 1988	14 foot channel with sand placed along Gilgo Beach.	
GLEN COVE CREEK, NY (Section 7 of Text)		
March 1988	Channel 8 deep and 100 feet wide.	H. Doc. 207 , 68 th Cong 1 st sess

Navigation:

1. BARNEGAT INLET, NJ

Location: On the east coast of New Jersey about 50 miles south of Sandy Hook, between Island Beach on the north and Long Beach on the south (See U.S. Coast and Geodetic Chart Nos. 825 and 1216). This inlet is the main entrance to Barnegat Bay, largest of the bays on New Jersey coast, which are separated from the ocean by narrow barrier beaches.

Previous Project: None

Existing project: The existing project, adopted as HD 73-19 in 1935 and modified as HD 74-85 in 1937 and HD 79-358 in 1946, provides for a channel eight feet deep through the inlet and ten feet deep through the outer bar, protected by two converging stone jetties and a channel of suitable hydraulic characteristics extending in a northwesterly direction from the gorge in the inlet to Oyster Creek channel and through the latter channel to deep water in the bay. The project was modified in 1946 to provide for the maintenance of a channel eight feet deep and 200 feet wide to connect Barnegat Light Harbor with the main inlet channel. The project length is about 4.5 miles. (For details see page 203, Annual Report 1964.)

The Supplemental Appropriation Act of 1985 contained language stating that the existing project has not worked as projected and, in fact has created a hazard to navigation. As a result, the following administratively approved modifications were constructed as design deficiency correction measures: a new south jetty 4,270 feet in length along an alignment generally parallel to the existing north jetty, extending from the old groin located near the Barnegat Lighthouse to the tip of the existing south jetty; a navigation channel 300 feet wide to a depth of 10 feet below mean low water from the outer bar in the Atlantic Ocean to the north end of the existing sand dike in Barnegat Bay; remove the shoal located between the north jetty and the proposed navigation channel; jetty sport fishing facilities on the new jetty. All dredged material from initial construction was placed on the shores of Barnegat Light between the existing and new south jetties, and is being stabilized by vegetation and sand fence. Dredged material from maintenance operations are placed on the down draft beaches, the area between the existing and new south jetties, or in other locations as determined by a shoreline monitoring program. Estimated cost for new work (October 1990) Federal share is \$31,200,000 and non-Federal is

\$14,230,000. (See Table 3-B at end of chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total cost for existing project to Sept. 30, 2002.)

Local cooperation: Fully complied with. A local cooperation agreement for the approved modification was executed on 19 May 1986 and a modification to the local cooperation agreement was executed on 20 March 1987.

Terminal facilities: There are four docks or terminals in inner harbor at Barnegat Light that furnish adequate facilities for present commerce of locality.

Operation during fiscal year: Maintenance: Condition surveys were accomplished. Repairs were made to the South Jetty to protect the public and the structure from the effects of erosion. Dredging by the U.S. Government Dredge Currituck removed a total of 307,000 cubic yards of material at a total of \$1,233,000.

2. COLD SPRING INLET, NJ

Location: In Cape May County, southern New Jersey, about 3 miles east of Cape May City and about 16 miles northeast of Delaware breakwater. Inlet connects Cape May Harbor and New Jersey Intracoastal Waterway with the Atlantic Ocean and is about 1 mile long. (See Coast and Geodetic Survey Charts 234, 827 and 1219).

Existing project: An entrance channel 25 feet deep and 400 feet wide, protected by two parallel jetties, and extending from the 25-foot depth curve in the Atlantic Ocean to a line 500 feet harborward of a line joining the inner ends of the jetties, thence 20 feet deep and 300 feet wide to deep water in Cape May Harbor. The total length of the section included in the project is about 2.25 miles. Extreme tidal range, due to ocean storms, is about 11 feet. Project was completed in 1942. (For details see page 238, Annual Report for 1962. See Table 3-B at end of chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total cost for existing project to Sept. 30, 2002.)

Local cooperation: Complied with Act of 1907, except work of deepening and enlarging inner harbor that is 80 percent complete.

Terminal facilities: See page 238 Annual Report for 1962.

Operations during fiscal year: Maintenance: Dredging by the U.S. Government Side Casting Dredge Fry removed a total of 118,000 cubic yards of material

from the inlet at a total cost of \$380,000.

3. DELAWARE RIVER BETWEEN PHILADELPHIA, PA AND TRENTON, NJ

Location: Rises in southeastern New York, flows generally southerly 367 miles, forming boundary line between New York and New Jersey on the east and Pennsylvania and Delaware on the west, and empties into Delaware Bay. (See U.S. COAST and Geodetic Survey Charts 1218, 280, 294, 295, and 296.)

Previous project: For details see page 1778 of annual report for 1915, page 311 of Annual Report for 1924, page 220 of Annual Report for 1934, and page 296, Annual Report for 1938.

Existing project: A channel from Allegheny Avenue, Philadelphia, 23.5 miles to upstream end of Newbold Island 40 feet deep and 400 feet wide, with suitable widening of bends, including relocation of channel at Delair Railroad bridge, and reconstruction of bridge, thence 5.5 miles to upper end of Trenton Marine Terminal, 35 feet deep and 300 feet wide, with a turning basin 800 feet wide and 1,700 feet long at the terminal; and maintenance of a channel 12 feet deep and 300 feet wide from upper end of 34-foot channel to Penn Central railroad Bridge at Trenton, dredged under a previous project. Project also provides for an auxiliary channel 20 feet deep and 200 feet wide east of Burlington Island, extending easterly from main channel to upper end of U.S. Pipe and Foundry Co.'s property at East Burlington, with a turning basin 450 feet wide at upper end; for initial excavation, only, of a cross channel 8 feet deep and 200 feet wide through artificial island opposite Delanco, NJ, and for construction of such bank protection works as may be necessary. Section included in project is about 30.5 miles long, excluding auxiliary channel east of Burlington Island, which is 1.4 miles long, and cross channel opposite Delanco. Lower end is about 55 miles above river mouth at Liston Point and about 105 miles above Harbor of Refuge at mouth of Delaware Bay. Freshets, which occur usually during February and March, attain a height of 9 to 20 feet above mean low water in the vicinity of Trenton. Navigation is occasionally suspended during a portion of winter months due to ice. Existing project is 90 percent complete. A 40-foot channel under the 1954 modification from Allegheny Avenue to upper end of Newbold Island was completed April 1964. Work remaining is dredging from upper end of Newbold Island to Trenton Marine Terminal and widening turning basin at terminal that is in deferred category. (See Table 3-B at end of chapter for Acts authorizing existing project. See Table 3-A at end of

chapter for total cost for existing project to Sept. 30, 2002.)

Local cooperation: Modification authorized by 1954 River and Harbor Act provides local interests must provide suitable terminal facilities, furnish lands and rights-of-way for construction and future maintenance, and hold the United States free from damages. Local interest complied with requirements, except city of Trenton has not provided suitable terminal facilities.

Terminal facilities: There are 21 piers, wharves, and docks from Allegheny Avenue, Philadelphia, PA to Trenton, NJ facilities are considered adequate for existing commerce. (For details see Port Series No. 8 (revised 1966-Corps of Engineers.)

Operations during fiscal year: Maintenance: Work included channel examination surveys and dredging operations by the government-owned Hopper Dredge McFarland removing 241,191 cubic yards of material at a cost of \$2,037,750. Shoals located on Mud Island, Kinkora, Penn and Newbold ranges of the 40-foot channel were removed by this work. Dredging was also done by Weeks Marine Incorporated removing 133,677 cubic yards of material at a cost of \$889,605.

4. DELAWARE RIVER MAINSTEM CHANNEL & DEEPENING, NJ, PA, & DE

Location: The project area is located within the Delaware Estuary and borders Pennsylvania, New Jersey and Delaware. It extends over 100 miles of the Delaware River from Philadelphia Harbor, Pa. and Beckett Street Terminal in Camden, NJ to the mouth of the Delaware Bay.

Existing project: Delaware River Federal Navigation Channel (Philadelphia to the Sea Project) completed in 1942. The project calls for modifying the existing Delaware River Federal Navigation (Philadelphia to the Sea Project) channel from 40 to 45 feet below Mean Low Water (MLW) with an allowable dredging over depth following the existing channel alignment from Delaware Bay to Philadelphia Harbor and the Beckett Street Terminal, Camden New Jersey, a distance of about 102.5 miles. The channel width (same as the existing 40-foot project) would range from 400 feet in Philadelphia Harbor to 800 feet from Philadelphia Naval Business Center to Bombay Hook and then 1,000 feet in Delaware Bay. The plan includes appropriate bend widening as well as provision of a two-space anchorage for safety purposes to a depth of 45 feet at Marcus Hook. Dredged material would be placed in confined upland disposal

areas and for beneficial uses in Delaware Bay.

The improved channel will have a significant impact in allowing more efficient vessel loading, reducing the lightering requirements of crude oil tankers in the lower Delaware Bay, and attracting larger, more efficient container and dry bulk vessels. It is estimated that the proposed deepening will result in annual transportation savings of \$24.1 million. Project estimate cost (October 2001) is Federal, \$244,190,000, which includes \$1,190,000 of Coast Guard contributions. Non-Federal costs are \$133,000,000. (See Table 3-B at end of chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total cost for existing project to Sept. 30, 2002.)

Local Cooperation: Project Cooperation Agreement (PCA) has been negotiated and was forwarded to the sponsor for execution.

Operations During Fiscal Year: New Work: Answered inquiries concerning this project, completed and coordinated the comprehensive economic reanalysis, continued coordination associated with State of Delaware Permit, coordination with State of New Jersey concerning Federal Coastal Zone Determination (CZM) and coordination and negotiation with project sponsor of the Project Cooperation Agreement.

5. DELAWARE RIVER, PA, NJ, AND DE, PHILADELPHIA TO THE SEA

Location: See U.S. COAST and Geodetic Survey Charts 1218, 394, 295, and 280.

Previous project: For details see page 1779 of Annual Report for 1915, and page 299, Annual Report for 1938.

Existing project: Provides for a channel from deep water in Delaware Bay to a point in the bay, near Ship John Light, 40 feet deep and 1,000 feet wide; thence to Philadelphia Naval Base, 40 feet deep and 800 feet wide, with 1,200-foot width at Bulkhead Bar and 1,000-foot width at other bends; thence to Allegheny Avenue, Philadelphia, PA, 40 feet deep and 500 feet wide through Horseshoe Bend and 40 feet deep and 400 feet wide through Philadelphia Harbor, along west side of channel; and for anchorages at Reedy Point, Deepwater Point, Marcus Hook, and Mantua Creek, each 40 feet deep and 2,300 feet wide with respective length of 8,000, 5,200, 12,650, and 11,500 feet; anchorage at Gloucester 30 feet deep and about 3,500 feet long. Project also provides for construction of dikes and training works for regulation and control of tidal flow; for maintenance of an area on

north side of channel opposite Philadelphia Naval Base between Shipway 3 and Schuylkill River to 40 feet deep and width of 150 feet on Mifflin Range and 200 feet on West Horseshoe Range; and for maintenance of any areas dredged by local interests to 35 feet deep between channel and a line 100 feet channelward of pierhead line between Point House wharf and Philadelphia Naval Base, when in opinion of Chief of Engineers such areas are so located as to be of benefit to generate navigation. Section included in project is about 96.5 miles long. All depths refer to plane of mean lower low water. Under influence of heavy and long-continued winds extreme tidal range is about 14 feet. Normal maximum velocity of tidal currents in the dredged channel varies between 2 and 3.5 miles per hour. Storm tides may increase maximum to as much as 4.5 miles per hour. Estimated cost for new work is \$71,630,000 (July 1972) exclusive of amounts expended on previous projects. Channel to 37 feet deep and 500 feet wide through Horseshoe Bend and 37 feet deep and 60 feet wide through Philadelphia Harbor along east side of channel and Port Richmond anchorage to 37 feet deep, except for that portion of channel which forms a part of 40 feet deep and 400 feet wide channel portion is to be restudied and excluded from foregoing cost estimate. Estimated cost (July 1960) of this portion of project is \$2,951,000. Existing project, excluding work deferred for restudy, is about 66 percent complete. The 40-foot channel from Naval Base to the sea was completed in 1942. Dredging Naval Base to Allegheny Avenue to 40 feet deep was completed in 1962. Enlarging anchorage at Marcus Hook was completed in 1967. Work remaining is to construct new anchorages at Reedy Point and Deepwater Point, and enlarge Mantua Creek anchorage, channel dredging from 35 to 37 feet deep over a width of 500 feet through Horseshoe Bend and about 600 feet through Philadelphia Harbor, and deepening Port Richmond Anchorage to 37 feet, all of which have been deferred for restudy. (See Table 3-B at end of chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2002.)

Local cooperation: Requirements under 1938 River and Harbor Act for maintaining channel and anchorage in Philadelphia Harbor annually by cities of Philadelphia and Camden were removed (see 1962 Annual Report for details.)

Terminal facilities: There are 217 piers, wharves, and docks between Allegheny Avenue, Philadelphia and the sea, 135 on the waterfront of Philadelphia, Camden, and Gloucester, and 82 below Philadelphia. Facilities are considered adequate for existing commerce. (For further details see Port Series Nos. 7, revised 1967, and 8, revised 1966-Corps of Engineers.)

Operations during fiscal year: Maintenance: Routine maintenance of Government owned disposal areas and channel examination surveys. Work included dredging by the U.S. Government Dredge McFarland at a cost of \$5,385,711.

6. DELAWARE RIVER VICINITY OF CAMDEN, NJ

Location: Camden, NJ on east bank of Delaware River, is directly opposite the City of Philadelphia, PA. It is about 51 miles above mouth of the river and about 101 miles above Harbor of Refuge at the mouth of Delaware Bay. (See U.S. Coast Guard and Geodetic Survey Charts Nos. 295 and 280).

Previous project: Adopted by River and Harbor Act of June 25, 1910. No work was done on this project, for further details, see page 321, Annual Report for 1932.

Existing project: The existing project which is a modification to the Delaware River from Philadelphia to the Sea project was adopted as House Document No. 63-1120 in 1919 and modified by House Document No. 70-111 in 1930 and House Document No. 77-353 in 1945. Dredging to project depth of 37 feet in front of the Camden Marine Terminal was completed in March 1988. It also provides for dredging in of Camden to Newton Creek, with the depth increased to 40 feet in front of the Beckett Street Marine Terminal. These depths extend from the ship channel in Delaware River to a line parallel with and 50 feet distant from the established pierhead line. The project length is about four miles. Projects depths are well maintained in 40 foot depth section of channel. (See Table 3-B at end of chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2002).

Local cooperation: Fully complied with.

Terminal facilities: See page 228, Annual Report 1962.

Operations during fiscal year: Maintenance: Work included project condition surveys.

7. INLAND WATERWAY FROM DELAWARE RIVER TO CHESAPEAKE BAY, DE & MD

Location: The Waterway begins at Reedy Point on Delaware River, about 41 miles below Philadelphia, PA, and passes through the sea level Chesapeake and Delaware Canal, a distance of 14 miles, to Back Creek, at Chesapeake City, MD. It then passes for 5 miles down Back Creek, thence 9 miles down Elk River to Chesapeake Bay and thence 18 miles down Chesapeake Bay to a point near Pooles Island. A branch channel connects Delaware River at Delaware City, DE, with main channel at a point about 1.5 miles west of Reedy Point. (See U.S. COAST and Geodetic Survey Charts 294, 1226, 570, and 572.)

Previous project: For details see Annual Report for 1934, page 242, and Annual Report for 1938, page 312.

Existing project: A channel 35 feet deep and 450 feet wide from Delaware River through Elk River and Chesapeake Bay to water of natural 35-foot depth in Chesapeake Bay including a cutoff at Penn Central Railroad crossing, and having a maximum radius of curvature of 7,000 feet at bends; a high-level, fixed railroad bridge with vertical clearance of 135 feet and horizontal clearance of 600 feet at the railroad crossing over the cutoff (economic study of railroad crossing requested by Office of Management and Budget resulted in construction of a single track vertical lift bridge in lieu of a high-level fixed railroad bridge); high-level fixed highway bridges over canal at Reedy Point, St. Georges, Summit, and Chesapeake City; a bascule drawbridge across Delaware City Branch Channel; extension of entrance jetties at Reedy Point; and anchorage in Elk River, 35 feet deep and 1,200 feet wide, with an average length of 3,700 feet; enlargement of anchorage and mooring basin in Back Creek to afford an area about 400 feet wide, 1000 feet long, and 12 feet deep; dredging Delaware City Branch Channel to 8 feet deep and 50 feet wide, and deepening existing basin to same depth; revetment of banks of canal as required between Delaware and Elk Rivers, and on banks of Delaware City Branch Channel east of Fifth Street Bridge; and construction of bulkheads. Total of section included in project, excluding Delaware City Branch Channel, which is about 2 miles long, is about 46 miles. All depths refer to plane of low water in Delaware River. Extreme tidal range is from 6.3 feet above mean high water to 3 feet below mean low water.

High-level fixed highway bridges were completed at St. Georges (4-lane) in 1942; at Chesapeake City (2-lane) in 1949; at Summit (4-lane) in 1960; and at Reedy Point (2-lane) in 1969. Relocation of Penn Central Railroad

bridge was completed December 21, 1965. Enlargement to 35 feet deep and 450 feet wide was completed in the third quarter of FY 1975 with the exception of the anchorage at Elk River. Removing the old Penn Central railroad bridge was completed on January 21, 1972. Deepening of the Delaware City Branch Channel from 6 to 8 feet from a point 400 feet east of Fifth Street Bridge to its junction with the canal has been deferred for study.

Original cost of canal including purchase was \$10,709,755; estimated cost of new work for modifications of 1935 and 1954 are federal cost \$166,000,000 (October 1992). This portion is deauthorized. Major Rehabilitation of St. Georges and Summit Bridges was completed in fiscal year 1991 at an approximate federal cost of \$20,868,000 (90 price level). Portion of project comprising completion of Delaware City Branch Channel from a point 400 feet east of Fifth Street Bridge to its junction with canal is to be restudied and excluded from foregoing estimate. (See Table 3-B at end of chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2002.)

Local cooperation: River and Harbor Act of 1954 provided that local interests furnish lands and rights-of-way required for bridges. Assurances accepted and approved February 16, 1955. Requirements for Summit and Reedy Point Bridges have been met.

Terminal facilities: Ample mooring facilities at eastern and western ends of canal and bulkheads at Delaware City and St. Georges were constructed by the United States. A small-boat harbor was provided and a wharf constructed at Chesapeake City. Facilities are considered adequate for existing commerce.

Operations during fiscal year: Maintenance: Work included general maintenance of traffic control television, dispatch service, operation of traffic, administration building, bridges, roadways, grounds, museum, auxiliary works, and periodic bridge inspection. Also included in work was maintenance night lighting, lease of equipment, surveys, environmental monitoring, electrical maintenance, property management, plans and specifications, engineering and design, and supervision and administration. There was also work on the Disposal Material Management Plan, Geographical Information System, Environmental Review Guide for Operations assessment, mosquito control, monitoring data,

monitoring stabilization banks, and miscellaneous repairs. There was also maintenance dredging by Great Lakes Dredge and Dock Company removing a total of 142,682 cubic yards of material at a total cost of \$1,939,000.

8. INLAND WATERWAY, REHOBOTH BAY TO DELAWARE BAY, DE

Location: A tidal canal in southeasterly part of Sussex County, DE. It extends 12 miles northward from Rehoboth Bay through high land west of town of Rehoboth to Gordon Lake; thence down Lewes River to its junction with Broadkill River near its mouth. An entrance to the waterway from Delaware Bay is about 4 miles above Cape Henlopen. (See U.S. Coast and Geodetic Survey Charts 379, 1218, and 1219.)

Previous project: A canal along a slightly different route formed a part of projected waterway from Chincoteague Bay, Va. to Delaware Bay, begun in 1886 and abandoned in 1905.

Existing project: This provides for an entrance channel near Lewes 10 feet deep and 200 feet wide protected by two parallel jetties 500 feet apart; thence a channel 10 feet deep and 100 feet wide to South Street Bridge at Lewes, and a basin of the same depth 1,200 feet long and up to 375 feet in width at the latter point; thence a channel 6 feet deep and 100 feet wide (40 feet wide through Deep Cut near Rehoboth Bay) to Rehoboth Bay; a channel 6 feet deep and 100 feet wide from the entrance to Broadkill River; two parallel rubble jetties 725 feet long at the Rehoboth Bay entrance; and the construction of the one highway bridge and one railroad Bridge to Rehoboth. The total length of the section included in the project is about 12 miles.

The extension of the jetties at the Delaware Bay entrance is considered to be inactive and is excluded from the foregoing cost. The cost of the portion was last revised in 1960 and was estimated to be \$816,000. Existing project is about 70 percent complete. For details on completed work see page 241 of Annual Report for 1963. Work remaining, extension of existing jetties at Delaware Bay entrance, is considered inactive. The Sheet Pile Jetty at the Delaware Bay entrance was removed during Fiscal Year 1987. (See Table 3-B at end of chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2002.)

Local cooperation: Complied with except local interest must furnish suitable terminal facilities and necessary spoil-disposal areas.

Terminal facilities: See page 228, Annual Report 1962.

Operations during fiscal year: Maintenance: Work included a real estate inspection of all government outgrants for use of Federal property as well as all lands the government holds an interest in, be it by fee or easement right, from Savannah Ave. Bridge to Rehoboth Bay. Also, shoals from within the projects entrance channel (Roosevelt Inlet) to the Savannah Ave. Bridge were removed under a \$1,186,231 continuing contract performed by Cottrell Construction Corporation between 25 January 2002 and 15 February 2002. 45,736 cubic yards were removed by this work.

9. MANASQUAN RIVER, NJ

Location: This small stream flows in eastern part of New Jersey, rises near Freehold, flows easterly and empties into the Atlantic Ocean, about 26 miles south of Sandy Hook. (See U.S. Coast and Geodetic Survey Chart No. 795).

Previous projects: For details see Annual Report for 1909, page 186, and Annual Report for 1938, page 269.

Existing project: A channel 14 feet deep and 250 feet wide, protected by jetties and other works, extending from the Atlantic Ocean to inner end of north jetty, thence 12 feet deep and 300 feet wide to within 700 feet of New York and Long Branch Railroad bridge, thence of same depth and narrowing to 100 feet wide to within 300 feet of bridge; for a widening on northerly side of channel of 200 feet for 3,150 feet and 8 feet deep on south side of channel and for a 27.5-acre anchorage to 12 feet deep about 0.5 miles west of Route 35 highway bridge. Section included in project is about 1.5 miles long. Mean tidal range is 3.7 feet at inner end of inlet and 4 feet at ocean end; mean range of spring tides, 4.4 and 4.8 feet, respectively, irregular fluctuations due to wind and barometric pressure vary from 2.7 feet below to 7.5 feet above mean low water at inner end of inlet. Project, excluding 10-and 12-foot anchorages, cost \$518,243. Estimated cost (1958) for 10 and 12-foot anchorages portion of project considered inactive is \$504,000. Restoration of bulkheads completed 16 August 1965 at a cost of \$117,807. Existing project was completed in June 1963. Dredging 19-acre anchorage south of channel and 27.5-acre anchorage west of highway bridge is in the inactive category. (See Table 3-B at end of chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2002.)

Local cooperation: River and Harbor Act of 1945

provides that local interests must furnish lands and rights-of-way for construction and future maintenance and hold the United States free from damages. Assurances to date have been complied with.

Terminal facilities: Five landings with a total wharfage of 700 feet used by commercial fishermen, and 7 landings and boat basins for pleasure craft. Existing facilities are considered adequate for present requirements.

Operations during fiscal year: Maintenance: Emergency channel dredging by the U.S. Government hopper dredge Currituck removed 15,000 cubic yards of material at a cost of \$80,000.

10. MISPELLION RIVER, DE

Location: Rises in Kent County and Sussex Counties, DE, flows northeasterly 15 miles along the boundary line between the two counties and empties into Delaware Bay about 16 miles above Cape Henlopen. (See Coast and geodetic Survey Chart 1218.)

Previous project: For details see page 1786, Annual Report for 1915, page 448 of Annual Report for 1918, and page 327 of Annual Report for 1938.

Existing project: Project is about 31 percent complete. Four cutoffs for 6-foot channel were completed in 1923; 6-foot channel from Delaware Bay to Milford in 1924; and jetties at the mouth in 1939. Work remaining is dredging channel to 9-foot depth, 80 feet wide in Delaware Bay to the mouth, thence 60 feet wide to Milford with the provision of three cutoffs to eliminate bends, and a turning basin at Milford. Controlling depths at mean low water, in October 1964 from Delaware Bay to mouth 7.1 feet, and thence to fixed highway bridge at Report 1957, (See Table 3-B at end of chapter for Acts authorizing existing project. See Table 3-A end of chapter for total costs for existing project to Sept. 30, 2002.)

Local cooperation: Assurances required by 1954 River and Harbor Act has not been furnished. For details see page 243, Annual Report for 1957. Prior requirements fully complied with.

Terminal facilities: For details see page 244, Annual Report for 1957.

Operations during fiscal year: Maintenance: Condition survey of stone revetment. Cottrell Construction Corporation performed maintenance

dredging within the entrance channel during the period 20 September 2002 to 29 September 2002. A total of 14,052 cubic yards of material were removed at this time. The dredged material was placed on Conch Bar Island in a beneficial manner to nourish the former breach area immediately upstream of the north jetty.

11. MURDERKILL RIVER, DE

Location: Rises in Kent County, DE, flows northeasterly 19 miles through county, and empties into Delaware Bay about 25 miles above Cape Henlopen. (See U.S. Coast and Geodetic Survey Chart no. 1218.)

Existing project: Provides for a channel 7 feet deep at mean low water, 150 feet wide in Delaware Bay to mouth, and thence 80 feet wide to Frederica, 7.5 miles above mouth. Total length of section included in project is about 8.5 miles. Extreme tidal range is from about 1 foot below mean low water to about 2 feet above mean high water.

Estimated cost for new work revised in 1954 is \$38,000. Portion comprising widening channel to project width throughout its length is to be restudied and excluded from foregoing cost estimate. Estimated cost of this portion last revised in 1954 was \$86,000. Project was authorized by River and Harbor Act of July 13, 1892 (H. Ex. Doc. 21, 52d Cong., 1st Sess. See page 981 Annual Report for 1892). Latest published map is in House Document 1058, 62d Congress 3rd Session.

Existing project about 30 percent complete, including revision to be restudied. Channel 7 feet deep and 60 feet wide was completed in 1911. Work remaining is widening the channel to project width. (See Table 3-B at end of chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2002.)

Local cooperation: None required.

Terminal facilities: There are a number of light timber wharves on both sides of river near mouth and two wharves at Frederica, all privately owned. Facilities are considered adequate for existing commerce.

Operations during fiscal year: Maintenance: A continuing contract to remove selected shoals within the Murderkill River Entrance channel commenced on 13 September 2002 and was completed on 19 September 2002 by Cottrell Construction Corporation. A total of 26,723 cubic yards of material were removed by this work.

12. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Navigation activities pursuant to Section 107, Public Law 86-645.

Name of Project	Cost to 30 Sept. 2002

Feasibility

Wilmington Harbor, DE	\$ 4,628

Construction

Delaware River Phila-Trenton, Fairless Hills	\$740,438

13. NEW JERSEY INTRACOASTAL WATERWAY

Location: A sea level inland water route approximately parallel with New Jersey coast, extends from Atlantic Ocean at Manasquan Inlet, about 26 miles south of Sandy Hook, NJ to Delaware Bay about 3 miles above Cape May Point. Waterway extends through inlet and up Manasquan River about 2 miles; thence by Point Pleasant Canal through high ground for 2 miles to head of Barnegat Bay. It then passes through a series of bays, lagoons, and thoroughfares along New Jersey coast to Cape May Harbor; thence across Cape May County to Delaware Bay through a land cut by way of New England Creek basin. (See U.S. COAST and Geodetic Survey Charts, 234, 795, 825, 826, 827, 1216, 1217, 1218, and 1219.)

Existing project: This provides for a channel 12 feet deep at mean low water and generally 100 feet wide, extending from the Atlantic Ocean at Manasquan Inlet, NJ to Delaware Bay above Cape May, NJ, by the further improvement of Manasquan River and Inlet, NJ, and the present New Jersey Intracoastal Waterway, and by the construction of a canal of similar dimensions from Cape May Harbor to Delaware Bay via the New England Creek basin, with adequate jetties at the Delaware Bay entrance.

The total length of the project is about 117 miles. The unconstructed portion of the project, deepening the channel from 6 feet to 12 feet from the Atlantic Ocean at Manasquan Inlet to Cape May Harbor, was deauthorized on 1 January 1990, by PL 99-662. Normal tide range in sections of the waterway remote from inlets is 0.5 foot.

Estimated cost for new work is \$71,549 (July 1969),

exclusive of \$1,824,940 Navy Department funds and \$99,000 contributed by local interests. Portion of project extending from Manasquan River to Cape May Harbor is to be restudied and excluded from new work costs estimate. Estimated cost of this portion is \$6,470,000 (July 1954). Existing project was adopted by 1945 River and Harbor Act (H. Doc 133, 76th Cong., 1st Sess.) Latest published map is in project document. River and Harbor Act of 1946 (Public Law 525, 79th Cong., 2nd Sess., as extended by Public Law 240, 82d Cong.), authorized use for a period not to exceed 6 years, of funds from appropriations heretofore or hereafter made for maintenance and improvement of rivers and harbors, for maintenance of canal from Cape May Harbor to Delaware Bay constructed as an emergency wartime project with Navy Department funds, including cost of maintaining temporary railroad and seashore highway bridges over canal.

A canal 12 feet deep and 100 feet wide from Cape May Harbor to Delaware Bay was completed in 1942 as well as two parallel stone jetties at Delaware Bay entrances and a temporary highway and a railroad bridge in 1944, all with Navy Department funds. The project between Ottens Harbor and Richardson Channel and from that point to Cape May are being maintained to 10 feet and 12 feet, respectively, since they were originally dredged to these depths by the State. Section 860 of the Water Resources Development Act of 1986 authorized, for preconstruction engineering and design, a 15 foot depth in the Vicinity of Cape May Harbor, titled as Cold Spring Inlet. (See Table 3-B at end of chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2002.)

Local cooperation: The project is subject to the conditions that the State of New Jersey cede to the United States all right, title, and interest that it has acquired to lands, easements, rights-of-way, and structures other than bridges for the Bayhead-Manasquan Canal; that the State of New Jersey furnish, free of cost to the United States, all lands, easements, rights-of-way, and disposal areas required for construction of the Cape May Canal and for improvement of the proposed waterway and for their subsequent maintenance; that local interests provide, maintain, and operate suitable bridges over the waterway; that the State of New Jersey donate to the United States the navigation aids in use on the present New Jersey Intracoastal Waterway; and that the State of New Jersey hold and save the United States and its agents free from any claims for damages resulting from the work of improvement. Compliance with these conditions was completed January 15, 1954, except that local interests are required to furnish disposal areas for the construction

and the subsequent maintenance of the proposed improvements.

Terminal facilities: See Annual Report for 1962.

Operations during fiscal year: Maintenance: Work included general maintenance, surveys, and gabion repairs along the Cape May Canal. Maintenance dredging by Barnegat Bay Dredging Company removed 140,000 cubic yards of material at a total cost of \$815,000. Real Estate inspections were also conducted.

15. REGIONAL SEDIMENT MANAGEMENT PILOT PROGRAM

Location: Cape May Inlet, Cape May County, New Jersey.

Existing project: The beaches immediately east and west of Cape May Inlet experience problems related, respectively, to an excess and a deficit of sediment supply. Because the Cape May beachfill is located just downdrift of the Cape May Inlet jetties (completed in 1911), sediment transport from the north into the area is interrupted and erosion has been the predominate historical trend. Between 1943 and 1977, accretion as high as 1,000 feet occurred along the ocean frontage just south of Hereford Inlet. Prior investigations indicate that sand appears to be bypassing the inlet on the ebb-tidal shoal.

A Federal beach erosion control project was initiated in 1990 for the US Coast Guard Base and the City of Cape May, immediately west of Cape May Inlet. Sand for construction and subsequent nourishment of this project has been obtained from an offshore borrow site, but that site has an insufficient reserve of material for future nourishment needs. The District is investigating

alternative sources for the approximate 200,000 cubic yards a year demand at Cape May City and the USCG Base. Contrasting the erosion on the downdrift (southwest) side of Cape May Inlet is the accumulation of sediment on the updrift beaches of Wildwood Crest and Wildwood City. The excess of sediment supply there has resulted in at least two problems: storm water outfalls that do not drain because of beach width accretion, and excessive beach widths that make recreational beach user access to the "shoreline" problematic.

The District is presently evaluating a range of options for removing sediment from the updrift beaches for use in nourishing the beach downdrift of Cape May Inlet. Two essentially different concepts are being considered for remedy of the sediment excess/deficit problems on the updrift/downdrift shorelines adjacent to Cape May Inlet. The first would involve a more-or-less continuous (low) level of sand bypassing using a fixed bypass plant across Cape May Inlet. Excess sand would be obtained for Wildwood and Wildwood Crest by either mechanical pan scraping or small hydraulic plant and stockpiled at the bypass plant location. The second approach considered for bypassing sediment across Cape May Inlet involves periodic (i.e., once per year, or less frequently) dredging from the east jetty fillet by means of a conventional floating hydraulic pipeline dredge. In this plan, sediment would be bypassed across the inlet infrequently at large volume rates, as compared to the "continuous," low-volume transport rate associated with the first plan (above.) This alternative would still require a method of obtaining sand from the Wildwood and Wildwood Crest beaches, such as the mobile pan scraper concept. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2002.)

Local cooperation: Local and Federal interests must furnish lands and rights-of-way for construction and future maintenance and hold the United States free from damages. Assurances to date have not been obtained.

Operations during fiscal year: Maintenance: Coordination with Environmental stakeholders, Engineer Research and Development Center, and Corps of Engineers Waterways Experiment Station. Database framework was developed and development of a rapidly deployed beach surveying system was completed.

16. WILMINGTON HARBOR, DE

Location: Formed by Christina River, which rises in New Castle County, DE, flows northeasterly 16 miles, passing through the City of Wilmington, DE, and empties into Delaware River about 29 miles below Philadelphia,

PA (See U.S. Coast and Geodetic Survey Chart 294.)

Previous project: For details see page 1785 of Annual Report for 1915 and page 308 of Annual Report for 1938.

Existing project: This provides for a channel 38 feet deep and 400 feet wide from west edge of Delaware River ship channel to Lobdell Canal, a distance of about 1.2 miles; thence 21 feet deep and 250 feet wide for the distance of .8 mile to the mouth of Brandywine River; thence the same depth and 200 feet wide for a distance of about 2.2 miles to a point approximately 4.2 miles from the Delaware River ship channel; thence decreasing to a depth of 10 feet in a distance of 750 feet to Penn Central Railroad bridge No. 4; and thence 7 feet deep and 100 feet wide for a distance of about 5.6 miles to Newport, DE, approximately 9.9 miles above Delaware River ship channel, including a turning basin 38 feet deep opposite the Wilmington Marine terminal and extending upstream from the mouth to Lobdell Canal, 320 feet wide, 2,900 feet long on the north side of the channel and decreasing to a length of 2,000 feet on the north side of the basin. It also provides for the removal of about 1,200 feet of the outer end of a stone-filled, pile-and-timber crib jetty constructed 2,150 feet long on the north side of the entrance; for a steel sheet-pile jetty 2,300 feet long, with 120-foot inshore wing, on the south side of the entrance, and for a V-shaped stone-filled pile-and-timber jetty at the mouth of Brandywine River 430 feet along the north side of Brandywine and 260 feet long on the Christina. Depths refer to the plane of mean low water. The extreme tidal range, due to prolonged heavy winds, is about 13 feet. Existing project was completed in 1962. (For details see page 222, Annual Report 1962). Authority from Section 107 of the River and Harbor Act of July 1960 provide for channel and turning basin deepening from 35 to 38 feet and the turning basin widened from 200 to 320 feet. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2002.)

Local cooperation: Fully complied with.

Terminal facilities: There are 18 piers, wharves, and docks within limits of the improvement. Facilities considered adequate for existing commerce. (For further details see Port Series No.8, revised 1966-Corps of Engineers.)

Operations during fiscal year: Maintenance: Routine maintenance of disposal areas, channel examination surveys, and contract administration. Also, a contract for maintenance dredging of both the 35-foot and 38-foot project channels was completed by Norfolk

Dredging Company. As a result of this work, 332,668 cubic yards of material were removed at a cost of \$689,122. Contract work to raise dikes at Wilmington North is continuing.

Shore Protection:

17. BRIGANTINE INLET TO GREAT EGG HARBOR INLET (ABSECON ISLAND, NJ)

Location: This project is located along the Atlantic Coast of New Jersey in Atlantic County, approximately 50 miles east of Philadelphia, Pennsylvania. It is 8.1 miles in length, extending from Absecon Inlet to Great Egg Harbor Inlet.

Existing project: The project consists of providing 7.1 million cubic yards of initial beachfill, with subsequent periodic nourishment of 1.7 million cubic yards every three years, for a 200-foot-wide berm at elevation 8.5 feet above mean low water and a dune to elevation 16 feet above mean low water for Atlantic City, and a 100-foot-wide berm at elevation 8.5 feet above mean low water and a dune to 14 feet above mean low water for Ventnor, Margate and Longport along 8.1 miles of shoreline. The plan also includes 0.3 miles of bulkhead construction along the Absecon Inlet frontage of Atlantic City. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total cost for existing project to Sept. 30, 2002.)

Local Cooperation: The existing authority for this project is Section 101 (b) (13) of WRDA 1996. Federal participation in the proposed project is recommended and contingent on the local sponsor signing the Project Cooperation Agreement that identifies the required items of cooperation.

Operations during fiscal year: New work: Work included real estate studies, engineering and design and negotiation of the Project Cooperation Agreement with the local sponsor.

18. CAPE MAY INLET TO LOWER TWP., NJ

Location: The project is located in Cape May County and extends along the beach front from the western side of Cape May Inlet to the boundary of Lower Township, and Cape May City.

Existing project: The plan, as presented in HD 94-641, was authorized for the Phase I Design Memorandum Stage of Advance Engineering and Design by Section 101a of the Water Resources Development Act of 1976, proposes the following features: breakwater on the updrift side of Cape May Inlet; beachfill from Cape May Inlet to Cape May Point; provision of a dune with sand fence and grass from Cape May Inlet to Wilmington Avenue; construction of two groins in Cape May City and seven groins in Lower Township; inclusion of all groins comprising the existing project; and periodic nourishment of the beaches and maintenance of the dune and dikes.

The Phase I GDM, completed in August 1980 and approved by the Chief of Engineers in December 1981, determined that only beach erosion control measures in Cape May City are warranted. The plan proposed in that document consists of modifying the existing navigation project for Cape May Inlet to provide; a weir-breakwater at Cape May Inlet with construction being deferred pending demonstration of need; two new groins at Trenton and Baltimore Avenues in Cape May City; placement of beachfill between Cape May Inlet and the terminal groin at Third Avenue in Cape May City; maintenance of two new groins and existing groins in Cape May; periodic beach maintenance with material obtained from deposition basin on the northeast side of Cape May Inlet; and institution of a beach monitoring program in Lower Township area. Work for the initial beachfill was accomplished as follows; USGS feeder beach fiscal year 1989, Cape May City groin fiscal year 1990, and Beachfill Cape May City fiscal year 1991. Project estimate cost (October 2001) is Federal, \$142,300,000, which includes \$54,900,000 of Coast Guard contributions. Non-Federal costs are \$9,700,000.

The existing authority is for Phase I studies as provided by Section 101(a) of the Water Resources Development Act of 1976 in accordance with the provision of House Document 94-641. Continuation of planning and engineering for this proposed project was initiated in October 1977. The Phase I GDM was completed in August 1980 and approved by the Chief of Engineers in December 1981. Phase II AE&D studies were completed in July 1983. The project was authorized for separable elements under Section 501(a) of the Water Resources Development Act of 1986, PL 99-662. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total cost for existing project to Sept. 30, 2002.)

Local cooperation: The State of New Jersey furnished a letter of intent on 6 May 1981 regarding their willingness to comply with the above items of local

cooperation. In addition, a draft Section 221 local cooperation agreement has been coordinated with letter of intent on May 31, 1983 regarding compliance with the items of local cooperation.

Operations during fiscal year: New Work: Work included plans and specifications for beachfill, supervision and administration, hydraulic studies, engineering and design, surveys of the beach, aerial photography, monitoring, sediment sampling, and periodic nourishment.

19. DELAWARE BAY COASTLINE, ROOSEVELT INLET/LEWES BEACH, DE

Location: The Roosevelt Inlet-Lewes Beach project area is located in Sussex County in Southern Delaware at the entrance to the Delaware Bay. Sussex County is one of three counties in the State of Delaware. It is bordered on the east by the Atlantic Ocean, on the south and west by Maryland and on the north by Kent County. The project area begins at Roosevelt Inlet and extends southeast along Lewes Beach for approximately 1,400 feet.

Existing project: The project consists of providing initial beachfill with subsequent periodic nourishment. The project for the purposes of navigation mitigation and hurricane and storm damage reduction provides for a 25-foot wide berm at an elevation of +8.0 feet North American Vertical Datum (NAVD), and a dune at an elevation of +14.0 feet NAVD over a total project length of 1,400 feet. The total project width of the berm and dune, including side slopes, is 100 feet. The project includes dune grass, dune fencing and suitable advance beachfill and periodic nourishment every six years over the 50-year project life to ensure the integrity of the design. The project also provides for reconstruction of the south jetty at Roosevelt Inlet. The south jetty will be parallel to and will extend into the bay an equal distance as the north jetty on the opposite side of the inlet. The south jetty will have a top elevation of +5.1 feet NAVD and a bottom elevation of -6.0 feet NAVD. The top width of the jetty will be 12 feet and it will have 2H:1V side slopes. Estimated cost of project (October 2001) is \$41,500,000 of which \$32,100,000 is Federal costs and \$9,400,000 is required non-Federal costs. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total cost for existing project to September 30, 2002.)

Local Cooperation: Federal participation in the proposed project is recommended. A Project Cooperation

Agreement (PCA) with the local sponsor that identifies the required items of local cooperation was signed in November 2002.

Operations during fiscal year: New Work: Executed Project Cooperation Agreement (PCA) with non-Federal sponsor, preconstruction engineering and design, real estate acquisition, and award of the initial construction contract.

20. DELAWARE COAST FROM CAPE HENLOPEN TO FENWICK ISLAND, DE (DEWEY BEACH TO REHOBOTH BEACH, DE)

Location: The Rehoboth Beach to Dewey Beach project area stretches for approximately 2 miles along the northern part of the Atlantic Ocean coast of Delaware in Sussex County, Delaware. From north to south the project area includes the Town of Rehoboth Beach, the unincorporated region in front of Silver Lake (under Sussex County jurisdiction), and the Town of Dewey Beach. (See NOAA Nautical Chart Number 12214).

Existing project: The project consists of providing initial beachfill with subsequent periodic nourishment. The proposed plan consists of one continuous project, from the northern end of Rehoboth Beach to the southern border of Dewey Beach, a distance of 13,500 linear feet. Along Rehoboth Beach, the plan provides for a 125-foot wide beach berm at elevation +8.0 feet National Geodetic Vertical Datum (NGVD) and a dune at elevation +14.0 feet NGVD. At Dewey Beach, the project would transition to a 150-foot wide beach berm at elevation +8.0 feet NGVD and a dune at elevation +14.0 feet NGVD. The plan requires the initial placement of 1,354,000 cubic yards of material and subsequent periodic nourishment of approximately 277,000 cubic yards of material every 3 years throughout the 50-year project life to ensure the integrity of the design. The material for the initial construction and subsequent periodic nourishment will be taken from an offshore borrow area. The plan also includes the extension of stormwater outfalls at Rehoboth Beach. Appurtenant project features such as dune grass planting, sand dune fencing, vehicle access ramps, and dune walkovers are included with the plan as well. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total cost for existing project to September 30, 2002.)

Local Cooperation: Federal participation in the proposed project is recommended and contingent on the local sponsor signing the Project Cooperation Agreement (PCA) that identifies the required items of local

cooperation.

Operations during fiscal year: New Work: Obtained environmental permits, executed Project Cooperation Agreement (PCA) with non-Federal sponsor, preconstruction engineering and design and real estate acquisition.

21. DELAWARE COAST PROTECTION, DE

Location: The project is located in Sussex County, Delaware, on the Atlantic Ocean and starts immediately south of Delaware Bay extending in a southerly direction a distance of 24.5 miles to Fenwick Island on the Delaware-Maryland border.

Previous Project: The previous project, adopted as HD 85-216 in 1958 and modified by P.L. 87-874 in 1962, provided for Federal participation in the cost of restoration and subsequent periodic nourishment, and the initial periodic nourishment was completed in 1957 by local interests. The second increment of beach replenishment by local interest was completed in 1963.

Existing project: Provides a sand bypass system and periodic nourishment until 2021. (For details, see S. Doc. 90, 90th Cong. 2nd Sess.) Estimated cost of project (October 2001) is \$35,400,000 of which \$16,300,000 is federal costs and \$19,100,000 is required non-Federal costs. The construction of the feeder beach north of Indian River Inlet was completed in 1973 and nourished in 1978, and 1984. Section 869 of the Water Resources Development Act of 1986 deauthorized the unscheduled portion of the project. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2002.)

Local cooperation: Assurances of local cooperation were provided by the State of Delaware, January 13, 1981.

Operations during fiscal year: New work: Work included supervision and administration, engineering and design, monitoring, and sand bypassing.

22. GREAT EGG HARBOR INLET & PECK BEACH, NJ

Location: The project is located in Cape May and Atlantic Counties, New Jersey. Great Egg Harbor Inlet, an unimproved inlet, is about 1.1 miles wide at its narrowest point and provides a tidal connection between the Atlantic Ocean, Great Egg Harbor Bay, the New

Jersey Intercoastal Waterway, and Great Egg Harbor River. Peck Beach is occupied in its entirety by the City of Ocean City and extends from Great Egg Harbor Inlet southward to Corson Inlet. The ocean frontage is about eight miles in length.

Existing project: The project consists of providing initial beachfill, with subsequent periodic nourishment, with a minimum berm width of 100 feet at an elevation of 8 feet above mean low water. The beachfill extends from Surf Road southwest to 34th Street with a 1000 foot taper south of 34th Street. This plan required the initial placement of 6,200,000 cubic yards of material and subsequent periodic nourishment of approximately 1,100,000 cubic yards every three years. The material for the initial construction, and periodic nourishment is being taken from the ebb shoal area located approximately 5,000 feet offshore of the Great Egg Harbor Inlet. Additionally, the construction of the project required the extension of 38 storm drainpipes. All work is programmed. Estimated cost for new work (October 2001) Federal share is \$438,000,000 and non-Federal is \$236,000,000. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total cost for existing project to Sept. 30, 2002.)

Local Cooperation: The Local Cooperation Agreement was executed in September 1991 with the State of New Jersey Department of Environmental Protection Agency.

Operations during fiscal year: New work: Work included hydraulic studies, engineering and design, supervision and administration, surveys of the beach, aerial photography, monitoring, and sediment sampling.

23. LOWER CAPE MAY MEADOWS, NJ

Location: The project area includes Lower Cape May Meadows, which consists of Cape May Point State Park and the Cape May Migratory Bird Refuge, and the Borough of Cape May Point. The Lower Cape May Meadows area consists of approximately 343 acres and extends through the Borough of Cape May Point, totaling about 2 miles along the southern Atlantic coast of New Jersey.

Existing project: The plan for the purposes of navigation mitigation, ecosystem restoration, and hurricane and storm damage reduction consists of a dune/berm 20 feet wide, extending for a total length of 10,050 feet; planting of 18 acres of dune vegetation; seaward restoration of 35 acres of emergent wetland; elimination of 95 acres of the nuisance plant Phragmites australis; planting of 105 acres of wetland vegetation; creation of drainage ditches; installation of two weir-flow control structures; creation of six fish reservoirs; and construction of elements to create 25 acres of tidal marsh. The project also includes 650,000 cubic yards of periodic nourishment every 4 years over the 50-year project life, and monitoring and adaptive management over a 5-year period for the Lower Cape May Meadows freshwater wetlands restoration element. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total cost for existing project to Sept. 30, 2002.)

Local Cooperation: Federal participation in the proposed project is recommended and contingent on the local sponsor signing the Project Cooperation Agreement (PCA) that identifies the required items of local cooperation.

Operations during fiscal year: New Work: Project Cooperation Agreement (PCA) coordination with non-Federal sponsor along with engineering and design.

24. TOWNSEND INLET TO CAPE MAY INLET, NJ

Location: This project is located along the Atlantic Coast of New Jersey in Atlantic County, approximately 50 miles east of Philadelphia, Pennsylvania. The project area is located along the Atlantic Coast of New Jersey, extending approximately 15 miles from Townsends Inlet to Cape May Inlet, including the communities of Avalon, Stone Harbor, and North Wildwood.

Existing project: The recommended plan includes interim shoreline protection projects for Avalon, Stone Harbor and North Wildwood, New Jersey, and an environmental restoration project for Stone Harbor Point, as follows: (1) 4.3 miles of beachfill with a berm width of 150-foot at elevation 8.5 feet NGVD and dune height of +16-feet along with periodic nourishment for Avalon and Stone Harbor; The beachfill portion of the project consists of providing approximately 4 million cubic yards of initial beachfill, with subsequent periodic nourishment of 750,000 cubic yards every three years. (2) 2.2 miles of revetment construction along Townsends and Hereford Inlets frontages; (3) and ecosystem restoration of about 107 acres of natural barrier island habitat at Stone Harbor

Point including beachfill, dune construction, and the planting of bayberry and red cedar rousting habitat. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total cost for existing project to Sept. 30, 2002.)

Local cooperation: The existing authority for this project is WRDA 1999, Section 101 (a) (26) that authorizes the construction of the Townsends Inlet to Cape May Inlet, NJ shore protection project.

Operations during fiscal year: New work: The work included finalizing real estate acquisitions, environmental coordination, beachfill plans and specifications, and bid documents. The Project Cooperation Agreement with the non-Federal sponsor was executed. The beachfill portion of the project was awarded and construction was initiated.

Flood Control:

25. BELTZVILLE LAKE, PA

Location: Damsite is on Pohopoco Creek about 4.5 miles upstream from its confluence with Lehigh River and 4 miles east of Lehigh, PA (See Geological Survey Quadrangle Map for Lehigh, PA-1960.)

Existing project: This is a multiple-purpose development project providing water supply, flood control, and recreation. Plan of improvement provides for an earth and rock fill dam 4,200 feet long rising 170 feet above creekbed; a spillway around the north end of dam; and gate control outlet works discharging through a conduit on rock along right abutment. The lake, a unit of comprehensive plan for flood control and other purposes of Delaware River Basin, has a reservoir capacity of 68,250 acre-feet at spillway crest level with 1,390 acre-feet of inactive storage, 39,830 acre-feet for water supply and recreation, and 27,030 acre-feet for flood control. The cost of project was \$22,931,400 including \$6,100,000 required non-Federal reimbursement for costs allocated to water supply storage during life of project. The construction of the dam and appurtenances was completed in 1971. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2002.)

Local cooperation: Project was approved subject to certain requirements of cooperation by local interests as defined in approved House Document. Resolution of Delaware River Basin Commission providing assurances of repayment of water supply and pollution control costs

was accepted June 7, 1965. A contract for repayment of water supply costs was signed October 16, 1966.

Operations during fiscal year: Maintenance: Normal operation and maintenance of the project continued.

26. BLUE MARSH LAKE, PA

Location: Dam site is on Tulpehocken Creek about 1.5 miles upstream from its confluence with Plum Creek and about 6 miles northwest of Reading, PA (See Geological Survey Quadrangle Sheet, Bernville, PA)

Existing project: This is a multiple-purpose development project providing water supply, flood control, and recreation. Construction started in 1974 and was completed in 1980. The dam is 1,775 feet long and rises 98 feet above creekbed, with spillway about 1,500 feet south of dam, and gate-controlled outlet works discharging through a conduit on rock along right abutment. The lake, a unit of comprehensive plan for flood control and other purposes of Delaware River Basin, has a capacity of 50,010 acre-feet at spillway crest level, with 3,000 acre-feet of inactive storage, 14,620 acre-feet for water supply and recreation, and 32,390 acre-feet for flood control. (For details see H.Doc 533 87th Cong., 2nd Sess.) Costs of project \$63,163,791. Existing project was authorized by 1962 Flood Control Act. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2002.) (H. Doc. 533, 87th Cong., 2d Sess., contains latest published maps.)

Local cooperation: Project was approved subject to certain requirements by local interests, as prescribed in House Document cited above. Delaware River Basin Commission on December 29, 1964, adopted a preliminary resolution providing for repayment of water supply costs.

Operations during fiscal year: Maintenance: Normal operation and maintenance of the project continued.

27. EMERGENCY BANK PROTECTION

Emergency Bank Protection Section 14, Public Law 79-526.

Mill Creek, St. Clair, Schuylkill	\$25,393

County, PA
 Pennypack Lower Moreland, PA \$24,135
 Port Providence, Montgomery City, PA \$ 3,863
 Wissahickon, PA \$27,899

Emergency flood control activities-repair, flood fighting, and rescue work (Public Law 99, 84th Congress, and antecedent legislation).

Fiscal year costs were \$262,341 for disaster preparedness.

29. FRANCIS E. WALTER DAM, PA

Location: Reservoir is in northeastern Pennsylvania on Lehigh River between White Haven and Stoddartsville. Dam is about 0.4 mile below mouth of Bear Creek, about 60 miles above confluence of Lehigh River and Delaware River at Easton, PA (See Geological Survey Quadrangle Sheet, Stoddartsville, PA).

Existing project: Plan of improvement authorized by 1946 Flood Control Act (H. Doc. 587, 79th Cong., 2d Sess.) provided for a single-purpose flood control reservoir. Modification of project, authorized by 1962 Flood Control Act (H. Doc. 522, 87th Cong., 2d Sess.), provides for a multiple-purpose development for water supply and recreation in addition to present single-purpose flood control project. Plan of improvement requires altering spillway, increasing height of dam, constructing a new intake tower, extending outlet tunnel by addition of a concrete conduit, and constructing new dikes and raising existing dikes. Modified dam will rise 264 feet above riverbed and be 3,500 feet long. Reservoir modification, a unit of comprehensive plan for flood control and other purposes of Delaware River Basin, will have a reservoir capacity of 181,000 acre-feet spillway crest level with 3,000 acre-feet of inactive storage, 70,000 acre-feet for water supply and recreation and 108,000 acre-feet for flood control. Total cost is \$186,000,000, estimated Federal cost of new work (October 1993) is \$30,000,000 including \$156,000,000 required non-Federal reimbursement for costs allocated to water supply storage during life of project after use of this storage is initiated. Project as authorized under the 1946 Flood Control Act was completed June 1961. Settlement for lands was completed October 1962. The advance engineering and design for the modified project is completed. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2002.)

Local cooperation: None required under 1946 Flood Control Act. Under 1962 Flood Control Act, project was

approved subject to certain requirements by local interests, as defined in House Document 522 cited above. The Delaware River Basin Commission expressed its support by a resolution dated 23 April 1980 and reiterated its sponsorship for the modified project in August 1985, October 1985, and July 1988.

Operations during fiscal year: Maintenance: Normal operation and maintenance of the project .

30. GENERAL EDGAR JADWIN DAM AND RESERVOIR, PA

Location: In Dyberry Creek valley in central part of Wayne County, PA, between borough of Honesdale and village of Tanners Falls. Dam is about 3 miles above confluence of Dyberry Creek and Lackawaxen River in Honesdale and 29 miles above confluence of Lackawaxen and Delaware Rivers. (See Geological Survey Quadrangle Sheet, Honesdale, PA.)

Existing project: A single-purpose flood control reservoir with a capacity of 24,500 acre-feet formed by an earth embankment, about 1,225 feet long at crest and rising 109 feet above creek bed. It also has a tunnel with intake structure and a chute-type spillway with a stilling basin in left abutment. Reservoir controls runoff from a drainage area of 65 square miles which is 91 percent of watershed of Dyberry Creek and 39 percent of Lackawaxen River watershed above Honesdale, PA. Construction of project was authorized by 1948 Flood Control Act (H.Doc. 113, 80th Cong., 1st Sess.). Project completed in June 1960. (See Table 3-B at end of Chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2002.)

Local cooperation: Assurances of Compliance with requirements of local cooperation were accepted July 30, 1956. For details see page 251, Annual Report for 1962.

Operations during fiscal year: Maintenance: Normal operation and maintenance of the project .

31. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

To ascertain whether local interests were maintaining and operating completed projects as required, inspections were made as follows:

PROJECT INSPECTION	DATES
Chester River, PA	February 2002

Equinunk River, Equinunk, PA July 2002
Pennypack Creek, Hatboro, PA January 2002
Port Jervis, NY, Delaware River June 2002
Ice Division

Local interests are satisfactorily maintaining and operating projects in accordance with regulation. Costs during the period were \$18,487.

32. INSPECTION OF NON-FEDERAL LEVEES

Inspection of non-federal levees were conducted at the following sites:

PROJECT INSPECTION	DATES
Allentown, PA	August 2002
Bristol, PA	August 2002
Cheltenham, PA	August 2002
Upland, PA	August 2002

33. MOLLY ANN'S BROOK, NJ

Location: Approximately 12 miles northwest of New York City, located in Haledon, Prospect Park and Paterson, New Jersey along Molly Ann's Brook from the mouth below Totowa Avenue in Paterson upstream to Church Street in Haledon.

Previous project: None.

Existing project: The recommended plan modified the channel a total length of 2.5 miles. The channel includes both trapezoidal channel sections and walled sections. Five bridges were replaced and one building was removed. Estimated cost of project (October 1997) is \$ 38,800,000 of which \$20,600,000 is Federal costs and \$18,200,000 is required non-Federal costs. Costs are in accordance with Section 401(a) of the Water Resources Development Act (Public Law 99-662), dated November 17, 1986. (See Table 3-B at end of chapter for Acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing Project to Sept. 30, 2002.)

Local cooperation: Fully complied with. A Project Cooperation Agreement was executed on December 16, 1993. The State of New Jersey Department of Environmental Protection and Energy, the non-federal sponsor, provided a portion of their support through the Intermodal Surface Transportation Efficiency Act of 1991.

Terminal facilities: None.

Operations during fiscal year: New work: Work included engineering and design, supervision and administration, and work deferred from and repairs due to Hurricane Floyd.

34. NATIONAL EMERGENCY PREPAREDNESS

The total fiscal year cost for this category amounted to \$169,509.

35. PROMPTON LAKE, PA

Location: In Lackawaxen River Valley in central part of Wayne County, PA, between borough of Prompton and village of Aldenville. Dam is within corporate limits of Prompton, 4 miles upstream from Honesdale, PA, and approximately 30 miles above confluence of Lackawaxen and Delaware River. (See Geological Survey Quadrangle Sheet, Honesdale, PA)

Existing project: Plan of improvement authorized by 1948 Flood Control Act (H. Doc. 113, 80th Cong., 1st Sess.) provides for a single-purpose flood control reservoir. Modification of project authorized by 1962 Flood Control Act (H. DOC 522, 87th Cong., 2nd Sess.) provides for a multiple-purpose development for water supply and recreation in addition to present single-purpose flood control project. Plan of improvement requires construction of control tower with gates and service bridge, placing an impervious blanket on valley walls and floor upstream from dam, widening spillway, and clearing land and relocating roads in reservoir. Dam, completed under 1948 Flood Control Act which will not be modified, is 1,230 feet long and rises 140 feet above riverbed. Existing spillway, cut into rock of right abutment, will be modified and present uncontrolled outlet works discharging into a concrete conduit along right bank, and will be provided with gates and a control tower. Reservoir modification, a unit of comprehensive plan for flood control and other purposes of Delaware River basin has a capacity of 52,000 acre-feet: 3,500 acre-feet for inactive storage, 28,200 acre-feet for water supply and recreation, and 20,300 acre-feet for flood control. Estimated Federal cost of new work (October 1994) is \$3,510,000 including \$54,990,000 required non-Federal reimbursement for costs allocated to water supply storage during life of project after use of this storage is initiated. Project as authorized under the 1948 Flood Control Act was completed in November 1960. (For details, see page 358, Annual Report for 1963.) Work accomplished under the 1962 Flood Control Act was preconstruction engineering

and design. (See Table 3-B at end of Chapter for Acts authorizing existing project. See table 3-A at end of chapter for total cost for existing project to Sept. 30, 2002.)

Local cooperation: Project modification was approved subject to certain requirements by local interests, as defined in House Document 522 cited above. Assurances of compliance under Flood Control Act of 1948 have been met. Delaware River Basin Commission on March 18, 1966, gave their view that the need for water supply was not urgent at that time. However recent studies conducted by DRBC have determined that there is now a need for water supply. In August 1983, DRBC expressed their strong support for the project modification. Preconstruction engineering and design was initiated in 1966, suspended in 1968 and again suspended in and resumed in 1986.

Operations during fiscal year: Maintenance: Normal operation and maintenance at the project continued.

36. SCHUYLKILL RIVER PARK, PHILADELPHIA, PA

Location: The Schuylkill River Park is located about six nautical miles from the confluence of the Delaware and Schuylkill River in Center City Philadelphia. Philadelphia represents the urban gateway of 1,900 square mile Schuylkill Watershed.

Existing Project: This proposed project is the final phase of a three-phase master plan, which the City of Philadelphia and other local interests have implemented. This phase focuses on the restoration of a greenway to include a 7,500-foot long promenade and amenities enabling and experience with values of the river corridor and provide opportunities for active and passive recreation. The greenway will eliminate urban blight and increase the viability of the surrounding residential, institutional and commercial communities.

Corps of Engineers assistance on the project is authorized by Section 564 (c) of the Water Resources Development Act of 1996 (PL 104-303) and Section 348 of the Water Resources Development Act of 1999, which amended the authorization amount to \$4,000,000. The total cost of the entire project is estimated at \$6,400,000. (See Table 3-B at end of chapter for acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2002.)

Local Cooperation: Under cost-share provisions for environmental restoration, non-Federal sponsors are

required to provide 50% of project costs to include lands, easements and rights of way and bear all costs of operation and maintenance of the project after construction.

Operations during fiscal year: New Work: Revised decision document.

Environmental Restoration:

37. ENVIRONMENTAL IMPROVEMENT WORK UNDER SPECIAL AUTHORIZATION

Activities pursuant to Section 1135, Public Law 99-662.

38. SOUTH CENTRAL PENNSYLVANIA ENVIRONMENTAL IMPROVEMENT, PA

Location: The south central Pennsylvania area includes twenty-one counties defined by the authorizing legislation. The program area within the Philadelphia District consists of Pike, Monroe, and Lackawanna Counties.

Existing project: Section 313 of the Water

Resources Development Act of 1992, as amended, established a pilot program for providing environmental assistance to non-Federal interests in south central Pennsylvania. Such assistance may be in the form of design and construction assistance for water-related environmental infrastructure and resource protection and development projects, including projects for wastewater treatment and related facilities, water supply, storage treatment, distribution facilities, and surface water resource protection and development. The Federal share may be provided in the form of grants or reimbursements to the sponsor. FY 98 was the first year of funding for three project names in the Energy and Water Appropriations documents. Total project funds earmarked were \$7,650,000 for work within Philadelphia District. The House Report (105-190) provides \$10,000,000 in design and construction assistance under the Section 313 Program for projects in Lackawanna, Lycoming, Susquehanna, Wyoming, Pike and Monroe Counties in Pennsylvania. The Conference Report (105-271) specifies the funds among eight specific projects. Appropriations for those projects in the Philadelphia District are: Westfall Municipal Sewage Authority, Pike County; Jefferson Township, Lackawanna County; Township of Tobyhanna Sewer Authority, Monroe County. (See Table 3-B at end of chapter for acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2002.)

Local cooperation: The non-Federal sponsors are required to provide 25% of project costs including lands, easements, rights-of-way, and relocations and bear all

costs of operation, maintenance, replacement, repair and rehabilitation of the project after construction.

Operations during fiscal year: New work: Continued design on Municipal Authority of the Westfall Township, PA and completed Corps of Engineers funded Jefferson Township, Lackawanna County, PA. Completed Corps of Engineers funded construction on Tobyhanna Township, Monroe County, and on Municipal Authority of the Borough of Milford, PA.

39. SOUTHEASTERN PENNSYLVANIA, PA

Location: Section 566 of the Water Resources Development Act (WRDA) of 1996 authorized a pilot program to provide for environmental assistance (design and construction) to non-Federal interests for publicly owned facilities in the five (5) county area surrounding the city of Philadelphia.

Previous project: None.

Existing project: Pilot program established for providing environmental assistance to non-Federal interests in southeastern Pennsylvania. Assistance under this section may be in the form of design and construction assistance for water-related environmental infrastructure and resource protection and development projects in southeastern Pennsylvania, including projects for wastewater treatment and related facilities, water supply and related facilities, and surface water resource protection and development. The four pilot programs are the East Central Incinerator, Wissinoming, Logan (Feltonville), and Delaware Canal. (See Table 3-B at end of chapter for acts authorizing existing project. See Table 3-A at end of chapter for total costs for existing project to Sept. 30, 2002.)

The East Central Incinerator property is located on Municipal North Piers 31 through 35 at 601 North Columbus Boulevard (at the intersection of North Columbus Boulevard and Spring Garden Street), in Philadelphia, Philadelphia County, Pennsylvania. The Delaware River bounds the property on the north and east. The property is bounded to the south by the Delaware River and a parking lot. North Columbus Boulevard bounds the property on the west. The East Central Incinerator property consists of approximately seven (7) acres of land which currently accommodates the Incinerator Building, a Service Building (built on piles in 1968 at the north side of the former Municipal pier 34), an electric switch building, a scale house, two (2) small parking attendant buildings and a parking lot.

Wissinoming and Logan (Feltonville) sections of Philadelphia are located in north/northeast Philadelphia. These areas are experiencing severe subsidence of residential properties that were built many years ago on fill material placed over old watercourses. Breaks in the pipes provide an avenue for the fill material to be transported by ground water away from building foundations. In an effort to determine the cause and extent of the subsidence, a topographic map will be prepared and compared to historic maps to show how much fill was placed in the old watercourses. Borings will be taken in the fill to confirm topographic data and to determine the engineering characteristics of the fill material. Water and sewer lines will also be mapped to determine if such lines are present in areas where subsidence has occurred and to predict where subsidence may occur due to leaking water lines and deteriorating sewer lines.

Local cooperation: 1. East Central Incinerator: The non-Federal sponsors are required to provide 25% of the project costs to include lands, easements and rights of

way and bear all costs of operation and maintenance of the project after construction. The non-Federal sponsors receive credit for any design work completed prior to the federal involvement. 2. Wissinoming, Logan (Feltonville), and Delaware Canal studies are 100% Federal expense. Design and construction cost sharing will be in accordance with policy guidance.

Terminal facilities: None.

Operations during fiscal year: New Work: East Central Incinerator – Completed the design and plans and specifications for the demolition contract. Subsequently awarded and executed the demolition contract and completed the work. Delaware Canal – Completed plans and specifications. Wissinoming and Logan (Feltonville) sinking home studies – Performed general coordination, attended status meetings, and completion of status reports.

Miscellaneous:

40. AQUATIC ECOSYSTEM RESTORATION WORK UNDER SPECIAL AUTHORIZATION

Activities pursuant to Section 206, Public Law 104-303.

preconstruction planning.

- 19. Includes \$112,000 for work done for the State of New Jersey.
- 20. Includes \$704,000 AE&D.
- 21. Includes \$39,000 for new work for previous projects.

22. Includes \$555,809 for previous projects.

23. Includes \$2,054 for maintenance for previous projects.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACITIVITIES FOR FY 2002

TABLE 3-B AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Aug. 30, 1935	BARNEGAT INLET, NJ (See Section 1 of Text) An 8-foot depth through inlet to Oyster Creek Channel across inner bar, 10-foot depth through outer bar and for jetties.	Rivers and Harbors Committee Doc. 19, 73rd Cong., 2nd sess. ¹
Aug. 26, 1937	A channel of suitable hydraulic characteristics from gorge to Oyster Creek Channel, and thence to deep water in bay.	Rivers and Harbors Committee Doc.85, 74th Cong., 2nd sess. ¹
Jul. 24, 1946	Maintenance dredging of channel to connect main inlet channel with Barnegat City Harbor.	H. Doc. 358, 79th Cong., 2nd sess.
Jul. 2, 1985	Construction of a parallel, 4270 foot rubble mound south jetty and dredging a channel 10 feet deep, 300 feet wide, and 11,300 feet long.	H. Doc. 236, 99th Cong., 2nd sess.
Mar. 2, 1907	COLD SPRING INLET, NJ (See Section 2 of Text) An inlet channel 25 feet deep and jetties.	H. Doc. 388, 59th Cong., 2nd sess.
Mar. 2, 1945	A 20-foot channel to deep water in harbor	H. Doc. 262, 77th Cong., 1st sess.
Jul. 3, 1930	DELAWARE RIVER BETWEEN PHILADELPHIA, PA AND TRENTON, NJ (See Section 3 of Text) A channel 28 feet deep, 300 feet wide between Allegheny Ave., Philadelphia, PA and Delair Bridge	Rivers and Harbors Committee Doc. 3, 71st Cong., 1st sess.
Aug. 30, 1935	Channel 25 feet deep from Delair Bridge to Trenton, NJ, and maintenance of 12-foot channel from upper end of 25-foot project to Penn Central R.R. Bridge at Ferry St., Trenton.	Rivers and Harbors Committee Doc. 11, 73rd Cong., 1st sess.
Aug. 30, 1935 ²	Auxiliary channel, 20 feet deep east of Burlington Island.	Rivers and Harbors Committee Doc. 66, 74th Cong., 1st sess. ¹
Aug. 26, 1937	A cross channel 8 feet deep, opposite Delanco, NJ	Rivers and Harbors Committee Doc. 90, 74th Cong., 2nd sess.
Jul. 24, 1946	Anchorage at mouth of Biles Creek	H. Doc. 679, 79th Cong., 2nd sess.
Sept. 3, 1954	A channel 40 feet deep and 400 feet wide between Allegheny Ave., Philadelphia, PA, and upstream end of Newbold Island, thence 35 feet deep to Trenton Marine Terminal and turning basin to 800 feet wide. Relocate channel at railroad bridge at Delair and suitably reconstruct bridge. Construct necessary bank protection works; and	H. Doc. 358, 83d Cong., 2nd sess. ¹

TABLE 3-B AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
	eliminate authorized anchorage near mouth of Biles Creek, PA.	
	DELAWARE RIVER MAINSTEM CHANNEL & DEEPENING (See Section 4 of Text)	
October 1992	The 45-foot deep project was authorized for construction.	WRDA 1992 P.L. 102-580 Section 101 (6)
	Allows for certain credits to the non-Federal sponsor and the payment of disposal fees, and the development of a disposal area management plan.	WRDA 1999 P.L. 106-53, Section 308
	DELAWARE RIVER, PA, NJ, AND DE, PHILADELPHIA TO THE SEA (See Section 5 of Text)	
Jun. 25, 1910	Channel 35 feet deep from Allegheny Ave., Philadelphia, PA to Delaware Bay.	Doc. 733, 61st Cong., 2nd sess.
Jul. 3, 1930	Anchorage 35 feet deep at Port Richmond and Mantua Creek, a 30 foot anchorage at Gloucester, NJ and extend 1,000 foot channel in Philadelphia Harbor to Horseshoe Bend.	H. Doc. 304, 71st Cong., 2nd sess. ¹
Aug. 30, 1935 ²	An anchorage 35 feet deep at Marcus Hook, PA	Rivers and Harbors Committee Doc. 5, 73rd Cong., 1 st sess.
Jun. 20, 1938 ³	A channel 37 feet deep from Philadelphia - Camden Bridge to Navy Yard, thence 40 feet deep to deep water in Delaware Bay.	S. Doc. 159, 75th Cong. 3rd sess. ¹
Mar. 2, 1945 ⁴	A 37-foot depth channel from Allegheny Ave., Philadelphia, PA to Philadelphia-Camden Bridge	H. Doc. 580, 76th Cong. 1st sess. ¹
Mar. 2, 1945 ⁴	A 37-foot depth in an enlargement of anchorage near Mantua Creek and Marcus Hook.	H. Doc. 340, 77th Cong. 1st sess. ¹
Mar. 2, 1945 ⁴	Maintain enlarged channel opposite Philadelphia Navy Yard.	Specified in Act. H. Doc. 358, 83rd Cong. 2nd sess. ¹
Sept. 3, 1954	A channel from Allegheny Ave., to Naval Base 40 feet deep, 400 feet wide along west side of channel through Philadelphia Harbor and 500 feet wide through Horseshoe Bend.	
Jul. 3, 1958	Anchorage at Reedy Point, Deepwater Point, Marcus Hook, and Mantua Creek 40 feet deep and 2,300 feet wide with mean lengths of 8,000, 5,200, 13,650 and 11,500 feet respectively.	H. Doc. 185, 85th Cong., 1st sess. 74th Cong., 1st sess. ¹
	DELAWARE RIVER VICINITY OF CAMDEN, NJ (See Section 6 of Text)	

TABLE 3-B AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Mar. 2, 1919	A depth of 30 feet from Newton Creek to Kaighn Point, thence 18 feet to Cooper Point.	H. Doc. 1120, 63rd Cong., 2 nd sess.
Jul. 3, 1930	Extending the 30-foot depth upstream to Berkely Street Terminal.	H. Doc. 111, 70 th Cong., 1 st sess.
Mar. 2, 1945	A depth of 37 feet in front of the Camden Marine Terminal.	H. Doc. 353, 77 th Cong.,
Oct. 20, 1988	A depth of 40 feet in front of the Camden Marine Terminal.	1 st sess., WRDA 1988
INLAND WATERWAY FROM DELAWARE RIVER TO CHESAPEAKE BAY, DE & MD (See Section 7 of Text)		
Aug. 30, 1935	A sea level channel 27 feet deep, 250 feet wide from Delaware River to Elk River and 400 feet wide down Elk River and Chesapeake Bay to deep water at or near Pooles Island; alter existing bridges over canal; enlarge Delaware City Branch Channel to 8 feet deep and 50 feet wide, with a basin same depth and revetment of both banks east of Fifth Street; enlarge anchorage and mooring basin in Back Creek to 400 feet wide, 1,000 feet long and 12 feet deep; extend jetties at Reedy Point; and construct bulkheads.	H. Doc. 201, 72nd Cong., 1st sess. and Rivers and Harbors Committee Docs. 18 and 24, 736 Cong., 2nd sess. ¹
Aug. 7, 1939	Construct a 4-lane high-level fixed highway bridge at or near St. Georges.	Public Law 310, 76th Cong., 1st sess.
Sept. 3, 1954	A channel 35 feet deep and 450 feet wide from Delaware River through Elk River and Chesapeake Bay.	S. Doc. 123, 83rd Cong., 2nd sess. ¹
Aug. 30, 1935	For an 8-foot depth and width increased to 150 feet in Delaware Bay.	H. Doc. 275, 73rd Cong., 2nd sess. ¹
INLAND WATERWAY, REHOBOTH BAY TO DELAWARE BAY, DE (See Section 8 of text)		
Jul. 25, 1912	For a 6-foot depth canal to connect Rehoboth Bay and Delaware Bay.	H. Doc. 823, 60th Cong., 1st sess. and Rivers and Harbors Committee Doc. 51, 61st Cong., 3rd sess.
Aug. 30, 1935	For a 6-foot depth entrance near Lewes, for jetties, for widening the canal from Broadkill River to Lewes and basin.	Rivers and Harbors Committee Doc. 56, 75th Cong., 2nd sess. ¹
Mar. 2, 1945	For a 10-foot depth from Delaware Bay to Lewes and in basin, and for extending jetties. ⁵	H. Doc. 344, 77th Cong., 1st sess. ¹
MANAQUAN RIVER, NJ (See Section 9 of Text)		
Jul. 3, 1930	Channel 8 feet deep and provision of works designed to secure channel.	H. Doc. 482, 70 th Cong., 2 nd sess.

TABLE 3-B AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Aug. 30, 1935	Widening channel on northerly side.	Senate Committee Doc., 74 th Cong., 1 st sess.
Mar. 2, 1945	Deepening channel to 12 and 14 feet, 10 and 12 foot anchorages. ⁶	H. Doc. 356, 77 th Cong., 1 st sess.
Mar. 2, 1912	MISPILLION RIVER, DE (See Section 10 of Text) A 6-foot depth and extention of south.	H. Doc. 678, 62 nd Cong., 2 nd sess. ¹
Aug. 26, 1937	Extention of north jetty.	Rivers and Harbor Comm., Doc. 83
Sep. 3, 1954	A channel 9 feet deep, 80 feet wide from like depth in Delaware Bay to the landward end of the jetties and thence 60 feet wide to Milford, including 3 cutoffs, with a turning basin at Milford.	S. Doc. 229, 81 st Cong., 2 nd sess. ¹
Jul. 13, 1982	MURDERKILL RIVER, DE (See Section 11 of Text) A channel 7 feet deep at low water from Frederica to the 7 foot curve in Delaware Bay, 80 feet wide down to the mouth, and 150 feet wide at bottom and 250 feet wide at top from the mouth to the 7 foot curve in the bay. Embankment of dredged material on each side to a height of at least 2 feet above high spring tides.	H. Ex. Doc. 21, 52 nd Cong., 1 st sess. (See page 981 in Annual Report of 1892.)
Jul. 1, 1945	NEW JERSEY INTRACOASTAL WATERWAY (See Section 13 of Text) A channel 12 feet deep at mean low water and generally 100 feet wide, extending from the Atlantic Ocean at Manasquan Inlet, NJ to Delaware Bay above Cape May, NJ. Construction of a canal of similar dimensions from Cape May Harbor to Delaware Bay via the New England Creek basin, with adequate jetties at the Delaware Bay entrance.	H. Doc. 133, 76th Cong., 1st Sess. Rivers and Harbors Committee Doc. 525 79th Cong., 2nd sess.
Nov. 17, 1986	To increase the depth of the 2,000, foot reach of the Waterway in Cape May County to 15 feet.	WRDA of 1986
	REGIONAL SEDIMENT MANAGEMENT PILOT PROGRAM (See Section 15 of Text) To remedy of the sediment excess/deficit problems on the Updrift/downdrift shorelines adjacent to Cape May Inlet.	Energy and Water Development Approp. Act of 2002, P.L. 107-66
Jun. 3, 1896	WILMINGTON HARBOR, DE (See Section 16 of Text) Depths of 21, 10 and 7 feet and jetties.	H. Doc. 66, 54 th Cong., 1 st sess. Annual Report, 1897

TABLE 3-B AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
		p. 12501
Jul. 25, 1912	Purchase or construct a dredge and auxiliaries including a wharf and depot, and maintenance of project.	H. Doc. 359, 62nd Cong., 2nd sess.
Sept. 22, 1922	Entrance channel and basin with 25-foot depth and construction by local interests of new south jetty.	H. Doc. 114, 67th Cong., 1st sess. and S. Committee Print, 68th Cong., 1st sess.
Jul. 3, 1930	A 30-foot depth between Delaware River and Lobdell Canal and modification or removal of a portion of north jetty.	Rivers and Harbors Committee Doc. 20, 71st Cong., 2nd sess.
Aug. 30, 1935 ⁷	Completion of new south jetty by the United States subject to provision that city of Wilmington reimburse the United States for cost, without interest, of any part of structure that may subsequently be occupied and utilized for city activities.	Rivers and Harbors Committee Doc. 32, 73rd Cong., 2nd sess.
Oct. 17, 1940	Permit temporary occupancy by city of Wilmington of any part of south jetty for city activities under revocable license, provided occupied portion of jetty is properly maintained without expense to the United States.	H. Doc. 658, 76th Cong., 3rd sess.
Jul. 14, 1960	A 35-foot depth between Delaware River ship channel and Lobdell Canal including turning basin of same depth, opposite Wilmington Marine Terminal, 200 feet wide, 2,900 feet long on north side of channel, and 2,000 feet long on north side of basin.	H. Doc. 88, 86th Cong., 2nd sess.
BRIGANTINE INLET TO GREAT EGG HARBOR INLET, NJ (ABSECON ISLAND, NJ)		
(See Section 17 of Text)		
Oct. 12, 1996	Consists of providing 6.2 million cubic yards of initial beachfill, with subsequent periodic nourishment of 1.6 million cubic yards every three years, for a 200-foot-wide berm at elevation 8.5 feet above mean low water and a dune to elevation 16 feet above mean low water for Atlantic City, and a 100-foot-wide berm at elevation 8.5 feet above mean low water and a dune to 14 feet above mean low water for Ventnor, Margate and Longport along 8.1 miles of shoreline. The plan also includes 0.3 miles of bulkhead construction along the Absecon Inlet frontage of Atlantic City.	Section 101 (b) (13) of WRDA 1996
CAPE MAY INLET TO LOWER TOWNSHIP, NJ		
(See Section 18 of Text)		
	Consists of beach fill; dune fill; new groins; maintenance of existing groins; rehabilitation of an existing seawall; and a breakwater with weir and deposition basin at Cape May Inlet.	Rivers & Harbors Act of 1968

TABLE 3-B AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Nov. 17, 1986	Project may be constructed separately or in combination with any other feature of the project.	WRDA of 1986
	DELAWARE BAY COASTLINE, ROOSEVELT INLET/LEWES BEACH, DE (See Section 19 of Text)	
Aug. 17, 1999	Provides for navigation mitigation, hurricane, and storm damage reduction.	Section 101 (a) (13) of WRDA 1999
	DELAWARE COAST CAPE HENLOPEN TO FENWICK ISLAND, DE (DEWEY/REHOBOTH, DE) (See Section 20 of Text)	
Oct. 12, 1996	Provides for beachfill with subsequent periodic nourishment. The plan consists of one continuous project, from the northern end of Rehoboth beach to the southern border of Dewey Beach, a distance of 13,500 linear feet. Along Rehoboth Beach, the plan provides for a 125-foot wide beach berm at elevation +8.0 feet NGVD and a dune at elevation +14.0 feet NGVD. At Dewey Beach, the project would transition to a 150-foot wide beach berm at elevation +8.0 feet NGVD and a dune at elevation +14.0 feet NGVD.	Section 101 (b) (6) of WRDA 1996
Dec. 11, 2000	Project is modified to authorize increased project costs.	Section 307 of WRDA 2000
	DELAWARE COAST PROTECTION (See Section 21 of Text)	
	Provides for Federal participation in the cost of restoration and subsequent periodic nourishment, not to exceed 10 years, of the shore from Rehoboth Beach to Indian River Inlet.	H. Doc. 90, 90th Cong., 2nd sess.
Nov. 17, 1986	Project is modified to authorized the construction of sand bypass facilities and stone revetment erosion control measures at Indian River Inlet, DE. ⁸	WRDA of 1986 Sec. 869
	GREAT EGG HARBOR INLET & PECK BEACH, NJ (See Section 22 of Text)	
Nov. 17, 1986	Project may be constructed separately or in combination with any other feature of the project. Consists of providing initial beachfill, with subsequent periodic nourishment, with a minimum berm width of 100 feet at an elevation of 8 feet above mean low water.	River and Harbor Act of 1965. WRDA of 1986.
	LOWER CAPE MAY MEADOWS, NJ (See Section 23 of Text)	
Aug. 17, 1999	Provides for navigation mitigation, ecosystem restoration, shore protection, and hurricane and storm damage reduction.	Section 101 (a) (25) WRDA of 1999

TABLE 3-B AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
	TOWNSEND INLET TO CAPE MAY INLET, NJ (See Section 24 of Text) Provides for hurricane and storm damage reduction, shore protection, and ecosystem restoration.	Section 101 (a) (26) WRDA of 1999
	BELTZVILLE LAKE, PA (See Section 25 of Text) Provides for multiple-purpose development for water supply flood control and recreation.	H. Doc. 522, 87th Cong., 2nd sess.
	BLUE MARSH LAKE, PA (See Section 26 of Text) Provides for multiple purpose development for water supply, flood, control, and recreation. Site is located on Tulpehocken Creek about 1 1/2 miles up-stream from its confluence with Plum Creek and about six miles northwest of Reading, PA.	H. Doc. 522, 87th Cong., 2nd sess.
	FRANCIS E. WALTER DAM, PA (See Section 28 of Text) Provided for a single-purpose flood control reservoir.	H. Doc. 587, 79th Cong., 2nd sess.
	Provides for a multiple-purpose development for water supply and recreation.	H. Doc 522, 87th Cong., 2nd sess.
	GENERAL EDGAR JADWIN DAM AND RESERVOIR, PA (See Section 29 of Text) A single-purpose flood control reservoir with a capacity of 24,500 acre-feet formed by an earth embankment.	H. Doc 113, 80th Cong., 1st sess.
Nov. 17, 1986	MOLLY ANN'S BROOK, NJ (See Section 32 of Text) Modify Channel with a total length of 2.5 miles miles. Channel will include both trapezoidal channel sections and walled sections. Five bridges will be replaced and one building will removed.	WRDA of 1986
	PROMPTON LAKE, PA (See Section 34 of Text) Provides for a single-purpose flood control reservoir.	H. Doc. 113, 80th Cong., 1st sess.
	Provides for multiple-purpose development for water supply, and recreation in addition to present single-purpose flood control project.	H. Doc. 522, 87th Cong., 2nd sess.
	SCHUYLKILL RIVER PARK, PHILADELPHIA, PA (See Section 35 of Text) Authorized appropriated amount is increased. Authorized \$4 million to provide technical, planning, design, and construction assistance.	WRDA 1996 Section 564 (c)

TABLE 3-B AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Report	SOUTH CENTRAL PENNSYLVANIA ENVIRONMENTAL IMPROVEMENT, PA (See Section 37 of Text) Pilot program providing environmental assistance to non-Federal Interests in South Central Pennsylvania.	Section 313, WRDA of 1992
	Provides \$10 million in design and construction assistance under the Section 313 program.	H. Report 105-190
	Specifies the funds among eight specific projects.	Conference
		105-271
	SOUTHEASTERN PENNSYLVANIA, PA (See Section 38 of Text) Pilot program providing for environmental assistance (design and construction) to non-Federal interests for publicly owned facilities in the five (5) county area surrounding the City of Philadelphia.	Section 566, WRDA of 1996
	“Brownfields” initiative to investigate to spur the revitalization of these properties and return them to productive use.	Section 104 (d)(1) of the Comprehensive Environmental Response, Compensation and Liability Act of 1980

1. Contains latest published maps.
2. Also Public Works Administration September 6, 1933, and Emergency Relief Administration, May 28, 1935.
3. Channel 37 feet deep and 600 feet wide from Naval Base to Philadelphia-Camden Bridge, deferred for restudy.
4. Channel 37 feet deep and 600 feet wide from Philadelphia-Camden

5. Bridge to Allegheny Ave. deferred for restudy.
6. Extension of jetties considered to be active.
7. The 10 and 12 foot anchorages are considered inactive.
8. Also May 28, 1935, under Emergency Relief Administration.
8. Deauthorized the remaining portion of the project.

- extention to two groins.
8. National Parks and Recreation Act of 1978 terminated Corps authority to proceed with the project. Legislation would be required to proceed with the project.
9. Excludes cost of \$1,146,325 to local interests and \$272,766 Federal participation expended under Public Works Acceleration Program for extention of five existing groins completed 11 May 1964.
10. Includes \$3,489,088 for AE&D.

BALTIMORE, MD DISTRICT

This district comprises the watershed of Susquehanna River and its tributaries from headquarters in south central New York State through central Pennsylvania to its mouth in Chesapeake Bay; watershed of the Potomac River and its tributaries from headquarters in Maryland, eastern West Virginia, and Northern Virginia to its

mouth in Chesapeake Bay; District of Columbia; and southwestern portion of Delaware. It includes that portion of Chesapeake Bay and its tributaries north of Smith Point, MD, on western shore of the bay, and includes that portion of Maryland between Chesapeake Bay and Atlantic Ocean.

NAVIGATION

1. BALTIMORE HARBOR AND CHANNELS, MD AND VA

Location. Baltimore Harbor is at the head of the navigable portion of Patapsco River about 12 miles from Chesapeake Bay. The Patapsco River rises near the town of Westminster in Carroll County, MD, and flows generally southeast for about 65 miles to enter Chesapeake Bay. (See National Ocean Survey Chart 12278.)

Existing project.

a. A uniform main channel depth of 50 feet between Cape Charles, VA, and Fort McHenry at Baltimore, MD, with dimensions as follows: (1) Cape Henry Channel: 50 feet deep and 1,000 feet wide from the 50-foot depth curve in the Atlantic Ocean to that depth in Chesapeake Bay, a distance of 3.0 miles; (2) York Spit Channel: 50 feet deep and 1,000 feet wide connecting the 50-foot depth curves in Chesapeake Bay near York Spit, a distance of 18.4 miles; (3) Rappahannock Shoal Channel: 50 feet deep and 1,000 feet wide connecting the 50-foot depth curves in the Chesapeake Bay opposite the Rappahannock River, a distance of 10.3 miles; and (4) Baltimore Harbor Approach Channels: 50 feet deep and generally 800 feet wide, widened at the approach and bends, from the 50-foot depth curve in Chesapeake Bay opposite the mouth of the Magothy River to Fort McHenry on the Patapsco River, a distance of 20.2 miles.

b. Branch channels with dimensions as follows: (1) Connecting Channel to Chesapeake and Delaware Canal Approach Channel: 35 feet deep, 600 feet wide, and 15.6 miles long from the Cutoff Angle in the main channel to the 35-foot depth curves in the natural channel on the east side of Chesapeake Bay which is part of the inland waterway from Delaware River to Chesapeake Bay. The channel includes the Brewerton Extension and Swan Point and Tolchester Channels; (2) Curtis Bay: 50 feet deep, 600 feet wide, and 2.3 miles long from the main channel to and including a turning basin at the head of Curtis Bay; (3) Curtis Creek: (a) a channel, 35 feet deep and generally 200 feet wide, from the 50-foot channel in Curtis Bay to 750 feet downstream of the Pennington Avenue Bridge; (b) a channel, 22 feet deep and generally 200 feet wide, from the 35-foot channel to and along the marginal wharf of the Curtis Bay Ordnance Depot; (c) an irregular shaped 3-acre basin, with a depth of 18 feet, adjacent to the head of the 22-foot channel; (d) a basin, 15 feet deep and 450 feet wide, from the end of the 22-foot channel to the end of the marginal wharf; and (e) a channel, 22

feet deep and 200 feet wide, from the 22-foot channel south of the Baltimore and Ohio Railroad Bridge to the vicinity of Arundel Cove, a distance of 2,800 feet, thence 100 feet wide in Arundel Cove for a distance of 2,100 feet, with an anchorage basin, 700 feet square, adjacent to the channel and southwest of the wharf of the Coast Guard Depot at Curtis Bay; (4) Middle Branch; Ferry Bar East Section: a channel, 42 feet deep and 600 feet wide, from the main channel at Fort McHenry to Ferry Bar, a distance of 1.5 miles; and (5) Northwest Branch: Federal maintenance of 39-foot or 35-foot deep channels after either depth has been provided by local interests: (a) East Channel: a channel, 49 feet deep, 600 feet wide, and 1.0 mile long with a turning basin at the head of the channel from that depth existing at the time of construction; and (b) West Channel: a channel, 40 feet deep, 600 feet wide, and 1.3 miles long with a turning basin at the head of the channel from that depth existing at the time of construction.

c. The following anchorages: (1) Riverview Anchorage No. 2: 30 feet deep, 2400 feet long, and 1,200 feet wide; (2) Riverview Anchorage No. 1: 35 feet deep, 4,500 feet long, and 1,500 feet wide; and (3) Fort McHenry Anchorage: 35 feet deep, 3,500 feet long, and 400 feet wide.

The mean range of tide is 2.8 feet at the Cape Henry Channel, 2.3 feet at the York Spit Channel, 1.4 feet at the Rappahannock Shoal Channel, 0.8 foot at the Craighill Entrance, 0.9 foot in the Cutoff Section, 1.1 feet at Fort McHenry, and 1.2 feet at Pooles Island in the upper Chesapeake Bay. Depths refer to mean low water.

Estimated cost for new work is \$361,581,000 which includes: \$8,330,000 for completed work through the River and Harbor Act of 1945; \$38,411,000 for work completed under the River and Harbor Act of 1958 of which \$33,991,000 is Corps of Engineers, \$60,000 is U.S. Coast Guard and \$4,360,000 is non-Federal; and \$314,840,000 (October 1989 prices) for work authorized by the River and Harbor Act of 1970, of which \$460,000 is U.S. Coast Guard and \$314,380,000 is Corps of Engineers and non-Federal.

Local cooperation. Requirements are described in full on page 4-3 of Fiscal Year 1982 Annual Report.

Terminal facilities. The Port of Baltimore has 45 miles of waterfront of which 25 miles are industrially developed. There are 94 covered and open overseas piers for the loading and discharging of 173 ships, providing 84 general cargo, 65 specialized cargo, and 24 public bulk cargo berths. The existing ground storage is equivalent to 53,700 railroad cars of cargo. There are

31 public general merchandise warehouses, with 4.9 million square feet of storage space and 4.7 million cubic feet of cold storage space. Eight ship-building, ship-repair, and ship-dismantling yards are available for handling up to 90 vessels. The two grain elevators in the port have a capacity of about 8 million bushels. Latest description of terminal facilities is in "Port Series No. 10 (revised 1991)" on Port of Baltimore, MD, (issued by Board of Engineers for Rivers and Harbors).

Operations and results during fiscal year.

New Work, Baltimore District: None.

New Work, Norfolk District: None.

Maintenance, Baltimore District. Condition surveys of the project channels were made. Dredged material testing of the Maryland channels was initiated in September 2002 and was in progress at the end of the calendar year. Dredge monitoring studies were initiated in December 2002 and are scheduled for completion in the spring of 2003. Maintenance dredging, by contract, of the Craighill Entrance and Craighill Angle commenced on September 23, 2001 and was completed on January 27, 2002. A total of 624,261 cubic yards of material were dredged and deposited in the Poplar Island Environmental Restoration Project in the Chesapeake Bay at a cost of \$2,387,697. Maintenance dredging, by contract, of the Fort McHenry Channel, Ferry Bar Channel, Riverview Anchorage No. 1 and Riverview Anchorage No. 2 is being performed in conjunction with new work dredging of the Baltimore Harbor Anchorage & Channels project. Dredging commenced on March 18, 2002 and is expected to be completed by April 2003. A total of 268,074 cubic yards have been dredged to date and placed at the Hart-Miller Island Containment Facility at a cost of \$1,527,967. A contract in the amount of \$7,308,400 was awarded on September 17, 2002 to dredge an estimated 1.1 million cubic yards from the Craighill Entrance, Craighill Channel, Cutoff Angle, and Brewerton Channel Eastern Extension and to deposit the material at the Poplar Island Environmental Restoration Project in the Chesapeake Bay. Dredging commenced on November 13, 2002 and is scheduled for completion in late January 2003.

Maintenance, Norfolk District. Condition surveys were made of the Rappahannock Shoal and Atlantic Ocean Channels. Maintenance dredging, by contract, of the Cape Henry Channel and York Spit Channel commenced on September 17, 2001 and was completed on November 4, 2002. A total of 2,488,563 cubic yards of material were dredged from the Cape Henry Channel and deposited at the approved Dam Neck Ocean Placement Area in the Atlantic Ocean and a total of 957,811 cubic yards were dredged from the York Spit Channel and deposited at the Wolf Trap Alternate open

water placement site in the Chesapeake Bay at a cost of approximately \$8,040,000.

2. BALTIMORE HARBOR

ANCHORAGES AND CHANNELS, MD

Location. The project area encompasses the 32-square mile area of the Port of Baltimore. The port area of Baltimore includes the navigable part of the Patapsco River below Hanover Street, the Northwest and Middle Branches, and Curtis Bay and its tributary, Curtis Creek.

Existing project. Existing anchorages and branch channels are not of sufficient depth, length and width to accommodate vessels now in operation. The recommended plan will reduce delays and increase efficiency and safety through the following improvements: (1) widen and deepen Federal Anchorages 3 and 4; (2) widen and provide flared corners for state-owned East Dundalk, Seagirt, Connecting, and West Dundalk branch channels; (3) dredge a new branch channel at South Locust Point; and (4) dredge a turning basin at the head of the Fort McHenry Channel. An estimated 3.9 million cubic yards of material will be dredged for these improvements. The current project cost estimate is \$24.8 million including \$18.3 million Federal and 6.5 million non-Federal. Following completion of the project, the state of Maryland will reimburse an additional \$1.4 million over 30 years to the Federal government.

Local cooperation. The PCA with the State of Maryland was executed December 19, 2001. The sponsor is required to provide lands, easements, rights-of-way, including disposal areas and pay 25 percent of costs allocated to general navigation facilities during construction and pay 50 percent of the costs of incremental maintenance below 45 feet below mean low water. All dredged material from the project is considered contaminated by law, and will be placed in a containment site, the expanded capacity at Hart-Miller Island, to be provided by the non-Federal sponsor. The State will receive credit for proportional costs to modify the site to make it usable for placement of project material.

Terminal facilities. See Section 1 of this text.

Operations and results during fiscal year. New Work: Plans and specifications for project construction were completed in early 2001. A limited re-evaluation report was completed in November 2001 to address design changes and the project's economic justification. Construction started February 2002 and completed in April 2003.

3. BALTIMORE HARBOR, MD, COLLECTION AND REMOVAL OF DRIFT

Location. Project applies to Baltimore Harbor, MD, and its tributaries.

Existing project. Provides for collection and removal of drift from Baltimore Harbor and its tributary waters, and authorizes the Secretary of the Army to allot such amounts as may be necessary for work from appropriations for maintenance and improvement of existing river and harbor works or other available appropriations, and that this work shall be carried as a separate and distinct project. It is wholly a work of maintenance. Purpose of work is to afford relief from variable conditions of obstruction.

Local cooperation. None required.

Terminal facilities. See Section 1 of this text.

Operations and results during fiscal year. Maintenance: Operations, by hired labor, consisted of collection and disposal of 9,720 cubic feet of driftwood, ranging from small blocks up to timbers of large dimensions.

Terminal facilities. There are two bulkhead wharves on Chester River section. Facilities on the Kent Island Narrows section of the existing project consist of about 10,000 linear feet of timber pile bulkheaded wharf. About 1,350 linear feet of the wharf is owned and operated by the Queen Anne's County; the remainder is privately owned. The privately owned bulkheaded wharf is operated mostly by the seven marinas located on the Narrows with the remainder being owned and operated by the seafood packing houses in the area. In addition to the slips of the marinas, there are marine railways, launching ramps, and travel-lifts. All of these facilities are in good condition and are located adjacent to the proposed improvements. In Wells Cove there is a small wharf, a small marine railway, and a public landing. All facilities are privately owned except the public landing on Wells Cove. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. Maintenance: In May of 2002, elected officials and interested parties, in conjunction with the National Aquarium and the Corps, planted about 6 acres of salt marsh on the dredged material.

4. CHESTER RIVER, MD

Location. Rises in Kent County, DE, and flows 50 miles generally southwesterly and empties into the Chesapeake Bay. Kent Island Narrows is a passage connecting Chester River and Eastern Bay. Wells Cove is an indentation on the easterly side of Kent Island Narrows about 0.4 mile south of the highway bridge crossing the Narrows. (See Coast and Geodetic Survey Charts 12266 and 12270.)

Previous project. For detail see page 262 of the 1960 Annual Report.

Existing project. Provides for a channel 6 feet deep at mean low water and 60 feet wide from Crumpton to Jones Landing, section included in project is about 5.5 miles long with the lower end of the section being about 37 miles above mouth of river; for a channel 7 feet deep at mean low water and 75 feet wide from Chester River to Eastern Bay through Kent Island Narrows; and a channel 7 feet deep at mean low water and 75 feet wide extending from 7-foot deep curve in Kent Island Narrows 800 feet into Wells Cove with a basin of same depth and 300 feet square at head of channel. Mean range of tide is 2.4 feet. Cost of new work for completed project was \$32,454, exclusive of amounts expended on previous projects. Widening 7-foot deep channel from 75 to 100 feet from Chester River to Eastern Bay through Kent Island Narrows was deauthorized and is excluded from the foregoing estimate.

Local cooperation. Fully met except local interests are to furnish disposal areas for future maintenance.

5. CRISFIELD HARBOR, MD

Location. Along western limits of the town of Crisfield on east bank of Little Annemessex River, an estuary of Tangier Sound on east side of Chesapeake Bay. (See Coast and Geodetic Survey Chart 1224.)

Previous project. For details see page 279 of Annual Report for 1962.

Existing project. A channel 12 feet deep at mean low water, 425 feet wide from the 12-foot depth curve in Tangier Sound to Somers Cove Light, thence 266 feet wide to the bend about 1,800 feet southwest of railroad pier, and thence of irregular width to a point opposite Consumers Ice Co.; a spur channel 10 feet deep and 100 feet wide from the ice plant to Hop Point; a channel 7 feet deep and 60 feet wide from the 7-foot depth curve in Little Annemessex River via Cedar Creek, a landcut, and Daugherty Creek Canal to Big Annemessex River; a mooring basin 7 feet deep, 160 feet wide and about 875 feet long roughly parallel to Brick Kiln Road, with a channel 7 feet deep and 100 feet wide leading therefrom to 7-foot project channel connecting Little Annemessex and Big Annemessex Rivers; and an anchorage basin in Somers Cove 10 feet deep, 600 feet wide, and 1,000 feet long, with an approach channel 10 feet deep and 60 feet wide from the 10-foot depth curve in Little Annemessex River through the present entrance to Somers Cove. Mean range of tide at Crisfield is about 1.9 feet.

Local cooperation. Local interests furnished disposal areas for future maintenance dredging.

Terminal facilities. Waterfront of Crisfield Harbor is built up principally with solid-bulkhead wharves and pile-and-timber piers. Most wharves are privately owned, but are open to the public for transaction of business with the owners. Few of the terminals have mechanical freight-handling devices, but most of the freight is transferred by hand. There are three boat-repair yards with marine railways having capacities up to 250 tons. Existing terminals are adequate for present and reasonably prospective commerce. Sufficient areas are available north of Hop Point and on Somers Cove for construction of additional terminals as needed.

Operations and results during fiscal year. Maintenance: Engineering and design work was accomplished for future maintenance dredging.

6. DUCK POINT COVE, MD

Location. A tidal cove about 4,000 feet long on east shore of Fox Creek, about 2.5 miles above mouth. Fox Creek is a shallow tidal estuary about 4 miles long entering Honga River about 4 miles above its junction with Hooper Strait, which, in turn, connects with Chesapeake Bay on east side, at a point about 15 miles north of mouth of Potomac River. (See Coast and Geodetic Survey Chart 1224.)

Existing project. A channel 60 feet wide and 6 feet deep, from that depth in Fox Creek to a mooring basin of same depth, 100 feet wide and 300 feet long, roughly parallel to county road at head of waterway. Cost of new work for completed project was \$25,289.

Local cooperation. Complied with except local interests must, for future maintenance, hold the United States free from damages to oyster beds and furnish spoil-disposal areas. Assurances were accepted by the Chief of Engineers October 26, 1949.

Terminal facilities. There are three privately owned packing-house wharves on north bank of Duck Point Cove which are open to the public for transaction of business with the owners. Facilities area adequate for present needs. The commissioners of Dorchester County constructed a public terminal. Sufficient areas are available for construction of additional terminals if, and when, necessary.

Operations and results during fiscal year. Maintenance: Engineering and design work was accomplished for future maintenance dredging.

7. FISHING CREEK, MD

Location. A narrow winding tidal stream which enters Chesapeake Bay from the west 56 miles south of Baltimore and about 26 miles south of Annapolis, MD. (See U.S. Coast and Geodetic Survey Chart 12266.)

Existing project: A channel 7 feet deep with widths of 100 and 60 feet from deep water in the Chesapeake Bay to an anchorage of same depth, 120 feet wide and 400 feet long, located in marsh 500 feet above mouth of creek, and twin stone jetties at entrance; north jetty is about 1,050 feet long, and south jetty about 1,100 feet long. The mean range of tide is about 1 foot. Cost of new work for the completed project was \$111,242.

Local cooperation. Fully complied with except that local interests are to furnish disposal areas as needed for future maintenance.

Terminal facilities. Seven hundred feet of bulkhead wharf are available on the south side of the entrance channel running west from bay shore, and the U.S. Navy Department constructed a pile-and-timber wharf on west side of basin.

Operations and result during fiscal year. Maintenance: Engineering & design activities were performed for future maintenance dredging of the project.

8. HERRING BAY AND ROCKHOLD CREEK, MD

Location. Herring Bay is a wide-mouthed indentation on the westside of Chesapeake Bay about 20 miles below Annapolis, MD. It is about 3 miles long from north to south and penetrates the shore for a depth of about 1 mile. Rockhold Creek, which is about 2.5 miles long, is an estuary which extends northward from the northerly end of Herring Bay. (See U.S. Coast and Geodetic Survey Chart 1225.)

Existing project. Provides for channel 7 feet deep and 60 feet wide from 7-foot contour in Herring Bay to vicinity of county wharf on Rockhold Creek, with turning basin of same depth, 100 feet wide and 150 feet long at head of channel, and a stone breakwater approximately 900 feet long east of entrance channel. Mean range of tide is about 1.5 feet and extreme tidal range about 4 feet. The Federal cost of new work for completed project was \$50,591.

Local cooperation. Fully met except local interests are to furnish disposal areas for future maintenance as needed.

Terminal facilities. Consists of a public wharf on Rockhold Creek about 600 feet below the county bridge, open to all, together with a few private landing stages. No freight-handling devices are installed on any of the wharves which are considered adequate for existing commerce.

Operations and results during fiscal year. Maintenance: A contract in the amount of \$438,374 was awarded on January 9, 2002 to dredge 38,651 cubic yards from the project and placed in an upland

placement site. Maintenance dredging commenced on February 12, 2002 and was completed on April 1, 2002.

9. HONGA RIVER AND TAR BAY, MD

Location. Honga River is a tidal estuary of Chesapeake Bay and penetrates Dorchester County on Eastern Shore of Maryland between Hooper Island and the mainland; Tar Bay lies between Barren Island and the mainland and Hooper Island. Fishing Creek connects Tar Bay and Honga River. Back Creek is a branch of Honga River extending into Hooper Island; the mouth is about 2 miles south of Fishing Creek. (See Coast and Geodetic Survey Chart 1224.)

Existing project. Provides for a channel 60 feet wide and 7 feet deep at mean low water from the 7-foot contour in Chesapeake Bay, through Tar Bay and Fishing Creek to the 7-foot contour in Honga River, 25,300 feet long, and a channel in Back Creek 7 feet deep and 60 feet wide from the 7-foot depth curve in Honga River to a point near the head of Back Creek with a turning basin of the same depth 150 feet long and 200 feet wide at the head of channel, about 5,500 feet long. Mean range of tide is about 1.4 feet. Federal cost of new work for the completed project was \$66,119.

Local cooperation. Local interests furnished placement areas for future maintenance dredging.

Terminal facilities. Numerous small private wharves are scattered along Fishing Creek and Back Creek. A public wharf is on Fishing Creek. A public wharf, four oyster houses, and a marine railway are on Back Creek. Facilities are adequate for existing and reasonable prospective commerce.

Operations and results during fiscal year. Maintenance: Engineering and design activities were performed to identify a suitable placement site for future maintenance dredging of the Back Creek portion of the project. The local sponsor has been unable to identify a suitable placement site for the dredged material.

10. MUDDY HOOK/TYLER COVE, MD

Location. Muddy Hook Cove is a small indentation about 0.7 mile south of Hoopersville on the east side of Middle Hooper Island. Middle Hooper Island is one of a chain of islands separating Honga River from Tar Bay and Chesapeake Bay on the Eastern Shore of Maryland. Tyler Cove is a small tidal indentation on the north side of Fishing Creek which separates Hooper Islands from the mainland. (See Coast and Geodetic Survey Chart 12230.)

Existing project. An entrance channel 60 feet wide and 6 feet deep from that depth in Honga River to an anchorage basin of the same depth, 160 feet wide and 400 feet long, in Muddy Hook Cove. Project also

provides an entrance channel, 60 feet wide and 6 feet deep, from the existing channel in Fishing Creek (See Honga River and Tar Bay project) into Tyler Cove and includes an anchorage basin 200 feet wide, 250 feet long, and 6 feet deep. Federal cost of new work for the completed project was \$61,917. Existing project was approved for accomplishments under general authority provided by section 107, River and Harbor Act of 1960.

Local cooperation. Local interests must furnish lands, pay for dike construction and provide rights-of-way for new work and future maintenance; hold the United States free from damages; build and maintain a suitable public landing with adequate approaches thereto at each location; accomplish alterations, relocations, and removal, as required, of sewer, water supply, drainage and other utility facilities, and piers and stakes.

Terminal facilities. Local interests have, under terms of local cooperation, provided a public landing at Tyler Cove. A few privately owned piers are on Muddy Hook Cove. Local interests provided a public landing at Muddy Hook Cove, in accordance with the terms of local cooperation.

Operations and results during fiscal year. Maintenance: Engineering and design was accomplished in connection for future maintenance dredging.

11. NANTICOKE RIVER, MD

Location. The Nanticoke River flows in a south-westerly direction to Tangier Sound, Chesapeake Bay, and is about 50 miles long. The town of Nanticoke, MD, is on the east side of the river, about 3 miles from the mouth, just north of Roaring Point. (See Coast and Geodetic Survey Chart 567.)

Existing project. Provides for a small-boat harbor 7 feet deep, 120 feet wide, and 400 feet long in the marsh at Nanticoke, with an entrance channel of the same depth and 60 feet wide, protected by twin stone jetties in the river, the north jetty being about 870 feet long and the south jetty being about 770 feet long. The mean range of tide is about 2.6 feet. The cost of new work for the completed project was \$73,243.

Local cooperation. Fully met except that local interests are to furnish placement sites as required for subsequent maintenance and guarantee the United States and its contractors against claims for damages to oyster beds attributable to subsequent maintenance.

Terminal facilities. There are three privately owned wharves open to the general public.

Operations and results during fiscal year. Maintenance: A contract in the amount of \$490,467 was awarded on August 14, 2002, to dredge 23,918

cubic yards from the project and placed in an upland placement site.

12. NANTICOKE RIVER, DE AND MD

Location. Headwaters of Nanticoke River consist of numerous branches rising mainly in the northern portion of Sussex County, DE. The river is about 50 miles long and flows southwesterly from its source to Tangier Sound.

Northwest Fork is a branch of Nanticoke River which rises in Kent County, DE, and flows past Federalsburg, MD, generally southerly through Dorchester County, MD, to its junction with the main river opposite Riverton, MD. It is about 30 miles long. (See Coast and Geodetic Survey Chart 77.)

Existing project. Nanticoke River: Channel 12 feet deep and 100 feet wide from the 12-foot depth curve in Tangier Sound to the highway bridge at Seaford, DE, with a turning basin at the upper end. Disjointed sections included in the project is about 4 miles long, extending over 32 miles of river; lower end of the first section of the project is about 8 miles above the mouth of the river. Mean range of tide is 3.4 feet, and the extreme tidal range is 4.3 feet.

Northwest Fork: Dredging a channel 6 feet deep and 60 feet wide at mean low water from upper Browns wharf to within one-half mile of the southern boundary of town of Federalsburg, with a turning basin at the upper end. Section included in the project is about 4 miles long, and its lower end is 11.75 miles above the mouth of the river. Mean range of tide is 2.6 feet.

Local cooperation. Local interests must furnish disposal areas for future maintenance dredging.

Terminal facilities. Waterfront at Seaford consists largely of unconnected pile-and-timber bulkhead wharves with earthfills. One public wharf is used as a launching ramp. Remaining wharves are privately owned. A rail siding extends along a considerable portion of waterfront and offers facilities for interchange of rail and water traffic. Existing terminals are reasonably adequate for present and prospective commerce.

Terminal facilities on Northwest Fork are all privately owned and open to general public use. They consist of one solid bulkhead wharf of 80-foot frontage and three landings each with 60-foot frontages. Depths of water are from 2 to 8 feet. Landings are log revetments backed by earthfill and are in poor condition.

Operations and results during fiscal year. Local sponsor was unable to identify a suitable placement site for dredge material; therefore, all engineering and design work was suspended pending identification of a site and future funding.

13. NEALE SOUND, MD

Location. Along the Potomac River between Cobb Island and the mainland of Charles County, Maryland, near the confluence with Wicomico River, 70 miles downstream of Washington, D.C. (See U.S. Coast Guard and Geodetic Survey Chart. (See Coast and Geodetic Survey Chart 12286.)

Existing Project. A channel 7 feet deep and 100 feet wide at the lower entrance to Neale Sound, from deep water within the Sound to deep water in the Wicomico River; a channel 6 feet deep and 80 feet wide in the Potomac River to deep water within the sound at the upper entrance. Plane of reference is mean low water. Total project length is 5,000 feet. Tidal range is 1.9 feet. The project was adopted by the River and Harbor Act of August 26, 1937, and constructed in 1939. The upper channel has been maintained five times, the lower channel has not required maintenance. In July 1999, the project was modified by Section 107 of the River and Harbor Act of 1960 to provide for a 1,650 foot stone jetty to protect the upper channel from shoaling.

Local Cooperation. Charles County has completed their cost-sharing requirements, pending project financial closeout, which is anticipated in spring 2001. Charles County has provided 50 percent of the cost of the feasibility study, including in-kind services, that was completed in February 1997, and sufficient cash and credits to satisfy the requirements of Section 107 for plans and specifications and construction.

Operations During Fiscal Year. Maintenance: A contract in the amount of \$344,000 was awarded on June 24, 2002, to dredge 22,939 cubic yards from the project and the dredged material was used to create an oyster bar. Maintenance dredging commenced on July 24, 2002 and was completed on August 12, 2002. Upon completion of the dredged material placement, 2,500 cubic yards of clamshell material and 2,500 cubic yards of oyster shell were placed on top of the dredged material. Oyster clutch was then placed on top of the oyster shell material.

14. OCCOQUAN RIVER, VA

Location. Occoquan Creek is formed by the junction of Bull and Broad Runs, about 5 miles southeast of Manassas, VA, and flows about 13 miles in a southeasterly direction, emptying into the Potomac River about 26 miles below Washington, D.C. (See Coast and Geodetic Survey Chart 560.)

Previous project. The original project was adopted by the River and Harbor Act of March 3, 1873. For further details see page 1792, Annual Report for 1915, and page 363, Annual Report for 1936.

Existing project. Provides for a channel 6 feet deep and 150 feet wide from deep water in the Potomac River to Taylors Point, and thence 100 feet wide to the town of Occoquan 6 miles from the mouth, and the protection of the channel above Taylors Point by riprap stone dikes 2,200 feet long. Mean range of tide is 2.0 feet.

Local cooperation. None required.

Terminal facilities. There are 10 landings or wharves in Occoquan Creek. The principal terminal is a solid fill and open pile structure; all the other wharves or landings are solid bulkhead structures.

Operations and results during fiscal year. New Work: The Defense Appropriations Act of 2002 modified the authorization and directed the Secretary of the Army to (1) deepen the project to a depth of 9 feet and (2) widen the project between channel marker number 2 and the bridge at U.S. Route 1 to a depth of 200 feet. Feasibility phase investigations began to determine if this modification was economically justified and if a non-federal sponsor can be identified to cost-share construction of the project modification.

15. OCEAN CITY HARBOR AND INLET AND SINEPUXENT BAY, MD

Location. Ocean City is on a barrier island between Sinepuxent Bay and Atlantic Ocean about 35 miles south of entrance to Delaware Bay. (See U.S. Coast and Geodetic Survey Chart 12211.)

Existing project. This provides for an inlet channel 200 feet wide and 10 feet deep through the inlet to the channel in the Isle of Wight Bay, protected on the south side by a stone jetty with a top elevation of 8.8 feet above mean low water and a top width of 18 feet, and on the north side by a stone jetty with a top elevation of 9 feet above mean low water and a top width of generally 20 feet, thence generally 100 feet wide and 6 feet deep to the project harbor; a channel 6 feet deep and 150 feet wide in Sinepuxent Bay from the inlet to Green Point, and thence 100 feet wide in Chincoteague Bay; and for a channel 6 feet deep and 125 feet wide from the inlet channel to a point opposite North Eighth Street in Ocean City, thence 75 feet wide into the Isle of Wight Bay. The modification authorized by the 1954 River and Harbor Act was de-authorized in December 1989. This work included 16- and 14-foot depth channels with widths from 300 to 100 feet from the Atlantic Ocean to the head of the harbor. Depths in the inlet channel and harbor refer to project datum. Depths in the bay channels refer to mean low water.

The elevation of mean low water in the bays above mean low water in the ocean at Ocean City varies from about 0.8 foot in the vicinity of the inlet to 1.7 feet at

their heads. The mean range of ocean tide is 3.4 feet. The extreme range is from 3 feet below mean low water to about 3.5 feet above mean high water, a total of 9.9 feet. In the bays the mean range of tide varies from approximately 2.5 feet at the inlet to 0.3 foot at their heads. Greater fluctuations are caused by prolonged high winds. Federal cost of new work for the completed project was \$1,190,530, exclusive of \$500,000 contributed by local interests and exclusive of \$3,700,000 for rehabilitating the south jetty.

Local cooperation. Fully met except local interests must furnish disposal areas for future maintenance as needed.

Terminal facilities. On bay side of Ocean City: two storage basins, for pleasure and small commercial craft, and numerous privately owned pile-and timber piers and bulkhead wharves. At project harbor: a public landing about 1,000 feet long, several privately constructed bulkhead wharves open to the public for transaction of business with the owners, and a boat repair yard with a marine railway capable of handling boats up to about 150 tons. All piers and wharves are accessible by highway. Port facilities have been expanded to include all available space in the Fish Harbor.

Operations and results during fiscal year. Maintenance: Construction began on the south jetty rehabilitation contract in April 2002 and is anticipated to be completed in January 2003.

16. POCOMOKE RIVER, MD

Location. Pocomoke River is a tributary of Pocomoke Sound, a tidal estuary on the east side of Chesapeake Bay about 40 miles north of Cape Charles, VA.

Existing project. Provides for a channel 11 feet deep at mean low water and 150 feet wide from the 11-foot depth in Pocomoke Sound to Tulls Point, thence 100 feet wide to deep water in Pocomoke River above Williams Point, and for construction of a dike along the offshore side of channel between Tulls Point and the end of the existing dike; and a channel 9 feet deep at mean low water and 100 to 130 feet wide from Shad Landing to the bridge at Snow Hill. Length of project is about 8.7 miles from Pocomoke Sound to Williams Point, and about 4.5 miles from Shad Landing to Snow Hill, MD. Shad Landing is about 25.7 miles above the mouth of the river.

Mean range of tide is 2.4 feet in Pocomoke Sound and 2.5 feet in the river at Snow Hill. Prolonged high winds on Chesapeake Bay frequently cause greater fluctuations. Estimated cost (1969) for new work is \$1,071,458 exclusive of amounts expended under previous projects. Extensions of channel above the

bridge at Snow Hill, 100 feet wide, 9 feet deep and widened to 150 feet to form a turning basin at upper end was de-authorized and is excluded from the foregoing estimate.

Local cooperation. Compiled with for section of project from Pocomoke Sound to Pocomoke River and from Shad Landing to the highway bridge at Snow Hill, authorized by acts of June 3, 1986, and August 30, 1935, except local interests must furnish releases from damage to oyster beds and spoil disposal areas as required for future maintenance. Terms for the section of the project above the highway bridge at Snow Hill, authorized by act of March 2, 1945, required local interests to furnish all lands, easements, rights-of-way, and spoil disposal areas for initial work and future maintenance, hold the United States free from damages resulting from the improvement; and contribute one-half the initial cost of that portion of project, but not to exceed \$4,250. This portion was de-authorized. Terms for the 11-foot depth channel from Pocomoke Sound to deep water in Pocomoke River above Williams Point, authorized by act of September 3, 1954, and de-authorized in December 1989 required local interests to provide all lands, easements, rights-of-way, and spoil disposal areas for construction and future maintenance of the project; and hold the United States free from damages due to construction and maintenance, including such damages as may occur to the public or leased oyster beds.

Terminal facilities. Waterfronts at Pocomoke City and Snow Hill are built up principally with earthfilled timber bulkheads, the majority of which are privately owned. A few of the warehouses and factories on the river at these communities have railroad sidings and mechanical freight-handling facilities. Any appreciable increase in commerce at Pocomoke City or Snow Hill would necessitate construction of new facilities and repair of existing structures. Adequate space is available for development of additional terminals.

Operations and results during fiscal year. Maintenance: Engineering and design activities were performed for future maintenance dredging of the project.

17. POTOMAC AND ANACOSTIA RIVERS, DC, COLLECTION AND REMOVAL OF DRIFT

Location. Project applies to the Potomac and Anacostia Rivers, Washington, DC, and their tributaries.

Existing project. Collection and removal of drift from the waters of the Potomac and Anacostia Rivers and their tributaries in the Washington area from the head of tidewater to Mount Vernon, VA. Total length

of project, considering both sides of the waterway, is about 50 miles.

Local cooperation. None required.

Terminal facilities. See Section 22 of this text.

Operations and results during fiscal year. Maintenance: Operations by hired labor consisted of collection and disposal of 58,320 cubic feet of driftwood, ranging from small blocks up to timbers of large dimensions.

18. POTOMAC RIVER AT MOUNT VERNON, VA

Location. Mount Vernon lies in Fairfax County, VA, about 14 1/2 miles below Washington, DC on the right bank of the Potomac River, which flows in a southeasterly direction into the Chesapeake Bay, 93 1/2 miles downstream from Mount Vernon. (See U.S. Coast and Geodetic Survey Chart No. 560.)

Existing project. This provides for dredging a channel 200 feet wide and 9 to 10 feet deep, at mean low water, between the main channel of the Potomac River and the Mount Vernon wharf, a distance of about 2,200 feet, with a turning basin of the same depth and a radius of 200 feet at the wharf. Tidal ranges are: mean, 2.2 feet; irregular, 3 feet; and extreme, 9.7 feet.

The cost estimate of the project to the Federal Government made in 1888 was \$26,000. There is no approved estimate for annual cost of maintenance.

Local cooperation. None required.

Terminal facilities. There is one privately owned and operated wharf on the Mount Vernon estate at the head of the channel.

Operations and results during fiscal year. Maintenance: A contract in the amount of \$1,519,727 was awarded on September 13, 2001 to dredge 39,173 cubic yards from the project. The material was dredged mechanically, unloaded at Marshall Hall, and trucked to a surface mining site. Dredging was completed on January 24, 2002.

19. POTOMAC RIVER BELOW WASHINGTON, DC

Location. Potomac River is formed 21 miles below Cumberland, MD, and flows southeasterly about 285 miles and enters Chesapeake Bay, about 80 miles from Atlantic Ocean. Washington, DC is 108 miles upstream of mouth, and head of tidewater is at mile 117. (See Coast and Geodetic Survey Charts No., 12233, 12286, 12287, 12288, and 12289.)

Existing project. Provides for a channel 24 feet deep and 200 feet wide between the mouth of the river and Giesboro Point at Washington, DC--a distance of 108

miles. Plane of reference is mean low water. Tidal ranges are: mean, 1.3 feet at mouth, 2.9 feet at Washington; irregular, 2 feet at mouth, 4.5 feet at Washington; extreme, about 6 feet at mouth, 10.7 feet at Washington. Federal cost of new work for the completed project was \$153,836.

Local cooperation. None required.

Terminal facilities. In general, the improvement is a main river channel, and terminal facilities are only served where the channel runs close to either bank of river.

Operations and results during fiscal year. Maintenance: Engineering and design activities were performed for future maintenance dredging of the project. A contract was issued to locate placement sites.

20. PREVENTION OF OBSTRUCTIONS AND INJURIOUS DEPOSITS, MD

Location. Project applies to tidal waters of the harbor of Baltimore and its adjacent and tributary waters and to all tidal waters of Chesapeake Bay and in Maryland.

Existing project. Patrol and inspection throughout the project location to detect violations of sections 13 and 15 of the River and Harbor Act of March 3, 1899 and to investigate obstructions to navigation pursuant to Federal regulations (33 CFR 209.109).

Local cooperation. None required.

Operations and results during fiscal year. Maintenance: Operations, by Supervisor of Harbor of Baltimore included inspections of approximately 81 Federal navigation channels within the project location to insure channels are not obstructed to general navigation by debris, sunken vessels/wrecks, and fishing appurtenances. There were 103 investigations of obstructions or sunken vessels/wrecks.

21. RHODES POINT TO TYLERTON, MD

Location. Rhodes Point and Tylerton are two settlements about 1.5 miles apart on Smith Island, between Chesapeake Bay and Tangier Sound, about 60 miles north of Virginia Capes, and about 110 miles south of Baltimore. (See U.S. Coast and Geodetic Survey Chart 1224.)

Existing project. Channel 6 feet deep, 50 feet wide from that depth in Tyler Creek to and including an anchorage basin of the same depth 150 feet wide and 400 feet long at Tylerton; channel 6 feet deep and 50 feet wide from that depth in Big Thorofare River to

Tylerton; and Channel 6 feet deep and 50 feet wide from Rhodes Point to Tylerton. Mean range of tide is 1.7 feet. On January 22, 1982, the Chief of Engineers under authority of Section 107 of the 1960 River and Harbor Act, as amended, authorized a channel 6 feet deep and 50 feet wide a distance of about one mile from the anchorage basin at Rhodes Point through Sheep Pen Gut to deep water in the Chesapeake Bay.

Local cooperation. Fully met except local interests must furnish placement sites for future maintenance dredging.

Terminal facilities. There are numerous pile-and-timber wharves along waterfronts at Rhodes Point and Tylerton. Facilities are privately owned, open to the public without charge when not in use by the owners, and are adequate for existing commerce. Sufficient space for construction of additional facilities is available, if required.

Operations and results during fiscal year. Maintenance: A contract in the amount of \$2,849,187.28 was awarded on December 19, 2001 to dredge 220,000 cubic yards from Rhodes Point to Tylerton and Twitch Cove & Big Thorofare. The Rhodes Point to Tylerton portion of 104,000 cubic yards was completed in April 2002. A portion of the material was used to seal a breach at the Martin Wildlife Refuge.

22. ST. JEROME CREEK, MD

Location. St. Jerome Creek is a tidal estuary in St. Marys County, MD, 2.5 miles long flowing in a southeasterly direction and entering the western shore of the Chesapeake Bay, 6 miles north of Point Lookout, at the mouth of the Potomac River. The creek is 86 miles northerly of Norfolk, VA. (See Coast and Geodetic Survey Chart 12233.)

Existing project. Provides for a channel 100 feet wide and 7 feet deep from Chesapeake Bay to the Vicinity of Airedele, thence 60 feet wide to deep water in the creek, with a turning basin of the same depth 200 feet wide and 300 feet long opposite Airedele. The project is 4,900 feet long. The plane of reference is mean low water. The tidal ranges are: Mean 1.3 feet, and extreme, approximately 7 feet. The cost of the Federal Government for new work, for the completed project was \$17,857, exclusive of amounts expended under previous projects.

Local cooperation. Fully complied with, except that local interests are to furnish spoil disposal areas for future maintenance as needed.

Terminal facilities. There are numerous privately-owned wharves, 2 of which are open to the public. It is

considered that the present terminal facilities are adequate for present and prospective commerce.

Operations and results during fiscal year. Maintenance: Engineering and design activities were performed for future maintenance dredging of the project. The local sponsor has been unable to provide a suitable placement site for the dredged material.

23. TOLCHESTER CHANNEL S-TURN, MD

Location. The Tolchester Channel is located along the eastern side of the upper Chesapeake Bay, near Tolchester Beach, Kent County, Maryland (see National Ocean Survey Chart 12278).

Existing Project. The Tolchester Channel is a uniform channel 35 feet deep, 600 feet wide with widening at the bends, and 7 miles long that follows the naturally deeper water along the eastern side of the upper Chesapeake Bay. The mean range of tide is 1.2 feet. Depths refer to mean lower low water. The project provides for constructing a new straight channel 35 feet deep, 600 feet wide, and 2 miles long to replace the existing Tolchester Channel S-Turn, which has several turns within a 3-mile long reach of channel. Section 329 of the Water Resources Development Act of 1999 modified Section 101 of the Rivers & Harbors Act of 1958 to "direct the Secretary to straighten the Tolchester Channel S-Turn as part of the project maintenance".

Local cooperation. Section 101 of the River and Harbor Act of 1958, PL 85-500, 3 Jul 1958 requires locals interests to: (1) furnish without costs to the United States all lands, easements, right-of-way, and dredged material placement areas necessary for construction and subsequent maintenance, when and as required; (2) hold and save the United States free from damages due to construction and maintenance of the project; and (3) provide and maintain all necessary alterations in sewer, water supply, drainage, and other utilities.

Terminal facilities. Terminal facilities are described under the Baltimore Harbor & Channels, MD and VA, Federal navigation project.

Operations and results during fiscal year. Dredging of the Tolchester S-Turn, by contract, commenced on October 3, 2001 and was completed on January 27, 2002. A total of 2,844,564 cubic yards of material were dredged and deposited in the Poplar Island Environmental Restoration Project in the Chesapeake Bay at a cost of \$10,502,968.

24. TWITCH COVE AND BIG THOROFARE, MD

Location. A tidal waterway about 4 miles long traversing Smith Island, MD, southeasterly from Chesapeake Bay on the west to Tangier Sound on the east. (See U.S. Coast and Geodetic Survey Chart 1224.)

Existing project. A channel 7 feet deep at mean low water and 60-feet wide from Twitch Cove on Tangier Sound through Big Thorofare, thence through canal at Ewell, MD, thence through Levering Creek and Big Thorofare to vicinity of Swan Point, thence of same depth and 100 feet wide through offshore bar to deep water in Chesapeake Bay, with twin stone jetties at entrance, north jetty is about 2,080 feet long, and south jetty about 1,800 feet long; and anchorage basin 7 feet deep, 100 feet wide, and 700 feet long connecting with west side of existing project channel at Ewell; extension of existing project channel in Levering Creek, 6 feet deep, 60 feet wide, and 1,000 feet long; and a channel 4 feet deep and 25 feet around point between Big Thorofare and Tylers River. Mean range of tide is 1.7 feet, and extreme tidal range is 3 feet. Federal cost of new work for completed project was \$193,175.

Local cooperation. Fully complied with, except that local interests are to furnish placement sites for future maintenance as needed.

Terminal facilities. Numerous privately owned pile-and-timber wharves and bulkheads at Ewell are open to the public for business transactions with the owners. A county wharf is also at west end of town. Five crab houses are on Levering Creek, and one oyster house on project waterway west of Town of Ewell.

Operations and results during fiscal year. Maintenance: A contract in the amount of \$2,849,187.28 was awarded on December 19, 2001 to dredge 220,000 cubic yards from Rhodes Point to Tylerton and Twitch Cove & Big Thorofare. The Rhodes Point to Tylerton portion was completed in April 2002. Dredging of Twitch Cove & Big Thorofare, which is estimated to be 110,000 cubic yards, will be accomplished in FY 2003 during the next environmental window.

25. UPPER THOROFARE, MD

Location. Natural waterway lying between Deal Island and mainland of Somerset County, MD, on eastern shore of Chesapeake Bay. (See U.S. Coast and Geodetic Survey Chart 1224.)

Previous project. For details see page 277 of Annual Report for 1962.

Existing project. Entrance channel from Tangier Sound 9 feet deep and 100 feet wide, thence of irregular width to and along south shore of Thorofare, protected

by two stone breakwaters at entrance, north breakwater is about 410 feet long and south breakwater about 310 feet long, with a turning basin at inner end 9 feet deep on south side of channel to within 50 feet of bulkhead along south shore, an anchorage area 6 feet deep and 150 feet wide extending across waterway parallel to highway bridge to within 50 feet of bulkhead on south shore, and an anchorage area 650 feet long, 300 feet wide, and 9 feet deep on north side of channel between breakwater and 6-foot anchorage. Mean range of tide is about 2 feet.

Local cooperation. Fully complied with.

Terminal facilities. A small packing-house wharf on shore of Tangier Sound south of project channel: two small packing houses along approach channel at which seafood is landed; and a public wharf at turning basin with a suitable road connecting it with the road system.

Operations and results during fiscal year. Maintenance: Engineering and design activities were performed for future maintenance dredging of the project.

26. WASHINGTON HARBOR, DC

Location. Within the District of Columbia at junction of the Anacostia River with the Potomac River which flows southeasterly 108 miles to the Chesapeake Bay. It is southerly 202 miles by water from Baltimore, MD, and northerly 195 miles from Norfolk, VA. (See U.S. Coast and Geodetic Survey Chart 12289.)

Existing projects. The Washington Harbor project provides for a channel in the Potomac River from Giesboro Point to Key Bridge, a second channel from Giesboro Point to the end of Washington Channel, and a third channel from the mouth of the Anacostia River to the foot of 15th Street, SE, with turning basins opposite the Naval Weapons Plant (800 feet wide 2,400 feet long) and at the head of the Anacostia Channel (400 feet square). Channel dimensions are 24 feet deep and 400 feet wide except upstream from Anacostia Channel Bridge where the width is reduced to 200 feet and from Giesboro Point to a point 3,000 feet downstream of Arlington Memorial Bridge and above Easby Point where channel dimensions are 20 feet deep and 200 feet wide. Channel lengths including turning basins are: Virginia Channel, 5,000 feet; Washington Channel, 10,000 feet; and Anacostia River, 15,000 feet; and operations and maintenance of the inlet gates and lock and the outlet gates of the Tidal Basin constructed under a previous project to flush Washington Channel. Plane of reference is low-water datum which is .35 foot below mean low tide as observed from 1932 to 1942. Tidal ranges are: mean, 2.9 feet; irregular, 4.5 feet; and

extreme, 10.7 feet. Federal cost of new work for the completed project was \$162,006.

Local cooperation. None required.

Terminal facilities. There are four wharves generally of bulkhead type on Virginia Channel that are privately owned and not open to the public except by special arrangement. On Washington Channel there are four piers under jurisdiction of District of Columbia, two of which are open to the public and one open to the public by special arrangement. In Anacostia River there are four privately owned piers and eight government piers and slips. None of the piers is open to the public except by special arrangement. Terminal facilities are considered adequate for existing commerce.

Operations and results during fiscal year. Maintenance: The tidal basin gates were inspected and maintained by hired labor.

27. WICOMICO RIVER, MD

Location. Wicomico River has its source in northern part of Wicomico County, MD, and flows generally southwardly emptying into Monie Bay, a tributary of Tangier Sound on the east side of Chesapeake Bay about 85 miles southeast of Baltimore. Webster Cove is the site of an improved small-boat harbor on southeast bank of Wicomico River about 3 miles above the mouth. (See U.S. Coast and Geodetic Survey Charts 567 and 1224.)

Existing project. Channel 14 feet deep and 150 feet wide from Chesapeake Bay to Salisbury, about 37 miles long, including about 12 miles from the mouth of river to Chesapeake Bay; 14 feet deep in channels and turning basins in north and south prongs with channel widths of 100 feet, and a channel 6 feet deep and 60 feet wide extending from 6-foot contour in Wicomico River to and including a basin in Webster Cove of the same depth, 100 feet wide and 400 feet long; and extension of basin 200 feet long and 100 feet wide on each side. Plane of reference is mean low water. Mean range of tide is about 3 feet, and extreme tidal range is 4.4 feet. Cost of new work for the completed project was \$421,609, exclusive of amounts expended on the previous project.

Local cooperation. Fully met, except that local interests are to furnish disposal areas for future maintenance as needed and hold the United States free from such damages as may occur to public or leased oyster beds.

Terminal facilities. Present waterfront at Salisbury consists of pile-and-timber bulkheads with earthfills. Some wharves have warehouses and factories with mechanical freight-handling facilities and rail sidings. All terminals are privately owned. A shipyard, with two

marine railways with capacities of 1,200 and 500 tons, respectively, is on right bank of river below prongs. Areas for development of new terminals on north prong are limited. Areas for considerable expansion of terminal facilities are available on main river. There is a pile-and-timber wharf about 4 miles above the mouth of river at Mount Vernon. A wharf of similar construction is at White Haven. There is a county wharf at head of basin in Webster Cove, a pile-and-timber pier at oyster house on southwest side of basin, a T-shaped pile-and-timber pier at cafe on southwest side of basin and several small timber piers on walkways that local interests constructed around the basin. Fueling facilities are available for construction of additional facilities when required.

Operations and results during fiscal year. Maintenance: Engineering and design activities were performed for future maintenance dredging of the project.

28. RECONNAISSANCE AND CONDITION SURVEYS

(See Table 4-H at end of chapter.

29. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Fiscal year cost were \$166,186 for Coan River, VA; \$95,971 for Rockhold Creek, MD; \$10,330 for Section 107 Coordination; \$12,613 for Tedious Creek; \$9,493 for Webster's Cove, Somerset County, MD; \$268,740 for Ocean City Harbor and Inlet, MD; \$102,973 for Rhodes Point, MD; and \$38,861 for Tall Timbers, MD.

Non-Federal contributed costs for the fiscal year were; \$50,236 for Rockhold Creek.

SHORE PROTECTION

30. SHORE PROTECTION WORK UNDER SPECIAL AUTHORIZATION

Shore Protection pursuant to Sec. 103 of Public Law 727, as amended (pre-authorization). None.

31. ASSATEAGUE ISLAND, MD

Location. The Town of Ocean City and adjacent areas of Worcester County comprise an area of 625 square miles including Assateague Island, Ocean City Inlet, and Chincoteague, Sinexuxent, Assawoman, and Isle of Wight Bays on the Eastern Shore of Maryland.

Adjacent to Ocean City is the Assateague Island National Seashore and State Park.

Existing project. The project involves the short-term and long-term restoration of Assateague Island. The short-term restoration plan includes dredging of approximately 1.4 million cubic yards from Great Gull Bank and placing it on Assateague Island in the area between 1.6 miles and 7.2 miles south of the south jetty. The beach will be widened varying distances and a low storm berm will be constructed to elevation 3.3 meters. The long-term portion of the project consists of the mobile bypassing of 190,000 cubic yards of sand around the inlet. Both the short-term and long-term projects include monitoring components. The project area is composed of 4.7 miles of National Park Service and 0.9 miles of State of Maryland land.

Local cooperation. The sponsor for the project is the National Park Service who administers the Assateague Island National Seashore. The National Park Service will provide lands, easements and rights-of-way for the initial construction work.

Operations and results during fiscal year. New Work: Memorandum of Agreement executed between Corps and the National Park Service. Short-term costs will be 100% Corps funded and Long-term costs will be 50% Corps/ 50% National Park Service. The construction contract for the short-term portion was awarded September 2001 to Weeks Marine, Inc. in the amount of \$9,675,000. Construction started in July 2002 and continued through the fiscal year.

32. ATLANTIC COAST OF MARYLAND

Location. The project is located on Fenwick Island at Ocean City, MD, which is about 35 miles south of the entrance to Delaware Bay. (See U.S. Coast and Geodetic Survey Charts 1220.)

Existing project. The authorized project provides for a steel sheetpile bulkhead along the oceanward edge of the boardwalk from about 4th Street to 27th Street and a sand dune from 27th Street to about 0.3 mile across the Delaware line. The bulkhead is fronted by a 165-foot wide beach, and the dune is fronted by a 100-foot wide beach. The project also provides for periodic nourishment over the 50-year project life. The current estimated total project cost is \$500,000,000 (including a future inflation allowance through the project completion) which includes \$44,881,000 for initial construction and \$455,119,000 for periodic nourishment.

Local cooperation. The State of Maryland is the project sponsor and the Local Cooperation Agreement was executed March 30, 1990. The sponsor is required

to: provide lands, easements, and rights-of-way; modify or relocate buildings, utilities, roads, bridges and other facilities; pay 35% of the first costs and 47% of periodic nourishment costs; and bear all costs of operation maintenance, replacement and major rehabilitation of storm damage reduction facilities. To date the sponsor has fully met these requirements.

Operations and results during fiscal year. New Work: Beach monitoring continued throughout the fiscal year. A construction contract for the second beach re-nourishment project was awarded to Weeks Marine, Inc. on April 11, 2002 in the amount of \$4,559,666. Placement of approximately 700,000 cubic yards of sand started May 30, 2000 and was completed on June 27, 2002.

33. COLONIAL BEACH, VA

Location. Colonial Beach, Westmoreland County, VA, is located on the right bank of the Potomac River 40 miles upstream from its mouth at Chesapeake Bay and 69 miles downstream from Washington, DC. (See U.S. Coast and Geodetic Survey Chart No. 12286.)

Existing project. On May 29, 1980, the Chief of Engineers under authority of Section 103 of the River and Harbor Act, as amended, authorized construction of the following work: extending the existing Central Beach area and beach at Castlewood Park; off shore breakwaters; and one terminal groin at Castlewood Park. The Central Beach extension begins downstream from Hawthorne Street and continues southward for 1,570 feet, with a maximum width of 120 feet, and provides 107,200 square feet of area, stabilized with vegetation about 200 feet of embankment behind the beachfill. There are four 200-foot breakwaters to stabilize this beach area. At Castlewood Park there are: a 59,300 square foot beach area; three breakwaters; and one 100-foot terminal groin to reduce shoaling to the entrance channel to Monroe Creek. The breakwaters are two each at 200 feet in length and one at 300 feet. The beach will have periodic nourishment when needed.

Local cooperation. The May 4, 1981 Local Cooperation Agreement with the Town of Colonial Beach, in brief, requires the local sponsor to: provide all lands, easements, and rights-of-way; hold and save U.S. from damages; assure public ownership; assure maintenance and repair of the breakwaters; provide 50 percent of the initial construction cost; provide 50 percent of the cost of periodic beach nourishment.

Operations and results during fiscal year. Maintenance: The periodic beach re-nourishment was completed in the fall of 2000. Future re-nourishment will be completed as necessary.

FLOOD CONTROL

34. BROAD TOP REGION, PA

Location. The project is located in South Central Pennsylvania, and includes portions of Bedford, Fulton, and Huntingdon Counties. (See Geological Survey Quadrangle sheets Saltillo, PA, and Saxton, PA.)

Existing project. Section 304 of the Water Resources Development Act of 1992, as amended provides for a pilot project to develop and carry out a watershed reclamation and protection, and wetlands creation and restoration project using innovative reclamation technologies for the purposes of restoring, maintenance and protecting surface and ground water, including municipal water supplies, from adverse impacts related to acid mine draining and other runoff. A Master Plan, prepared at a cost of \$400,000 identified many potential projects in the Broad Top Region. The Wood-Broad Top-Wells Water Supply and Environmental Restoration project was developed as the initial pilot project. The project consists of two components--replacement and upgrade of the Water Supply System for the villages of Wood and Robertsedale and the restoration of abandoned mine sites at Rocky Ridge South and Defiance North. The current estimated total project cost is \$6,975,000, which includes a future inflation allowance through project completion. Federal funds allocated for the project are \$5,000,000.

Local cooperation. The Wood-Broad Top-Wells Joint Municipal Authority is the non-Federal sponsor for the project. The local sponsor is required to provide 25% of the cost of the project, including lands, easements, rights-of-way, and relocations, and bear all costs of operation, maintenance, replacement, repair and rehabilitation of the project after construction.

Operations and results during fiscal year. Final actions to document completed work were accomplished during fiscal year 2002.

35. CUMBERLAND, MD, AND RIDGELEY, WV

Location. On the North Branch of the Potomac River, 21 miles upstream from its junction with the South Branch of the Potomac River and 197 miles upstream from Washington, DC. The Chesapeake and Ohio (C&O) Canal stretches 184.5 miles along the Potomac River from the District of Columbia to its terminus in Cumberland, MD, Allegany County. (See Geological Survey Quadrangles, Frostburg and Flintstone, MD, WV, and PA.)

Existing project. Channel improvements on the North Branch of Potomac River from the Western Maryland Railway bridge in South Cumberland upstream to the mouth of Wills Creek, with levees and fill along the left bank and levees along the right bank from downstream corporate limits of Ridgeley, WV, to a point about 150 feet above Johnson Street Bridge; channel improvements along Wills Creek from its mouth upstream to a point in the Narrows about 500 feet upstream from the highway bridge on U.S. Highway 40; levee and flood wall in West Cumberland, MD, on the left bank of the North Branch of the Potomac River from the mouth of Wills Creek upstream to Kelly Boulevard; levee and flood wall in Ridgeley, WV, on the right bank of the North Branch of the Potomac River from Carpenter Avenue upstream to Patapsco Street near the upstream corporate limits of Ridgeley, WV; interior drainage facilities in Cumberland and West Cumberland, MD, and Ridgeley, WV; removal of the Chesapeake and Ohio Canal dam and construction of a new industrial dam on the North Branch of the Potomac River immediately above mouth of Wills Creek; and alteration and reconstruction of highway and railroad bridges. Federal cost of new work for the completed project is \$15,633,970, which includes \$49,998 emergency relief funds and is exclusive of \$197,513 public works acceleration funds. Estimated cost to local interests is \$2,900,000 of which \$1,402,001 is contributed funds and \$1,497,999 is for lands and damages.

Section 580 of WRDA 99 authorizes the Secretary of the Army to undertake "restoration of the historic Chesapeake and Ohio Canal substantially in accordance with the Chesapeake and Ohio Canal National Historic Park"...The plan envisioned is to re-build and rewater up to 1.1 miles of the historic C&O Canal terminus at Cumberland. The turning basin was filled in by the Corps in the 1950's as part of the Cumberland, Md-Ridgeley, WV Flood Protection Project. The project is currently authorized at \$15M.

Local cooperation. Fully met for the project. The City of Cumberland is the non-Federal sponsor for the new work. The local sponsor is required to provide 35% of the cost of the project, including lands, easements, rights-of-way, and relocations. In-kind services are permitted to count towards the sponsor's share to include those incurred prior to a signed project cooperation agreement. The National Park Service (NPS) is responsible for operation and maintenance.

Operations and results during fiscal year. New Work: Rewatering design is 75 percent complete and a value engineering study has been completed. Maintenance: Normal operation and maintenance of the project continued.

36. JENNINGS RANDOLPH LAKE, MD AND WV

Location. Project is located on the North Branch Potomac River on the state line between Garrett County, MD, and Mineral County, WV. The damsite is located approximately 7.9 miles upstream from the confluence with Savage River at Bloomington, MD. It is also about 5 air miles southwest of the tritowns of Luke and Westernport, MD and Piedmont, WV. (See Geological Survey quadrangle sheets, Kitzmiller and Westernport, MD.)

Existing project. The improvement consists of a rolled earth and rock fill dam with an impervious core and an 800-foot long dike on the left bank. Top of dam is 296 feet above streambed with a total length of 2,130 feet. When filled to spillway crest, the reservoir will extend about 6.6 miles upstream and inundate 965 acres. Flood control storage of 36,200 acre-feet is provided. Storage available for low flow augmentation for water supply and water quality improvement is 92,000 acre-feet. The reservoir controls a drainage area of 263 square miles. Recreation facilities are provided for picnicking, camping and boating. Final project cost is \$176,325,300.

Local cooperation. See page 4-15 of the 1977 Annual Report for requirements. A water supply contract between the Federal Government and the Washington Suburban Sanitary Commission in concert with the Fairfax County Water Authority, VA and the District of Columbia was executed for repayment of all water supply costs. The first of 50 annual payments began in July 1981. Federally approved water quality standards put into effect by Maryland, Virginia, West Virginia, and the District of Columbia are considered satisfactory assurances of intent to control pollution. Satisfactory assurances have been received from Maryland, West Virginia, and Virginia that they will protect downstream channels from encroachment that would adversely affect operation of the project. Local interests operate a white water access area below the dam. The State of Maryland has constructed a recreation area on the Maryland side of the lake.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued. Federal funding totaling \$960,000 was provided to construct beach and support facilities on the WV side of the lake. Construction is scheduled to be complete in summer 2003.

37. LACKAWANNA RIVER BASIN, PA

Flood Control Act of 1962 authorized construction of Aylesworth Creek Lake, Fall Brook Lake, and local protection works on Lackawanna River at Scranton, PA,

substantially as recommended by the Chief of Engineers (S. Doc. 141, 87th Cong., 2d Sess.). The Basin includes an area of 346 square miles in northeastern Pennsylvania.

37A. AYLESWORTH CREEK LAKE, PA

Location. Project is located in Lackawanna County on Aylesworth Creek about one mile above its confluence with the Lackawanna River, near the community of East Jermyn, PA.

Existing project. Provides for an earthfill dam with a maximum height of 90 feet above streambed and a top length of 1,200 feet. The spillway located adjacent to the left abutment is an open cut channel 80 feet wide with a concrete sill. The outlet works consist of a 3-foot diameter uncontrolled conduit. Project controls a drainage area of 6.2 square miles and provides flood control storage of 1,700 acre-feet equivalent to 5.1 inches of runoff from the drainage areas. The lake will extend about 4,600 feet and inundate 87 acres when filled to spillway crest. Recreation facilities constructed by local interests include a bathing beach, bathhouse, and picnic area. Federal cost of new work was \$2,268,200 of which \$2,153,559 was for construction and \$114,641 for lands and damages. In addition \$52,200 Federal and \$52,200 non-Federal funds were expended for construction of bathhouse facilities under the recreation facilities for completed projects program.

Local cooperation. None required. The Aylesworth Creek Reservoir Park Authority, representing the Boroughs of Archbald and Jermyn, operate and maintain limited day use facilities including a small beach.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued.

38. MOOREFIELD, WV

Location. Moorefield, WV, is located at the junction of the South Fork (Moorefield River) of the South Branch of the Potomac River, 57 miles upstream from the mouth of the South Branch of the Potomac River, and 233 miles upstream from Washington, DC. (See Geological Survey Quadrangle sheets, Moorefield, WV).

Existing project. Provides for a flood warning system, 21,600 feet of earth levee, 1,360 linear feet of floodwall, highway bridge replacement of one span of a railroad bridge, environmental mitigation, and appurtenant project features such as ramps, closures,

riprap, relocations, and ponding areas for local drainage. The current estimated total project cost is \$26,925,000 which includes a future inflation allowance through project completion.

Project cooperation. The Town of Moorefield is the sponsor for the project. The Project Cooperation Agreement was signed May 12, 1994. The local sponsor is required to: provide lands, easements, rights-of-way; modify or relocate buildings, utilities, roads, bridges, and other facilities; pay 5% of the cost allocated to flood control; and bear all costs of operations, maintenance and replacement of flood control; and facilities after construction. (The cash contribution is deemed satisfied in consideration of the transfer of Grandview State Park to the Federal Government.) The Water Resources Development Act of 1999 waived the non-Federal requirement to pay its unpaid balance on the project.

Operations and results during fiscal year. New Work: The District has begun monitoring of a mechanically stabilized earthen wall that appears to be shifting.

39. NEABSCO CREEK, VA

Location. Neabsco Creek is located in Woodbridge, Prince William County, Virginia. A tidal estuary approximately three miles long, enters the west side of the Potomac River about 83 miles above its mouth and about 27 miles south of Washington, D.C. (See Coast and Geodetic Survey Chart 560.)

Existing project. Silt and debris build-up has dammed the lower reach of Neabsco Creek between US Route 1 and its confluence with the Potomac River. The new hydraulic flow regime is inefficient and leads to frequent flooding of US Route 1 and local businesses. Any project constructed in the area would have the intent of reopening an efficient stream channel to reduce flood frequency upstream. This area was studied in 1995 under Section 208 of the Flood Control Act of 1954 and was found to lack economic justification. Section 576 of the Water Resources Development Act of 1996 directed the Secretary of the Army to carry out a project for flood control in the Neabsco Creek Watershed, Prince William County, Virginia, at an estimated cost of \$1,500,000.

Local cooperation. The sponsor for the project is the Board of County Supervisors of Prince William County which will be required to provide all lands, easements and rights-of-way and relocations and contribute a total of 25 percent of project costs.

Operations and results during fiscal year. Limited coordination occurred to bring closure to the project.

**40. LACKAWANNA RIVER,
OLYPHANT, PA**

Location. The project is located along the Lackawanna River in Lackawanna County, Pennsylvania. (See Geological Survey quadrangle sheets, Olyphant, PA)

Existing project. The authorized project will provide 100-year level of protection and will include a combination of approximately 5,200 feet of levee and floodwall, a closure structure, interior drainage structures, and an upgraded flood forecast and warning system. Since authorized by WRDA 1992, the project has undergone a number of changes in scope and cost which have increased the project cost above the limitation prescribed in Section 902 of WRDA 1986. As a result of these changes, the project cost has increased from \$15,400,000 (as authorized in 1998) to an estimated \$19 million. The levee and floodwall portion of the project was awarded in January 2002 and will be completed in the fall 2003. However, the interior drainage structures along Garfield Avenue can not be constructed because the cost would exceed the 902 maximum funding limit for the project. In response to this problem, the District prepared a Limited Reevaluation Report (LRR) and submitted it to higher authority for review and approval in June 2002. The LRR will serve as the basis for a post authorization change request. If re-authorized and funded, the Garfield Avenue portion will be constructed.

Local cooperation. The Borough of Olyphant is the sponsor for the project. The local sponsor is required to: provide lands, easements, and rights-of-way; modify or relocated buildings, utilities, roads, bridges, and other facilities; pay 5% of the costs allocated to flood control; and bear all costs of operation, maintenance, and replacement of flood control facilities after construction.

Operations and results during fiscal year. With the exception of the Pinkus/Korb property, the Borough of Olyphant has completed the necessary real estate acquisitions for the project. Construction of the levee and floodwall is currently underway by Tri-State Design Construction/KC and will be completed in the fall 2003.

41. DICKSON CITY, (OLYPHANT), PA

Location. Dickson City is located on the Lackawanna River across from the Borough of Olyphant. (See Geological Survey Quadrangle sheets, Olyphant, PA.)

Existing project. The Energy and Water Development Appropriations Act of 1998 provided 1 million for the Corps to undertake activities leading to construction of flood control measures at Dickson City with the same levels of protection (100-year) as provided to Olyphant, PA.

Local cooperation. Dickson City is the sponsor for the project. The sponsor is required to: provide lands, easements and rights-of-way; modify or relocate buildings, utilities, roads, bridges and other facilities; pay a minimum of 5% of the cost allocated to flood control; and bear all costs of operation, maintenance, and replacement of flood control facilities after construction.

Operations and results during fiscal year. New Work: Additional funds are required to continue engineering and design work to determine if there is federal interest in a flood control project at Dickson City.

**42. RAYSTOWN LAKE, RAYSTOWN
BRANCH, JUNIATA RIVER, PA**

Location. Dam site is on Raystown Branch, about 5.5 miles upstream from its confluence with Juniata River. Project is about 10 miles south of Huntingdon, PA. (See Geological Survey Quadrangle sheets, Huntingdon, Mt. Union, Broad Top and Everett, PA.)

Existing project. The rock and earthfill dam rises 225 feet above streambed with a gated concrete spillway and auxiliary spillway in the right abutment. The reservoir has a storage capacity of 762,000 acre-feet, of which 248,000 acre-feet are for flood control, 476,000 acre-feet for recreation and water quality control, and the balance for sediment reserve. At full flood control pool elevation, the reservoir would inundate 10,800 acres and extend 34 miles upstream. Recreation facilities are provided for boating, fishing, camping, swimming, hunting, hiking, and picnicking. Federal cost for new work was \$77,408,700 of which \$46,120,931 was for construction and \$31,287,769 was for lands and damages including relocations. Construction of a private hydroelectric plant at Raystown Lake was completed May 1988.

Local cooperation. None required.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued. Federal funding totaling \$1,213,000 were provided to Juniata College for construction of facilities and structures at the Juniata College field station. Dedication of new facilities is scheduled for spring 2003.

**43. LACKAWANNA RIVER,
SCRANTON, PA**

Location. The project is located along the Lackawanna River in the northeastern portion of the Commonwealth of Pennsylvania in Lackawanna

County. (See Geological Survey Quadrangle sheets, Scranton, PA.)

Existing project. The Albright Ave. portion of the project provides for 6,800 feet of earth levee, 700 feet of concrete floodwall, 3 closure structures, interior drainage facilities, 2,700 feet of gabion slope protection, an improved flood warning system, removal of a railroad bridge, access ramps, and associated cultural mitigation. The Energy and Water Development Appropriations Act of 1999 provided funding to construct 100-year level flood protection for two additional communities: the Green Ridge Section and the Plot neighborhood. The current estimated total project cost is \$55,459,000 which includes \$20,934,000 for the Albright Ave. portion, \$14,672,000 for the Plot portion and \$19,853,000 for the Green Ridge portion of the project.

Local cooperation. The City of Scranton is the sponsor for the project. The local sponsor is required to: provide lands, easements and rights-of-way; modify or relocate buildings, utilities, roads, bridges, and other facilities; pay a minimum of 5% of the cost allocated to flood control; and bear all costs of operation, maintenance, and replacement of flood control facilities after construction.

Operations and results during fiscal year. New Work: Construction by the Corps continued on the Albright Ave. portion of the project. Design continued on the Plot and Green Ridge portions of the project. The Albright Ave. portion of the project is scheduled for completion in November 2003. The overall project is scheduled to be completed in September 2006.

44. OCEAN PINES, WORCESTER COUNTY, MD

Location. Ocean Pines is a large residential development located in eastern Worcester County along the mainland shoreline of Isle of Wight Bay. The project site is located on a peninsula formed by Herring and Turville Creeks.

Existing project. For detailed project description, see Annual Report for FY01.

Local cooperation. The PCA was executed in January of 2001. The local sponsor is Worcester County. All local requirements have been fulfilled.

Operations and results during fiscal year. Project construction was completed in October 2001, more than two months ahead of schedule. Construction was completed for a total of \$851,000. Activities during the first three quarters of FY02 involved monitoring for stability, appropriate tidal inundation, and vegetative success.

A Dedication/Memorial Ceremony was held in May. In addition to the District Engineer, more than 100 citizens and numerous local, state and federal elected officials and agency representatives attended. All Congressional interests were represented. The completed marsh was dedicated to the memory of A. J. Corts, an employee of the Baltimore District who served as Construction Manager for the project. Mr. Corts died suddenly on the day the project was completed.

45. WILLIAMSPORT, PA - HAGERMAN'S FLUME

Location. Williamsport, the county seat of Lycoming County, PA, is located on the left bank of the West Branch of the Susquehanna River, 40 miles above its mouth. (See U.S. Geological Survey Quadrangle sheets, "Trout Run and Williamsport, PA.")

Existing project. The plan of improvement provides for the construction of a system of levees and concrete floodwalls and appurtenant structures, consisting of the following features: about 26,200 feet of earth levee and 3,060 feet of concrete floodwall along the left bank of the West Branch of the Susquehanna River, extending from high ground near Sheridan Street, generally parallel to and on the right bank of Millers Run to the Susquehanna River, thence extending upstream along the left bank of the river and Lycoming Creek; about 29,900 feet of earth levee and 860 feet of concrete floodwall along the left bank of the West Branch of the Susquehanna River, extending from high ground and Bottle Run generally parallel to and on the right bank of Lycoming Creek to the Susquehanna River, thence extending upstream along the left bank of the river to Carothers Lane, thence to high ground along the Pennsylvania Railroad; about 11,400 feet of earth levee and 880 feet of concrete floodwall along the right bank of the West Branch of the Susquehanna River in South Williamsport, extending from high ground at Central Avenue and Charles Street, along Charles Street to the river, thence upstream along the river to high ground at Maynard Street; a reinforced concrete pressure culvert about 1,390 feet along and a flume 470 feet along to provide for control of Hagerman's Run; 10 pumping stations for the disposal of interior drainage; and appurtenant closure and drainage structures. The improvement provides protection for the City of Williamsport and the Borough of South Williamsport and part of Old Lycoming Township against a flood discharge equal to the maximum flood of record, which occurred in March 1936. The Federal costs of new work for the completed project are \$12,964,893, which includes \$1,887 emergency relief funds. The estimated local cost of lands and damages and utility relocations, revised in 1955, is \$2,158,500. The Energy and Water

Development Appropriations Act of 1998 directed the Corps to use \$225,000 to construct necessary repairs to the flume and conduit for flood control at the Hagerman's Run, Williamsport, Pennsylvania flood control project.

Local cooperation. Fully complied with on the completed work.

Operations and results during fiscal year. Construction began on the repairs necessary to the flume and conduit for flood control at Hagerman's Run.

46. WEST VIRGINIA AND PENNSYLVANIA FLOOD CONTROL

Location. The eight projects within the Baltimore District are located in the City of Altoona, Logan Township and Allegheny Township; Carbon Township; Coalmont Borough; Rock Hill Furnace Borough; the Borough of Everett; Bedford County; Newton Hamilton Borough; and Huntingdon Borough in Pennsylvania.

Existing project. Section 581 of the Water Resources Development Act of 1996, as amended, provides for design and construction of structural and non-structural flood control, streambank protection, stormwater management and channel clearing and modification measures in the Lower Allegheny and Lower Monongahela (Pittsburgh District) and West Branch Susquehanna River and Juniata River basins, Pennsylvania at a level of protection that is sufficient to prevent any future losses to communities in the basins from flooding such as occurred in January 1996, but no less than a 100-year level of flood protection with respect to measures that incorporate levees or floodwalls. The current estimated total project cost is \$16,532,000 which includes a future inflation allowance through project completion.

Local cooperation. Local sponsors identified to date include the Borough of Everett, Logan Township/Altoona, Coalmont Borough and Carbon Township. Huntingdon Borough, Newton Hamilton Borough and Rock Hill Furnace Borough are not going forward with projects. The sponsors are required to: provide lands, easements, and rights-of-way; modify or relocate utilities, roads, bridges, and other facilities; provide cash contributions such that their total share, including LERRDS, is a minimum of 25 percent; and bear all costs of operation and maintenance.

Operations and results during fiscal year. New Work: Final Design for the Logan Township/Altoona (Mill Run), Coalmont Borough (Coalbank Run) and Carbon Township (Shoups Run) projects were

completed. Preliminary design for the Borough of Everett (Bloody Run) project was completed.

47. SOUTHERN NEW YORK FLOOD CONTROL PROJECTS

Authorized plan provides for construction of reservoirs and related flood control works for protections are located in the upper watershed of the Susquehanna River to and including the Chemung River.

47A. ADDISON, NY

Location. At confluence of Tuscarora Creek and Canisteo River in the City of Addison, NY. (See Geological Survey map for Addison, NY.)

Existing project. Provides for construction of about 3,100 feet of earth levee and 700 feet of concrete flood wall on the right bank of the Canisteo River, extending from high ground on Steuben Street near the Baltimore & Ohio Railroad to the mouth of Tuscarora Creek; removal of existing dam, mill, and raceway from the channel; construction of about 2,200 feet of earth levee on the left bank of Tuscarora Creek, extending from Tuscarora Street to Canisteo River; construction of 4,600 feet of earth levee on the right bank of Tuscarora Creek, extending from high ground at the southwest edge of the village to high ground at the southeast edge of the village; and appurtenant drainage structures.

Local cooperation. Fully met.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued.

47B. ALMOND LAKE, NY

Location. Dam is located two miles upstream from Hornell, NY, on Canacadea Creek, a tributary of the Canisteo River. (See Geological Survey map for Hornell, NY.)

Existing project. The dam is an earthfill structure, 1,260 feet long rising 90 feet above the streambed, with a concrete spillway and a gated outlet conduit in the left abutment. The outlet works consist of three 5-foot by 10-foot service gates and three emergency gates of the same size. The reservoir has a storage capacity of 14,640 acre-feet at spillway crest. The project controls a drainage area of 56 square miles, 36 percent of the watershed of the Canisteo River upstream from Hornell, NY. Recreation facilities include a boat-launching ramp and dock, bathing beach, picnic area, and tent and trailer camping area.

Local cooperation. None required. Local interests have developed recreational facilities at the lake in

conjunction with the Federal Government. These facilities are operated and maintained by the Steuben County Board of Supervisors.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued.

47C. ARKPORT DAM, NY

Location. Dam is located five miles upstream from Hornell, NY, on the Canisteo River, a tributary of the Chemung River which flows into the Susquehanna River. (See Geological Survey map for Arkport, NY.)

Existing project. The dam is an earthfill structure, 1,200 feet long, exclusive of spillway, rises 113 feet above the streambed, with a concrete spillway and an ungated outlet in the right abutment. The outlet structure consists of an 8-foot diameter reinforced concrete lined conduit, 660 feet long. A cast iron nozzle placed in the lower end of the conduit, reduced the outlet size to 4 feet 4 inches. The reservoir has a storage capacity of 7,950 acre-feet at spillway crest. The project controls a drainage area of 31 square miles, 20 percent of the watershed of the Canisteo River upstream from Hornell.

Local cooperation. None required.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued.

47D. AVOCA, NY

Location. On the Cohocton River at the Village of Avoca, NY, about 30 miles upstream from the confluence of the Cohocton and Chemung Rivers. (See Geological Survey map for Avoca, NY.)

Existing project. Provides for improvement and realignment of about 8,300 feet of Cohocton River channel, extending from above the Erie Railroad to below the junction of Main Street and U.S. Highway 15; construction of about 8,500 feet of earth levee on left bank of the Cohocton River, extending from high ground above Alexander Avenue to about 1,300 feet below the junction of Main Street and U.S. Highway 15; and 4,500 feet of earth levee on the right bank of Salmon Creek, extending from high ground above Alexander Avenue to the Erie Railroad; a new highway bridge for U.S. Highway 15 over Cohocton River, raising of the Erie Railroad bridge 4 feet; and appurtenant drainage structures.

Local cooperation. Fully met.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued.

47E. BINGHAMTON, NY

Location. At the confluence of the Chenango and Susquehanna Rivers in the City of Binghamton, NY. (See Geological Survey map for Binghamton, NY.)

Existing project. Provides for construction of earth levees, concrete flood walls, and appurtenant drainage structures, consisting of about 850 feet of channel excavation and about 1,375 feet of earth levee along Phelps Creek, Town of Port Dickinson; new concrete wall on the right bank of the Chenango River, extending downstream from high ground near the city limits to an existing flood wall below DeForest Street, a distance of about 520 feet; about 150 feet of concrete wall just below Cutler Dam; about 180 feet of concrete wall at the pumphouse near McDonald Avenue; raising existing earth levees on the right bank of Chenango River, extending from Cutler Dam downstream for about 1,220 feet; about 2,915 feet of earth levee on the left bank of Chenango River north of the city limits in the Village of Port Dickinson, extending from Church Street to high ground just north of the city line; about 3,900 feet of earth levee on the left bank of Chenango River, extending from DeForest Street to Cutler Dam; new concrete flood walls and riverbank revetment for about 5,570 feet extending on the left bank of Chenango River from Cutler Dam to the junction with the Susquehanna River; about 540 feet of new concrete flood wall and raising about 1,085 feet of concrete flood wall on the right bank of the Susquehanna River, extending from the Delaware, Lackawanna & Western Railroad downstream to Tompkins Street Bridge; about 1,940 feet of earth levee; about 1,940 feet of concrete flood wall and capping about 125 feet of concrete flood wall, on the right bank of the Susquehanna River from Stuyvesant Street to mouth of Chenango River; about 8,380 feet of earth levee, about 2,180 feet of new concrete flood wall on the left bank of the Susquehanna River extending from Pierce Creek to high ground at State Highway 17, a debris dam and flume between Corbett and Hotchkiss Streets and a concrete pressure conduit, 1,060 feet long to carry flow of Park Creek from Vestal Avenue to the Susquehanna River; about 665 feet of levee extending from the Erie Railroad to high ground along the right bank of Chamberlain Creek near the mouth; closure structures at Erie Railroad and at Court Street; a weir, a drop structure, and about 1,800 feet of earth levee, about 2,235 feet of channel excavation, about 645 feet of channel paving and raising, about 470 feet of existing concrete flood wall, and about 200 feet of new concrete flood wall for improvement of Pierce Creek from its mouth to about 1,000 feet about Conklin Avenue; and appurtenant drainage structures. Improvement, supplemented by authorized flood control dams above the area, will provide protection for the City of Binghamton against a

flood discharge about 20 percent greater than the maximum flood of record, which occurred in July 1935 on the Chenango River and in March 1936 on the Susquehanna River.

Local cooperation. Fully met.

Operations and results during fiscal year.

Maintenance: Normal operation and maintenance of the project continued.

47F. CANISTEO, NY

Location. On Purdy and Bonnets Creeks in the Town of Canisteo, NY, situated along the south side of the Canisteo River, at the confluence of Bonnets Creek and in the Canisteo River. (See Geological Survey map for Canisteo, NY.)

Existing project. Provides for construction of about 8,000 feet of earth levees on the right bank of the Canisteo River, extending from high ground 1,570 feet west of State Highway Route 21 above the Town to a point at the intersection of Ordway Lane and East Main Street; about 7,400 feet of earth levee on the left bank of Purdy and Bennetts Creeks, extending from the Main Street Bridge to high ground above Greenwood Street 1,000 feet of earth levee on the right bank of Bennetts Creek extending upstream from the Main Street Bridge; a concrete check dam with wing levees from Greenwood Street; a new highway bridge at Greenwood Street; channel excavation in Bennetts and Purdy Creeks; and appurtenant drainage structures.

Local cooperation. Fully met.

Operations and results during fiscal year.

Maintenance: Normal operation and maintenance of the project continued.

47G. CORNING, NY

Location. On the Chemung River in the City of Corning, NY, about 44 miles upstream from the confluence of Chemung River and North Branch of Susquehanna River. (See Geological Survey map for Corning, NY.)

Existing project. Plan of improvement provides for construction of a pumping station, earth levees, and concrete flood walls, consisting of about 4,300 feet of earth levee, enlargement of about 8,610 feet of existing earth levee and about 3,100 feet of concrete flood wall on the right bank of the Chemung River, extending from the Erie Railroad Bridge to high ground at Park Avenue below the City; about 200 feet of concrete flood walls, about 2,500 feet of earth levees and enlargement of about 11,500 feet of existing earth levee on the left bank of the Chemung and Cohocton Rivers, extending from the Erie Railroad Bridge over Cohocton River to the mouth of Post Creek; about 2,500 feet of earth levee and enlargement of about 4,700 feet of existing earth levee

on the right bank of Post Creek; about 2,500 feet of earth levee and enlargement of about 4,700 feet of existing earth levee on the right bank of Post Creek from its mouth to Watkins Street; realignment of about 3,000 feet of channel, about 8,800 feet of earth levee, about 3,000 feet of channel excavation, a pressure conduit about 400 feet long, a drop structure and a weir for improvement of Cutler Creek, extending from its mouth to high ground at Deckertown Road and Hornby Road; and appurtenant drainage structures. Flood protection on Monkey Run was authorized by the Flood Control Act of 1950. Plan of improvement provides for construction of 2,010 feet of open flume, 2320 feet of pressure conduit storm sewers, and appurtenant facilities between the existing improved channel above Sixth Street and the Chemung River at a point immediately east of Pine Street East. Modified improvement will provide protection for the City of Corning against a flood discharge in Chemung River approximately equal to the maximum flood of record, which occurred in May 1945, and on tributary streams against floods of greater magnitude than known to date.

Local cooperation. Fully met.

Operations and results during fiscal year.

Maintenance: Normal operation and maintenance of the project continued.

47H. EAST SIDNEY LAKE, NY

Location. Dam is located near East Sidney, NY, on the Ouleout Creek, about five miles above the confluence of the creek with the Susquehanna River. (See Geological Survey map for Franklin, NY.)

Existing project. The dam is an earthfill and concrete structure, 2,010 feet long, including spillway, rises 130 feet above the streambed and consists of a concrete gravity-type section with a compacted earth-dike section at the right abutment. The outlet works consist of five rectangular conduits each 3.5 feet by 5.85 feet and 105 feet long. The reservoir has a storage capacity of 33,500 acre-feet at spillway crest. The project controls a drainage area of 102 square miles which is 93 percent of the Ouleout Creek drainage area, and 5 percent of the watershed of the Susquehanna River upstream from Binghamton, NY, exclusive of the separately controlled Chenango River. Recreation facilities include a bathing beach, picnic and camping areas, and boat-launching and docking facilities.

Local cooperation. None required. The Town of Sidney, NY, cooperated in the development of recreation facilities and operations and maintains all the facilities with the exception of the recreational pool, which is the responsibility of the Federal Government.

Operations and results during fiscal year. Maintenance: Normal operations and maintenance of the project continued.

47I. ELMIRA, NY

Location. On the Chemung River in the City of Elmira, NY, about 27 miles stream from the confluence of the Chemung River and North Branch of Susquehanna River (See Geological Survey map for Elmira, NY).

Existing project. Provides for about 17,700 feet of earth levees, and about 4,100 feet of concrete flood wall on the right bank of the Chemung River, extending from South Hoffman Street to a point below the city near the upper end of Big Island; about 12,100 feet of earth levee and about 6,300 feet of concrete wall on the left bank of the Chemung River extending from Durland Avenue to the Delaware, Lackawanna & Western Railroad at the mouth of Newton Creek; about 10,000 feet of earth levee on right bank of Newton Creek, extending from about the intersection of Delaware, Lackawanna & Western Railroad and East Church Street to high ground near intersection of Sullivan and Warren Streets; about 4,300 feet of earth levee on the right bank of Divan Creek; about 2,000 feet of concrete conduit enclosing Hoffman Brook from West Second Street to the Chemung River; clearing islands and riverbanks of trees and brush for about 3.5 miles in the Chemung River; about 14,300 feet of earth levee on the left bank of Seely Creek, extending from the Erie Railroad to high ground approximately 1,000 feet northwest of the intersection of South Broadway and Pennsylvania Avenue; a pumping plant for disposal of interior drainage; an interceptor sewer about 6,000 feet long varying in size from 48 to 96 inches in diameter; and appurtenant structures.

Local cooperation. Fully met.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued.

47J. HORNELL, NY

Location. On the Canisteo River in the City of Hornell, NY, about 42 miles upstream from the confluence of the Canisteo and Tioga Rivers. (See Geological Survey map for Canisteo, NY.)

Existing project. Provides for channel realignment and earth levees, concrete flood walls, and check dams consisting of: realignment of about 4,600 feet of the Canisteo River channel, and about 5,800 feet of earth levee on its right bank, extending from Seneca Street upstream to the junction of the Pittsburgh, Shawmut &

Northern Railroad and the Erie Railroad; about 4,500 feet of earth levee, extending on both sides of Seneca Street from the Canisteo River to Wrightman Avenue and the junction of Cleveland Avenue and Bethesda Drive; about 7,200 feet of earth levee, about 2,500 feet of concrete flood wall, and raising about 1,500 feet of existing concrete flood wall, on the right bank of the Canisteo River, and about 12,000 feet of channel improvement, extending from Seneca Street to the Erie Railroad; about 2,500 feet of earth levee, about 2,100 feet of concrete flood wall on the left bank of the Canisteo River extending from Seneca Street to the Erie Railroad; about 2,500 feet of earth levee, about 2,100 feet of concrete flood wall on the left bank of the Canisteo River extending from a point opposite Walnut Street to the Erie Railroad; a ring-earth levee about 2,800 feet long around the sewage-disposal plant on the left bank of the Canisteo River; about 4,500 feet of realignment and improvement of the Canisteo River Channel with about 4,500 feet of earth levee on its right bank extending from Cedar Street downstream to about 1,400 feet about East Avenue; about 2,400 feet of channel paving, 1,400 feet of earth levee, raising about 1,900 feet of concrete flood wall, and construction of one check dam on Canacadea Creek; about 1,600 feet of channel paving and construction of three check dams on Chauncey Run with about 300 feet of new wall and about 300 feet of capping; a weir, a check dam, 3,030 feet of channel paving, 4,800 feet of flood walls and levees, and related work on existing walls, on Crosby Creek; removal of 6 bridges, erection of 4 bridges, miscellaneous bridge structures, and 3 drop structures; and appurtenant drainage structures and small stream control works. Improvement, supplemented by Arkport and Almond Reservoirs above the area, provides protection for the City of Hornell against a flood discharge approximately double the maximum flood of record, which occurred in July 1935.

Local cooperation. Fully met.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued.

47K. LISLE, NY

Location. On the Tioughnioga River in the Village of Lisle, NY, about 12 miles upstream from the confluence of the Tioughnioga and Chenango Rivers. (See Geological Survey map for Lisle, NY.)

Existing project. Provides for channel realignment and construction of earth levees and concrete flood walls, consisting of: relocation of about 3,000 feet of Dudley Creek Channel, extending from 1,200 feet west of the intersection of Cortland and Main Streets to the confluence with Tioughnioga River; realignment of

some 5,700 feet of Tioughnioga River Channel east of the Village; about 4,150 feet of earth levee and 970 feet of concrete wall on the right bank of Dudley Creek and Tioughnioga River; realignment of some 5,700 feet of Tioughnioga Street to the railroad crossing on River Street; raising about 1,860 feet of the Delaware, Lackawanna & Western single track railroad over the levee; relocation of about 1,600 feet of Cortland Street; a new bridge over relocated Dudley Creek; and appurtenant drainage structures.

Local cooperation. Fully met.

Operations and results during fiscal year.

Maintenance: Normal operation and maintenance of the project continued.

47L. OXFORD, NY

Location. On the Chenango River in the Village of Oxford, NY, about 40 miles upstream from the confluence of the Chenango and Susquehanna Rivers. (See Geological Survey map for Oxford, NY.)

Existing project. Provides for earth levees and clearing of Chenango River Channel, consisting of about 2,100 feet of earth levees on the left bank of the Chenango River, extending from high ground near Cemetery Drive and running mostly along the railroad to high ground near Main Street; removal of dam and island below Main Street; raising the Delaware, Lackawanna & Western Railroad over the levee; and appurtenant closure and drainage structures. Improvement provides protection for the Village of Oxford on the left bank against a flood discharge substantially larger than the maximum flood of record, which occurred in July 1935.

Local cooperation. Fully met.

Operations and results during fiscal year.

Maintenance: Normal operation and maintenance of the project continued.

47M. WHITNEY POINT LAKE, NY

Location. Dam is located near Whitney Point, NY, on the Otselic River about 0.7 mile upstream from its confluence with Tioughnioga River. (See Geological Survey map for Whitney Point and Willet, NY.)

Existing project. The dam is an earthfill structure, 4,900 feet long, exclusive of a spillway, rises 95 feet above the streambed, with a concrete spillway and gated outlet in the left abutment. The outlet works consist of three 5-foot by 10-foot gates and one emergency gate of the same size. The reservoir has a storage capacity of 86,440 acre-feet at spillway crest. The project controls a drainage area of 255 square miles, the entire watershed of Otselic River, or 16 percent of the

Chenango River watershed upstream from Binghamton, NY. Recreation facilities, constructed in cooperation with local interests, provide for swimming, picnicking, camping, boating, fishing, and hunting.

Local cooperation. None required. Local interests operate and maintain all of the recreation facilities.

Operations and results during fiscal year.

Maintenance: Normal operation and maintenance of the project continued.

47N. WHITNEY POINT VILLAGE, NY

Location. On the Tioughnioga River at the confluence of the Tioughnioga and Otselic Rivers, tributaries of the Susquehanna River. (See Geological Survey map for Whitney Point, NY.)

Existing project. Provides for channel realignment and earth levees, consisting of realignment of about 1,800 feet of Tioughnioga River Channel, above the confluence with Otselic River; about 7,100 feet of earth levee along the right bank of the Tioughnioga River, extending from high ground on Main Street above the Village to Collins Street just below the Village; and appurtenant drainage structures.

Local cooperation. Fully met.

Operations and results during fiscal year.

Maintenance: Normal operation and maintenance of the project continued.

48. STILLWATER LAKE, LACKAWANNA RIVER, PA

Location. Dam is on the Lackawanna River, 39 miles from the mouth of the stream and about 4 miles upstream from Forest City, Susquehanna County, PA (See Geological Survey Quadrangle sheet, Honesdale, PA.)

Existing project. Dam is earthfill type, rising 77 feet above the streambed, with a controlled outlet conduit and side channel spillway in the left abutment. Reservoir capacity is 12,000 acre-feet, of which 11,600 acre-feet is flood control storage and the remainder is used to maintain the existing water supply reservoir for Forest City, PA, at this site. Reservoir area is 422 acres, and the pool extends about 2.1 miles upstream. Reservoir controls 52 percent of the watershed above Carbondale, 26 percent above Olyphant, and 17 percent above Scranton. Federal cost of new work, completed in 1965, was \$5,725,700 of which \$4,500,500 was for construction and \$1,225,200 was for lands and damages.

Local cooperation. None required. Section 2, Flood Control Act of June 28, 1938, applies.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued.

49. SUSQUEHANNA RIVER FLOOD CONTROL PROJECTS, NY AND PA

Plan of improvement authorized by the 1958 Flood Control Act provides for construction of Cowanesque Lake, PA, Tioga-Hammond Lakes, PA, local protection works at Elkland, PA, and Nichols, NY, and channel improvements at Cortland, NY. This project plan supplemented the comprehensive flood control program for Southern New York and Northern Pennsylvania which included the Southern New York flood control project and Stillwater, Genegantslet, and South Plymouth Reservoirs.

49A. COWANESQUE LAKE, PA

Location. Dam is on the Cowanesque River about 2.2 miles above its confluence with Tioga River at Lawrenceville, PA. (See Geological Survey map for Tioga, PA.)

Existing project. The project provides for an earthfill dam 3,100 feet long and rising 151 feet above the streambed, an uncontrolled spillway in the right abutment, a gated conduit in the Valley floor, and flood control storage is 82,000 acre-feet. Relocation of the Town of Nelson to a new townsite was authorized by Section 121 of the Water Resources Development Act of 1976. The Federal cost of this new work was \$106,030,700 of which \$61,743,600 was for construction and \$44,287,100 was for lands and damages and relocations (which includes \$5,755,000 for relocation of the Town of Nelson). Within the discretionary authority of the Chief of Engineers the project was modified in March 1983 in accordance with the Water Supply Act of 1958, as amended, and the Flood Control Act of 1944, as amended. The modification provides for reallocating 25,600 acre-feet of present flood control storage for water supply storage by raising the permanent pool from elevation 1,045 to 1,080 mean sea level. Other features include modifying the existing intake tower and two access ramps, stabilizing the reservoir slope near the relocated Town of Nelson, replacing existing day-use recreation facilities, and expanding both day-and overnight-use recreation facilities to accommodate an expected increase in annual visitation due to the larger pool. Estimated cost (October 1991) of the modification is \$55,198,00 of which \$1,257,00 is Federal (for expanded recreation facilities) and \$53,941,000 is non-Federal (which includes \$39,414,000 for reimbursement of the

cost of existing flood control storage reallocation to water supply storage, \$13,270,000 cash contribution for the water supply modification, and \$1,257,000 cash contribution for expanded recreation facilities.)

Local cooperation. The Water Resources Development Act of 1976, which authorized relocation of the Town of Nelson, provides that before the Secretary of the Army acquires any real estate property for the new townsite, appropriate non-Federal interests shall furnish binding contractual commitments that all lots in the new townsite will be either occupied when available, replacements for open space and vacant lots in the existing town, or will be purchased by non-Federal interests at the fair market value. The required contractual agreement for local cooperation was executed with Nelson Township on August 25, 1977. The March 1983 project modification (discussed above) requires non-Federal interests repay 100 percent of the investment cost of project modifications allocated to water supply, to terrestrial wildlife habitat mitigation, and to in-kind replacement recreation, plus the allocated share of the project's original cost (escalated to current price levels). Additionally, they are required to pay annual costs of operation, maintenance, and major replacements allocated to water supply and to provide 50 percent of the cost of expanded recreation facilities, as well as, all operation, maintenance, and replacement costs for the expanded facilities. Water supply and recreation contracts were executed by the Assistant Secretary of the Army (Civil Works) and the Susquehanna River Basin Commission on June 30, 1986.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued. Update of the project master plan was completed in August 2002.

49B. TIOGA-HAMMOND LAKES, PA

Location. The dams are located in Tioga County, PA, upstream from the confluence of the Tioga River and Crooked Creek. Tioga Dam is located on the Tioga River and Hammond Dam on Crooked Creek, approximately opposite the Tioga damsite, about 3.3 miles above its mouth and less than one mile from the Village of Brooklyn. (See Geological Survey map for Tioga, PA.)

Existing project. Tioga Dam is 2,600 feet long, rising 140 feet above the streambed, with a controlled outlet conduit. Hammond Dam is 5,900 feet long, and has a maximum height of 121.5 feet above the streambed, with a concrete spillway. Both dams are of earth and rockfill construction. The Tioga-Hammond Lakes project controls a total drainage area of 402

square miles, with Tioga Dam controlling 280 square miles of the Tioga River Basin and Hammond Dam controlling 122 square miles of the Crooked Creek Basin. Recreation facilities are provided for swimming, camping, picnicking, boating, and fishing. Federal cost of completed work was \$185,620,000 of which \$125,029,000 is for completed construction and \$60,591,000 is for lands and damages and relocations. Estimated Federal cost (October 1988) of Mill Creek recreation facilities (inactive) is \$7,500,000.

Local cooperation. None required.

Operations and results during fiscal year. Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued. Update of project master plan was completed in Aug 2002. New Ranger Station and Visitor Center completed in May 2002.

50. WEST BRANCH OF SUSQUEHANNA RIVER, PA

A system of three flood control reservoirs, in the headwaters of the West Branch Susquehanna River, PA, are known as Curwensville, Alvin R. Bush (formerly known as Kettle Creek), and Foster Joseph Sayers (formerly known as Blanchard).

In accordance with the terms of local cooperation, the Commonwealth of Pennsylvania furnished assurances that it will coordinate operation of George B. Stevenson Reservoir (formerly known as First Fork Reservoir) with operation of Curwensville, Alvin R. Bush, and Foster Joseph Sayers Reservoirs to secure optimum flood control benefits from system operation. George B. Stevenson Reservoir on the First Fork Sinnemahoning Creek in Cameron and Potter Counties, PA, was constructed by the Commonwealth of Pennsylvania at a first cost of \$12,240,000 and an estimated \$30,000 annually for operation and maintenance.

50A. ALVIN R. BUSH DAM, PA

Location. Alvin R. Bush (formerly Kettle Creek Dam) is located on Kettle Creek about 8.4 miles above the mouth and 15 miles upstream from Renovo, PA. (See Geological Survey map for Keating, PA.)

Existing project. Dam is an earthfill structure, about 1,350 feet long, rises 165 feet above the streambed, with an uncontrolled spillway located in rock adjacent to the right abutment, and has a horseshoe-shaped outlet tunnel with 3 service gates. The reservoir has a storage capacity of 75,000 acre-feet at spillway crest. The project controls a drainage area of 226 square miles or about 92 percent of the Kettle Creek watershed. Recreation facilities are provided for camping, fishing, boating, picnicking, hiking, winter sports, hunting, and

swimming by the State of Pennsylvania at Kettle Creek State Park.

Local cooperation. None required.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued.

50B. CURWENSVILLE LAKE, PA

Location. Dam is on the West Branch of Susquehanna River approximately 2.5 miles upstream from Curwensville, Clearfield County, PA. (See Geological Survey map for Curwensville, PA.)

Existing project. Within the discretionary authority of the Chief of Engineers, the project was modified in September 1992, in accordance with the Water Supply Act of 1958, as amended. The modification provides for reallocating an estimated 5,360 acre-feet of storage from conservation to water supply. The reallocation project includes a year-round normal pool and modifications to the existing recreation area. Estimated cost of the modification is \$1.7 million which is being funded entirely by the local sponsor, the Susquehanna River Basin Commission. In addition, the sponsor will reimburse the Federal Government about \$4.5 million for part of the original project cost.

Local cooperation. The 1992 project modification requires non-Federal interests to pay 100 percent of costs allocated to water supply plus the allocated share of the original project cost (escalated to current price levels). Additionally, they must pay annual costs of operation, maintenance, and major replacement allocated to water supply. A water supply contract was executed on September 30, 1994.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued.

50C. FOSTER JOSEPH SAYERS DAM, PA

Location. Dam is located on Bald Eagle Creek in Centre County, PA, about one mile upstream from Blanchard and about 14 miles above the confluence of Bald Eagle Creek with the West Branch Susquehanna River at Lock Haven, PA. (See Geological Survey map for Howard, PA.)

Existing project. Dam is an earthfill structure, about 6,835 feet long, rises 100 feet above the streambed, and has an open-cut concrete chute and uncontrolled concrete weir 600 feet wide located in rock in a saddle adjacent to the left abutment. The outlet works, located in the left abutment, consist of a 15-foot diameter

circular outlet conduit with two hydraulically-operated wheel gates 7 feet wide and 15 feet high. The reservoir has a storage capacity of 99,000 acre-feet at spillway crest. The project controls a drainage area of 339 square miles or 88 percent of the drainage area above Beech Creek and 43 percent of the Bald Eagle Creek drainage area. Recreation facilities are provided for boating, camping, fishing, picnicking, hunting, swimming, hiking, and winter sports by the State of Pennsylvania at Bald Eagle State Park.

Local cooperation. None required.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued.

51. WYOMING VALLEY, PA (LEVEE RAISING)

Location. The Wyoming Valley flood control projects are located in Northeastern Pennsylvania on the Susquehanna River in Luzerne County and are the four contiguous existing Federal flood control projects at Plymouth, Kingston-Edwardsville, Swoyersville-Forty Fort, and Wilkes-Barre/Hanover Township, which together function as a flood control system within the Wyoming Valley.

Existing project. The proposed modification provides for raising existing levees and floodwalls between 3 and 5 feet, structural, mechanical and electrical modifications to pump stations, modifying closure structures, relocating utilities and providing some new floodwalls and levees to maintain the integrity of the existing flood control system. The proposed project also includes a plan to reduce project-related adverse impacts. The current estimated total project is \$175,000,000 which includes a future inflation allowance through project completion.

Local cooperation. The Luzerne County Flood Protection Authority is the sponsor for the project. The local sponsor is required to: provide lands, easements and rights-of-way; modify or relocate buildings, utilities, roads, bridges, and other facilities; pay a minimum of 5% of costs allocated to flood control and pay 50% of costs allocated to recreation; and bear all costs of operations, maintenance and replacement of flood control and recreation facilities after construction.

Operations and results during fiscal year. Work continued on the Mechanical and Electrical Upgrades to the Stormwater Pump Stations, the construction contracts for the Wilkes-Barre/Hanover Township reach, the Plymouth levee raising contract, and modifications to the Sunbury project. Engineering and design work continues as well as feasibility analysis of possible additions to the overall project.

52. YORK, INDIAN ROCK DAM, PA

Location. On Codorus Creek 10 miles above its confluence with the Susquehanna River. Codorus Creek has tributary branches in York County in the south and central parts of Pennsylvania. (See Geological Survey Quadrangle sheets for York and Hanover, PA.)

Existing project. Indian Rock Dam is an earth and rockfill dam about 1,000 feet long at the top, rising 83 feet above the streambed, with a reservoir providing for control storage of 28,000 acre-feet. The dam is on the main branch of Codorus Creek about 3 miles above York. Outlet works are in the right abutment, and the uncontrolled spillway is on the right bank. The reservoir will control the entire drainage area of the main branch of Codorus Creek and 41 percent of the drainage area above York. Improvements in Codorus Creek in the vicinity of and through the City of York provide for 22,969 feet of channel extending from 300 feet above Richland Avenue to a point downstream from the Pennsylvania Railroad crossing known as Black Bridge. Improvements, which will increase channel capacity to 24,000 cubic feet per second, include widening and deepening the channel, bank protection, removal of York Roller Mill Dam, and a low water channel about 3,900 feet long in the vicinity of York Roller Mill Dam. Cost of new work for the completed project was \$5,061,167, of which \$4,566,446 (regular funds) and \$11,588 (emergency relief funds) were for construction and \$483,133 (regular funds) was for lands and damages.

Local cooperation. Section 2, Flood Control Act of June 28, 1938, applies.

Operations and results during fiscal year. Maintenance: Normal operation and maintenance of the project continued.

53. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Projects in New York, Pennsylvania, Maryland, District of Columbia, and Virginia were inspected during the period by hired labor. See table 4-I.

54. SCHEDULING FLOOD CONTROL RESERVOIR OPERATIONS

Operations and results during fiscal year. The operation of George B. Stevenson Dam, PA, was coordinated with the operation of Alvin R. Bush, Curwensville, and Foster Joseph Sayers Dams in the West Branch Susquehanna River Basin in order to secure optimum flood control benefits from the system operation. Costs during the period were \$1,895,437.

Supplemental instructions for the operation of Savage River Dam, MD, were provided, during periods of high

water, to insure maximum protection for downstream localities. Costs during the period were \$136,039.

55. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Cost for the period was \$349,777 for the Disaster Preparedness Program; \$43,175 for Mobilization, Continuity of Government and Emergency Water Preparedness Programs; \$5,187 for Emergency Operations; \$50,032 for Rehabilitation; \$732,014 for the Nationwide Civil Works Activities. Federal year costs were \$9,453 for Section 205 Coordination; \$253,795 for Elkton, MD; \$3,030 for Gwynns Falls, Baltimore, MD; \$144,144 for Lycoming County Flood Warning System, PA; \$2,909 for Paxton Creek Harrisburg, PA; \$5,064 for North Branch at Westernport, MD; \$5,257 for Middle North Branch, MD; \$56,723 for Heshbon to Hepburnville, Lycoming County; \$2,744 for Wills Creek, Allegheny County, MD; \$24,214 for Montoursville Lycoming County, PA; \$30,056 for Mill Creek, PA; and \$218,445 for Solomon Creek Wilkes-Barre, PA.

Non-Federal contributed costs were: \$1,424 for Paxton Creek Harrisburg, PA; \$8,895 for Lycoming County Flood Warning System; and \$15,821 for Solomon Creek PA; and \$38,270 for Elkton 205 Feasibility.

Flood control activities pursuant to Section 14, Public Law 526, 79th Congress, as amended (pre-authorization).

Fiscal year costs were \$9,453 for Section 14 Coordination; \$79,287 for Hooper Island Causeway, MD; \$16,948 for Deep Run, Race Road, MD; \$44,309 for Loyalsock Creek, Warrensville Road, PA; \$3,000 for Mahonoy Creek Market Street, PA; \$127,373 for Newton Creek Newton Avenue, NY; \$7,000 for Potomac River Thomas Road, MD; \$188,697 for Pine Creek Township Road 566, PA; \$80,749 for Chesapeake Bay Punch Island Road, MD; \$73,277 for Patuxent River Patuxent Beach Road, MD; \$8,400 for North River, VA.

Non-Federal contributed costs were: \$12,578 for Hooper Island Causeway, MD; and \$14,365 for Hudson Branch, Colored Schoolhouse, MD.

MULTIPLE-PURPOSE PROJECTS INCLUDING POWER - None

ENVIRONMENTAL

56. ANACOSTIA RIVER AND TRIBUTARIES, MD AND DC

Location. The project area is the 170-square mile watershed of the Anacostia River. This watershed encompasses approximately 145 square miles in Montgomery and Prince George's Counties, Maryland, and 25 square miles in the District of Columbia. The entire area is within the Washington, D.C. metropolitan area.

Existing project. The authorized plan provides for the construction of 80 acres of tidal and non-tidal freshwater wetlands, the restoration of 5 miles of piedmont streams, and the planting of 33 acres of bottomland hardwood forest within the highly urbanized Anacostia River watershed. The construction is located at 13 sites within the project area. The 13 actions include 2 wetland restorations, development of 5 stormwater management wetlands areas, and restoration of 6 stream reaches. The current estimated total cost for the Anacostia environmental restoration project is \$18 million.

Local cooperation. The non-Federal sponsors for the project are Montgomery County, Prince George's County, the District of Columbia, the Maryland-National Capital Park and Planning Commission, and the National Park Service. The last two sponsors are the current landowners of the project sites. The non-Federal sponsors are required to pay 25 percent of the cost allocated to fish and wildlife restoration and to bear all costs of operation, maintenance, repair, rehabilitation and replacement of the facilities after construction.

Operations and results during fiscal year. Project design continued for work in Montgomery County and the District of Columbia.

57. CHESAPEAKE BAY OYSTER RECOVERY, MD

Location. The project is located in the Maryland portion of the Chesapeake Bay.

Existing project. The authorized project contributes to multi-agency and private efforts to restore oyster populations in the Maryland portion of the Chesapeake Bay. Project elements include: construction and rehabilitation of oyster habitat; construction of seed bar facilities for production of oyster seed or "spat"; purchase of disease-free spat from the state-owned hatcheries, planting of disease-free spat in locations which best foster oyster production and health; and monitoring of project performance to increase oyster populations. Phase I of the project has an estimated total cost of \$3,334,000. Phase II of the project, which will extend into the waters of Virginia, has an estimated project cost of \$23,333,000.

Local cooperation. The State of Maryland is the sponsor for the Maryland action of the project. The local sponsor is required to pay 25% of the cost allocated to fish and wildlife restoration and to bear all costs of operation, maintenance, repair, rehabilitation and replacement of fish and wildlife facilities after construction.

Operations and results during fiscal year. New Work: The Phase I project construction was completed in September 2000, with monitoring activities continuing through September 2004. Planning for the long-term Phase II project was initiated in January 2001 and will continue through 2003. Short-term construction activities for the Phase II project will be conducted in the summer of 2002 and 2003.

58. CHESAPEAKE BAY ENVIRONMENTAL RESTORATION/PROTECTION PROGRAM, MD

Location. The project is located in the Chesapeake Bay area within portions of the states of Maryland, Virginia and Pennsylvania.

Existing Project. Section 510 of WRDA 1996 authorizes the Corps of Engineers to provide design and construction assistance to non-Federal interests for publicly owned water-related environmental infrastructure and resource protection and development of projects affecting the Chesapeake Bay estuary. These projects include sediment and erosion control, protection of eroding shorelines, protection of essential public works, wastewater treatment and related facilities, water supply and related facilities, and beneficial uses of dredged material, and other related projects that may enhance the living resources of the estuary. At least one project shall be established in each of the states of Maryland, Virginia and Pennsylvania. The Maryland projects include Tylerton, Smith Island Martin Wildlife Refuge Shoreline Protection Project, and upgrade of Smith Island Wastewater Treatment Plants, the Virginia project is an oyster restoration project being handled by Norfolk District and the Pennsylvania project will be upgrade of the Scranton Wastewater Treatment Plant to include nitrogen removal.

Local cooperation. The sponsors for the project include the Maryland Department of Natural Resources, Maryland Department of the Environment, Somerset County, and Dorchester County, Maryland, and the Virginia Marine Resources Commission.

Operations and results during fiscal year. Design work completed on the Smith Island Wastewater Treatment Plants. Construction work completed on the Lower Rappahannock project and on the Tylerton Shoreline Protection Project.

59. DENTS RUN, PA

Location. The Dents Run watershed is located in Benazette Township, Elk County, Pennsylvania. The lower 4.5 miles of Dents Run is devoid of aquatic life due to acid mine drainage along its tributary, Porcupine Hollow. In addition, approximately 250 acres of upland habitat scarred from past mining activities does not provide suitable habitat for wildlife.

Existing Project. On March 11, 2002, the Chief of Engineer, under the authority provided by Section 206 of the Water Resources Development Act of 1996, as amended, authorized construction of aquatic ecosystem restoration and protection measures. The work consists of mining of 500,000 tons of limestone and remediation work at PA 1934 which is located on Winslow Hill Road off Route 555. The estimated implementation cost is \$9,000,000 of which \$5,000,000 is Federal and \$4,000,000 is non-Federal, including \$1,300,000 which is being voluntarily provided as work-in-kind by the local sponsor to ensure a functionally complete project.

Local cooperation. The sponsor is the Bennett Branch Watershed Association. The sponsor funds are provided from PADEP-BAMR (\$2.7 million) and the Pennsylvania Growing Greener Program (\$1.3 million), and in partnership with the Pennsylvania Game Commission (PGC) is responsible for providing 35 percent of the project costs and for providing the entire cost of design and construction reclamation and passive treatment system work at PA 1934. The Western Pennsylvania Conservancy, under a Memorandum of Understanding with the sponsor, will assist the sponsor in all real estate acquisition activities.

Operations and results during fiscal year. New Work. A Final Detailed Project Report Statement and Integrated Environmental Impact Statement was completed in October 2001 and approved in March 2002. The Project Cooperation Agreement was executed on July 23, 2002. The initial construction contract was awarded in December 2002.

60. POPLAR ISLAND, MD

Location. The group of islands known as Poplar Island is located in the upper middle Chesapeake Bay approximately 34 nautical miles southeast of the Port of Baltimore and 1 mile northwest of Tilghman Island, Talbot County, MD.

Existing project. The authorized project provides for the use of approximately 33 million cubic yards of dredged material from the southern approach channels of the Baltimore Harbor and Channels navigation project to restore 1,140 acres of remote habitat. The restoration project will employ dikes to contain the

dredged materials necessary for the wetlands vegetation and to protect the facility from the severe wave activity common in this region of the Chesapeake Bay. The placement site will restore Poplar Island to its approximate 1847 configuration and will consist of 570 acres of upland habitat at an elevation up to +20 feet MLLW and 570 acres of wetland habitat that would be further divided into approximately 444 acres of low marsh and 111 acres of high marsh. The current estimated total project cost is \$340 million (including a future inflation allowance through the project completion).

Local cooperation. The State of Maryland is the project sponsor and the Local Cooperation Agreement was executed April 4, 1997. The sponsor is required to provide lands, easements, and rights-of-way; pay 25% of the cost of the project; and bear all costs of operation, maintenance, replacement and major rehabilitation of the ecosystem restoration project.

Operations and results during fiscal year. New Work: Phase II construction was completed in March 2002. The second inflow of dredged material (3.5 million cubic yards) started in September 2001 and was completed in January 2002.

million to carry out the program, including \$90 million within the Chesapeake Bay watershed area. From FY 94 through FY02, Congress has added \$65,016,000 to the Corps budget for 47 projects in the Baltimore District. This includes two Master Plans; 15 Projects for water supply and distribution; 22 for wastewater collection and treatment; 6 combined improvements for water, wastewater and stormwater; and two for stormwater and flood control.

Local cooperation. The non-Federal sponsors are required to provide 25% of project costs including lands, easements, rights-of-way, and relocations and bear all costs of operation, maintenance, replacement, repair and rehabilitation of the project after construction.

Operations and results during fiscal year. Of the 52 projects in the Baltimore District, 18 were completed prior to FY 02. With carryover funds for 34 active projects, we completed construction of 6 projects, continued or initiated sponsor construction of 9 projects, continued sponsor design of 19 projects, continued a Corps water supply study for McConnellsburg. In support of these actions, 4 construction agreements were executed in FY 01.

61. SOUTH CENTRAL PENNSYLVANIA ENVIRONMENTAL IMPROVEMENT PROGRAM

Location. The south central Pennsylvania area includes fifteen counties defined by the authorizing legislation. Funds for an additional six counties were provided in the FY 1998 and FY 1999 Energy and Water Appropriation Act. The program area within the Baltimore District consists of the Chesapeake Bay watershed portion of the program area including Bedford, Blair, Clearfield, Franklin, Fulton, Huntingdon, Juniata, Mifflin, Snyder, and a portion of Cambria Counties.

Existing project. Section 313 of the Water Resources Development Act of 1992, as amended, established a pilot program for providing environmental assistance to non-Federal interests in south central Pennsylvania. Such assistance may be in the form of design and construction assistance for water-related environmental infrastructure and resource protection and development projects, including projects for waste water treatment and related facilities, water supply, storage treatment, distribution facilities, and surface water resource protection and development. The Federal share may be provided in the form of grants or reimbursements to the sponsor. Section 313 as amended authorizes Federal appropriations of \$180

REGULATORY PROGRAM

62. REGULATORY PROGRAM

The Regulatory Program began FY02 with 671 applications pending from FY01. During FY02, 4670 new applications were received; 3997 permits were issued; 1 application was denied and 14 were withdrawn; for activities in regulated waterways and wetlands in MD, Washington, DC and part of PA. At the beginning of the FY, 188 enforcement cases were pending. During FY02, 186 violations were resolved and 77 new violations were discovered/reported. 470 Jurisdictional determinations were requested and verified. Total FY02 Regulatory Program costs were \$4,922,434.

WATER SUPPLY

63. WASHINGTON AQUEDUCT

Location. The diversion dam and raw water supply intakes at Great Falls, the two collecting conduits, part of Dalecarlia receiving reservoir, the booster pumping of Dalecarlia receiving reservoir, the booster pumping station and the Little Falls raw water pumping station are located in Maryland. All other structures of the water supply system including parts of the raw water collecting system, two purification plants, pumping

stations, storage reservoirs, and transmission mains are in the District of Columbia. Federally owned water mains are maintained in Virginia and Maryland.

Existing project. Control of the water supply system is vested in the Chief of Engineers (see Acts of March 3, 1859, and March 2, 1867, November 22, 1973 and Sec. 1800 of Revised Statutes). The project includes: administration; operation and maintenance of the collection, purification, pumping, and transmission facilities; protection of the water supply system; engineering; and construction of major water system additions and improvements.

Authority to supply water to Arlington County, the City of Falls Church, and other jurisdictions in Virginia is contained in Public Law 119, 69th Congress, approved April 14, 1926; and Public Law 118, 80th Congress, June 26, 1947.

Local cooperation. Requirements are described in full on page 4-19 of the Fiscal Year 1981 Annual Report.

Operations and results during fiscal year. Purified water was furnished to the District of Columbia; Arlington County, and Falls Church, VA; and to Federal Establishments in the District of Columbia, Arlington County, VA, and Montgomery County, MD. Total consumption for fiscal year 2002 was 65.12 billion gallons. The average amount furnished Arlington County and Falls Church, VA was 42.8 million gallons per day. The Corps of Engineers was reimbursed \$25,120,283 for operations and maintenance of which \$9,562,180 was from Virginia.

GENERAL INVESTIGATIONS

64. SURVEYS

Federal costs for the fiscal year were \$2,770,076 including \$228,917 for flood damage prevention studies, \$1,667,114 for special studies, \$297,124 for special investigations, \$17,977 for interagency water resource development, \$2,023 for National estuary studies, and \$428,814 for coordination with other agencies and non-Federal interests.

Non-Federal contributed costs for the fiscal year were \$3,014,730 of which \$2,203,275 was for navigation studies, \$464,842 for flood damage prevention studies, and \$346,613 for special studies and non-Federal interest.

65. AQUATIC ECOSYSTEM RESTORATION

Fiscal year costs were \$10,116 for Section 206 Coordination; \$309,048 for Isle of Wight Bay, MD; \$13,581 for Lackawanna, PA; \$316,903 for Nanticoke

Creek Luzerne, PA; \$58,855 for Easton, MD; \$661,070 for Blackwater, MD; \$204,518 for Lower Anacostia Park, DC; \$295,608 for Ft. Chaplin/Ft. Dupont, DC; \$69,299 for Eastonbrook Reservoir, NY; \$33,386 for Loyalsock Creek-Dushore; PA; \$51,597 for North Beach, MD; \$109,206 for Northwest Branch Anacostia; \$7 2,504 for St. Martin's River Ocean City, MD; \$430,121 for Western Branch Patuxent; MD; \$33,572 for Parsons Creek; MD; \$336,723 for Kettle Creek, PA; \$323,205 for Fall Brook, PA; \$243,083 for Powderly Creek, PA; \$7,000 for Dog Island Shoals, MD; \$13,454 for Chenango Lake, NY; \$8,963 for Six Mile Run, PA; \$8,932 for Sandy Run, PA; \$8,872 for Longs Run, PA; \$5,827 for Great Cypress Swamp, DE; \$4,196 for Paint Branch Fish Passage, MD; \$9,395 for Sweet Arrow Lake, PA; \$6,120 for Lower Gwynns Falls, MD; \$3,308 for Delaware Forested Wetlands, DE; \$9,373 for Codorus Creek, PA; \$4,694 for Forestville, MD; \$3,500 for Brubaker Run, PA; \$8,410 for Wright's Creek, MD; and \$8,297 for Betterton, MD.

Fiscal year costs were \$73,933 for Aquatic Plant Control. Fiscal year costs were \$9,525 for Section 1135 Coordination; \$664,400 for Hart-Miller Island, MD; \$385,626 for Whitney Point Reservoir, NY; \$43,539 for Kitzmiller, MD; \$118,688 for Heritage Island, DC; \$31,049 for Little Falls Fish Passage #2; \$9,800 for Rooster Island Restoration, MD; \$133,981 for Lower Kingman Island; \$9,763 for York Restoration Project, PA; and \$5,000 for Jennings Randolph Lake, MD & WV Nitroge.

Fiscal year miscellaneous costs were \$9,965 for Coordination Account Funds and \$2,618 for Initial Appraisals.

66. COLLECTION AND STUDY OF BASIC DATA

Costs for flood plain management activities and general planning guidance during the period was \$149,694. Providing assistance and guidance to local interests on methods and procedures for preventing and reducing flood damages was in progress at end of fiscal year.

67. PRECONSTRUCTION ENGINEERING AND DESIGN

Smith Island Environmental Restoration--Smith Island is Maryland's only inhabited offshore island having been settled in the mid 1600's. There are three towns on the island Ewell, Rhodes Point and Tylerton, with harbors that are used by the oystering and crabbing industries. In the past 100 years, 1,200 acres of Smith

Island have eroded into the Chesapeake Bay, and future erosion will destroy the island if unchecked. There are existing Federal navigation channels being maintained for the island, all of which were formulated and constructed prior to today's recognition of fish and wildlife values. The recommended projects include construction of environmental restoration measures including protection/restoration of SAV habitat and protection/creation of wetlands and navigation improvements. Total costs during the fiscal year were \$166,055. Estimated pre-construction planning cost is \$600,000.

**FORMERLY UTILIZED SITES
REMEDIAL ACTION PROGRAM
(FUSRAP)**

**68. W.R. GRACE, CURTIS BAY
FACILITY, MD**

Location. The W.R. Grace Curtis Bay Facility is located at 5500 Chemical Road in Baltimore, Maryland on an industrialized peninsula in south Baltimore, and consists of 260 acres owned by Grace. The property is bordered on the north by Curtis Bay, on the west by Curtis Creek, on the east by the Patapsco River, and on the south by the Baltimore City Municipal Landfill. The facility currently consists of a manufacturing plant and waste disposal areas.

Existing project. Currently, W.R. Grace manufactures and produces specialty chemicals at its Curtis Bay facility. Contamination at the site consists of radioactively-contaminated slabs and other surfaces impacted by the thorium extraction process in Building 23 and the Radioactive Waste Disposal Area to the east of the plant property. The W.R. Grace Site has been separated into 2 distinct work components: Building 23 and the Radioactive Waste Disposal Area. The overall project cost is estimated at \$50 million.

Local Cooperation. Not applicable.

Operation and results during fiscal year. New Work: Feasibility Studies for the Radioactive Waste Disposal Area and Building 23 continued throughout the fiscal year. Total cost for the fiscal year was \$900K ±.

1. Includes \$8,467,003 for previous projects.

2. Includes \$399,802 for previous projects.

3. Includes \$638,844 for previous projects.

4. Excludes \$1,890,750 for previous project and excludes \$64,994 in contributed funds.

5. Excludes \$378,477 for previous projects.

6. Excludes \$2,292,427 for previous projects.

7. Includes \$1,105,148 for previous projects.

8. Excludes \$2,200 contributed funds and includes \$27,668 emergency relief funds.

9. Includes \$604,441 for previous projects.

10. Includes \$5,000 for previous project.

11. Includes \$203,198 for previous projects.

12. Includes \$283,008 public works funds and \$67,185 emergency relief funds; excludes \$500,000 contributed funds.

13. Excludes \$3,667,075 for previous projects.

14. Unconstructed portion of the project was deauthorized November 2, 1979.

15. Includes \$2,368,946 for previous projects.

16. Includes \$756,360 for previous projects.

17. Includes \$913,753 for previous projects.

18. Includes \$3,029,001 for previous project.

19. Excludes \$1,831,609 for previous project.

20. Excludes \$4,000 for emergency dredging under provisions of Section 3, 1945 River and Harbor Act.

21. Includes \$649,957 for previous projects.

22. Excludes \$414,977 contributed funds.

23. Includes \$114,712 for previous project.

24. Includes \$12,000 for previous project and excludes \$1,000 contributed funds.

25. Excludes \$903,450 contributed funds.

26. Includes \$62,577 emergency relief funds.

27. Includes \$109,944 emergency relief funds.

28. Excludes \$163,096 contributed funds.

29. Includes \$207,520 rehabilitation funds.

30. Excludes \$34,729 contributed funds.

31. Includes \$250,899 emergency relief funds and excludes \$15,000 contributed funds.

32. Includes \$71,557 emergency relief funds.

33. Includes \$73,465 emergency relief funds.

34. Excludes \$263,900 contributed funds in accordance with the Tri-party Agreement for construction of a sanitary system for public use.

35. Includes \$11,588 emergency relief funds.

36. Includes \$15,000 for deferred maintenance.

TABLE 4-B AUTHORIZING LEGISLATION

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
1.		BALTIMORE HARBOR AND CHANNELS, MD and VA	
	Aug 8, 1917	Branch channel 35 feet deep to head to Curtis Bay, and one 35 feet deep and 400 feet wide Fort McHenry to Port Covington entrance channel, thence 150 feet wide to Ferry Bar, and thence 27 feet deep and 150 feet wide to Hanover Street Bridge, widen approaches and bends, and enlarge anchorage basin near entrance. Inclusion of Patapsco River and tributaries into one project for Baltimore Harbor.	H. Doc. 799, 64th Cong., 1st Sess.
	Jan 21, 1927	Change in location of anchorage near upper end of Fort McHenry Channel.	
	Jul 3, 1930	Increased anchorage facilities Rivers and Harbors.	Committee Doc. 11, 70th Cong., 1st Sess.
	Jul. 3, 1930	For 37-foot depth in that portion of channel to Baltimore lying between 37-foot depth curve near Baltimore Light to Sparrows Point entrance channel; widen angle between Fort McHenry and Ferry Bar section; and for width of 400 feet in Curtis Bay section.	H. Doc. 86, 85th Cong., 1st Sess.
	Oct. 17, 1940	For 22-, 18-, and 15-foot channels in Curtis Creek from 22-foot depth below Pennington Avenue Bridge to upper end of marginal wharf of U.S. Ordnance Depot	Adopted as a national defense project. (No printed report.)
	Mar 2, 1945	Uniform main channel 309 feet deep from the ocean through York Spit section and Craighill entrance to Fort McHenry, additional anchorage area, 2,400 feet long, 1,200 feet wide, and 30 feet deep; a connecting channel 400 feet wide and 27 feet deep from Cutoff Brewerton Angle in main channel to Inland Waterway from Delaware River to Chesapeake Bay; a channel in Curtis Creek 200 feet wide and 35 feet deep from head of existing 35-foot project channel in Curtis Bay to a point in the creek about 750 feet below Pennington Avenue Bridge.	H. Doc. 741, 79th Cong., 2nd Sess.
	Mar. 2, 1945	A channel 22 feet deep and 200 feet wide from 22-foot depth curve south of Baltimore & Ohio R.R. bridge about 2,800 feet to vicinity of Arundel Cove, thence 100 feet wide in Arundel Cove for about 2,100 feet; with an anchorage basin about 700 feet square adjacent to channel southwesterly of Coast Guard wharf.	In accordance with plans on file in the Office, Chief of Engineers
	Jul 3, 1958	Main channel 42 feet deep and 1,000 feet wide in Cape Henry section at entrance to Chesapeake Bay and in York Spit section; 42 feet deep and 800 feet wide in Rappahannock Spit section and in approach channel to Baltimore Harbor from Craighill entrance to Fort McHenry, with widening at entrance and bends; channels 42 feet deep and 600 feet wide in Curtis Bay and Ferry Bar sections of harbor; a connecting channel 35 feet deep and 600 feet wide from main channel to approach channel to Chesapeake and Delaware Canal; and for three disjointed sections of channels of same depth and width in Chesapeake Bay leading to Chesapeake and Delaware Canal; and to provide Federal maintenance of 39-foot depth in Northwest Branch, in areas dredged to that depth by local interests.	H. Doc. 86, 85th Cong., 1st Sess.
	Dec, 31, 1970	Deepening of the Cape Henry Channel to 50 feet at the existing width of 1,000 feet, with widening at bends; deepening of the Spit Channel to 50 feet at the existing width of 1,000 feet, with widening at bends; enlargement of the	H. Doc. 181, 94th Cong., 1st Sess.

		Rappahannock Shoal Channel to a depth of 50 feet and a width of 1,000 feet; deepening of the main ship channel from Chesapeake Bay to Fort McHenry to a depth of 50 feet at the existing width of 800 feet, with widening at bends and at the Craighill Entrance; deepening of the Curtis Bay Channel to a depth of 50 feet at the existing width of 600 feet, and deepening of the 950-foot wide and 980-foot long turning basin at the head of channel to the same depth; deepening of the Northwest Branch--East Channel to a depth of 49 feet from the depth existing at the time of construction at a width of 600 feet, and deepening of the 950-foot wide and 950-foot long turning basin at the head of the channel to the same depth; and deepening and extension of the Northwest Branch--West Channel to a depth of 40 feet from the depth existing at the time of construction, at a width of 600 feet, and with an irregularly shaped turning basin at the head of the channel 40 feet deep and about 2,000 feet long with a maximum width of 1,150 feet.	
2.		BALTIMORE HARBOR ANCHORAGES AND CHANNELS, MD	
	Aug. 17, 1999	Widen and deepen two existing Federal anchorages; widen several connecting channels; provide a new turning basin near Fort McHenry; and provide a new branch channel within the Port of Baltimore.	Chief of Engineers Report dated Jun 8, 1998
3.		BALTIMORE HARBOR, MD, COLLECTION AND REMOVAL OF DRIFT	
	Jun. 30, 1948	Collection and removal of drift from Baltimore Harbor and its tributary waters.	River and Harbor Act of 1948
4.		CHESTER RIVER, MD	
	Mar. 3, 1873	A channel 7 feet deep at mean low water and 100 feet wide from Chester River to Eastern Bay through Kent Island Narrows.	H. Doc. 381 80th Cong., 1st Sess.
	Jun 30, 1948	A channel 7 feet deep at mean low water and 75 feet wide extending from the 7-foot depth in Kent Island Narrows 800 feet into Wells Cove with a basin of the same depth and 300 feet square at the head of the channel.	H. Doc. 380, 80th Cong., 1st Sess. ²
	Sep. 19, 1980	A channel 6 feet deep at mean low water and 60 feet wide from Crumpton to Jones Landing.	H. Dox. 595
5.		CRISFIELD HARBOR, MD	
	Mar. 3, 1925	A 12-foot channel of varying widths to opposite Consumers Ice Co., thence 10 feet deep and 100 feet wide from ice plant to Hop Point.	H. Doc. 355, 68th Cong., 1st Sess.
	Aug. 26, 1937	7-foot channel 100 feet wide from opposite Hop Point to an anchorage parallel to Brick Kiln Road.	Rivers and Harbors Committee Doc. 2, 75th Cong., 1st Sess.
	Aug. 26, 1937	For the 7-foot x 60-foot channel in Little Annemessex River...	H. Doc. 72, 75th Cong., 1st Sess.
	Mar. 3, 1945	A mooring basin 7 feet deep, 160 feet wide, and about 875 feet long roughly parallel to Brick Kiln Rd., with a channel 7 feet deep and 100 feet wide leading from there to the 7-foot project channel connecting Little Annemessex and Big Annemessex Rivers.	H. Doc. 457, 76th Cong., 1st Sess.
	Sep. 3, 1954	An anchorage basin in Somers Cove 10 feet by 600 feet by 1,000 feet with an approach channel 10 feet by 100 feet from 10-foot depth in Little Annemessex River through a land cut in Jersey Island to south side of basin.	H. Doc. 435, 81st Cong., 2d Sess.

TABLE 4-B AUTHORIZING LEGISLATION

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
	Aug. 14, 1958	Change location and dimensions of approach channel to Somers Cove to plan No. 2 through the present entrance, at no increase in Federal cost of modification.	H. Doc. 435, 81st Cong., 2d Sess.
6.		DUCK POINT COVE, MD	
	Mar. 2, 1945	A channel 60 feet wide and 6 feet deep, from that depth in Fox Creek to a mooring basin of same depth, 100 feet wide and 300 feet long, roughly parallel to county road at head of waterway.	H. Doc. 241, 76th Cong., 1st Sess.
7.		FISHING CREEK, MD	
	Aug. 26, 1937	A channel 7 feet deep with widths of 100 feet and 60 feet from deep water in Chesapeake Bay to an anchorage of the same depth, 120 feet wide and 400 feet long, located in the marsh 500 feet above the mouth of the creek and twin stone jetties at the entrance.	H. Doc. 241, 75th Cong., 1st Sess.
8.		HERRING BAY AND ROCKHOLD CREEK, MD	
	Jul. 3, 1930	A channel 60 feet wide, 5 feet deep, from the 6-foot contour in Herring Bay to the 3-foot contour in Rockhold Creek.	Rivers and Harbors Committee Doc. 34, 71st Cong., 2nd Sess.
	Jun. 20, 1938	For the present project channel dimensions, 7 feet deep and 60 feet wide, the turning basin 7 feet deep, and a stone breakwaters 900 feet long.	H. Doc. 595 75th Cong., 3rd Sess. ²
9.		HONGA RIVER AND TAR BAY, MD	
	Aug. 30, 1935	Channel 60 feet wide and 7 feet deep from the 7-foot contour in Chesapeake Bay through Tar Bay and Fishing Creek to the 7-foot contour in Honga River.	Rivers and Harbors Committee Doc. 35, 74th Cong., 1st Sess.
	Jun. 30, 1948	Modification providing for a channel in Back Creek 7 feet deep and 60 feet wide from the 7-foot depth curve in Honga River to a point near the head of Back Creek, with a turning basin of the same depth, 150 feet long and 200 feet wide.	H. Doc. 580, 80th Cong., 2nd Sess.
10.		MUDDY HOOK & TYLER COVE, MD	
	Dec. 4, 1964	An entrance channel 60 feet wide and 6 feet deep from that depth in Honga River to and including an anchorage basin of same depth, 160 feet wide and 400 feet long, in Fishing Creek into Tyler Cove and includes an anchorage basin 200 feet wide, 250 feet long and 6 feet deep.	Detailed Project Report, May 1964
11.		NANTICOKE RIVER, MD	
	Aug. 30, 1937	A small boat harbor 7 feet deep, 120 feet wide, and 400 feet long in the marsh at Nanticoke with an entrance channel of the same depth and 60 feet wide protected on either side by stone jetties in the river.	H. Doc. 242, 75th Cong., 1st Sess. ²

TABLE 4-B AUTHORIZING LEGISLATION

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
12.		NANTICOKE RIVER, DE AND MD	
	Jun. 3, 1896	A 9-foot channel, 100 feet wide up to Seaford, DE, with a turning basin.	H. Doc. 333, 53rd Cong., 3rd Sess., and Annual Report, 1985, p. 1165.
	Jun. 25, 1910	Slight widening between bridges in harbor at Seaford, DE.	H. Doc. 674, 61st Cong., 2nd Sess.
	Jun. 25, 1910	A channel 6 feet deep, 60 feet wide in Northwest Fork, together with turning basin.	H. Doc. 869, 60th Cong., 1st Sess.
	Mar. 2, 1945	A channel 12 feet deep, 100 feet wide from 12-foot contour in Tangier Sound to highway bridge at Seaford, DE.	S. Doc. 69, 77th Cong., 1st Sess.
13.		NEALE SOUND, MD	
	Aug. 26, 1937	Channel 7 feet deep and 100 feet wide through lower entrance into Wicomico River and a second channel 6 feet deep at upper entrance extending from deep water within the sound through a marshy barrier at head of Cobb Island to deep water in the Potomac with widths of 60 feet within the sound and 80 feet elsewhere.	H. Doc. 159, 75th Cong., 1st Sess.
	Jul. 13, 1999 Sec. 107	A channel 7 feet deep and 100 feet wide at the lower entrance to Neale Sound, from deep water within the Sound to deep water in the Wicomico River; a channel 6 feet deep and 80 feet wide in the Potomac River to deep water within the sound at the upper entrance. This project provides for a 1,650 foot stone jetty to protect the upper channel from shoaling.	Detailed Project Report, Feb. 28, 1997
14.		OCCOQUAN CREEK, VA	
	Dec. 5, 1980	Channel 6 feet deep and 100 to 150 feet wide through four bars and construction of dikes.	Annual Report for 1801, p. 1254
	Mar. 2, 1907	Extending channel 6 feet deep and 150 feet wide through outer bar.	H. Doc. 190, 59th Cong., 1st Sess. (The latest published map is in H. Doc. 190, 63d Cong., 2d Sess.)
15.		OCEAN CITY HARBOR AND INLET AND SINEPUXENT BAY, MD	
	Aug. 30, 1935	Construction of an inlet between the Atlantic Ocean and Sinepuxent Bay, 10 feet deep and 200 feet wide, protected by jetties; a channel 8 feet deep and 100 feet wide from the inlet to Ocean City, 6 feet deep and 150 feet wide to Green Point, and 100 feet wide into Chincoteague Bay.	Rivers and Harbors Committee Doc. 38, 72nd Cong., 1st Sess.
	Aug. 30, 1935	Modification providing a 10-foot by 100-foot channel from the inlet to the west side of the bay with two turning basins; a channel 6 feet deep and 125 feet wide from the inlet to Ocean City, 6 feet deep and 150 feet wide to Green Point feet wide into Isle of Wight Bay.	Rivers and Harbors Committee Doc. 60, 74th Cong., 1st Sess.

TABLE 4-B AUTHORIZING LEGISLATION

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
	Sep. 3, 1945	Modification providing for raising the north jetty to an elevation 9 feet above mean low water, and a channel 300 feet wide and 16 feet deep from the ocean through the inlet to the Isle of Wight Bay Channel, thence 200 feet to the project harbor, and a depth of 14 feet in the project harbor. Channel depths refer to project datum.	H. Doc. 444, 82nd Cong., 2nd Sess.
16.		POCOMOKE RIVER, MD	
	Jun. 3, 1896	A 9-foot channel from Shad Landing to Snow Hill.	Annual Report for 1895, p. 1167.
	Aug. 30, 1935	A channel 7 feet deep and 100 feet wide from Pocomoke Sound to Pocomoke River.	H. Doc. 227, 74th Cong., 1st Sess. ² H. Doc. 429, 76th Cong., 1st Sess. ²
	Mar. 2, 1945	Extend channel above bridge at Snow Hill, 100 feet wide, 9 feet deep, widened to 150 feet to form a turning basin at upper end.	H. Doc. 486, 81st Cong., 2nd Sess. ²
	Sep. 3, 1954	Channel 11 feet deep by 150 feet wide from Pocomoke Sound to Tulls Point, thence a channel of the same depth and 100 feet wide to deep water in Pocomoke River above William Point, and dike construction along south side of channel from existing dike to Tulls Point.	
17.		POTOMAC & ANACOSTIA RIVERS, DC, COLLECTION & REMOVAL OF DRIFT	
	Oct. 27, 1985	Collection and removal of drift from waters of the Potomac and Anacostia Rivers and their tributaries in the Washington, DC area from the head of the tidewater to Mount Vernon. VA	H. Doc. 286, 89th Cong., 1st Sess.
18.		POTOMAC RIVER AT MT. VERNON, MD	
	Mar. 3, 1879	Channel 6 to 7 feet deep, 150 feet wide, from Potomac River channel to Mount Vernon wharf, with turning basin at wharf. Channel increased to 9- to 10-foot depth, 200-foot width, turning basin to have 200-foot radius.	Annual Report, 1879, vol. 1, p. 83. Annual Report, 1888, vol. 1, p. 814.
19.		POTOMAC RIVER BELOW WASHINGTON, DC	
	Mar. 3, 1899	A channel 24 feet deep and 200 feet wide between mouth at Chesapeake Bay and Giesboro Point at Washington, DC, a distance of 108 miles.	H. Doc. 33, 52nd Cong., 1st Sess.
20.		PREVENTION OF OBSTRUCTIONS AND INJURIOUS DEPOSITS, BALTIMORE HARBOR, MD	
	Aug. 30, 1935	Continuous patrol and inspection of Baltimore Harbor, Chesapeake Bay, and its tributaries to prevent and detect violations, and issue permits as required for transporting and despositing waste materials in navigable waters. (The project is limited to the tidal waters of Chesapeake Bay and its tributaries that lie within the State of Maryland.)	River and Harbor Act, June 28, 1888 as amended by Public Law 85-802, dated August 29, 1959
21.		RHODES PT TO TYLERTON, MD	
	Jan.22, 1982	A channel 6 feet deep and 50 feet wide at mean low water from Tylerton to limit of existing Rhodes Point to Tylerton Federal navigation channel, a dis-	Detailed Project Report,

TABLE 4-B AUTHORIZING LEGISLATION

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
	Sec. 107 Jul. 14, 1960	tance of about one-mile, through Sheel Pen Gut to deep water in the Chesapeake Bay.	June 1981
	Sep. 3, 1954	A channel 4 feet deep at mean low water and 50 feet wide from Tylerton to Rhodes Point via Rhodes Point Gut.	H. Doc. 51 82nd Cong., 1st Sess. ²
	Aug. 1, 1968 Sec. 107 Jul. 14, 1960	Modification providing for a channel 6 feet deep and 50 feet wide from that depth in Tyler Creek to and including an anchorage basin of the same depth 150 feet wide and 400 feet long at Tylerton; channel 6 feet deep and 50 feet wide from that depth in Shanks Creek to and including an anchorage basin of the same depth 100 feet wide and 400 feet long at Rhodes Point' channel 6 feet deep and 50 feet wide from that depth in Big Thorofare River to Tylerton; channel 6 feet deep and 50 feet wide from Rhodes Point to Tylerton.	Detailed Project Report, February 1968
22.		ST. JEROME CREEK, MD	
	Aug. 26, 1937	A channel 7 feet deep and 100 feet wide at Airedele, thence 7 feet deep and 60 feet wide to deep water in the creek, with a turning basin of the same depth 200 feet wide and 300 feet long opposite Airedele.	H. Doc. 174, 75th Cong., 1st Sess. ¹
23.		TOLCHESTER CHANNEL S-TURN, MD	
	Aug. 5, 1999	Dredge a new straight channel 35 feet deep, 600 feet wide, and 2 miles long to replace the existing Tolchester Channel S-Turn off Tolchester Beach.	Water Resources Dev. Act of 1999
24.		TWITCH COVE AND BIG THOROFARE, MD	
		A channel 4 feet deep and 25 feet wide from Tangier Sound into Big Thorofare River, and one of same dimensions around point between said river and Tyler River.	H. Doc. 285, 62nd Cong., 2nd Sess.
25.		UPPER THOROFARE DEAL ISLAND, MD	
	Aug. 30, 1935	A 9-foot channel 75 feet wide protected by breakwater at entrance, with turning basin at inner end and anchorage area 6 feet deep and 150 foot wide.	Rivers and Harbors Committee Doc. 37, 72nd Cong., 1st Sess.
	Aug. 26, 1937	Widen entrance channel to 100 feet, extend 9-foot turning basin an 6-foot anchorage, and dredging an additional anchorage area on north side of channel.	H. Doc. 76, 75th Cong., 1st Sess.
26.		WASHINGTON HARBOR, DC	
	Aug. 30, 1935	Provides for: (a) Virginia Channel, from Giesboro Point to area for 25,000 square feet; (b) Washington Channel, from Haines Point to head of Washington Channel, 24 feet deep and 400 feet wide; (c) Anacostia River from Giesboro Point to Anacostia Bridge, 24 feet deep and 400 feet wide, with turning basin 800 feet wide and about 2,400 feet long of same depth opposite Naval Weapons Plant, (d) Anacostia River from Anacostia Bridge 24 feet deep and 200 feet wide to turning basin 400 feet square of same depth at foot of 15th Street SE Channel lengths including turning basins are: Virginia Channel, 25,000 feet; Washington Channel, 10,000 feet; and Anacostia River, 15,000 feet; and (e) operation and maintenance of inlet gates and lock and outlet gates of Tidal Basin constructed under a previous project to flush Washington Channel.	Rivers and Harbors Committee Doc. 22, 74th Cong., 1st Sess.

TABLE 4-B AUTHORIZING LEGISLATION

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
27.		WICOMICO RIVER, MD	
	Sep. 19, 1890	Channel 9 feet deep from Main Street Bridge to about 2 miles below.	H. Doc. 20, 51st Cong., 1st Sess., and Annual Report 1890, p. 947
	Jun. 25, 1910	Extend 9-foot depth into north prong from Main Street Bridge to the Salisbury Dam and turning basin.	H. Doc. 569, 61st Cong., 2nd Sess.
	Mar. 2, 1919	Extend 9-foot depth into south prong to head of navigation at Cathell Street, including a turning basin, and extend project down to mouth of river in Monie Bay.	H. Doc. 1509, 63rd Cong., 3rd Sess.
	Jul. 3, 1930	A 12-foot channel below the Main Street Bridge.	
	Aug. 26, 1937	A 14-foot channel, 150 feet wide; depths of 14 feet in the north and south prongs and a basin 6 feet deep at Webster Cove and approach channel thereto of the same depth.	Senate Committee Print, 75th Cong., 3rd Sess. ²
	Sep. 3, 1954	Enlarge existing basin at Webster Cove, by dredging an extension 6 feet deep, 100 feet wide, and 200 feet long on each side of existing basin to form a T-shaped harbor.	H. Doc. 619, 81st Cong., 2nd Sess. ²
31.		ASSATEAGUE ISLAND, MD	
	Oct. 12, 1996	Provides for expediting the Assateague Island restoration feature of the Ocean City, Maryland and vicinity study with a Federal appropriation limit of \$35 million.	P.L. 104-303
32.		ATLANTIC COAST OF MARYLAND	
	Nov. 17, 1986	Consists of a dune beginning at 27th Street extending north to the Delaware line; a steel sheetpile bulkhead from 27th Street south to Fourth Street; and widened and raised beach from Third Street to just beyond the Delaware line.	Report of the Chief of Engineers dated Sept. 29, 1981 Energy Water Dev. Approp. Act
	Sep. 29, 1989	Modification reauthorized the project at a higher project cost determined by Section 902 of the Water Resources Development Act of 1986.	District Engineer's Post Authorization Notification Report 1989
33.		COLONIAL BEACH, VA	
	Sep. 15, 1980	Extending and widening the existing Central Beach area, stabilizing the bank behind the beachfill with vegetation, and constructing four segments of offshore breakwater; and extending and widening of the existing Castle Beach area, constructing three segments of offshore breakwater, removing debris in the beachfill area, and constructing a 100-foot long terminal groin at the southern end of Castlewood Park beachfill.	Detailed Project Report, May 1980

TABLE 4-B AUTHORIZING LEGISLATION

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
34.		BROAD TOP REGION, PA	
	Oct. 31, 1992	Pilot program to develop and carry out a watershed reclamation and protection, and wetlands creation and restoration project using innovative reclamation technologies for the purposes of restoring, maintaining and protecting surface and ground water, including municipal water supplies, from adverse impacts related to acid mine drainage and other runoff.	P.L. 102-580
	Oct. 12, 1996	Provided for non-Federal sponsor credit for design and construction prior to PCA execution; allowed for Federal share of project costs to be provided in the form of grant or reimbursement of project costs.	P.L. 104-303
35.		CUMBERLAND, MD, AND RIDGELEY, WV	
	Jun. 22, 1936	Levees, retaining walls, movable dam, and channel clearing for Cumberland, West Cumberland and South Cumberland, MD and Ridgeley, WV.	H. Doc. 101, 73rd Cong., 1st Sess.
	Jul. 24, 1946	Levees, wall, channel improvement, remove Chesapeake and Ohio Canal Dam and construct new industrial dam.	Report on file in Office, Chief of Engineers
36.		JENNINGS RANDOLPH LAKE, MD AND WV	
	Oct. 23, 1962	Construction of Bloomington Lake project.	H. Doc. 469, 87th Cong., 2nd Sess.
37.		LACKAWANNA RIVER BASIN, PA	
	Oct. 23, 1962	Construction of Aylesworth Creek Lake, Fall Brook Lake, and local protection works on Lackawanna River at Scranton, Pennsylvania Sess.	S. Doc. 141, 87th Cong., 2nd
38.		MOOREFIELD, WV	
	Nov. 28, 1990	Levee, floodwall, closures, relocations, and improvements to the flood warning system.	Report of the Chief of Engineers dated July 23, 199
39.		NEABSCO CREEK, VA	
	Oct. 12, 1996	Provides for a flood control project in the Neabsco Creek Watershed in Prince William County.	P.L. 104-303
40.		OLYPHANT, LACKAWANNA RIVER, PA	
	Oct. 31, 1992	Provides for 3,800 feet of earth levee, 1,400 feet of concrete floodwall, a closure structure, interior drainage facilities, 1,500 feet of gabion slope protection and associated cultural mitigation and environmental restoration.	Report of the Chief of Engineers dated June 29, 1992
41.		DICKSON CITY, PA	
	Oct. 13, 1997	Provides for Corps to undertake activities leading to construction of flood control measures at Dickson City, with the same level of protection as Olyphant, PA.	P.L. 105-62

TABLE 4-B AUTHORIZING LEGISLATION

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
42.		RAYSTOWN LAKE, RAYSTOWN BRANCH, JUNIATA RIVER, PA	
	Oct. 23, 1962	Construction of dam and appurtenant facilities.	H. Doc. 565, 87th Cong., 2nd Sess.
43.		LACKAWANNA RIVER, SCRANTON, PA	
	Oct. 31, 1992	Provides for 5,800 feet of earth levee, 1,700 feet of concrete floodwall, 3 closure structures, interior drainage facilities, 2,700 feet of gabion slope protection, an improved flood warning system, removal of a railroad bridge, access ramp, and associated cultural mitigation.	Report of the Chief of Engineers dated June 29, 1992
	Modified by Act of Oct. 12, 1996	Directs Secretary to carry out the project for Plot and Green Ridge sections and allows non-Federal interest to participate in the financing of the project in accordance with Section 903(c) of WRDA 86.	P.L. 104-303
44.		OCEAN PINES, WORCESTER COUNTY, MD	
	Oct. 12, 1996	Restoration of 6.3 acres of filled salt marsh to tidal salt marsh.	Ecosystem Restora- tion Report
45.		WILLIAMSPORT, PA - HAGERMAN'S RUN	
	Oct. 13 1997	Directs the Secretary of the Army to use \$225,000 to construct necessary repairs to the flume and conduit for flood control at the Hagerman's Run project.	P.L. 105-62
46.		WV & PA FLOODING PROGRAM	
	Oct. 12, 1996	Provides for design and construction of structural and non-structural flood control, streambank protection, stormwater management and channel clearing and modification measures in the West Branch Susquehanna River and Juniata River Basins in Pennsylvania.	P.L. 104-303
	Aug. 17 1999	Requires flood protection not less than 100-year level for measures that incorporate levees or floodwalls.	P.L. 106-53
47.		SOUTHERN NEW YORK FLOOD CONTROL PROJECTS	
	Jun. 22, 1936 modified by Acts of Jun. 28, 1938 Aug. 18, 1941; Dec. 22, 1944; May 17, 1950; and Jul. 3, 1958	Construction of detention reservoirs and related flood control works for protection of Binghamton, Hornell, Corning and other towns in New York and Pennsylvania.	H. Doc. 702, 77th Cong., 2nd Sess.

TABLE 4-B AUTHORIZING LEGISLATION

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
48.		STILLWATER LAKE, LACKAWANNA RIVER, PA	
	Aug. 18, 1941	Construction of a flood control reservoir.	H. Doc. 702, 77th Cong., 2nd Sess.
49.		SUSQUEHANNA RIVER FLOOD CONTROL PROJECTS, NY AND PA	
	Jul. 3, 1958	Construction of Cowanesque and Tioga-Hannond reservoirs, local flood protection works at Elkland, PA, and Nichols, NY and channel improvement at Cortland, NY.	H. Doc. 702, 77th Cong., 2nd Sess.
	Oct. 22, 1976	Modification in connection with the construction of Cowanesque Lake to relocate the Town of Nelson, PA, to a new townsite.	H. Doc. 394, 84th Cong., 2nd Sess.
	Mar. 1, 1983	Modification of Cowanesque Lake to include water supply as provided by Section 4 of the Flood Control Act of 1944 (PL 78-534) and Section 301 of Water Supply Act of 1958 (PL 85-500).	
50.		WEST BRANCH OF SUSQUEHANNA RIVER, PA	
	Sep. 3, 1954	Construction of three flood control reservoirs.	H. Doc. 29, 84th Cong., 1st Sess.
51.		WYOMING VALLEY, PA (LEEVE RAISING)	
	Nov. 17, 1986	Modification provides for raising existing levees and floodwalls between 3 and 5 feet, modifying closure structures, relocating utilities and providing some new floodwalls and levees to maintain the integrity of the existing flood control system.	Report of the Chief of Engineers dated October 19, 1983
	Oct. 12, 1996	Modification to include as part of the construction of the project mechanical and electrical upgrades to stormwater pumping stations. The second modification is for the non-Federal sponsor to carry out mitigation measures that the Secretary would otherwise be authorized to carry out.	PL 104-303 Sec. 346
52.		YORK, INDIAN ROCK DAM, PA	
	Jun. 22, 1936	Construction of Indian Rock Dam and channel improvements on Codorus Creek.	H. Doc. 702, 77th Cong., 2nd Sess.
56.		ANACOSTIA RIVER AND TRIBUTARIES, MD AND DC	
	Oct. 12, 1996	The project consists of two wetland restoration sites in the District of Columbia, one stream restoration site and one stormwater wetland site in Prince George's County, and nine stream restoration and stormwater wetland sites in Montgomery County. The project will restore a total of 80 acres of tidal and non-tidal freshwater wetlands, 5 miles of piedmont streams, and 33 acres of bottomland hardwood forest within the highly urbanized Anacostia River watershed.	Report of the Chief of Engineers, dated November 15, 1994

TABLE 4-B AUTHORIZING LEGISLATION

57.		CHESAPEAKE BAY OYSTER RECOVERY, MD	
	Nov. 17, 1986	Contributes to multi-agency and private efforts to restore oyster populations in the Maryland portion of the Chesapeake Bay.	P.L. 99 - 662
	Oct. 12, 1996	Modification by inserting "and Virginia" after "Maryland" and increased program Authorization to \$7 million.	P.L. 104-303
	Dec. 11, 2000	Increased program authorization to \$20 million.	P.L. 106-541 Sec. 342
58.		CHESAPEAKE BAY ENVIRONMENTAL RESTORATION	
	Oct. 12, 1996	Establishes a pilot program to provide environmental design and construction assistance to new Federal interests in the Chesapeake Bay watershed.	P.L. 104-303
59.		DENTS RUN, PA	
	Oct. 12, 1996	An aquatic ecosystem restoration and protection project if the Secretary determines that the project will improve the quality of the environment and is in the public interest.	Detailed Project Report, Oct. 2001
60.		POPLAR ISLAND, MARYLAND	
	Oct. 12, 1996	The project consists of reconstructing Poplar Island to its approximate size in 1847 (1,110 acres), using an estimated 38 million cubic yards of uncontaminated dredged material from maintenance dredging of the southern approach channels of the Baltimore harbor and Channels navigation project.	Report of the Secretary of the Army, dated September 3, 1996
	Dec. 11, 2000	Modification that the non-Federal share of the cost of a project may be provided in cash or in the form of In-kind-services or materials.	P.L. 106-541
61.		SOUTH CENTRAL PA ENVIRONMENTAL IMPROVEMENT PROGRAM	
	Oct. 31, 1992	Pilot program for providing environmental assistance to non-Federal interests in South Central Pennsylvania.	P.L. 102-580
	Modified by Acts of Nov. 13, 1995	Expanded scope to include 15 counties; increased program authorization limits to \$50 million; provided for non-Federal sponsor credit for design and construction prior to PCA execution; allowed for Federal share of project costs to be provided in the form of grants or reimbursement of project costs; and provided the non-Federal sponsors to receive credit for reasonable interest to provide non-Federal share of project's cost.	P.L. 104-46

1. Exclusive of portion considered inactive. Inactive portion is widening 35-foot depth channel from 150 to 400 feet from Port Covington to Ferry Bar, widening 27-foot depth channel from 150 to 250 feet to Hanover Street Bridge, and providing a channel 127 feet deep by 250 feet wide to Western Maryland Railway Bridge with an anchorage and turning basin at the upper end.

2. Contains latest published maps.

3. Included in Public Works Administration program September 16, 1993. The site chosen for the inlet under this authorization was opened just south of Ocean City by natural forces during a severe storm in August 1933. This eliminated the necessity for an 8-foot channel from the inlet to Ocean City.

4. Included in Emergency Relief Program 1935.

5. Raising of the north jetty to an elevation of 9 feet above mean low water was accomplished with maintenance funds in 1956.

1. Unconstructed portion of the project was deauthorized August 5, 1977.

2. Project deferred for restudy.

3. Includes \$8,476 for previous projects.

4. Includes \$31,065 for previous project.

5. Excludes \$3,998 contributed funds.

6. Includes \$37,500 for previous projects.

7. Includes \$50,000 for previous projects.

8. Excludes \$3,998 contributed funds and includes \$61,321 for previous projects.

9. Includes \$40,041 for previous projects.

10. Authorization for the unconstructed portion of the project was withdrawn by the Chief of Engineers January 22, 1979.

11. Includes \$30,000 for previous projects.

12. Unconstructed portion of the project was deauthorized November 2, 1979.

13. Includes \$79,626 for previous project and excludes \$8,414 contributed funds.

14. Includes \$24,321 for previous projects.

15. Includes \$2,840 for previous projects.

16. Authorized by Chief of Engineers.

17. Excludes \$10,306 contributed funds.

18. Excludes \$1,100 contributed funds.

19. Abandonment recommended in 1926 (H. doc. 467, 69th Cong., 1st Sess.)

20. Includes \$2,000 expended outside project limits.

21. Excludes \$111,581 expended by Navy Department and \$52,000 from contributed funds.

22. Excludes \$565 contributed funds.

23. Excludes \$1,000 contributed funds.

24. Unconstructed portion of the project was deauthorized November 6, 1977.

25. Includes \$25,000 for previous projects.

26. Includes \$19,170 Works Progress Administration funds.

27. Includes \$10,617 for previous projects.

28. Excludes \$389,000 contributed funds.

29. Excludes \$101,162 Public Health Service funds expended for waterchestnut removal.

30. Includes \$19,000 for previous projects.

31. Excludes \$672,880 contributed funds.

32. Excludes \$24,125 contributed funds.

33. Excludes \$600 contributed funds.

34. Includes \$26,500 for previous projects.

35. Excludes \$6,984 contributed funds.

36. Unconstructed portion of the project was deauthorized November 6, 1977. Includes \$22,905 Works Progress funds and \$97,390 for previous projects.

37. Excludes \$40,000 contributed funds.

38. Excludes \$10,158 contributed funds.

39. Includes \$6,000 for previous projects.

40. Excludes \$344,952 contributed funds.

41. Excludes \$80,000 contributed funds.

NORFOLK DISTRICT

NORFOLK, VA DISTRICT

The district comprises the State of Virginia, except the Potomac, Roanoke, and Ohio River Basins; the entire area on the eastern shore of Virginia except for the project for Pocomoke River, Maryland and Virginia. On the west shore of Chesapeake Bay, all waterways south of Smith Point, VA, at the mouth of the Potomac River except the project for Little Wicomico River, VA. North Carolina, only the Chowan River Basin downstream to and including the mouth of the Meherin River, and the Dismal Swamp Canal Route of the Atlantic Intracoastal Waterway to the Albemarle Sound. West Virginia, only the James River Basin.

Navigation

1. APPOMATTOX RIVER, VA

Location. This river rises in Appomattox County, VA, flows northeasterly 137 miles, and empties into the James River at Hopewell, VA. The portion under improvement extends from its mouth to Petersburg, VA, a distance of 11 miles, which is the length of the tidal and navigable reach. (See National Ocean Service Chart No. 12251.)

Previous projects. For details see page 469 of Annual Report for 1938.

Existing project. This project provides for a channel 60 to 80 feet wide and 10 feet deep from the mouth of the river to a point 400 feet above Lieutenant Run; thence 80 feet wide and of such depth, not exceeding 10 feet, as can be obtained without rock excavation to the head of navigation at Petersburg; including a turning basin at the mouth of Lieutenant Run 410 feet long, 80 to 140 feet wide, and 10 feet deep. All depths are referred to mean low water.

The project also provides for a dam at Petersburg and the excavation for a width of from 200 to 300 feet of a diversion channel connecting the river above the dam with the river at a point 2.5 miles below; for about 1.7 miles of levees on the low grounds between the navigable and the diversion channels; for a highway bridge and a railway bridge across the diversion channel; and for other work incidental to the diversion channel.

Under ordinary conditions the mean tidal range is 2.9 feet and the extremes 2.4 and 3.3 feet. There are no records available of the heights of stage due to ordinary floods. These are estimated at 6 to 8 feet above mean low water at Petersburg, where the extremes are from 15.6 feet to 17.1 feet.

Local cooperation. Fully complied with. City of Petersburg, VA is the local sponsor. For details, see page 212 of Annual Report for 1969.

Terminal facilities. There are about 2,500 feet of wooden bulkhead and a shore landing in Petersburg Harbor. These facilities are in an abandoned, dilapidated condition and have not been used by commercial traffic on the river since 1950. There are two large recreational facilities now in operation on the Appomattox River. One is located about 2 miles downstream from Petersburg, VA and

the other is at Hopewell, VA near the confluence of the Appomattox and the James. There is also a sand and gravel loading facility at Puddledock, located about 3 miles downstream from Petersburg, VA.

Operations during fiscal year. Work consisted of coordination and technical assistance to the City of Petersburg in their efforts to secure a site for placing contaminated dredged material.

2. ATLANTIC INTRACOASTAL WATERWAY BETWEEN NORFOLK, VA, AND ST. JOHNS RIVER, FL (NORFOLK DISTRICT)

Location. Two inland water routes approximately paralleling Atlantic coast south of Norfolk, VA, between a point in Southern Branch of Elizabeth River, VA, 2,500 feet upstream of Norfolk & Western Railway bridge and Virginia-North Carolina state line in North Landing River, a distance of 27.2 miles; and 64.6 miles between mouth of Deep Creek, VA, and mouth of Pasquotank River, NC. These routes are shown on National Ocean Service Chart 12206.

Existing project. A channel 12 feet deep at mean low water and 90 to 250 feet wide following southern Branch of Elizabeth River, 5.2 miles, Virginia Land Cut, 8.3 miles, and North Landing River, 13.7 miles; and construction of tidal guard lock at Great Bridge, VA. It also provides channels 10 feet deep at mean low water and 90 to 100 feet wide in Deep Creek, 3.1 miles, Turners Cut, 4.3 miles and Pasquotank River, 35.1 miles; maintaining Dismal Swamp Canal, 22.1 miles, to about 9 feet deep mean canal level over a width of 50 feet; protection of banks in Turners Cut with sheet piling, and cutting curtain sharp points in Pasquotank River to shorten its course. (See Table 5-C at end of chapter on Data Relative to Completed Locks included in Project.) Project includes operating and care of completed locks, dams and bridges. Southern Branch of Elizabeth River and Deep Creek sections of the two routes are tidal, mean range being about 3 feet with extremes of minus 3.5 and plus 9.6 feet. Remaining sections are non-tidal with fluctuations of 1 to 2 feet in level due to winds.

Local cooperation. None required.

Terminal facilities. Existing facilities are considered adequate. See Annual Report for FY 1970.

NORFOLK DISTRICT

Operations during fiscal year.

Maintenance: Work consisted of operation and ordinary maintenance of the project consisting of real estate management services, condition and operation studies. Operation and care of locks, bridges, spillways, wharves, canal equipment, grounds, roads, buildings, etc. performed by contract. Contracts were awarded to dredge the Dismal Swamp Canal at the Feeder Ditch, install gauges along the Dismal Swamp Canal, repair the roadway to Lake Drummond and install erosion control at the feeder ditch junction with Route 17.

3. ATLANTIC INTRACOASTAL WATERWAY (AIW) BRIDGE REPLACEMENT, DEEP CREEK, CHESAPEAKE, VA

Location. Deep Creek, located in southeastern Virginia within the City of Chesapeake, is the northern terminus of the Dismal Swamp Canal (DSC). The DSC is a portion of the Atlantic Intracoastal Waterway (AIW) that connects the Southern Branch of the Elizabeth River at Deep Creek to the Pasquotank River at South Mills, North Carolina, via Turner's Cut, covering a distance of 64.6 miles. The route of the AIW, extending from New Jersey to Florida, passes through the harbor of Baltimore, Maryland; Norfolk Harbor, Virginia; and down the Southern Branch of the Elizabeth River, to the tidal river Deep Creek, a tributary to the Southern Branch, down to the Deep Creek Locks where the DSC begins. The canal is generally oriented north-south.

Existing projects. Atlantic Intracoastal Waterway Bridge at Deep Creek, Virginia, is Federally owned and Corps operated facility that is functionally obsolete because of its narrow roadway and poor alignment with the connection roads, compounded by increasing traffic volumes. This project is to replace the existing structure in conjunction with the city's and the Commonwealth of Virginia's plans to improve the road system in this area. The new bridge will be a split leaf pit bascule consisting of a 2-lane leaf (eastbound) and a 3-lane leaf (westbound). Once completed, the local sponsor will assume ownership of the bridge and take over

operation and maintenance.

Local cooperation. Complied with except that the entire project through construction will be Federally funded. Upon completion of construction, the bridge will be turned over to the City of Chesapeake, Virginia, for operation and maintenance.

Operations during fiscal year. Work consisted of continuing Preconstruction Engineering and Design (PED).

4. ATLANTIC INTRACOASTAL WATERWAY BRIDGE AT GREAT BRIDGE, VA

Location. The project is located in the city of Chesapeake, in the southeastern portion of VA. The city is bordered by the city of Suffolk on the west, the cities of Norfolk and Portsmouth on the North, the city of Virginia Beach on the east, and North Carolina on the south. The federally owned Atlantic Intracoastal Waterway highway bridge crosses the Albermarle and Chesapeake Canal in the community of Great Bridge.

Existing project. The plan of improvement includes replacement of the existing 55-year old, U.S. Army Corps of Engineers, 2-lane swing bridge with a 5-lane, double-leaf, rolling-lift bascule bridge, 2000 LF of approach roadway, utility relocations, and removal of the existing bridge. The feasibility report was approved in Jul 94. Pre-construction engineering and design was initiated during FY 95 and completed in FY 97. Project Cooperation Agreement was executed on 22 Nov 99. The construction contract for the bascule bridge was awarded on 13 Jul 01.

Local cooperation. The local sponsor (city of Chesapeake) is required to assume OMRR&R responsibility on project completion in accordance with the provisions described in Section 339 of the National Highway System Designation Act of 1995. (P.L. 104-59)

Operations during fiscal year. Construction started on the bascule bridge. Federal acquisition of real estate and rights-of-way for the approach roads are in progress. The construction

contract for the approach roads is scheduled for 4th Quarter, FY 02.

5. BACK RIVER, POQUOSON, VA

Location. Back River is a tidal estuary located within the cities of Poquoson and Hampton, VA. The project channel joins Front Cove with Back River at Messick Point, near the river's confluence with the Chesapeake Bay. The proposed channel is approximately 3,000 feet long, flows in a southerly direction, and terminates in deep water within Back River. (See National Ocean Service Chart No. 12222.)

Existing project. Provides for a channel 6 feet deep and 60 feet wide from deep water in Back River to the city boat ramp and public landing at Messick Point, a distance of approximately 3,000 feet; also provides a turning basin located adjacent to the boat ramp 100 feet square. Mean tidal range is 2.3 feet.

Local cooperation. Fully complied with. City of Poquoson, VA is the local sponsor.

Terminal facilities. Existing terminal facilities are adequate for present commerce.

Operations during fiscal year. New Work: Construction of the placement area and dredging of the channel to authorized dimensions were completed. A total of 27,205 cubic yards of material was dredged from the project and placed into the upland placement site in Hampton, Virginia. After dredging surveys of the channel were distributed to the users.

6. BENNETT'S CREEK, VA

Location. Bennetts Creek is located on the south shore of the Nansemond River in the City of Suffolk, VA. (See National Ocean Service Chart No. 12248)

Existing project. Provides for a channel 6 feet deep and 60 feet wide over a length of about 1

mile, from the 6-foot contour in the Nansemond River to the 6-foot contour within the mouth of Bennetts Creek, and extending upstream to the city boat ramp at Bennetts Creek Park, a distance of approximately 2.4 miles. Mean range of tide is 2.8 feet.

Local cooperation. Fully complied with. City of Suffolk, VA is the local sponsor.

Terminal facilities. Terminal facilities are adequate for existing commerce.

Operations during fiscal year. A project condition survey of the channel was performed and distributed to the users.

7. CHANNEL TO NEWPORT NEWS, VA

Location. West of north entrance to Norfolk Harbor Channel, connects deep water in James River with Hampton Roads. (See National Ocean Service Chart No. 12245.)

Existing project. A channel 55 feet deep at mean low water and 800 feet wide from Norfolk Harbor Channel in Hampton Roads to Newport News, a distance of about 5.4 miles, and two deep-draft anchorage berths opposite Newport News 45 feet deep over a 1,200-foot swinging radius. Under ordinary conditions mean tidal range is 2.7 feet and extremes 2.1 and 3 feet. Extremes of irregular fluctuations due to combined wind and tides, referred to mean low water, are minus 2 feet and plus 9.5 feet.

Local cooperation. Fully complied with for dredging the channel to an intermediate depth of 50 feet, which was completed December 2, 1988. The local sponsor (Virginia Port Authority) is required to furnish cost sharing in accordance with the provisions described in the Water Resources Development Act of 1986, as amended, for additional deepening.

Terminal facilities. See Port Series No. 11, (Revised 1993) on Ports of Hampton Roads, prepared by the Water Resources Support Center.

Operations during fiscal year. A contract

NORFOLK DISTRICT

to dredge the 50-foot channel was executed in April and May of 2002; a total of 280,424 cubic yards was removed.

8. CHINCOTEAGUE BAY, VA

Location. The project is just south of the Maryland state line and provides access to Chincoteague Bay from a public landing and marina at the town of Greenbackville, VA. (See National Ocean Service Chart 12211.)

Existing project. Provides an approach 5 feet deep and 60 feet wide from that depth in Chincoteague Bay to an L-shaped harbor of the same depth, 60 feet wide, and 1500 feet long. The total length is approximately 4200 feet. Mean range of tide is about 0.6 feet. All depths are referred to mean low water.

Local cooperation. Fully complied with

Terminal facilities. Existing facilities are considered adequate for current and prospective traffic.

Operations during fiscal year. Maintenance dredging was performed on the channel and removed 11,422 cubic yards of material to restore project depths. The material was placed in adjacent confined disposal facility that was upgraded as part of the maintenance.

9. CHINCOTEAGUE INLET, VA

Location. Chincoteague Inlet at the southern end of Assateague Island provides access to the Atlantic Ocean from the inland waterway near the town of Chincoteague, VA. (See National Ocean Service Chart 12211.)

Existing project. Provides for a channel 12 feet deep and 150 feet wide across the ocean bar in the Atlantic Ocean and to the mouth of the inlet, a channel 9 feet deep and 100 feet wide from the inlet through the canal, and then along Chincoteague Channel to a point approximately 2,000 feet north of the state highway bridge to Chincoteague, a distance

of about 6.6 miles. Mean range of tide is about 3 feet. All depths are referred to mean low water.

Local cooperation. Fully complied with. For details see Annual Report for 1974.

Terminal facilities. Existing facilities at Chincoteague are considered adequate for current and prospective traffic.

Operations during fiscal year. Work on the project consisted of condition surveys of the channel.

10. CRANEY ISLAND EASTWARD EXPANSION FEASIBILITY STUDY, VA

Location. The Craney Island Dredged Material Management Area (CIDMMA) is a man-made dredge containment area located along the south bank of the James River in Portsmouth, Virginia.

Existing project. Authorized in 1946 and constructed between 1956 and 1958, provides a 2,500 acre dredge disposal site for the deposition of dredge spoils from the Hampton Roads inner harbor. The site is owned by the Federal government and operated by the Corps of Engineers, Norfolk District. Project is operated and maintained by the collection of tolls from users. Feasibility study was authorized by a 1997 resolution of the U.S. House of Representatives Committee on Transportation and Infrastructure. Purpose of the study is to investigate an eastward expansion of Craney Island giving specific attention to rapid filling to accommodate anticipated port expansion and to the operation of the existing facility while extending the useful life of Craney Island, and shall take into account all relevant environmental issues and the subsequent transfer of the expanded area to the Commonwealth of Virginia.

Local cooperation. Commonwealth of Virginia is funding 50% of the feasibility study cost.

Terminal facilities. Existing facilities require expansion to meet future dredge material

placement needs of the Hampton Roads Port.

Operations during fiscal year. Conduct of feasibility study.

11. GREENVALE CREEK, VA

Location. Greenvale Creek is a tidal creek located in Lancaster County, VA. The creek is tributary to the Rappahannock River. (See National Ocean Service Chart No. 12237.)

Existing project. The project authorization provides for a channel 6 feet deep and 60 feet wide from that depth in Rappahannock River to the mouth of Greenvale Creek. Once inside the mouth of the creek the channel narrows to 50 feet wide.

Local cooperation. Lancaster County, VA, is the local sponsor and is in full compliance with all items of local cooperation.

Terminal facilities. Terminal facilities are adequate for existing commerce.

Operations during fiscal year. The project requires maintenance dredging. The Norfolk District prepared and issued a maintenance dredging contract solicitation package for bid. Funds expended for fiscal year 2002 enabled the project to progress forward to bid opening. Award of the contract is scheduled for fiscal year 2003.

12. GUILFORD CREEK, VA

Location. Guilford Creek is located in Accomack County, VA, near the communities of Guilford and Parksley, VA, and is tributary to the Chesapeake Bay. (See National Ocean Service Chart No. 12225.)

Existing project. Provides for a channel 6 feet deep and 60 feet wide over a length of about 1 mile, from Beasley Bay into Guilford Creek, and including a turning basin 6 feet deep and 100 feet square. The project also includes construction of a rock groin approximately 140 feet long at the dredged material placement site. Mean range of tide

is 2.3 feet.

Local cooperation. Fully complied with. County of Accomack, VA is the local sponsor.

Terminal facilities. Existing terminal facilities are adequate for present commerce.

Operations during fiscal year. A project condition survey of the channel was performed and distributed to the users.

13. HAMPTON ROADS, VA COLLECTION AND REMOVAL OF DRIFT

Location. Hampton Roads is a natural harbor 300 miles south of New York and 180 miles south of Washington, DC. Its principal tributaries are the James River, affording a natural deep harbor at Newport News, VA; Elizabeth River, with its Southern, Eastern, and Western Branches providing harbors for Norfolk and Portsmouth, VA; and Hampton Creek, serving the harbor at Hampton, VA. (See National Ocean Service Chart Nos. 12248, 12245 and 12253.)

Existing project. Collection and removal of drift in Hampton Roads and its tributary waters authorizes the Secretary of the Army to allot necessary amounts of work from appropriations for main-other available appropriations and that this work shall be carded on as a separate and distinct project. It is wholly a work of maintenance. The purpose of work is to afford relief from variable conditions of obstruction. No advance estimate of the amount of work is required.

Local cooperation. None required.

Terminal facilities. See Norfolk Harbor, VA, and Channel to Newport News, VA.

Operations during fiscal year. Maintenance: Operation of the project resulted in collection and disposal of a variety of floating refuse. Operations were performed using government plant and hired labor.

NORFOLK DISTRICT

14. HOSKINS CREEK, VA

Location. Hoskins Creek is a tidal estuary 2.5 miles long flowing easterly and entering the right bank of the Rappahannock River in Essex County, VA, 42 miles upstream from its mouth in the Chesapeake Bay. It is located at the southern limits of the Town of Tappahannock, VA. (See National Ocean Service Chart No. 12237)

Existing project. Provides for a channel 10 feet deep at mean low water from the 10-foot contour in the Rappahannock River to the US Route-17 Bridge, a distance of approximately 1 mile. The channel width is 100 feet through the entrance to the Rappahannock River and 80 feet within the creek. Also provides a turning basin of the same depth 250 feet long by 200 feet wide, with flared approaches, at the public landing. Mean tidal range is about 1.6 feet.

Local cooperation. Fully complied with. County of Essex, VA is the local sponsor.

Terminal facilities. Two bulkheaded landings and two wharves, with a public boat ramp. Terminal facilities are adequate for existing commerce.

Operations during fiscal year. A condition survey performed in September 2000 was distributed to the locals, Coast Guard and users of the project. Preliminary engineering and design work was performed in support of a planned dredging event for FY 2004.

15. JAMES RIVER, VA

Location. The river is formed by the junction of the Cowpasture and Jackson Rivers in Botetourt County, VA, flows east 340 miles and empties into Hampton Roads at Newport News, VA. (See National Ocean Service Chart Nos. 12248 and 12251.)

Existing project. A channel 25 feet deep and 300 feet wide from the mouth to Hopewell, 25 feet deep and 200 feet from Hopewell to the

Richmond Deepwater Terminal, and a channel 18 feet deep and 200 feet wide from the Deepwater terminal to Richmond Lock, a mooring basin 25 feet deep, 180 to 220 feet wide and 2,100 feet long alongside the channel opposite waterfront at Hopewell; a turning basin at Richmond Deepwater Terminal to 500 feet wide, 2,770 feet long and 25 feet deep; a turning basin in Richmond Harbor 200 feet wide, 600 feet long and 18 feet deep; and construction of spur and training dikes. Depth of channels is referred to mean low water. Total length of channel included in the project is 91 miles, which is the navigable section. Mean tidal ranges under ordinary conditions for different parts of the river are: mouth, 2.6 feet; Jamestown, 2 feet; City Point, 2.6 feet; and Richmond, 3.2 feet. Spring tide ranges under ordinary conditions at the same localities are mouth, 3.1 feet; Jamestown, 2.4 feet; City Point, 3 feet; Richmond, 3.2 feet. Ordinary fluctuations of stage at Richmond, due to floods are 6 to 12 feet above mean low water. Extreme fluctuations are 16 to 32 feet. Flood heights below Richmond diminish rapidly. The extreme according to available information is about 11 feet lower at Dutch gap, 14 miles below and 17 to 18 feet lower, 20 miles below. For previous projects, see Annual Report for 1938.

Local cooperation. Fully complied with for conditions imposed by River and Harbor Act of 1962. However, the local sponsor (City of Richmond) is required to furnish cost sharing in accordance with the provisions described in the Water Resources Development Act of 1986, as amended. Deepening the project from 25 feet to 35 feet, and the widening, authorized by the River and Harbor Act of 1962 has not been started.

Terminal facilities. There are city-owned wharves at Richmond Harbor and at Richmond Deepwater Terminal, and numerous private facilities elsewhere on the James River. The Deepwater Terminal is at the head of the 25-foot deep improved channel, and it serves oceangoing vessels and larger ships engaged in coast-wide trading. For detailed information on the terminal facilities on the James River, see Port Series No. 11, (Revised 1993) on Ports of Hampton Roads, prepared by the Water Resources Support Center. Existing terminal facilities are adequate for present commerce.

Operations during fiscal year. Maintenance dredging was performed under an Indefinite Quantities Contract to remove shoals on several areas of the James River; at Dancing Point – Swann Point Shoal Channel, at Goose Hill Channel, Jordan Point-Harrison Bar-Windmill Point Shoal Channel, and Richmond Deepwater Terminal. Related work performed during the year included condition surveys, environmental and archeological studies, and engineering investigations related to shoaling, river currents and realignments at Goose Hill Channel and Tribell Shoal Channel.

16. JONES CREEK, VA

Location. Jones Creek is a tributary to the Pagan River, in Isle of Wight County on the southwest shore of the James River. (See National Ocean Service Chart No. 12248.)

Existing project. Provides for a channel 6 feet deep and 60 feet wide over a length of about 5,000 feet, from the Pagan River into Jones Creek and as far upstream as the State Highway Route 704 Bridge at Rescue, VA.

Local cooperation. Fully complied with. County of Isle of Wight, VA is the local sponsor.

Terminal facilities. Existing terminal facilities at Rescue, VA are adequate for present commerce.

Operations during fiscal year. None.

17. LYNNHAVEN INLET, VA

Location. On the south shore of the Chesapeake Bay, 5 miles west of Cape Henry, and 10 miles east of Norfolk, VA, the inlet connects Lynnhaven Roads, a part of the Chesapeake Bay, with a network of inland waters in the northern half of the city of VA Beach. (See National Ocean Survey Chart 12254.)

Existing project. An entrance channel from Chesapeake Bay through Lynnhaven Inlet, 10 feet deep and 150 feet wide; a mooring and turning basin inside of Lynnhaven Inlet, 10 feet deep, 1,100 feet

long, and 750 feet wide; a channel 9 feet deep and 90 feet wide to extend from the mooring and turning basin into Broad Bay via Long Creek-Broad Bay Canal, a side channel from the basin into Long Creek at a depth of 8 feet and width of 100 feet, and a channel through the Narrows connecting Broad and Linkhorn Bays, 6 feet deep and 90 feet wide. Mean range of tide in Lynnhaven Inlet is about 2 feet with extreme fluctuations of 1.5 feet below and 9.5 feet above mean low water. Range in Lynnhaven Bay is a little more than 2 feet, in Broad and Linkhorn Bays, fluctuations in water level are caused by local winds.

Local cooperation. Fully complied with. The city of Virginia Beach is the local project sponsor. For details see page 308 of Annual Report for 1965.

Terminal facilities. Existing facilities are considered adequate. For details see page 308 of Annual Report for 1970.

Operations during fiscal year. Maintenance dredging was performed.

18. NANDUA CREEK, VA

Location. Nandua Creek is located within the County of Accomack, VA, about 10 miles south of Watts Island light, and is a tributary to the Chesapeake Bay. (See National Ocean Service Chart No. 12226)

Existing project. Provides for a channel 9 feet deep at mean low water and 100 feet wide across the bar at the mouth of the creek. Mean tidal range is about 1.6 feet.

Local cooperation. None required.

Terminal facilities. Terminal facilities are adequate for existing commerce.

Operations during fiscal year. A condition survey of the channel was performed.

19. NEWPORT NEWS CREEK, VA

NORFOLK DISTRICT

Location. On the southern end of the peninsula between the James and York Rivers and within the corporate limits of the city of Newport News. (See National Ocean Survey Chart 12245.)

Existing project. A channel 12 feet deep and with width varying from 150 to 90 feet, from deep water in Hampton Roads to the municipal boat harbor, and including a turning and anchorage basin at the upper end of the same depth, width varying from 188 to 214 feet, and 500 feet in length. Under a Section 107 modification, a portion of the entrance channel 125 feet wide is being deepened to 18 feet, to connect with the adjacent harbor protected with an L-shaped wave screen. Portions of this harbor are also being deepened to 18 feet under Section 107 authority. Mean range of tide is 2.6 feet.

Local cooperation. Fully complied with. The city of Newport News is the local project sponsor.

Terminal facilities. Existing facilities are considered adequate, and the local sponsor is constructing a new pier to service commercial vessels.

Operations during fiscal year. None.

20. NORFOLK HARBOR AND CHANNELS, VA.

Location. Norfolk, VA, is 187 miles south of Baltimore, MD, and 30 miles from entrance to Chesapeake Bay at Cape Charles and Cape Henry. Harbor extends 18.3 miles from 40-foot contour in Hampton Roads to a point 2,500 feet above Norfolk and Western Railway bridge over a Southern Branch of Elizabeth River. (See National Ocean Service Chart Nos. 12245 and 12253.)

Previous projects. For details see Annual Report for 1938.

Existing project. For details see Annual Report for 1993.

HAMPTON ROADS AND ELIZABETH RIVER: A channel 55 feet deep and 1,500 feet wide from that depth in Hampton Roads to a point approximately 6.3 miles upstream from the Hampton Roads Bridge-Tunnel; thence 55 feet deep and 800 feet wide to Lamberts Point; thence 45 feet deep and 750 feet wide to the junction of Southern Branch and Eastern Branch.

Operations during fiscal year. The District is completing Preconstruction, Engineering and Design (PED) for the 50-Foot Inbound Element. Plans and Specifications are underway and a Project Cooperation Agreement is being developed and negotiated with the Non-Federal Sponsor. Construction scheduled for initiation in calendar year 2003.

EASTERN BRANCH: A channel 25 feet deep and 500 feet wide from the junction of the branches to Norfolk and Western Railway Bridge, from the Norfolk and Western Railway Bridge a channel 25 feet deep and 200 feet wide to the Campostella Bridge, channel 25 feet deep and 200 feet wide to the Norfolk and Western Railway Bridge (formerly Virginian), including a turning basin 25 feet deep and approximately 5.5 acres in size located at the upstream end of the project.

Operations during fiscal year. None.

WESTERN BRANCH: A channel 24 feet deep and 300 feet wide to a point 0.78 mile from the 40-foot channel, thence 24 feet deep and 200 feet wide for a distance of 0.38 mile; thence 18 feet deep and 150 feet wide for 0.57 mile to a point 0.34 mile above the West Norfolk Bridge.

Operations during fiscal year. None.

SCOTTS CREEK: A channel 12 feet deep at mean low water and 100 feet wide from the 40-foot channel for a distance of 0.73 mile.

Operations during fiscal year. None.

ANCHORAGES: Three fixed mooring anchorage facilities with a depth of 55 feet, each capable of accommodating two large vessels

simultaneously; anchorage area on the west side of the 55-foot channel opposite Lamberts Point aggregating 173 acres consisting of open space 1,500 feet square and 38 feet deep, one space 1,500 feet square and 35 feet deep, and one space 3,000 feet long, 1,000 feet wide and 20 feet deep; and 45-acre anchorage, 12 feet deep, near Pinners Point.

Operations during fiscal year. None.

SOUTHERN BRANCH: The southern branch of the Elizabeth River generally oriented and flows south to north, and in the vicinity of this project is bordered on the east bank by the city of Chesapeake. The Southern Branch 40 Foot Deepening element will deepen a 2.5 mile section of the Elizabeth River from its current depth of 35 feet to 40 feet between the Norfolk and Western Railroad Bridge at mile 15, upstream to the U.S. Routes 460 and 13 highway bridge (also known as Gilmerton Bridge) at mile 17.5. This reach of the channel ranges in width between 250 and 500 feet, with an average width of 300 feet. The channel will be widened at selected points to permit vessels to safely negotiate bends. At mile 17.5, in the vicinity of the Gilmerton Bridge, an 800 foot turning basin with a depth of 40 feet will be constructed. In addition, the possible need for modifying the Gilmerton Bridge will be explored as part of this project.

Operations during fiscal year. Planning, engineering and design were temporarily postponed due to questions of local sponsorship. Coordination continued with the local sponsor and other agencies regarding scheduling of additional deepening.

CRANEY ISLAND DREDGED MATERIAL AREA: A dredge material placement area of about 2,500 acres adjacent to and north of Portsmouth, Virginia, enclosed by stone-faced levee of sand; re-handling basin, approach and exit channels connecting re-handling basin and Norfolk Harbor 55-foot channel.

Operations during fiscal year. Craney Island received 3,024,752 cubic yards of dredged material in 2002.

Local cooperation. Fully complied with for

dredging the channel to an intermediate depth of 50 feet, which was completed December 15, 1988. The local sponsor (Virginia Port Authority) is required to furnish cost sharing in accordance with the provisions described in the Water Resources Development Act of 1986, as amended for additional deepening.

Terminal facilities. See Port Series No. 11 (revised 1993) on Ports of Hampton Roads, prepared by the Water Resources Support Center.

NORFOLK HARBOR CHANNEL:

Operations during fiscal year. Maintenance: A contract to dredge the 45-Ft. and 50-Ft. Channels was awarded in June 2002, with work completed in September 2002; a total of 759,492 cubic yards was removed. In addition to maintenance dredging, work on the project included condition surveys and environmental studies.

21. OYSTER CHANNEL, VA

Location. Oyster Channel is located in Northampton County, Virginia, at the town of Oyster, VA. The channel is tributary to Mockhorn Bay on the Virginia Eastern Shore. Vessel access to the project is via the Waterway on the Coast of Virginia (See National Ocean Service Chart No. 12224).

Existing project. Provides for a channel 6 feet deep and 80 feet wide from deep water in Liscombes Channel to and including a turning basin 6 feet deep and 1,100 feet long at Oyster, VA.

Local cooperation. Fully complied with. The county of Northampton, VA, is the local sponsor.

Terminal facilities. Existing terminal facilities are adequate for the present commerce.

Operations during fiscal year. An earthwork contract was awarded in fiscal year 2002 to manage the upland dredged material placement site for Oyster Channel.

22. PAGAN RIVER, VA

Location. Pagan River is located in Isle of

NORFOLK DISTRICT

Wight County, VA, and is a tributary to the James River. The project provides vessel access to the Town of Smithfield, VA. (See National Ocean Service Chart No. 12248).

Existing project. A channel 10 feet deep at mean low water and 80 feet wide between Smithfield and the 10-foot contour in James River. A traffic survey revealed that the maintenance of a 10-foot deep channel is not justified at this time. A 6-foot deep channel will be maintained until traffic indicates the need for a change.

Local cooperation. The Town of Smithfield is the local sponsor and is in full compliance with items of local cooperation.

Terminal facilities. Terminal facilities are adequate for existing commerce.

Operations during fiscal year. The U.S. Army Corps of Engineers Special Purpose Dredge CURRITUCK was utilized to dredge portions of the Pagan River channel. The Norfolk District also performed after dredging surveys of the federal channel and paid Rehandling Basin toll charges at the Craney Island Dredged Material Management Area.

23. RUDEE INLET, VA

On the Atlantic Coast of Virginia, within the City of Virginia Beach, approximately 5 miles south of Cape Henry. (See National Ocean Service Chart No. 12205.)

Existing Project. An entrance channel 10 feet deep, 100 to 72 feet wide and 1,605 feet long; an inner channel 7 feet deep, 72 to 53 feet wide and 2,495 feet long, including a safety area 7 feet deep, and approximately 1.9 acres in size and a turning basin 7 feet deep, 175 feet wide and 1,570 feet long; a sand trap 18 feet deep and approximately 3.3 acres in size; and a weir and jetty system at the mouth of the inlet. Mean tidal range is about 3.3 feet.

Local cooperation. Fully complied with. The City of Virginia Beach as local sponsor is required to financially participate in continued annual maintenance as described in the Local Cooperation Agreement, and has fully participated through the

current fiscal year.

Terminal facilities. Existing terminal facilities are considered adequate for present commerce.

Operations during fiscal year. A contract to dredge the entrance channel and sand trap was awarded in May 2002. The contract was completed in July 2002; a total of 31,257 cubic yards was removed. In addition, the U.S. Army Corps of Engineers Special Purpose Dredge CURRITUCK was utilized to dredge the entrance channel during October and November 2001, and March and September 2002; a total of 32,715 cubic yards was removed.

24. SUPERVISOR OF NORFOLK HARBOR (PREVENTION OF OBSTRUCTIVE AND INJURIOUS DEPOSITS)

The District Engineer, Norfolk District, was designated Supervisor of the harbor of Hampton Roads under the provisions of the River and Harbor Act of June 29, 1888 (33 U.S.C. 441-451), as amended July 12, 1952. Under this Act, the Supervisor of the harbor of Hampton Roads is charged with the mission of preventing the deposit of obstructive and injurious materials in the tidal waters of the harbors of Norfolk, Portsmouth, Newport News, Hampton Roads, and their adjacent and tributary waters, so much of the Chesapeake Bay and its tributaries as lies within the state of Virginia, and so much of the Atlantic Ocean and its tributaries as lies within the jurisdiction of the United States within or to the east of the State of Virginia. The River and Harbor Act of March 3, 1899 (33 U.S.C. 403,407,409), as amended, prohibits obstructions to navigable waters such as unauthorized structures, unauthorized fill, deposit of refuse, and sinking of vessels. Other laws relating to the supervision of Norfolk Harbor and its tributary waters are the Clean Water Act, The Marine Protection, Research and Sanctuaries Act of 1972, the Coastal Zone Management Act of 1969, the Fish and Wildlife Act of 1956, the Federal Power Act of 1920, the National Historic Prevention Act of 1966, the Endangered Species Act of 1973, the Deepwater Port Act of 1972,

the Wild and Scenic Rivers Act, and the Land and Water Conservation Fund Act. Direct supervision of the waters under the jurisdiction of the Norfolk District was accomplished by means of two patrol vessels performing inspections, removing debris and investigating navigational hazards and sunken abandoned vessels. A derrick boat and crane barge performs removal of sunken vessels and navigational hazards and supports federal dredging projects. In addition, surveillance of the harbor was performed regarding the Corps' regulatory program, using also two small outboard craft, motor vehicles from land and occasional chartered aerial reconnaissance. This regulatory surveillance involved compliance surveys of permitted activities and evaluation of navigational impacts of proposed piers and other structures.

Operations during fiscal year. None.

25. THIMBLE SHOAL CHANNEL, VA

Location. In the lower portion of Chesapeake Bay between Hampton Roads and the ocean, 20 miles northeast of center of Norfolk Harbor, extending southeasterly 12 miles from a point 1.25 miles east of Thimble Shoal lighthouse toward entrance to Chesapeake Bay. (See National Ocean Service Chart No. 12222.)

Existing project. Provides for dredging a channel 12 miles long, 1,000 feet wide, and 55 feet deep at mean low water. To date the 650-ft. wide outbound lane has been deepened and maintained to a depth of 50 feet, and the remaining 350-ft. width is maintained at a 45-ft. depth under the previous project. Under ordinary conditions mean tidal range is 2.5 feet and extreme 3 feet. Extremes of irregular fluctuation, due to combined wind and tides referred to mean low water, are minus 3 feet and plus 7 feet.

Local cooperation. Fully complied with for the deepening of the outbound lane to an intermediate depth of 50 feet in 1988. The Commonwealth of Virginia, acting through its agent, the Virginia Port Authority, was the Non-Federal project sponsor and shared in the cost of the improvement. A Project Cooperation Agreement for the deepening of the

inbound lane to an intermediate depth of 50 feet is scheduled for execution between the Federal Government and the Commonwealth of Virginia during the third quarter of Fiscal Year 2003.

Terminal facilities. Project serves as an entrance channel to Hampton Roads. See Port Series No. 11 (revised 1993) on Ports of Hampton Roads, prepared by the Water Resources Support Center.

Operations During Fiscal Year. Work consisted of condition surveys of the channel and monitoring of the Dam Neck Ocean Dredged Material Management Site as required by the EPA.

26. TYLERS BEACH, VA

Location. Tylers Beach is located on the south shore of the James River in the County of Isle of Wight, VA, in a deep depression known as Burwells Bay about 13 miles above the mouth of the James River. (See National Ocean Service Chart No. 12248)

Existing project. Provides for a harbor of refuge 6 feet deep at mean low water and 150 feet wide and 300 feet long just south of Tylers Beach and a channel 6 feet deep, 50 feet wide, and about 2,350 feet long from that depth in Burwells Bay to the harbor of refuge. The project also includes two stone revetments/jetty structures approximately 370 feet long. Mean tidal range is about 2.4 feet.

Local cooperation. Fully complied with. County of Isle of Wight, VA is the local sponsor.

Terminal facilities. Terminal facilities are adequate for existing commerce.

Operations during fiscal year. A project condition survey of the channel was performed and distributed to the users. Work also consisted of coordination with, and technical assistance to, Isle of Wight County in their efforts to secure a site for placing the dredged material.

27. WATERWAY ON THE COAST OF VA (WCV)

NORFOLK DISTRICT

Location. The project is a waterway between the barrier islands along the Atlantic Ocean and Virginia's Eastern Shore on the west. (See National Ocean Service Chart Nos. 12210, 12211, and 12221.)

Existing projects. The waterway is 6 feet deep at mean low water and 60 feet wide. It provides a north-south route approximately 90 miles long from Chincoteague Bay to Chesapeake Bay. WCV provides an essential connection between many shallow draft harbors along the Eastern Shore. The project includes about 18 shoals that require periodic maintenance dredging. During a typical year an average of about 3 shoals are dredged.

Local cooperation. Accomack and Northampton Counties are the local sponsors for the project. The local sponsors are in compliance with all items of local cooperation. Local interests are to continue furnishing dredged material placement sites for future channel maintenance.

Terminal facilities. Existing facilities are considered adequate.

Operations during fiscal year. A dredging contract was awarded in fiscal year 2001 to dredge shoals in Sloop, North, and Swash Bay Channels. The contract continued into fiscal year 2002 with payment for Swash Bay dredging and dredge plant demobilization occurring with 2002 funds. Other project costs for fiscal year 2002 included supervision and administration of contracts, engineering and design, environmental coordination and monitoring, and project condition surveys.

28. WINTER HARBOR, VA

Location. Winter Harbor is a tidal estuary located in Mathews County, VA entering the Chesapeake Bay on its western shore 4.9 miles north of New Point Comfort. (See National Ocean Service Chart No. 12238)

Existing project. Provides for a channel 12 feet deep at mean low water and 100 feet wide from the 12-foot contour in Chesapeake Bay to the vicinity of the public landing, a distance of approximately 7,600 feet. Also provides a mooring and turning

basin of the same depth 400 feet square, with flared approaches, at the inner end of the channel. Until channel traffic indicates a need for a change, the channel will be maintained to a depth of 6 feet. Mean tidal range is about 2.0 feet.

Local cooperation. Fully complied with. County of Mathews, VA is the local sponsor.

Terminal facilities. Terminal facilities are adequate for existing commerce.

Operations during fiscal year. A contract to dredge the channel and mooring basin was awarded in March 2002. The contract was completed in June 2002; a total of 31,257 cubic yards was removed. Construction of the placement area and dredging of the channel to authorized dimensions were completed. A total of 202,443 cubic yards of material was dredged from the project, placing the fine-grained material into the upland placement site at the mouth of the channel, and the sandy material along the shoreline north of the channel. After dredging surveys of the channel were distributed to the users.

29. YORK RIVER, VA

Location. This river is formed at West Point, VA by the confluence of the Mattaponi and Pamunkey Rivers, and flows southeasterly about 41 miles into the Chesapeake Bay, which it enters about 20 miles in a northerly direction from Norfolk, VA, and 20 miles in a northwesterly direction from the Atlantic Ocean at Cape Henry. (See National Ocean Service Chart Nos. 12238 and 12243.)

Existing project. Provides for dredging a channel 22 feet deep at mean low water and 4300 feet wide through the bars with a basin of the same depth at the wharves at West Point, and construction of a dike 1.9 miles in length near the west bank at West Point to assist in maintaining the channel. Also provides for dredging a channel 37 feet deep at mean lower low water and 750 feet wide from the 38 foot contour in the Chesapeake Bay to a point adjacent to the piers at the Yorktown Naval Weapons Station, approximately 8 miles above the mouth of the river. Mean range of tide is 2.2 feet at the mouth and 2.9 feet at West Point.

Local cooperation. Fully complied with. Virginia Port Authority was project sponsor and shared in the cost of the improvement to the Entrance Channel.

Terminal facilities. The facilities are considered adequate for the existing commerce.

Operations during fiscal year. Coordination with the channel users was implemented to assess future needs and strengthen the partnership between project stakeholders. A conditiona survey and preliminary engineering and design work was performed in support of a planned dredging event for FY 2003 and FY 2004.

BEACH EROSION CONTROL

30. CHESAPEAKE BAY SHORELINE, HAMPTON, VA

Location. The city of Hampton is located approximately 135 miles southeast of Washington, D.C. at the junction of Hampton Roads and the Chesapeake Bay. The city is bordered by the Chesapeake Bay on the east; the Chesapeake Bay and Hampton Roads harbor on the south; the city of Newport News on the west; and York County, the city of Poquoson, and the Chesapeake Bay on the north. The city has approximately 6 miles of shoreline which fronts on the Chesapeake Bay and includes the areas of Buckroe Beach, Salt Ponds, White Marsh, Grandview, and Grandview Nature Preserve. The location and orientation of this shoreline on the western side of the southern Chesapeake Bay and immediately within the mouth of the bay have made this area susceptible to damages associated with coastal storms such as hurricanes and northeasters. (See National Ocean Service Chart No. 12222.)

Existing projects. There are a variety of existing coastal protection structures located along the beach within the study area including groins, bulkheads, riprap, and jetties. The condition of these structures ranges from good to completely deteriorated, with ages varying from relatively new to 35 years old. In addition, the city of Hampton has

conducted several beach nourishment activities in the study area to provide storm protection and to alleviate the erosion problem, primarily along the public section of Buckroe Beach. However, these projects have been small in scope, given the limited resources of the city.

A Federal feasibility study was authorized by Section 114 of the Water Resources Development Act of 1992 (Public Law 102-580). However, during the course of the feasibility study, the authorization was changed to Section 103 of the River and Harbor Act of 1962 (Public Law 87-874), as amended, due to the limited size and complexity of the project. This is now a Continuing Authorities Program project. The final feasibility report was approved in September 2002 and the design phase was initiated that same month. The Federal project provides a beach in the Buckroe Beach area that is 3,785 feet long with a berm 50 feet wide at elevation 5.4 feet. The local sponsor has requested that it maintain an option of adding the public beach in the Salt Ponds area as a local project that would consist of a berm 50 feet wide at elevation 5.4 feet for a distance of about 2,050 feet.

Local cooperation. The local sponsor, the city of Hampton, provided a letter of intent in March 2002 to cost share in the Federal project.

Operations during fiscal year. FY 02 funds were used to complete the feasibility study phase and initiate the design phase.

31. VIRGINIA BEACH, VA (HURRICANE PROTECTION)

Location. The city of Virginia Beach is located on the southeastern coast of Virginia bordered by the Atlantic Ocean on the east, Chesapeake Bay on the north, the cities of Norfolk and Chesapeake on the west, and North Carolina on the south (See National Ocean Service Chart 12207.)

Existing project. The plan of improvement includes construction of a vertical steel sheet-pile wall with concrete cap extending from Rudee Inlet to 58th Street (about 4 miles), enhancement of the existing dune system between 58th Street and 89th

NORFOLK DISTRICT

Street (about 2 miles), construction and periodic re-nourishment of a widened and raised beach berm between Rudee Inlet and 89th Street (about 6.2 miles), a new boardwalk integrated with the vertical wall which will be placed seaward of the existing boardwalk extending from Rudee Inlet to approximately 40th Street (about 3 miles), a storm water runoff system consisting of the offshore discharge by pumped flow through submarine pipelines, appropriate beach access structures consisting of ramps and stairs and dune crossover facilities. Periodic beach nourishment will maintain the beach and dune system over the 50 year project life. The Project Cooperation Agreement was executed in June 1996 and the first construction contract was underway in October, 1996. Initial construction of the project is scheduled for completion in September 2002.

Local cooperation. The local sponsor (city of Virginia Beach) is required to furnish cost sharing in accordance with the provisions described in The Water Resources Development Act of 1986.

Operations during fiscal year. The project was in continuing construction: The Beach Berm, the dune improvements and crossovers were completed.

FLOOD CONTROL

32. GATHRIGHT DAM AND LAKE MOOMAW, VA

Location. Gathright Dam is on the Jackson River, a tributary of James River at mile 43.4 in Allegheny County. Gathright Dam site is in the reach of the Jackson River known as the Gorge, about 19 miles upstream from Covington, VA. At the elevation of the top of the conservation pool, the lake extends upstream about 9 miles. (See Falling Spring and Mountain Grove, Virginia-West Virginia quadrangles of geological survey.)

Existing project. Gathright Dam consists of a 1,172-foot long, rolled-rock-fill dam with an impervious core, with the top at elevation 1,684.5; outlet works consisting of a concrete intake structure located in the right bank 500 feet upstream from the axis of the dam: a 1,075-foot long outlet tunnel

through the right abutment and a stilling basin; and a 2,450-foot long fixed-crest emergency spillway excavated in a low saddle in the divide at Fortney Branch about 2.5 miles south of the dam. Discharges through the maximum conservation pool elevation 1,582 will be provided for water quality control. The reservoir area at elevation 1,582 will be 2,530 acres. A total of 302,000 acre-feet of storage between elevation 1,582 and the spillway crest (elevation 1,663.5) will be reserved for flood control. At the spillway crest the reservoir will have an area of 4,540 acres.

Local cooperation. None required.

Operations during fiscal year. Care of service and recreational facilities, water control management, testing and monitoring, supervision and administration and engineering and design.

33. EMERGENCY FLOOD CONTROL ACTIVITIES

During FY 02, a total of \$67,645 was spent on Catastrophic Disaster Preparedness Program (Approp. 96X3123), and \$272,762 on Flood Control and Coastal Emergencies including Emergency Operations (Approp. 96X3125).

ENVIRONMENTAL RESTORATION

34. CHESAPEAKE BAY OYSTER RECOVERY, VA

Location. Tangier Sound.

Existing Projects. Project is authorized by WRDA 1986 as amended. Construction of 150 acres of 2-D reefs and 8 acres of 3-D reefs were completed Sep 2002. These reefs will be seeded with disease resistant oyster seed Spring 2003. The project is the beginning of a Chesapeake Bay wide effort in Virginia and Maryland to restore the native oyster. Native oysters have been identified as an important component to the Bay eco-system due to its natural ability to filter water. Oyster population has declined to a dangerous level due to years of over harvesting, diseases, and pollution.

Local cooperation. Commonwealth of Virginia is funding 25% of the project cost.

Operations during fiscal year. \$2.56 million project in Tangier and Pokomoke Sounds for the construction of 158 acres of oyster reef was completed.

35. TANGIER ISLAND, VA

Location. Tangier Island is located in the Chesapeake Bay approximately 90 miles Southeast of Washington, DC, and is entirely within the political boundaries of Accomack County on Virginia's Eastern Shore. The island is about 5 miles long and 1-1/2 miles wide, and, with the exception of three sand ridges, it composed of low marshland and tidal flats.

Over 50 percent of the submerged aquatic vegetation (SAV) in the waters adjacent to the island has been lost during the 1990s. SAV is prime habitat for young blue crabs. Since these waters are a significant crab nursery for the Chesapeake Bay, the economic impact could be severe. (See National Ocean Service Chart No. 12228.)

Existing Projects. Three Corps of Engineers projects are located in the vicinity of the island. The Tangier Channel to the Chesapeake Bay (or North Channel) provides a channel 7 feet deep and 60 feet wide from the anchorage basin at the town of Tangier, northwesterly through Tangier Creek to the Chesapeake Bay, a distance of 0.7 mile. The anchorage basin is 7 feet deep and 400 feet square. The Tangier Channel to Tangier Sound provides a channel which approaches the island from the east and is 8 feet deep and 100 feet wide and 0.2 mile long in Tangier Sound; thence 8 feet deep and 60 feet wide and 0.9 mile long to the anchorage basin. The Tangier Seawall project provides over one mile of shore protection to the island's west coast, south of the North Channel.

A Federal Continuing Authorities Program study as authorized by Section 206 (Aquatic Ecosystem Restoration) of the Water Resources Development Act of 1996 (Public Law 104-303), as

amended. A Preliminary Restoration Plan was approved in October 2001, and a feasibility study was initiated in March 2002. The Preliminary Restoration Plan (PRP) proposed a project, which would provide a series of 10 unconnected, low-sill breakwaters that would form a chain of structures roughly along the western 2-3 foot bottom contour from Tangier Island to Goose Island. A primary benefit of the project would be to restore an estimated 17.22 million square feet (395 acres) of current open bottom to dense SAV coverage and, consequently, to support up to an additional 48 million juvenile blue crabs and make a significant contribution toward increasing numbers of blue crabs in the bay. There would also be benefits to the finfish, shellfish, and waterfowl populations. Various other options are being considered in the Feasibility Phase.

Local cooperation. The local sponsor, the Town of Tangier, provided a letter of intent in October 2001 to cost share in the next phases of the project.

Terminal facilities. The existing facilities at Tangier are considered adequate for current and prospective traffic.

Operations during fiscal year. FY 02 funds were used to complete the PRP and initiate the feasibility study.

General Investigations

36. WORK UNDER CONTINUING AUTHORITY PROGRAM

The district continues work on six Section 107 (navigation) studies: York River Entrance Channel, VA, has completed construction and project close-out activities have been initiated; Newport News Creek, VA, has completed construction and project close-out activities have been initiated; Guilford Creek, VA, has completed construction and project close-out activities have been initiated; Messick Point, Back River, VA, continuing the Plans & Spec (P&S) phase, Starlings Creek, VA continuing the feasibility phase; Nassawadox Creek, VA, initiating the feasibility phase. In addition, the

NORFOLK DISTRICT

district continues work on one Section 205 (Small Flood Control) study, Jamestown Island, VA, initiating the feasibility phase.

37. GENERAL INVESTIGATION SURVEYS

Total cost of surveys during the fiscal year amounted to \$2,261,147. The work consisted of feasibility studies for Elizabeth River \$232,400, Craney Island \$778,300 (Fed)/ \$279,100 (non-Fed), Hampton Shoreline \$193,400 (Fed)/ \$184,800 (non-Fed) , Deep Creek \$372,747, and Embry Dam \$20,800. Also work consisted of Interagency Water Resources Development \$28,900; Special Investigations, \$33,400; FPMS and Section 22 \$137,300.

38. COLLECTION AND STUDY OF BASIC DATA

During the fiscal year 02, cost of collection and study of basic data was \$212,000 consisting of flood plain management studies including Quick Responses, Management Service Unit, Technical Services and Environmental Data Studies and special studies.

39. INSPECTION OF COMPLETED WORKS

This year's work consisted of inspections and reports of seven completed local flood protection and civil works projects in the Norfolk District for an expenditure of \$57,000. The projects were constructed by the Corps, and are operated/maintained by local interests.

Projects inspected included: Hampton Institute Shore Protection, Jamestown Park Shore Protection, Norfolk Floodwall, Newmarket Creek Ditch, Richmond Floodwall, Buena Vista Flood Protection and Richmond Filtration Plant.

Rappahanonock Shoal – Cond	8-02	Condition

WILMINGTON, N.C., DISTRICT

This district comprises central and eastern North Carolina and a portion of south-central Virginia, embraced in drainage basins tributary to the Atlantic Ocean from the southern boundary of Virginia to the Shallotte River, inclusive, with exception of the Meherrin River Basin above Murfreesboro, N. C., the Chowan River Basin above the confluence of the Nottaway and Blackwater Rivers, and the Pasquotank

River and its tributaries for navigation only. Also included are those portions of the Yadkin-Pee-Dee and Catawba River basins within the State of N. C. as well as a portion of the Atlantic Intracoastal Waterway from the northern boundary of North Carolina to Little River, S.C., and a portion of the waterway from Norfolk, Va., to the Sounds of North Carolina, south of the north shore of Albemarle Sound.

Navigation

1. AQUATIC PLANT CONTROL (RIVER AND HARBOR ACT OF 1965)

Location. Navigable waters, tributary streams, connecting channels, and other allied waters in Wilmington District.

Existing project. The existing project provides for control and progressive eradication of water-hyacinth, alligatorweed, Eurasian watermilfoil, and other obnoxious aquatic plant growths from navigable waters, tributary streams, connecting channels, and other allied waters of the United States, in the combined interest of navigation, flood control, drainage, agriculture, fish and wildlife conservation, public health, and related purposes, including continued research for development of the most effective and economic control measures in cooperation with other Federal and State agencies in accordance with the report of the Chief of Engineers, House Document 251, 89th Congr., 1st session). The project was authorized by Section 302, 1965 River and Harbor Act (H.D. 25, 89th Congress, 1st session). The Act provides that research and planning costs shall be borne fully by the United States.

Local cooperation. Local interests must agree to hold the United States free from damages that may occur from operations performed in connection with this project, and participate to the extent of 50 percent of the cost of the program. Recon studies are 100 percent Federal. Requirements are being met.

Operations and results during fiscal year. New work: In FY02 there were no operations and no new areas were added to the program. Aquatic Plant Control Program management activities cost \$73.

Condition at end of fiscal year. The State has kept alligatorweed treatment sites under maintenance control in FY02. Monitoring of hydrilla control sites previously stocked with triploid grass carp indicates that overall our biological control efforts have been effective. Nationwide funds are being applied to research activities. No additional funds for treatment are expected, although recent introduction of giant salvinia is of concern to the sponsor.

2. ATLANTIC BEACH CHANNELS, N.C.

Location. In Carteret County, on south side of Bogue Sound, 3 miles west of Beaufort Inlet. (See Coast and Geodetic Survey Chart 420.)

Existing project. A channel 6 feet deep and 50 feet wide from the Atlantic Intracoastal Waterway in Bogue Sound to the marina east of Money Island; and a

channel 6 feet deep and 50 feet wide from the intersection of Money Island and Causeway Channel in Bogue Sound to the southern end of Causeway Channel. The length of channels is 28 miles. Existing project was authorized November 23, 1965, under authority of Section 107, 1960 River and Harbor Act.

Local cooperation. Local interests must provide lands, easements, and rights-of-way for construction and future maintenance, and aids to navigation, including suitable spoil-disposal areas, and necessary retaining dikes, bulkheads, and embankments therefore or the cost of such works; hold the United States free from damages; provide and maintain adequate public terminal and transfer facilities open to all equally in both Money Island Channel and Causeway Channel; provide and maintain depths in berthing areas and local channels commensurate with the depths provided in the related project areas; and provide a cash contribution toward the first costs of the project, expressed as a percentage of the Federal construction costs, of 50 percent for Money Island Channel, and 41.5 percent for Causeway Channel. Fully complied with.

Terminal facilities. Numerous wharves and piers exist along Causeway Channel and a marina near Money Island have berthing facilities for about 100 boats. Existing facilities are not adequate and additional facilities will be provided by local interests.

Operations and results during fiscal year. Maintenance: Between May 16 and June 4, 2002 the contract dredge Clarendon dredged 9,948 cubic yards from shoals in the channel at a cost of \$70,221.

Condition at end of fiscal year. Project completed April 1996.

3. ATLANTIC INTRACOASTAL WATERWAY BETWEEN NORFOLK, VA, AND ST. JOHNS RIVER, FL. (WILMINGTON DISTRICT)

Location. The project is located on the east coast of the United States, between Norfolk, Va., and St. Johns River, Florida. The section within Wilmington District begins at the Virginia-North Carolina State line and extends generally southerly and southwestwardly to Little River, S.C., a total of 308 statute miles. (See Coast and Geodetic Survey Charts 830 to 842, inclusive.)

Previous projects. For details see Annual Reports for 1915, 1926, 1932, and 1938.

Existing project. The authorized project provides for a waterway, 12 feet deep, with widths varying from 90 feet in land cuts to 300 feet in open waters; the construction, operation and maintenance of suitable bridges; saltwater intrusion preventive measures in the

vicinity of Fairfield, N.C.; a channel in Peltier Creek, 6 feet deep and 50 feet wide from the Intracoastal Waterway in Bogue Sound to and including a basin in Peltier Creek, 6 feet deep, 200 feet wide, and 600 feet long; a channel, 6 feet deep and 90 feet wide between the Intracoastal Waterway and the gorge in Bogue Inlet, then 8 feet deep and 150 feet wide across the ocean bar; a channel, 12 feet deep and 90 feet wide to a turning basin, 200 feet wide and 350 feet long, at Swansboro; a channel, 6 feet deep and 90 feet wide in New River Inlet, and a connecting channel of the same dimensions to the Intracoastal Waterway near the mouth of New River; a channel, 10 feet deep, and 90 feet wide in New River, between the Intracoastal Waterway and the Seaboard Coastline Railroad bridge at Jacksonville, N.C.; a channel through New Topsail Inlet, 8 feet deep and 150 feet wide and a channel from New Topsail Inlet to the Intracoastal Waterway by way of Old Topsail Creek, 7 feet deep and 80 feet wide; a channel, 7 feet deep and 80 feet wide, in Banks Channel, from New Topsail Inlet, paralleling the barrier beach, to the Atlantic Intracoastal Waterway; a channel, 14 feet deep and 400 feet wide, across the ocean bar at Masonboro Inlet, with suitable jetties at the entrance, thence 12 feet deep and 90 feet wide to the channel of the Intracoastal Waterway at Wrightsville Beach by way of Banks and Motte Channels; a turning basin, 15 feet deep, 300 feet wide, and 700 feet long, on the east side of Banks Channel near Masonboro Inlet, with three 15-pile dolphins therein; a channel, 8 feet deep and 150 feet wide across the ocean bar at Carolina Beach Inlet to the Atlantic Intracoastal Waterway; a channel, 6 feet deep, 80 feet wide, and 8,000 feet long, to and including a turning basin of the same depth, 130 feet wide and 180 feet long, at Carolina Beach; a yacht basin, 230 feet wide, 450 feet long, and 12 feet deep, at the town of Southport, connected to the waterway by a suitable channel of the same depth; and maintenance of the general navigation features of the North Carolina State Ports Authority Small Boat Harbor at Southport, consisting of an entrance channel, 150 feet wide and 400 feet long, an eastern harbor access channel, 70 feet wide and 430 feet long, a western harbor-access channel, 60 feet wide and 185 feet long, to a turning basin, 180 feet wide and 550 feet long, all to a depth of 6 feet. A modification providing for the replacement of five federally-owned and operated highway bridges was authorized in December 1970. A modification providing for 100 percent Federal funding for Walter B. Jones (formerly Wilkerson Creek) and Joseph P. Knapp (formerly Coinjock) bridges was authorized in October 1976. A modification providing for 100 percent Federal funding at Core Creek, Gene A. Potter (formerly Hobucken), and Fairfield Bridges was authorized in November 1986. Estimated Federal cost is \$70,200,000 (2000). The tidal lock at Snow's Cut was deauthorized

September 23, 1986, under authority of Sec. 12, PL93-251. The 12-foot-deep channel in Peltier Creek was deauthorized by the Water Resources Development Act of 1986. The 12-foot deep channel modification to New River was deauthorized January 1, 1990, under Sec. 1002, PL99-662. The jetties at Masonboro Inlet are complete except for the training wall, which was deauthorized April 5, 1999. A Section 111 project to mitigate damages caused by the north jetty was authorized in October 1980 and was completed in April 1981. Length of channels and basins total 347.7 miles. Plane of reference is mean low water.

In the waterway north of Neuse River, variations in water surface due to winds seldom exceed 2 feet above or below mean stage. Between Beaufort and the Cape Fear River, normal tidal range varies from 3.5 feet at the inlets to 1 foot at points between. Average range of tide is 4 feet on the ocean side of Bogue Inlet and 2.5 feet just inside the inlet. At New River, tidal range varies from 3.5 feet at the inlet to 1 foot at the head of the marshes and zero at Tar Landing, 31 miles above. From Cape Fear River, N. C., to Little River, S. C., mean tidal range varies between 4.7 feet in Cape Fear River and 4 feet at the intermediate inlets, and 2 feet at points midway between the inlets. On October 15, 1954 (Hurricane Hazel), the tide at Holden Beach reached an elevation of 17.6 feet. (See Table 6-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date except for the uncompleted modifications. The State of North Carolina has agreed to keep the bridges toll free and upon completion of each bridge, accept maintenance, replacement, and ownership responsibilities thereof. They have withdrawn their offer to contribute 25 percent of the first cost. The Water Resources Acts of 1976 and 1986 modified the terms of local cooperation to delete the non-Federal cost-sharing requirement for all five bridges.

Operations and results during fiscal year. New Work: Costs in connection with the completed Fairfield Bridge, including real estate activities and close out of the construction contract, were \$498,252. Costs in connection with close out of the completed Gene A. Potter Bridge (Hobucken) were \$10,558 and close out of the Core Creek Bridge were \$31. Maintenance: **Through Channel** – During intermittent periods the U.S. debris boat *Snell* conducted clearing and snagging operations and maintained dredging ranges and mooring facilities at a cost of \$417,176. Between September 12 and September 13, 2002 the U.S. debris boat *Elizabeth* collected vibracores for Shallotte River and Lockwoods Folly River inlet crossings at a cost of \$4,958. During intermittent periods, the contract dredge *Marion* removed 27,454 cubic yards from the through channel and the contract dredge *Jekyll Island* removed 81,900

cubic yards from inlet crossings at a cost of \$1,771,797. Between December 6, 2001 and January 1, 2002, the U.S. hopper dredge *Currituck* removed 36,320 cubic yards from the inlet crossing at Carolina Beach Inlet at a cost of \$104,500. Cost adjustment for prior year dredging of the through channel resulted in a negative cost of \$508,182. Engineering and design for future years dredging for the through channel and inlet crossings cost \$48,662. Mosquito control in disposal areas cost \$125,894. Real estate support for easements and audit cost \$58,147. Long-term environmental dredging and monitoring studies cost \$40,478. Snows Cut erosion control and property maintenance cost \$3,214. Planning for the AIWW SAD Regional Dredging Contract cost \$5,258. Dredged material management plan cost \$609,178. Dredged material facility surveys and maintenance cost \$26,113. The accident review team cost \$14,188. Condition and operations studies and project operation and management cost \$611,128. Receipts in connection with non-Federal use of Federal diked disposal areas and other miscellaneous collections resulted in a negative cost adjustment of \$2,400. **Bogue Inlet** – During intermittent periods, the U.S. sidecasting dredge *Fry* removed 227,170 cubic yards from shoals in Bogue Inlet at a cost of \$573,000. During intermittent periods, the U.S. sidecasting dredge *Merritt* removed 181,550 cubic yards from shoals in Bogue Inlet at a cost of \$364,000. Condition and operation studies cost \$61,812. **Carolina Beach Inlet** – Between December 6, 2001 and January 1, 2002 the U.S. hopper dredge *Currituck* removed 11,885 cubic yards from shoals in Carolina Beach Inlet at a cost of \$205,200. During intermittent periods, the U.S. sidecasting dredge *Fry* removed 141,270 cubic yards from shoals in Carolina Beach Inlet at a cost of \$405,000. During intermittent periods the U.S. sidecasting dredge *Merritt* removed 100,220 cubic yards from shoals in Carolina Beach Inlet at a cost of \$180,000. Construction of a mooring facility for government plant and a small storage building cost \$3,301. Condition and operation studies and project operation and management cost \$51,056. **Masonboro Inlet** – Between March 1 and May 24, 2002 the contract dredge *R.S. Weeks* with *Arkansas* booster bypassed 518,826 cubic yards of sand to Masonboro Island in connection with the Wrightsville Beach nourishment at a cost of \$1,569,096 and placed 360,498 cubic yards on Wrightsville Beach at a cost of \$1,207,196. Between July 15 and July 31, 2002 the contract dredge *Marion* removed 41,144 cubic yards from Masonboro Inlet and Connecting Channels at a cost of \$493,460. During intermittent periods the U.S. debris boat *Snell* maintained dredging ranges and mooring facilities at a cost of \$18,300. Environmental studies and monitoring activities cost \$3,893. Condition and operation studies cost \$1,812. **New River Inlet** –

Between May 22 and July 2, 2002 the contract dredge *Marion* removed 154,196 cubic yards from the Channel To New River Inlet at a cost of \$731,440. During intermittent periods, the U.S. sidecasting dredge *Fry* removed 45,730 cubic yards from shoals in New River Inlet at a cost of \$126,000. Condition and operation studies cost \$50,096. **New Topsail Inlet** – Cost in connection with contract dredging was \$108,873. During intermittent periods the sidecasting dredge *Merritt* removed 210,840 cubic yards from shoals in New Topsail Inlet at a cost of \$405,855. Between August 1 and August 18, 2002 the U.S. sidecasting dredge *Fry* removed 82,260 cubic yards from shoals in New Topsail Inlet at a cost of \$200,000. Condition and operation studies and project operation and management cost \$62,649.

Condition at end of fiscal year. The project was completed in September 1997 except for three tie-up dolphins at Masonboro Inlet and the replacement of Fairfield Bridge. Fairfield Bridge is the last of the AIWW bridges to be replaced and was opened to traffic on March 12, 2001. Total cost of existing project to September 30, 2002, was \$308,374,108; of which \$88,703,627 was for new work including \$86,851 in contributed funds and \$219,670,481 was for maintenance, including \$667,300 in contributed funds.

4. BEAUFORT HARBOR, N.C.

Location. The project is just inside Beaufort Inlet, adjacent to Morehead City Harbor. (See Coast and Geodetic survey Chart 420.)

Previous projects. For details see Annual Reports for 1915 and 1938.

Existing project. The authorized project provides for stopping erosion at Beaufort Inlet by jetties and sand fences at Fort Macon and Shackleford points and other shore protection; channels 15 feet deep at mean low water and 100 feet wide in Bulkhead and Gallants Channels, except for a depth of 12 feet in the upper 5,000 feet of Gallants Channel; a harbor of refuge in Town Creek 12 feet deep, 400 feet wide, and 900 feet long connected to Gallants Channel by a channel 12 feet deep, 150 feet wide, and 1,400 feet long; a basin 12 feet deep, 600 feet wide in front of the town of Beaufort except for a channel 15 feet deep, 100 feet wide through the basin; a stone bulkhead from Town Marsh across Bird Shoal to the west end of Carrot Island; a channel 14 feet deep, 70 feet wide, and 1,900 feet long from Bulkhead Channel to a turning basin 14 feet deep, 150 feet wide, and 300 feet long near the upper end of Morgan Creek; and a channel in Taylors Creek 15 feet deep, 100 feet wide, extending about 2.6 miles easterly from about opposite Marsh Street in Beaufort to Lennoxville Point at North River except for an 800-

foot-long section at the east end which is 12 feet deep. Total length of channels is 7.3 miles. Average tidal range is 2.5 feet at Beaufort and 3.5 feet at the inlet. (See Table 6-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date.

Terminal facilities. There are fifty waterfront facilities with a total frontage of 2,000 feet. These facilities are adequate for present commerce.

Operations and results during fiscal year. Maintenance: Between February 19 and March 26, 2002 the contract dredge *Clarendon* dredged 39,485 cubic yards from shoals in Beaufort Harbor at a cost of \$192,470. Project condition surveys cost \$6,282.

Condition at end of fiscal year. The project was completed in October 1965 except for the Morgan Creek modification which was completed November 12, 1983. (For further details see Annual Report for 1962.) Costs under existing project to September 30, 2002, were \$827,040 for new work, including \$34,000 contributed funds and \$4,914,967 for maintenance, including \$326,225 contributed funds, a total of \$5,742,007.

5. CAPE FEAR RIVER, N. C. ABOVE WILMINGTON

Location. The river is formed by confluence of the Deep and Haw Rivers at Moncure, Chatham County, N.C., and empties into the Atlantic Ocean at Cape Fear, near the southern extremity of the State. (See Coast and Geodetic Survey Chart 426.)

Previous project. For details see Annual Reports for 1915 and 1938.

Existing project. The authorized project provides for a channel 25 feet deep and 200 feet wide from Wilmington to a turning basin 400 feet wide and 550 feet long at Navassa (2.9 miles); a channel 12 feet deep and 140 feet wide from Navassa to mile board 30 at Acme, with five channel cutoffs, 12 feet deep and 150 feet wide to eliminate sharp bends; a channel 8 feet deep from mile board 30 to Fayetteville by constructing three locks and dams and by dredging river shoals; and recreational facilities at the locks and dams. Total length of the project channels is 113.9 miles. The project was authorized by River and Harbor Acts of June 25, 1910; June 26, 1934; August 30, 1935; August 26, 1937; October 27, 1965; and Section 4, Flood Control Act of 1944. (For further details see Annual Reports for 1962 and 1970.)

Local cooperation. Fully complied with.

Terminal facilities. There are twelve-waterfront facilities on the river, with a total frontage of 1,190 feet.

Operations and results during fiscal year. Maintenance: Between February 24 and February 28, 2002 the U.S. sidecasting dredge *Fry* removed 6,800 cubic yards from shoals in the channel at a cost of \$58,000. Enhanced physical security cost \$15,682. A National Register of Historic Places Evaluation cost \$83,224. Costs in connection with replacement of flush toilet buildings at Lock and Dam No.1 and William O. Huske Lock and Dam were \$2,075. Costs in connection with replacement of the boat ramps at the three locks and dams were \$89,335. Costs in connection with construction of picnic shelters at Lock and Dam No.1 and William O. Huske Lock and Dam were \$2,021. Periodic inspections cost \$3,905. Condition and operations studies cost \$4,923. Operation and maintenance of the three locks and dams cost \$373,485. Miscellaneous collections resulted in a negative cost adjustment of \$100.

Condition at end of fiscal year. The project was completed in June 1970. Total cost of existing project to September 30, 2002, was \$28,540,206 of which \$3,610,454 (including \$1,226,385 public works) was for new work and \$24,929,752 for maintenance.

6. LOCKWOODS FOLLY RIVER, N. C.

Location. The project is located on the south coast of North Carolina about 12 miles west of Cape Fear River. (See Coast and Geodetic Survey Chart 1236 and Geological Survey Map of North Carolina.)

Existing project. The authorized project provides for a channel 100 feet wide and 6 feet deep at low water from the ocean to the bridge at Supply 12.5 miles above, to be obtained by dredging through oyster rocks and mudflats. The completed river portion of the project above the waterway was reclassified to the active category in 1971. Lunar tidal ranges in Lockwoods Folly River are 4.5 feet at the inlet and 2 feet at the head of navigation at Supply. The existing project was authorized by the 1890 River and Harbor Act. (See Annual Report for 1887, page 1099.) A modification to enlarge the channel from 6 to 12 feet deep and from 100 to 150 feet wide across the ocean bar for a distance of 4,700 feet was approved by the Chief of Engineers on June 3, 1980, under Section 107 of the 1960 River and Harbor Act. During dredging operations it became apparent that establishment of the 12-foot project would not be possible with currently available equipment. Therefore, the Chief of Engineers, on December 20, 1983, approved the District's recommendation that further construction activity for the Lockwoods Folly Inlet project be suspended until suitable equipment becomes available and that the project be maintained at an 8-foot project depth in the interim.

Local cooperation. For the new modification local interests must: (a) pay, contribute in kind, or repay with interest, one-half of the first costs of construction allocated to recreational boating; (b) hold and save the United States free from damages resulting from changes in ground water levels, saltwater intrusion, or wave action due to the construction works, except damages due to the fault or negligence of the United States or its contractor; (c) provide without cost to the United States all lands, easements, and rights-of-way necessary for the construction and subsequent maintenance of the project and for aids to navigation upon the request of the Chief of Engineers, and (d) provide depths in berthing areas commensurate with the project depths, and provide service facilities.

Terminal facilities. Thirty-one piers and wharves on the Atlantic Intracoastal Waterway at Holden Beach, about 1.25 miles west of Lockwoods Folly Inlet, with a total frontage of about 1,980 feet available. At Dixons Landing, about 2 miles upstream of the inlet, there are five wharves with a total frontage of 240 feet. Numerous natural landings are used for loading and unloading small boats. Berthing space in the vicinity of Lockwoods Folly Inlet totals about 2,220 feet. Facilities are considered adequate for present commerce.

Operations and results during fiscal year. Maintenance: Between October 1 and October 8, 2001, the U.S. hopper dredge *Currituck* removed 19,245 cubic yards from shoals in Lockwoods Folly Inlet at a cost of \$68,800. During intermittent periods, the U.S. sidecasting dredge *Fry* removed 242,506 cubic yards from shoals in Lockwoods Folly Inlet at a cost of \$602,000. During intermittent periods, the U.S. sidecasting dredge *Merritt* removed 241,580 cubic yards from shoals in Lockwoods Folly Inlet at a cost of \$448,500. Engineering and design for future year dredging of Lockwoods Folly River cost \$53,187. Condition and operation studies and project operation and management cost \$55,765.

Condition at end of fiscal year. The active portion of the project was completed in June 1965 except for the latest modification. Work was initiated on the latest modification on September 23, 1982, with a depth of 8 feet being reached in October 1982. The project will be maintained at the 8-foot depth until suitable equipment for deepening to 12 feet becomes available.

7. MANTEO (SHALLOWBAG) BAY, N. C.

Location. The project is located on the northeastern side of Roanoke Island, North Carolina. (See Coast and Geodetic Survey Chart 1229.)

Existing project. The authorized project provides for a channel 14 feet deep and 400 feet wide from the Atlantic Ocean through Oregon Inlet with connecting

12-foot channels, 100 feet wide, to Pamlico Sound, Manteo, and Wanchese; and a channel 6 feet deep and 100 feet wide connecting the Manteo-Oregon Inlet Channel with Albemarle Sound. Length of channels is 25.4 miles. A newly authorized modification provides for stabilization of Oregon Inlet with a dual rubble-mound jetty system, including means for sand transfer to the down drift beach; a channel, 20 feet deep and 400 feet wide, through the ocean bar at Oregon Inlet; a channel, 14 feet deep and 120 feet wide, from the gorge in Oregon Inlet to and through Roanoke Sound to and including a 15-acre basin of the same depth at Wanchese; and a channel 10 feet deep and 100 feet wide from the 12-foot-deep channel in Manteo (Shallowbag) Bay through Roanoke and Albemarle Sounds to deep water near the northern end of Croatan Sound. The 12-foot Croatan Sound channel has been deferred due to lack of economic justification. The estimated Federal cost for the modification is \$100,000,000 (2000 inflated). The project was authorized by River and Harbor Acts of June 25, 1910; October 17, 1940; May 17, 1950; and December 31, 1970; and under Section 107 of the 1960 River and Harbor Act.

Local cooperation. For the new modification, local interests must: (a) provide all lands, easements, and rights-of-way for construction and subsequent maintenance of the project, including suitable areas required for initial and subsequent disposal of spoil; (b) hold and save the United States free from damages due to the construction works and subsequent maintenance; (c) continue to provide and maintain adequate terminal and transfer facilities, open to all on equal terms, in accordance with plans approved by the Chief of Engineers; (d) provide and maintain necessary mooring and berthing facilities in any enlarged basin, open to all on equal terms, in accordance with plans approved by the Chief of Engineers; (e) provide and maintain depths in berthing areas and local access channels serving the terminals commensurate with depths provided in the related project areas; (f) accomplish such alterations as required in sewer, water supply, drainage, electrical power lines, telephone lines, or other utility facilities as well as their maintenance; (g) establish a competent and properly constituted public body empowered to regulate the use, growth, and free development of the harbor facilities, with the understanding that said facilities will be open to all on equal terms; (h) establish regulations prohibiting the discharge of untreated sewage, garbage, and other pollutants in the water of the harbor by the users thereof, which regulations shall be in accordance with applicable laws; or regulations of Federal, State, and local authorities responsible for pollution prevention and control; (i) perform, or, cause to be performed, any investigation for hazardous substances as are determined necessary to identify the existence and extent of any hazardous substances regulated under

CERCLA and assume complete financial responsibility, as between the Federal government and the non-Federal sponsor, for all necessary clean up and response costs; j) pay 10 percent of the costs allocated to navigation during construction presently estimated at \$10,933,000; (k) pay an additional 10 percent of the costs allocated to navigation within a period of 30 years following completion of construction offset by a credit allowed for the value of lands, easements, rights-of-way and relocations (except utility relocations), presently estimated at \$11,019,000. Reasonable assurances have been received. The State of N.C. has constructed the Wanchese Harbor portion and was reimbursed under Sec. 215, PL 90-483.

Terminal facilities. The project is served by 33 waterfront facilities with a total frontage of 3,320 feet. Additional wharves and facilities will be provided with the enlarged basin at Wanchese.

Operations and results during fiscal year. New Work: Work continued on the economic update, GDM supplement, and EIS supplement at a cost of \$234,903. Maintenance: Between August 5 and September 30, 2002 the contract dredge *Lyndy1* dredged 73,449 cubic yards from shoals in Old House Channel and Channel to Wanchese at a cost of \$609,164. Between September 2 and September 30, 2002 the contract dredges *Northerly Island and Texas* dredged 454,801 cubic yards from shoals in the ocean bar and vicinity of the bridge at a cost of \$3,252,827. Cost in connection with prior year dredging of the ocean bar was \$277,704. Between October 1 and November 8, 2001 the U.S. sidecasting dredge *Fry* removed 133,130 cubic yards from Oregon Inlet at a cost of \$408,000. Between December 6, 2001 and March 13, 2002 the U.S. sidecasting dredge *Merritt* removed 317,355 cubic yards from shoals in Oregon Inlet at a cost of \$750,500. During intermittent periods the U.S. debris boat *Snell* conducted clearing and snagging operations and maintained dredging ranges and mooring facilities at a cost of \$70,550. Additional cost in connection with prior year dredging of Oregon Inlet cost \$331,979. Engineering and design and surveys in connection with future years dredging of Old House Channel and Channel to Wanchese cost \$4,023. Project monitoring cost \$4,560. Cost adjustment for prior year maintenance of Old House Channel and Channel to Wanchese resulted in a negative cost of \$3,800. Cost adjustment in connection with National Ocean Survey tidal datum determination resulted in a negative cost of \$6,793. Condition and operation studies and project operation management cost \$207,113. Engineering and Design for Island H disposal area repairs was accomplished at a contributed funds cost of \$44,231. Shoreline monitoring at Oregon Inlet was accomplished at a contributed funds cost of \$6,773.

Condition at end of fiscal year. The project is complete except for the latest modification. (For further detail, see Annual Report of 1962.)

8. MOREHEAD CITY HARBOR, N. C.

Location. The project is located on the northern shore of Bogue Sound, adjacent to Beaufort Inlet. (See Coast and Geodetic Survey Chart 420.)

Previous project. For details see page 470 of Annual Report for 1935.

Existing project. A channel 47 feet deep and 450 feet wide from deep water in the Atlantic Ocean through the ocean bar at Beaufort Inlet with three widenings; a cutoff channel 400 feet wide; and a depth of 45 feet in the east leg of the basin, including a 1,350 foot diameter turning area; a channel 12 feet deep, 100 feet wide from the turning basin to Sixth Street, Morehead City, then 12 feet deep, 200 to 400 feet wide to Tenth Street; then 6 feet deep, 75 feet wide, to Bogue Sound. Project also includes assumption of maintenance in the northwest leg and the east leg extension. Jetties at Beaufort Inlet were reclassified to the "active" category on March 8, 1972. The jetties were deauthorized by the Water Resources Development Act of 1986. The project was authorized by the 1958 River and Harbor Act (S.D. 54, 84th Cong., 1st Sess.), the River and Harbor Act of December 31, 1970 and the Water Resources Development Act of 1992. (For further details see Annual Report for 1962.)

Local cooperation. Fully complied with to date.

Terminal facilities. Twenty-six waterfront facilities serve the port, with a total frontage of 1,250 feet. Marine terminals provide 5,300 feet of berthing space, with a depth alongside of 35 feet, and facilities for transfer of cargoes between rail and water carriers. Improvements to facilities were completed in 1969. (For further details see Port Series No. 12, revised 1987, Corps of Engineers.)

Operations and results during fiscal year. Maintenance: Between February 1 and February 18, 2002, the contract dredge *Clarendon* removed 624,091 cubic yards from shoals in the inner harbor at a cost of \$3,065,461. Between January 18 and February 22, 2002 the U.S. hopper dredge *Wheeler* removed 480,117 cubic yards and the U.S. hopper dredge *McFarland* removed 82,160 cubic yards from shoals in the ocean bar at a cost of \$1,755,505. Cost in connection with prior year dredging of the ocean bar was \$4,087. Engineering and Design in connection with future pump out of Brandt Island cost \$2,064. Engineering and design in connection with future dredging of the ocean bar cost \$53,591. Ocean dumping monitoring cost \$10,017. Project monitoring of impacts on the shoreline of Bogue

Banks and Shackleford Banks cost \$3,770. An evaluation and report for assumption of maintenance of the West Turning Basin Expansion cost \$15,643. An evaluation and report of a Morehead City Harbor Section 933 project cost \$219,320. Condition and operation studies and project operation and management cost \$103,288. Surveys and repairs of Brandt Island dikes were completed at a contributed funds cost of \$813,133. Placement of dredge material on Fort Macon and the associated additional repairs to the Brandt Island dikes were completed for the State of North Carolina at a contributed funds cost of \$99,470 and \$10,964 respectively. Between March 27 and May 15, 2002 the contract dredge *Clarendon* removed 22,450 cubic yards from shoals at Berths 1, 2, and 3 and from a berth on Radio Island at the Aviation Fuel Dock for the State Ports Authority at a contributed funds cost of \$77,349. Between June 5 and July 8, 2002 the contract dredge *Clarendon* removed 164,089 cubic yards from shoals in the State project in the Northwest Leg (West Turning Basin) at a contributed funds cost of \$479,418.

Condition at end of fiscal year. The project is complete with the latest modification being physically complete in April 1994. (For further details, see Annual Report of 1962.) Total cost of the existing project to September 30, 2002, was \$105,704,026 of which \$15,892,219 was for new work, including \$2,731,996 contributed funds (including \$553,477 public works funds) and \$89,811,807 for maintenance, including \$3,307,628 contributed funds.

9. ROLLINSON CHANNEL, N. C.

Location. The project is located about 3.5 miles northeast of Hatteras Inlet. (See Coast and Geodetic Survey Chart 1232.).

Existing project. The authorized project provides for a channel 12 feet deep, 100 feet wide, and about 5.1 miles long from deep water in Pamlico Sound to and including a basin of the same depth, 80 to 150 feet wide, and 1,450 feet long at Hatteras; a rubble-mound breakwater on each side of the channel at the entrance to the basin; and a channel 10 feet deep and 100 feet wide from that depth in Hatteras Inlet gorge to Rollinson Channel, in the vicinity of the basin at Hatteras. The project was authorized by the River and Harbor Acts of August 30, 1935; March 2, 1945; September 3, 1954; and October 23, 1962. (For further details see Annual Report for 1961.)

Local cooperation. Complied with to date.

Terminal facilities. Six waterfront facilities serve the channel, with a total frontage of 926 feet. Existing facilities are adequate for present commerce.

Operations and results during fiscal year. Maintenance: Between February 28 and March 15, 2002, the contract dredge *Lndyl* removed 12,506 cubic yards from shoals in Rollinson Channel at a cost of \$92,386. Between June 7 and June 18, 2002 the U.S. sidecasting dredge *Fry* removed 52,720 cubic yards from shoals in the Rollinson Channel at a cost of \$150,487. Project condition surveys cost \$18,339.

Condition at end of fiscal year. The project was completed August 22, 1966. (For further details see Annual Report for 1961.)

10. SHALLOTTE RIVER, N.C.

Location. A small stream in Brunswick County, N.C., rising in the large swamp country between Cape Fear and Waccamaw Rivers, known as Green Swamp. Stream is about 30 miles long and flows southerly into Atlantic Ocean and 20 miles west of mouth of Cape Fear River. (See Coast and Geodetic Survey Chart 835.)

Previous project. For details see page 1806 of Annual Report for 1915.

Existing project. A channel 4 feet deep at mean low water and 36 feet wide from the mouth to town of Shallotte. Section under improvement is 9 miles long. River is tidal, range varying from 5 feet at mouth to 3 feet at Shallotte. Hurricane Hazel in 1954 caused a tide about 16 feet above mean sea level in the river at Shallotte Point. Project authorized by River and Harbor Acts of March 4, 1913, and January 21, 1927.

Local cooperation. None required.

Terminal facilities. A marine railway and shop at Shallotte Point and another in town of Shallotte with facilities for building and repairing boats up to about 60 feet long. On Shallotte River, there are 17 docks varying from 16 to 321 feet of frontage, providing 1,334 feet of wharf and docking space.

Operations and results during fiscal year. Maintenance: Between September 19 and September 30, 2002, the U.S. hopper dredge *Currituck* removed 13,375 cubic yards from shoals in Shallotte River at a cost of \$113,561. Project condition surveys cost \$399.

Condition at end of fiscal year. Project completed in 1929.

11. SILVER LAKE HARBOR, N. C.

Location. The project is located at the southwest end of Ocracoke Island, a portion of the Outer Banks on the southeast coast of North Carolina, separating Pamlico Sound from the Atlantic Ocean. (See Coast and Geodetic Survey Chart No. 1232.)

Existing project. The authorized project provides for basin depths of 12 feet in Silver Lake Harbor; an entrance channel 12 feet deep and 60 feet wide, from the basin to Teaches Hole Channel; a channel, 12 feet deep and 150 feet wide, from the entrance channel through Big Foot Slough Bar to the 12-foot contour in Pamlico Sound; a channel, 12 feet deep and 150 feet wide, from the entrance channel through Teaches Hole Channel to the gorge in Ocracoke Inlet, a channel, 12 feet deep and 150 feet wide, across Bluff Shoal; and for rubble-mound training walls on the north and south sides of the entrance channel, 300 feet and 400 feet long, respectively. Mean tidal ranges are 1.9 feet in the throat of Ocracoke Inlet and 1 foot at Ocracoke. Variations in the water surface of Pamlico Sound are generally due to winds and seldom exceed 1 or 2 feet above or below mean stage. Severe storms have raised the water surface as much as 7 feet above normal water level at Ocracoke. (See Table 6-B for Authorizing Legislation.)

Local cooperation. Fully complied with.

Terminal facilities. Twelve waterfront facilities serve the harbor. These facilities are adequate for existing commerce.

Operations and results during fiscal year. Maintenance: During intermittent periods the U.S. debris boat *Snell* conducted clearing and snagging operations and maintained dredging ranges and mooring facilities at a cost of \$279,650. Between March 18 and August 4, 2002, the contract dredge *Lndy1* dredged 81,134 cubic yards to realign Big Foot Slough at a cost of \$548,514. Costs in connection with prior year dredging were \$2,652. Condition and operations studies cost \$9.

Condition at end of fiscal year. The project was completed July 28, 1970. (For further details see Annual Report for 1961.)

12. STUMPY POINT BAY, N.C.

Location. On southeastern side of the mainland, Dare County, N.C. (See Coast and Geodetic Survey Chart 1229.)

Existing project. A channel 75 feet wide and 10 feet deep from that depth in Pamlico Sound to a basin in the harbor at Lake Worth, 75 to 100 feet wide, 550 feet long and 10 feet deep, plus an irregularly shaped area providing access to the public wharf, together with protective breakwaters at entrance to the harbor. Project was authorized by 1948 River and Harbor Act and under Section 107, 1960 River and Harbor Act.

Local cooperation. Fully complied with.

Terminal facilities. Bulkheads in existing basin provide about 550 linear feet of berthing space, and a

wholesale fish house provides about 250 feet. Part of the space along bulkheads is publicly owned. Facilities are considered adequate for existing commerce, but any appreciable increase will require additional facilities.

Operations and results during fiscal year. Maintenance: Disposal area dikes were repaired at a contributed funds cost of \$344,242.

Condition at end of fiscal year. The project was completed on September 20, 1967. (For further details, see Annual Report for 1966.)

13. WILMINGTON HARBOR, N. C.

Location. The project is located on the Cape Fear River, on southeast coast of North Carolina, between the Atlantic Ocean and Wilmington, North Carolina. (See Coast and Geodetic Survey Chart No. 426.)

Previous projects. For details, see page 1804 of Annual Report for 1915 and page 533 of Annual Report for 1938.

Existing project. The authorized and constructed project provides for a channel 40 feet deep and 500 feet wide from the Atlantic Ocean through the ocean bar and entrance channels to Southport, thence 38 feet deep and 400 feet wide to the upper end of the anchorage basin (foot of Castle Street) at Wilmington, thence 32 feet deep and 400 feet wide, to Hilton Bridge over Northeast Cape Fear River; a 38-foot deep anchorage basin at Wilmington; a 32-foot-deep turning basin opposite the principal terminals; a connecting channel 12 feet deep and 100 feet wide to the AIWW, about 3 miles long, in Cape Fear River; and a channel 25 feet deep and 200 feet wide from Hilton Bridge over Northeast Cape Fear River to a point 1.66 miles above, including a turning basin of the same depth, 700 feet wide and 500 feet long, at a point 1.25 miles above the bridge. The project was authorized by River and Harbor Acts of July 3, 1930; March 2, 1945; May 17, 1950; October 23, 1962; and March 10, 1964; and under the continuing authority of Section 107 of the 1960 River and Harbor Act. Three modifications to the project were authorized by the Water Resources Development Acts of November 17, 1986 (PL 99-662) and October 12, 1996 (PL 104-303). The Energy and Water Development Appropriations Act, 1998, subsequently combined these three modifications into one project modification. The project consists of two separable elements, the portion for deepening of the existing project and the portion for raising the dikes on Eagle Island dredged material disposal facility (DMDF) for maintenance of the existing project until the deepening is completed. The plan of improvement consists of deepening the ocean bar and entrance channels from the authorized depth of 40 feet to 44 feet; deepening the authorized 38-foot project to 42 feet up to and including the anchorage

basin immediately upriver from the State Ports Authority dock, and extending the anchorage basin northward by 300 feet; widening the existing 400-foot widechannel to 600 feet over a total length of 6.2 miles including Lower and Upper Midnight and Lower Lilliput reaches; widen five turns and bends by 100 to 200 feet providing a total average channel width of 500 to 675 feet; widening the Fourth East Jetty Channel to 500 feet over a total length of 1.5 miles; deepening the 32-foot channel between Castle Street and the Hilton Railroad Bridge, the 32-foot turning basin just above the mouth of the Northeast Cape Fear river on the west side, and the 25-foot channel from the Hilton Railroad Bridge to 750 feet upstream all to a depth of 38 feet; deepening the 25-foot channel from 750 feet upstream of the Hilton Railroad Bridge to the turning basin near the upstream limits of the project to 34 feet, along with widening of the channel from 200 to 250 feet; and widening the turning basin from 700 to 800 feet; mitigation to include acquiring, by fee title, 30 acres of upland and construction of an embayment and acquisition of about 500 acres of existing marsh and upland areas for preservation of habitat to offset losses of wetlands and primary nursery areas. The plan of improvement for the dredged material disposal facility consists of incrementally raising the dikes of three cells on Eagle Island dredged material disposal facility from their current elevations to an ultimate elevation of 40 feet. The environmental enhancement portion of the project is unprogrammed. The estimated Federal cost is \$258,666,000 (2002) for the deepening project separable element and \$36,800,000 (2002) for the dredged material disposal facility separable element. (For further details of authorization, see 1962 Annual Report.)

Local cooperation. Fully complied with to date except for latest modification. Cost sharing and financing are in accordance with concepts reflected in the Water Resources Development Act of 1986. For the deepening project separable element the non-Federal sponsor must (1) provide all lands, easements, rights-of-way, and dredged material disposal area lands presently estimated at \$2,064,000, and bear all operation and maintenance costs presently estimated at \$6,000 annually; (2) modify or relocate buildings, utilities, roads, bridges (except railroad bridges), and other facilities, where necessary in the construction of the project, presently estimated at \$20,957,000; (3) pay 25 percent of the costs allocated to deep draft navigation during construction presently estimated at \$81,832,000 and reimburse an additional 10 percent of the costs allocated to deep draft navigation within a period of 30 years following completion of construction which is partially offset by a credit allowed for the value of lands, easements, rights-of-way, relocations (except utility relocations), and dredged material disposal areas,

presently estimated at \$31,000,000; and (4) provide and maintain, at its own expense, the local service facilities necessary to realize the benefits of the general navigation features, presently estimated at \$22,101,000.

For the dredged material disposal facility separable element the non-Federal sponsor must (1) pay 25 percent of the costs allocated to deep draft navigation during construction, presently estimated at \$12,200,000; and (2) reimburse an additional 10 percent of the costs allocated to deep draft navigation within a period of 30 years following completion of construction, presently estimated at \$4,900,000.

Terminal facilities. Forty-three principal wharves, piers, and docks at port of Wilmington, with a berthing space of about 20,000 linear feet serve the harbor. These facilities handle general cargo and petroleum products. (For further details, see Port Series No. 12, revised 1987, Corps of Engineers.)

Operations and results during fiscal year. New Work: Engineering and design and construction management in connection with the harbor deepening project cost \$5,799,763. Between July 12 and September 30, 2002, the contract dredges *California* and *Dredge 54* removed 1,197,594 cubic yards for the Anchorage Basin/Passing Lane contract at a Federal cost of \$7,223,000 and a contributed funds cost of \$2,407,382. Cost in connection with prior year dredging for the Ocean Bar contract 1 (Outer Bar-New Channel) was \$228,750 Federal cost and \$76,250 contributed funds cost. Between October 1, 2001 and September 10, 2002, the contract dredges *Meridian* and *Eagle 1* dredged 4,322,182 cubic yards for the Inner Bar contract at a Federal cost of \$17,971,165 and a contributed funds cost of \$5,989,868. Between October 1, 2001 and January 31, 2002, the contract dredges *Apache* and *Texas* dredged 1,045,296 cubic yards for the Big Island Rock contract at a Federal cost of \$28,549,409 and a contributed funds cost of \$9,350,733. Cost in connection with prior year contract dredging for the Horseshoe Shoal Channel, Snows Marsh Channel, and Disposal Area 4 in Wilmington Harbor was \$66 Federal cost and \$22 contributed funds cost. Between October 1, 2001 and September 10, 2002, the contract dredges *Meridian* and *Eagle 1* dredged 1,260,842 cubic yards for the Wilmington Harbor Section 933 project for the Brunswick County Beaches Consortium at a Federal cost of \$4,564,083 and a contributed funds cost of \$2,457,656. Disposal area construction in connection with the harbor deepening project resulted in a Federal cost of \$1,303,516 and a contributed funds cost of \$195,956. Maintenance: Between July 12 and September 30, 2002, the contract dredges *Dredge 54* and *California* removed 40,761 cubic yards from shoals in the anchorage basin/passing lane at a cost of \$230,869. Adjustment for prior year dredging resulted

in a negative cost of \$9,801. Between October 25, 2001 and January 25, 2002, the contract dredge *Clarendon* dredged 950,422 cubic yards from shoals in the anchorage basin and river channel at a cost of \$2,399,273. Between November 19, 2001 and January 17, 2002, the contract dredge *Clarendon* removed 18,327 cubic yards from shoals at the State Port at a contributed funds cost of \$219,900. Cost for prior year repair of Disposal Area 10 was a contributed funds cost of \$10,000. Between October 1, 2001 and January 31, 2002, the contract dredges *Apache* and *Texas* dredged 120,477 cubic yards from shoals in the Lower Brunswick Channel to Keg Island Channel at a cost of \$417,122. Between October 1, 2001 and September 10, 2002, the contract dredges *Meridian* and *Eagle-1* dredged 91,067 cubic yards from Snows Marsh to Baldhead Shoal Channel at a cost of \$256,895. Between February 23 and March 10, 2002, the U.S. hopper dredge *McFarland* removed 136,306 cubic yards from shoals in the channel at a cost of \$944,488. Cost in connection with prior year dredging of the AIWW Connecting Channel was \$521,121. During intermittent periods the U.S. debris boat *Snell* conducted clearing and snagging operations and maintained dredging ranges and mooring facilities at a cost of \$289,230. Engineering and design for repairs to disposal areas 4 and 10 cost \$44,047 in contributed funds and for Islands 8 and 10 cost \$29,685 in contributed funds. A study of manufactured soils from dredge material cost \$4,000. ODMDS/ocean dumping monitoring cost \$1,841. Mosquito control in disposal areas cost \$125,451. Condition and operation studies and project operation and management cost \$483,453. Miscellaneous collections resulted in a negative cost adjustment of \$1200.

Condition at end of fiscal year. The active portion of the project was completed August 1997 except for the latest modification. (For further details, see Annual Report for 1962) Total cost of existing project to September 30, 2002 was \$373,147,025 of which \$224,389,441 was for new work, including \$55,170,329 contributed funds and \$148,757,584 was for maintenance, including \$11,642,801 contributed funds. The remaining uncompleted portion of the work authorized under the River and Harbor Act of March 2, 1945, was deauthorized in accordance with Section 1001(b) (1), PL 99-662. A new construction start for the latest modification was received in FY98, with the first disposal area construction contract awarded May 1999 and completed October 1999 and the mitigation contract awarded August 1999 and completed November 2000 and the first deepening contract awarded August 2000. The deepening project is scheduled for completion in March 2006.

Flood Control

14. CAPE FEAR RIVER BASIN, N. C.

Location. Work covered by this project consists of a series of dams and reservoirs on tributaries of the Cape Fear River in North Carolina within a radius of 100 miles from Raleigh, North Carolina. (See Geological Survey Map of North Carolina.)

Existing project. Public Law 88-253, approved December 30, 1963, authorized three principal dams and reservoirs and a series of smaller reservoirs on tributaries of the Cape Fear River in accordance with the comprehensive plans in House Document 508, 87th Congress, 2d session. The act also provides that the appropriate agencies of the Departments of the Army and Agriculture shall conduct joint investigations and surveys and prepare a report on the upper tributaries of the Cape Fear River in the interest of watershed protection and flood prevention, and the conservation, development, utilization, and disposal of water. The report was prepared in compliance with provisions of Public Law 87-639. The study was unfavorable and has been submitted to Congress. No further action will be taken. B. Everett Jordan Dam and Lake, Randleman Lake, and Howards Mill Lake were included in the comprehensive plan and were authorized for construction in accordance with the above authorization. Howards Mill Lake was deauthorized in July 1995 due to the current lack of economic justification. Randleman Lake was reclassified to the "deferred" category in April 1992, due to the current lack of economic justification, and was deauthorized in April 2002. See Table 6-H on Dams and Reservoirs. Estimates of cost as given are based on 1960 price levels, except for B. Everett Jordan Dam and Lake which was revised in 1994 and Randleman Lake, which was revised in 1990.

Local cooperation. Requirements are given in the individual project reports.

14A. B. EVERETT JORDAN DAM AND LAKE, N. C.

Location. The project is located on the Haw River, N.C., 4.3 miles above its mouth, and 2.5 miles north of Moncure, N. C.

Existing project. The project provides for an earth dam 1,330 feet long with a maximum height of 112 feet above the streambed, an uncontrolled, unpaved chute spillway, and a controlled 19-foot diameter outlet structure. Some saddle dikes are required beyond the spillway. The reservoir has a gross storage capacity of 753,500 acre-feet, of which 538,400 acre-feet is for flood control and a conservation pool of 215,100 acre-feet for water-quality control, water supply, and

sedimentation. The reservoir will be operated as a unit of a coordinated system for control of floods in the Cape Fear River Basin and for water supply, water-quality control, and other purposes. Estimated Federal cost for new work is \$147,600,000 (1994), consisting of \$89,186,000 for construction, and \$58,414,000 for lands and damages, including highway, railroad, and utility relocations. The existing project was authorized by Public Law 88-253 approved December 30, 1963 (H.D.508, 87th Cong., 2d Session).

Local cooperation. Local interests must protect downstream channels from encroachments and obstructions which would adversely affect operation of the project; reimburse the Federal Government for all costs allocated to municipal and industrial water supply, presently estimated at \$3,700,000 and bear all annual costs for operation, maintenance, and major replacements allocated to municipal and industrial water supply, an amount presently estimated at \$46,000 annually; and contribute toward the cost of the ranger security buildings, an amount presently estimated at \$44,000. A contract between the State of N. C. and the United States for water supply storage space was executed by ASA(CW) on April 10, 1988. In addition, the State of N. C. has leased the project for public park, recreational, fish, wildlife, and other natural resource management purposes and the estimated cost to the State for O&M under this lease is \$806,000 annually.

Operations and results during fiscal year. New Work: Work continued on real estate activities at a cost of \$241, digitizing real estate maps at a cost \$3,461, and the master plan update at a cost of \$25,356. Total Federal expenditures were \$30,469, including the above items. Maintenance: Periodic inspections cost \$16,112. Engineering and design and construction management for the management center addition cost \$85,189. Engineering and design for the rip rap/slope protection failure cost \$3,725. Security activities cost \$17,818. GIS development cost \$403. Normal operation and maintenance cost \$1,012,109. Receipts in connection with real estate administrative fees and other miscellaneous collections resulted in a negative cost adjustment of \$5,290.

Condition at end of fiscal year. All facilities are complete. Impoundment was completed in February 1982, with dedication on May 1, 1982. The project was completed in June 1999. The real estate audit was completed March 2001. The master plan update and boater use study are scheduled to be completed September 2003.

15. CLINTON WASTEWATER TREATMENT PLANT, CLINTON, N.C.

Location. The project is located at the confluence of Dollar Branch and Williams Old Mill Branch near the City of Clinton, about 60 miles south of Raleigh, North Carolina.

Existing Project. The project consists of construction of a dike approximately 2,200 feet long around the Clinton Wastewater Treatment Plant, with sumps and pumps to provide interior drainage. Loss of 1.8 acres of wetlands due to construction will be mitigated by purchase of a 4-acre mitigation site and by the Sponsor placing a restrictive covenant to preserve 6 acres of land already owned. The project provides protection from a 100-year flood event. Approved estimated Federal cost for construction implementation is \$591,000 (1998). The project was approved by the Division Commander on April 7, 1998, under the continuing authority of Section 205 of the Flood Control Act of 1948, as amended.

Local cooperation. Local interests must provide all lands, easements and rights-of-way, including suitable borrow and disposal areas necessary for construction and subsequent maintenance and inspection of the project; accomplish without cost to the United States all relocation and alterations of buildings, transportation facilities, storm drains, utilities and other structures and improvements made necessary by the construction; provide, during the period of construction, an amount equal to not less than 25 percent, but no greater than 50 percent, of total project costs, estimated at \$197,000, at least 5 percent of which will be cash; hold and save the United States free from damages due to the construction and subsequent maintenance, except damages due to the fault or negligence of the United States or its contractors; maintain and operate the project after completion without cost to the United States; assume full responsibility for all project costs in excess of the Federal cost limitation of \$5,000,000 and assume financial responsibility for cleanup of hazardous and toxic waste, as defined in the Comprehensive Environmental Response, Compensation, and Liability Act, which is necessitated by the project. Such costs will not be considered part of the total project costs, nor will the sponsor receive credit for such costs it incurs.

Operations and results during fiscal year. New Work: An O&M manual was prepared and coordination continues with the Sponsor on mitigation lands and the floodplain management plan at a Federal cost of \$10,188. A cost adjustment in connection with close-out of the construction contract resulted in a negative contributed funds cost of \$2,500.

Condition at end of fiscal year. Real estate acquisition by the Sponsor is complete. The

construction contract was awarded July 13, 1999 and was substantially complete in June 2000. The project was turned over to the Sponsor in October 2000. Coordination continues with the Sponsor on mitigation lands and the flood plain management plan.

16. HAMLET CITY LAKE, HAMLET, N.C.

Location. The project is located on Marks Creek within the city limits of Hamlet, N.C. (See USGS quadrangle sheet, Hamlet, N.C.).

Existing project. A small earth dam constructed in the 1930's under the WPA Program impounds the shallow 50-acre lake. Much of the City's storm runoff empties into the lake and has contributed significantly to a sediment problem. Local interests desire removal of accumulated sediment and debris including construction of sediment traps and providing other devices or equipment to prevent and abate the further deposit of sediment. Results from the bottom sampling and testing program show that contaminants are much more widespread than originally estimated. The Federal cost for new work was \$2,720,200 (2002 Final). The project was authorized by the Water Resources Development Act of 1986 (Sec. 602, PL 99-662).

Local cooperation. Local interests cost was \$906,733.34 (2002 Final), 25 percent of total project cost.

Operations and results during fiscal year. New Work: Final accounting and close out of the project cost \$292. Cost adjustment for prior year work resulted in a negative contributed funds cost of \$240.

Condition at end of fiscal year. The construction contract was awarded November 21, 1997 and was substantially complete May 1998. Project completion was May 1999.

17. MORAVIAN CREEK, WILKESBORO, N.C.

Location. The project is located along 440 meters of Moravian Creek in the Town of Wilkesboro, Wilkes County, in western North Carolina.

Existing Project. The project consists of a concrete flood barrier approximately 650 feet long and up to 6 feet high, bank protection, clearing and snagging of the stream, grading and grassing of banks, and planting of native trees and shrubs. The project provides protection from a 15-year flood event of commercial structures. During design a second concrete barrier approximately 310 feet long and 6 to 18 inches high was determined necessary to provide the 15-year protection. Approved estimated Federal cost for construction implementation

is \$696,000 (2000). The project was approved by the Division Commander on September 30, 1998, under the continuing authority of Section 205 of the Flood Control Act of 1948, as amended.

Local cooperation. Local interest must provide all lands, easements and rights-of-way, including suitable borrow and disposal areas necessary for construction and subsequent maintenance and inspection of the project; accomplish without cost to the United States all relocation and alterations of buildings, transportation facilities, storm drains, utilities and other structures and improvements made necessary by the construction; provide, during the period of construction, and amount equal to not less than 25 percent, but not greater than 50 percent, of total project costs, estimated at \$232,000, at least 5 percent of which will be cash; hold and save the United States free from damages due to the construction and subsequent maintenance, except damages due to the fault or negligence of the United States or its contractors; maintain and operate.

Operations and results during fiscal year. New Work: Construction was completed at a Federal cost of \$367,709. A cost adjustment in connection with close out of the construction contract resulted in a negative contributed funds cost of \$1,000.

Condition at end of fiscal year. Construction was substantially completed December 2001.

18. NEUSE RIVER BASIN, N. C.

Location. Works covered by this project consist of a series of dams and reservoirs in the Neuse River Basin in North Carolina within a radius of 50 miles from Raleigh, North Carolina. (See Geological Survey Map of North Carolina.)

Existing project. The Flood Control Act of 1965 authorized construction of the Falls project as the key project in the recommended general plan of development of the Neuse River Basin. The plan will serve as a guide for immediate and future development of the basin's water resources as set forth in House Document 175, 89th Congress, 1st Session. A list of projects included in the general plan of development follows. (See Table 6-J on Dams and Reservoirs.) Estimated costs as given are based on 1963 price levels, except for Falls Lake, which was revised in 1989.

18A. FALLS LAKE, N. C.

Location. The project is on the Neuse River about 10 miles north of the city of Raleigh, North Carolina.

Existing project. The authorized project provides for an earth dam 1,915 feet long with a maximum height of 95 feet above streambed. The dam has a 30-foot top

width. An uncontrolled chute spillway, 100 feet wide, is located in the east abutment. The reservoir has a gross storage capacity of 374,450 acre-feet, of which 243,050 acre-feet is for flood control, 45,000 acre-feet for water supply for the city of Raleigh, 61,330 acre-feet for water quality control, and 25,070 acre-feet for sediment storage. The reservoir will be operated as the initial unit of a coordinated system for control of floods in the Neuse River Basin for water supply, water quality control, recreation, and other purposes. Estimated cost of new work is \$183,000,000 (1996) consisting of \$91,334,000 for construction and \$91,666,000 for lands and damages, including highway, railroad, and utility relocations. The project was authorized by the 1965 Flood Control Act (H.D. 175, 89th Cong., 1st Sess.).

Local cooperation. Local interests must prevent encroachment on downstream channels that would interfere with the operation of the reservoir; pay the United States in accordance with the Water Supply Act of 1958, as amended, the entire amount of construction cost allocated to water supply, presently estimated at \$13,637,000 and entire amount of operation, maintenance, and replacement costs allocated to water supply, presently estimated at \$116,000 annually, the final amounts to be determined after actual costs are known; administer project land and water areas for recreation and fish and wildlife enhancement; pay, contribute in kind, or repay (which may be through user fees), with interest, one-half of the separable cost of the project allocated to recreation and one-fourth of the separable cost allocated to fish and wildlife enhancement, the amount involved currently being estimated at \$21,595,000, and bear all costs of operation, maintenance, and replacement of recreation and fish and wildlife lands and facilities, the amount involved currently being estimated at \$1,544,000 on an average annual basis. Formal assurances have been received. The N.C. Department of Natural and Economic Resources has been authorized by an act of legislation to assure payment of all non-Federal costs allocable to water supply in all Federal projects as required by law. The State will require repayment of water supply costs by the users. A contract between the city of Raleigh and the United States for water-supply storage space was approved by the Secretary of the Army on September 11, 1972. A contract agreement for cost sharing of recreational lands and facilities in accordance with PL 89-72 was approved by the Secretary of the Army on September 11, 1972. A contract agreement in accordance with Section 221 of PL 91-611 was executed on October 10, 1972.

Operations and results during fiscal year. New Work: Warranty design and contract payments for work on the wildlife sub-impoundments that were completed in FY98 cost \$143,145. Engineering and design

continued on Holly Point Recreation Area improvements at a cost of \$46,191 and on real estate activities at a cost of \$713. The master plan update cost \$57,275. Total Federal expenditures were \$254,020, including the above items. Maintenance: Periodic inspections cost \$31,074. The water control plan update cost \$237. Acquisition of access road tract 728 cost \$72,500. Security activities cost \$17,995. Normal operation and maintenance cost \$1,054,812. Receipts in connection with miscellaneous collections resulted in a negative cost of \$3,000.

Condition at end of fiscal year. Reservoir filling was completed on December 7, 1983. Dedication ceremonies were held on April 30, 1983. The real estate audit was completed January 2000. The project was completed March 2000. The boater use study will be completed September 2003. The master plan update is scheduled for completion in December 2003. Minor modifications for recreational areas will be completed in December 2003.

19. ROANOKE RIVER UPPER BASIN, VIRGINIA, HEADWATERS AREA

Location. The project is located on the Roanoke River in the City of Roanoke, Va. (See USGS quadrangle sheet, Roanoke, Va.)

Existing project. The authorized plan includes about 6.2 miles of channel widening along the 10-mile project reach through the City of Roanoke, Va. Channel widening will be accomplished with the construction of a benched channel above the elevation of the average stream flow. Other flood damage reduction features include floodproofing at two locations, training walls to prevent floodwater intrusion into low areas along the river (total length 6,120 feet), replacement of two low-level bridges that constrict stream flows, and a flood warning system. Recreation facilities consist of a 5-mile recreation trail along the project reach and access and parking areas. Approved estimated Federal cost for new work is \$45,700,000 (2002). The project was authorized by the Water Resources Development Act of 1986 (H.R. 6, PL99-662).

Local cooperation. Local interests must provide all lands, easements, and rights-of-way including spoil disposal areas presently estimated at \$5,942,000; modify or relocate buildings, utilities, roads and other facilities except railroad bridges, where necessary for construction of the project presently estimated at \$9,398,000; pay 25 percent of the cost of the flood warning system (partially offset by a credit for lands, easements, rights-of-way, and relocations) presently estimated at \$10,000; pay 5 percent of the total cost allocated to flood control in cash in addition to all lands, easements, rights-of-way and relocations presently

estimated at \$2,708,275, and bear all costs of operation, maintenance, and replacement of flood control facilities presently estimated at \$101,000, annually; pay one-half of the separable cost allocated to recreation presently estimated at \$6,074,725, (partially offset by a credit for land, easements, rights-of-way and relocations) and bear all costs of operation, maintenance and replacement of recreation facilities presently estimated at \$9,000, annually; and pay 25 percent of the cost of non-structural floodproofing (partially offset by a credit for lands, easements, rights-of-way and relocations) presently estimated at \$367,000. Fully complied with to date.

Operations and results during fiscal year. New work: Engineering and design continued at a cost of \$1,564,777.

Condition at end of fiscal year. The contract for the flood warning system was completed in January 1991. The contract for the sewage treatment plant flood proofing was awarded in August 1991 and completed in February 1993. Two hazardous material sites have been cleaned by the owners. Sponsor initiated land acquisition for channel improvement in FY98. Low water bridges will be constructed at owners expense as part of the channel/flood wall construction contract from the sewage treatment plant to Wasena Park scheduled for award in FY2004. Project completion is scheduled for September 2010.

20. YADKIN RIVER BASIN, N. C. AND S.C.

Location. The river rises on the eastern slope of the Blue Ridge Mountains in western North Carolina, flows generally easterly about 100 miles to the vicinity of Donnah, North Carolina, thence southeasterly 104 miles to its confluence with Uwharrie River near Badin, North Carolina, where its name changes to Great Pee Dee River. (See U.S. Geological Survey map of North Carolina.)

Existing project. The Flood Control Act of July 24, 1946, authorized construction of four flood control dams in the Upper Yadkin River Basin, two on the Yadkin River above Wilkesboro, North Carolina, and two on Reddies River, a tributary stream. Studies made subsequent to authorization established the economic advantage of providing needed flood-control storage in only two reservoirs. W. Kerr Scott Dam and Reservoir was constructed in 1962 on the Yadkin River and was transferred to the Wilmington District from Charleston in fiscal year 1980. Reddies River Lake and Roaring River Lake were deauthorized in April 2002. (See Table 6-H on Dams and Reservoirs.)

20A. W. KERR SCOTT DAM AND RESERVOIR, N. C.

Location. W. Kerr Scott Dam and Reservoir is on Yadkin River, North Carolina, about 6 miles upstream from Wilkesboro. At full flood-control pool elevation (1,075 feet mean sea level), the reservoir extends 15.7 miles upstream to the Wilkes-Caldwell County line.

Existing project. The project consists of a rolled earth-fill dam 1,740 feet long, with top of dam at elevation 1,107.5 feet mean sea level or about 148 feet above streambed elevation; a spillway near the north abutment of the dam in a rock cut with crest elevation 1,075; and outlet works consisting of an intake structure, control tower, and a circular concrete conduit 12.25 feet in diameter through the base of the dam near the south abutment. The reservoir has a gross capacity of 153,000 acre-feet of which 112,000 acre-feet are reserved for flood control, 33,000 acre-feet will be used as required for water supply, and 8,000 acre-feet being contained in the minimum pool. Estimated cost is \$9,110,000 (1983) for new work. The existing project was authorized by the 1946 Flood Control Act.

Local cooperation. Requirements fully satisfied. For details, see page 413 of Annual Report for 1963.

Operations and results during fiscal year. Maintenance: Management center exhibits cost \$359. Periodic inspections cost \$15,320. Security activities cost \$57,049. Normal operation and maintenance cost \$2,756,956.

Condition at end of fiscal year. The project was commenced in August 1960 and placed in operation for flood control and water storage purposes in August 1962.

21. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

To determine the extent of compliance with approved regulations for maintenance and operation, review and inspections were made for the following projects during fiscal year 2002: Ararat River, Surry County, N.C.; Black River, Harnett County, N.C.; Carolina Beach and Vicinity, N.C. (Carolina Beach Portion and Area South Portion); Core Creek, Craven County, N.C.; Ellerbe Creek, Durham County, N.C., Gapway Swamp, N.C. and S.C.; Goldsboro, Neuse River, N.C. (Cutoff); King (Water Plant), N.C. (Sec 14); Old Field Swamp, N.C.; Simmons Bay Creek, Columbus County, N.C.; and South Mayo River, Patrick County, Va. Responsible local officials were advised of inadequacies in maintenance and operation on local flood protection works where appropriate. Cost for the period was \$20,201. Total cost to September 30, 2002, was \$565,751, charged to operations.

22. FLOOD CONTROLWORKS UNDER SPECIAL AUTHORIZATION

Flood control activities pursuant to Section 205, Public Law 858, 80th Congress, as amended (preauthorization). (See Table 6-K.)

Emergency flood control activities and hurricane flood and shore-protection activities at Federally authorized projects (Public Law 99, 84th Congress, and antecedent legislation).

The Catastrophic Disaster Preparedness Program cost \$44,037. The Disaster Preparedness Program cost \$299,401.

Non-reimbursable costs for the Rehabilitation and Inspection Program in connection with Deep Creek Dike at Speed, N.C. were \$78,643; Pasquotank River, N.C. \$772; and Tar River, Princeville, N.C. \$1,029.

Shoreline Protection

23. BRUNSWICK COUNTY BEACHES, N.C. (CAPE FEAR TO NORTH CAROLINA-SOUTH CAROLINA STATE LINE)

Location. The project is in Brunswick County, on the south Atlantic coast of North Carolina, between the mouth of the Cape Fear River and the North Carolina-South Carolina State Line. (See Coast and Geodetic Survey Charts 1236 and 1237.)

Existing Project. The project was authorized by the 1966 Flood Control Act (H.D. 511, 89th Congress, 2d session) The project was rejected by a public referendum in 1974 and was reclassified inactive in February 1976. The project was reclassified to active in 1985 due to renewed local interest caused by continuing erosion and repeated storm damage, with the exception of Sunset Beach, which remains inactive. The General Reevaluation Report for Ocean Isle Beach was approved May 15, 1998. The authorized project for the Ocean Isle Beach portion provides a continuous vegetated dune and berm stabilized by periodic re-nourishment. The dune crown width is 25 feet at elevation 9.5 feet NGVD fronted by a berm 50 feet wide at 7 feet NGVD for a distance of 5,150 feet, then a berm with crown width of 50 feet at 7 feet NGVD for a distance of 2,600 feet, then a berm with crown width of 25 feet at 7 feet NGVD for a distance of 2,400 feet. Transitions will be 4,200 feet on the eastern end and 2,800 feet on the western end. Total length of beach segment including transitions is 17,150 feet. A General Reevaluation is underway for the Oak Island (formerly Long Beach and Yaupon Beach), Caswell Beach, and Holden Beach portion. Sunset Beach remains inactive. The estimated Federal cost is

\$86,734,000 (2002) for the Ocean Isle beach portion and \$4,466,000 (2002) for the Oak Island, Caswell Beach, and Holden Beach portion.

Local Cooperation The PCA executed January 9, 2001, for the Ocean Isle Beach portion provides that the non-Federal sponsor shall: (a)provide all lands, easements, rights-of-way, and suitable borrow and dredged or excavated material disposal areas; (b)perform required relocations; (c)during initial construction, contribute 35 percent of construction costs assigned to hurricane and storm damage reduction, with credit allowed for (a) and (b), currently estimated at \$3,172,000; (d)during periodic re-nourishment, contribute 35 percent of construction costs assigned to hurricane and storm damage reduction, with credit allowed for (a) and (b), currently estimated at \$43,537,000; (e)participate in and comply with applicable Federal floodplain management and flood insurance programs; (f)not less than once a year inform affected interests of the extent of protection afforded by the project; (g)enforce floodplain regulations; (h)provide and maintain public ownership, during the economic life of the project, of an adequate width of beach for public use, with acceptable beach access, parking areas, and other facilities necessary for realization of the benefits upon which Government participation is based; (i)adopt and enforce ordinances to provide for preservation of the project and its protective vegetation; (j)control water pollution to the extent necessary to safeguard the health of bathers; and (k)operate, maintain, repair, and rehabilitate the project.

Operations and results during fiscal year. New Work: The General Reevaluation for the Oak Island, Caswell Beach, and Holden Beach portion continued at a cost of \$771,627. Prior year initial construction of the Ocean Isle Beach portion resulted in a Federal cost of \$230,227 and a contributed funds cost of \$31,932.

Condition at end of fiscal year. For the Ocean Isle Beach portion, a new construction start was approved in FY 2000, the PCA was executed January 9, 2001, the construction contract was awarded February 26, 2001, and construction was substantially complete and the project was operational May 15, 2001. The General Reevaluation is continuing for the Oak Island, Caswell Beach, and Holden Beach portion. Sunset Beach remains inactive.

24. CAROLINA BEACH AND VICINITY, N.C.

Location. The project is in New Hanover County, about 15 miles southeast of Wilmington, N. C., on the peninsula which separates lower Cape Fear River from the Atlantic Ocean. (See Coast and Geodetic Survey Map 834.).

Existing project. The authorized project consists of two separable elements, the Carolina Beach Portion and the Area South of Carolina Beach and extends about 32,000 feet from the northern limits of Carolina Beach to the southern limits of Kure Beach. Federal participation in the cost of periodic beach nourishment will be for a period not to exceed 50 years from the year of initial placement. The project provides for construction of a dune with a crown width of 25 feet at elevation 13.5 feet National geodetic vertical datum (NGVD), a berm with a crown width of 50 feet at elevation 10.5 feet NGVD for Carolina Beach and 9 feet NGVD for the Area South, and for Carolina Beach a rock revetment at elevation 10.5 feet NGVD along the northern 2,050 feet fronted by a 130-foot wide berm at elevation 6.5 feet NGVD. The Area South of Carolina Beach was reclassified to the active category, June 1985. The estimated Federal cost for the Carolina Beach Portion is \$29,200,000 (2002) and for the Area South is \$104,700,000 (2002). The project was authorized by the 1962 Flood Control Act (H.D.418, 87th Cong. 2d sess.). The Water Resources Development Act of 1986 authorized Federal participation in future nourishment for 50 years.

Local cooperation. For the Carolina Beach portion, local interests must: (a) Provide lands, easements, and rights-of-way for construction; (b) make required relocations and alterations of streets, utilities, or structures; (c) contribute 37.9 percent of the total first cost, with credit allowed for (a) and (b); (d) hold the United States free from damages; (e) maintain all works after completion; (f) maintain continued public ownership of the shore; (g) adopt and enforce appropriate ordinances to provide for preservation of improvement and its protective vegetation; (h) control water pollution to extent necessary to safeguard health of bathers; and (i) at least annually inform interests affected that project will not provide any substantial protection from ocean surges higher in elevation than that of Hurricane Hazel, October 15, 1954. Requirements have been fulfilled to date for the town of Carolina Beach portion of the project. For the Area South portion, local interests must: (a) provide lands, easements, rights-of-way, including borrow areas; (b) pay 35 percent of the first costs of operation, maintenance and replacement of hurricane and storm damage reduction facilities; (c) contribute, in cash, 35 percent of the total project cost; (d) inform affected interests of the limitation of the protection afforded by the project no less than once each year; (e) assure that water pollution which would endanger the health of bathers will not be permitted to the extent of its power; (f) assure the continued public ownership of the above shore and its administration for public use during the 50 year economic life of the project; (g) to the extent of its powers, prescribe and enforce regulations to prevent

obstruction of or encroachment on the project that would reduce the level of protection it affords or that would hinder operation or maintenance; and (h) provide and maintain necessary access roads, parking areas and other public use facilities open and available to all on equal terms.

Operations and results during fiscal year. New Work: Prior year initial construction of the Area South portion resulted in a Federal cost of \$202,416 and a contributed funds costs of \$176,000. Close out of the FY01 periodic nourishment cycle for the Carolina Beach portion resulted in a Federal cost of \$8,005 and a negative contributed funds cost of \$8,005. The FY 01 periodic nourishment cycle for the Carolina Beach - Area South (Kure Beach) project resulted in a Federal cost of \$67,820 and a contributed funds cost of \$192.

Condition at end of fiscal year. Initial project construction for the Carolina Beach portion was completed August 12, 1982, except for grassing which was completed in September 1983. The latest increment of periodic nourishment for the Carolina Beach portion was completed in April 2001 with the next increment scheduled for FY 2004. The contract for the initial construction of the Area South portion was awarded August 1996 with dredging completed in January 1998, and final contract completion in December 1999. The contract for the first increment of periodic nourishment for Area South was awarded in January 2001 and completed in June 2001.

25. WEST ONSLOW BEACH AND NEW RIVER INLET, NC

Location. The project is in the Town of Topsail Beach at the southern end of Topsail Island in Pender County on the central North Carolina coast. Topsail Island is a barrier island located approximately 40 miles northeast of Wilmington, North Carolina. (See USGS quadrangle sheets Hampstead and Holly Ridge)

Existing Project. The project was authorized by Title I, Section 101 (15) of the Water Resources Development Act of 1992. (H.D. 102-393, 102nd Congress, 2d session). Funds to initiate preconstruction engineering and design were appropriated in FY 1990. The project received a new construction start for FY 1994; however, no Construction, General appropriation funds were expended. The project cooperation agreement was not executed due to the Sponsor's inability to fund their share of the project cost. The project was placed in inactive status in July 1994 due to lack of local support. The Town of Topsail Beach has experienced severe beach erosion, heavy property damage, and damage to or destruction of the primary dune system as a result of storm surges from hurricanes in 1996 and 1999 and northeasters over recent years. Local interests are now

able to and would support the project. In FY 2001, a design agreement was executed and a general reevaluation was initiated to redefine the project scope. The authorized project consists of a sand dune constructed to an elevation of 13 feet above mean sea level (MSL) fronted by a storm berm constructed to an elevation of 9 feet above mean sea level and a beach (natural) berm constructed to an elevation of 7 feet above MSL along 9,500 feet of shoreline; two transition sections constructed to elevation 7 feet above MSL along 2400 feet on the southern end and along 6860 feet on the northern end; and renourishment of the project at approximately two year intervals. The borrow area, located in Banks Channel, will be dredged to a depth of 20 feet below mean low water. The estimated Federal cost for new work is \$119,150,000 (2002).

Local Cooperation The authorizing document provides that the non-Federal sponsor shall (a) provide all lands, easements, rights-of-way, and suitable borrow and dredged or excavated material disposal areas; (b) perform required relocations; (c) during initial construction, contribute 35 percent of construction costs assigned to hurricane and storm damage reduction, with credit allowed for (a) and (b), currently estimated at \$8,500,000; (d) during periodic re-nourishment, contribute 50 percent of construction costs assigned to hurricane and storm damage reduction, with credit allowed for (a) and (b), currently estimated at \$103,350,000; (e) hold and save the Government free from damages; (f) comply with the Uniform Relocations Assistance and Real Property Acquisition Act of 1970; (g) publicize flood plain information for the area; (h) provide and maintain public ownership and use, during the economic life of the project, of an adequate width of beach for public use, with acceptable beach access, parking areas, and other facilities necessary for realization of the benefits upon which Government participation is based; (i) at least once a year inform affected interests of the limitations of the protection provided by the project; (j) adopt and enforce regulations to prevent encroachment and preserve the project; and (k) operate, maintain, repair, and rehabilitate the project.

Operations and results during fiscal year. New Work: The General Reevaluation Report was continued at a Federal cost of \$377,290 and a contributed funds cost of \$126,049.

Condition at end of fiscal year. In FY 2001, a design agreement was executed and a General Reevaluation Report was initiated to redefine the project scope. Execution of the PCA is scheduled for FY 2006.

26. WRIGHTSVILLE BEACH, N. C.

Location. A small island 10 miles east of Wilmington, N. C. (See Coast and Geodetic Survey Map p.834)

Existing project. Construct a dune with a base bordering at or near the building line, with a crown width of 25 feet at elevation 15 feet above mean low water, together with integral construction of a beach berm with a crown width of 50 feet at elevation 12, extending about 14,000 feet from Moores Inlet on the north to Masonboro Inlet on the south. Existing project was authorized by 1962 Flood Control Act (H.D. 511, 87th Cong., 2d sess.). The Water Resources Development Act of 1986 authorized Federal participation in future nourishment for the life of the project. The estimated Federal cost for new work is \$27,200,000 (2001).

Local cooperation. Fully complied with to date.

Operations and results during fiscal year. New Work: Between March 28 and May 24, 2002, the contract dredge *R.S. Weeks* with *Arkansas Booster* dredged 423,193 cubic yards from Masonboro Inlet and Banks Channel and placed it on Wrightsville Beach for the periodic nourishment cycle, at a Federal cost of \$756,726 and a contributed funds cost of \$500,061.

Condition at end of fiscal year. All work under the initial authorization has been completed. Under WRDA 86, the third renourishment was completed in May 1998. Initial construction was completed in May 1970. The latest periodic renourishment was completed in FY2002, with the next cycle scheduled for FY2006.

Multi-Purpose Projects, Including Power

27. ROANOKE RIVER BASIN, VA. AND N.C.

Location. The project is on the Roanoke River and its tributaries in Virginia and North Carolina within a radius of 100 miles from Danville, Virginia.

Existing project. The Flood Control Act of 1944 approved a general plan for the comprehensive development of the Roanoke River Basin for flood control and other purposes, and authorized construction of John H. Kerr and Philpott Reservoirs. (See Table 6-H for a list of dams and reservoirs included in the comprehensive plan.)

Local cooperation. None required. John H. Kerr and Philpott Reservoirs are the only projects in the comprehensive plan that have been authorized for construction. (See Table 6-H on Dams and Reservoirs.)

27A. JOHN H. KERR DAM AND RESERVOIR, VA. AND NC

Location. The project is on Roanoke River, about 178.7 river miles above its mouth, in Mecklenburg County, Virginia, and 20.3 miles downstream from Clarksville, Virginia. The reservoir extends upstream on Roanoke River 56 miles and on Dan River 34 miles.

Existing project. The authorized project provides for a concrete gravity dam with wing and saddle dikes on the right and left banks, with a total length of about 22,285 feet. The reservoir is operated as a unit of a coordinated system of reservoirs in the Roanoke River Basin for control of floods, generation of hydroelectric power, regulation of low-water flow, and for other purposes. The power installation is 204,000 kilowatts. (For further details see Annual Report for 1962.) The existing project was authorized by the 1944 Flood Control Act.

Local cooperation. None required.

Operations and results during fiscal year. New Work: Major rehabilitation of power facilities cost \$3,539,356, including engineering and design and construction management costs of \$1,108,327 and contract earnings of \$36,612 for the Switchyard Installation Contract, \$259,650 for the Exciters Supply Contract, \$1,500,000 for the Transformers Supply Contract, \$569,900 for the Crane Rehabilitation Supply and Install Contract, and \$52,536 for the Generator Rewind and Turbine Replacement Contract and in-house and contract costs of \$3,772 for resident office permanent improvements, \$4,359 for the Station Service Control Board, and \$4,200 for distributions. Maintenance: Belle Vista archaeological activities cost \$24,257. The Island Creek pumping plant rehabilitation and replacement cost \$1,110,572. Preliminary assessment and delineation of DDT and Dioxin sites cost \$4,447. The Tungsten Queen Mine Site law suit cost \$9,911. Cost in connection with the rehabilitation study of 7 main units in the powerhouse resulted in a cost of \$241. GIS development cost \$23,516. Periodic inspections cost \$25,210. A cost adjustment in connection with prior year mitigation of flood damages at Buggs Island and Cedar Grove archaeological activities resulted in a negative cost of \$19,473. The Oconeechee Wildlife Management Area archaeology study cost \$145,231. The 50th Anniversary celebration cost \$40,178. Security activities cost \$57,577. Receipts in connection with collections for timber sales, disposals, damages, real estate administrative fees, and other miscellaneous collections resulted in a negative cost adjustment of \$76,460. Normal operation and maintenance cost \$8,827,403.

Condition at end of fiscal year. Project is complete except for additional recreational facilities. Production

of power and protection from floods are provided by project. Major rehabilitation of power facilities, with a new construction start in FY 2000, is continuing.

27B. PHILPOTT LAKE, VA.

Location. The project is located on Smith River, Virginia, 44.3 miles above its junction with Dan River, and 35 miles upstream from Virginia-North Carolina State line in Franklin and Henry Counties.

Existing project. The authorized project provides for a concrete gravity dam 892 feet long and with a maximum height of 220 feet. Reservoir is operated as a unit of a coordinated reservoir system for flood control in the Roanoke River Basin, generation of hydroelectric power, regulation of low-water flow, and for other purposes. The powerhouse has a total installation of 14,000 kilowatts. (For further details see Annual Report for 1962). Existing project was authorized by 1944 Flood Control Act.

Local cooperation. None required.

Operations and results during fiscal year. Maintenance: Recreation modernization at the Goose Point Recreation Site cost \$1,951,185. Periodic inspections cost \$135,998. Normal operation and maintenance cost \$2,700,168. Security activities cost \$93,135.

Condition at end of fiscal year. The project is complete except for additional recreational facilities, and is providing power and flood protection.

28. SCHEDULING FLOOD CONTROL RESERVOIR OPERATIONS

B. Everett Jordan Dam and Lake, located in the Cape Fear River Basin, North Carolina, began Fiscal Year 2002 at elevation 215.63 feet, m.s.l. or 0.37 feet below guide curve. Well below normal inflow and rainfall amounts caused the lake level to drop further below guide curve through December and into January. A rainfall event occurring during the middle of January resulted in over 4 inches of precipitation at the dam. This resulted in the lake rising to the maximum elevation during Fiscal Year 2002 on January 27, 2002 of 217.81 feet, m.s.l. Although February, March and April received below-normal rainfall, reduced minimum discharges maintained the lake elevation above guide curve, however, as drought conditions spread across the state the lake level fell below guide curve the first week of May. Drought conditions continued with below-normal rainfall and well below-normal runoff amounts through August. During this time, despite conservation efforts, the lake elevation declined to the minimum elevation during Fiscal Year 2002 of 209.87 feet, m.s.l. on August 24, 2002. A significant rainfall event

occurred during the last week of August and into the beginning of September brought the lake level up to elevation 213.98 feet, m.s.l., or 2.02 feet below guide curve, where it ended Fiscal Year 2002. Maximum flood pool storage utilized during the fiscal year was 4.9 percent, and the conservation pool storage remaining at the minimum elevation was 47 percent. Flood damages prevented during Fiscal Year 2002 were \$1,700 making the cumulative total \$208,716,650 since inception of the project in 1981. Total cost of functional operation for the period was \$111,371.

Falls Lake, located in the Neuse River Basin, North Carolina, began Fiscal Year 2002 at elevation 250.47 feet, m.s.l. or 1.03 feet below guide curve of 251.5 feet, m.s.l. The temporary 'Plan of Operation' granted by the South Atlantic Division on June 1, 2000, to maintain the normal guide curve level of Falls Lake at elevation 251.5 feet, m.s.l. on a continuous year round basis is still in effect. A study to review the 'Plan of Operation' at Falls Lake for possible enhancements is still incomplete. This required effort is based on increased operational experience gained during the floods of the late 1990's and the need to implement the revised operational level of 251.5 feet, m.s.l. following physical modifications that have been made to the dam and spillway. Well below average rainfall amounts in October through mid-January resulted in the lake level's continued drop below guide curve. During this time period, outflows were held at the minimum required level necessary to meet the Clayton water quality flow target. On November 27, 2001 the piggyback gates were opened and the service gates closed. This operation conserves remaining storage in the lake while ensuring that minimum instantaneous flows of 60 c.f.s. are maintained immediately downstream. Falls Lake reached a low elevation of 247.47 feet, m.s.l. on January 1, 2002. Storm events during late January, beginning of February, and throughout March, coupled with minimum releases, caused the lake level to rise above guide curve the last few days of March. The lake level continued to rise the first few days of April. On April 5, Falls Lake reached the annual maximum elevation of 252.14 feet, m.s.l., or 0.64 feet above guide curve. After rising above guide curve, the minimum flow target below the dam of 60 c.f.s. was increased to the water quality target at Clayton of 254 c.f.s. During the month of April the lake elevation remained above guide curve. In late April the lake elevation again fell below guide curve and continued to descend for the remainder of the fiscal year, due to the continuing drought conditions in the Southeast. In late June the North Carolina Department of Water Quality granted a temporary waiver of the water quality target flow at Clayton from 254 c.f.s. down to the lower target of 184 c.f.s. This action was made in the event that the drought pressed on and saved water would be a valuable

resource later on. Another decision was made by the City of Raleigh to implement a mandatory water conservation effort on June 30. Despite these efforts the lake level dropped to elevation 244.85 feet, m.s.l. on August 29. The last week in August, Falls Lake project recorded heavy rainfall amounts that caused the lake level to quickly rise to elevation 245.89 feet, m.s.l., or just over a foot. After this rainfall event Falls Lake level continued a decline to end the fiscal year with the annual minimum elevation of 244.68 feet, m.s.l. (or 6.82 feet below guide curve) on September 30. The maximum flood pool storage utilized during the year was 4.1 percent, and the minimum conservation pool storage remaining was 37 percent at the minimum elevation. There were no flood damages prevented during Fiscal Year 2002 leaving the cumulative total unchanged at \$544,018,000 since inception of the project in 1983. Total cost of functional operation for the period was \$122,480.

John H. Kerr Dam and Reservoir, located in the Roanoke River Basin, Virginia and North Carolina, began the fiscal Year 2002 at elevation 294.64 feet, mean sea level (m.s.l.), or 4.86 feet below guide curve. With well below normal rainfall/inflow for October and November the reservoir elevation continued to fall, despite conservation efforts. The minimum elevation for the fiscal year was on December 9, 2001 at 290.97 feet, m.s.l. or 4.53 feet below guide curve. On December 3, 2001 the Southeastern Power Administration (SEPA) agreed to support Wilmington District conservation efforts during the extended drought by purchasing replacement energy. SEPA spent \$1.29 million dollars to purchase 32,464 MWH of replacement energy on the open market to offset the required minimum energy normally produced at John H. Kerr and Philpott. These replacement energy purchases were for the 'system' meaning that it was a combined purchase for both John H. Kerr and Philpott projects. Volunteer drought mitigation efforts by the City of Virginia Beach, Virginia reduced water supply withdraws from Lake Gaston by 50% (60 c.f.s. to 30 c.f.s.). They purchased the balance of their water supply from other sources. The drought was also responsible for the cancellation of fish spawning releases from John H. Kerr. From December 2001 to May 2002 the percent of normal rainfall ranged from 28% to 88%, the resulting percent of normal inflow range was only 21% to 50%. To the credit of SEPA's reducing their water supply withdraws and USFWL foregoing fish spawning releases, John H. Kerr's reservoir level gradually rose to the annual maximum elevation of 301.75 feet, m.s.l. on May 20, 2002, or 0.25 feet below guide curve. From June to September 2002 the percent of normal rainfall ranged from 42% to 80%, the resulting percent of normal inflow range was only

12% to 28%. The precipitation had steadily increased from June's 42% of normal rainfall to near 80% of normal in September. The resulting inflow, however, did not reflect the increase in rain. The inflow from May to August remained below 15% of normal until September when the inflow rose to 28% of normal. The computed monthly average inflow for August of 596 cfs ranks as the all-time second lowest on record behind 593 cfs computed in September 1954. Because John H. Kerr's reservoir level was at or near guide curve from the end of May to the end of June SEPA discontinued purchasing replacement energy but maintained purchasing replacement energy for Philpott. John H. Kerr's releases were for minimum energy. As a consequence, the reservoir level drew down to the ending elevation of 292.38 feet, msl, or 7.12 feet below guide curve. Maximum flood pool storage utilized during the fiscal year was 7.04 percent. The contractual power pool storage remaining at the lowest elevation during the year was 61 percent. Gross generation for the fiscal year amounted to 116,812,100 kilowatt-hours or 73 percent below normal and net marketed power revenue was \$2,716,456, making the cumulative total \$210,472,818 since inception of the project in 1952. There were no flood damages prevented during Fiscal Year 2002 making the cumulative total unchanged from the previous year at \$390,852,830 since 1952. Total cost of functional operation for the period was \$340,245.

Philpott Lake, located on the Smith River in the Dan River Basin, Virginia, began Fiscal Year 2002 at elevation 967.42 feet, m.s.l. or 4.08 feet below guide curve. This elevation was the maximum level of the fiscal year for Philpott Lake. Observed rainfall occurring October through February was less than half of normal. The level of Philpott Lake continued on a steady decline into February due to well below average inflows. This resulted in the lake level dropping to its minimum elevation for the fiscal year on February 1, 2002 at 959.27 feet, m.s.l., or 12.23 feet below guide curve. March was the only month of the fiscal year with observed rainfall greater than normal. This temporary drought relief boosted the lake level above elevation 965 feet, m.s.l. in early April. The lake level continued a gradual rise to near elevation 967 feet, m.s.l. by mid-May. Computed monthly inflows remained below normal for the entire fiscal year. Inflow for the month of August was computed as -10 c.f.s. which at -5 percent of normal sets an all-time new record monthly low inflow for Philpott Lake. With two minor exceptions, the lake level gradually decreased the remainder of the fiscal year to end at elevation 963.71 feet, m.s.l. or 7.79 feet below guide curve. Discharges were minimal and energy commitments were transferred to John H. Kerr project throughout the fiscal year to conserve water. SEPA purchased replacement energy

for Kerr and Philpott as outlined in the previous paragraph. The lake level remained below the guide curve elevation throughout the fiscal year resulting in no flood pool storage utilized. The contractual power pool storage remaining at the lowest elevation during the year was 33 percent. Gross generation for the fiscal year amounted to 8,081,323 kilowatt hours or 31 percent of normal and net marketed power revenue was \$1,175,256, making the cumulative total \$31,010,287 since inception of the project in 1953. There were no flood damages prevented during Fiscal Year 2002, leaving the cumulative total at \$346,205,000. Total cost of functional operation for the period was \$132,934.

W. Kerr Scott Dam and Reservoir, located in the Yadkin-Pee Dee River Basin, North Carolina, began Fiscal Year 2002 at elevation 1028.74 feet, m.s.l., or 1.26 feet below guide curve elevation of 1030.00 feet, m.s.l. Fiscal Year 2002 began with depleted groundwater tables and below normal rainfall amounts. A modified low flow operation plan was implemented in Fiscal Year 2001 to compensate for the impacts of severe drought conditions. Minimum flows (near 130 c.f.s.) were maintained during October and November 2001. A rainfall event during the middle of October brought the lake elevation up slightly, but due to depleted groundwater tables, the runoff to the project was minimal and inflows and the lake elevation declined rapidly. Precipitation in December was near normal and the majority of the monthly precipitation occurred over a two-week period. This helped replenish groundwater tables and brought the lake level above 1032.0 feet, m.s.l. Project operation shifted to flood control. January also received near normal rainfall. A rainfall event in late January increased the lake elevation to 1032.90 feet, m.s.l., on January 25, 2002 which was the maximum elevation during Fiscal Year 2002. Flood operation continued until the lake elevation reached 1031.0 feet, m.s.l. Operation was then modified to maintain releases equal to inflows. This was done to prevent the lake from dropping below guide curve, in anticipation of continued long-term drought conditions. This operation was continued through May. Although the months of June and July received near normal rainfall, runoff to the project was only a third of normal, demonstrating the impact of the drought on groundwater tables and stream flows. Minimum releases were maintained through the majority of September, but the lake level continued to drop. Observed rainfall in August was well-below normal, and as a result, the computed monthly inflow was only 76 c.f.s., a new all time record low monthly average inflow since project implementation in 1963. The lake elevation dropped to 1024.60 feet, m.s.l., on September 14, which was the lowest level during Fiscal Year 2002. Substantial rainfall in September provided relief to project inflows and brought the reservoir

elevation to 1032.06 feet, m.s.l., where it ended Fiscal Year 2002. Maximum flood pool storage utilized during the fiscal year was 4.4 percent, and the conservation pool storage remaining was 83 percent at the minimum elevation. There were no flood damages prevented during Fiscal Year 2002 leaving the cumulative total unchanged at \$164,009,800 since inception of the project in 1963. Total cost of functional operation for the period was \$110,924.

Miscellaneous

29. CAPE FEAR LOCK AND DAM NO. 1 FISH LADDER, N.C. (CAP Section 1135)

Location. The project is located at Lock and Dam No. 1 on the Cape Fear River in Bladen County, North Carolina, 39 miles upstream (northwest) of Wilmington, N.C. (See USGS quadrangle sheet, Kelly, N.C.)

Existing project. This project modification for improvements to the environment modifies the Cape Fear River Above Wilmington, N.C. project. The project modification at Lock and Dam No. 1 includes the installation of a prefabricated fish ladder that would provide for passage of anadromous shad and river herring. The project will restore access by these species to 33 miles of high quality spawning habitat in the Cape Fear River above Lock and Dam No. 1. It is anticipated that this project will have a life of 10 to 15 years. This ladder is not expected to pass sturgeon or striped bass; therefore, future studies and projects are needed to provide a comprehensive fish passage solution that addresses all affected species. The fish ladder was attached to the existing lock and dam structure. The approved estimated cost for construction implementation is \$84,000 (2002 Final), including \$63,000 Federal and \$21,000 non-Federal. The project was approved by the Division Commander on April 24, 1996, under continuing authority of Section 1135, Water Resources Development Act of 1986, as amended.

Local Cooperation. The sponsor shall contribute 25 percent of total project modification costs which includes implementation of the authorized improvements as well as planning, engineering, design, supervision and administration, monitoring, and other activities associated with implementation, but does not include the implementation of betterments. The non-federal contribution will be credit for in-kind work, consisting of monitoring the operation and effectiveness of the fish ladder over two spawning seasons at a cost of \$21,000 (2002 Final).

Operations and results during fiscal year. New Work: Close out and final accounting cost \$5,161.

Condition at end of fiscal year. Construction was initiated in May 1996 and substantially completed April 1997. Project closed out with a September 2002 completion report.

30. LITTLE SUGAR CREEK HABITAT RESTORATION, N.C. (CAP Section 1135)

Location. This project is located on Little Sugar Creek between Archdale Drive and Brandywine Road in Charlotte, North Carolina. (See USGS quadrangle sheets, Charlotte East and Weddington, N.C.)

Existing project. This project modification for improvement of the environment modifies the Little Sugar Creek CAP Section 205 flood control project and includes: placement of fishery enhancement structures in the area of the flood control project, to include rock vanes that project into the stream and boulder clusters; stream bank stabilization on Little Sugar Creek upstream to Brandywine Road to reduce sedimentation that would cover the fish structures; and tree plantings in riparian areas to provide stream shading and aesthetic enhancement. The approved estimated cost for construction implementation is \$4,000,000 (2000), consisting of \$3,000,000 Federal and \$1,000,000 non-Federal. The project was approved by the Division Commander on April 21, 2000 under the continuing authority of Section 1135, Water Resources Development Act of 1986, as amended.

Local Cooperation. The sponsor shall contribute 25 percent of project costs, which include implementation of the authorized improvements as well as planning, engineering, design, supervision and administration, monitoring, and other activities associated with implementation, but does not include betterments. The sponsor shall also contribute sufficient additional funds to keep the Federal cost from exceeding the per project limit of \$5,000,000. The non-Federal contribution will consist of credit for required lands, easements, relocations, and rights-of way; work-in-kind credit for public involvement and 3 years of monitoring of fish and benthic organism populations, to be provided by the sponsor; credit for participation on the Project Coordination Team; and cash.

Operations and results during fiscal year. New Work: Design continued at a cost of \$89,036.

Condition at end of fiscal year. Design is underway. The draft PCA is with the sponsor for review.

31. SEA TURTLE HABITAT RESTORATION, OAK ISLAND, N.C. (CAP Section 1135)

Location. This project is located on the oceanfront of the Town of Oak Island (formerly Long Beach), south of the Atlantic Intracoastal Waterway in Brunswick

County, North Carolina. (See USGS quadrangle sheet, Southport, N.C.)

Existing project. This project modification for improvement of the environment modifies the Atlantic Intracoastal Waterway Between Norfolk, Virginia and the St. Johns River, Florida. The project modification restores sea turtle nesting habitat on Oak Island by placing beach compatible sand from the Yellow Banks Confined Disposal Facility between East 26th Place and East 58th Street to construct a 8,900 foot long main fill and a small dune to discourage turtles from crawling beyond the project. Implementation of a lighting ordinance will provide a more attractive nesting beach and improve survival of hatchlings. The approved estimated cost for construction implementation is \$11,284,000 (2000), consisting of \$5,000,000 Federal and \$6,284,000 non-Federal. The project was approved by the Division Commander on September 17, 1999 under the continuing authority of Section 1135, Water Resources Development Act of 1986, as amended.

Local Cooperation. The sponsor shall contribute 25 percent of total project modification costs, which include implementation of the authorized improvements as well as planning, engineering, design, supervision and administration, monitoring, and other activities associated with implementation, but does not include betterments. The sponsor shall also contribute sufficient additional funds to keep the Federal cost from exceeding the per project limit of \$5,000,000. The non-Federal contribution will consist of credit for required lands, easements, relocations, and rights-of way; work-in-kind credit for dune walkover structures and dune stabilization provided by the sponsor; credit for participation on the Project Coordination Team; and cash.

Operations and results during fiscal year. New Work: Prior year construction was closed out at a contributed funds cost of \$64,753. Continuing resolution of a construction contractor claim cost \$54,077.

Condition at end of fiscal year. The construction contract was awarded in December 2000 and substantially completed in May 2001. Monitoring of turtles and seabeach amaranth is continuing. Project close-out is underway. A construction contractor claim is being addressed.

32. LITTLE SUGAR CREEK AQUATIC ECOSYSTEM RESTORATION, N.C. (CAP Section 206)

Location. This project is located on Little Sugar Creek between Brandywine Avenue and East Boulevard in Charlotte, North Carolina. (See USGS quadrangle sheet, Charlotte East, N.C.)

Existing project. This aquatic ecosystem restoration project includes: placement of fishery enhancement structures to include rock vanes that project into the stream, boulder clusters, and lunker boxes; removal of an inoperable dam and concrete apron in the upstream area; stream bank stabilization on Little Sugar Creek upstream to East Boulevard to reduce sedimentation that would cover the fish structures; and planting of trees and vegetation in riparian areas to provide stream shading and aesthetic enhancement. The approved estimated cost for construction implementation is \$2,680,000 (2000), consisting of \$1,742,000 Federal and \$938,000 non-Federal. The project was approved by the Division Commander on July 27, 2000 under the continuing authority of Section 206, Water Resources Development Act of 1996, as amended.

Local Cooperation. The sponsor shall contribute 35 percent of project costs, which include implementation of the authorized improvements as well as planning, engineering, design, supervision and administration, monitoring, and other activities associated with implementation, but does not include betterments. The sponsor shall also contribute sufficient additional funds to keep the Federal cost from exceeding the per project limit of \$5,000,000. The non-Federal contribution will consist of credit for required lands, easements, relocations, and rights-of way; work-in-kind credit for public involvement and 3 years of monitoring of fish and benthic organism populations, to be provided by the sponsor; credit for participation on the Project Coordination Team; and cash.

Operations and results during fiscal year. New Work: The feasibility study phase cost \$1,482. Design continued at a cost of \$144,441.

Condition at end of fiscal year. Design is underway.

33. ROANOKE ISLAND FESTIVAL PARK, DARE COUNTY, NC. (CAP Section 206)

Location. The Roanoke Island Festival Park is a State owned historic facility located on Iceplant Island, in Shallowbag Bay, off of Roanoke Sound adjacent to Manteo, in Dare County, North Carolina, about 75 miles south of Norfolk, Virginia. (See USGS quadrangle sheet, Manteo)

Existing project. This project will provide 4 acres of valuable estuarine and wetland habitat that will be restored and protected, including protection of 2 acres of existing coastal marsh and adjacent wooded wetlands from erosion and restoration of about 2 acres of shallow water area by marsh restoration and development of sea grass, marine rock and oyster habitat. . In order to facilitate the construction of the aquatic ecosystem restoration and to protect the aquatic habitat from further wave erosion, a 1,330-foot long rock sill and breakwater

will be constructed. The project will provide incidental benefits by shoreline protection for public facilities located at Festival Park. The approved estimated cost for construction implementation is \$1,080,000 (2002), consisting of \$702,000 Federal and \$378,000 non-Federal. The project was approved by the Division Commander on November 21, 2001 under the continuing authority of Section 206, Water Resources Development Act of 1996, as amended.

Local Cooperation. The sponsor shall contribute 35 percent of project costs, which include implementation of the authorized improvements as well as planning, engineering, design, supervision and administration, monitoring, and other activities associated with implementation, but does not include betterments. The sponsor shall also contribute sufficient additional funds to keep the Federal cost from exceeding the per project limit of \$5,000,000. The non-Federal contribution will consist of credit for required lands, easements, relocations, and rights-of way; estimated at \$1,000; work-in-kind credit for oyster bed placement, management of the 1.3 acres of wooded wetland, and project signage, estimated at \$42,000, and participation on the project coordination team, estimated at \$6,000; and cash.

Operations and results during fiscal year. New Work: The combined planning and design analysis phase was completed at a cost of \$15,000 and construction was initiated at \$527,671 Federal cost and \$245,787 contributed funds cost.

Condition at end of fiscal year. The Division Commander approved the PDA Documentation and the project on November 21, 2001. Construction was substantially completed and the project was operational in FY 2002. Additional construction to complete the rock sill is scheduled for FY 2003. Marsh and sea grass plantings, as needed, and project monitoring will continue through FY 2005.

34. WANCHESE MARSH CREATION AND PROTECTION, DARE COUNTY, NC (CAP Section 204)

Location. This project is in Dare County, North Carolina on the southeastern corner of Roanoke Island at Wanchese Harbor adjacent to the channel from Oregon Inlet and north of the entrance to Wanchese Harbor. (See USGS quadrangle sheet, Oregon Inlet)

Existing project. The marshes of Roanoke Sound are important habitat for fish and wildlife resources, support recreational and commercial activities that rely on these resources, and provide an important function as nursery habitat for estuarine fish and shellfish and support a rich and diverse benthic fauna. The proposed project will create an estuarine creek and marsh area within a

protective dike. The project will encompass an area of about 12.1 acres including; (1) 8.6 acres of construction in an area that is primarily open sound waters, (2) 2 acres of high marsh that will be protected by the proposed construction and (3) 1.5 acres of *Phragmites* to be removed by chemical control and replaced by native grasses. Construction will include a dike to protect the marsh from wave action until it becomes established and can withstand the strong wave action in this area. The dike will be parallel to the existing harbor entrance channel for approximately 500 feet and then turn in a northerly direction and parallel the shoreline for approximately 700 feet. Armor stone will be placed on the outside of the permanent dike to protect against wave action. The construction of the new marsh will protect 2 acres of existing marsh from continued erosion and provide an incidental benefit by helping to stabilize the Wanchese Harbor entrance. The marsh area will be graded, planted with marsh grasses as needed over a 3-year establishment period, and monitored for the same 3 years to determine appropriate functioning of the habitat. Dredged material will come from maintenance dredging of the Manteo (Shallowbag) Bay – Channel to Wanchese navigation channel. The new marsh will be established by sprigging with at least three varieties of native marsh grasses including smooth cordgrass (*Spartina alterniflora*), black needlerush (*Juncus roemerianus*) and saltmeadow hay (*Spartina patens*). The use of additional species to increase habitat diversity will be considered. The approved estimated cost for construction implementation is \$1,728,000 (2002) consisting of \$1,296,000 Federal and \$432,000 non-Federal. The Division Commander approved the project on August 9, 2001 under the continuing authority of Section 204, Water Resources Development Act of 1992, as amended.

Local Cooperation. The sponsor shall contribute 25 percent of project costs which include implementation of the authorized improvements as well as planning, engineering, design, supervision and administration, monitoring, and other activities associated with implementation, but does not include betterments. The non-Federal contribution will consist of credit for required lands, easements, relocations, and rights-of way; credit for participation on the Project Coordination Team; and cash.

Operations and results during fiscal year. New Work: The feasibility report addendum cost \$20 and design continued at a cost of \$67,179.

Condition at end of fiscal year. The PCA was executed in November 2002. Award of the construction contract is scheduled for FY 2003.

35. STANLY COUNTY WASTEWATER INFRASTRUCTURE, N.C.

Location. The project is located in Stanly County, in mid-southern North Carolina about 26 miles northeast of Charlotte, North Carolina. (See USGS quadrangle sheets, Norwood, Stanfield, Mt. Pleasant, and Albemarle).

Existing project. The county desires to upgrade a substandard wastewater system at three elementary schools, including a wastewater pumping station, 20,000 feet of force main and 1,700 feet of gravity sewer. The county is predominately rural and unemployment is relatively high. In much of the county, basic infrastructures such as water lines and highways necessary to attract industry are lacking. Without major infrastructure improvements, quality of life in many of the communities in the county will continue to fall well short of the rest of the Nation. The estimated project cost is \$3,400,000 (2002), including \$2,550,000 Federal and \$850,000 non-Federal. This project was authorized by Sec 219(c) of WRDA 92, as amended by Sec 108(d) of the FY 2001 Omnibus Appropriations Act.

Local cooperation. The sponsor shall contribute 25 percent of the total cost of the project, estimated at \$850,000. Project costs include implementation of the authorized improvements as well as planning, engineering, design, supervision and administration, monitoring, and other activities associated with implementation, but does not include betterments. The non-Federal contribution will consist of credit for required lands, easements, relocations, rights-of way, and borrow or disposal areas and participation on the project coordination team.

Operations and results during fiscal year. New Work: Preparation of a decision document for replacement of a wastewater pumping station and associated force main in the Town of Norwood to benefit Aquadale School cost \$17,669.

Condition at end of fiscal year. The decision document for replacement of a wastewater pumping station and associated force main in the Town of Norwood to benefit Aquadale School is scheduled for completion and approval in FY 2003. The project cooperation agreement is scheduled for preparation and execution in FY 2003.

36. REGULATORY PROGRAM

Cost for the period was \$4,900,742, including \$3,845,400 for Permit Evaluation, \$1,034,460 for Enforcement, \$20,773 for Environmental Impact

Statement preparation, and \$109 for Administrative Appeals.

General Investigations

37. SURVEYS

Cost for the period was \$102,713 for flood damage prevention studies, \$772,159 for shoreline protection studies, \$82,980 for watershed/ecosystem restoration studies, \$44,982 for Special Investigations, \$2,136 for FERC License Review, 13,002 for Interagency Water Resources Development, \$2,875 for National Estuary Studies, \$1,586 for North American Waterfowl Management, \$1,985 for Cooperation With Other Water Resource Agencies, and \$126,766 for Planning Assistance To States. Contributed funds costs were \$13,139 for flood damage prevention studies, \$640,357 for shoreline protection studies, and \$296,130 for Planning Assistance To States.

38. COLLECTION AND STUDY OF BASIC DATA

Flood plain management information studies, as authorized by Section 206, 1960 Flood Control Act, as amended, provide information, technical assistance, and guidance in identifying the magnitude of the flood hazard and for planning wise use of the flood plain. Direct response and assistance are provided to states, Indian tribes, and local governments without charge and to Federal agencies and private persons on a cost reimbursable basis. Total costs for the period were \$351,859. Total costs to September 30, 2002 were \$8,794,123. Contributed funds of \$34,341 were expended for the New Hanover County Flood Study, the cost of which is fully paid by New Hanover County.

Hydrologic studies collect and analyze basic data on hydrologic, climatologic, and river morphology for general use in connection with Corps planning, design, construction, and operation of water resource projects. Total costs for the period were \$7,974.

39. PRECONSTRUCTION ENGINEERING AND DESIGN

Preconstruction engineering and design (PED) was continued on: Manteo (Shallowbag) Bay, N.C. at a cost of \$6,215; Dare County Beaches, N.C. at a Federal cost of \$475,701 and a contributed funds cost of \$55,951; and Brunswick County Beaches, N. C. at a cost of \$15,784.

1. Includes \$2,369 returned to local interests in FY82.

2. Includes \$2,055 refund to local interests.

3. Includes \$198,707 for previous projects.

4. Includes \$107,634 for previous projects.

5. Includes \$13,934 refund to local interests.

6. Includes \$25,000 for previous projects.

7. Includes \$12,854 for previous projects.

8. Includes \$149,119 for previous projects.

9. Includes \$8,178 for previous projects.

10. Includes preauthorization study funds: FY64, \$3,000; FY65, -\$2,755; FY71, \$8,000; FY72, \$2,000; FY74, \$9,000; FY75, \$25,000; FY76 & 76T, \$20,000; FY77, \$2,500; FY78, \$8,800; FY79, \$3,000; FY81, \$1,680; and preconstruction planning funds: FY80, \$15,000 and FY81, \$19,320.

11. Includes preauthorization study costs: FY64, \$219; FY65, \$26; FY71, \$8,000; FY72, \$1,448; FY73, \$552; FY74, \$9,000; FY75, \$11,925; FY76 & 76T, \$27,977; FY77, \$7,598; FY78, \$7,449; FY79, \$4,351; FY81, \$1,680; and preconstruction planning costs: FY80, \$5,686 and FY81, \$1,471.

12. Includes \$69,145 refund to local interests.

13. Adjusted by \$6,361 to reflect actual costs.

14. Includes \$44,484 for previous projects.

15. Includes \$284,557 for previous projects.

16. Includes \$4,625,614 for new work on previous projects.

17. Includes \$602,614 for previous projects.

18. Includes refunds to local interests: FY78, \$92,374; FY79, \$8,000; FY80, \$14,007; FY81, \$1,847; FY82, \$2,823; FY85, \$60,000.

19. Includes maintenance and operation of Dams funds: FY87, \$66,678; FY88, \$75,000; FY89, \$73,000; FY90, \$54,000; FY91, \$97,200; FY92, \$79,000; FY93, \$80,300; FY94, \$67,800; FY95, \$153,900.

20. Includes maintenance and operation of Dams costs: FY87, \$66,678; FY88, \$75,000; FY89, \$73,000; FY90, \$54,000; FY91, \$97,200; FY92, \$79,000; FY93, \$80,300; FY94, \$67,800; FY95, \$153,900.

21. Includes preauthorization study funds: FY82, \$10,000; FY83, \$85,000; FY84, \$70,000; FY85, \$35,000; FY86, \$45,000; FY87, \$30,000; FY88, \$1,000; FY89, \$55,000; FY90, \$85,000; FY92, \$39,484 and preconstruction planning funds: FY92, \$516; FY94, \$40,000; FY95, \$75,000; FY96, \$61,000; FY97, \$10,000; FY98, \$14,000 and FY99, \$11,910.

WILMINGTON, N.C. DISTRICT

22. Includes preauthorization study costs: FY82, \$4,828; FY83, \$76,218; FY84, \$61,709; FY85, \$41,994; FY86, \$36,550; FY87, \$49,888; FY88, \$3,562; FY89, \$30,816; FY90, \$32,657; FY91, \$63,108; FY92, \$50,468; FY93, \$3,024; FY94, \$662 and preconstruction planning costs: FY94, \$25,758; FY95 \$70,987; FY96, \$27,117; FY97, \$41,023; FY98, \$21,990; and FY99 \$25,551.
23. Includes preauthorization study funds: FY91, \$70,000; FY92, \$15,000; FY93, \$3,000; FY94, \$35,000; FY95, \$4,543 and preconstruction planning funds: FY95, \$457; FY96, \$20,000; FY97, \$55,000; FY98, \$15,000; FY99, \$10,000 and FY00, \$32,000.
24. Includes preauthorization study costs: FY91, \$12,573; FY92, \$69,544; FY93, \$57; FY94, \$32,103; FY95, \$13,311; FY96, -\$45 and preconstruction planning costs: FY96, \$11,317; FY97, \$26,257; FY98, \$45,357; FY99, \$15,425; and FY 00, \$23,500.
25. Adjusted in FY2000 report to remove funds and costs for reimbursable, support for others work on the low water bridges; should not have been included in the FY90 - FY99 report.
26. Includes Special Recreation Use Fees funds: FY74, \$4,000; FY75, \$5,500; FY76 & 76 T, \$3,600; FY 77, \$5,800; FY78,\$7,200; FY79,\$8,000; FY80, \$10,000; FY81, \$10,000; FY82, \$11,040; FY83, \$7,000; FY84, \$9,000; and maintenance and operation of Dams funds: FY87, \$66,678; FY88, \$75,000; FY89, \$73,000; FY90, \$54,000; FY91, \$97,200; FY92, \$79,200; FY93, \$80,300; FY94, \$67,800; FY95, \$153,900.
27. Includes Special Recreation Use Fees costs: FY74, \$4,000; FY75, \$4,400; FY76 & 76T, \$4,666; FY 77, \$5,193; FY78, \$6,824; FY79, \$7,506; FY80, \$11,312; FY81, \$9,688; FY82, \$9,727; FY83, \$7,000; FY84, \$8,444; FY85, \$2,379; and maintenance and operation of Dams costs: FY87, \$66,678; FY88, \$75,000; FY89, \$73,000; FY90, \$54,000; FY91, \$97,200; FY92, \$79,200; FY93, \$80,300; FY94, \$67,800; FY95, \$153,900.
28. Includes \$116,508 refund to local interests and prior to FY77 costs of \$31,161 for Ocean Isle, \$49,731 for Long Beach, \$41,443 for Yaupon Beach and \$31,157 for Sunset Beach.
29. Includes refunds to local interests: FY83, \$400,000; FY84, \$128,345; FY85, \$82,600.
30. Includes \$61,585 refund to local interests.
31. Includes Special Recreation Use Fees funds: FY74, \$35,000; FY76 & 76T, \$48,000; FY77, \$51,400; FY78, \$115,100; FY79,\$63,000; FY80, \$60,000; FY81, \$80,000; FY82,\$67,160; FY83, \$77,759; FY84, \$73,000; and maintenance and operation of Dams funds: FY79, \$167,646; FY87, \$66,678; FY88, \$75,000; FY89, \$73,000; FY90, \$54,000; FY91, \$97,200; FY92, \$79,000; FY93, \$80,300; FY94, \$67,800; FY95, \$153,900; FY00, \$475,769.
32. Includes Special Recreation Use Fees costs: FY75, \$35,000; FY76 & 76T, \$13,606; FY77, \$85,692; FY78, \$114,604; FY79, \$1,120; FY80, \$118,718; FY81, \$83,760; FY82, \$67,160; FY83, \$77,759; FY84, \$67,850; FY85, \$5,149; and maintenance and operation of Dams costs: FY79, \$167,350; FY80, \$296; FY87, \$66,678; FY88, \$75,000; FY89, \$73,000; FY90, \$54,000; FY91, \$97,200; FY92, \$79,000; FY93, \$80,300; FY94, \$67,800; FY95, \$153,900; FY00, \$472,993.
33. Includes Special Recreation Use Fees funds: FY75, \$47,000; FY78, \$40,400; FY79, \$22,000; FY80, \$25,000; FY81, \$20,000; FY82, \$20,240; FY83, \$21,000; FY84, \$19,000; and maintenance and operation of Dams funds: FY87, \$66,678; FY88, \$75,000; FY89, \$73,000; FY90, \$54,000; FY91, \$97,200; FY92, \$79,000; FY93, \$80,300; FY94, \$67,800; FY95, \$153,900; FY00, \$18,748.
34. Includes Special Recreation Use Fees costs: FY75, \$13,741; FY76 & 76T, \$31,666; FY77, \$1,593; FY 78, \$39,771; FY79, \$22,629; FY80, \$24,619; FY 81, \$20,381; FY82, \$20,240; FY83, \$21,000; FY84,\$19,000; and maintenance and operation of Dams costs: FY87, \$66,678; FY88, \$75,000; FY89, \$73,000; FY90, \$54,000; FY91, \$97,200; FY92, \$79,000; FY93, \$80,300; FY94, \$67,800; FY95, \$153,900.
35. Includes planning and design analysis funds: FY96, \$9,296; FY97, \$60; and construction implementation funds: FY96, \$53,704; FY97, \$6,940.
36. Includes planning and design analysis costs: FY96, \$9,296; FY97, \$60; and construction implementation cost: FY96, \$2,005; FY97, \$32,497.
37. Includes preauthorization study funds; FY98, \$40,000; FY99, \$110,000; FY00, \$10,000 and preconstruction planning funds; FY00, \$65,000; FY01, \$145,000; FY02, \$97,000.
38. Includes preauthorization study costs; FY98, \$16,807; FY99, \$128,745; FY00, \$14,448 and preconstruction planning costs; FY00, \$38,176; FY01, \$156,678; FY02, \$89,036.
39. Includes preauthorization study funds: FY97, \$150,000; FY98, \$30,000, FY99, \$40,000 and preconstruction planning funds: FY99, \$ 1,000; FY00, \$184,000; FY01, \$31,000.
40. Includes preauthorization study costs: FY97, \$4,792; FY98, \$167,663; FY99, \$43,471; FY00, \$4,074 and preconstruction planning costs: FY00 \$179,408; FY01, \$36,592.
41. Includes preauthorization study funds: FY99, \$59,000; FY00, \$111,000 and preconstruction planning funds: FY00, \$40,000; FY01, \$190,000.
42. Includes preauthorization study costs: FY99, \$44,071; FY00, \$112,681; FY01, \$11,766 and preconstruction planning costs: FY00, \$39,968; FY01, \$155,536.
43. Includes planning design and analysis funds: FY02, \$15,000 and construction implementation funds: FY02, \$231,000.
44. Includes planning design and analysis costs: FY02, \$15,000 and construction implementation costs: FY02, \$230,787.
45. Includes preauthorization study funds: FY97, \$25,000; FY98, \$115,000; FY99, \$28,000; FY00, \$16,000; FY01, \$14,000 and preconstruction planning funds: FY01, \$51,000; FY02, \$48,000.
46. Includes preauthorization study costs: FY98, \$103,281; FY99, \$61,594; FY00, \$15,236; FY01, \$17,869; FY02, \$20 and preconstruction planning costs: FY01, \$26,073; FY02, \$67,179.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

TABLE 6-B

AUTHORIZING LEGISLATION

Acts	Project and Work Authorized	Documents
	ATLANTIC INTRACOASTAL WATERWAY BETWEEN NORFOLK, VA. and ST. JOHNS RIVER, FLA.	
July 25, 1912	Original route of the Norfolk-Beaufort Inlet section.	H.D. 391, 62d Cong., 2d sess.
July 25, 1912	Purchase of canal.	H.D. 589, 62d Cong., 2d sess.
August 8, 1917	Change in route; following changes approved by Secretary of War, April 14, 1919. Albemarle Sound-Pamlico Sound section: Changed from "Alligator River-Rose Bay route" to "Alligator River- Pungo River route." Pamlico Sound-Neuse River section: Changed from "Pamlico Sound-Brant Shoal Neuse River route" to "Goose Creek-Bay River route."	H.D. 1478, 63d Cong., 3d sess. and H. D. 1136, 64th Cong., 1 st sess. ¹
July 18, 1918	Alligator River-Pungo route (proposed land cut connecting the rivers): Changed from a straight line to a bent line approaching nearer town of Fairfield, N. C.	Approved by Secretary of War, May 15, 1919.
January 21, 1927	A 12-foot channel 90 feet wide from Beaufort to Cape Fear River, N.C., including highway bridge and tidal lock. ⁴	H.D. 450, 69th Cong., 1st sess.
July 3, 1930	An 8-foot channel 75 feet wide from Cape Fear River to Winyah Bay, S.C.	H.D. 41, 71st Cong., 1st sess.
March 4, 1933 ²	Construct a suitable bridge near Fairfield, N. C.	Rivers and Harbors Committee Doc. 5, 72d Cong., 1st sess.
June 26, 1934 ³	Operating and care of works of improvements provided for with funds from War Department appropriations for rivers and harbors.	
August 26, 1937	Increasing dimensions of waterway to 12 feet deep and 90 feet wide.	Rivers and Harbors Committee, Doc. 6, 75th Cong., 1st sess. ¹
August 26, 1937	A 12-foot side channel 90 feet wide to Swansboro.	Rivers and Harbors Committee, Doc. 16, 75th Cong., 1st sess. ¹
June 20, 1938	A yacht basin near Southport, 12 feet deep, 230 feet wide, and 450 feet long, with connecting channel.	H.D. 549, 75th Cong., 3d sess. ¹
June 20, 1938	A 6-foot channel 90 feet wide from New River Inlet to Inland Waterway.	H.D. 691, 75th Cong., 3d sess. ¹
March 2, 1945	Six mooring basins. ⁵	H.D. 660, 76th Cong., 3d sess. ¹
June 30, 1948	A 12-foot channel in New River. ^{6, 11}	H.D. 421, 80th Cong., 1st sess. ¹
May 17, 1950	Vicinity of Fairfield - drainage.	H.D. 723, 80th Cong., 2d sess. ¹
May 17, 1950	Masonboro Inlet and connecting channels, including jetties at the inlet. ^{7, 12}	H.D. 341, 81st Cong., 1st sess. ¹
September 3, 1954	A 12-foot channel and basin in Peltier Creek. ⁸	H.D. 379, 81st Cong., 1st sess. ¹
November 29, 1963, Sec. 107 July 14, 1960	A 6-foot channel 90 feet wide from Intracoastal Waterway to Bogue Inlet gorge.	Detailed Project Report April 1963.
April 7, 1966 Sec. 107, July 14, 1960	An 8-foot channel 150 feet wide through New Topsail Inlet, thence a 7-foot channel 80 feet wide to Intracoastal Waterway by way of Old Topsail Creek; and a 7-foot channel 80 feet wide in Banks Channel from New Topsail Inlet, paralleling barrier beach, to Intracoastal Waterway.	Detailed Project Report July 1965.

WILMINGTON, N.C. DISTRICT

TABLE 6-B

AUTHORIZING LEGISLATION

Acts	Project and Work Authorized	Documents
November 7, 1966	Maintenance of a channel 6 feet deep, 80 feet wide, and 8,000 feet long, from the through channel of the waterway to and including a basin of the same depth, 130 feet wide and 180 feet long at Carolina Beach.	H.D. 515, 89th Cong., 2d sess.1
November 7, 1966	Maintenance of general navigation features of N.C. State Ports Authority Small Boat Harbor at Southport.	H.D. 514, 89th Cong., 2d sess.
December 31, 1970	Replacement of federally-owned and operated highway bridges at Coinjock, Fairfield, Wilkerson Creek, Hobucken, and Core Creek.	H.D. 142, 92nd Cong., 1st sess.
October 22, 1976	Modification of terms of local cooperation to allow for full Federal funding of Wilkerson Creek and Coinjock Bridges.	H.D. 597, 94th Cong., 2d sess.
August 13, 1968	Mitigation of damages caused by north jetty at Masonboro Inlet.	Approved by OCE Oct. 2, 1980
February 18, 1982, Sec. 107 July 14, 1960	An 8-foot channel 150 feet wide through Carolina Beach Inlet to the Intracoastal Waterway.	Detailed Project Report June 1980
September 7, 1983, Sec. 107 July 14, 1960	An 8-foot channel 150 feet wide from the gorge in Bogue Inlet through the ocean bar.	Detailed Project Report May 1983
November 17, 1986	Modification of terms of local cooperation to allow for full Federal funding of Core Creek, Hobucken and Fairfield Bridges.	
BEAUFORT HARBOR, N.C.		
March 3, 1881	A 9-foot channel 200 feet wide through Bulkhead Channel to Beaufort; a 6-foot channel 100 feet wide to North River and Core Sound; and construct jetties on Shackleford Point.	Annual Report, 1881, p.1013
March 2, 1907	Repairs to Fort Macon jetties and additional jetties and shore protection.	Specified in act.
March 3, 1925	Bulkhead across Bird Shoal.	Rivers and Harbors Committee Doc. 8, 68th Cong., 2d sess.1
July 3, 1930	Increase in depth to 12 feet in Bulkhead Channel, Gallants Channel, and in front of Beaufort.	H.D. 776, 69th Cong., 2nd sess.1
March 2, 1945	Increase in width and length of basin in front of Beaufort, all to 12 feet deep.	H.D. 334, 76th Cong., 2nd sess.1
May 17, 1950	Increase in depth to 12 feet and in width to 100 feet in Taylors Creek; transfer to Beaufort Harbor project.	H.D. 111, 81st Cong., 2nd sess.1
May 21, 1965, Sec. 107 July 14, 1960	Channels 15 feet deep, 100 feet wide in Bulkhead, Gallants and Taylors Creek channels, and through turning basin in front of Beaufort; and harbor of refuge in Town Creek, 12 feet deep, 400 feet wide and 900 feet long connected to Gallants Channel by channel 12 feet deep, 150 feet wide and 1,400 feet long.	Detailed Project Report April 1965
August 12, 1983 Sec. 107 July 14, 1960	A channel 14 feet deep, 70 feet wide, and 1,900 feet long, from Bulkhead Channel to a turning basin 14 feet deep, 150 feet wide, and 300 feet long near the upper end of Morgan Creek.	Detailed Project Report June 1983

SILVER LAKE HARBOR, N. C.		
July 3, 1930	Entrance channel, 5 feet deep and 50 feet wide, from Pamlico Sound to the 3-foot contour in the lake, and training wall at entrance.	Rivers and Harbors Committee Doc. 3, 70th Cong., 1st sess.
October 17, 1940	Channel, 10 feet deep, and anchorage basin of same depth, 100 feet wide across Big Foot Slough and 60 feet wide in entrance.	H.D. 325, 76th Cong., 1st sess.. ¹
February 7, 1967, Sec. 107 July 14, 1960	Basin depth of 12 feet in Silver Lake Harbor; channels 12 feet deep, 150 feet wide, in Teaches Hole and Big Foot Slough Channels and across Bluff Shoal; entrance channel, same depth, 60 feet wide; and training wall on south side of entrance channel.	Detailed Project Report July 9, 1965
WATERWAY CONNECTING PAMLICO SOUND AND BEAUFORT HARBOR, N. C.		
August 30, 1935 ⁹	A 7-foot channel 75 feet wide from Pamlico Sound to Beaufort Harbor via Wainright Channel.	H.D. 485, 72d Cong., 2d sess.. ¹
August 26, 1937	A 7-foot channel 75 feet wide to Atlantic.	Rivers and Harbors Committee Doc. 92, 74th Cong., 2d sess.. ¹
March 2, 1945	Channels, 7 feet deep, 75 feet wide, at east and west ends of Harkers Island and side channel 5 feet deep, 75 feet wide, with basin 150 by 130 feet, same depth, at Davis.	H.D. 99, 77th Cong., 1st sess.. ¹
March 2, 1945	A 7-foot side channel 75 feet wide, with basin 200 feet by 500 feet, same depth, at sea level.	S.D. 247, 77th Cong., 2d sess.. ¹
May 17, 1950	A 6-foot side channel 60 feet wide, with basin 100 feet by about 600 feet, same depth, at Marshallberg.	H.D. 68, 81st Cong., 1st sess.. ¹
July 11, 1963, Sec. 107 July 14, 1960	A side channel 7 feet deep, 70 feet wide to local harbor at Cedar Island and an access channel 6 feet deep, 60 feet wide and about 400 feet long to a basin same depth, 60 by 100 feet.	Detailed Project Report Dec. 12, 1962
September 22, 1967, Sec. 107 July 14, 1960	An entrance channel 6 feet deep, 60 feet wide, from Back Sound to harbor of refuge 120 by 250 feet, same depth, at west end of Harkers Island in Brook Creek.	Detailed Project Report March 13, 1967
February 17, 1969, Sec. 107 July 14, 1960	A channel 7 feet deep, 70 feet wide, from existing side channel at Atlantic to a basin 600 by 180 feet, same depth, with a breakwater, between mouth of Little Port Brook and White Point.	Detailed Project Report December 21, 1967
April 3, 1975, Sec. 107 July 14, 1960 ¹⁰	Deepening the existing 5-foot channel and basin at Davis to 7 feet.	Detailed Project Report Feb. 8, 1974

1. Contains latest published maps.
2. Public Law No. 443, 72d Cong.
3. Permanent Appropriations Repeal Act.
4. Tidal lock in land cut between Myrtle Sound and Cape Fear River, deauthorized September 23, 1986, under authority of Sec. 12, PL93-251.
5. Deauthorized August 5, 1977, under authority of Sec. 12, PL 93-251.
6. A 12-foot by 90-foot channel in New River from Intracoastal Waterway to and including a basin at Jacksonville, N. C.
7. Jetties on each side of Masonboro Inlet.
8. A 6-foot by 50-foot channel provided under Section 3, River and Harbor Act of March 2, 1945; 12-foot by 90-foot project

- deauthorized November 17, 1986, under authority of 1002, PL99-662.
9. Included in the Public Works Administration Program January 3, 1934.
10. Deauthorized by the Chief of Engineers March 31, 1982.
11. Deauthorized January 1, 1990, under authority of Sec. 1001(b)(1), PL99-662.
12. Training wall at Masonboro Inlet deauthorized April 5, 1999 under authority of Sec. 1001 (b)(1), PL99-662.

1. Includes highway, railroad, and utility relocations.

2. For details, see individual report.

3. Includes \$3,700,000 presently allocated to water supply to be reimbursed in the future by local interests and \$44,000 cash contribution for construction of ranger security buildings.

4. Includes \$13,637,000 presently allocated to water supply and \$21,595,000 recreation and fish and wildlife to be reimbursed in the future by local interests.

5. Exclusive of transmission lines.

6. Construction completed in 1963 by Virginia Electric and Power Co.

7. Based on modified plan developed in fiscal year 1949. Construction completed June 1955 by Virginia Electric and Power Co.

8. Construction completed in February 1966 by Appalachian Power Co.

9. Construction completed in June 1963 by Appalachian Power Co.

10. Includes cost of earth dam on Whipping Creek.

11. Authorizing legislation provided for earth dam; concrete gravity dam constructed.

12. Includes \$1,600,000 presently allocated to recreation and fish and wildlife.

13. Includes \$74,058,000 presently allocated to water supply, \$8,646,000 allocated to recreation and \$8,296,000 to flood control to be paid by local interests during construction.

14. Deauthorized April 2002

CHARLESTON, S.C., DISTRICT*

This district comprises all of South Carolina (except local watersheds draining into the Savannah River). It embraces the drainage basins tributary to the Atlantic Ocean between

Little River and Port Royal Sound, except watersheds of Mackey and Skull Creeks, and excluding Hilton Head Island.

IMPROVEMENTS

Navigation

1. AQUATIC PLANT CONTROL, SC

Location. The project includes all public waters in the State of South Carolina.

Existing Project. The project provides for the control of noxious aquatic plant growths from public waters in the combined interest of navigation, flood control, drainage, agriculture, fish and wildlife conservation, and public health.

Local Cooperation. Local interests must agree to hold the United States free from damages that may occur from operations performed in connection with this project and contribute 50 percent of the total cost. The South Carolina Department of Natural Resources, Water Resources Division, is designated as the State's lead agency for aquatic plant management and meets local interest requirements.

Operations and results during fiscal year.

Aquatic plants now infest approximately 10,500 acres, with the worst infestations occurring in the Cooper River, Back River Reservoir, Lake Murray, and the Santee Cooper Lake System. During FY 02, 2,244 acres of aquatic plants in 17 water bodies were treated to control problematic growth. The total cost of control operations (non-Federal and Federal) in FY 02 was \$298,037. The total Federal share of work performed in FY 02 was \$187,987.

2. ATLANTIC INTRACOASTAL WATERWAY BETWEEN NORFOLK, VA AND ST. JOHNS RIVER, FL (CHARLESTON DISTRICT)

Location. The project starts near Little River at the North Carolina-South Carolina state line and extends generally south along the coast of South Carolina 62 miles to Winyah Bay; thence 63.5 miles to Charleston; thence 84.5 miles to and including Port Royal Sound; a total of 210 miles. (See National Ocean Survey Charts Nos. 11513, 11521, 11531, 11534, and 11535.)

Previous projects. For further details see page 613 of Annual Report for 1932.

Existing project. The project provides for a waterway twelve feet deep and not less than 90 feet wide with a branch channel of the same dimensions to McClellanville and construction of three bridges crossing the waterway in Horry County, South Carolina. Existing project was completed in 1940; three bridges were completed in 1936. (See Table 7-B for authorizing legislation.)

Local cooperation. None required.

Terminal facilities. There are rail-water terminals at Georgetown, Charleston and Port Royal and numerous open-pile wharves mostly for shipping agricultural products, fish, oysters, pulpwood, wood products, and petroleum products. Marinas are located at convenient intervals along the waterway where limited supplies and repair facilities are available for both commercial vessels and pleasure craft. Facilities are considered adequate for existing commerce and recreation requirements.

Operations and results during fiscal year. New Work: None. Maintenance: Maintenance dredging was performed by Global Construction, Inc. using a pipeline dredge in the AIWW from Little River to Bucksport during October 2001 – September 2002, removing 266,466 cubic yards of material, at a cost of \$1,759,563. Costs of \$1,494,970 were incurred for contract dike maintenance. Costs of \$46,191 were incurred for mosquito abatement and trenching. Condition and operation studies, natural resource management, project operations management, lands and damages, water control management, planning, engineering and design and supervision and administration costs were \$946,807. Federal costs for the project were \$4,247,531.

3. CHARLESTON HARBOR, SC

Location. The harbor is located on the coast of South Carolina about 15 miles south of the midpoint of the coastline, 50 miles southwest of Winyah Bay, SC, and 80 miles northeast of the mouth of Savannah River. (See National Ocean Survey Charts Nos. 11521 and 11524.)

Previous projects. For further details see page 1808 of the Annual Report for 1915; page 579 of the Annual Report for 1926; page 562 of the Annual Report for 1938; page 425 of the Annual Report for 1962; and page 7-2 of the Report for 1997.

Existing project. The project as authorized by the 1996 Water Resources Development Act provides for deepening of the entrance channel from 42 ft deep to 47 ft deep and the inner channels from 40 ft deep to 45 ft deep. Other improvements include realignment/widening of various channels/reaches, construction of a new turning basin opposite the future Daniel Island terminal, construction of a new contraction dike, reconstruction of two existing dikes and removal of a third existing dike. Removal of the east contraction dike on Daniel Island was completed in June 1999. Dredging of the Daniel Island Reach was completed in July 2000. The Entrance Channel dredging was completed in September 2001. Dredging in the Lower Harbor was completed in April 2002. Construction of dikes at the Clouter Creek disposal area continues. Dredging in the Upper Harbor started in May 2002 and is scheduled for completion in May 2004. The entire project is scheduled for completion in June 2008. Ultimate project cost after 10% reimbursement will be \$85,433,000 (Federal) and \$53,267,000 (non-Federal) for a total project cost of \$138,700,000 (fully funded). (See Table 7-B for authorizing legislation.)

Local cooperation. Requirements are described in full on pg 7-2 of the FY 99 Annual Report. The non-Federal partner is the South Carolina State Ports Authority. The Project Cooperation Agreement was executed on June 5, 1998.

Terminal facilities. The South Carolina State Ports Authority owns and operates four public terminals and a grain elevator in Charleston Harbor. These terminals offer more than two miles of berthing space, room enough for seventeen vessels at one time. The Ports Authority operates twenty-one container cranes, thirty rubber tire gantry cranes, twenty-three toplifters, nine emptyhandlers, and two traveling breakbulk gantry cranes. There are 1.4 million square feet of warehouse space with covered rail access and truck loading docks. In addition to both CSX and Norfolk Southern rail lines, over 150 truck carriers provide inland transportation for Charleston Harbor. Facilities for marine repairs and servicing are available at Detyens Shipyard, which operates two yards. The main shipyard is located on the Cooper River and the original, smaller shipyard is located on the Wando River. For further details see Port Series No. 13, 1987, Corps of Engineers.

Operations and results during fiscal year. New Work: Dredging was performed (a) by Marinex Construction Company using pipeline and hydraulic dredges in the Upper Harbor during May 2002 - September 2002, removing 1,726,373 cubic yards of material, at a cost of \$5,637,678, and (b) by Norfolk Dredging using a clam/bucket dredge in the Lower Harbor during September 2001- April 2002, removing 214,059 cubic yards of material, at a cost of \$1,651,965. Costs of \$233,040 were incurred for work performed in FY01 for dredging of the Entrance Channel. Costs of \$1,081,036 were incurred for diking efforts at the Clouter Creek Disposal Area. Real estate costs, engineering and design and supervision and administration costs were \$851,674. Federal costs were \$7,133,969. Maintenance: Dredging was performed (a) by Marinex Construction Company using pipeline and hydraulic dredges in the Upper Harbor during May 2002 - September 2002, removing 486,970 cubic yards of material, at a cost of \$1,910,000, and (b) by Norfolk Dredging using a clam/bucket dredge in the Lower Harbor during October 2001 - April 2002, removing 307,339 cubic yards of material, at a cost of \$1,089,624, and (c) by Marinex Construction Company in the Upper Reaches using a pipeline dredge during October 2001, removing 588,874 cubic yards of material, at a cost of \$818,513. Costs of \$403,489 were incurred for trenching efforts at the Clouter Creek Disposal Area. Costs of \$114,713 were incurred for mosquito abatement and trenching. Condition and operation studies, water control management, natural resource management, lands and damages, planning, engineering and design, and supervision and administration costs were \$1,504,262. Federal costs for maintenance were \$5,840,601.

4. COOPER RIVER, CHARLESTON HARBOR, SC

Location. Cooper River is located in Charleston and Berkeley Counties, SC, and empties into the Atlantic Ocean at Charleston (See National Ocean Survey Charts Nos. 11521 and 11524.)

Existing project. The major cause of the shoaling problem in Charleston Harbor was the diversion of fresh water from the Santee River through Pinopolis Dam into the salt water of Charleston Harbor, which caused density currents that trapped sediments resulting in a phenomenal rate of deposition. The most practical solution of the shoaling problem was to divert most of the Santee River waters above Pinopolis Dam back into the lower Santee River through a canal beginning at Lake Moultrie and extending to the Santee River in the vicinity of St. Stephen, South Carolina. The project for Cooper River, as authorized by the 1968 River and Harbor Act, provided that the discharge through the existing Pinopolis Hydroplant be reduced to a flow which would not establish a density current in the harbor. This flow was estimated at 3,000 cubic feet per second (cfs) during the design phase of the project, but after operational tests, this flow is estimated at 4,500 cfs. The excess water impounded in Lake Moultrie is being directed through a new canal above St. Stephen, South Carolina, to enter the Santee River at a point well below the Lake Marion Spillway (Wilson Dam). A new hydroelectric facility was constructed on the new canal at the edge of the swamp adjacent to the Santee River. This plant replaces those features made less effective at Pinopolis through curtailment of flows. The average flow of 11,000 cfs at the new powerplant, plus the 4,500 cfs average release planned for Pinopolis, approximates the historical average flow at Pinopolis. The three generators at the new plant are rated at 28,000 kilowatts each, for a total of 84,000 kilowatts. In the interest of fish and wildlife resources of the area, the project includes a herring lift at the new powerhouse site and a fish hatchery. Construction was initiated March 1977. The power-on-line date was March 1985. The power plant, channels and canals, and attendant work were completed in FY 85. (See Table 7-B for authorizing legislation.)

Local cooperation. None required.

Operations and results during fiscal year. New Work: None. Federal costs for the project were \$51. Maintenance: Funds of \$3,243,217 were spent for maintenance of completed work.

5. FOLLY RIVER, SC

Location. The project begins in Folly River and Folly Creek north of the Town of Folly Beach and follows a southwesterly course into the Atlantic Ocean. (See National Ocean Survey Chart No. 11521.)

Existing project. The project provides for an entrance channel, eleven feet deep by 100 feet wide extending from the Stono River three miles through the ocean bar; a channel within Folly River nine feet deep and 80 feet wide, extending three miles downstream from U. S. Highway 171 to the confluence of Folly

and Stono Rivers; and a channel within Folly Creek nine feet deep by 80 feet wide extending three miles downstream from Highway 171 to the confluence with the Folly River. The existing project was completed in FY 79. (See Table 7-B for authorizing legislation.)

Local cooperation. None required.

Operations and results during fiscal year. New Work: None. Maintenance: Maintenance dredging was performed by the government-owned sidescaster dredge *Merritt* in the entrance channel during June and September 2002 at a cost of \$560,250. Condition and operations studies, environmental monitoring, planning, engineering and design and supervision and administrative costs were \$98,750. Federal costs for the project were \$659,000.

6. GEORGETOWN HARBOR, SC

Location. The harbor is located on the coast of South Carolina 50 miles northeast of Charleston Harbor and 90 miles southwest of the entrance to Cape Fear River, North Carolina. (See National Ocean Survey Chart No. 11532)

Previous projects. For further details see page 1806 of Annual Report for 1915; page 549 of Annual Report for 1938; and page 442 of Annual Report for 1944.

Existing project. The authorizations provide for a channel 27 feet deep with varying widths of 600 feet to 400 feet from the Atlantic Ocean to and including a turning basin at the U. S. Highway 17 bridge over Sampit River, with a side channel 2,400 feet long and not less than 200 feet wide leading to a turning basin at the upper end of the built-up portion of the city waterfront, a total of 17.9 miles. The project also provides for the continued maintenance to a depth of 18 feet and a width of 400 feet for the bypassed portion of Sampit River opposite the City of Georgetown. The existing project was completed in 1951. The jetties were completed in 1903 - 1904. (See Table 7-B for authorizing legislation.)

Local cooperation. None required.

Terminal facilities. Terminal facilities at the Port of Georgetown consist of one 600-foot concrete wharf, one 700-foot bulkhead adjacent to a paved outside storage area, and one 600-foot steel berth. There are 103,000 square feet of transit warehouse space, 36,400 square feet of covered transit storage sheds, and 25 acres of paved backup space. Mobile cranes with up to a 225-ton lifting capacity are available. The port is equipped with special handling facilities for metals, cement, salt, and forest products. On-terminal rail service is provided by CSX and the port is accessible via U.S. Highways 17, 521, 701 and Interstates 95, 26, and 20. For further details, see Port Series No. 13, 1987, Corps of Engineers.

Operations and results during fiscal year. New Work: None. Maintenance: Maintenance dredging was performed (a) by Cottrell Contracting Corporation in the Sampit River by pipeline dredge during October 2001, removing 239,530 cubic yards of material, at a cost of \$740,426, and (b) by Manson Construction in the Entrance Channel and Lower Winyah Bay by hopper dredge during February 2002 - April 2002, removing 480,886 cubic yards of material, at a cost of \$1,551,038. Costs of \$61,100 were incurred for dike maintenance. Costs of \$17,420 were incurred for mosquito abatement and trenching. Water control management, natural resource management, condition and operation studies, easement acquisition, planning, engineering and design and supervision and administration costs were \$630,071. Federal costs for the project were \$3,000,055.

7. LITTLE RIVER INLET, NC AND SC

Location. The project is located near the North Carolina-South Carolina state line. Little River enters the Atlantic Ocean at Little River Inlet at the state line and affords the only connection between the Atlantic Intracoastal Waterway and the ocean along 68 miles of coastline from Shallotte, N. C. to Georgetown, S. C. (See National Ocean Survey Chart No. 11535.)

Existing project. The project provides for an entrance channel twelve feet by 300 feet across the ocean bar; thence a ten by 90-foot inner channel to the Atlantic Intracoastal Waterway. The entrance channel is stabilized by jetties extending seaward 3,284 feet and 3,830 feet long on the east and west sides of the inlet, respectively. The project was completed in FY 84. (See Table 7-B for authorizing legislation.)

Local cooperation. Fully in compliance.

Terminal facilities. There are seven marinas, numerous private docks, and several public boat ramps located in or near Little River.

Operations and results during fiscal year. New Work: None. Maintenance: Condition and operation studies, water control management, and supervision and administration costs were \$124.

8. MURRELLS INLET, SC

Location. The project is located on the coast of South Carolina, in Georgetown County, about 13 miles southwest of the City of Myrtle Beach. The inlet is the ocean entrance through a barrier beach to several tidal streams in the Murrells Inlet-Garden City estuarine area. (See National Ocean Survey Chart No. 11535.)

Existing project. The project provides for an entrance channel twelve feet by 300 feet across the seaward bar; thence a ten by 90-foot inner channel to a turning basin at the old Army crashboat dock. The entrance channel is stabilized by ocean jetties extending seaward 3,445 feet and 3,319 feet on the north and south sides of the inlet, respectively. The recreational project includes a walkway on the south jetty with access road and parking area. The existing project was completed in 1981. (See Table 7-B for authorizing legislation.)

Local cooperation. Fully in compliance.

Terminal facilities. There are five marinas, numerous private docks, and several public boat ramps located about the Murrells Inlet Harbor.

Operations and results during fiscal year. New Work: None. Maintenance: Maintenance dredging was performed by Southern Dredging in the entrance channel and deposition basin during June – September 2002 by pipeline dredge, removing 399,126 cubic yards of material, at a cost of \$2,230,208. Condition and operations studies, sampling and testing of sediments, water control management costs, planning, engineering and design, and supervision and administration costs were \$223,208. Federal costs for the project were \$2,453,416.

9. PORT ROYAL HARBOR, SC

Location. The harbor is located on the coast of South Carolina 57 miles southwest of Charleston Harbor and 23 miles northeast of the mouth of the Savannah River. (See National Ocean Survey Chart No. 11516.)

Existing project. The authorized project provides for a channel from the ocean through Port Royal Sound to Port Royal, South Carolina, 27 feet deep and 500 feet wide across the ocean bar and in Port Royal Sound for approximately 12.8 miles, thence 24 feet deep and 300 feet wide in Beaufort River and Battery Creek for approximately 8.8 miles to and including a turning basin 27 feet deep and 600 feet wide opposite the wharf of the South Carolina State Ports Authority. The existing project was completed in 1959. (See Table 7-B for authorizing legislation.)

Local cooperation. None required.

Terminal facilities. Facilities at Port Royal Harbor include a 565-foot marginal concrete berth, 60,000 square feet of bulk cement storage, 27,000 square feet of transit storage, and 12 acres of backup storage space. Mobile cranes with up to a 90-ton lifting capacity are available. Ground transportation is provided by Port Royal Railroad, which connects to CSX Transportation. The Port is accessible via US Highways 71 & 21 and Interstate 95.

Operations and results during fiscal year. New Work: None. Maintenance: Condition and operation studies, water control management, natural resource management, planning, engineering and design, and supervision and administration costs were \$78,710.

10. SHIPYARD RIVER, SC

Location. This waterway is a tidal tributary of Charleston Harbor, South Carolina. It has its source about one-half mile below the U. S. Naval Base, whence it flows southerly about one and one-half miles and empties into the Cooper River, about three-fourths miles above Drum Island. (See National Ocean Survey Chart No. 11524.)

Previous projects. For details, see page 610 of Annual Report for 1932, page 463 of Annual Report for 1944, and page 534 of the Annual Report for 1952.

Existing project. The 1986 Water Resources Development Act authorized deepening to 38 feet and enlarging the lower turning basin to 1000 ft. as part of the Charleston Harbor, SC improvement. New work dredging was accomplished in 1989 and 1996 under the Charleston Harbor, SC improvement. The entrance channel and the lower turning basin have been deepened to 38 feet. Cost for that work is reflected in the cost for the Charleston Harbor improvement. (See Table 7-B for authorizing legislation.)

Local cooperation. None required.

Terminal facilities. Located at the mouth of Shipyard River is Kinder Morgan Bulk Terminals, which operates two wharves previously owned by Chevron USA Products Company and the Shipyard River Coal Terminal. These wharves accommodate deep-draft, oceangoing vessels. Kinder Morgan's 52-acre dry and liquid bulk products terminal facility can transload cement, coal, asphalt, fertilizers and other aggregates. There is open storage space with a capacity of 250,000 tons and covered storage space with a capacity of 50,000 tons. There are eight liquid storage tanks and two 40,000-ton storage domes for storing cement. Located mid-channel is Salmons Dredging Corporation. For further details see Port Series No. 13, 1987, Corps of Engineers.

Operations and results during fiscal year. New Work: None. Maintenance: Maintenance dredging was performed by Marinex Construction Company using a pipeline dredge during October 2001 removing 240,135 cubic yards of material. Costs for that work are reflected under the Charleston Harbor improvement.

11. TOWN CREEK, SC

Location. Town Creek Channel begins at the AIWW directly south of the Town of McClellanville in Charleston County, SC. The channel follows Five Fathom Creek in a southerly direction

to the Atlantic Ocean. (See National Ocean Survey Chart No. 11531.)

Existing project. The project provides a channel ten feet deep by 80 feet wide from the AIWW to the mouth of Five Fathom Creek, a distance of 6.2 miles. The project includes an entrance channel twelve feet deep by 100 feet wide across the ocean bar, a distance of 4.0 miles. The existing project was completed in 1975. In 1989, Hurricane Hugo breached Sandy Point and created a new inlet to the ocean. This inlet continued to increase in size and was being used by local traffic to get to the Atlantic Ocean. In 1997, the district requested authority to maintain this new inlet in lieu of the existing authorized channel. Our request to abandon the existing Town Creek channel alignment and establish the Clark's Creek channel alignment was approved by headquarters. The proposed channel relocation, due to natural occurrences, is within the scope of the project authorization. The authorized project dimensions of 12 feet deep by 100 feet wide shall be maintained as appropriate. (See Table 7-B for authorizing legislation.)

Local cooperation. Requirements fully satisfied.

Operations and results during fiscal year. New Work: None. Maintenance: Maintenance dredging was performed by the government-owned sidecaster dredge *Fry* and *Merritt* during June and September 2002, at a cost of \$338,000. Condition and operations studies, water control management, natural resource management, planning, engineering and design and supervision and administration costs were \$7,410. Federal costs for the project were \$345,410.

12. RECONNAISSANCE AND CONDITION SURVEYS

Costs of \$42,540 were incurred.

13. OTHER AUTHORIZED NAVIGATION PROJECTS

(See Table 7-C.)

14. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Navigation Activities Pursuant to Section 107, Public Law 86-645, as amended (Preauthorization).

Fiscal year costs were Coordination Account, \$4,749.

Snagging and Clearing for Navigation (Section 3, Public Law 79-14.)

No cost incurred in FY02.

15. CALABASH CREEK, BRUNSWICK COUNTY, SC

Location. Calabash Creek originates in the southeastern part of Brunswick County, NC, and flows generally southwestward, parallel to the ocean coastline, until it enters the Little River in Horry County, SC. The creek is flanked by the Town of Calabash, NC on the north at the upper limit of the project area. The SC and NC state line crosses Calabash Creek approximately mid-way up the navigation channel. The confluence of Calabash Creek and the Little River is approximately 0.5 miles from the AIWW and about 3.0 miles from the Atlantic Ocean at Little River Inlet.

Existing project. The existing navigation channel did not provide adequate depth for full tidal use by commercial vessels. The project consisted of construction of approximately 2,585 linear feet of low-level dikes at the Goat Island Disposal Site using material at the site. An adjustable water control structure was constructed on the AIWW side of disposal site. A 60' wide navigation channel was dredged in Calabash Creek from the AIWW upstream for a distance of approximately 1.5 miles. Approximately 1.0 miles of the channel was dredged to a depth of 7 ft deep with the remainder dredged to a depth of 8 ft deep. Dredged material was placed in the Goat Island Disposal Site. (See Table 7-B for authorizing legislation).

Local cooperation. The Project Cooperation Agreement was executed on December 8, 1999 with the Town of Calabash, NC.

Operations and results during fiscal year. Initial dredging work was completed in October 2000; however, additional follow-on work was required to remove a bump in the channel. Dredging was performed by Global Construction using a pipeline dredge during August – September 2002, removing 2,275 cubic yards of material, at a cost of \$22,883. Total costs for the project were \$24,467. Federal costs for the project were \$2,584.

Shore Protection

16. FOLLY BEACH, SC

Location. The municipality of Folly Beach, SC is located along the Atlantic shoreline of Folly Island, approximately 12 miles south of the City of Charleston, SC. Folly Island is the second island south of the Charleston Harbor entrance channel. (See National Ocean Survey Chart No. 11521).

Existing project. Approximately 2.7 million cubic yards of sand were placed on the beach over a total project reach of

28,200 feet. Rehabilitation of nine groins was completed in May 1993. Periodic nourishment will be required approximately every eight years. For further details see page 7-7 of the Annual Report for 1996. . (See Table 7-B for authorizing legislation.)

Local cooperation. Requirements are described in full on page 7-8 of the FY 1994 Annual Report.

Operations and results during fiscal year. Investigations were initiated to identify a new sand source for the next beach nourishment. Total engineering and design costs were \$108,153. Federal costs for the project were \$93,262.

17. MYRTLE BEACH, SC

Location. Myrtle Beach is located along the northern coast of SC. The area is commonly referred to as the Grand Strand. The Grand Strand extends from Little River Inlet at the NC border, in a southerly direction, to Murrells Inlet, SC for a total distance of approximately 37 miles. This project includes the developed area along the coast of Horry County, SC and a portion of the coastal area of Georgetown County, SC. Major municipalities in the project area include the cities of Myrtle Beach and North Myrtle Beach, Garden City, and the Town of Surfside Beach.

Existing project. The plan of improvement placed about 6.3 million cubic yards of sand over a total project reach of 25.4 miles of beach encompassing three separable reaches. The material came from offshore borrow sites. Periodic nourishment will be required once every 8 to 10 years throughout the project life of 50 years. Estimated cost (October 1995 price levels) of initial construction is \$35,188,000 Federal and \$18,947,000 non-Federal for a total of \$54,135,000. Estimated cost of periodic nourishment is \$105,347,000 Federal and \$56,725,000 non-Federal for a total project cost of \$216,207,000. Sand placement on the North Myrtle Beach reach was completed in May 1997 placing 2.5 million cubic yards of sand. Sand placement on the Myrtle Beach reach was completed in January 1998 placing 2.3 million cubic yards of sand. Sand placement on the Garden City/Surfside reach was completed in November 1998 placing 1.5 million cubic yards of sand. (See Table 7-B for authorizing legislation.)

Local cooperation. Requirements are described in full on page 7-8 of the FY 1995 Annual Report.

Operations and results during fiscal year. A sand fencing/dune vegetation contract was awarded to Professional Grading, Clearing, and Excavation on September 6, 2002 for the Garden City/Surfside area. The work will be performed in FY03. Total engineering and design costs were \$72,951. Federal costs for the project were \$57,244.

18. OTHER AUTHORIZED SHORE PROTECTION PROJECTS

(See Table 7-D.)

19. SHORE PROTECTION WORK UNDER SPECIAL AUTHORIZATION

Shore Protection Activities Pursuant to Section 103, Public Law 87-874 (Preauthorization).

No cost incurred in FY 02.

Flood Control

20. INSPECTION OF COMPLETED WORKS

Flood Control Act of June 22, 1936, and subsequent acts require local interests to maintain and operate local protection projects after completion in accordance with regulations prescribed by Secretary of the Army. Inspections were made to determine extent of compliance and responsible local officials were advised of inadequacies in maintenance and operation on local flood protection works when appropriate. Cost for the period was \$25,442. For project inspection data see Table 7-K.

21. OTHER AUTHORIZED FLOOD CONTROL PROJECTS

(See Table 7-E.)

22. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Flood Control Activities Pursuant to Section 205, Public Law 80-858, as amended (Preauthorization).

(See Table 7-J.)

Emergency Bank Protection

23. STREAMBANK EROSION UNDER SPECIAL AUTHORIZATION

Emergency Streambank and Shoreline Protection Activities Pursuant to Section 14, Public Law 79-526 as amended (Preauthorization).

Fiscal year costs were Chambers Waterfront, Beaufort, SC, \$4,797; Morris Island Lighthouse, SC, \$183; Hunting Island Water Line, SC, \$186,484; and Coordination Account, \$10,013. (See Table 7-H for Other Authorized Streambank Erosion Control Projects.)

Snagging and Clearing of Navigable Streams and Tributaries in Interest of Flood Control, Section 208, Public Law 83-780.

No cost incurred in FY 02.

Environmental Infrastructure

24. LAKES MARION & MOULTRIE, SC

Location. The Lakes Marion and Moultrie, SC project is located in the east central part of the state and the two lakes make up the Santee Cooper Lake system. Calhoun, Clarendon, Colleton, Dorchester, Orangeburg, and Sumter Counties are located around Lakes Marion and Moultrie.

Existing project. Six counties and fourteen municipalities have joined together to form the Lake Marion Regional Water Agency, for the purpose of constructing a regional water system in efforts to spur economic development. Using Lake Marion as a source, the system will provide potable water throughout a service area surrounding the lakes, giving central SC the water supply needed to cope with future industrial and population growth. The system will include a water treatment plant, and transmission pipelines sized to meet a projected demand of 21 millions gallons per day by 2015. The U.S. Army Corps of Engineers currently has authorization to expend \$15 million for planning, engineering, design, and construction assistance for the project. The Corps will perform design review, environmental compliance activities, real estate oversight, scheduling services, and value engineering studies during the design phase. (See Table 7-B for authorizing legislation).

Local cooperation. The Design Agreement was executed on May 11, 2001 with the Lake Marion Regional Water Agency. An amendment was executed on January 14, 2002 that allowed the Corps to accept a design provided by the sponsor.

Operations and results during fiscal year. Upcoming activities include 65%, and 95% design reviews. Total costs for the project were \$316,148. Federal costs for the project were \$240,936.

25. MULTIPLE PURPOSE PROJECTS INCLUDING POWER

(See Table 7-F.)

Miscellaneous

26. ECOSYSTEM RESTORATION AND PROTECTION

Project modifications accomplished under the authority of Section 206, Aquatic Ecosystem Restoration, Water Resources Development Act of 1996 (Preauthorization).

(See Table 7-M.)

Project modifications accomplished under the authority of Section 204, Beneficial Use of Dredged Material, Water Resources Development Act of 1986, as amended.

Fiscal year costs were Sand Island, SC \$895 and Coordination Account, \$177.

Project modifications accomplished under the authority of Section 1135, Project Modifications For Improvement of the Environment, Water Resources Development Act of 1986, as amended.

Fiscal year costs were Coordination Account, \$5,151.

See Table 7-L for Other Authorized Environmental Projects.

27. EMERGENCY RESPONSE ACTIVITIES - FLOOD CONTROL AND COASTAL EMERGENCIES

Operational Program Areas. Federal costs incurred under the Flood Control and Coastal Emergencies Program was \$374,571.

Emergency Work in Support of Other Federal Agencies. Costs of \$1,524 were incurred to support FEMA.

Costs of \$117,636 were incurred for the Catastrophic Disaster Preparedness Program.

28. GENERAL REGULATORY ACTIVITIES

During FY 02, \$2,599,430 was expended on Permit Evaluation, \$650,361 on Enforcement, and \$3,350 on Administrative Appeals. Total costs were \$3,253,141.

General Investigations

29. ACTIVE INVESTIGATIONS

See Table 7-I which covers: Surveys, Collections, and Study of Basic Data, and Research and Development Activities.

CHARLESTON, SOUTH CAROLINA DISTRICT

TABLE 7-B

AUTHORIZING LEGISLATION

See Sect. in Text	Date of Authorizing Act	Project and Work Authorized	Documents
CHARLESTON HARBOR, SC			
3.	Jun. 18, 1878 Aug. 8, 1917 Jul. 18, 1918	2 jetties. ⁵ Increase in depth to 30 feet with width of 500 feet between the jetties and 1,000 feet seaward thereof. The 40-foot channel to the Naval Base. Act provided that the 40-foot channel should not be undertaken "until the proposed new drydocks at this navy yard, carrying a depth of 40 feet of water over the blocks, has been authorized." This dock was authorized in the Naval Appropriations Act approved July 1, 1918 (40 Stat. L. 725).	Annual Report 1878, pp. 553-572. H.D. 288, 62nd Cong., 2nd sess. H.D. 1946, 64th Cong., 2nd sess, pt.1, pp. 21-29, 57, 58, and 64-68.
	Jan. 21, 1927	A 30-foot channel from the sea to Goose Creek via Cooper River, together with a 30-foot channel through Town Creek for commercial purposes. The act also provided that the 40-foot channel be prosecuted only as found necessary for national defense.	H.D. 249, 69th Cong. 1st sess.
	Oct. 17, 1940	The 35-foot channel depth from the sea to the head of the project via Cooper River and Town Creek, also a channel in Shem Creek to Mount Pleasant, 110 feet wide and ten feet deep, including a turning basin at the upper end.	H.D. 259, 76th Cong., 1st sess.
	Mar. 2, 1945	An anchorage area 30 feet deep in the water area between Castle Pinckney and Fort Moultrie. ⁶ (Deauthorized by 1986 WRDA)	H.D. 156, 77th Cong., 1st sess.
	Sep. 3, 1954	Deepen the 30-foot channel north and east of Drum Island to 35 feet.	S.D. 136, 83rd Cong., 2nd sess. ³
	Jul. 14, 1960 as amended	Shem Creek Channel modified by extending 1,150 feet upstream and downstream from mouth to Atlantic Intracoastal Waterway.	H.D. 35, 86th Cong., 1st sess.
	Oct. 22, 1976	Project authorized for the Phase I design memorandum stage of Advanced Engineering and Design.	H.D. 94-436, 94th Cong., 2nd sess.
	Nov. 17, 1986	Deepening 35 foot channel to 40 feet (42 feet in the ocean bar and entrance channel) from the 42 foot ocean contour to Goose Creek, a distance of 27.1 miles, construction of one turning basin, modification of existing turning basins, deepening and modification of the anchorage basin, deepening Shipyard River to 38 feet, maintain the Wando River Channel to 35 feet at Federal expense and the deepening of this channel to 40 feet if economically justified.	99th Cong. 2nd sess., P.L. 96-662

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

TABLE 7-B AUTHORIZING LEGISLATION

See Sect. in Text	Date of Authorizing Act	Project and Work Authorized	Documents
	Oct 12, 1996	Deepening of the entrance channel from 42 ft. deep to 47 ft. deep and the inner channels from 40 ft. deep to 45 ft. deep. Other improvements include realignment/widening of various channels/reaches, construction of a new turning basin opposite the future Daniel Island terminal, construction of a new contraction dike, reconstruction of two existing dikes and removal of a third existing dike.	104 th Cong. P.L. 104-303
		COOPER RIVER, CHARLESTON HARBOR, SC (ST. STEPHEN PROJECT)	
4.	Aug. 13, 1968	Redivert most of the Santee River waters Pinopolis Dam into the lower Santee River through a canal beginning at Lake Moultrie and extending to the Santee River in the vicinity of St. Stephen, South Carolina	S.D. 88, 90th Cong., P.L. 90-483
		FOLLY RIVER, SC	
5.	Jul. 14, 1960 as amended	Consists of stable all-tide channel nine feet deep and 80 feet wide in Folly River and Folly Creek and an entrance channel at Stono Inlet 100 feet wide and eleven feet deep.	Sec. 107, P.L. 86-645. Authorized by Chief of Engineers, Dec. 23, 1977.
		GEORGETOWN HARBOR, SC	
6.	Aug. 5, 1886	Jetties and earthen dike to protect south jetty.	H. Ex. Doc. 258 48th Cong., 2nd sess., and Annual Report 1885, pp. 1154-1170, and H. Ex. Doc. 117, 50th Cong., 2nd sess., and Annual Report 1889, pp. 1110-1111.
	Jun. 25, 1910	Previous project channel dimensions and training wall.	H.D. 398, 58th Cong., 2nd sess. and Annual Report 1904, pp. 1591-1605.
	Mar. 2, 1945	27-foot channel from ocean, including a turning basin in Sampit River.	H.D. 211, 76th Cong., 1st sess.
	Jun. 30, 1948	Cutoff and side channel in Sampit River.	H.D. 21, 81st Cong., 1st sess.

CHARLESTON, SOUTH CAROLINA DISTRICT

TABLE 7-B AUTHORIZING LEGISLATION

See Sect. in Text	Date of Authorizing Act	Project and Work Authorized	Documents
LITTLE RIVER INLET, NC AND SC			
7.	Oct. 27, 1965	Provides for an entrance channel twelve feet by 300 feet across the ocean bar; thence ten feet by 90-foot inner channel to the Atlantic Intracoastal Waterway.	H.D. 362, 92nd Cong. Section 201, P.L. 89-298 River and Harbor and Flood Control Act of 1965
	Mar. 7, 1974	Authorized emergency dredging operations as the Chief of Engineers determines necessary to maintain channel depths sufficient to permit free and safe movement of vessels until such time as the authorized project is constructed.	H.D. 10203, 93rd Cong. Section 67, P.L. 93-251 Water Resources Development Act of 1974
MURRELLS INLET, SC			
8.	Oct. 27, 1965	Provides for an entrance channel twelve feet by 300 feet across the seaward bar, thence ten by 90-foot inner channel to a turning basin at the old Army crash boat dock.	H.D. 137, 92 nd Cong. Section 201, P.L. 89-298 River and Harbor and Flood Control Act of 1965
	Mar. 7, 1974	Authorized emergency dredging operations as the Chief of Engineers determines necessary to maintain channel depths sufficient to permit free and safe movement of vessels until such time as the authorized project is constructed.	H.D. 10203, 93 rd Congr. Section 67, P.L. 93-251 Water Resources Development Act of 1974
PORT ROYAL HARBOR, SC			
9.	Sep. 3, 1954	A channel from the ocean through Port Royal Sound to Port Royal, SC.; 27 feet deep and 500 feet wide across the ocean bar and in Port Royal Sound for approximately 12.8 miles thence 24 feet deep and 300 feet wide in Beaufort River and Battery Creek for approximately 8.8 miles to and including a turning basin 27 feet deep and 600 feet wide opposite wharf of the SC State Ports Authority.	H.D. 469, 81st Cong., 2nd sess.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

TABLE 7-B AUTHORIZING LEGISLATION

SAVANNAH, GA, DISTRICT

The District comprises drainage basins that flow into the Atlantic Ocean between Port Royal Sound, SC, and Cumberland Sound, GA and FL, and includes the Atlantic Intracoastal Waterway between these points. This area covers the headwaters of the Savannah River in southwestern North Carolina, eastern Georgia, and a small portion of northeastern Florida.

IMPROVEMENTS

Navigation

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

WATERWAY BETWEEN NORFOLK, VA, AND ST. JOHNS RIVER, FL (SAVANNAH DISTRICT)

Location. This 161-mile section of waterway connects Port Royal Sound, SC, with Cumberland Sound, GA and FL. (See NOAA charts 11489-11507, formerly Coast and Geodetic Survey Charts 838-841, inclusive.)

Previous Projects. (Between Savannah, GA, and Fernandina, FL) For details see pages 1814, 1821-1823 of Annual Report for 1915 and page 585 of Annual Report for 1938.

Existing Project. The project provides for a waterway 12 feet deep at mean low water and not less than 90 feet wide between Port Royal Sound, SC, and Savannah, GA; 12 feet deep at mean low water, with widths of 90 feet in land cuts and narrow streams and 150 feet in open waters between Savannah, GA, and Cumberland Sound, GA and FL; and a suitable anchorage basin at Isle of Hope, GA. Mean tidal range between Port Royal, SC, and Cumberland Sound, GA and FL is from 6 to 8 feet with fluctuations from 1.5 to 2.5 feet due to winds and lunar phases. (See Table 8-B for Authorizing Legislation.)

Local Cooperation. Fully complied with.

Terminal Facilities. Exclusive or adequate terminal facilities at port of entry. This improvement serves numerous wharves, some of which are open to the public on equal terms. Facilities are considered ample for existing commerce.

Operations and Results During Fiscal Year.

Maintenance: The District used Cottrell Engineering Corporation dredge "Marion" to dredge the waterway during the first and second quarters of FY 02. The dredge removed 781,044 cubic yards of material at a cost of \$1,123,759.

Operation and Maintenance costs for the FY amounted to \$2,828,850, which included such items as water quality monitoring, project condition surveying and real estate monitoring. (See Table 8-A for Cost and Financial Statement.)

Condition at End of Fiscal Year. The main channel of the existing project, completed in 1941, is maintained at 12 feet. The former main channel, now an alternate route through the westerly end of the south channel and northerly end of Wilmington River, will be maintained to a depth of 7 feet mean low water for traffic points north and south of Savannah Harbor. Relocation of the main channel from the Frederica to Mackay Rivers near St. Simons Island, GA, was accomplished under Section 107 of the Continuing Authorities Program after con-

struction of a new bridge for the Torras Causeway. The notice on the final Environmental Impact Statement appeared in the Federal Register October 29, 1976.

2. BRUNSWICK HARBOR, GA

Location. The harbor entrance is 70 statute miles south of the entrance to Savannah Harbor, GA, and 25 statute miles north of the entrance to Fernandina Harbor, FL. (See NOAA Chart 11215, formerly Coast and Geodetic Survey Chart 447.)

Previous Project. For details see page 1818 of Annual Report for 1915 and page 591 of Annual Report for 1938.

Existing Project. The project provides for a stone jetty 4,350 feet long at the entrance to East River and the following channels: 32 feet deep and 500 feet wide across the bar; 30 feet deep and 400 feet wide through St. Simons Sound, Brunswick River, and East River to the foot of Second Avenue; 30 feet deep and 300 feet wide in Turtle River to the Allied Chemical Company wharf, formerly the Atlantic Refining Company; 30 feet deep and 400 feet wide in South Brunswick River; 27 feet deep and 350 feet wide in East River from Second Avenue to its confluence with Academy Creek; and a channel in Back River 20 feet deep and 150 feet wide from St. Simons Sound to the mouth of Mill Creek; and a channel in Terry Creek 10 feet deep and 80 feet wide from its mouth to a point immediately above the wharf of the former Glynn Canning Company. All depths refer to mean low water. Mean tidal range on the bar is 6.5 feet, at the City of Brunswick 7.3 and 7.6 feet at the upper end of the harbor. For further details see Annual Report for 1962.

Local Cooperation. Complied with to date.

Terminal Facilities. Twenty-six wharves and piers, almost all privately or state (Georgia Ports Authority) owned, have a berthing space of 7,530 linear feet. The Port of Brunswick and the State of Georgia have a transit shed and modem docks with 1,640 feet of berthing space (three general cargo berths) on East River. For further details see Port Series No. 14, Corps of Engineers (revised 2000).

Operations and Results During Fiscal Year.

Maintenance: The District used Mason Construction and Engineering Company, Inc. during the second quarter in FY 02 to dredge the Bar Channel using the dredge "Bayport". The dredge removed 507,718 cubic yards of material at a cost of \$1,003,834.

Operation and Maintenance costs for the FY amounted to \$2,371,140, which included such items as water quality monitoring, project condition surveying, real estate monitoring, environmental and cultural resources

SAVANNAH, GA, DISTRICT

monitoring. (See Table 8-A for Cost and Financial Statement.)

Condition at End of Fiscal Year. The existing project was completed in December 1960. General condition of the harbor works is satisfactory, providing maintenance dredging continues. The notice on the Final Environmental Impact Statement appeared in the Federal Register October 3, 1975. Authorized depths were maintained throughout the FY.

Total cost for existing completed project to September 30, 2002, is \$120,099,399. New Work costs for the FY amounted to \$1,300,474. (See Table 8-A for Cost and Financial Statement.)

New Work Dredging. Deepening the Brunswick Harbor from 30 to 36 feet began with the award of the Entrance Channel Contract on July 2, 2002 to Bean Dredging Corporation for a sum of \$13,677,080. The cutterhead dredge "Meridian" began the work on September 23, 2002. The hopper dredge "Eagle" arrived on December 9, 2002 and dredged the remainder of the channel. A total of approximately 200,000 cubic yards of new work and O&M materials was removed from the channel by 1 October 2002.

3. LOWER SAVANNAH RIVER BASIN, GA & SC

Location. The project is located on the Savannah River between river mile 40.9 and river mile 42.0, approximately 20 river miles above the city of Savannah, GA. The project area itself is located within Effingham County, GA and Jasper County, SC. A portion of the project is within the Federal Savannah National Wildlife Refuge.

Existing Project. This environmental restoration project was authorized by a resolution passed on August 1, 1990, by the U.S. House of Representatives Committee on Public Works and Transportation. The total project cost approved is \$4,222,000. The recommended plan includes a large partial diversion structure at cut #3, a plug in bend #3 below the mouth of Bear Creek, a realignment and restoration of the mouths of Bear and Mill Creeks, which provides improved flows into both creeks.

The Project Cooperation Agreement (PCA) was executed and the construction phase officially began in FY 00. Construction was completed in FY 02.

Local Cooperation. The cost share is 75% Federal and 25% non-Federal.

New Work costs for the FY amounted to \$2,438,534. (See Table 8-A for Cost and Financial Statement.)

4. SAVANNAH HARBOR, GA

Location. Harbor entrance is 75 statute miles south of Charleston, SC, and 70 miles north of Brunswick Harbor, GA. (See NOAA Chart 11512, formerly Coast and Geodetic Survey Chart 440.)

Previous Project. For details see page 1810 of Annual Report for 1915 and page 578 of Annual Report for 1938.

Existing Project. The project provides for a channel 44 feet deep and 600 feet wide across the ocean bar about 7.0 miles long; 42 feet deep and 500 feet wide to the vicinity of Garden City (Georgia Ports Authority terminal) and 36 feet deep and 400 feet wide to the vicinity of the Savannah Foods and Industries, Inc., about 22.6 miles; and 30 feet deep and 200 feet wide to a point 1,500 feet below the Houlihan Highway Bridge, about 1.5 miles, for a total length of 31.1 miles; Fig Island and Marsh Island Turning Basins 34 feet deep by 900 feet wide by 1,000 feet long in the vicinity of the Georgia Kaolin Terminal and East Coast Terminal, respectively; Kings Island Turning Basin 42 feet deep by 1,500 feet wide by 1,600 feet long in the vicinity of the Garden City Terminal of the Georgia Ports Authority; Argyle Island and Port Wentworth Turning Basins 30 feet deep by 600 feet long near Savannah Foods and Industries, Inc. terminal and at the extreme upper limit of the project near the Weyerhaeuser Corporation, respectively; and a 1,200 foot long by 1,050 foot wide by 40 foot deep Oyster Bed Island Turning Basin in the vicinity of Georgia Ports Authority Lash Facility. The project also provides for sediment control works consisting of a tide gate structure across Back River; a sediment basin 40 feet deep, 600 feet wide; about 2 miles long, with an entrance channel 38 to 40 feet deep and 300 feet wide; a drainage canal across Argyle Island 15 feet deep and 300 feet wide; control works and canals for supplying fresh water to the Savannah National Wildlife Refuge; and facilities to mitigate damages to presently improved areas other than refuge lands. Mean range of tide is 7.9 feet at the upper end of the harbor and 6.9 feet at the lower end. Extreme ranges are about 11.1 and 10.7 feet, respectively.

The tide gate structure across Back River was taken out of operation as of March 1991 to decrease salinity levels in the wildlife refuge. The drainage canal across Argyle Island, which was part of the original tide gate project, was closed as of April 1992 by the New Cut closure contract done by a Section 1135 program. The cost of this contract was \$1,531,847.

Local Cooperation. Local interests must provide suitable disposal areas and retaining dikes for construction and future maintenance of the project. The Chatham County Board of Commissioners, as local assurers, has met all requirements to date.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

Terminal Facilities. Sixty-one piers and wharves adequately serve existing waterborne commerce of the port. These facilities, with use of dolphins, have a combined berthing space of 46,930 linear feet at mean low water. Included in the berthing space are six container berths with 271 acres of handling area. All have railway and highway connections. Lash Facilities are located at the entrance to the harbor and have depth ranging up to 38 feet mean low water. The berthing space of Lash facilities is included in the above combined berthing space. For further details, see Port Series No. 14, Corps of Engineers (revised 1982) and Annual Report for 1990.

Savannah Harbor Deepening. The Savannah Harbor Deepening project was authorized by WRDA 92 on October 31, 1992. The LCA was signed with the local sponsor and the Georgia Ports Authority, on March 2, 1993. Because Federal appropriations would be no earlier than FY 95, the LCA was written and negotiated to allow the local sponsor to up-front the construction funds upon project authorization and the signing of the LCA.

The first phase contracts for the Savannah Harbor Deepening project was awarded in March 1993 for the outer bar channel from Station 0+000 to -60+000 and the lower inner harbor channel from Station 0+000 to 70+000 for \$7,298,876 and \$8,748,883, respectively. The second phase that requiring significant real estate acquisition, was awarded in July 1993 from Station 70+000 to 103+000, for \$4,675,376. The total project scope entails the deepening of the harbor by 4 feet, from -38 ft mlw to -42 ft mlw in the inner harbor and from -40 ft mlw to -44 ft mlw in the bar channel, for a total of 31 miles of harbor improvement.

Construction was initiated with the Inner Harbor contract (0+000 to 70+000) on May 1, 1993, and was completed on April 21, 1994. The authorized cost for the Savannah Harbor Deepening project is \$50,050,000. The current estimated cost for the project is \$28,107,635. New Work costs for the FY amounted to \$8,462. (See Table 8-A for Cost and Financial Statement.)

New Work costs for the FY for Savannah Harbor Widening amounted to \$704.

In the FY 95 appropriations bill, Congress provided \$11,585,000 as reimbursement to the local sponsor for the Federal share of the NED plan. The appropriations bill also provided the \$2,083,000 of those funds be provided for the cost shared Savannah Riverwalk Extension. The PCA for the Savannah Riverwalk Extension Project was executed on July 21, 1995. The final cost estimate for the project is \$3,532,499, of which the Federal share was fixed at \$2,083,000 and the

City of Savannah's share was \$1,449,499. Work was completed as scheduled on May 24, 1996 and a dedication ceremony took place on June 10, 1996. In November 1996, the Georgia Ports Authority received \$7,500,000 towards their reimbursement of the Federal share of the project and the balance of the Federal share of \$1,500,000 has been forwarded now that all the contracts have been closed out and the final audits completed.

Savannah Harbor Expansion. The Georgia Ports Authority completed the Feasibility Study and Tier I Environment Impact Statement (EIS) for the Savannah Harbor Expansion project in August 1998, under the authority of Section 203 of WRDA 86. Based on this study, WRDA 1999 gave a conditional authorization for construction. The conditions are the completion of a Chief's Report and the completion of a Tier II EIS and General Reevaluation Report (GRR). In addition, this Tier II EIS and GRR must obtain the approvals from the Secretary of the Army, the Director of the Environmental Protection Agency, and the Secretary of Commerce and Interior.

The Georgia Ports Authority is currently underway with the additional Environmental Studies as required by the authorization. These studies are scheduled for completion in FY 2004. The Georgia Ports Authority and the Department of the Army signed a Memorandum of Understanding in July 2001 regarding the preparation of the Tier II EIS. The authorization calls for the Savannah Harbor to be deepened as much as 6 feet, from the present -42 feet mlw to as deep as -48 feet at a first cost (October 1997 price levels) of \$229,527,000.

In February 2002, the notice of intent to file a draft Tier II EIS on the project was published in the Federal Register.

Operations and Results During Fiscal Year.

Maintenance. The District dredged the Inner Harbor from Station 0+000 to 112+500 and the Sediment Basin with a contract to Marinex Corporation using the dredge "Arlington". The "Arlington" dredged 418,329 cubic yards and 2,500 ft of station dredging from Station 0+000 to 112+500 and 883,726 cubic yards from the Sediment Basin at a cost of \$3,424,450. The dredge "Bayport" owned by Manson Construction Company dredged 940,565 cubic yards from the Entrance Channel at a cost of \$2,038,656. The District prepared Plans and Specifications for the FY 03 Brunswick and Savannah Entrance Channel.

Operation and Maintenance costs for the FY amounted to \$7,267,055, which included such items as water quality monitoring, project condition surveying, and cultural resources monitoring. (See Table 8-A for Cost and Financial Statement.)

SAVANNAH, GA, DISTRICT

Condition at End of Fiscal Year. Training walls, jetties, and other structures are in fair condition. Authorized channels are maintained by a planned dredging program with work at critical areas, when necessary. The notice on the Final Environmental Impact Statement appeared in the Federal Register June 25, 1976. Notices of availability on two Final Supplements to the Environmental Impact Statement appeared in the Federal Register September 25, 1978, and January 8, 1980.

5. SAVANNAH RIVER BELOW AUGUSTA, GA

Location. Savannah River is formed by the confluence of the Tugaloo and Seneca Rivers on the boundary line between South Carolina and Georgia. It flows southeast 314 miles, forming the boundary line between two states, and empties into the Atlantic Ocean 16.6 miles below Savannah, GA. (See NOAA Charts 11514 and 11515, formerly Geological Survey maps of South Carolina and Georgia.)

Previous Projects. For details see page 1813 of Annual Report for 1915 and page 581 of Annual Report for 1938.

Existing Project. The authorized project provides for a channel 9 feet deep and 90 feet wide (at ordinary summer flow of 5,800 second-feet at Augusta, GA) from the upper end of the Savannah Harbor to the head of navigation at Augusta, above the 13th Street Bridge (R.M. 202.6), a total distance of about 181 miles. A lock and dam is located approximately 15 miles below the upper limit of the project at New Savannah Bluff. Improvement is to be obtained by construction of contraction works, closure of cutoffs, bank protection, dredging, removal of snags, over hanging trees and wrecks, and open-river regulation. Mean tidal variation at the mouth of the river is 7 feet. Freshet variation above the normal pool level (elevation 114.5 mean sea level) of New Savannah Bluff Lock and Dam at mile 187 is ordinarily about 13 feet with an extreme of 34 feet. Due to lack of commercial use, the river has not been dredged since FY 79.

Local Cooperation. Complied with to date.

Terminal Facilities. The only water terminals served by this improvement are at Augusta, Sylvania, and at or near Savannah. Augusta provided a municipal dock valued at \$50,000 and Georgia Ports Authority constructed a state port at Augusta, GA, costing about \$418,000. These facilities were expanded in 1965 at an additional cost of about \$250,000. These are supplemented by natural landings along the river and extensive facilities at Savannah.

Operations and Results During Fiscal Year. In general, open-channel works are in good condition. The

notice on the Final Environmental Impact Statement appeared in the Federal Register February 18, 1977. There were no dredging projects during this fiscal year.

Operation and Maintenance costs for the FY amounted to \$203,072. (See Table 8-A for Cost and Financial Statement.)

6. RECONNAISSANCE AND CONDITION SURVEYS

Reconnaissance and Condition Surveys were conducted in FY 02 on the following projects:

AIWW
Brunswick Harbor
Savannah Harbor

7. OTHER AUTHORIZED NAVIGATION PROJECTS

(See Table 8-C.)

8. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Navigation activities pursuant to Section 107, Public Law 86-645 (preauthorization). Expenditures in FY 02 totaled \$28,243. Coordination account: \$8,762; Port Wentworth, GA: \$716; and Lazaretto Creek, GA: \$18,764.

Mitigation of shore damages activities pursuant to Section 111, Public Law 90-483 (preauthorization). Tybee Island, GA incurred costs in FY 02 of \$12,985.

Beach Erosion Control

9. TYBEE ISLAND, GA

Location. Tybee Island is located directly south of the Savannah River entrance, about 17 miles east of the City of Savannah, GA. (See NOAA 11512, 11513, and 11509, formerly U. S. Coast and Geodetic Survey Charts Numbers 440, 1240, and 1241, and on maps included in HD 92-105, 92nd Cong.) The only portion of the island that has developed is bounded on the north by the south channel of the Savannah River, on the east by the Atlantic Ocean, and on the south and west by Tybee Creek and other small tidal streams. The city of Tybee Island, GA, occupies this area, hereinafter referred to as "Tybee Island." The ocean face of this area has a wide sandy beach. Tybee Island is about 3.5 miles long from its northerly tip to the mouth of Tybee Creek with an average width of about 0.5 miles. Behind the beach lies a line of sand dunes, a number of which have been removed during the years to make room for

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

improvements and for various other reasons. Those that remain are from 10 to 20 feet high. The ground elevation west of the dunes is from 10 to 18 feet and slopes westward to the salt marsh.

Existing Project. The Water Resources Development Act of 1976 authorized a Project Plan of Improvement for an 800-foot rock groin at the north end of the island, with a 225-foot tie-in to high ground. An additional 1,200-foot extension of this groin is deferred, as are two additional intermediate groins (480 feet long); these would be added at a later date, if needed. The plan also provided for the initial restoration of approximately 13,300 feet of beach, from the vicinity of 18th Street to the terminal groin located at the northern end of the island. Periodic nourishment is authorized to maintain suitable beach dimensions. Section 201 of the Flood Control Act of 1965, U.S. Senate Committee Resolution of June 22, 1971 approved the project as contained in House Document No. 92-105. The main features included a north terminal groin that was completed in June 1975; initial nourishment in March 1976; construction of the south terminal groin in February 1987; the first periodic renourishment in April 1987, and the second renourishment in July of 2000. The Federal Project included 2.6 miles of oceanfront beach between the north and south terminal rock groins.

Local Cooperation. Local interests must: (a) contribute in cash the required percentage of the first cost (including costs for construction, engineering and design, and administration; and excluding the cost of lands, easements, rights-of-way and relocation) of all items of work to be provided by the Corps of Engineers. The local contribution is presently estimated at 39.9 percent to be paid in a lump sum prior to start of construction or in installments prior to the start of pertinent work items in accordance with construction schedules as required by the Chief of Engineers, the final apportionment of cost to be made after the actual costs have been determined; (b) provide maintenance and repair of the groins, and provide (after the first 10 years of project life) periodic nourishment of the restored beach as may be required to serve the intended purpose during the life of the project; (c) provide without cost to the United States all lands, easements, rights-of-way, and relocations required for construction and subsequent nourishment of the project; (e) control water pollution to the extent necessary to safeguard the health of bathers; and (f) provide, without cost to the United States, access and facilities necessary for realization of the public benefits upon which Federal participation is based, and maintain continued public use of the beach and administer it for public use during the life of the project, and provide further the construction on the project shall not be started until local interests furnish lands for beach access and parking, satisfactory to the Chief of Engineers, for the entire project limits.

Condition at End of Fiscal Year. Section 934 of 1986 WRDA and Corps policy guidance required a reevaluation of renourishment projects. The purpose was to determine if future renourishments met current policy and further Federal participation was justified. The analysis, completed in October 1994, recommended extending the project life for the remaining 28 years of the 50-year project life. Section 506 of 1996 WRDA, approved in June 1995, was the formal Secretary of the Army authorization to continue periodic renourishment until 2024. The analysis further indicated the National Economic Plan (NED) might be different than the authorized project and lead to a more detailed analysis in the Special Report on South Tip Beach/Back River.

The Asst. Secretary of the Army (Civil Works) approved the Special Report on South Tip Beach/Back River on August 24, 1998. The report determined the South Tip and Back River segments should be added to the authorized project. It resulted in passage of Section 301 of 1996 WRDA that modified the authorized project to include the portion of Tybee Island located south of the existing south terminal groin between 18th and 19th Streets, including the east bank of Tybee Creek up to Horse Pen Creek as shown below. The project now extends from the north terminal groin southward for 3.5 miles to Horsepen Creek.

Section 301 of Water Resources Development Act of 1996 modified the authorized project as follows:

SECTION 301(b) PROJECTS SUBJECT TO REPORTS.--The following projects are modified as follows, except that no funds may be obligated to carry out work under such modifications until completion of a report by the Corps of Engineers finding that such work is technically sound, environmentally acceptable, and economically justified.

(4) TYBEE ISLAND, GEORGIA.--The project for beach erosion control, Tybee Island, Georgia, authorized pursuant to section 201 of the Flood Control Act of 1968 (42 U.S.C. 1962d-5; 79 Stat. 1073-1074) is modified to include as an integral part of the project the portion of Tybee Island located south of the existing south terminal groin between 18th and 19th Streets, including the east bank of Tybee Creek up to Horse Pen Creek.

The Department of the Army and the City of Tybee Island, Georgia, signed a Project Cooperative Agreement (PCA) that allowed renourishment of oceanfront, nourishment of a State placed groin field on South Tip, and construction of several rock groins and initial nourishment in Back River. (Civil Works) City of Tybee Island is the non-Federal sponsor for the project. The agreement is included in Appendix B. The project, now constructed, includes:

SAVANNAH, GA, DISTRICT

- Renourishing 13,200 feet of oceanfront beach between north and south Federal terminal groins to provide minimum 124-foot wide beach at high tide.
- Constructing rock groin field along 1,800 feet of Back River Beach.
- Restoring the beach along Back River Beach.

In September 1999, construction of the Back River Beach groins began and the associated beach renourishment was completed in July 2000.

The District continued the long term monitoring in FY 2002, performing two full beach surveys in March and August at a contract cost of \$27,857. The surveys showed only slight erosion occurring along the Ocean Front beach with marked erosion along the Back River segment. Per the Operations and Maintenance Manual, the South Tip groins were notched once the total erosion between the three Back River cells exceeded 40 percent of the baseline volume. The notching occurred on October 16, 2002 with six of the Campbell units removed from the oceanward end of the three groins. Pre-notching topographic survey information was gathered on October 13, 2002. Agreement was reached that requires three of the units to be replaced if the total sand loss in any cell reaches 30 percent or three feet on average along the seawall in any groin cell or if five feet of the seawall is exposed at any given location within the groin fields.

Flood Control

10. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Expenditures for the FY amounted to \$26,958. (See Table 8-A&D.)

11. OTHER AUTHORIZED FLOOD CONTROL PROJECTS

(See Table 8-D)

12. OATES CREEK, RICHMOND COUNTY, GA

Oates Creek is a major drainage outlet for flood water from an urban area of Augusta, GA. A flood control study of Oates Creek was authorized and completed as part of the Savannah River Basin study. The Oates Creek study area is located just south of Augusta in Richmond County.

The revised FEMA mapping has been prepared in order to reduce the flood insurance costs of the inhabitants of the Oates Creek Basin. The Operation and Maintenance manual was completed in December 1993 and the

project was turned over to Richmond County for long term maintenance. For more details, see Annual Report for FY 1995. Based on the Design Deficiency Evaluation Reconnaissance Report, the Oates Creek project will require some repair and improvement work. It is scheduled to start construction in FY 2003. Total cost of the repair project is \$2,230,000. New Work costs for the FY amounted to \$142,404.

13. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

These Flood Damage Reduction activities are accomplished under the authority of Section 205, Flood Control Act of 1948 (Public Law 858, 80th Congress) as amended. During FY 02 a total of \$718,050 was spent on preauthorization flood damage reduction studies. Study efforts during FY 02 were as follows: Coordination Account: \$12,759; Harmon Canal: \$555,076; and Unnamed Tributaries Ben Hill County: \$150,214.

14. EMERGENCY STREAMBANK AND SHORELINE PROTECTION UNDER SPECIAL AUTHORIZATION

In FY 02, costs were incurred for Section 14, Coordination Account: \$8,823 and Augusta Ports: \$3,000.

Environmental Restoration

15. PROJECT MODIFICATION TO IMPROVE ENVIRONMENT UNDER SPECIAL AUTHORIZATION

These projects are accomplished under the authority of Section 1135, Water Resources Development Act of 1986 (Public Law 99-662) as amended. During FY 02 costs were incurred as follows: Coordination Account: \$16,605 and Preliminary Restoration Plan: \$4,654. Environmental study efforts were as follows: Latham River/Jekyll Island, GA: \$18,558; and Back River Restoration, GA: \$12,358. Project Modification Report was completed for Latham River/Jekyll Creek to determine environmental benefits but sponsor decided not to participate.

16. AQUATIC ECOSYSTEM RESTORATION UNDER SPECIAL AUTHORIZATION

These projects are accomplished under the authority of Section 206, Aquatic Ecosystem Restoration, Water Resources Development Act of 1996. During FY 02 costs were incurred as follows: Coordination Account: \$19,050; Preliminary Restoration Plans: \$49,784;

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

Beaver Ruin Creek: \$9,907; Jackson Creek: \$9,908; Mill Creek: \$298,695; and Quacco Canal: \$208,271.

Multiple-Purpose Power Projects Including Major Rehabilitation

17. J. STROM THURMOND DAM AND LAKE, GA AND SC (Formerly Clark Hill Lake)

Location. J. Strom Thurmond Dam and Lake is located at mile 237.7 on the Savannah River about 22 miles upstream from Augusta, GA. (See Geological Survey maps of GA and SC.)

Existing Project. The authorized project provides for construction of J. Strom Thurmond Dam and Reservoir, the final cost of which was \$79,156,300. The dam has a concrete section 2,282 feet long with a maximum height of 200 feet and a controlled spillway 1,096 feet long. The concrete section is flanked on the west side by a rolled-earth embankment of 2,069 feet and on the east side by a similar embankment of 1,329 feet.

The total length of the dam is 5,680 feet. The lake covers 71,100 acres at maximum power pool elevation 330 msl. It provides a total storage capacity of 2,900,000 acre-feet allocated as follows: flood control 390,000 acre-feet; hydropower 1,045,000 acre-feet; dead storage 1,465,000 acre-feet. Seven 40,000-kilowatt generators have a combined generating capacity of 282,000 kilowatts with an average annual output of 700 million kilowatt-hours of electrical energy.

Local Cooperation. None required.

Operations and Results During Fiscal Year. Net generations of electric energy for the period was 326,731 megawatt-hours, most of which was delivered to the Southeastern Power Administration. Cumulative flood damage prevented through FY 02 was \$11,377,000. Maintenance: Operation and Maintenance costs for the FY amounted to \$11,172,854. (See Table 8-A for Cost and Financial Statement.) The notice of availability on the Final Environmental Impact Statement on J. Strom Thurmond Dam and Reservoir Operation and Maintenance appeared in the December 18, 1981 Federal Register. In FY 02, 6,705,377 persons visited the facility.

Condition at End of Fiscal Year. Construction is complete except for providing additional recreational development.

Major Rehabilitation. The J. Strom Thurmond

Powerplant was included as a project in the Major Rehabilitation Program in 1996. An Evaluation Report was approved in July 1994. Appropriations were provided in the FY 96 Energy and Water Bill in November 1996. Current estimate is \$69,700,000. All eight contracts have been awarded. Current project cost estimate remains at \$69,700,000. Project completion date is September 2006. Currently six of the eight contracts have been completed in FY 02 with one more scheduled for completion in FY 2003 and one in 2006. Major Rehabilitation costs for the FY amounted to \$8,579,369. (See Table 8-A for Cost and Financial Statement.)

18. HARTWELL DAM AND LAKE, GA AND SC

Location. Hartwell Dam and Lake is on the Savannah River 305 miles above its mouth and 89 miles upstream from Augusta, GA (See Geological Survey maps of GA and SC.)

Existing Project. The dam is a concrete gravity-type structure 1,900 feet long with a maximum height of 204 feet and a controlled spillway 480 feet in length. The concrete section is flanked on the east and west abutments by earth embankments totaling 13,362 feet in length and by a saddle dike 2,590 feet long also on the west side. Total length of the dam is 17,852 feet. At maximum conservation pool elevation of 660 feet the lake covers 55,950 acres. Total capacity of the lake is 2,843,000 acre-feet of storage allocated as follows: flood control - 293,000 acre-feet; hydropower - 1,416,000 acre-feet; dead storage - 1,134,000 acre-feet. Four 66,000 kilowatt generators having a generating capacity of 264,000 kilowatts were installed initially with provisions for a fifth unit. Unit 5 went into operation in 1983 with a nameplate rating of 80,000 kilowatts. Rehabilitation Phase I is complete for Units 1-4 and has increased their nameplate rating to 85,500 kilowatts for a total plant nameplate capacity of 422,000 kilowatts.

Local Cooperation. None required.

Operations and Results During Fiscal Year. Net generation of electrical energy for the period amounted to 236,721,000 kilowatt-hours, all of which was marketed by the Southeastern Power Administration. Cumulative flood damage prevented through FY 02 is \$13,729,334. Maintenance: Operation and Maintenance costs for the FY amounted to \$14,266,316. (See Table 8-A for Cost and Financial Statement.) The notice on the Final Environmental Impact Statement on the operation and maintenance of Hartwell Dam and Lake appeared in the Federal Register on August 21, 1978. Approximately 9,723,545 persons visited the lake in FY 02.

SAVANNAH, GA, DISTRICT

Major Rehabilitation. The Hartwell Powerplant Major Rehabilitation project was approved by HQUSACE, and was included in the FY 96 budget. The project scope includes the rewinding of the first four generators, the replacement of the transformers, the refurbishment of the turbine water passageways, and the replacement of key electrical/mechanical peripheral equipment and the replacement/refurbishment of the four older headgates. The fully funded cost for the recommended plan is \$26,000,000. All five contracts have been awarded and Rehabilitation Phase I was completed in September 2000. Rehabilitation Phase II is underway with plans and specifications being completed in FY 03. Phase II will include replacing the exciters and voltage regulators, governor upgrades, replacing the 230kV switchyard breakers, and upgraded the switchyard equipment and current capacity. Funding in the amount of \$10 million has been authorized for Phase II Rehabilitation Program. Schedule for completion of Rehab Phase II is FY 04. Major Rehabilitation costs for the FY amounted to \$2,436,596.

19. HARTWELL LAKE/CLEMSON UPPER & LOWER DIVERSION DAMS, GA AND SC

Location. Both Diversion Dams are located on Government property located between Clemson University and the Savannah River Basin on the South Carolina side of Hartwell Lake, approximately 20 miles upstream of Hartwell Dam.

Existing Project. The Remedial Measures to Increase Post Earthquake Stability for both Upper and Lower Clemson Diversion Dams in accordance with the Dam Safety Assurance Program was authorized in Senate and House Committee resolutions pursuant to the Water Resources Development Act of 2000, as presented to 106th Congress dated January 24, 2000.

Both upper and lower earthen dams were constructed in 1960 and 1961 prior to the impoundment of Hartwell Reservoir to protect Clemson University lands and existing facilities. The upper dam is 2,100 feet and the lower dam is 3,000 feet long, both have a maximum height of 75 feet. Seismic evaluation indicates that the downstream slopes of both dams (the Clemson University side) will fail from seismic events that could occur with a probability of once in every 475 years. Earthquake triggering events of as low as .07 to .10 g forces could cause liquefaction and subsequent failure. In this scenario, 390 acres of Clemson University will flood in about 5 hours. Economic damage is estimated at \$1.1 billion and there is a high probability that human life will be lost in such event.

The total project for both upper and lower diversion dams includes the following construction components:

a. Excavation at Upper & Lower Dams

- Temporarily excavate existing material from the downstream side over the entire 2,100 and 3,000 foot lengths of both upper and lower dams, respectively. The excavation will take place between approximate elevations of 645 to 640' msl. This section traverses 50 feet perpendicular to the dams and involves removing material to an average depth of about 16 feet.

b. Deep Soil Mixing at Upper and Lower Dams

- Deep soil mixing elements will be installed to a depth of two feet below the existing loose alluvium layer. The deep soil mixing elements will be installed into 3 to 8 foot diameter auger holes driven to a varying depths of 40 to 45 feet. All holes will be overlapped into each other to create 50 foot continuous ground walls oriented perpendicular to the axis of each dam and spaced every 11.5 feet. A longitudinal wall paralleling the dam axis will connect the upstream ends of the transverse walls and they run the entire lengths of both dams.

c. Restore Downstream Side of the Dams to Original Template

- Place fill material into the 50 foot swath paralleling the axis of the dams. Original excavation material will be reused.

Local Cooperation. None required.

Condition at End of Fiscal Year. The project is funded with construction general funds. The total project cost estimate is \$8,741,000 and this figure includes all engineering and design as well as supervision and administration during construction and a 25 percent contingency on the construction cost estimate. The project design is scheduled for completion in late March 2003. It will be advertised for bids in April 2003 with award scheduled in May 2003. The construction period is 18 months and scheduled for completion in November 2004. New work costs for the FY amounted to \$637,499. (See Table 8-A for Cost and Financial Statement.)

20. RICHARD B. RUSSELL DAM AND LAKE, GA AND SC (Formerly Trotters Shoals Lake, GA and SC)

Location. Richard B. Russell Dam is located on the Savannah River 275.1 miles above its mouth, 29.9 miles below Hartwell Dam, and about 37.4 miles above J. Strom Thurmond Dam (formerly Clarks Hill Dam). (See NOAA Survey maps of GA and SC.)

Existing Project. The authorized project provides for construction of Richard B. Russell Dam and Lake substantially in accordance with the recommendations. The latest approved (FY 99) cost estimate for the project

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

is \$620,000,000 of which \$466,969,000 is for construction; \$28,857,000 for lands and damages; \$4,880,000 for cultural resources; and \$124,174,000 for engineering/design, supervision/administration, and all project studies, including environmental. Approval was received in January 1977 to include minimum provisions for pumped storage.

A Feasibility Report and Final Environmental Impact Statement to address the installation and operation of four 75 MW reversible pump-turbines were prepared in 1979 with the Record of Decision signed in August 1980. The Richard B. Russell Fish and Wildlife Mitigation Plan was completed in 1981, approved by the Assistant Secretary of the Army (Civil Works) in September 1982, and the provisions are being implemented.

Since 1986, the District has conducted comprehensive Fishery studies in the Russell tailrace and J. Strom Thurmond Lake (formerly Clarks Hill Lake) downstream. In addition, the District conducted water quality studies, hydraulic modeling, and an evaluation of various fish protection measures associated with hydroelectric projects. The results of these study efforts have been used to evaluate the need to develop fish protection at the Richard B. Russell Project associated with pumped storage operations. This evaluation is presented in a supplement to the final Environmental Impact Statement (EIS) on pumped storage. The Record-of-Decision (ROD) was signed September 1991. Installation of pumped storage is complete; final Phase III environmental testing was completed in October 1996.

The Phase III Environmental Report and its Interagency Review was completed in August 1997. The District completed the NEPA Documentation Phase and also completed discussions with the resource agencies in attempting to resolve issues. SAS reached an agreement with SCDNR on operational measures and general mitigation package. The remaining issue was that SC insisted on a consent order for commercial operations. COE could not accept this condition and attempted to resolve this with a Memorandum of Agreement (MOA) in addition to the NEPA Documentation. SCDNR did not accept the MOA. DOJ/USACE request for summary judgement and oral arguments were presented in the Charleston, SC U.S. District Court on October 17, 2000, requesting release from the injunction to commercially operate this 320 mw addition. The court ruled in the Corps' favor on May 3, 2002 and the units were placed into commercial production on September 1, 2002. All cost shared recreation is complete except a wilderness park that was planned in the McCalla Peninsula.

Local Cooperation. Federal Water Project Recreation Act. Public Law 89-72; 79 stat. 213C (for Legislative History of Act see page 1864).

Operations and Results During Fiscal Year. Net generations of electric energy for the period were 284,847 megawatt-hours. Maintenance: Operation and Maintenance costs for the FY amounted to \$8,470,540. (See Table 8-A for Cost and Financial Statement.) These funds were for management of lake and power activities. (See Table 8-A for Cost and Financial Statement.) Approximately 1,097,399 persons visited the lake in FY 02.

Condition at End of Fiscal Year. The project is 97 percent complete.

Total cost of project to September 30, 2002, is \$730,164,873. New Work costs for the FY amounted to \$2,135,692. (See Table 8-A for Cost and Financial Statement.)

General Investigations

21. SURVEYS

During FY 02, costs of \$890,643 were incurred as follows: Navigation Studies: \$189; Flood Damage Prevention Studies: \$426,580; Special Studies: \$150,139; Watershed/Comprehensive Studies: \$187,021; Review of Authorized Projects: \$78,618; and Miscellaneous Activities: \$48,096.

22. COORDINATION WITH OTHER AGENCIES

Planning Assistance to States activities are accomplished under the authority of Section 22, Water Resources Development Act of 1974, as amended. During FY 02, a total of \$71,287 was expended.

23. COLLECTION AND STUDY OF BASIC DATA

During FY 02, under the Flood Plain Management Services Program, flood hazard related information and assistance were provided to state and local governments on a nonreimbursable basis and to other Federal agencies and private persons on a cost recovery basis. Expenditures were as follows: Flood Plain Management Services: \$53,118; Technical Services: \$83,016; Quick Responses: \$7,999; two Special Studies: \$30,016; HES Dialogue: \$6,035; and Hydrologic Studies: \$2,231.

24. PRE-CONSTRUCTION ENGINEERING AND DESIGN (PED)

Total PED expenditures in FY 02	
Projects Not Fully Authorized:	\$510,662.
Projects Fully Authorized:	760,027.

SAVANNAH, GA, DISTRICT

Savannah Harbor Expansion, GA & SC: \$510,662. Congress added funds for development of the tier II EIS, General Reevaluation Report and the Federal Oversight of the project that was formulated by a non-Federal interest (The Georgia Ports Authority) (GPA) under Section 203 of WRDA 86. The project was conditionally authorized for construction by Congress in the Water Resources Development Act of 1999. The GPA is conducting numerous studies and data gathering under Federal oversight for the required Tier II Environment Impact Statement.

New Savannah Bluff Lock & Dam, GA & SC: \$760,027. In the Water Resources Development Act of 2000 and Omnibus Appropriation Act, January 2001, Congressional direction was provided to repair the project at Federal expense, including provision of a fishway. Congressional authorization to transfer the project to the City of North Augusta and Aiken County, SC after the repairs was also provided. This project consists of a lock chamber, dam, operation building, and a 50-acre park and recreation area in Georgia. A naturalistic designed channel will be built on Government property located on the SC side of the facility.

Miscellaneous

25. CATASTROPHIC DISASTER PREPAREDNESS PROGRAM

Local Preparedness	\$ 0
National Preparedness	23,136
National Emergency Facility	5,003

See Section In Text	Project	Funding	FY-99	FY-00	FY-01	FY-02	Total to Sep 30, 2002
1.	Includes \$194,497 for previous projects.						
2.	Includes \$134,789 for previous projects. Does not include \$35,000 appropriated but unexpended of contributed funds in FY's 86 and 87.						
3.	Includes \$643,456 for previous projects and \$97,521 expended from Public Works Funds for existing project. Does not include \$10,000 contributed funds.						
4.	Includes \$54,414 for previous projects, \$4,995 expended from Public Works Funds for existing project, and \$2,150,000 under 1983 Job Bill Act. Does not include contributed funds by Brunswick and Georgia Port Authority.						
5.	Includes \$7,260,384 for previous projects. Does not include \$46,847 for removal of sunken vessels or contributed funds.						
6.	Includes \$298,894 for previous projects and \$62,727 contributed funds.						
7.	Includes \$93,480 for previous projects and \$1,634,562 from Public Works Fund.						
8.	Does not include \$61,856 contributed funds.						
9.	Does not include \$395,634 accelerated Public Works Funds. Includes \$4,448,613 appropriated under Code 710. Also includes \$1,000,000 expended under the 1983 Job Bill Act.						
10.	Includes \$576,665 under special recreation use fees and \$736,000 under the 1983 Job Bill Act.						
11.	Includes \$17,515,000 appropriated for construction of 5 th Unit of which \$17,469,002 has been expended.						
12.	Does not include \$276,200 accelerated Public Works Funds. Includes \$4,861,000 appropriated under Code 710 of which \$4,851,306 has been expended and \$545,000 expended under the 1983 Job Bill Act.						
13.	Includes \$797,558 expended for special recreation use fees.

AUTHORIZING LEGISLATION

1.		ATLANTIC INTRACOASTAL WATERWAY BETWEEN NORFOLK, VA, AND ST. JOHNS RIVER, FL (SAVANNAH DISTRICT)	
	Jun 3, 1896	Section from Beaufort, SC, to Savannah, GA Route No. 2 adopted.	HD295, 53d Cong., 3d sess.
	Mar 3, 1899	Route No. 1 adopted.	HD295, 53d, Cong., 3d sess.
	Jul 13, 1892	Section from Savannah, GA, to Fernandina, FL. Original 7-foot channel.	HD41, 52d Cong., 1st sess.
	Mar 3, 1905	Provided for Skidaway Narrows.	HD450, 58th Cong., 2d sess.
	Jul 25, 1912	Incorporated alternative routes previously improved as separate projects and the auxiliary channels.	HD1236, 60th Cong., 2d sess.
	Aug 8, 1917	Section from Cumberland Sound, GA and FL to St. Johns River, FL. Consolidation of the 3 sections shown above, into "Waterway between Beaufort SC, and St. Johns River, FL."	
	Mar 2, 1919	Section from Beaufort, SC to Cumberland Sound GA and FL. Removing logs and snags from Generals Cut.	HD581, 63d Cong., 2d sess.
	Mar 2, 1919	Improving Back River to provide a channel 7 feet deep and 150 wide.	HD1391, 62d Cong., 3d sess.
	Mar 3, 1925	Channel 75 feet wide between Beaufort, SC, and Savannah, GA.	SD178, 68th Cong., 2d sess.
	Jul 3, 1930	Channel from Baileys Cut to Dover Creek.	SD43, 71st Cong., 2d sess.
	Aug 26, 1937	A 7-foot protected channel around St. Andrews Sound.	Senate Committee Print, 74th Cong., 1st sess.
	Aug 26, 1937	A 12-foot channel between Beaufort, SC, and Savannah, GA, via Beaufort River and Port Royal Sound.	Rivers and Harbors Committee, Doc 6, 75th Cong., 3d sess.
	Jun 20, 1938	A 12-foot channel between Savannah, GA, and Fernandina, FL, various cutoffs; and anchorage basin at Thunderbolt, GA.	HD618, 75th Cong., 3d sess.
	Mar 2, 1945	An alternate route 9 feet deep and 150 feet wide in that part of Frederica River, GA, not now traversed by the main route, at no additional cost to the United States.	HD114, 77th Cong., 1st sess.
	Oct 15, 1981	Main channel relocated from Frederica River to Mackay River in the vicinity of Torras Causeway. Navigation Project.	Project authorized by Chief of Engineers under the Small Navigation Project Authority, Sec. 107, PL 86-645, as amended.
2.		BRUNSWICK HARBOR, GA	
	Mar 3, 1879	Construction of East River jetty.	Annual Report, 1980, p.959.
	Mar 2, 1907	Channels in the inner and outer harbors of 30-foot depth at mean high water, with widths varying from 150 feet in Academy Creek to 400 feet across the outer bar, extension of training wall in East River and construction of two spur dikes.	HD407, 59th Cong., 1st sess.
	Mar 2, 1919	Channels 27 feet deep at mean low water over the bar and at Brunswick point; and 24 feet deep at mean low water in the inner harbor and provides for a cut from Academy Creek to Turtle River, if deemed advisable.	HD393, 64th Cong., 1st sess.
	Jul 3, 1930	A channel in Back River 230 feet deep and 150 feet wide.	SD57, 71st Cong., 2d sess.
	Jul 3, 1930	Increased Channel dimensions of the bar, Brunswick Point, East River, and Turtle River, as given in the	SD132, 71st Cong., 2d sess.

		then existing project.	
	Jun 20, 1938	A 10-foot channel in Terry Creek.	HD690, 75th Cong., 3d sess.
	May 17, 1950	Increased channel dimensions of the bar, St. Simons Sound, Brunswick River, East River, and Turtle River, as given in the existing project.	HD110, 81st Cong., 1st sess.
	Oct 22, 1976	Provides for Phase I AE&D studies for deepening portions of existing harbor (East River and Entrance Channel) and for provision of a navigation channel to Colonels Island.	Report of Chief of Engineers dated Aug. 18, 1976.
	Jul 14, 1981	Enlargement of the maneuvering area of the entrance to East River and dredging Brunswick and Turtle Rivers to obtain depths authorized by the Rivers and Harbors Act of May 17, 1950.	HD177, 97th Cong., 1st sess.
	Jul 13, 1983	Enlargement of the East River Turning Basin to a length of 1,000 feet and a width of 750 feet.	PL 98-360
	Oct 17, 1986	Incorporated Georgia Port Authority's 30 foot deep by 300 foot wide by 8000 foot channel in South Brunswick River serving Colonel's Island into Brunswick Harbor Navigation Project.	HR6, 99th Cong., 2d sess., Section 846
3.	PL-104-303 Water Resources Development Act of 1996, Oct 12, 1996	LOWER SAVANNAH RIVER BASIN, GA & SC Project for the environmental restoration of the Lower Savannah River Basin; modification to cut off Bend No. 3 and improve the mouths of Bear Creek and Mill Creek.	HD105-173, 105th Congress, 2nd Session, Jan 27, 1998
4.		SAVANNAH HARBOR, GA	
	Mar 2, 1907	Tentative provisions for a 26-foot channel from the Quarantine Station to the Seaboard Air Line Railway Bridge.	HD181, 59th Cong., 1st sess.
	Jun 25, 1910	Definite provision for the 26-foot channel.	
	Jul 25, 1912	A 21-foot channel from the Seaboard Air Line Railway Bridge to the foot of Kings Island.	HD563, 62d, Cong., 2d sess.
	Aug 8, 1917	A 30-foot depth from the sea to the Quarantine Station.	HD1471, 64th Cong., 2d sess.
	Jan 21, 1927	A 21-foot channel above Kings Island.	HD261, 69th Cong., 1st sess.
	Jan 21, 1927	Channel 30 feet deep, with general width 50 feet, from the ocean to the Quarantine Station, thence 26 feet deep, general width 400 feet, to the Seaboard Air Line Rho. Bridge, thence 21 feet deep and 300 feet wide to Kings Island. Widening at West Broad and Barnard Streets; anchorage basin; mooring dolphins; regulating dam across South Channel; relocation of the Inland Waterway; dredging Drakes Cut to 13 feet; widening to 525 ft. at Kings Island; extension of training walls, revetments, and jetties. Consolidation of projects relating to Savannah Harbor.	HD262, 69th Cong., 1st sess.
	Jul 3, 1930	Channel 26 feet deep and 300 feet wide from the Seaboard Air Line Rho. Bridge to the foot of Kings Island.	SD39, 71st Cong., 1st sess.
	Aug 30, 1935	Authorized the 30-foot project and eliminated from the project (a) the relating dam across South Channel; (b) the relocation of the Inland waterway; and (c) the further extension of training walls, revet-	HD276, 73d Cong., 2d sess.

SAVANNAH, GA, DISTRICT

TABLE 8-B

AUTHORIZING LEGISLATION

	ments, and jetties.	
Mar 2, 1945	Deepening the channel and turning basin above the Seaboard Air Line Rho. Bridge from 26 to 30 feet and widening the channel opposite the Atlantic Coast Line Terminals to a maximum of 550 feet for a length of 5,000 feet.	HD283, 76th Cong., 1st sess.
Nov 7, 1945	Deepening the channels to 36 feet deep and 500 feet wide across the ocean bar; 34 feet deep and generally 400 feet wide increased to 550 feet opposite the Atlantic Coast Line Terminals, with a turning basin 34 feet deep at the Mexican Petroleum Corp. Refinery; and with such modifications thereof as the Secretary of War and the Chief of Engineers may consider desirable.	HD227, 79th Cong., 1st sess.
Jul 24, 1946	Extending channel 30 feet deep, 200 feet wide upstream from Atlantic Creosoting Terminal to a point 1,500 feet below the Atlantic Coastal Highway Bridge, with turning basin 30 feet deep at upper end.	HD678, 79th Cong., 2d sess.
Sep 3, 1954	Deepening the channel to 34 feet and widening to 400 feet from the upper end of the presently authorized 34-foot channel in the vicinity of the American Oil Company Refinery wharf, to the Savannah Sugar Refinery Corp. with a turning basin at the upper end of the proposed improvement made by widening the channel to 600 feet for a length of 700 feet and providing approaches.	HD110, 83d Cong., 1st sess.
Oct 23, 1962	Enlargement of turning basin near Kings Island to a width of 900 feet and a length of 1,000 feet, with suitable approaches, at a depth of 34 feet.	SD115, 87th Cong., 1st sess.
Oct 27, 1965	Deepening the bar channel from 36 feet to 40 feet, the channel between the bar channel and Garden City Terminal from 34 feet to 38 feet, and the channel from the Garden City Terminal to the vicinity of the Savannah Sugar Refining Corp., from 30 feet to 36 feet; widening the bar channel from 500 feet to 600 feet, the channel between Fort Pulaski and the Atlantic Coast Line Terminal from 400 feet to 500 feet, and the channel between Garden City Terminal and the Savannah Sugar Refinery Corp., from 200 feet to 400 feet; providing necessary wideners of the bends; constructing a new turning basin 900 feet wide by 1,000 feet long by 34 feet deep opposite the Atlantic Coast Line Terminals; and enlargement of existing turning basin at the American Oil Company Terminal from 600 feet wide by 600 feet long to 900 feet wide by 1,000 feet long.	HD226, 89th Cong., 1st sess.
Oct 27, 1965	Providing sediment control works consisting of tide gate structure across Back River; sediment basin 40 feet deep, 600 feet wide about 2 miles long, with entrance channel 38 to 40 feet deep and 300 feet wide; control works and canals for supplying fresh water to Savannah National Wildlife Refuge; and facilities to mitigate damages to presently improved areas other than refuge lands. Provided for modification of the existing project to	HD223, 89th Cong., 1st sess.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

TABLE 8-B

AUTHORIZING LEGISLATION

	SPWC Resolution Jun 15, 1976 and HPWC, Jun 9, 1976 under authority of Sec. 201, Flood Control Act of 1965	include (1) incorporation of the LASH Turning Basin as an element of the existing Federal navigation project for maintenance purposes, (2) enlargement of Kings Island Turning Basin to 1,500 feet by 38 feet.	HD94-520, 94th Cong. dated June 8, 1976.
	Jul 16, 1984	Construction of three new work curve wideners in the inner harbor channel. Curve Widener #1 is between mile 11.1 and 11.9. Curve widener #2 is between mile 13.2 and 13.8 and curve widener #3 is between mile 14.0 and 14.8. The Wideners are located on the north side of the channel.	PL 98-360
	Oct 17, 1986	Savannah Harbor Widening as described in Report of Chief of Engineers date Dec. 19, 1978. Widen channel from 400 feet to 500 feet between Kings Island turning Basin and Fig Island Turning Basin. Allows planning, engineering and design to remove drift and debris as part of operations and maintenance.	HD6, 99th Cong., 2d sess. Dated Oct. 17, 1986, Section 201 Section 867
	Oct 31, 1992	Savannah Harbor Deepening deepened harbor from -38 feet to -42 feet mlw in Inner Harbor and from -40 feet to -44 feet mlw in the Bar Channel for a total of 31 miles of harbor improvements.	WRDA 1992
5.	Sep 13, 1891 Jun 25, 1910	SAVANNAH RIVER BELOW AUGUSTA, GA For a 5-foot channel Special improvement by bank protection work of 20 to 25 miles of the river immediately below Augusta.	HD255, 51st Cong., 2d sess. HD962, 60th Cong., 1st sess.
	Jul 3, 1930	The present 6-foot channel project and Lock and Dam, GA.	HD101, 70th Cong., 1st sess.
	Aug 30, 1935	Provision made for locating the lock and dam at New Savannah Bluff.	Senate Committee Print, 73d
	Aug 26, 1937 May 17, 1950	Conditions of local cooperation modified. Provides for a 9-foot channel.	Cong., 2d sess. Rivers and Harbors Com., Doc. 39, 75th Cong., 1st sess. SD6, 81st Cong., 1st sess.
9.		TYBEE ISLAND, GA	
	SPWC Resolution Jun 22, 1971 and HPWC, Jun 23, 1972 under authority of Sec. 201, Flood Control Act of 1965	Project will provide for beach erosion control, consisting of beach restoration, groin nourishment.	HD105, 92d Cong.
	Oct 17, 1986	Extends authority for renourishment with Federal participation from 15 to 50 years.	HR6, 99th Cong., 2d sess. Dated Oct. 17, 1986, Section 867
	PL-104-303 Water Resources Development Act	Sect 301(b)(4) provided for inclusion of that portion of Tybee Island located south of the existing terminal groin, including the East Bank of Tybee	WRDA 1996

Savannah River at Augusta, GA 2, 3, 5	See Notes	1929	200,556	17,444

1. Channel adequate for commerce.

2. Project recommended for abandonment in HD 467, 69th Cong., 1st session.

3. No commerce reported.

4. About 84 percent completed. Owing to construction of two power dams which submerged much of the work under the present and former projects, this improvement cannot be completed as originally planned.

5. Excludes \$185,000 contributed funds (\$172,151 for construction and \$12,849 for operation and maintenance).

6. Water Resources Development Act of 1986 authorized demonstration project on the Umbrella Creek - Dover Creek for the purpose of reducing shoaling. Monitor for 10 years, develop a hydrodynamic model.

1. Final Cost. (Excludes \$127,000 for preauthorization study.)
2. Approved August 1963. (Excludes \$73,000 for preauthorization study.)
3. Approved July 1954.
4. Excludes Code 710 funds.
5. Richard B. Russell Dam and Lake (formerly Trotters Shoals Lake) replaced Goat Island, GA and SC and Middleton Shoals, GA and SC.

JACKSONVILLE, FL DISTRICT*

With the exception of a small area in the north-eastern section of Florida, this district comprises a portion of south-central Georgia and all of peninsular Florida, embracing the watersheds tributary to the

Atlantic Ocean and the Gulf of Mexico from, and including the harbor at Fernandina, Florida, to and including the Aucilla River. It also includes Puerto Rico and the U.S. Virgin Islands.

JACKSONVILLE, FL DISTRICT

Navigation

1. AQUATIC PLANT CONTROL (R&H ACT OF 1965)

Location. Navigable waters, tributary streams, connecting channels, and other allied waters in Florida.

Existing project. The authorized project provides for control and progressive eradication of water hyacinth, alligatorweed, Eurasian water-milfoil, and other noxious aquatic plant growths from navigable waters, tributary streams, connecting channels, and other allied waters of the United States, in combined interest of navigation, flood control, drainage, agriculture, fish and wildlife conservation, public health, and related purposes, including continued research for development of most effective and economical control measures in cooperation with other Federal and State agencies in accordance with report of Chief of Engineers, H 251/89/1. The Water Resource Development Act of 1986 amended the River and Harbor Act of 1965 requiring the local sponsor to share 50 percent of planning costs and 50 percent of research costs that are local in nature. The cost of research that is regional or national in scope shall be borne fully by the United States.

Local cooperation. Florida Department of Natural Resources holds the United States free from damages that may occur from operations performed in connection with this project and contributes 50 percent of cost of operations. Compliance with requirements of local cooperation is on schedule.

Operations and results during fiscal year. New work: \$3,894.

Condition at end of fiscal year. Cost share operation by the Corps and the State of Florida are on hold due to lack of funding. Water hyacinths within Florida are under maintenance control. Hydrilla is continuing to spread throughout the state and is causing major problems in some areas.

2. ARECIBO HARBOR, PR

Location. The harbor is located on the north shore of Puerto Rico about 40 miles west of San Juan Harbor. (See NOAA Nautical Chart No. 25668.)

Previous project. For details see page 504 of 1956 Annual Report.

Existing project. The project provides for a channel 25 feet deep by 400 feet wide, with flare at entrance and widening at inner end to form a maneuvering area and a stone breakwater 1,200 feet long. Plane of reference is mean low water. Mean tidal range is 1.1 feet. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date.

Terminal facilities. A bulkhead wharf 688 by 220 feet providing deep water berthing space of approximately 500 feet and a 300 by 100-foot transit shed. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. Maintenance: \$-19,225.

Condition at end of fiscal year. Project was completed in 1944. Breakwater was repaired in 1952. Wave action has since caused damage.

3. ATLANTIC INTRACOASTAL WATERWAY BETWEEN NORFOLK, VA AND ST. JOHNS RIVER, FL (JACKSONVILLE DISTRICT)

Location. That part of Intracoastal Waterway between southerly limit of Fernandina Harbor, FL, at junction of Lanceford Creek and Amelia River, and St. Johns River, FL. (See NOAA Nautical Chart No. 11489.)

Previous project. For details see page 605 of 1938 Annual Report.

Existing project. Channel 12, 90 to 150 feet wide from Fernandina Harbor to St. Johns River, about 22 miles long. Plane of reference is mean low water. Mean tidal range is 6 feet at Fernandina and 3.8 feet at St. Johns River. (See Table 9-B for Authorizing Legislation.)

Existing project was authorized by River and Harbor Acts of 1913 (H 898/62/2) and 1938 (H 618/75/3).

Local cooperation. Fully complied with to date.

Terminal facilities. There is a commercial marina located at Sisters Creek. No other facilities exist along this section of the waterway and none are currently required.

Operations and results during fiscal year. Maintenance: \$365.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

Condition at end of fiscal year. Project was completed in 1941. Minor shoals exist throughout the project.

4. BAKERS HAULOVER INLET, FL

Location. The inlet connects the Intracoastal Waterway and the Atlantic Ocean and is located 2 miles north of Miami Beach in Dade County, Florida.

Existing project. The authorized project provides for an entrance channel 11 by 200 feet, thence 8 by 100 feet to the Intracoastal Waterway and a marina basin 8 by 200 feet. The length of the project is 1.02 miles. Plane of reference is mean low water.

Operations and results during fiscal year. None.

Condition at end of fiscal year. The project was completed in December 1964. Project is at authorized depth.

5. CANAVERAL HARBOR, FL

Location. The harbor is located on the east coast of Florida in Canaveral Bight, about 146 miles south of the entrance to Jacksonville Harbor and 69 miles north of the entrance to Fort Pierce Harbor. (See NOAA Nautical Chart Nos. 11478 and 11484.)

Existing project. The authorized project provides for a 37 foot deep entrance channel and maintenance of the 44 foot deep Navy channel in the 37 foot channel reach; and 35 foot depth turning basin; construction and operation of a sand transfer plant; relocation of the perimeter dike about 4,000 feet westward and extension of the harbor westward; south entrance jetty 1,100 feet long and the entrance jetty 1,150 feet long; a lock; a channel and turning basin 31 feet deep near the relocated dike; and a barge canal 12 by 125 feet from the turning basin to the Atlantic Intracoastal Waterway. Plane of reference is mean low water (Banana River) for barge canal. The project is about 11.5 miles long. Mean tidal range is 3.5 feet at the entrance and practically non-tidal in Banana and Indian Rivers. (See Table 9-I for Data Relative to Lock.) (See Table 9-B for Authorizing Legislation.)

Estimated project cost for Canaveral Harbor Sand Transfer System is \$136,240,000 Federal and \$4,960,000 non-Federal.

Local cooperation. Local interests must; provide all lands, rights-of-way, spoil-disposal areas, retaining dikes, and embankments; hold United States free from

damages; provide and maintain four-lane bridge and roadway subject to Federal contribution of 65.3 percent of cost of constructing bridge and 51.2 percent of constructing roadway; provide public terminal and transfer facilities; and make alterations as required in berthing facilities. For further details see Senate Document 140, 87th Congress, 2nd session. Non-Federal contribution for new work is \$2,635,845.

Terminal facilities. Canaveral Harbor has 27 commercial waterfront facilities. The General Cargo Facilities consist of 1,900 feet of usable berthing space capacity of 168,000 square feet. The Oil Handling Facilities operate with 3,760 feet of usable berthing space and 1,413,000 barrels of tank storage. Available warehouse storage includes 28,000 square feet of dry storage and 2,500,000 cubic feet of cold storage. Open storage is 189 acres.

Three-cruise ship berths totaling 1,400 feet long by 34-foot depth and three 8,800 square foot cruise terminals are also located on the south side. The western cruise ship berth is equipped with a roll on/off ramp and is adjacent to 20 acres of trailer storage area.

Hoisting facilities consist of one 45-ton floating crane and crawler and mobile cranes, with capacities from 70 to 200 tons, available from local crane rental services. There are 2 waterfront marine repair facilities with the nearest dry-dock facilities located at Port Everglades and Jacksonville. Two tugs with ratings of 1,600 and 2,250 horsepower are also available. There is no rail service available at the port. The nearest rail service is the Florida East Coast Railway located 9 miles away. Facilities are considered adequate for existing commerce. (See Port Series No. 16, Rev. 1982.)

Operations and results during fiscal year. New work: Real Estate costs, \$4,999. Navigation costs, \$408,409. Engineering and design, \$837,244; contract administration, \$6,786. Maintenance: contract dredging cost was \$2,594,413. Engineering and design and construction management costs were \$405,133 and \$74,125, respectively. Maintenance and operation of locks and dams amounted to \$853,900. Bank stabilization cost was \$218,099; miscellaneous costs: \$182,274.

Condition at end of fiscal year. Report for north jetty sand tightening has been completed and is under review. Plans and specifications will be completed in FY 2002.

6. CHANNEL FROM NAPLES TO BIG

JACKSONVILLE, FL DISTRICT

MARCO PASS, FL

Location. Naples Bay is on the southwestern side of the Florida peninsula about 35 miles south of the mouth of the Caloosahatchee River and approximately 1-mile inland and parallel to the Gulf of Mexico coastline. (See NOAA Nautical Chart No. 11430.)

Existing project. The authorized project provides for an interior channel 6 by 70 feet from Naples to Big Marco Pass; a channel 12 by 150 feet from the Gulf of Mexico to Gordon Pass, thence 10 by 100-70 feet to a 10 foot depth turning basin in the upper Naples Bay; and an 8 foot depth turning basin at the municipal yacht basin. Plane of reference is mean low water. Mean tidal range is 2.1 feet. (See Table 9-B for Authorizing Legislation.)

For further details see Annual Report of 1962.

Local cooperation. Fully complied with to date. Contributed funds for new work were \$159,975.

Terminal facilities. Four seafood-packing houses; 4 marine repair yards; a municipal pier and basin for use by recreational boats; and numerous private piers and slips for both commercial and recreational craft are available. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. Maintenance: Engineering and design cost was \$66,126.

Condition at end of fiscal year. The project is complete. A maintenance dredging contract was awarded in September 2002 for the Gordon Pass project. Dredging of the outer portion of the project is expected to be completed by April 2003. The upper channel into Naples has minor shoals.

7. CHARLOTTE HARBOR, FL

Location. The Harbor is located on the west coast of Florida about 68 miles south of the entrance to Tampa Bay and 150 miles north of Key West. (See NOAA Nautical Chart No. 11429.)

Previous projects. For details, see page 457 of 1959 Annual Report.

Existing project. The authorized project provides for a channel 32 by 300 feet, increased to 700 feet at the bend, from the Gulf of Mexico to Port Boca Grande to and including a turning basin at 200 feet square at the

municipal terminal at Punta Gorda. Plane of reference is mean low water. The project is about 29.5 miles long.

Mean tidal range is one foot at Port Boca Grande and 1.4 feet at Punta Gorda. Extreme range is about 3 feet at Port Boca Grande and 3.8 feet at Punta Gorda. Strong southwesterly winds raise water levels about 1.5 feet; strong northerly and easterly winds lower water levels about one foot. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Local cooperation is fully complied with to date.

Terminal facilities. Existing facilities consist of a phosphate wharf at Port Boca Grande and a municipal earthfill pier about 850 feet long at Punta Gorda, both open to the public. Railway connections are available at Port Boca Grande, and highway and railway connections are available at Punta Gorda.

Operations and results during fiscal year. None.

Condition at end of fiscal year. The project was completed in 1959, and was dredged for maintenance in June 1998. The Florida Power and Light Company no longer has a requirement for bunker fuel oil to be delivered into Charlotte Harbor. Therefore, there is no future maintenance scheduled for the project.

8. EAU GALLIE HARBOR, FL

Location. The Harbor is located on Indian River about midway of the State of Florida, 176 miles south of Jacksonville Harbor and 174 miles north of Miami Harbor.

Existing project. The authorized project provides for a channel 8 by 100 feet from Indian River to and including a 300 by 600-foot turning basin in Eau Gallie. The project is about 2,700 feet long. Plane of reference is mean low water. The harbor is almost nontidal.

Local cooperation. Fully complied with to date.

Terminal facilities. A privately owned boatyard in Eau Gallie Harbor provides more than 600 feet of docking space used chiefly by pleasure boats. There are also 2 marine railways and repair and storage facilities available. The facilities are considered adequate for the present needs of navigation.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

Operations and results during fiscal year. This project was determined to have inadequate national economic benefits to justify further funding for operation and maintenance.

Condition at end of fiscal year. The project was completed in 1939. In December 1982, the controlling depth of the channel was 5 feet.

9. FERNANDINA HARBOR, FL

Location. Entrance to the harbor is located on the northeast coast of Florida about 95 miles south of the entrance to Savannah Harbor, Georgia, and 22 miles north of the entrance to Jacksonville Harbor, Florida. (See NOAA Nautical Chart No. 11503.)

Existing project. The authorized project provides for a 32 foot depth channel (maximum channel in active status: 28 feet) generally 300-400 feet wide from deep water in the ocean to the junction of Lanceford Creek with Amelia River; an 800 foot wide turning basin at the first bend below Lanceford Creek; and 2 jetties, 19,150 and 11,200 feet long. The project is 7 miles long. Plane of reference is mean low water. Mean tidal range is 5.8 feet on the bar and 6 feet in the inner harbor. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date. Non-Federal contribution for new work was \$935,000.

Terminal facilities. There are 2 large wharves operated by industrial plants; 12 wharves serving fishing boats, recreational craft, and other vessels; 3 oil handling wharves with pipelines; and a Municipal Marina and Sportsman's Wharf with public facilities for small craft. Total berthing space is approximately 4,065 feet. Most terminals are served by rail, and all have highway access. Facilities are considered adequate for existing commerce. (See Port Series No. 16 (Part 2), 1964.)

Operations and results during fiscal year. New work: Maintenance contract dredging, entrance channel, \$1,138,434. Engineering and design and construction management costs were \$470,964 and \$72,307, respectively.

Condition at end of fiscal year. The active portion of the existing project is complete. Jetties are in poor condition and are badly in need of repair. Remaining work is to deepen the inner harbor channel and turning basin to 32 feet when and if the presently inactive 1950 authorization is reactivated. The entrance channel has

been deepened to 46 feet for the Kings Bay project. Authorized depths were restored as of March 1991.

10. FORT MYERS BEACH, FL

Location. Fort Myers Beach is on Estero Island near the mouth of the Caloosahatchee River, about 20 miles below Fort Myers and 110 miles south of Tampa, Florida. (See NOAA Nautical Chart No. 11427.)

Existing project. The authorized project provides for a channel 12 by 150 feet from that depth in San Carlos Bay into Matanzas Pass, thence 11 by 125 feet in Matanzas Pass to and including a turning basin 2,000 feet upstream from the upper shrimp terminals. Plane of reference is mean low water. Project is 2.5 miles long.

Mean tidal range is 1.7 feet. Spring range is about 2.3 feet. Strong northerly winds lower the water surface 1 to 2 feet; strong southerly winds have an opposite effect. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date.

Terminal facilities. There are 3 shrimp-packing houses and several fish-packing houses, 2 marine railways, a fuel terminal and an ice manufacturing plant in the area. There are several commercial facilities for servicing shrimp boats. Recreational craft facilities include 9 marinas, a boat motor testing laboratory which is closed, and numerous privately owned piers and wharves. All terminals have highway access. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. Maintenance: Dredging contract, \$-57,744.

Condition at end of fiscal year. The project is complete. Shoaling exists in the minimum outer entrance channel.

11. FORT PIERCE HARBOR, FL

Location. On east coast of Florida, about 218 miles south of entrance to St. Johns River and about 124 miles north of entrance to Miami Harbor. (See NOAA Nautical Chart No. 11475.)

Existing project. A channel 350 feet wide at the 27-foot contour in the ocean, tapering to a width of 200 feet at Station 100+00, thence 200 feet wide to Sta. 30+00, and thence flaring to a turning basin 900 feet

JACKSONVILLE, FL DISTRICT

wide. Entrance channel is 27 feet deep to Sta. 130+00 and thence 25 feet deep to and including the turning basin. Project includes the maintenance of two jetties and shore revetments at the inlet. Length of project is about 3.5 miles.

Plan of improvement consists of enlarging the existing entrance channel to 400 feet wide and 30 feet deep, the interior channel to 250 feet wide and 28 feet deep, the existing turning basin to 1,100 feet square and 28 feet deep, and providing an access channel 1,250 feet long, 250 feet wide and 28 feet deep north of the main turning basin.

Mean tidal range is 2.6 feet at the entrance and 0.7 feet at terminals. (See Table 9-B for Authorizing Legislation.) For further details see 1961 Annual Report.

Local cooperation. Fully complied with to date. Non-Federal contribution for new work was \$2,503,387. A 25% contribution and an additional 10% reimbursement over 30 years from locals are required.

Terminal facilities. Two earth-filled piers forming a slip 200 by 300 feet, with bulkhead wharf at inner end, affording berthing space of about 1,653 feet. The south pier and bulkhead wharf are municipally owned. Facilities also include a cooling plant, a warehouse and a fruit-packing house. Railway and both piers serve the north pier by highway connections. North of the turning basin local interests have provided deep-draft berthing and pier facilities. Also available is a bulkhead wharf with a depth of 25 feet with ample room for open storage and with tank storage for petroleum in the rear. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. Maintenance: Contract dredging \$563,249, engineering and design; and construction management costs were \$393,162 and \$38,767, respectively.

Condition at end of fiscal year. Mitigation contract completed in May 1996. No further work is scheduled.

12. HORSESHOE COVE, FL

Location. On the gulf coast of Florida about 18 miles southeast of the mouth of the Suwanee River.

Existing project. Channel 6 feet deep by 75 feet wide from that depth in the Gulf of Mexico to and including an irregular-shaped basin of like depth at the village of

Horseshoe, Fl. Project is 1.75 miles long. Plane of reference is mean low water.

Local cooperation. Fully complied with.

Terminal facilities. Three marineways about 300 feet of privately owned piers and wharves, and a public wharf about 200 feet long. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. Maintenance: Contract dredging costs were \$815,884.35, construction management cost was \$59,700 and engineering and design was \$32,572.

Condition at end of fiscal year. Project was complete in 1959.

13. INTRACOASTAL WATERWAY, CALOOSAHATCHEE RIVER TO ANCLOTE RIVER, FL

Location. The Waterway extends from the mouth of the Caloosahatchee River at Punta Rassa, Florida, to the mouth of Anclote River, Florida, following in general an almost continuous series of protected inside waterways along the gulf coast of Florida. (See NOAA Nautical Chart Nos. 11411, 11425 and 11427.)

Previous projects. For details see page 767 of 1945 Annual Report.

Existing project. The authorized project provides for a channel 9 by 100 feet from Caloosahatchee River to Anclote River; deepening the existing channel at Casey's Pass to 9 feet; a channel 6 by 80 feet (Cats Point Channel) along the southeastern side of Boca Ciega Bay past Frenchman Creek and Gulfport; maintenance of bulkheads, revetments, and two jetties built at Casey's Pass under previous project; and improvement and maintenance of Sunshine Skyway Channel. Plane of reference is mean low water. The project includes about 160 miles of channels.

Mean ranges of tide are 1.7 feet at Punta Rassa, 1 foot at Port Boca Grande, 1.4 feet in Tampa Bay at Anna Maria, and 2 feet at entrance to Anclote River. Extreme ranges are about 4.5 feet at Punta Rassa, about 3 to 4 feet between Port Boca Grande and Corey Causeway over Boca Ciega Bay, and about 5.5 feet at entrance to Anclote River. Southerly winds over the area generally raise water levels by 1 to 1.5 feet; northerly winds lower water levels by 1 to 2 feet. (See Table 9-B for Authorizing Legislation.)

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

Local cooperation. Fully complied with to date.

Terminal facilities. Existing facilities include one municipal concrete pier, one railway pier, one freight wharf, one marginal wharf 500 feet long on terminal island, and 11 privately owned landings, all at Sarasota. Municipal pier and freight wharf are open to the public. All piers have highway connections. There are 6 wharves along Boca Ciega Bay and a number of small privately owned piers and wharves at various points along waterway for use by commercial fishing boats and recreational craft. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. Maintenance: Real Estate management cost was \$11,607.

Condition at end of fiscal year. Existing project is complete. Shoaling exists in northern Pinellas County around Longbeat Pass and Venice Inlet and just south of the Sunshine Skyway Bridge.

14. INTRACOASTAL WATERWAY, JACKSONVILLE TO MIAMI, FL

Location. The Waterway extends from Jacksonville to Miami, Florida, following the St. Johns River to the mouth of Pablo Creek and thence following in general an almost continuous series of protected inside waterways along the Atlantic coast of Florida to Miami. (See NOAA Nautical Chart Nos. 11489, 11485, 11472 and 11467.)

Previous projects. For details, see pages 618-619 of 1938 Annual Report.

Existing project. The authorized project provides for a channel 12 by 125 feet from Jacksonville to Miami, modified by Chief of Engineer's report of July 22, 1960; side channels at Sebastian and Daytona Beach and turning basins at Sebastian and Vero Beach, all to an 8 foot depth, and operation and maintenance of Palm Valley highway bridge. Project is 370 miles long, including 21 miles in Jacksonville Harbor. Mean range of tide is 3.8 feet at St. Johns River, 0.7 foot in Indian River at Fort Pierce, 1.8 feet in Lake Worth at Port of Palm Beach terminals, 2.3 feet at the Port Everglades terminals, and 2 feet in Biscayne Bay. The extreme range is about 7 feet at St. Johns River, 1.5 feet at Fort Pierce, and 3 feet in Biscayne Bay. Plane of reference is mean low water. Tidal effect is imperceptible at

points along waterway distant from inlets. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date.

Terminal facilities. There are a number of privately owned piers, wharves, and landings at various points along waterway. Terminals with railway connections are available at Jacksonville, Fort Pierce, West Palm Beach, Port Everglades, and Miami. Municipal piers or wharves have been constructed at Titusville, Cocoa, Melbourne, and Vero Beach for handling general freight and at St. Augustine, Daytona Beach, New Smyrna Beach, Eau Gallie, West Palm Beach, Delray Beach, Fort Lauderdale, and Miami for use of recreational craft. Yacht basins, open to the public, have been provided at Jacksonville Beach, Daytona Beach, Titusville, Eau Gallie, Vero Beach, Fort Pierce, West Palm Beach, Fort Lauderdale, Hollywood, and Miami. Facilities are considered adequate for existing commerce. (For further details on facilities at Jacksonville, see Port Series No. 15, 1969, and at Palm Beach, Port Everglades, and Miami, see Port Series No. 16, Revised 1972.)

Operations and results during fiscal year. Maintenance: Contract dredging, various segments, \$2,142,285; bridge operations and maintenance \$417,750. Engineering and design, and contract management costs were \$605,851 and \$6,850, respectively.

Condition at end of fiscal year. The existing project as modified by the Chief of Engineers is complete. (Construction of the channel and turning basin at Sebastian, Florida, was deauthorized by WRDA of 1988, P.L. 100-676.) (See Table 9-A for total project costs.)

15. JACKSONVILLE HARBOR, FL

Location. The authorized project comprises the lower 24.9 miles of St. Johns River, which empties into the Atlantic Ocean near the northeasterly corner of the Florida peninsula. (See NOAA Nautical Chart No. 11491.)

Previous projects. For details, see page 607 of Annual Report, 1938.

Existing project. The authorized project provides for a channel 38 feet deep by 400-1,200 feet wide from ocean to mile 20 via Dame Point-Fulton Cutoff, thence 34 feet to Commodore Point, and thence 30 feet deep to the FEC railway bridge at Jacksonville, including a

JACKSONVILLE, FL DISTRICT

30 foot channel in Arlington cut in the old Dames Point-Fulton channel; maintenance of the existing 42 and 40 foot depth entrance channel; widening of channel by 100 feet near mile 5 and by 200 feet near mile 7; maintenance of jetties at channel entrance; construction of training walls and revetments; a navigation and floodway channel 26 by 200 feet along south side of Commodore Point; on approach and mooring basin 20 feet deep, 1,300 feet long at 20 foot depth contour and 600 feet long at pier head line near Naval Reserve Armory in south Jacksonville; a depth of 24 feet between that depth contour and the pier head line from Hogan Creek to the foot of Laura Street; and a depth of 28 feet to within 60 feet of pier head line between foot of Laura Street and St. Elmo W. Acosta (formerly Upper State) bridge. Length of project is about 26.8 miles. In addition the Navy has provided funds for a deeper Jacksonville Harbor entrance channel 42 feet deep and 800 feet long, intersecting with the Navy's Mayport entrance channel to the Mayport turning basin; also an extension of the existing project to provide 38 foot depth for the Navy fuel depot, at Drummond Creek.

Mean tidal range is 5.3 feet on the bar, 4.9 feet at Mayport, 2.6 feet at Dame Point, and 1.1 feet at Jacksonville. The extreme range varies from about 9 feet on the bar to about 1.5 feet at Jacksonville. Strong northeasterly winds raise the water level about 2 feet at Mayport and Jacksonville. Strong southwesterly winds lower the water about 1.5 feet at Mayport and one foot at Jacksonville. (See Table 9-B for Authorizing Legislation.)

Estimated cost of new work \$10,100,000 Federal and \$19,700,000 non-Federal.

Local cooperation. Local interests have fully complied with requirements of local cooperation for work performed to date. For work authorized by the 1965 River and Harbor Act, local interests were required to contribute 2.6 percent of the contract price plus supervision and administration for work provided by the Corps; provide all lands and rights-of-way; save the United States free from damages; and provide and maintain public terminal and transfer facilities. Assurances of local cooperation for this work were accepted February 11, 1966. Non-Federal contribution for new work was \$1,135,669.

Terminal facilities. Jacksonville Harbor has 84 waterfront facilities. Available at the General Cargo Facilities are 11,140 feet of usable berthing space and 12 transit sheds with a total storage space of 1,009,800 square feet. The Oil Handling Facilities consist of

7,843 feet of usable berthing space and 179 storage tanks providing a total of 8,478,900 barrels of tank storage. Warehouse storage at the port includes 3,266,900 square feet of dry storage and 4,071,100 cubic feet of cold storage. Available open storage is 233 acres.

Four fixed cranes with capacities from 40 to 100 tons are located at the port. Available locally are crawler and truck cranes with capacities up to 100 tons. Various phases of marine repair work are accomplished by 7 waterfront repair facilities and numerous other companies located offwater. Dry-dock facilities consist of 6 floating dry-docks with capacities from 800 to 33,000 tons. Floating equipment includes 25 tugs with up to 3,300 horsepower and 16 tank barges with capacities up to 20,700 barrels. Three major railroads furnish rail service from port docks to all points outside of Jacksonville. Facilities are considered adequate for existing commerce (See Port Series No. 15, Rev. 1978.) Navigation cost, \$7,700,190; engineering and design, \$617,794; and construction management, \$241,844.

Operations and results during fiscal year. New Work: Maintenance: Contract dredging cost: Channels \$3,600,000 and terminal channel \$1,059,831; Engineering and design, and construction management costs were \$635,153 and \$111,426, respectively.

Condition at end of fiscal year. PED was completed in July 2000. Contract I to deepen the west Blount Island channel from 30 to 38 feet was awarded in July 2001. Contract II to deepen the main ship channel from the ocean up to river mile 14 from 38 to 40 feet will be awarded in February 2002. A GRR to deepen the remainder will be submitted for WRDA 2002.

(See Table 9-A for total project costs.) In addition, \$290,013 has been expended from public works funds for new work.

16. JACKSONVILLE HARBOR (MILL COVE), FL

Location. The authorized Mill Cove project comprises a 6 square mile body of shallow water on the St. Johns River approximately 10 miles from the Atlantic Ocean near the northeasterly corner of the Florida peninsula. (See NOAA Nautical Chart No. 11491.)

Previous project. None.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

Existing project. The authorized project provides improved flow and circulation through Mill Cove to eliminate further shoaling. This large shallow area averages about 2 to 4 feet deep, is about 5.5 miles long, and varies from 0.5 to 2.0 miles wide. It is situated along the St. Johns River near the Dame Point-Fulton Cutoff portion of the Jacksonville Harbor navigation project. The Mill Cove project includes dredging a 650 foot by 3,600 foot flow channel at the west end to -12 feet MSL; enlarging the weir opening at the eastern end to 1,300 feet wide and -12 feet MSL; and installing flow diversion features at the west and east ends of the cove. Mean tidal range is 4.9 feet at entrance, 4.5 feet at Mayport, 3.0 feet at Dame Point, and 1.2 feet at Jacksonville. Strong northeasterly winds raise the water level about 2 feet at Mayport and Jacksonville. Strong southwesterly winds lower the water about 1.5 feet at Mayport and 1 foot at Jacksonville (See Table 9-B for Authorizing Legislation.)

Local cooperation. In conformance with Section 221, Public Law 91-611, and prior to commencement of construction, the Jacksonville Port Authority, as local sponsor, must provide written agreement to the following local cooperation requirements: provide without cost to the United States all lands, easements, and rights-of-way required for construction and subsequent maintenance of the project; hold and save the United States free from damages that result due to construction and maintenance other than damages due to the fault or negligence of the United States or its contractors; accomplish without cost to the United States such utility and other relocations or alterations as necessary for construction.

Terminal facilities. None.

Operations and results during fiscal year. New work: Navigation costs were \$1,755,570. Engineering and design costs were \$44,893 and contract management costs were \$74,884.

Condition at end of fiscal year. Project is scheduled to be completed November 2002.

17. JOHNS PASS, FL

Location. A natural inlet on the west coast of Florida connecting Boca Ciega Bay with Gulf of Mexico. The pass is located about 8 miles northwest of lower Tampa Bay directly across Boca Ciega Bay from St. Petersburg, Florida. (See NOAA Nautical Chart No. 11411.)

Existing project. Channel 10 by 150 feet in the Gulf, thence 8 by 100 feet inside pass, and 6 by 100 feet to the Intracoastal Waterway, and suitable protective measures over a frontage of approximately 1,000 linear feet of shore along the north end of Treasure Island. Plane of reference is mean low water. Mean range of tide is 1.5 feet. Project is about 2.6 miles long. Project was authorized December 2, 1964 by the Chief of Engineers under Section 107 of the 1960 River and Harbor Act and by Section 110 of the 1966 River and Harbor Act.

Local cooperation. Fully complied with to date.

Terminal facilities. Only small marinas and repair yards for recreational craft are in the general vicinity. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. None.

Condition at end of fiscal year. Project was completed in 1968. Authorized project depths were restored as of June 2002.

18. LONGBOAT PASS, FL

Location. Longboat Pass is located on the west coast of Florida about 11 miles northwest of Sarasota and 23 miles south of St. Petersburg. Located in Manatee County, it is one of several natural inlets connecting Sarasota Bay, a tidal estuary, with the Gulf of Mexico. (See NOAA Nautical Chart No. 11425.)

Existing project. The authorized project provides for an entrance channel 12 by 150 feet from the Gulf to Longboat Pass Bridge, thence a channel 10 by 100 feet from Longboat Pass Bridge along a north to northeasterly alignment to the Intracoastal Waterway to Cortez Bridge. The mean tidal range is 2.2 feet and the maximum tidal range is about 5 feet. Currents are predominantly tidal. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date. See 1978 Annual Report for detailed local cooperation requirements. Contributed funds for new work were \$172,324.

Terminal facilities. From Sarasota north to Tampa Bay there are about 28 small craft facilities including marinas, boat repair yards, and boat basins along the Intracoastal Waterway. Nine of them are located within 2 miles of Longboat Pass. Numerous private mooring piers and wharves also exist in the area. The

JACKSONVILLE, FL DISTRICT

marina and repair facilities appear adequate for the general boating needs of the area.

Operations and results during fiscal year. Maintenance: Maintenance dredging contract, \$7,475.

Condition at end of fiscal year. Construction of the project is complete. Authorized project depths were restored as of June 1997. The channel depths are adequate for navigation.

19. MANATEE HARBOR, FL

Location. The project is located in Manatee County on the east side of Tampa Bay 10 miles from the Gulf of Mexico. (See NOAA Nautical Chart No. 11414.)

Existing project. The authorized project provides for maintenance of the existing 40-foot deep draft navigation channel and turning basin, which extends from Tampa Bay Channel to berthing facilities at Port Manatee. Also provide initial construction for a widener at the northwest end of the Manatee Harbor Channel and initial construction to deepen approximately 6.6 acres adjacent to the southern berthing area to provide a larger turning basin. All material from the project will be placed on upland sites west and northeast of the port slip.

Estimated cost of new work \$26,800,000 Federal and \$13,300,000 non-Federal.

Local cooperation. Fully complied with to date. A 25 percent contribution and an additional 10 percent reimbursement over 30 years from locals are required. Non-Federal contribution for new work was \$2,606,943.

Terminal facilities. Existing facilities at Port Manatee consist of 675 acres of port operational lands, a ship basin 1,500 feet long by 788 feet wide; and an approximately 3 mile access channel, with a design width of 400 feet, which connects with the Federally authorized Tampa Bay Channel. The Manatee project was constructed between August 1968 and February 1970. The required design depth was 40 feet, and the dredging contractor was allowed a pay overdepth of 2 feet. Port Manatee also operates its own terminal railroad, which is licensed under the Interstate Commerce Commission, and publishes a switching tariff as a Class III railroad. It also maintains and operates 2 switch engines and about 30,000 feet of track, which connects with the CSX Railroad.

Operations and results during fiscal year. New Work: Real estate costs were \$486; Engineering and design costs were \$7,031; construction management costs were \$894,241. Maintenance: Engineering and design costs were \$18,704.

Condition at end of fiscal year. An updated design document and plans are currently underway for Phase II of the project which includes the wideners and the turning basin, and is scheduled to be awarded in FY 2002. The GRR presents an evaluation of the South Extension Channel (to provide an additional berthing area) under current policies, criteria and guidelines is scheduled for completion in May 2003.

20. MAYAGUEZ HARBOR, PR

Location. The Project is on the west coast of Puerto Rico, about 110 miles by water from San Juan Harbor. (See NOAA Nautical Chart No. 25673.)

Existing project. The authorized project provides for a 30 by 1,000-foot approach channel to the deep-water terminal, decreasing to a 500-foot width opposite the westerly end of terminal, thence the same width to the easterly end of terminal. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date.

Terminal facilities. A modern deep water terminal is located in the northeast section of the harbor consisting of a bulkhead wharf about 1,270 feet long with a storage transit shed 800 by 60 feet immediately shoreward. The Puerto Rico Industrial Development Company, an agency of the Commonwealth of Puerto Rico, owns a bulkhead wharf of about 200 feet in line with the existing deep-water terminal plant located within the industrial harbor area. In addition, Bumble Bee Packing Company, Inc., owns and operates a dock of about 200 feet for docking tuna fish boats. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. None.

Condition at end of fiscal year. Project was completed in 1934.

21. MELBOURNE HARBOR, FL

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

Location. The project is on Indian River about midway of the State of Florida, 179 miles south of Jacksonville Harbor and 171 miles north of Miami Harbor.

Existing project. The authorized project provides for a channel 8 by 100 feet from Indian River to a 400 by 800 foot turning basin in Crane Creek. Project is about 3,150 feet long. Plane of reference is mean low water. The harbor is almost non-tidal.

Terminal facilities. The Municipal Marina on the north end of the turning basin has a 350 foot steel bulkhead with 11 finger piers, each about 40 feet long. There are also 2 privately owned storage and repair facilities and several privately owned boathouses and docks. The facilities are considered adequate for existing commerce.

Operations and results during fiscal year. None.

Condition at end of fiscal year. The project was completed in 1938. As of September 1984 channel depths as authorized were available throughout the project. Project determined to have inadequate economic benefits to justify further use of operation and maintenance fund.

22. MIAMI HARBOR, FL

Location. Miami is near the northern end of Biscayne Bay, about 71 miles south of the entrance to Palm Beach Harbor. Miami River has its source in the Everglades and flows southeasterly to enter Biscayne Bay at Miami. (See NOAA Nautical Chart No. 11468.)

Existing project. The authorized project provides for a 38 by 500 foot channel from the ocean to the outer end of the north jetty, thence 36 by 400 feet through the entrance and across Biscayne Bay to and including a turning basin at the municipal terminals; a 36 foot depth turning basin at Fisher Island; 2 rubblestone jetties at the entrance; and a channel 15 feet deep in Miami River varying in width from 250 feet at mouth to 90 feet 5.5 miles inland. Plane of reference is mean low water, except for 15-foot channel in Miami River where depths are based on flood conditions. Total length of the project is about 13 miles.

Mean tidal variation is 2.5 feet at entrance and 2 feet in the bay. Extreme variation is about 4.5 feet at entrance and 3 feet in Biscayne Bay. Strong easterly winds raise the water level about 1.5 feet at entrance and 1 foot in the bay. Strong westerly winds lower water level about 1 foot at entrance and about 0.5 foot

in the bay. Estimated cost for Miami Harbor Channel is \$57,100,000 Federal cost and \$36,200,000 non-Federal. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date. See 1978 Annual Report for detailed local cooperation requirements. Non-Federal contribution for new work was \$2,300,710. Assurances of local cooperation for the 1968 modification to the project were accepted December 18, 1968.

Terminal facilities. There are 91 commercial waterfront facilities serving the port. The General Cargo Facilities include 21,373 feet of usable berthing space, 13 transit sheds with a total capacity of 474,300 square feet, and 9 freight stations with a total storage capacity of 270,400 square feet. Oil Handling Facilities consist of 2,714 feet of usable berthing space and 36 storage tanks with a total storage capacity of 744,475 barrels. Available shore house storage includes dry storage of 1,450,500 square feet and cold storage of 11,204,000 cubic feet. There are 117.1 acres of open storage at the port.

Hoisting Facilities located at the port include two 40 ton cranes and cranes with capacities up to 200 tons available through local rental. Twelve waterfront repair yards and 2 offwater yards serve the port. Dry-dock facilities available include 7 marine railways and 4 boat lifts with haul out capacities ranging from 40 to 1,000 tons and lifting capacities ranging from 79 to 500 tons. Nine tugs, with ratings up to 3,000 horsepower, and 13 tank barges, with capacities up to 35,000 barrels, are also available. The CSX and the Florida East Coast Railway serve rail Facilities at the port.

Facilities are considered adequate for existing commerce. (See Port Series No. 16, Rev. 1982.)

Operations and results during fiscal year. New work: Real estate cost, \$632; navigation costs, \$167; Engineering and design costs, \$1,272,819. Construction supervision costs were \$900. Maintenance: Engineering and design costs were \$211,108.

Condition at end of fiscal year. Phase I was completed in August 1994. Phase II is scheduled for completion in September 2003. The remainder of Phase II is being taken over by the Corps of Engineers and a new Project Cooperation Agreement will be executed. A GRR for further deepening is slated for WRDA 2003.

23. NEW PASS, SARASOTA, FL

JACKSONVILLE, FL DISTRICT

Location. Sarasota Bay is a tidal lagoon along the west coast of Florida immediately south of Tampa Bay. New Pass is a gulf inlet across the bay from Sarasota, Florida. (See NOAA Nautical Chart No. 11425.)

Existing project. The authorized project provides for an entrance channel 10 feet deep and 150 feet wide in the Gulf of Mexico diminishing to 8 by 100 feet through New Pass and extending across Sarasota Bay to the Intracoastal Waterway with side channels to, and turning basins at, Payne Terminal and city pier. Plane of reference is mean low water. Mean range of tide is 1.3 feet in Sarasota Bay; mean spring range is 1.7 feet. Project is about 4 miles long. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date.

Terminal facilities. Consist of Payne Terminal, a slip 200 by 650 feet, and city pier, 400 feet long with 2 finger piers equipped with adequate facilities at each location.

Operations and results during fiscal year. Maintenance: Engineering and design cost for maintenance dredging, \$137,134.

Condition at end of fiscal year. Project was completed in 1964. Authorized project depths were restored as of April 1991. A maintenance dredging contract was awarded in September 2002 with work to be completed February 2003.

24. OKEECHOBEE WATERWAY, FL

Location. The waterway traverses the southern part of the Florida peninsula via the Caloosahatchee River, Lake Okeechobee, and St. Lucie Canal, connecting coastal waterways along the Gulf and Atlantic Shores. (See NOAA Nautical Chart No. 11428.)

Previous project. For details, see page 785 of 1949 Annual Report.

Existing project. The authorized project provides for replacing the old locks on the St. Lucie Canal by a single new lock; a channel 10 by 100 feet from Ft. Myers for about 5 miles upstream, thence 8 by 80-100 feet to the Intracoastal Waterway, Jacksonville to Miami, near Stuart; a side channel at Ft. Myers; operation and care of St. Lucie Lock; and maintenance of features completed under previous projects as follows: a 12 by 200 foot channel from the Gulf of Mexico to Punta Rassa, thence 10 by 100 feet to Ft.

Myers with a 10 foot depth basin at Fort Myers; a 6 by 80 foot channel along the south shore of Lake Okeechobee from Clewiston to St. Lucie Canal; a 6 by 60 foot channel in Taylor Creek from the town of Okeechobee to the Lake; and operation and care of Moore Haven and Ortona Locks. (See Table 9-B for Authorizing Legislation.)

For further details see 1962 Annual Report.

Local cooperation. Fully complied with for completed portion of project. Non-Federal contribution amounted to \$503,700.

Terminal facilities. There are 3 freight piers, one municipal recreation pier, 4 privately owned piers, and a municipal yacht basin on the Caloosahatchee River near Fort Myers. The Corps has provided a boat basin, launching ramp, and a 120-foot wharf on the Caloosahatchee River about one-quarter mile below Ortona Lock. There are tie-up dolphins above and below all 5 locks. Commercial yacht basins are provided on the south side of the Caloosahatchee River about halfway between Ortona and Moore Haven Locks and about 3 miles east of LaBelle. A commercial/municipal yacht basin is provided on the north side of the St. Lucie Canal at Indiantown.

There are numerous small wooden-pile landings along the Caloosahatchee River, St. Lucie Canal, and on the St. Lucie River, including one railroad terminal pier, municipal pier, and a pier for handling petroleum products at Stuart. Also, 550 feet of wharves have been provided on the west side of Taylor Creek immediately landward of Hurricane Gate No. 6 and 150 feet on the east side of the creek. A yacht basin has been provided on the west side of the creek immediately landward of the hurricane gate. The installations on Taylor Creek are privately owned, but are open to the public. A breakwater protected harbor is available at Pahokee. There is a 440 foot marginal wharf on the Industrial Canal at Clewiston; a 125 foot wharf at LaBelle; a 150 foot wharf at Belle Glade; a 125 foot wharf at Moore Haven; a 50 foot wharf at Alva; and a 30 foot wharf on Taylor Creek at the town of Okeechobee. A docking facility for loading raw sugar was constructed in 1967 on Herbert Hoover Dike near Belle Glade. All have highway and/or railway connections. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. (See Table 9-L for work accomplished.)

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

Condition at end of fiscal year. The project is complete. (The 8 foot depth basin at Stuart was deauthorized by WRDA of 1988, P.L. 100-676.)

25. OKLAWAHA RIVER, FL

Location. The river has its source in a system of large lakes in the central part of the Florida peninsula and flows generally northerly, then easterly, emptying into St. Johns River 22 miles upstream from Palatka. The extreme head of the system is considered to be Lake Apopka, 120 miles above the river's mouth.

Previous projects. For details, see page 613 of 1938 Annual Report.

Existing project. The authorized project provides for clearing a channel to Lake Griffin; maintaining dikes to obtain a navigable depth of about 4 feet to Leesburg and construction of a lock and dam at Moss Bluff. The project length is about 85.7 miles. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date.

Terminal facilities. Several private and public landings and boat-launching ramps are located along the river. Public recreation craft basins and boat launching ramps are near Silver Springs and State Roads 40 and 316 bridges. There is a municipal wharf on Lake Griffin at Leesburg. A dam has created Lake Ocklawaha (13,000 acres) with egress to the St. Johns River through Buckman Lock. Along the lake are 4 launching ramps; Payne's Landing, Orange Springs, Kenwood Landing, and Rodman Recreation Area. Access below the dam is at the Ocklawaha Boat launch ramp and at State Road 19. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. None.

Condition at end of fiscal year. The project is complete. (A 6-foot depth channel from the mouth of the river to the head of Silver Springs Run was deauthorized.) The Moss Bluff lock and dam structure was replaced under the Four River Basins, Florida flood control project.

26. PALM BEACH HARBOR, FL

Location. The authorized project is located on the east coast of Florida about 71 miles north of the entrance to Miami Harbor and about 264 miles southeasterly from

the entrance to Jacksonville Harbor. (See NOAA Nautical Chart No. 11472.)

Existing project. The authorized project provides for an entrance channel 35 by 400 feet merging with an inner channel 33 by 300 feet to and including a turning basin; tank revetment; and restoring jetties. Plane of reference is mean lower water. The project is about 1.6 miles long.

Mean range of tide in the ocean at the entrance is 2.8 feet and at the turning basin, 2.2 feet. Extreme range of tide is about 4.5 feet at the inlet and 3 feet at the terminals. Seven-foot tidal ranges have occurred during storms. For details, see 1962 Annual Report. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date. For requirements, see 1961 Annual Report.

Terminal facilities. The port has 13 commercial waterfront facilities. The General Cargo Facilities include 5,156 feet of usable berthing space and 6 transit sheds with a total of 118,030 square feet of storage capacity. The Oil Handling Facilities consist of 10 storage tanks with a total capacity of 2,029,600 barrels. Usable berthing space is not available at the Oil Handling Facilities. Dry storage is available at 150,500 square feet, cold storage at 19,200 cubic feet and open storage at 27.1 acres. Seven cranes with capacities from 15 to 230 tons are located at the port. There are no floating cranes, repair facilities or dry-dock facilities located at the port. A 100-ton vertical boatlift is located on the Intracoastal Waterway south of the port for heavy lifts. Two tugs with ratings of 900 and 1,000 horsepower are available. The Palm Beach Belt Line, which connects, with the Florida East Coast Railway serves the port.

Facilities are considered adequate for existing commerce. (See Port Series No.16, Rev. 1982.)

Operations and results during fiscal year. Maintenance: Contract dredging, \$2,384,916; engineering and design, \$824,462; contract management, \$93,116; and real estate management, \$11,452.

Condition at end of fiscal year. The project was completed in 1967. Jetties and revetment are in need of repair. Maintenance dredging was completed May 2002. Future maintenance dredging will occur yearly as necessary depending on shoaling conditions.

27. PALM VALLEY BRIDGE, FL

JACKSONVILLE, FL DISTRICT

Location. Palm Valley Bridge is located over the Intracoastal Waterway on State Road 210 in St. John's County, Florida.

Existing project. The project replaced the existing Palm Valley Bridge with a new high level bridge that is fixed for navigation. Additional roadway construction was required because of the new bridge alignment. The old bridge was removed and the Intracoastal Waterway in the vicinity of the old bridge will be dredged to its authorized dimensions. (See Table 9-B for Authorizing Legislation).

Local cooperation. Operations and maintenance at an estimated \$75,000 per year.

Terminal facilities. None in the immediate area.

Operations and results during the fiscal year. New Work: Real estate cost was \$1,287,656; bridge construction cost was \$4,614,322. Engineering and design cost was \$145,274. Construction management cost was \$476,059.

Condition at end of fiscal year. Local sponsor is funding expansion from 2 to 4 lanes. PCA executed in December 1999. Construction contract awarded September 2000. The County Commissioners have approved a betterment to a 4-lane bridge. The new bridge was completed in July 2002.

28. PONCE DE LEON INLET, FL

Location. Ponce de Leon Inlet is on the Atlantic coast of Florida about 65 miles south of St. Augustine Harbor and 57 miles north of Canaveral Harbor. (See NOAA Nautical Chart No. 11485.)

Existing project. The authorized project provides for an entrance channel 15 by 200 feet across the ocean bar, thence 12 by 200 feet and 12 by 100 feet through the inlet; thence southward in Indian River North, 12 by 100 feet, and northward in Halifax River, 7 by 100 feet, each leg continuing to the Intracoastal Waterway; ocean jetties on the north and south of the inlet 4,200 and 2,700 feet long respectively, and weir in the north jetty with an impoundment basin inside the jetty. Plane of reference is mean low water. Mean range of tide is 4.1 feet in the ocean and 2.3 feet inside the inlet. The project is about 5 miles long.

Estimated cost for new work is \$3,500,000 Federal and \$2,900,000 non-Federal.

Local cooperation. Fully complied with to date. Non-Federal contribution for new work was \$2,452,600.

Terminal facilities. None in the immediate area.

Operations and results during fiscal year. New Work: Engineering and design cost was \$26,726. Maintenance: North jetty contract dredging \$1,721,176; engineering and design \$65,331; and contract management costs were \$164,309.

Condition at end of fiscal year. The north jetty revetment is complete.

29. PONCE HARBOR, PR

Location. Ponce Harbor is an open bay about midway on the south coast of Puerto Rico. From the center of the city of Ponce, the harbor is about 3 miles south. (See NOAA Nautical Chart No. 25677.)

Previous project. For details, see page 12 of Annual Report for 1975.

Existing project. The authorized project provides for a seawall 362 feet long extending northwesterly across the rock reef from near the landward end of the municipal pier, 30 feet deep and containing about 18 acres; a breakwater 2,400 feet long extending southwesterly from Punta Carenero; a channel 36 feet deep by 600 feet wide extending from the Caribbean Sea approximately 2.8 miles up to the port, thence a channel 400 feet wide by 36 feet deep into the harbor, and a 36 foot deep, irregularly shaped turning basin with a diameter of 959 feet. Plane of reference is mean low water. Mean tidal range is 0.6 foot, extreme varies between about 1 foot below and 2 feet above mean low water. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Should provide all lands, easements and rights-of-way; provide and maintain at local expense depths in berthing areas and local access channels; hold United States free from any damages resulting from construction and maintenance of the project; relocate without cost to the United States all cables, sewer mains, water supply, drainage and other utility installations as required; provide adequate public terminal and transfer facilities open to all on equal terms. A letter has been received from mayor of Ponce, assuring compliance with local requirements and to cost share the project. Non-Federal contribution for new work was \$717,304. A 25 percent contribution

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

is required and an additional 10 percent reimbursement over 30 years from locals.

Terminal facilities. The municipality of Ponce owns and operates the only deep-draft terminal facilities in Ponce Harbor, which consist of a municipal pier 515 feet long and 108 feet wide, and a bulkhead wharf 3,811 feet long. Both are equipped for transfer and storage of freight. A 40-ton container lift shore crane is available for the handling of loaded containers. The municipal pier has a steel transit shed 386 by 85 feet. The bulkhead wharf has 4 steel transit sheds totaling over 103,000 square feet. Three concrete and steel warehouses are available providing 800,000 square feet for general storage. Open storage areas for structural steel, lumber, and other bulk and package commodities are also provided. Bulk cement is handled and loaded into cement cargo ships by the use of a private pipeline loading facility. A tuna fish processing and canning factory is located on the premises, with direct access to the bulkhead wharf. Existing facilities are open to the public. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. Maintenance: None.

Condition at end of fiscal year. Construction of the project is complete. South and north jetties are in fair condition.

30. PORT EVERGLADES HARBOR, FL

Location. The harbor is on the east coast of Florida about 23 miles north of Miami and about 48 miles south of Palm Beach Harbor, Florida. (See NOAA Nautical Chart No. 11470.)

Existing project. The authorized project provides for an ocean entrance channel 45 by 500 feet through an ocean bar tapering to 42 by 450 feet between rubblestone entrance jetties, and continuing at that depth to an irregularly flared entrance and turning basin of same depth; enlarging Pier 7 channel to 36 by 400 feet for distance of about 1,600 feet; maintenance of the locally dredged channel opposite Berth 18 to 36 feet deep over a length of 700 feet with varying widths of 200 to 150 feet; construction of a south jetty fishing walkway; and, maintenance of the jetties. Plane of reference is mean low water. The project is about 1.9 miles long. Mean range of tide is 2.5 feet at the entrance and 2.3 feet at the terminals; extreme range is about 4.5 feet with storm tides of about 6.5 feet. Estimated cost of new work is \$240,000,000 Federal and \$86,000,000 non-Federal.

Local cooperation. Fully complied with for work completed to date. For work under H 144/93/1, local interests must: provide all lands, easements and rights-of-way; save United States free from damages; accomplish utility and other relocations or alterations; provide depths in berthing areas and local access channels serving the terminals commensurate with depths provided in the related project areas; establish regulations prohibiting discharge of pollutants into waters of the channel by users thereof; prohibit erection of any structure within 100 feet of project channel as authorized at time of construction; provide and maintain public terminal and transfer facilities; contribute 50 percent of total first costs of recreational jetty fishing facility; and operate and maintain jetty fishing facility. The local sponsor has furnished assurances of local cooperation for the 1974 authorization.

Terminal facilities. There are 22 commercial waterfront facilities serving the port. The General Cargo Facilities include 13,807 feet of usable berthing space, 7 transit sheds with a total capacity of 393,870 square feet, and 6 container yards with space for 3,965 containers. Oil Handling Facilities consist of 232 storage tanks with a total storage capacity of 9,564,800 barrels. There is no usable berthing space located at the Oil Handling Facilities. Dry storage is available at 225,000 cubic feet and open storage at 100.3 acres.

Hoisting facilities available from a local firm include 8 cranes with capacities from 20 to 155 tons. No floating cranes or derricks for heavy lifts are available at the port. There are 2 marine repair yards. Dry-dock facilities include 2 dry-docks with capacities of 2,200 and 3,200 tons and a 4,270 ton vertical boatlift. Three tugs with ratings up to 4,290 horsepower serve the port. The Port Everglades Belt Line connects with the CSX railroad to serve the port.

Facilities are considered adequate for existing commerce. (See Port Series No. 16, Rev. 1982.)

Operations and results during fiscal year. Maintenance: Engineering and design costs were \$55,395.

Condition at end of fiscal year. Feasibility study to expand and deepen the port is scheduled to be completed in October 2003. PED is scheduled to start in July 2003 with an October 2004 completion date at a Federal cost of \$750,000.

31.REMOVAL OF AQUATIC GROWTH

JACKSONVILLE, FL DISTRICT

FROM NAVIGABLE WATERS IN THE STATE OF FLORIDA.

Location. Water hyacinth, hydrilla and water lettuce are found in freshwater streams and lakes in various parts of the district.

Existing project. The authorized project provides for destruction or removal of aquatic growth in Federal navigation projects in Jacksonville District which threaten or negatively impact navigation. This project is 100% federally funded. No estimate of the final cost of work has been made. (See Table 9-B for Authorizing Legislation.)

For further details, see 1962 Annual Report.

Local cooperation. None required.

Operations and results during fiscal year. Maintenance: Operations continued during the year. (See Table 9-B for Authorizing Legislation and Table 9-M for spraying operations.)

Condition at end of fiscal year. The project is for maintenance of federal navigation projects. During the year approximately 10,000 acres of floating vegetation (water hyacinth and/or water lettuce) and 5,000 acres of hydrilla were controlled.

32. ST. AUGUSTINE HARBOR, FL

Location. The harbor is on the east coast of Florida, about 35 miles south of the entrance to St. Johns River and about 180 miles north of Fort Pierce Harbor. (See NOAA Nautical Chart No. 11485.)

Previous project. For details see page 412 of Annual Report for 1958.

Existing project. The authorized project provides for a channel 16 by 200 feet along the best natural new inlet bar, thence 12 feet deep to the Intracoastal Waterway; a sand trap groin on the north side of the inlet extending seaward from the shore of Vilano Beach, and a sand-tight jetty on the south side of the channel extending seaward from the shore of Conch Island parallel to and coextensive with the groin; future landward extension of the groin and jetty; and a channel 10 by 100 feet in San Sebastian River from the Intracoastal Waterway to King Street Bridge, with a turning basin near the upper end. Length of the inlet channel is about 1.5 miles and length of the San Sebastian River channel is about 2.6 miles. Plane of reference is mean low water. The mean tidal range is

4.5 feet in the ocean at St. Augustine Inlet and 4.2 feet at the city waterfront. Strong northerly winds, mostly in the winter, lower the water surface about 1 foot. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Fully complied with to date.

Terminal facilities. There are several timber docks on the Matanzas waterfront of St. Augustine. In this area of the harbor is a concrete dock, which serves as a municipal yacht pier. It has fuel facilities, 19 slips and accommodates boats up to 60 feet in length. A large public boat ramp is also available. The principal terminals are the numerous shrimp docks in the San Sebastian River, which flows southward through the city into the Matanzas River south of the bridge. These consist of timber wharves, with frame and corrugated iron warehouses thereon, and 9 marine railways for small boats. There is also a marine supply facility and several boat yards. The present terminals have highway connections and several of the shrimp docks have rail connections. They are considered adequate for existing commerce and recreational craft.

Operations and results during fiscal year. Maintenance: \$917.

Condition at end of fiscal year. Project is complete except for the North Jetty, which is in a deferred status. The groin is in good condition except for the 300 feet, which has subsided to about elevation 3.0 feet, mean low water. The jetty is in good condition, but is submerged at high tide. Maintenance dredging at the entrance channel was completed June 1996.

33. ST. JOHNS RIVER, FL, JACKSONVILLE TO LAKE HARNEY

Location. Rises in marshes of Brevard County, Florida, near east coast, and flows northwesterly to Jacksonville, thence easterly into the Atlantic Ocean, 122 miles south of Savannah River. River is about 285 miles long, of which 161.5 miles are included in project. (See NOAA Nautical Chart No. 11492.)

Previous projects. Adopted by River and Harbor Acts of June 14, 1880 and July 5, 1884. For further details see Annual Reports for 1915 and 1938.

Existing project. Channel is 13 by 200 feet from Florida East Coast Railway bridge at Jacksonville to Palatka, thence 12 by 100 feet to Sanford, and thence 5 by 100 feet to Lake Harney, with side channel to Enterprise and maintenance of two jetties.

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

Existing project was authorized by River and Harbor Acts of March 2, 1945 (H 445/78/2) and July 24, 1946 (SD 208/79/2). For further details see Annual Report for 1962.

Terminal facilities. There are 36 piers and wharves along project, including municipal piers and wharves at Green Cove Springs and Palatka, 12 Navy piers at Green Cove Springs, a municipal recreational pier at Sanford, and 19 privately owned piers, 5 of which have nearby tank storage facilities for petroleum projects. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. None.

Condition at end of fiscal year. Active portion is complete. Condition of project, as a whole is adequate for present needs of navigation. (For more detailed information refer to 1963 Annual Report.)

34. ST. LUCIE INLET, FL

Location. The inlet is on the east coast of Florida about 19 miles south of the entrance to Fort Pierce Harbor, Florida, and 100 miles north of the entrance to Miami Harbor, Florida. (See NOAA Nautical Chart No. 11472.)

Previous project. For details see page 764 of Annual Report for 1949.

Existing project. The authorized project provides for extending the north jetty about 500 feet and modifying existing jetty to provide a sand bypass weir section about 500 feet long; excavation of a sand impoundment basin adjacent to the bypass weir in the north jetty; construction of a south jetty consisting of a rubble mound structure about 2,400 feet long with a walkway for recreational fishing; channel between existing bar cut and the Intracoastal Waterway 10 by 500 feet through the bar cut, tapering to 150 feet through the inlet, and 7 by 100 feet to the Intracoastal Waterway; and transfer of 380,000 cubic yards of material to the south beach during each two year maintenance period. Total project length is about 1.9 miles. Plane of reference is mean low water. Mean tidal range is 2.6 feet on the ocean side and about one foot on the landside of the inlet. (See Table 9-B for Authorizing Legislation.)

Estimated cost of new work \$16,800,000 Federal and \$4,400,000 non-Federal.

Local cooperation. Local interests must: contribute 19.9 percent of construction cost allocated to navigation in the combined project, 23.1 percent allocated to beach erosion, and 50 percent of construction cost of jetty fishing walkway; provide 39.8 percent of the annual maintenance cost allocated to navigation and 23.2 percent of the annual costs for maintenance dredging allocated to beach erosion control for periodic beach nourishment and 100 percent of the annual jetty maintenance costs allocated to beach erosion control; maintain jetty fishing walkway; agree that each 5 years the amount of local cost sharing for maintenance is to be adjusted; provide all lands, easements, and rights-of-way; hold United States free from damages; provide marina with mooring facilities and utilities; provide and maintain depths in berthing area and local access and feeder channels commensurate with the depths provided in the project; accomplish such alterations as required to sewer, water supply, drainage, and other utility facilities, and take action to place in effect statutes and/or regulations which will protect water quality for the authorized uses of the project. The local sponsor signed assurances of local cooperation for the 1974 modification on August 24, 1978. Non-Federal contribution for new work was \$3,851,383.

Terminal facilities. A municipal pier provides facilities for docking and servicing charter fishing and small recreational craft. At Stuart there is a dock for handling bulk petroleum products and several marinas, which provide facilities for mooring, servicing and minor repair of small craft. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. New Work: Navigation \$6,301,000; engineering and design, \$158,185; contract supervision, \$249,082. Maintenance: dredging contract, \$3,572,523.

Condition at end of fiscal year. Work required to complete the project is construction authorized in HD 294/93/1. Authorized project depths were restored as of August 2002. Maintenance dredging was completed June 1996. Improvements to the inlet were authorized in 1974. Due to limited funding during construction, the south jetty was completed 1,000 feet short of the authorized length; the impoundment basin was not constructed to design capacity as a shallow subsurface rock was encountered. Sufficient commercial benefits were identified in the economic update study to reclassify the inlet from a predominately recreational usage inlet to a commercial usage inlet. Construction of impoundment basin was

JACKSONVILLE, FL DISTRICT

completed August 2002. Construction of remaining jetty elements scheduled for summer 2004.

35. SAN JUAN HARBOR, PR

Location. San Juan Harbor is on the north coast of Puerto Rico and about 35 miles from the east end of the island and 1,100 miles southeast of Miami, Florida. (See NOAA Nautical Chart No. 25670.)

Previous projects. For details see Annual Reports for 1915, 1916, and 1938.

Existing project. The authorized project to provide the deepening of the Bar Channel to 48 feet and shifting its alignment 350 feet west; deepening Anegado and Army Terminal to 40 feet; deepening Graving Dock Channel, the Cruise Ship Basin, Puerto Nuevo Channel, and San Antonio Channel to 36 feet; and deepening Anchorage Area E to 38 feet while reducing its size and constructing 6 mooring dolphins within its limits. The Sabana approach channel deepened to 32 feet. Estimated cost of new work \$45,300,000 Federal and \$16,400,000 non-Federal.

Local cooperation. Should provide all lands, easements and rights-of-way; hold the United States free from any damages; provide and maintain depths in berthing areas and local access and feeder channels; provide alterations as required to sewer, water supply, and other utility facilities. It is further recommended that local interests be reimbursed for work performed by them on the project subsequent to project authorization. A 25 percent contribution and an additional 10 percent reimbursement over 30 years from locals are required. Non-Federal contribution for new work was \$16,128,708.

Terminal facilities. There are 28 piers and bulkhead wharves in the harbor capable of docking deep-draft vessels, which have an aggregate berthing length of about 23,700 feet. Eleven piers and bulkhead wharves are on the north shore, 2 piers and a three-level ramp facility for roll-on/roll-off operations at Front Graving Dock turning basin and channel, 9 at the eastern side and 3 at the western side of the Army Terminal basin and channel, and 3 on the south shore of San Antonio Channel. One pier and bulkhead wharf are privately owned, 7 are U.S. Government property, and the Commonwealth of Puerto Rico owns 24. Twenty piers and wharves are equipped with mechanical crane transfer facilities. Five wharves are equipped with a special crane for handling loaded containers. Twenty-four are open to the general public. Pier No. 6 was repaired and improved in 1985.

There is an aggregate length of about 1,339 feet of berthing space at Catano Point used principally by small vessels within the 18-foot draft range. This space is also open to the public. In addition, there are 10 piers and bulkhead wharves with approximately 6,910 feet of berthing space owned and operated by different agencies of the Federal Government. This space is not open to the public.

Facilities are considered adequate for existing commerce.

Operations and results during fiscal year. New Work: Real estate cost was \$41,482; channels and canal cost was \$3,247,058. Navigation cost was \$856,056; engineering and design cost was \$379,955. Construction management cost was \$68,761. Maintenance: Dredging contract cost were \$108,833; engineering and design \$353,101.

Condition at end of fiscal year. The PED phase was completed in September 1995. Revisions to the plans and specifications were accomplished in FY 97. Execution of PCA was completed June 1998. Authorized in WRDA 1996. Contract II (navigation improvements for the Bar, Anegado, and Army Terminal Channel) has been completed. Plans and specifications for Mitigation contract are ongoing and contract is scheduled for award in FY 03.

Existing project includes the entrance channel and turning basin to Army Terminal, which cost \$1,543,712 (this expenditure was made from military appropriations and is not included in Table 9-A costs).

36. TAMPA HARBOR, FL

Location. Tampa Harbor is in a large natural indentation of the Gulf of Mexico about midway of the west coast of Florida. The entrance is about 220 miles north of Key West and about 330 miles southeast of Pensacola. (See NOAA Nautical Chart Nos. 11413 and 11414.)

Previous projects. For details see page 665 of 1938 Annual Report.

Existing project. The authorized project provides for a channel from the Gulf of Mexico to Port Sutton and Tampa; 46 by 700 feet from the Gulf of Mexico to Mullet Key; 44 by 600 feet in Mullet Key Cut Channel; 44 by 500 feet in Tampa Bay from Mullet Key Cut to Hillsborough Bay and Port Tampa

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

Channels; 44 by 500 feet in Hillsborough Bay from junction with Tampa Bay and Port Tampa Channels to the junction with Port Sutton entrance channel, thence 42 by 400 feet to the junction with Seddon and Garrison Channels; 44 by 400 feet in Port Sutton entrance channel; 42 by 400 feet in Sparkman Channel; 40 by 300 feet in Ybor Channel; 42 by 400 feet in Port Tampa Channel; 44 by 400-500 feet in East Bay entrance channel; 44 by 300 feet in East Bay approach channel; 30 by 300 feet in Seddon and Garrison Channels; 30 by 200 feet in Alafia River; 9 by 100 feet in Hillsborough River to a point 2,000 feet above Columbus River bridge; a breakwater; a 43 by 200 foot Port Sutton Terminal Channel 3,700 feet long; turning basins at Ybor Channel, Port Tampa, East Bay, mouth of Hillsborough River, and in Alafia River; and maintenance of a channel 12 by 200 feet in Hillsborough River, a 43 by 200 feet by 3,700 feet long in Port Sutton Terminal Channel, and 34 by 300 feet in East Bay Channel. (The 46-foot and 44 foot depth portions of the project include a 5-foot under keel clearance. Special studies on the project concluded that 4 feet under keel is sufficient. Therefore, a one-foot overdepth has been placed in an inactive status, resulting in active project depths of 45 and 43 feet respectively.) Plane of reference is mean low water. The project is about 67 miles long, including 10 miles in Hillsborough River and 3.6 miles in Alafia River. Mean range of tide is 1.3 feet at the lower end of the bay, 1.6 feet at Port Tampa, and 1.8 feet at Tampa. Extreme range is about 3.8 feet at the lower end of the bay and 4.8 feet at Tampa. Strong southwesterly winds raise the water level about 1.5 feet. Strong northerly winds, which usually occur in the winter, lower the water level about 2 feet. (See Table 9-B for Authorizing Legislation.)

Estimated cost for Big Bend Channel \$9,100,000 Federal and \$6,400,000 non-Federal. Estimated cost for Alafia River is \$39,000,000 Federal and \$15,000,000 non-Federal. Estimated cost for Port Sutton is \$7,000,000 Federal and \$4,800,000 for non-Federal.

For further details, see 1962 Annual Report.

Local cooperation. Local cooperation has been fully complied with for work completed to date. See 1978 Annual Report for requirements for work authorized by the River and Harbor Act of 1970, H 401/91/2 and H 150/91/1. The Secretary of the Army approved assurances of local cooperation for the 1970 authorization on January 10, 1973. The LCA for branch channels was signed June 20, 1986. An amendment to the LCA reflecting cost sharing

requirements of WRDA of 1986 for section 6 was signed August 31, 1987. Non-Federal contribution for new work was \$4,971,144. A 25 percent contribution and an additional 10 percent reimbursement over 30 years are required from locals.

Terminal facilities. There are 102 commercial waterfront facilities serving Tampa Harbor. The General Cargo Facilities consist of 7,226 feet of usable berthing space and 15 transit sheds with a total of 585,200 square feet of storage space. The Oil Handling Facilities include 16,440 feet of usable berthing space and 316 storage tanks for a total capacity of 11,610,350 barrels. Dry storage is available at 1,904,750 square feet, cold storage at 14,309,000 cubic feet, and open storage at 59.4 acres. There are 2 wharves available for coal storage at 750,000 tons total storage and grain elevators with a 3,400,000-bushel total capacity. One elevator on Ybor Channel has a 1,000,000-bushel capacity.

Hoisting Facilities include 13 cranes, fixed and mobile, with capacities from 45 to 150 tons and other crawler and mobile cranes available locally. Marine repair yards include 9 waterfront repair facilities and numerous other offwater companies engaged in various phases of marine repair. There are 4 floating and 4 graving docks available at the port with capacities ranging from 548 to 5,400 long tons. Floating equipment includes 24 tugs with up to 3,350 horsepower and 4 companies with tank barges of capacities up to 14,000 barrels. The CSX Railroad serves the port.

Facilities are considered adequate for existing commerce. (See Port Series No. 17, Rev. 1979.)

Operations and results during fiscal year. New work: Port Sutton: Engineering and design cost was \$1,357. East Bay Channel: Real estate cost was \$2,543; contract dredging cost was \$2,973,900. Engineering and design cost was \$131,633. Supervision and administration cost was \$113,794. Big Bend: Engineering and design cost was \$284. GRR: Engineering and design cost was \$73,000. Maintenance: Dredging for cuts A, C, J, and K \$5,588,413; engineering and design \$702,763; and construction management \$113,716.

Condition at end of fiscal year. Big Bend Channel Chief's report signed in October 1998. PED agreement executed February 1998. PED currently on hold until construction funding is budgeted. Feasibility report for Alafia River completed October 2000. Final feasibility report was returned by HQUSACE to be held in

JACKSONVILLE, FL DISTRICT

District until construction funds are appropriated. PED is scheduled for signature October 2002. Port Sutton is on hold awaiting completion of bulkhead/stabilization work by sponsor. Plans and specifications will begin after sponsor work nears completion.

37. NAVIGATION PROJECTS ON WHICH RECONNAISSANCE AND CONDITION SURVEYS ONLY WERE CONDUCTED DURING PERIOD

Total cost was \$673,284. (See Table 9-H.)

38. OTHER AUTHORIZED NAVIGATION PROJECTS

(See Table 9-C.)

39. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Navigation Activities Pursuant to Section 107, Public Law 86-645 (Preauthorization)

Fiscal year costs for Section 107 Coordination Account, \$16,009; Salt Run, St. Augustine, FL, \$62,074; Hernando Beach Channel, FL \$95,166; Canaveral Harbor (West Turning Basin), FL \$59,451; Key West Harbor, FL \$14,669; Palm Beach Harbor, FL \$80,026; Ponce de Leon 107, FL \$31,145.

Snagging and clearing for navigation (Section 3 of 1945 River and Harbor Act, Public Law 14, 79th Congress.)

No costs incurred.

Mitigation of shore damages attributed to navigation projects (Sec 111).

Stohl Road, Aguadilla Harbor, PR \$343,150; Virginia Beach Key, FL \$253,030.

Beach Erosion Control

40. BREVARD COUNTY, FL

Location. The project is on the east coast of Florida at approximately the midpoint of the peninsula. (See NOAA Nautical Chart Nos. 11484 and 11476.)

Existing project. The authorization provides for a protective and recreational beach with a berm 50 feet wide at elevation 10 feet above mean low water and a natural seaward slope as would be shaped by wave action, along 14,600 feet of beach at the city of Cape Canaveral and 10,600 feet of beach at Indiatlantic and Melbourne beach, and for periodic nourishment of the restored beach at Indiatlantic and Melbourne beach limited initially to a period of 10 years. Nourishment of the restored beach at the city of Cape Canaveral would be provided by the authorized sand-transfer plant for construction at Canaveral Harbor. The project also provides for improvement of the Federally owned shores for beach erosion control or hurricane protection to be accomplished by the Federal agencies involved, subject to their own determination of economic justification. The areas involved include 4.9 miles of shore at Kennedy Space Center, 4.0 miles at Cape Kennedy Air Force Station, and 2.3 miles at Patrick Air Force Base.

Mean tidal range in the area is 3.5 feet. (See Table 9-B for Authorizing Legislation.)

Estimated cost for new work \$142,600,000 Federal and \$98,600,000 non-Federal.

Local cooperation. Local interests must contribute 50 percent of all first costs of the work and 50 percent of the nourishment cost at Indiatlantic and Melbourne beach for the first 10 years of the project life; provide lands and rights-of-way; provide, after the first 10 years of project life, periodic nourishment of the restored beach at Indiatlantic and Melbourne beach during project life; maintain continued public ownership of the shore upon which the amount of Federal participation is based; control water pollution; and hold the United States free from damages. The Secretary of the Army approved assurances of local cooperation on July 9, 1973. Non-Federal contribution for new work was \$15,411,026.

Operations and results during fiscal year. New work: Lands and damages cost was \$11,000. Beach replenishment cost was \$11,809,000. Engineering and design cost was \$647,353. Construction management cost was \$298,000.

Condition at end of fiscal year. Feasibility report was completed in September 1996, approved in December

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

1996, and authorized by Section 101(b) of WRDA 1996. PED completed in September 1999. PCA was signed April 2000 and North Reach contract was awarded September 2000. A continued construction contract was awarded for South Reach in December 2001 for the base (2.2 miles from monument R-127 to R-139) and Option A (0.3 miles from monument R-125T to R-127). Option B (0.6 miles from monument R-122 to R-125T) and Option C (0.7 miles from monument R-118.3 to R-122) will be awarded in FY 03.

41. BROWARD COUNTY, FL BEACH EROSION CONTROL AND HILLSBORO INLET, FL NAVIGATION PROJECT

Location. Broward County is on the lower east coast of Florida, 300 miles south of Jacksonville and about 30 miles north of Miami. Hillsboro Inlet is in the northern part of Broward County. (See NOAA Nautical Chart No. 11466.)

Existing project. The authorization provides for Federal participation in cost sharing of a shore restoration and protection project and a project to maintain a channel adequate for small craft navigation. The authorized plan provides for restoration of a shoreline protection and recreational beach at 4 locations generally 100 feet wide with berm elevation of 10 feet above mean low water; a navigation channel 8 by 100 feet from the Intracoastal Waterway to a point 1,500 feet ocean ward in Hillsboro Inlet, thence 10 by 150 feet in the ocean; jetties on north and south sides of ocean entrance; a permanently based floating dredge; and on a deferred basis, a trestle-mounted sand-transfer plant, if needed. Navigation portion of the project is in an inactive status. Mean range of tide in areas is 2.5 feet. Plane of reference is mean low water. Cost estimate for Broward County is \$112,900,000 Federal and \$101,300,000 non-Federal contribution. Cost estimate for Hillsboro Inlet \$3,400,000 and \$1,100,000 non-Federal. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Local interests must contribute 90.5 percent of the first cost beach restoration in the reach between north county line and Hillsboro Inlet, Seg. II, 90 percent of first cost allocated to beach restoration, and 50 percent of first cost allocated to navigation for reach between Hillsboro Inlet, Seg. III, and Port Everglades and 72.4 percent of beach restoration in reach between Port Everglades and south county line; provide all lands and rights-of-way; obtain

approval of Chief of Engineers of plans and specifications if local interests construct beach erosion features; and furnish assurances that they will hold the United States free from damages; provide and maintain adequate public landing or wharf at Hillsboro Inlet; establish a public body to cooperate financially and to provide and operate local facilities for navigation, control water pollution, maintain ownership of publicly owned shores, and maintain all project works except the jetties (maintenance of the channel to revert to the United States if sand-transfer plant is constructed). Assurances of local cooperation were accepted November 22, 1968. Non-Federal contribution for new work was \$3,460,990.

Operations and results during fiscal year. New work: Broward County BEC: Real estate cost was \$9,000; engineering and design cost was \$133,946. Hillsboro Inlet: Engineering and design cost was \$38,172.

Condition at end of fiscal year. The GRR for renourishment of Segments II and III, prepared by Broward County, is under Washington level review. The City of Deerfield Beach has recently indicated a desire to initially construct Segment I. The County intends to award a contract for renourishment of Segments II and III in the summer of 2003.

42. DUVAL COUNTY, FL

Location. On upper east coast of Florida, within 20 miles of Florida-Georgia line. Ocean shoreline is about 16 miles long. (See NOAA Nautical Chart No. 11488.)

Existing project. Provides for Federal participation toward cost of construction with artificial fill, a beach 60 feet wide at elevation 11 feet above mean low water with a natural slope seaward, and for periodic nourishment for 10 years. Federal participation to be 100 percent of the first cost of construction applicable to the Federal shore and 50 percent applicable to the other publicly owned shore and 55.5 percent of periodic nourishment cost for first 10 years of project life. Mean tidal range at south jetty in St. Johns River is 4.9 feet.

Estimated cost of new work \$117,200,000 Federal and \$76,700,000 non-Federal.

Project was authorized by River and Harbor Act of 1965 (H 273/89/1).

Local cooperation. Local interests must contribute 50 percent of first cost of constructing non-Federal publicly owned shores; contribute 44.5 percent of

JACKSONVILLE, FL DISTRICT

periodic nourishment costs for first 10 years of project life; provide all lands, rights-of-way, and relocations; hold the United States free from damages; control water pollution; and furnish assurances that they will maintain continued public ownership of the shore upon which the amount of federal participation is based during economic life of project. Assurances of local cooperation were accepted on November 29, 1973. Non-Federal contribution for new work was \$19,595,567.

Operations and results during fiscal year. New work: Engineering and design cost was \$97,941.

Condition at end of fiscal year. Renourishment of the shore protection project is being combined with the contract for dredging the Jacksonville Harbor navigation project. The shore protection project will pay the additional costs to dispose of 500,000 cubic yards of sand along 7 miles of the project area. The contract was advertised in October 2001.

43. FORT PIERCE BEACH, FL

Location. Fort Pierce Beach Erosion Control Project extends 1.3 miles south of Fort Pierce Inlet, on the east coast of Florida about 120 miles north of Miami.

Existing project. The project fill was initially completed by local interests in 1971, using offshore borrow material. Prior to the nourishment, severe shorefront recession had destroyed a private residence and threatened other residences and a state road. Local interests were reimbursed the federal share of the initial project construction cost. Federal participation in renourishment was authorized for an initial 10-year period and subsequently extended five years under the discretionary authority of the Chief of Engineers until 1985. The project is also periodically nourished with suitable material obtained from operational maintenance of the nearby Fort Pierce Harbor federal navigation project. The project was renourished in the summer of 1980.

A Section 111 project authorized in 1982 provides that 60 percent of the cost of material required to nourish 1.2 miles south of Fort Pierce Inlet should be reallocated to the navigation project. A reevaluation report is being conducted to determine whether extension of federal participation in cost sharing to 50 years is warranted.

Estimated cost is \$36,100,000 Federal and \$15,100,000 non-Federal.

Local cooperation. Non-Federal contribution for new work was \$5,054,180.

Operations and results during fiscal year. New work: Replenishment cost was \$3,000. Engineering and design and construction management cost was \$613,868 and \$11,000 respectively.

Condition at end of fiscal year. Final EIS addressing bryozoans in borrow completed and approved. Addressing higher authority comments on GRR for the additional mile. Renourishment to begin in spring 2003.

44. INDIAN RIVER COUNTY, FL

Location. Indian River County is on the east coast of Florida, midway between Jacksonville and Miami. The authorized project comprises 2.65 miles of beach along the ocean shore of Vero Beach and 1.7 miles along the Sebastian Inlet State Park. (See NOAA Nautical Chart Nos. 11474 and 11476.)

Existing project. The authorized project provides nourishment for 8,870 feet (1.68 miles) of the State Park, south of Sebastian Inlet. The initial beach fill would consist of 202,000 cubic yards of nourishment material. An estimated 202,000 cubic yards of periodic nourishment at 5-year intervals would be required. The Federal share of the first cost was estimated to be 65 percent of this segment.

The plan also provided for nourishment of 9,180 feet (1.74 miles) of Vero Beach. The initial beach fill consisted of 572,000 cubic yards of material, including advance nourishment. The restored beach would have a 20-foot wide level berm at an elevation of 15 feet above mean low water. The beach fill as designed would provide protection against a 10-year return interval storm. An estimated 120,000 cubic yards of periodic nourishment would be required at 5-year intervals. In addition to the beach fill a "Sabecon" reef breakwater was recommended. The structure would be placed 500 feet offshore of the new beach and would be 400 feet in length, with a zero mean low water crest elevation. The Federal share of the first cost was estimated to be 43.7 percent for this segment.

The project was authorized on November 17, 1986 (Public Law 99-662) by the 1986 Water Resource Development Act.

Local cooperation. The authorization of a beach erosion control project for Indian River County, Florida was made with the provision that the State and

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

local interests will, in addition to the general requirements, agree to comply with the following requirements: provide all necessary lands, easements and rights-of way; including borrow areas and disposal areas for excavated material, and relocations; hold and save the United States free from claims for damages; assure continued conditions of public ownership and public use of the shore; assure maintenance and repair during the economic life of the project; provide and maintain as necessary access roads, parking areas and other public use facilities; provide a cash contribution for periodic nourishment's for the life of the project; provide an additional cash contribution for the Sebastian Inlet State Park Beach. The project, as authorized, provides that the work may be accomplished in separate units or features and that the written agreement with non-Federal interests be obtained. The Indian River County Board of Commissioners, by letters dated December 21, 1984 and January 15, 1987, affirmed their support for the project and their willingness and ability to share in project costs.

Operations and results during fiscal year. New work: None.

Condition at end of fiscal year. No work is currently scheduled.

45. LEE COUNTY, FL

Location. Lee County is on the lower Gulf coast of Florida, about 90 miles south of the entrance to Tampa Bay and 130 miles north of Key West.

Existing project. The project provides for the Federal participation in restoration and protection of Lee County, Florida, as follows: On Gasparilla Island, restore beach along 2.7 miles of shore and provide revetment along 2,400 feet of shore and a 500-foot terminal groin; on Captiva Island, restore beach along 4.7 miles of shore; and on Estero Island, restore beach along 4.6 and provide a 5-year advance supply of beach nourishment material and periodic nourishment of the restored beaches, as needed, with Federal aid for nourishment limited to the first 10 years of project life after completion of the initial fill placement on each island. (See Table 9-B for Authorizing Legislation.)

Estimated cost is \$189,100,000 Federal cost and \$138,200,000 non-Federal cost.

Local Cooperation. Local interest must: contribute in cash) including contract price, engineering and design, and supervision and administration) 65.8 percent of first cost at Gasparilla Island, 91.3 percent of first cost

at Captiva Island, and 87.5 percent of first cost at Estero Island; contribute toward beach nourishment for the first 10 years of project life, 95.5 percent for Gasparilla Island; 91.3 percent for Captiva Island, and 96.9 percent for Estero Island; and contribute 50.9 percent of the annual maintenance costs of the terminal groin on Estero Island; provide after 10 years of project life periodic nourishment of the restored beaches; provide lands, easements, rights-of-way, and relocations; assure continued public ownership for public use of the shore upon which the amount of Federal participation is based; control water pollution; save the United States free from damages; and provide an adequate width of beach with acceptable access and other facilities necessary for public use.

Operations during the year. New work: Engineering and design cost was \$60,602.

Condition at end of fiscal year. GRR for Estero and Gasparilla Islands is currently under review for initial construction. The County intends to award the contract for initial construction of both islands in summer 2004 under the authority of Section 206 of WRDA 92. Captiva Island second renourishment scheduled for summer 2005.

46. MANATEE COUNTY, FL

Location. Manatee County is on the west coast of Florida, just south of the entrance to Tampa Bay. The county's 14-mile gulf shoreline consists of 2 barrier islands, Anna Maria Key and the northern half of Longboat Key, separated from the mainland by Tampa and Sarasota Bays and from each other by Longboat Pass. Project consists of about 7.5 miles of gulf shoreline.

Existing project. Provides for Federal participation in the shore protection project for Manatee County, which includes the entire 7.5-mile, gulf shoreline of Anna Maria Key. The project consists of restoration of 3.2 miles of gulf shore beach to an elevation 6 feet above mean low water with a level berm 50 feet wide and a natural slope seaward as would be shaped by wave action. The project also provides for periodic nourishment of the restored beach and such adjacent shoreline as may be and justified for the project life. Mean tidal range is 2.3 feet. (See Table 9-B for Authorizing Legislation.)

Estimated cost is \$53,800,000 Federal and \$45,200,000 non-Federal.

Local cooperation. The authorization of a shore protection project for Manatee County, Florida was

JACKSONVILLE, FL DISTRICT

made with the provision that Federal cost sharing would be in accordance with policy established by existing law, and the percentages based on conditions of shore ownership and use existing at the time of construction: Provided that, prior to construction, local interests furnish assurances satisfactory to the Secretary of the Army that they will: (a) Provide without cost to the United States all lands, easements, and rights-of-way, including borrow areas, and relocations necessary for construction of the improvements; (b) Provide a cash contribution equal to 47 percent of the first cost of construction, subject to any credit for eligible construction costs incurred by local interests, and exclusive of costs for lands, easements, rights-of-way, relocations, and alterations, and exclusive of the cost of fill placed behind the Corps construction line, the final percentage to be based on shore ownership and use existing at the time of construction; (c) Provide all costs of construction for nourishment landward of the Corps construction line; (d) Provide a cash contribution for periodic nourishment equal to 41 percent of the cost of each nourishment, such contribution to be made prior to each nourishment operation, and the final percentage to be based on shore ownership and use existing at the time of construction; (e) Hold and save the United States free from damage due to the construction works, except for damages due to the fault or negligence of the United States or its contractors; (f) Assure continued public ownership and administration of the shore upon which the amount of Federal participation is based; (g) Provide without cost to the United States appropriate access and facilities, including parking and sanitation, necessary for realization of the public benefits upon which Federal participation is based; (h) Adopt appropriate ordinances, or provide other means, to insure the intended use of the beach fill areas; (i) Control water pollution to the extent necessary to safeguard the health of bathers; and (j) Agree to pay 100 percent of the operation, maintenance, and replacement and rehabilitation's costs of the project, or functional element thereof. Non-Federal contribution for new work is \$3,337,348.

Operations and results during fiscal year. New work: Beach Replenishment cost was \$824,000. Engineering and design cost was \$43,619.

Condition at end of fiscal year. Manatee County awarded a contract in December 2001 for the first renourishment of the project following initial construction by USACE in 1993 for \$8.4 million. ASA(CW) approved the use of Section 206 (WRDA 92) authority to allow the County to conduct the first

renourishment with reimbursement of the Federal share of the costs.

47. MARTIN COUNTY, FL

Location. Martin County is located on the east coast of Florida about 300 miles south of Jacksonville and 70 miles north of Miami. (See Table 9-B for Authorizing Legislation.)

Existing project. The recommended plan of improvement for Martin County provides for restoration of a protective beach along 3.75 miles of shoreline. The plan includes restoration of the primary dune as needed and a 35-foot wide protective berm. The recommended plan was designed to reduce environmental impacts. Of primary importance is the impact of project construction on sea turtle nesting. In order to avoid these impacts, project construction has to occur between November 1st and April 15th. Only one island segment is authorized for this project, which is located on Hutchinson Island in Martin County. The project begins at the St. Lucie/Martin County line and proceeds south 4 miles. The actual project to be constructed is 3.75 miles. The project was shortened 0.25 miles to avoid impacting sensitive hardgrounds. The borrow area is approximately 3,000 feet offshore of the southern end of the project area. (See Table 9-B for Authorizing Legislation.)

Estimated cost of new work is \$37,800,000 Federal and \$43,300,000 non-Federal.

Local cooperation. Martin County Board of Commissioners is the local sponsor. Non-Federal funds will be requested from the sponsor following execution of the PCA. Non-Federal contributions for new work is \$7,440,000.

Operations and results during fiscal year. New Work: Beach replenishment cost was \$982,000. Engineering and design cost was \$324,000. Construction management cost was \$115,658.

Condition at end of fiscal year. Initial nourishment was completed April 1996. Southern half of project renourished spring 2001 and 2002. Northern half to be renourished spring 2003.

48. NASSAU COUNTY, FL

Location. Nassau County is on the east coast of Florida, north of Jacksonville and adjoins the state of Georgia. The authorized project comprises 4.3 miles of beach along the ocean shore of northern Amelia Island,

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

and tightening 1,500 feet of the shoreward end of the existing south jetty at the entrance to Fernandina Harbor.

Existing project. The authorized project would provide initial restoration of 3.6 miles of eroded beach, starting at a point about .7 mile south of the Fernandina Harbor south jetty and extending south to Sadler Road; sand tightening about 1,500 feet of the shoreward end of the south jetty; and periodic nourishment of 4.3 miles of shore between the south jetty and Sadler Road. The restored beach would have a 20-foot wide level berm at an elevation of 13 feet above mean low water. The initial beach fill would consist of an estimated 1,100,000 cubic yards of nourishment material. An estimated 240,000 cubic yards of nourishment at 2-year intervals would be required. Sand tightening would require about 16,700 tons of stone. The Federal share of the first cost was estimated to be 77%. (Sand tightening, accomplished as part of the Navy's effort to deepen and widen the navigation channel was deleted from the plan.)

Estimated cost of new work \$13,000,000 Federal and \$3,500,000 non-Federal contributed funds.

Local cooperation. The authorization of a shore protection project for Nassau County, Florida was made with the provision that the State and local interests will, in addition to the general requirements, agree to comply with the following requirements: provide without cost to the United States all necessary lands, easements, and rights-of-way, including borrow areas and disposal areas for excavated material and relocations required for construction of the project, including that required for periodic nourishment; hold and save the United States free from claims for damages which may result from construction and subsequent maintenance, operation and public use of the project, except damages due to the fault or negligence of the United States or its contractors; assure continued conditions of public ownership and public use of the shore upon which the amount of Federal participation is based during the useful life of the project; assure maintenance and repair during the useful life of the project as required to serve the project's intended purpose; provide and maintain clearly marked beach access, nearby parking areas, and other public use facilities, open to all on equal terms, and as required to realize the benefits upon which Federal participation is based; provide a cash contribution for beach erosion control equal to the appropriate percentage of the final construction cost allocated to this function, exclusive of lands, easements, rights-of-way, alterations, and relocations,

the percentage to be in accordance with existing law and based on shore ownership at the time of implementation; provide a cash contribution for periodic nourishment during the useful life of the project, such contribution to be made prior to each nourishment, with the actual amount to be based on existing law and conditions of ownership at the time of each nourishment; and at least annually inform affected interests of the limitations of the protection afforded by the project.

Operations and results during fiscal year. New work: Engineering and design cost: none.

Condition at end of fiscal year. Currently addressing higher authority on GRR.

49. PALM BEACH COUNTY, FL

Location. Palm Beach County is on the east coast of Florida about 300 miles south of Jacksonville and 70 miles north of Miami. (See NOAA Nautical Chart No. 11466.)

Existing project. Project authorization, the River and Harbor Act of 1962, provides for Federal participation toward the cost of local shore project for restoration of beaches to a general width of 100 feet with a berm elevation of 10 feet above mean low water, and periodic nourishment for 10 years from the year of initial nourishment, as follows: 62.1 percent of the cost for Martin County line-Jupiter Inlet segment; 55.8 percent of cost for Jupiter Inlet-Lake Worth Inlet segment; and 50 percent for south Lake Worth Inlet-Delray Beach; and 53 percent of cost for Delray Beach-Boca Raton inlet segment. Mean range of tide is 2.8 feet in the Atlantic Ocean at Palm Beach and 2.3 feet at Boca Raton Inlet. (See Table 9-B for Authorizing Legislation.)

Estimated cost for Palm Beach County is \$88,300,000 Federal and \$189,400,000 non-Federal cash contributions.

Local cooperation. Federal participation is subject to the conditions that responsible local authorities will: (a) obtain approval by the Chief of Engineers, prior to commencement of work on the project, of detailed plans and specifications and arrangements for prosecution of the work on the project; (b) provide at their own expense all necessary lands, easements, and rights-of-way; (c) furnish assurances satisfactory to the Secretary of the Army that they will: (1) assure maintenance of the protective measures during their economic life as may be required to serve their

JACKSONVILLE, FL DISTRICT

intended purpose, and periodic nourishment of the protective beach at suitable intervals; (2) control water pollution to the extent necessary to safeguard the health of bathers; and (3) maintain continued public ownership of the publicly owned shores upon which a part of the recommended Federal participation is based and their administration for public use during the economic life of the project.

Operations and results during fiscal year. New work: Palm Beach County BEC: Real estate cost was \$20,042; beach replenishment cost was \$36,488; engineering and design cost was \$1,191,677; construction management cost was \$2,041. Lake Worth Inlet STP: Engineering and design cost was \$47,803.

Condition at end of fiscal year. The City of Delray Beach has completed a fourth periodic nourishment contract in Spring 2002. the County completed the first periodic nourishment for the Jupiter/Carlin segment in Spring 2002.

50. PALM BEACH ISLAND, FL

Location. Palm Beach Island is on the east coast of Florida about 300 miles south of Jacksonville and 70 miles north of Miami. (See NOAA Nautical Chart No. 11466).

Existing project. The River and Harbor Act of 1958 authorization provides for Federal participation in the costs of a plan for protection of the shore of the Palm Beach Island, comprising restoration of a protective beach with berm elevation of 10 feet above mean high water from Lake Worth Inlet to a point about 1,000 feet south of Southern Boulevard extended, thence with a general width of 100 feet to South Lake Worth Inlet, construction and operation of a sand-transfer plant at Lake Worth Inlet, and additional periodic nourishment from Lake Worth or other suitable source, substantially in accordance with the plan developed by the district engineer, with such modifications thereof as may be considered advisable by the Chief of Engineers. Federal assistance would entail contribution of funds in the amount of 4.7 percent of the initial construction cost of the beach restoration and appurtenant drainage work, and of the expenditures for periodic nourishment from Lake Worth for a period of 10 years from the year of the initial placement, plus 19.3 percent of the expenditures for construction, and for operation, maintenance, and current replacements of parts of the sand-transfer plant for the same period. Mean tidal range is 2.8 feet in the Atlantic Ocean at

Palm Beach and 2.3 feet at Boca Raton Inlet. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Federal participation is subject to the conditions that responsible local authorities will: (a) obtain approval of the Chief of Engineers, prior to commencement of work on the project (except the sand-transfer plant already under contract), of detailed plans and specifications and arrangements for prosecution of the work on the project; (b) make appropriate modification of the location of the end of the discharge line of the sand-transfer plant to accomplish satisfactory dispersion of bypassed material; (c) provide at their own expense all necessary lands, easements, and rights-of-way; (d) furnish assurances satisfactory to the Secretary of the Army that they will: (1) assure maintenance of the protective measures during their economic as may be required to serve their intended purpose, and periodic nourishment of the protective beach at suitable intervals, including operation of the sand-transfer plant; (2) control water pollution to the extent necessary to safeguard the health of bathers; and (3) maintain continued public ownership of the publicly owned shores upon which a part of the recommended Federal participation is based and their administration for public use during the economic life of the project.

Operations and results during fiscal year. New Work: None.

Condition at end of fiscal year. No work scheduled.

51. PINELLAS COUNTY, FL

Location. Pinellas County is on the Gulf coast of Florida, about midway of the peninsula. It extends northerly about 39 miles from the main entrance to Tampa Bay to the vicinity of the mouth of Anclote River. (See NOAA Nautical Chart No. 11411.)

Previous project. For details see page 429 of Annual Report for 1965.

Existing project. The authorized project provides for Federal participation in preserving and protecting the shores of Pinellas County, Florida, by: restoration of 5,000 feet of beach at Clearwater Beach Island; restoration of 49,000 feet of beach at Sand Key; restoration of 9,200 feet of beach at Treasure Island; construction of 600 feet of revetment at Long Key; and advance nourishment of Long Key and periodic nourishment of each island. (See Table 9-B for Authorizing Legislation.)

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

Estimated cost is \$169,300,000 Federal and \$113,100,000 non-Federal.

Local cooperation. Local interests must (a) contribute in cash the required percentages of the first costs of work provided by the Corps of Engineers, the percentages varying with the type of beach ownership; 94.1 to 50 percent of the beach restoration at Clearwater Beach; 98.1 to 50 percent of the improvement at Sand Key; 94.3 to 50 percent of the improvement at Treasure Island; and 50 percent of the first cost of the revetment at Long Key; (b) contribute in cash an amount computed in accordance with the cost sharing provision contained in P.L. 826, 84th Congress as amended by P.L. 87-874, for beach nourishment cost for the first 10 years of the project life; (c) provide lands, easements, and rights-of-way; (d) assure maintenance and repair of the stone revetment of Long Key; (e) assure periodic nourishment of the restored beaches; (f) assure public ownership of beaches; (g) assure against water pollution; (h) hold the United States free from damages; and (i) provide beach for public use. Assurances of local cooperation were accepted March 22, 1967. Non-Federal contribution for new work is \$33,729,772.

Operations and results during fiscal year. New work: Beach replenishment cost was \$488,000. Engineering and design and construction management cost \$1,147,000 and \$84,645, respectively.

Condition at end of fiscal year. Preparation of plans and specifications for next renourishment of Long Key and treasure Island underway. Renourishment scheduled for spring/summer 2004.

52. ST. JOHNS COUNTY, FL

Location. St. John's County is located about 100 miles south of the Florida/Georgia border.

Existing project. The project consists of restoration of 2.5 miles of shoreline, beginning approximately 2.7 miles south of St. Augustine Inlet, and including the City of St. Augustine Beach. The authorized project provides for initial restoration of the beach to a width of 80 feet +12 feet elevation relative to mean low water. The initial fill would consist of placement of 3,580,000 cubic yards of beach quality sand, includes six years of advanced nourishment. The project would replace sand lost due to frequent northeasters and provide storm protection to upland development. The borrow area is located at the ebb tidal shoal south of

St. Augustine. The project was authorized with a 50-year project life from the start of construction. (See Table 9-B for Authorizing Legislation.)

Estimated cost is \$195,800,000 Federal and \$47,400,000 Non-Federal.

Local cooperation. The sponsor of this project is the St. John's County Board of Commissioners. Cost sharing for this project is 76.4 percent Federal and 23.6 percent Non-Federal. The cost sharing reflects the higher Federal percentage required to mitigate for erosion caused by the Federal navigation project at St. Augustine Harbor. PCA will be executed following completion and approval of the General Reevaluation Report. Non-Federal contribution for new work is \$1,216,200.

Operations and results during fiscal year. New work: Beach replenishment cost was \$8,724,000. Engineering and design cost was \$193,000. Construction management cost was \$138,862.

Condition at end of fiscal year. Contract for initial construction scheduled for completion January 2003.

53. SARASOTA COUNTY, FL

Location. Sarasota County is on the Gulf coast of Florida about 30 miles south of Tampa Bay. The northern most portion of the project adjoins the Manatee County Beach Erosion Control Project on Longboat Key. The total project consists of about 5.7 miles of gulf shoreline on Longboat Key and Venice Beach.

Existing project. The authorized project provides for Federal participation in the construction of a protective beach 12,600 feet long at Longboat Key and a protective beach 29,400 feet long at Manasota Key at the City of Venice, Florida. Two borrow areas will be required. The first is located within 2 shoal areas located between 1 to 2 miles offshore of Manasota Key south of the project area. This borrow area will be supplemented by material located within the ebb tidal shoal of Big Sarasota Pass which is about 13 nautical miles north of the project beach at Venice. The project also provides periodic nourishment of the restored beach and such adjacent shoreline as may be needed and justified for life of the project. The mean tidal range is 2.1 feet. (See Table 9-B for Authorizing Legislation.)

Estimated cost is \$55,200,000 Federal and \$28,500,000 non-Federal. The Federal share of each

JACKSONVILLE, FL DISTRICT

periodic nourishment is 72.55 percent for Venice, and 15.4 percent for Longboat, of applicable nourishment costs.

Local cooperation. Federal participation is subject to the conditions that responsible local authorities will: (a) provide without cost to the United States all lands, easements, and rights-of-way, including borrow areas, and relocations necessary for construction of the improvements; (b) provide a cash contribution equal to 29.3 percent of the first cost of construction, subject to any credit for eligible construction costs incurred by local interests, and exclusive of costs for lands, easements, and rights-of-way, relocations, and alterations, and exclusive of the cost of fill placed behind the Erosion Control Line (ECL), the final percentage to be based on shore ownership and use existing at the time of construction; (c) provide all costs of construction for nourishment of private lands and share in the costs of construction for public lands landward of the Erosion Control Line (ECL); (d) provide a cash contribution for periodic nourishment equal to 29.3 percent of the cost of each nourishment, such contribution to be made prior to each nourishment operation, and the final percentage to be based on shore ownership and use existing at the time of construction; (e) hold and save the United States free from damage due to the construction works, except for damages due to the fault or negligence of the United States or its contractors; (f) assure continued public ownership and administration of the shore upon which the amount of Federal participation is based; (g) provide without cost to the United States appropriate access and facilities, including parking and sanitation, necessary for realization of the public benefits upon which Federal participation is based; (h) adopt appropriate ordinances, or provide other means, to insure the intended use of the beach fill areas; (i) control water pollution to the extent necessary to safeguard the health of bathers; and (j) agrees to pay 100 percent of the operation, maintenance, and replacement and rehabilitation costs of the project, or functional element thereof. Non-Federal contribution for new work is \$5,020,605.

Operations and results during fiscal year. New work: Engineering and design cost was \$807,228.

Condition at end of fiscal year. The City of Venice desires renourishment of the project in FY 04 due to project conditions resulting from recent storms. Engineering and design for development of the offshore borrow area and preparation of plans and specifications are underway.

54. OTHER AUTHORIZED BEACH EROSION CONTROL PROJECTS

Key West, FL; Lido Key, FL; Mullet Key, FL; Virginia Key and Key Biscayne, FL were deauthorized January 1, 1990 by the WRDA of 1988, P.L. 100-676. (See Table 9-D.)

55. BEACH EROSION CONTROL ACTIVITIES UNDER SPECIAL AUTHORIZATION

Beach erosion control activities pursuant to section 103, Public Law 87-874 (Preauthorization) Reports incurring costs during the fiscal year were Hwy 187, Pinones, PR \$61,931; Puerto Nuevo Beach, PR \$66,104; Red Point Airport, VI \$46,953; Tarpon Springs, FL \$40,511; Veteran's Drive Shoreline, VI \$136,349; Boca de Cangrejos, PR \$45,734; Hwy. 102, Mayaguez, PR \$73,417.

Beach erosion control activities pursuant to section III, Public Law 90-433, Mitigation of Shore Damages Attributable to Navigation Projects.

No costs were incurred under the above authorization.

Beach erosion control activities pursuant to Shoreline Erosion Control Act of 1074, Public Law 93-251.

No costs were incurred under the above authorization.

Flood Control

56. CEDAR HAMMOCK (WARES CREEK), FL

Location. The project area is located in Bradenton and unincorporated Manatee County on the southwest side of Peninsular Florida.

Existing project. The project provides for clearing and snagging from approximately 500 feet upstream of Manatee Avenue bridge and extending 17th Avenue West; trapezoidal grass-lined channel, 1V:2H side slopes, 26-foot-bottom width from 17th Avenue West to 21st Avenue West; Vertical Sheet Pile Wall channel from just upstream of 21st Avenue West to 14th Street West (B.R. 41) with a 40-foot-bottom; and trapezoidal grass-lined channel, 1V:2H side slopes, 26-foot-bottom width from upstream of the 14th Street West (B.R. 41) and extending to just downstream of 44th

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

Avenue West (Cortez Road) bridge. (See Table 9-B for Authorizing Legislation.)

Estimated cost is \$12,600,000 Federal and \$6,700,000 non-Federal.

Local cooperation. In accordance with the cost sharing and financing concepts reflected in WRDA 1986, the sponsor must provide lands, easements, rights of way, and borrow and excavated or dredged material disposal sites; modify or relocate utilities, roads, bridges, and other facilities where necessary for the construction of the project; and pay 10.06 percent of the costs allocated to flood damage reduction during construction. Non-Federal contributions for new work is \$227,901.

Operations and results during fiscal year. New Work: Engineering and design cost was \$234,627.

Condition at end of fiscal year. The sponsor has decided to proceed with the real estate surveys prior to signing PCA.

57. CENTRAL AND SOUTHERN FLORIDA

Location. The project is generally located within the southeastern 18 counties of Florida covering an area of about 15,200 square miles. It is comprised of the Upper St. Johns River basin in the northeastern section of project, Kissimmee River basin in central section north of the Lake Okeechobee-Everglades area in the central and southwestern section, and the east coast Everglades's area in southeastern section.

Previous projects. Completed works for control of Lake Okeechobee were included in and constructed under the navigation project for Okeechobee Waterway, FL (formerly Caloosahatchee River and Lake Okeechobee drainage area, FL) and under provisions of River and Harbor Acts of July 3, 1930 and August 30, 1935. For further information, see Annual Reports for 1948 and 1949.

Existing project. The authorized project is for flood relief and water conservation and provides principally for: an east coast protective levee extending from the Homestead area north to the eastern shore of Lake Okeechobee near the St. Lucie Canal; three conservation areas for water impoundment in the Everglades area west of the east coast protective levee with control structures to effect transfer of water as necessary; local protective works along the lower east

coast; encirclement of the Lake Okeechobee agricultural area by levees and canals; enlargement of portions of Miami, North New River, Hillsboro, and West Palm Beach Canals; enlargement of the existing Lake Okeechobee levees and construction of new levees on the northeast and northwest shores of the lake; increased outlet capacity for improved control of Lake Okeechobee; floodway channels in the Kissimmee River basin, with suitable control structures to prevent over-drainage; an interrelated system of canals, levees, pumping stations, and structures in southwest Dade County to control water levels; and facilities for regulating floods in Upper St. Johns River basin; a system of canals and control structures for gravity drainage of Martin County and distribution of available water supplies to portions of Martin and St. Lucie Counties; and works to improve the supply, distribution, and conservation of water resources in central and southern Florida, including the Lake Okeechobee agricultural area, Everglades National Park, and other related areas. The project will provide water control and protection from recurrence of the devastating floodwaters from the Everglades and local sources, for the highly developed urban area along the lower east coast of Florida and for the productive agricultural areas around Lake Okeechobee (including towns around the lake), in the Upper St. Johns and Kissimmee River basins, and in South Dade County. The project includes a total of 990 miles of levees, 978 miles of canals, 30 pumping plants, 212-floodway control and diversion structures, 56 railroad bridge relocations, and 2 highway bridge relocations. The project also provides that upon completion, local interests assume operation and maintenance of all completed works except levees, channels, locks, and control works for regulation of Lake Okeechobee and the main control structures of conservation areas, which will be operated and maintained by the United States. The principal features of the hurricane gates, constructed under previous projects for Okeechobee Waterway and maintained under existing project since July 1, 1950, are set forth in Table 9-Q. Also, see Table 9-N for principal features of locks and dams. (See Table 9-B for Authorizing Legislation.)

Estimated cost for new work is \$2,409,100,000 Federal and \$1,742,500,000 Non-Federal, exclusive of river and harbor funds expended on previous projects.

Local cooperation. (See Table 9-R for local cash contribution.) Local interests must also: provide lands, rights-of-way, and spoil disposal areas; hold the United States free from damages; bear the cost of maintenance and operation of all works except those having to do with regulation of Lake Okeechobee and the main

JACKSONVILLE, FL DISTRICT

control structures of conservation areas; construct and maintain lateral drainage facilities; prohibit encroachment on flood-carrying capacity of the improved channels; and assume cost of all new highway bridges, relocations of existing bridges and alterations to utilities incident to construction of the project. In addition, for small boat navigation channels, local interests must provide, maintain, and operate adequate public landings, sanitary and access facilities, and establish regulations prohibiting discharge of pollutants into the waters of the locks and channels by users thereof. Assurances of local cooperation have been accepted by the District Engineer for all items of work authorized to date. Non-Federal contributions for new work is \$74,593,331.

Operations and results during fiscal year. (See Table 9-S for work accomplished.)

Operations and care. a. Features completed under previous navigation project for Okeechobee Waterway and being maintained under this project are: a levee about 70 miles long following in general the south shore of Lake Okeechobee and a north shore levee 15.8 miles long; spillways at Ortona and St. Lucie Locks; 5 hurricane gates; and 16 spillways along St. Lucie Canal.

b. Features completed under existing project that are to be maintained with operation and maintenance funds are: (1) Levees 47, 48, 49 and 50 -- total length 63 miles and enlargement of existing levees L-D1, L-D2, L-D3, L-D4, and L-D9, (2) spillway structures S-10, S-11, S-12, S-18C, S-77, and S-78 (3) C-43, Section 4 (Caloosahatchee River), and (4) W.P. Franklin Lock and Dam.

In addition to the actual facilities listed above it is necessary under operation and maintenance to continue meteorological studies, water level records, stream gauging stations, etc., for proper regulation of the level of Lake Okeechobee and storage of water in Conservation Areas 1, 2 and 3.

Corps of Engineers - The Corps of Engineers operates and maintains the major outlets to Lake Okeechobee and Water Conservation Area Nos. 1, 2A and 3A in central and southern Florida.

South Florida Water Management District - SFWMD is responsible for operation and maintenance of the project facilities, including major pumping stations, spillways, locks (except on Okeechobee Waterway), levees and culverts.

Condition at end of fiscal year. Continue preparation of the Water Preserve Area, Indian River Lagoon, Southwest Florida, and Florida Bay/Florida Keys feasibility studies are underway. Engineering and design is underway for Upper St. Johns, South Dade, C-51, and Manatee Pass Gates. Several PMP have been initiated and are ongoing under the Comprehensive Everglades Restoration Plan (CERP). PIR and PPDR will be initiated under CERP in FY 02. The CERP Recover efforts have also been initiated. (For status of work under construction at the end of the fiscal year see Table 9-P.)

58. DADE COUNTY, FL

Location. Dade County is on the southeast coast of Florida. Project area consists of that part of the Atlantic shoreline of the county from Government Cut north to Bakers Haulover Inlet and at Haulover Beach Park. (See NOAA Nautical Chart No. 11466.)

Existing project. Project provides for a protective and recreational beach having a dune at elevation 11.5 feet and a level berm 50 feet wide at elevation 9 feet, mean low water, for beach erosion control and hurricane protection between Government Cut and Bakers Haulover Inlet; a protective and recreational beach with a berm elevation of 9 feet for beach erosion control at Haulover Beach Park; and Federal participation in the initial construction and in periodic nourishment of both the above reaches for the first 10 years of project life. Plane of reference is mean low water. Mean range of tide in the area is 2.5 feet. Project was authorized by Flood Control Act of 1968 (H 335/90/2).

Estimated cost of the project is \$179,800,000 Federal cost and \$162,900,000 non-Federal cost.

Local cooperation. Local interests must (a) contribute for the first cost of the work: between Government Cut and Bakers Haulover Inlet amounts ranging from 60.2 percent of the cost of the fill within the project limit with existing shorefront ownership, and 100 percent of the cost of fill required landward of the project limit; and for the work at Haulover Beach Park, contribute 21.3 percent of the entire first cost excluding costs for lands, easements, rights-of-way, relocations, and preproject work, but including credit for preproject work; (b) contribute in cash for the first 10 years of project life, amounts ranging from 88.9 percent of the nourishment cost for the beach, with existing ownership, to 60.7 percent with public ownership, and the entire maintenance cost for dune, all between

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

Government Cut and Bakers Haulover Inlet; (c) provide all lands and rights-of-way; (d) hold United States free from damages; (e) assure continued public ownership and use of the shore upon which the amount of Federal participation is based; (f) assure maintenance of the groin, and after 10 years of project life, periodic nourishment of the protective beach and maintenance of the dune during the economic life of the project; (g) assure that water pollution will not be permitted; (h) prevent removal or relocation by man of fill from the beach berm and dune; (i) prevent the erection of barriers to the littoral movement of material that would interfere with the nourishment of the beach; (j) maintain at the parks qualifying for 70 percent Federal participation a zone that excludes permanent human habitation; (k) at least annually inform interests affected that the project will not provide complete protection from a hurricane tide level equal to or higher in elevation than that of the hurricane of September 1926; and (l) establish in public ownership for public use the beaches within project limits as a requirement for Federal participation in the allocated beach erosion control costs of improvement of shores presently in private ownership. Assurances of local cooperation were accepted January 16, 1973. A supplemental agreement for Bal Harbour portion was approved June 30, 1976. Non-Federal contribution for new work was \$52,552,842.

Operations and results during fiscal year. New work: Renourishment cost was \$5,746,000. Engineering and design and construction management cost \$728,000 and \$301,766, respectively.

Condition at end of fiscal year. The contract for construction of the Sunny Isles Modification was awarded in September 2000. The contract consists of construction of two offshore breakwaters, a transitional beach fill along 1,500 feet of Golden Beach, and renourishment of about 2.5 miles at Sunny Isles. An option for that contract was awarded for north Miami Beach in January 2001. Completion of that contract is scheduled for winter 2002. A renourishment contract (#3) is scheduled to be awarded in summer 2002 for Haulover Beach. Engineering and design is ongoing for preparation of plans and specifications for award of a renourishment contract for north Miami Beach (Test Beach) in fall 2002.

59. DADE COUNTY, NORTH OF HAULOVER BEACH, FL

Location. On the southeast coast of Florida. Project area consists of that part of the Atlantic shoreline

extending 2.5 miles north of Haulover Beach Park. (See NOAA Nautical chart No. 11466.)

Existing project. The existing shore protection project for Dade County provides for Federal participation in the cost of construction of a beach fill for the purpose of erosion control and hurricane protection along 9.3 miles of shore between Government Cut and Bakers Haulover Inlet and for the construction of a beach fill for the purpose of erosion control along the 1.2 miles of shore fronting Haulover Beach Park and provides for protection and nourishment of 2.5 miles of beach shore north of Haulover Beach Park and for extension of the period of Federal participation from 10 years to the life of the project. (See Table 9-B for Authorizing Legislation.)

Local cooperation. Consistent with the cost-sharing and financing concepts agreed to by the administration and Senate Majority Leadership, local interests will be required to: provide lands, easements, and rights-of-way and relocations; pay 50 percent of the separable and joint costs allocated to recreation; pay 35 percent of the cost allocated to storm damage prevention; hold the United States free from damages; control water pollution; and furnish assurances that they will maintain continued public ownership of the shore upon which the amount of Federal participation is based during economic life of project. Assurances of local cooperation have been requested from local sponsors. Non-federal contribution for new work was \$8,082,927.

Operations and results during fiscal year. New work: None.

Condition at end of fiscal year. No new work scheduled.

60. FOUR RIVER BASINS, FL

Location. The Four River Basins area covers about 6,000 square miles within 14 counties in central and southwest peninsular Florida. Project includes all or part of the four mainstream basins -- the Hillsborough, Oklawaha, Withlacoochee, and Peace Rivers -- and all of three smaller coastal basins north of Tampa, Florida, drained by the Pithlachascotee and Anclote Rivers and Lake Tarpon.

Existing project. The authorized project provided for improvements for control of floods and drainage, and for conservation through construction of necessary canals, levees, reservoirs, and control structures. More specifically, the project provided for: *Green Swamp*

JACKSONVILLE, FL DISTRICT

Area -- a conservation area and 3 storage reservoirs with necessary canals and control structures; *Hillsborough River* -- 4 flood-storage reservoirs, with necessary channels, control structures and levees; *Oklawaha River* -- a levee on the north shore of Lake Apopka, improvement of parts of the river channel and a west bank levee below Moss Bluff lock and dam, and replacement of the lock and dam; *Withlacoochee River* -- one flood-storage reservoir with outlet canals and control structures; *Peace River* -- Peace Creek canal and control structures and improvements to the existing water control and drainage features; *Gulf Coastal Areas* -- Lake Tarpon; outlet canal and control structure; Pithlachascotee River: reservoir with outlet canals and control structures. (See Table 9-T on Moss Bluff Lock.) (See Table 9-B for Authorizing Legislation.)

Estimated cost for new work is \$192,500,000 Federal and \$169,800,000 non-Federal.

Local cooperation. Local interests must furnish all lands, and rights-of-way; provide all alterations or replacements of public and private utilities, roads, bridges (except railroad bridges), etc.; hold the United States free from damages; operate and maintain all project works after completion; construct and maintain such associated works as are necessary to realize benefits made available by the project works; and contribute in cash 17 percent of the first cost of construction and 50 percent of recreation costs. Non-Federal contribution for new work is \$14,095,058.

Operations and results during fiscal year. New work: None.

Condition at end of fiscal year. Construction of the project commenced April 18, 1966 and the scheduled work is 98 percent complete. Flatwoods Phase II has not been funded.

61. PORTUGUES AND BUCANA RIVERS, PR

(This project authorized as Lago de Cerrillos, Lago de Portugues, and Channel Improvement at Ponce.)

Location. Portugues and Bucana Rivers originate on the southern slopes of Cordillera Central divide of Puerto Rico and flow from this central ridge of the island to the Caribbean Sea. Their drainage areas are

22.6 and 31.4 square miles, respectively. Ponce, the second largest city in Puerto Rico, is located in the lower coastal area along Portugues River and is the only urban community in the two basins.

Existing project. The authorized project provides for 2 multiple-purpose reservoirs for flood control, water supply, general recreation, and fish and wildlife enhancement -- one on Portugues River and the other on Cerrillos River, a tributary to the Bucana River; enlargement of about 5.7 miles of the Bucana River, with an additional 0.2 mile long tieback levee at the upstream terminus of the improvement; enlargement of 2.1 miles of the Portugues River, with an additional 0.5 mile of tieback levee at the upstream terminus of the improvement; and a 1.3 mile diversion channel connecting Portugues River to lower Bucana River. (See Table 9-B for Authorizing Legislation.)

Estimated cost of the project is \$434,000,000 Federal and \$145,500,000 non-Federal.

Local cooperation. Local interests must provide all lands, easements, and rights-of-way; hold the United States free from damages; operate and maintain all project works after completion; repay construction cost allocated to water supply in accordance with Water Supply Act of 1958; pay one-half of the separable cost allocated to recreation and fish and wildlife enhancement; prohibit discharge of inadequately treated sewage and other pollutants into the reservoir; and prevent encroachment on downstream channels. Assurances of local cooperation have not been completed, except for Cerrillos Reservoir, which was signed March 15, 1982. Non-Federal contribution for new work was \$10,293,201.

Operations and results during fiscal year. New work: Real estate cost was \$155,319. Construction contract for dams' cost was \$-48,092. Recreation cost was \$3,546,242. Buildings, grounds, and utilities cost was \$25,509. Engineering and design and construction management cost \$2,192,370 and \$174,202, respectively.

Condition at end of fiscal year. Cerrillos Dam Lake Recreation contract was continued in FY 2001 and construction is scheduled for completion May 2003. Portugues Shoal Removal Phase II is scheduled for award in October 2002. Portugues Dam contract is scheduled for re-advertisement in January 2004 with award in April 2004. Post authorization change report is scheduled for completion June 2003.

62. RIO DE LA PLATA, PR

Location. The Rio de La Plata basin is located about 11 miles west of the San Juan metropolitan area along the north coast of Puerto Rico. The Rio de la Plata basin drains an area of 240 square miles through several towns and villages into the Atlantic Ocean.

Existing project. The Water Resources Development Act of 1990 authorized the project. It would provide 100-year protection upstream of PR Highway 2 and SPF protection down stream and calls for construction of 7.6 miles of levees. The plan includes the replacement of 3 bridges, recreation facilities, and mitigation for the loss of environmental habitats. The benefit-cost ratio is 1.6. (See Table 9-B for Authorizing Legislation.)

Estimated cost is \$69,000,000 Federal and \$31,800,000 Non-Federal.

Local cooperation. The project cooperation agreement was executed on 7 June 1995. The Commonwealth of Puerto Rico, Department of Natural and Environmental Resources, is the body authorized to represent the local interest and is responsible for complying with the following requirements: (1) provide a cash contribution equal to five percent of total project costs; (2) provide all lands, easements, rights-of-way, relocations, and dredged material disposal areas; (3) provide an additional cash payment when the sum of both items (1) and (2) are less than 25 percent of total project costs; (4) operate and maintain the project after completion, including accomplishment of any needed repairs or rehabilitation's of any of its components; (5) hold and save the United States free from damages due to the construction or subsequent maintenance of the project, except due to damages due to the fault or negligence of the United States or its contractors; (6) prevent future encroachments which might interfere with proper functioning of the project; (7) participate in and comply with applicable Federal flood plain management and flood insurance programs; and (8) (a) provide guidance and leadership to prevent unwise future development in the flood plain; and (b) recreation local cooperation requirements: (1) provide one-half of the separable first cost of post authorization planning and construction of recreation facilities and provide all land required for recreation; and (2) all costs and full responsibility for the operation, maintenance, replacement, and management of recreation lands and facilities. Non-Federal contribution for new work was \$834,088.

Operations and results during fiscal year. New work: Real estate cost was \$8,076. Engineering and design cost was \$264,118.

Condition at end of fiscal year. PED was completed September 1994 with approval of plans and specifications for first contract. Land acquisition process has been initiated and will continue in FY 03 Award of the first contract for the lower reach of the channel is scheduled for award in February 2004.

63. RIO GRANDE DE ARECIBO, PR

Location. The city of Arecibo is located on the northern coast of Puerto Rico, approximately 40 miles west of San Juan. The Rio Arecibo Basin covers a 272 square mile area and includes towns of Utuado, Jayuya, and Adjuntas.

Existing Project. The authorized project for flood control includes channel improvements, a floodwall, and a levee along the Arecibo River; a levee along the Tanama River; and a plug, channel improvements, and a diversion channel along the Santiago River. (See Table 9-B for Authorizing Legislation.)

Estimated cost of the project is \$15,800,000 Federal and \$12,100,000 non-Federal.

Local cooperation. Local interests must provide lands, easements, rights of way, and dredged material disposal areas; modify or relocate buildings, utilities, roads, bridges (except railroad bridges), and other facilities, where necessary in the construction of the project; pay one-half of the separable costs allocated to recreation and bear all costs of operation and maintenance, and replacement of recreation facilities; pay 8.52 percent of the first costs allocated to flood control, and bear all cost of operation, maintenance, and replacement of flood control structures; and has also agreed to make all required payments concurrently with project construction. Non-Federal contribution for new work is \$0.

Operations and results during fiscal year. New work: Real Estate work was \$19,422. Engineering and design cost was \$549,693.

Condition at end of fiscal year. Plans and specifications are being finalized. Land acquisition by sponsor is ongoing. MOA for bridge and utility relocations are being developed.

64. RIO GRANDE DE LOIZA, PR

JACKSONVILLE, FL DISTRICT

Location. The Rio Grande De Loiza basin, located in the eastern central part of Puerto Rico, is the island's largest basin. It comprises the coastal plain of Carolina and the metropolitan area of Caguas in the interior valley. The project area consists of 530 square kilometers draining into Lake Loiza. It includes the city of Caguas and the town of Gurabo where over 4,100 families and numerous public buildings and commercial facilities are affected by flooding.

Existing project. The authorized project would provide channels, levees, and floodwalls for flood protection for the highly urbanized areas of the city of Caguas and the town of Gurabo. It consists of 1.8 kilometers of gabion-lined channel, 1.9 kilometers of concrete channels, and a debris basin for Rio Caguaitas; 1.3 kilometers of concrete channels, 1.0 kilometers of earth channel, 0.6 kilometers of gabion-lined channel, 1.0 kilometers of levees, and a debris basin for Rio Bairoa; 2.8 kilometers of levees and floodwalls for Rio Grande De Loiza; and 0.7 kilometers of pilot channel and 1.8 kilometers of levees for Rio Gurabo. It also provides for recreation bikeway/pedestrian trails at Rio Grande De Loiza and Rio Gurabo levees. The average level of protection at Rio Caguaitas and Rio Bairoa is estimated at 70 years and 220 years, respectively. The average level of protection for the remaining reaches is estimated at 100 years. (See Table 9-B for Authorizing Legislation.)

Estimated cost is \$157,600,000 Federal and \$55,900,000 non-Federal.

Local cooperation. In accordance with the cost sharing and finance concepts reflected in the Flood Control Act of 1970 and the WRDA 1986, the sponsor must provide lands, easements, and rights-of-way; modify or relocate buildings, utilities, roads, bridges, and other facilities, where necessary in the construction of the project; pay 6.32 percent of the costs allocated to flood control to bring the total non-Federal share of flood control costs to 25 percent and bear all costs of operations, maintenance, and replacement of flood control facilities; and pay one-half of the separable costs allocated to recreation and bear all costs of operation, maintenance, and replacement of recreation facilities.

Operations and results during fiscal year. New work: Real Estate cost was \$2,185. Engineering and design cost was \$399,716.

Condition at the end of fiscal year. Initiated work on the LRR for entire project and plans and specifications for the first construction contract, the lower reach of the Caguaitas segment. PCA package is also being developed.

65. RIO MANATI, BARCELONETA, PR

Location. The project area consists of the Rio Grande De Manati basin, which is located in the north-central coastal region of Puerto Rico at the town of Barceloneta.

Existing project. The recommended plan consists of providing a 5,300-meter long ring levee, two pilot channels totaling 1,620 meters in length, and minimum interior drainage facilities. Project implementation requires acquisition of seven residential structures, relocation of one boat ramp, three highway ramps, and one agricultural road ramp, and relocation of existing utilities impacted by the levee at four locations. The project is designed to protect against the 100-year flood and would reduce 92 percent of the total annual flood damages for the flood prone areas of the town of Barceloneta. The recommended plan maximizes the net national economic development benefits. (See Table 9-B for Authorizing Legislation.)

Estimated cost is \$10,700,000 Federal and \$5,600,000 non-Federal.

Local cooperation. In accordance with the cost sharing and financing concepts reflected in the Chief of Engineers Reported dated 22 January 1999 and WRDA '99, the non-Federal sponsor must provide lands, easements, rights-of-way, and dredged material disposal areas; modify or relocate buildings, utilities, roads, bridges (except railroad bridges), and other facilities, where necessary in the construction of the project; and pay 15.95 percent of the first costs allocated to flood control, and bear all cost of operation, maintenance, and replacement of flood control structures. The non-Federal sponsor has agreed to make all required payments concurrently with project construction.

Operations and results during fiscal year. New work: Real estate cost was \$5,379. Engineering and design cost was \$648,913; channel construction and canal cost was \$3,428,000; Construction Management cost was \$1,262,538.

Condition at the end of fiscal year. Construction contract was awarded September 2001 and is scheduled for completion April 2004.

66. RIO PUERTO NUEVO, PR

Location. The Rio Puerto Nuevo drainage basin is located within the San Juan Metropolitan Area along the northern coast of Puerto Rico. The basin joins the southeast side of San Juan Harbor and extends south and up into the foothills of the central mountains of Puerto Rico. The Rio Piedras, Rio Puerto Nuevo, Quebrada Margarita, Quebrada Josefina, Quebrada Dona Ana, Quebrada Vista, and Quebrada Guaracanal traverse the basin.

Existing project. The authorized project for flood control includes improvements to 11.2 miles of the existing channel of Rio Puerto Nuevo and Rio Piedras and five tributaries of the Rio Puerto Nuevo drainage basin. The 25 square mile drainage basin drains into San Juan Harbor. (See Table 9-B for Authorizing Legislation.)

Estimated cost of the project is \$331,900,000 Federal and \$110,100,000 non-Federal.

Local cooperation. Local interests must provide cash contribution equal to five percent of the total project costs; provide LERRD (except railroad bridge alterations); provide an additional cash payment when the sum of cash and LERRD are less than 25 percent of the total project costs; operate and maintain project works after completion; hold and save the United States free from damages; prevent future encroachments; participate and comply with Federal flood plain management and flood insurance programs; provide guidance and leadership to prevent unwise future development in the flood plain; provide one-half of the separable first cost of post authorization planning and construction of recreation facilities; and all costs and full responsibility for operations, maintenance, replacement, and management of the recreation lands and facilities. Non-Federal contribution for new work was \$26,341,396.

Operations and results during fiscal year. New work: Real estate cost was \$168,886. Roads, Railroads, and Bridge cost was \$886,569. Channels and canals cost was \$3,793,251. Engineering and design cost was \$2,647,716. Construction management cost was \$477,500.

Condition at end of fiscal year. Contract No.1 (first 1.7 miles of channel) is scheduled for completion March 2002. Contract #2A (Margarita Earthen Channel, next 1.3 miles of channel) was terminated and will be re-advertised as resumption of 2A October

2004 with award in November 2004. Contract 1A was awarded in April 2002 and is scheduled for completion in FY 2003. Contract 2AA (Margarita Levee and Bechara Drainage Works) is scheduled for award in November 2002. Contract 2D1 is scheduled for award in FY 2003. Engineering and design continues on remaining phases (Contract 2D/E).

67. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Features transferred to the Central and Southern Florida Flood Control District and Southwest Florida Water Management District were inspected quarterly during the fiscal year at a total cost of \$89,523.

68. OTHER AUTHORIZED FLOOD CONTROL PROJECTS

(See Table 9-E.)

69. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Flood control activities pursuant to section 205, Public Law 685, 84th Congress, as amended (Preauthorization).

(See Table 9-V.)

Emergency flood control activities -- repair, flood fighting, and rescue work (Public Law 99, 84th Congress, and antecedent legislation).

Federal costs for the fiscal year were \$461,137 for the Disaster Preparedness Program. Emergency Operations cost was \$12,496. Rehabilitation cost was \$620,650.

Emergency streambank and shoreline protection activities pursuant to Section 14, Public Law 526, 79th Congress as amended (Preauthorization).

Federal cost for the fiscal year was Coordination Account \$9,028; Los Carolinas Bridge, Caguas, PR \$282,005; Police Station and Sewerline, Trujillo Alto, PR \$51,603; Rio Matilde, PR \$259, 732.

General Investigations

70. SURVEYS

JACKSONVILLE, FL DISTRICT

Costs during the fiscal year were: navigation studies \$432,882; flood damage prevention studies \$235,520; shoreline protection studies \$220,606; special studies \$228,333; review of authorized projects \$3,125; miscellaneous activities \$48,100 and coordination with other agencies and non-Federal interests \$343,501 for a total cost of \$1,512,068.

71. COLLECTION AND STUDY OF BASIC DATA

The requirement for preparation of regular flood plain information studies has been rescinded. FPI studies that deal with land use changes will continue to be prepared. Flood Plain Management Services \$40,945; Technical Services \$111,661; Quick Responses \$6,602; Florida Statewide Evacuation \$520; Hurricane Evacuation Study Western Puerto Rico \$1,000; SS - Bre. Res. Indian Prairie \$935; Seminole Floodway \$9,458; SS – Mass Management Tool for the Islands \$32,513; for a total cost of \$203,634.

72. CONTINUATION OF PLANNING AND ENGINEERING

Navigation cost was Jacksonville Harbor \$4,737; Hillsboro Inlet \$1,607; Lake Worth Inlet \$249; Ponce de Leon Inlet \$33,176. Beach erosion cost was Brevard County \$97 and Monroe County, FL \$362. Local protection cost was Rio Arecibo River, PR \$64,593 and Rio Nigua de Salinas, PR \$27,265. Total cost for Continuation of Planning and Engineering was \$132,086.

73. ADVANCE ENGINEERING AND DESIGN

Navigation cost was St. Petersburg Harbor, FL \$53,050 and Tampa Harbor Big Bend, FL \$284. Flood control cost was Guanajibo River, PR \$349,921; Rio Nigua at Salinas, PR \$6,960 and Cedar Hammock (Wares Creek), FL \$10,304. Total cost for Advance Engineering and Design was \$420,520.

General Regulatory

74. PERMIT EVALUATION (R&H ACT of 1899; CWA of 1977; MPRSA of 1972)

Location. Navigable waters of the United States, including tributary systems, headwaters and isolated

waters, and ocean waters to the limits of the territorial seas.

Existing Program. The program evaluates permit applications for work in navigable waters (dredging, filling, and other structures) of the United States, and the transportation of dredged material to the oceans for ocean disposal. Geographic coverage includes Florida, Puerto Rico, and the U.S. Virgin Islands. Decision making criteria consist of the public interest review, Section 404(b)(1) Guidelines, and ocean dumping criteria.

Local Cooperation. The joint application arrangements with Florida, Puerto Rico, and the U.S. Virgin Islands continue in place. The Florida State Programmatic General Permit is also still in place, but its usefulness is severely diminished by manatee litigation. We continue to participate in interagency coordination with our state and commonwealth regulatory counterparts. We are working to reinitiate regular federal agency coordination meetings to improve communications and partnering. We are in the final stages of implementing a transportation streamlining process with FDOT and FHWA. Next year we plan to restructure our workforce to emphasize our work on watershed basis.

Operations and results during fiscal year. Permit evaluation cost was \$8,520,754.

75. ENFORCEMENT (R&H ACT of 1899; CWA of 1977; MPRSA of 1972)

Existing program. The program takes appropriate enforcement action against both unauthorized work requiring a permit and noncompliance findings on issued permits. Operation of the program is continuing to make increased use of alternative dispute resolution processes to remediate violations. Close coordination with and cooperation of Department of Justice continues, with development of consent orders and fines as appropriate.

Local cooperation: We have re-opened discussions with EPA to get some of their staff co-located with us to take advantage of their administrative order authority.

Operations and results during fiscal year. Cost incurred this fiscal year for enforcement was \$905,708.

76. STUDIES

(R&H Act of 1899)

Location. Navigable waters of the United States in Florida, Puerto Rico, and the U.S. Virgin Islands.

Existing program. This program conducts studies to determine geographic extent of navigable waters of the United States, and establishment of danger or restricted zones in these waters.

Local cooperation. Additional activity in identifying and establishing restricted zones, in light of increased terrorist concerns. We have also been working closely with FWS, USCG, and FFWCC to establish standard manatee speed zones and sanctuary areas.

Operations and results during fiscal year. Studies cost was \$1,816. Environmental inspection statement cost was \$52,006; other Navigation Regulations \$3,308.

Environmental Improvement Projects

77. KISSIMMEE RIVER, FLORIDA

Location. The Kissimmee River Basin comprises 3,013 square miles, and extends from Orlando southward to Lake Okeechobee, the second largest freshwater lake in the United States. The area is bounded on the north by the lakes of the Orlando area, on the west by the Peace River Basin, on the south by Lake Okeechobee, and in the east by the Upper St. John's and the Taylor Creek-Nuddin Slough Basins. The watershed is about 105 miles long and has a maximum width of 35 miles.

Existing Project. The purpose of this study is to determine the extent of Federal participation in the Level II Backfilling Plan, as developed by the South Florida Water Management District, for restoration of the Kissimmee River and flood plain ecosystem. It is expected that restoration will restore the ecological integrity of the river system. Environmental improvements through modification of operations for Lake Kissimmee, Cypress, and Hatchineha. The project will include canal and/or structure improvements and real estate acquisition. The recommended plan consists of backfilling approximately 29 miles of C-38. This will result in the restoration of almost 29,000 acres in the floodplain. Three structures will be removed and two bridges and associated utilities will be relocated. Real estate interests will be acquired for effected portions of the

floodplain. (See Table 9-B for Authorizing Legislation.)

Estimated cost of the project for Kissimmee River (Upper and Lower Basins) \$289,000,000 Federal and \$289,000,000 non-Federal.

Local Cooperation. The South Florida Water Management District, an agency of the State of Florida, is the feasibility study cost-sharing partner, and has expressed its intent to be the project sponsor. Local cost for the Headwater Revitalization is to be credited towards the total project cost. The authorization calls for the restoration to be cost-shared 50%-50% and that the lands be credited toward the total cost of the Kissimmee River Restoration. A draft Local Cooperation Agreement (LCA) has been reviewed by the sponsor and a letter of intent has been provided for the Headwaters Revitalization. LCA for the River Restoration project is scheduled for execution in May 1994. Non-Federal contribution amounted to \$2,087,000.

Operations and results during fiscal year. New work: Lands, \$194,000. Fish and wildlife cost was \$7,000. Channels and canal cost was \$1,923,000. Levees and floodwall cost was \$229,000. Floodway control structure cost was \$100,000. Engineering and design cost was \$3,125,000. Construction management cost was \$374,000. Buildings, grounds, and utilities were \$2,000. Relocations cost was \$223,000.

Condition at the end of the fiscal year. Currently developing/finalizing plans and specifications for contracts to be awarded in FY 2002. Those contracts include: C-37 channel enlargement; S-83A & S-84A spillway addition; U.S. Highway culvert installation; Avon Park Air Force Bombing Range fence installation; and S-65B radio tower. Also, obtaining survey and geotechnical data for Reaches 2& 3 Backfilling.

78. EVERGLADES SOUTH FLORIDA ECOSYSTEM RESTORATION, FL

Location. The area consisting of the lands and waters within the boundary of the South Florida Water Management District, including the Everglades, the Florida Keys, and the contiguous near-shore coastal waters of South Florida.

Existing Project. The authorized project shall develop a comprehensive plan for the purpose of restoring, preserving, and protecting the South Florida

JACKSONVILLE, FL DISTRICT

Ecosystem. The comprehensive plan shall provide for the protection of water quality in, and the reduction of the loss of fresh water from, the Everglades. The comprehensive plan shall include such features as are necessary to provide for the water-related needs of the region, including flood control, the enhancement of water supplies, and other objectives served by the Central and Southern Florida Project. The comprehensive plan shall be developed in cooperation with the non-Federal sponsor and in consultation with the Task Force.

Projects identified for design and construction of any Central and Southern Florida Project that are authorized, may use funds that are available provided that they will accelerate the restoration, preservation, and protection of the South Florida ecosystem; will be generally consistent with the conceptual framework specified in the report entitled "Conceptual Plan for the Central and Southern Florida Project Restudy"; and be compatible with the overall authorized purposes of the Central and Southern Florida Project. If it is determined, in cooperation with the non-Federal sponsor and the Task Force, that a restoration project for the South Florida ecosystem will produce independent, immediate, and substantial restoration, preservation, and protection benefits, and will be generally consistent with the conceptual framework, the project may proceed expeditiously with the implementation of the restoration. (See Table 9-B for Authorizing Legislation.)

Estimated cost of the project \$75,000,000 Federal and \$75,000,000 non-Federal.

Local Cooperation. The comprehensive plan shall be developed in cooperation with the non-Federal sponsor and in consultation with the Task Force. The non-Federal cost share is 50 percent, except for water quality, which is 100 percent with the exclusion of Everglade's restoration, which is 50 percent. The value of lands or interests in land acquired by non-Federal interests will be included in the total cost of the activity and credited against the non-Federal share of the cost of the activity. The operation and maintenance of projects will be a non-Federal responsibility. Non-Federal contributions amount to \$4,285,110.

Operations and results during fiscal year. New work: Channels and canal cost was \$6,256,000. Engineering and design cost was \$6,213,000. Construction management cost was \$336,000. Reservoirs cost was \$1,327,000.

Condition at the end of the fiscal year. Plans and specifications are nearing completion on East Coast Canal Structures and Western C-11 Water Quality Treatment Projects. PCA's were executed on eight projects 7 January 2000. The eight projects are: East Coast Canal Structures, Tamiami Trail Culverts, Western C-11 Water Quality Treatment, Seminole Big Cypress Preservation Water Conservation, Southern Crew, Lake Okeechobee Water Retention/Phosphorus Removal, Ten Mile Creek Water Preserve Area, and Lake Trafford. The PCA for Keys Carrying Capacity was executed in 1998.

79. RESTORATION WORK UNDER SPECIAL AUTHORIZATION

Restoration Activities Pursuant to Section 1135, Public Law 99-662.

Fiscal year costs were Coordination Account Funds \$45,001; Preliminary Restoration Plan \$25,478; Wetland Restoration Oklawaha River, FL \$326,745; La Esperanza Peninsula, PR \$91,198; Peanut Island Restoration, FL \$183,863; Manatee Protection, Canaveral Lock, FL \$248; Sarasota Bay Restoration, Sarasota, FL \$37,570; Palm River Restoration, Hillsborough Co., FL \$129,533; Chicopit Bay Wetland, FL \$82,005; Johns Island Habitat Preservation \$67,670; Ocklawaha Prairie Restoration \$161,883; Virginia Beach Key, FL \$196,658; C-8 Miami Dade, FL \$162,090; C-9 Miami Dade, FL \$148,780; AIWW Sebastian Inlet, FL \$560,238; Ponce de Leon AIWW, FL \$157,704; Ponce de Leon Inlet, FL \$223,421; C 102/103 Restoration, Dade County, FL \$100,106; Mill Cove, FL \$164,791; C-7 Miami-Dade, FL \$138,601.

Restoration Activities Pursuant to Sec 206, Public Law 104-303.

Coordination Account Funds \$20,532; Preliminary Restoration Plans \$68,194; Aquatic Ecosystem Restoration, Rose Bay \$203,997; C-1 Rediversion/Lagoon Restoration \$220,643; Dinner Key \$83,543; Stevenson Creek Estuary \$365,100; Sawgrass Lake/Hell'n Blazes \$109,173; Lake Osborne \$165,046; Homosassa Springs Manatee Habitat \$97,322; Boqueron Refuge, PR \$155,657; Oleta River, Miami, FL \$2,571.

80. WETLAND AND OTHER AQUATIC HABITAT CREATION UNDER SPECIAL AUTHORIZATION

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

*Wetland Activities Pursuant to Sec 204
Public Law 102-560.*

Fiscal year cost was Cockroach Bay Habitat \$135,849
and Coordination Accounts \$9,965; Condado Lagoon,
PR, \$3,644.

JACKSONVILLE, FL DISTRICT

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

¹Excludes \$288,000 for contributed funds for new work.

²Includes \$97,566 for previous project.

³Excludes \$243,235 contributed funds for new work.

⁴Excludes \$700,000 contributed by NASA in connection with construction of lock.

⁵Includes \$113,000 for new work on previous project; excludes \$15,563 expended for new work on existing project in Boca Grande entrance channel from contributed funds.

⁶Includes \$905,221 expended for recreation facilities.

⁷Includes \$10,128 cost for reconnaissance and detailed project report prepared under Section 107 modification to the project. Excludes \$1,095 contributed funds for new work.

⁸Includes \$515,479 for new work for previous projects: \$8,472 for new work on Sunshine Skyway Channel; and \$9,707 for new work for Cats Point Channel. Excludes \$14,473 contributed funds for new work for Sunshine Skyway and Boca Ciega Bay channels.

⁹Includes \$450,749 for maintenance for previous project.

¹⁰Includes \$94,776 for work for previous projects. Excludes \$2,199,842 expended from public works funds for new work.

¹¹Includes \$213,222 for maintenance on previous projects and \$3,179 operating and care under provisions of permanent indefinite appropriation.

¹²Includes \$3,520,137 new work on previous project and \$290,013 for new work expended from public works funds.

¹³Includes \$543,399 maintenance on previous projects.

¹⁴Includes unused contributed funds of \$64,136 returned to local interests.

¹⁵Project authorized December 2, 1964, by Chief of Engineers under Section 107 of 1960 R&H Act and by Section 110 of the 1966 R&H Act. Cost of new work excludes \$53,732 contributed funds.

¹⁶Includes \$5,502,126 expended from public work funds for new work. Includes costs of \$6,777,906 for recreation facilities.

¹⁷Includes \$381,479 work-in-kind and \$172,314 in costs for north jetty recreation facility.

¹⁸Excludes \$45,811 contributed funds for new work.

¹⁹Includes \$21,101,919 for new work under previous project, \$626,925 for recreational facilities (Code 710), and \$27,574 for reconnaissance and detailed project report prepared under Section 107 modification to the project.

²⁰Includes \$7,581,150 for maintenance for previous projects. Excludes \$1,000 for maintenance.

²¹Includes \$3,912 for new work for previous projects.

²²Includes \$11,414 for operating and care under provisions for permanent indefinite appropriation.

²³Includes \$80,000 new work from public works funds. Excludes \$509,506 contributed funds.

²⁴Includes \$30,000 for maintenance from public works funds.

²⁵Includes \$11,588 expended for restudy, but excludes \$21,960 expended for new work from contributed funds.

²⁶Excludes \$1,033,069 contributed funds.

²⁷Includes \$71,303 for new work on previous project. Excludes \$137,500 contributed funds.

²⁸Baresford cutoff and completion of cutoffs and easing of bends in Putnam Lake and Volusia Counties in inactive status were deauthorized by Public Law 93-251 section 12. Includes \$29,566 for new work under previous project.

²⁹Includes \$25,838 under previous project.

³⁰Includes \$26,689 for new work under previous project.

³¹Includes \$747,684 for new work under previous project. Excludes \$100,000 expended for new work from contributed funds.

³²Includes \$44,730 for maintenance from public works funds under previous project.

³³Includes \$853,050 for new work from public works funds under previous project and \$1,463,000 from emergency relief funds. Excludes \$270,466 for new work for Hillsborough River and \$13,939 for new work from contributed funds.

³⁴Includes \$17,107 for maintenance under previous project.

³⁵Includes work-in-kind.

³⁶Excludes \$15,543 for property received without reimbursement and R&H Funds, expended on previous projects (see cost and financial statement for Okeechobee Waterway, FL, project for these costs). Excludes \$100,000 advanced by local interests toward federal costs. Includes \$175,000 appropriation and \$175,000 cost for new work at C&SF St. Johns Water Management District.

³⁷Includes \$2,294,134 for reimbursement costs to Bal Harbor.

³⁸Excludes unused contributed funds of \$17,969 returned to local interests.

³⁹Includes costs of \$89,691 for recreation facilities at Moss Bluff and \$2,638,272 at Lake Tarpon.

⁴⁰Funds appropriated under General Regulatory Functions 96X3126.

JACKSONVILLE, FL DISTRICT

TABLE 9-B

AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Oct. 27, 1965	AQUATIC PLANT CONTROL (See Section 1 of Text) Control and progressive eradication of obnoxious aquatic plants, and continued research to develop best method of control.	H.Doc. 251, 89th Cong., 1st sess.
WRDA Aug. 17, 1999	LOWER ST. JOHNS RIVER BASIN, FL May apply the computer model developed under the feasibility study to assist non-Federal interests in developing strategies for improving water quality at 50 percent cost share.	P.L. 106-53, Aug. 17, 1999 106 th Cong., 1 st sess.
WRDA Oct. 12, 1996	TAMPA, FL May enter into a cooperative agreement under section 229 with the Museum of Science and Industry, Tampa, Fl to provide technical, planning, and design assistance to demonstrate the water quality functions found in wetlands, at an estimated total Federal cost of \$500,000.	P.L. 104-303, Oct. 12, 1996 104th Cong.
WRDA Oct. 12, 1996	WEST DADE, FL Conduct a reconnaissance study to determine the Federal interest in using the West Dade, FL, reuse facility to improve water quality in, and increase the supply of surface water to, the Everglades in order to enhance fish and wildlife habitat.	P.L. 104-303, Oct. 12, 1996 104th Cong.
NAVIGATION PROJECTS Aug. 26, 1937	ARECIBO HARBOR, PR (See Section 2 of Text) Construction of breakwater 1,200 feet long and dredging channel 25 feet deep and 400 feet wide with flare at entrance and widening at inner end to form a maneuvering area.	Rivers and Harbors Committee Doc. 43, Cong., 75th 1st sess.
WRDA Oct. 12, 1996	ATLANTIC INTRACOASTAL WATERWAY, ST. JOHNS COUNTY, FL Project for navigation. Operation, maintenance, repair, replacement and rehabilitation shall be a non-Federal responsibility, and the non-Federal interest shall assume ownership for the bridge.	P.L.104-303, Oct. 12, 1996 104th Cong.
Mar. 4, 1913	ATLANTIC INTRACOASTAL WATERWAY BETWEEN NORFOLK, VA AND THE ST. JOHNS RIVER, FL (See Section 3 of Text) Channel 7 x 100 feet.	H.Doc. 898, 62nd Cong., 2d sess.
Jun. 20, 1939	Channel 12 feet deep and 90-150 feet wide with cutoffs.	H.Doc. 618, 75th Cong., 3d sess.

TABLE 9-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
	BAKERS HAULOVER, FL (See Section 4 of Text)	
Jul. 14, 1960	Channel 11 x 200 feet in ocean entrance, thence 8 x 100 feet to Intracoastal Waterway; Marina basin 8 x 200 feet; reconstruction of jetties and protection of inlet shores.	H.Doc. 189, 86th Cong., 1st sess.
	CANAVERAL HARBOR, FL (See Section 5 of Text)	
Mar. 2, 1945	Entrance channel jetties, a turning basin enclosed by a dike, and a barge canal with a lock.	H.Doc. 367, 77th Cong., 1st sess.
Oct. 23, 1962	Maintain improved channel, turning basin, enlarge barge channel and lock, relocate dike, provide channel and turning basin west of 35-foot turning basin, construct and operate sand-transfer plant.	S.Doc. 140, 87th Cong., 2d sess.
Report of the Chief of Engineers Oct. 1985	Mitigation of fish and wildlife losses at Port Canaveral West Turning Basin Project.	P.L. 99-662, Nov. 17, 1986 99th Cong., 2d sess
Report of the Chief of Engineers Jul. 24, 1991	Project for navigation, Canaveral Harbor, FL, as modified by the letter of the Secretary dated Oct. 10, 1991	P.L. 102-580, Oct. 13, 1992 102nd Cong., 2d sess.
WRDA Oct. 12, 1996	Modification of navigation project to reclassify the removal and replacement of stone protection on both sides of the channel as general navigation features.	P.L. 104-303, Oct. 12, 1996 104th Cong.
	CHANNEL FROM NAPLES TO BIG MARCO PASS, FL (See Section 6 of Text)	
Jun. 20, 1938	Interior channel 6 x 70 feet.	H.Doc. 596, 75th Cong., 3d sess.
Jul. 14, 1960	Channel 12 x 150 feet from the Gulf to Gordon Pass, thence 10 x 100 feet to a point 400 feet south of U.S. Highway 41 Bridge, thence 10 x 70 feet to bridge and two turning basins.	H.Doc. 183, 86th Cong., 1st sess.
	CHARLOTTE HARBOR, FL (See Section 7 of Text)	
Jul. 25, 1912	Channel 24 x 300 feet through Gulf through Boca Grande entrance.	H.Doc. 699, 62nd Cong., 2d sess.
Mar. 3, 1925	Depth of 27 feet at entrance and width of 500 feet at bend.	H.Doc. 113, 66th Cong., 1st sess.
Jul. 3, 1930	Channel 10 x 100 feet to Punta Gorda and a turning basin.	Rivers and Harbors Committee, Doc. 1, 70th Cong., 1st sess.
Aug. 26, 1937	Depth of 30 feet at entrance and width of 700 feet at bend.	Rivers and Harbors Committee Doc.95, 74th Cong., 2d sess.

JACKSONVILLE, FL DISTRICT

TABLE 9-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
May 17, 1950	Depth of 32 feet in entrance channel.	H.Doc. 186, 81st Cong., 1st sess.
Jun. 20, 1938	EAU GALLIE HARBOR, FL (See Section 8 of Text) Channel 8 x 100 feet and a turning basin.	H.Doc. 497, 75th Cong., 3 sess.
Jun. 14, 1880	FERNANDINA HARBOR, FL (See Section 9 of Text) Entrance jetties.	Annual Report 1879
Jul. 13, 1892	Raising and extending jetties to provide a 19-foot depth.	Annual Report 1891 & 1896
Mar. 2, 1907	Improvement of inner harbor to obtain 20 to 24-foot depth and 400 to 600-foot channel width.	H.Doc. 388, 59th Cong., 1st sess.
Jun. 25, 1910	Combining improvement of Fernandina Harbor and Cumberland Sound under the general heading of Fernandina Harbor.	
Mar. 3, 1925	Provided for a 26-foot channel.	H.Doc. 227, 68th Cong., 1st sess.
Jun. 20, 1938	Provided for the 28-foot channel and turning basin.	H.Doc. 548, 75th Cong., 3d sess.
Mar. 2, 1945	Provided for reducing the maximum width of turning basin from 1,000 to 800 feet, for shifting channel line in this vicinity vicinity 50 feet northwesterly and for including in authorized project small area dredged by Rayonier, Inc.	H.Doc. 284, 87th Cong., 1st sess.
May 17, 1950	Provided for 32-foot channel and turning basin.	H.Doc. 662, 80th Cong., 2d sess.
WRDA Nov. 28, 1990	Re-designated location of turning basin until Section 107 (R&H Act of 1960) study is completed and the resulting project constructed	P.L. 101-640, Nov. 28, 1990 101st Cong.? sess.
WRDA Jan. 24, 2000	Realign the access channel in the vicinity of the Fernandina Beach Municipal Marina 100 feet to the west and cost shall be a non-Federal expense.	P.L. 106-541, Jan. 24, 2000 106 th Cong., 2 nd sess.
Jul. 14, 1960	FORT MYERS BEACH, FL (See Section 10 of Text) 12 x 150 foot channel in San Carlos Bay, thence 11 x 125 feet in Matanzas Pass to upper shrimp terminals.	H.Doc. 183, 86th Cong., 1st sess.

TABLE 9-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Auth. by Chief of Engineers Dec. 6, 1968 under Sec. 107 of 1960 R&H Act	Extension of 11 x 125 foot channel easterly about 2,000 feet to and including a turning basin adjacent to natural deep water in Matanzas Pass.	
	FORT PIERCE HARBOR, FL (See Section 11 of Text)	
Def. Act of Mar. 4, 1931	Expenditure of \$20,000 for dredging channel, maintenance by local interests.	Specified in Act
War Dept. Approp. Act, Mar. 4, 1933	Expenditure of up to \$30,000 for dredging channel.	Specified in Act
Aug. 30, 1935	Maintaining channels, jetties, and revetments, and enlarging channels and turning basin to existing project dimensions.	H.Doc. 252, 72nd Cong., 1st sess. and Rivers and Harbors Committee Doc. 21, 74th Cong., 1st sess.
Report of the Chief of Engineers Dec. 14, 1987	Deepening and enlarging channels and turning basin. Total cost of \$6,742,000.	P.L. 100-676, Nov. 17, 1988 100th Cong., 2d sess.
	HORSESHOE COVE, FL (See Section 12 of Text)	
May 17, 1950	A channel 6 feet deep and 75 feet wide and a turning basin 6 feet deep and of an irregular shape.	River and Harbor Act H.Doc. 106, 81 st Cong., 1 st sess.
	INTRACOASTAL WATERWAY, CALOOSA HATCHEE RIVER TO ANCLOTE RIVER, FL (See Section 13 of Text)	
Mar. 2, 1945	9 x 100 foot channel; deepening channel at Casey's Pass to 9 feet and construction of highway bridge at Venice.	H.Doc. 371, 76th Cong., 1st sess.
Jun. 30, 1948	Original route may be modified at no excess cost to U.S.	Specified in Act
May 17, 1950	Any route in Venice-Lemon Bay area may be used.	Specified in Act
Sep. 3, 1954	Use of alternate Route C-1 in Venice-Lemon Bay area.	Specified in Act
May 10-16, 1957	Local interests to bear costs of Venice Avenue highway bridge and any other necessary crossing over Route C-1.	H.Doc. 109, 85th Cong., 1st sess.
Auth. Mar. 1, 1962 by Senate and House Public Works Comm	Sunshine Skyway Channel to be improved and maintained to. 9 x 100 feet	

JACKSONVILLE, FL DISTRICT

Acts	Work Authorized	Documents
Auth. by Chief of Engineers, Mar.1, 1963, under Sec 107 of 1960 R&H Act	6 x 80 foot channel in Boca Ciega Bay.	
INTRACOASTAL WATERWAY, JACKSONVILLE TO MIAMI, FL (See Section 14 of Text)		
Jan. 21, 1927	Channel 8 x 75 feet from Jacksonville to Miami.	H.Doc. 586, 69th Cong., 2d sess.
Jul. 3, 1930	Channel width of 100 feet.	S.Doc. 71, 71st Cong., 2d sess.
PARA Jun. 26, 1934	Operation and care of Palm Valley Bridge.	Specified in Act
Aug. 26, 1937	Turning basin at Jacksonville Beach.	H.Doc. 180, 75th Cong., 1st sess.
Mar. 2, 1945	Channel 12 x 125 feet.	H.Doc. 740, 79th Cong., 2d sess.
Mar. 2, 1945	Side channel and turning basin at Sebastian (deauthorized).	H.Doc. 336, 76th Cong., 1st sess.
Mar.2, 1945	Turning basin at Vero Beach.	H.Doc. 261, 76th Cong., 1st sess.
Jul. 3, 1958	Maintenance of side channel at Daytona Beach.	H.Doc. 222, 85th Cong., 1st sess.
Chief of Engineers Report of Jul. 22, 1960, Mod. 12-foot Channel	Channel 10 x 125 feet from Ft. Pierce to Miami.	
JACKSONVILLE HARBOR, FL (See Section 15 of Text) ST. JOHNS RIVER, FL OPPOSITE THE CITY OF JACKSONVILLE		
Mar. 2, 1907	The 24-foot area from Hogan Creek to Florida East Coast Railroad Bridge.	H.Doc 663, 59th Cong., 1st sess.
Nov. 17, 1986	Deauthorized the 24-foot area from Hogan Creek to Florida East Coast Railroad bridge.	P.L. 99-662, Nov. 28, 1986 99th Cong., 2d sess.

TABLE 9-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
WRDA Aug. 17, 1999	Project for navigation.	P.L. 106-53, Aug. 17, 1999 106 th Cong., 1 st sess.
JACKSONVILLE HARBOR (MILL COVE), FL (See Section 16 of Text)		
Report of the Chief of Engineers Feb. 12, 1982	Enlarge weir structure and west opening controlling flow into Mill Cove, to reduce shoaling and improve navigation as well as circulation.	P.L. 99-662, Nov. 17, 1986 99th Cong., 2d sess.
WRDA Oct. 12, 1996	Modification to carry out a project for mitigation consisting of measures for flow and circulation improvement within Mill Cove.	P.L. 104-303, Oct. 12, 1996 104th Cong.
JOHN'S PASS, FL (See Section 17 of Text)		
Auth. by Chief of Engineers Dec. 2, 1964 under Sec. 107 of 1960 R&H Act and Sec. 110 of 1966 R&H Act	Channel 10 x 100 feet in gulf, 8 x 100 feet inside pass, 6 x 100 feet to IWW, 2.6 miles long.	
LAKE WORTH INLET, FL		
WRDA Oct. 12, 1996	Project for navigation and shoreline protection subject to final report to be completed not later than December 31, 1996.	P.L. 104-303, Oct. 12, 1996 104th Cong.
LONGBOAT PASS, FL (See Section 18 of Text)		
Auth. by Chief of Engineers, Apr. 20, 1976 under Sec. 107 of 1960 R&H Act, as amended	12 x 150 foot entrance channel from Gulf of Mexico to Longboat Bridge; 10 x 100 foot channel from Longboat Bridge northeasterly to IWW; channel from north channel to Cortez Bridge.	
MANATEE HARBOR, FL (See Section 19 of Text)		
Report of the Chief of Engineers May 12, 1980	Provide for maintenance of the existing 40-foot deep draft navigation channel and turning basin from Tampa Bay to Port Manatee. Initial construction of a widener at Manatee Harbor and deepen area adjacent to berthing area.	P.L. 99-662, Nov. 17, 1986 99th Cong., 2d sess.
WRDA Nov. 28, 1990	Modified the project for navigation authorized by the WRDA of 1986 to construct substantially in accordance with the post authorization change report dated April 1990.	P.L. 101-640, Nov. 28, 1990, 101st Cong., ? sess.

JACKSONVILLE, FL DISTRICT

TABLE 9-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Aug. 30, 1935	MAYAGUEZ HARBOR, PR (See Section 20 of Text) Approach channels 30 feet deep to and along deep-water terminal.	H.Doc. 215, 72nd Cong., 1st sess. & River and Harbor Committee Doc. 1, 73rd Cong., 1st sess.
Aug. 26, 1937	MELBOURNE HARBOR, FL (See Section 21 of Text) Channel 8 x 100 feet and a turning basin.	H.Doc. 390, 74th Cong., 2d sess.
Jul. 3, 1930	MIAMI HARBOR, FL (See Section 22 of Text) MIAMI RIVER The 15-foot channel in Miami River, 150 feet wide at the mouth.	Specified in Act
PWA Program Sep. 6, 1933	The channel at Dinner Key Airport.	S.Doc. 95, 72nd Cong., 1st sess. and Specified in Act
Jun. 13, 1902	An 18-foot channel in a land cut across the peninsula and construction of the north jetty.	H.Doc. 622, 56th Cong., 1st sess. (Annual Report 1900, p. 1987)
Mar. 2, 1907	Construction of the south jetty and increase of channel width to 100 feet.	Specified in Act
Mar. 4, 1913	Modification of local cooperation requirements imposed by the Act of July 25, 1912.	Specified in Act
Mar. 3, 1925	A channel 25 feet deep with present widths from the ocean to Biscayne Bay, thence 200 feet wide across the bay to but not including the municipal turning basin, and extension of both jetties.	H.Doc. 516, 67th Cong., 4th sess.
Jul. 3, 1930	A channel width of 300 feet across the bay and enlarging the municipal turning basin, with expenditures thereon limited. to \$200,000	Rivers and Harbors Committee Doc. 15, 71st Cong., 2d sess.
Aug. 30, 1935	A depth of 30 feet from the ocean to and in the turning basin, with the existing authorized project widths, including the 300-foot width in the channel across the bay.	Sen. Comm. Print. 73rd Cong., 2d sess.

TABLE 9-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Aug. 26, 1937	Extending the turning basin 200 feet to the southward.	Rivers and Harbors Committee Doc. 86, 74th Cong., 2d sess.
Mar. 2, 1945	The Virginia Key improvement.	S.Doc. 251, 79th Cong., 2d sess.
Mar. 2, 1945	For incorporation of the project for Miami River in that for Miami Harbor, the widening at the mouth of Miami River to existing project widths; the channels from the mouth of Miami River to the turning basin and to Government Cut; and the channel from Miami River to the harbor of refuge, provided that local interests contribute one-third of the cost.	H.Doc. 91, 79th Cong., 1st sess.
Jul. 14, 1960	Deletion of Virginia Key development and the Dinner Key, approach channel widening the existing ship channel by easing the ocean bend and increasing the width of the 300-foot wide section to 500 feet, enlarging the existing turning basin 300 feet along both the south and northeasterly sides, and dredging a turning basin along the north side of Fisher Island about 39 acres in extent and 30 feet in depth.	S.Doc. 71, 85th Cong., 2d sess.
Aug. 13, 1968	Enlarging existing entrance channel to 38 x 500 feet, deepening existing 400-foot wide channel across Biscayne Bay to 36 feet; deepening existing turning basins at Biscayne Boulevard terminal and Fisher Island to 36 feet.	S.Doc. 93, 90th Cong., 2d sess.
WRDA Nov. 17, 1986	Deauthorized the widening at the mouth of Miami River to existing project widths; and the channels from the mouth of Miami River to the turning basin, to Government Cut, and to a harbor of refuge in Palmer Lake.	P.L. 99-662, Nov. 17, 1986, 99th Cong., 2d sess
Report of the Chief of Engineers Sep. 25, 1989	The project for navigation, Miami Harbor Channel.	P.L. 101-640, Nov. 28, 1990, 101st Cong, ? sess.
WRDA Oct. 12, 1996	The project for navigation, Miami Harbor Channel subject to a final report to be completed no later than 31 December 1996.	P.L. 104-303, Oct. 12, 1996 104th, Cong
WRDA Aug. 17, 1999	Miami Harbor Channel project modified to include construction of artificial reefs and related environmental mitigation.	P.L. 106-53, Aug. 17, 1999, 106 th Cong., 1 st sess.

JACKSONVILLE, FL DISTRICT

TABLE 9-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Auth. by Chief of Engineers Apr. 20, 1964 under Sec. 107 of 1960 R&H Act	NEW PASS, SARASOTA, FL (See Section 23 of Text) 10 x 150 foot entrance channel; 8 x 100 foot inner channels; and 8-foot deep turning basins at Payne Terminal and City Pier.	
	OKEECHOBEE WATERWAY, FL (See Section 24 of Text) Operation and care of locks and dams provided for with funds from R&H appropriations.	Specified in Act
Aug. 26, 1937	New lock and weir structure in St. Lucie Canal.	Rivers and Harbors Committee Doc. 28, 75th Cong., 1st sess.
Mar. 2, 1945	Deepening to 8 feet from Ft. Myers to Jacksonville-Miami waterway near Stuart via channel across lake from Clewiston.	H.Doc. 696, 76th Cong., 3d sess.
Mar. 2, 1945	Channel to yacht basin at Ft. Myers and a basin at Stuart.	H.Doc. 736, 79th Cong., 2d sess.
WRDA Nov. 17, 1986	Deauthorized basin at Stuart.	PL 99-662, Nov. 17, 1986 99th Cong., 2d sess.
Auth. by Chief of Engineers Nov. 5, 1968, under Sec. 107 of 1960 R&H Act	Enlarge existing 8 x 90 foot section of Okeechobee Waterway for about 5 miles upstream from Ft. Myers to 10 x 100 feet.	
	OKLAWAHA RIVER, FL (See Section 25 of Text) Clearing obstructions for channel 4 feet deep from mouth to Leesburg.	Annual Report 1889, p.1360
Mar. 2, 1907	Channel 6 feet deep from mouth to head of Silver Springs Run.	H.Doc. 782, 59th Cong., 1st sess.
Jun. 25, 1910 Jul. 25, 1912	Maintenance of levels in the lakes at head of river.	Specified in Acts
Jul. 27, 1916	Acceptance of certain artificial waterways in lieu of portions of natural riverbed.	Specified in Act

TABLE 9-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
PARA Jun. 26, 1934	Operation and care of lock and dam provided for with funds from appropriations for rivers and harbors.	Specified in Act
WRDA Nov. 17, 1986	Deauthorized channel 6 feet deep from mouth to head of Silver Springs Run	P.L. 99-662, Nov. 17, 1986 99th Cong., 2d sess.
Mar. 13, 1934	PALM BEACH HARBOR, FL (See Section 26 of Text) Maintenance of improvement previously constructed by local interests.	H.Doc. 185, 73rd Cong., 2d sess.
Dec. 10, 1934	Deepening the channels and turning basin, as constructed by local of interests, to 20 feet.	Recommended by Chief Engineers to Public Works Administration Oct. 17, 1934
Aug. 30, 1935	Authorized the work previously approved by Public Works Administration, and widening the channels to existing project dimensions, enlarging the 700-foot square turning basin eastward removing the obstructive point on south side of the and inlet, revetting the banks of the inlet restoring existing jetties.	H.Doc. 185, 73rd Cong., 2d sess. and Rivers and Harbors Comm. H. Doc. 42, 74th Cong., 1st sess.
Mar. 2, 1945	Deepening the channels and turning basin to 25 feet.	H.Doc. 530, 78th Cong., Cong., 2d sess.
May 17, 1950	Extending the turning basin 550 feet southward over a 900-foot width, with a flare to the east; provided that local interests may be reimbursed not to exceed \$305,000 for work done by them on this modification subsequent to July 1, 1949.	H.Doc. 704, 80th Cong., 2d sess.
Jul. 14, 1960	An entrance channel 35 feet deep, 400 feet wide, and 0.8 mile long merging with an inner channel 33 feet deep, 300 feet wide and 0.3 mile long, thence flaring into a turning basin, 1,400 feet north-south by a minimum of 1,200 feet east-west.	H.Doc. 283, 86th Cong., 1st sess. (contains latest published map)
Report of the Chief of Engineers Dec. 10, 1985	Assume maintenance of locally expanded turning basin to a depth of 25 feet on north side of existing basin.	P.L. 99-662, Nov.17, 1986, 99th Cong., 2d sess.
WRDA Oct. 12, 1996	PALM VALLEY BRIDGE, FL (See Section 27 of Text) Replacement of a two lane bridge.	P.L.104-303 Oct. 12, 1996 104 th Cong.

JACKSONVILLE, FL DISTRICT

TABLE 9-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Oct. 27, 1965	PONCE DE LEON INLET, FL (See Section 28 of Text) Widening and deepening channels; jetties on north and south sides of inlet; a weir in the north jetty and an impoundment basin inside the weir	H.Doc. 74, 89th Cong., 1st sess.
WRDA Aug. 17, 1999	Project for navigation and related purposes.	P.L. 106-53, Aug. 17, 1999, 106 th Cong., 1 st sess.
Mar. 3, 1925	PONCE HARBOR, PR (See Section 29 of Text) Dredging 3 continuous areas, aggregating 153 acres, to depths of 30, 18, and 9 feet, and construction of a seawall, costs to be shared by U.S. and local interests.	H.Doc. 532, 67th Cong., 4th sess.
Aug. 30, 1935	Modified conditions of local cooperation to provide that U.S. undertake all dredging at Federal expense and return local funds previously contributed for dredging, all other portions of the improvement hereafter to be at the expense of local interests.	Rivers and Harbors Committee Doc. 18, 72nd Cong., 1st sess.
Mar. 2, 1945	Eliminate previously authorized 9-foot dredging area, and provided for dredging 30-foot depth area and 18 acres off the municipal pier and for construction of the breakwater off Punta Carenero.	H.Doc. 745, 79th Cong., 2d sess.
H.R. Sep. 23, 1976, S.R. Oct. 1, 1976	Eliminate previously authorized 18-foot and a portion of the 30-foot project outside the proposed 36-foot and a portion adjacent to the municipal bulkhead. Channel 36 x 600 feet from Caribbean Sea to harbor; channel 36 x 400 feet into harbor; and a 36-foot turning basin.	H.Doc. 532, 94th Cong., Cong., 2d sess.
Jul. 3, 1930	PORT EVERGLADES HARBOR, FL (See Section 30 of Text) Maintenance of harbor constructed by local interests.	Cong., 2d sess.
Aug. 30, 1935	Enlarge entrance channel and complete turning basin to 1,200 feet square.	Rivers and Harbors Committee Doc. 25, 74th Cong., 1st sess.
Jun. 20, 1938	Widen turning basin 350 feet on north side.	H.Doc. 545, 75th Cong., 3d sess.
Jul. 24, 1946	Widen turning basin 200 feet on north side, 500 feet on south side and enlarge flare at entrance channel.	H.Doc. 768, 78th Cong., 2d sess.
Jul. 3, 1958	Deepen and widen entrance channel on a new alignment and increase turning basin in size and depth.	H.Doc. 346, 85th Cong., 2d sess.

TABLE 9-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
H.R. May 9, 1974; S.R. May 31, 1974	Deepen and widen entrance channel, enlarge turning basin, widen Pier 7 channel, maintenance of Berth 18 channel, and planning for a south jetty fishing walkway with construction contingent upon need as developed by detailed post authorization studies.	H.Doc. 144, 93rd Cong., 1st sess.
WRDA Jan. 24, 2000	Reimbursement of the non-Federal interest for the project for navigation, \$15,003,000 for the Federal share of costs incurred by the non-Federal interest in carrying out the project and determined by the Secretary to be eligible for reimbursement under the limited reevaluation report dated April 1998.	P.L. 106-541, Jan. 24, 2000 106 th Cong., 2d sess.
Report of the Chief of Engineers Sep. 23, 1991	Project for navigation.	P.L. 102-580, Oct.31, 1992 102nd Cong., 2d sess.
	REMOVAL OF AQUATIC GROWTH FROM NAVIGABLE WATERS IN THE STATE OF FLORIDA (See Section 31 of Text)	
Mar. 3, 1899	Construction and operation of a suitable vessel and use of log booms for removal of water hyacinths in the navigable waters of the State.	Annual Report 1899
Jun. 13, 1902	Extermination and removal of water hyacinths by any mechanical, chemical or other means.	Specified in Act
Mar. 3, 1905	Prohibits use of any chemical process injurious to cattle.	Specified in Act
	ST. AUGUSTINE HARBOR, FL (See Section 32 of Text)	
Jun. 20, 1938	Channel 27 x 200 feet protected by a groin.	H.Doc. 555, 75th Cong., 3d sess.
May 17, 1950	Channel 16 x 200 feet across bar, and thence 12 feet deep to Intracoastal Waterway; jetty on south side of inlet; future landward extension of groin and jetty; and channel 10 x 100 feet in San Sebastian River.	H.Doc. 133, 81st Cong., 1st sess.
	ST. JOHNS RIVER, FL, JACKSONVILLE TO LAKE HARNEY (See Section 33 of Text)	
Mar. 3, 1899	A channel 13 feet deep and 200 feet wide from Jacksonville to Palatka.	H.Doc. 523, 55th Cong., 2d sess. and Annual Report 1899 p. 1343
Mar. 2, 1919	The improvement of Deep Creek.	H.Doc. 699, 63rd Cong., 2d sess.
Jun. 14, 1880	Two jetties at Volusia Bar (Maintenance only; new work completed under previous project).	Annual Report for 1879, pp. 795-798

JACKSONVILLE, FL DISTRICT

TABLE 9-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Jun. 25, 1910	A channel 100 feet wide, 8 feet deep from Palatka to Sanford with a side channel to Enterprise, and thence 5 feet deep to Lake Harney.	H.Doc. 1111, 60th Cong., 2d sess.
Jul. 3, 1930	Cutoffs at Butcher Bend, Shake Creek, and Starks Landing, and easing bends at other points.	H.Doc. 691, 69th Cong., 2d sess.
Mar. 2, 1945	A channel 10 feet deep and 100 feet wide from Palatka to Sanford, with a side channel to Enterprise and with cutoffs and easing of bends. (Cutoffs deauthorized)	H.Doc. 603, 76th Cong., 3d sess.
Mar. 2, 1945	Combining the two projects above into a single project for St. Johns River, FL, Jacksonville to Lake Harney, and for a cutoff 5 feet deep and 75 feet wide between Lake Monroe and the vicinity of Osteen Bridge (Woodruff Creek Cutoff).	H.Doc. 445, 78th Cong., 2d sess.
Jul. 24, 1946	A channel 12 feet deep and 100 feet wide from Palatka to Sanford, and in the branch to Enterprise.	S.Doc. 208, 79th Cong., 2d sess.
Mar. 2, 1945	ST. LUCIE INLET, FL (See Section 34 of Text) Channel 10 x 200 feet.	H.Doc. 391, 77th Cong., 1st sess.
Nov. 7, 1966	Modification to maintain existing channel 6 x 100 feet.	H.Doc. 508, 89th Cong., 2d sess.
H.R. May 9, 1974 S.R. May 31, 1974	Extending north jetty and modifying existing jetty to provide a sand bypass weir section; excavation of sand impoundment basin; construction of south jetty with a walkway for recreational fishing; channel 10 x 500 feet through bar cut, tapering to 150 feet through the inlet, and 100 feet and 7 feet deep to the Intracoastal Waterway; and transfer of 380,000 cubic yards of material to the south beach during each two-year maintenance period.	H.Doc. 294, 93rd Cong., 1st sess.
Aug. 8, 1917	SAN JUAN HARBOR, PR (See Section 35 of Text) Anchorage (inner harbor) area of 206 acres and San Antonio Channel to 30-foot depth.	H.Doc. 865, 63rd Cong., 2d sess.
Sep. 22, 1922	Substitution of a 68-acre area 30 feet deep along southeasterly side of anchorage area, for one 25 acres in extent and of same depth extending easterly from eastern end of the San Antonio project channel.	Specified in Act

TABLE 9-B (Continued) AUTHORIZING LEGISLATION

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

Acts	Work Authorized	Documents
Jul. 3, 1930	Modified condition of local cooperation.	H.Doc. 45, 71st Cong., 2d sess.
Aug. 30, 1935	Entrance channel across outer bar 38 feet deep and 800 feet wide, and thence across bay to anchorage area (Anegado Reach Channel) 30 feet deep and 700 feet wide and increasing anchorage area to 239 acres to 30-foot depth.	R&H Comm. Doc. 38, 74th Cong., 1st sess.
Aug. 26, 1937	Widening Anegado Reach Channel and increasing anchorage area to 329 acres	R&H Comm. Doc. 42, 75th Cong., 1st sess.
Oct. 17, 1940	Removal to 8-foot depth of Anegado, Largo, and Capitanejo Shoals, and dredging to 30-foot depth the entrance channel and turning basin to the Graving Dock.	H.Doc. 364, 76th Cong., 1st sess.
Mar. 2, 1945	Maintenance of the 30-foot depth entrance channel and turning basin to the Army Terminal.	Specified in Act
Jul. 3, 1958	Deepening portions of entrance and approach channels and basins to Army Terminal and San Antonio Pier areas to 35-45 feet; new 32-foot depth Puerto Nuevo Channel; new 36-foot depth anchorage.	H.Doc. 38, 85th Cong., 1st sess.
Aug. 4, 1976	A bar channel 48 x 800 feet, shifting the centerline 350 feet west; deepening Anegado Channel in steps from 46 to 40 feet while reducing width to 800 feet; deepening Army Terminal Channel and turning basin to 40 feet while widening the channel to 450 feet; deepening Puerto Nuevo Channel to 40 feet and widening it to 400 feet; deepening Graving Dock Channel to 40 feet at existing 400-foot width; deepening San Antonio Channel to 38 feet at varying widths, minimum of 500 feet; deepening cruise ship basin at 30 x 250 feet; provide a 38-foot depth in Anchorage Area "E" with irregular width; six mooring dolphins for vessels using the area.	H.Doc. 574, 94th Cong., 2d sess.
Report of the Chief of Engineers Dec. 23, 1982	Modification of the authorized project to provide the deepening of the Bar Channel to 48 feet and shifting its alignment 350 feet to the west; deepening Anegado, and Army Terminal to 40 feet; deepening Graving Dock Channel, and Cruise Ship Basin, Puerto Nuevo Channel, and San Antonio Channel to 36 feet; and deepening Anchorage Area "E" to 38 feet while reducing its size and constructing six mooring dolphins within its limits. A 1,500-foot long extension to San Antonio Channel would be added to the Federal project and Sabana approach deepened to 32 feet.	P.L. 99-662 Nov. 17, 1986 99th Cong., 2d sess

TABLE 9-B (Continued) AUTHORIZING LEGISLATION

JACKSONVILLE, FL DISTRICT

Acts	Work Authorized	Documents
WRDA Oct. 12, 1996	Modification of the project to deepen the bar channel to depths varying from 49 feet to 56 feet below mean low water with other modifications to authorized interior channels as described in the General Reevaluation Report and Environmental Assessment dated March 1994.	P.L. 104-303, Oct.12, 1996 104th Cong.
	TAMPA HARBOR, FL (See Section 36 of Text) TAMPA BAY	
Mar. 3, 1899	For a channel 27 feet deep from the Gulf of Mexico to Port Tampa, 500 feet wide across the bar and 300 feet wide in the bay.	H.Doc. 52, 55th Cong., 3d sess. (Also printed in Annual Report 1899, p. 1640) Channel dimensions specified in Act
Mar. 3, 1905	For a channel depth of 26 feet with sufficient width from the Gulf of Mexico to Port Tampa.	Specified in Act
	TAMPA AND HILLSBOROUGH BAYS	
Jun. 25, 1910	For a depth of 24 feet in Hillsborough Bay.	H.Doc. 634, 61st Cong., 2d sess.
Aug. 8, 1917	For a 27-foot depth from Gulf of Mexico up to and in the several channels of Hillsborough Bay, the widths to be 500 feet on the bar, 300 feet in Tampa Bay, Ybor, and Garrison Channels, and 200 feet in Hillsborough Bay, Sparkman, and Seddon Channels, with turning basins at the mouth of Hillsborough and at Ybor Estuary.	H.Doc. 634, 61st Cong., 1st sess.
	HILLSBOROUGH RIVER	
Mar. 3, 1899	For a 12 x 200 foot channel to within 100 feet of the Lafayette St. highway bridge (maintenance only; new work completed under a previous project under title Improving Hillsborough Bay, FL).	H.Doc. 545, 55th Cong., 2d sess. and Annual Report 1998, pp 1357- 1360
	TAMPA HARBOR, FL	
Sep. 22, 1922	Consolidation of the above projects to form a single project for Tampa Harbor.	Specified in Act
Jul. 3, 1930	Increasing the depth of Egmont Channel to 29 feet and the width of Sparkman Channel to 300 feet.	H.Doc. 100, 70th Cong., 1st sess.

Acts	Work Authorized	Documents
Sep. 3, 1954	Extended removal of obstructions in Hillsborough River to City Water Works Dam. Maintenance of cleared channel to be assumed by local interests.	H.Doc. 567, 81st Cong., 2d sess.
Oct. 23, 1962	Channel and turning basin at Port Sutton 30 feet deep, Ybor Channel 34 x 400 feet.	H.Doc. 529, 87th Cong., 2d sess.
Dec. 31, 1970	For federal maintenance of Port Sutton Channel, 280 feet wide and an irregularly shaped turning basin both to a depth of 34 feet.	H.Doc. 150, 91st Cong., 1st sess.
Do.	Enlarge entrance channel across Egmont Bar to 46 x 700 feet from the Gulf to Mullet Key.	H.Doc. 401, 91st Cong., 2d sess.
Do.	Enlarge Mullet Key Cut Channel to 44 x 600 feet.	Do.
Do.	Enlarge Tampa Bay Channel to 44 x 500 feet from Mullet Key Cut through Tampa Bay to the junction of Hillsborough Bay and Port Tampa Channels.	Do.
Do.	Enlarge Hillsborough Bay Channel to 44 x 500 feet from the junction with Tampa Bay and Port Tampa Channels to the junction with Port Sutton entrance channel, and thence deepening to a depth of 42 feet at the existing width of 400 feet to the junction with Seddon and Sparkman Channels.	Do.
Do.	Enlarge Port Sutton entrance channel to 44 x 400 feet.	Do.
Do.	Enlarge Port Sutton turning basin to a depth of 44 feet and a turning diameter of 1,200 feet.	Do.
Do.	Deepening Sparkman Channel to 42 x 400 feet.	Do.
Do.	Deepening Ybor Channel to 40 x 300 feet.	Do.
Do.	Enlarge turning basin at the entrance to Ybor Channel to a depth of 42 feet and an additional width of 200 feet on the southwest edge of the present basin.	Do.
Do.	Deepening Port Tampa Channel to 42 feet at its existing width from the junction with Hillsborough and Tampa Bay Channels to the turning basin.	Do.

TABLE 9-B (Continued) AUTHORIZING LEGISLATION

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

Acts	Work Authorized	Documents
Do.	Deepening the Port Tampa turning basin to 42 feet over its existing length of 2,000 feet and width of 900 feet.	Do.
Do.	An entrance channel in East Bay 44 x 400 feet and 500 feet north from the Port Sutton turning basin for a distance of about 2,000 feet.	Do.
Do.	A turning basin in East Bay at a depth of 44 feet and with a turning diameter of 1,200 feet.	Do.
Do.	An approach channel in East Bay 44 x 300 feet north from the East Bay turning basin for a distance of about 2,500 feet.	Do.
Do.	Maintenance of Port Sutton Terminal channel to 44 x 200 feet for a distance of 4,000 feet.	Do.
Aug. 15, 1985	Maintenance of East Bay channel to 34 x 300 feet for a distance of 5,500 feet.	H.Doc. 236, 99th Cong., 1st sess.
Report of the Chief of Engineers Mar. 28, 1988	Port Sutton Channel deepening to 43 feet for a distance of 3,700 feet and a width of 200 feet.	P.L. 100-676, Nov. 17, 1988, 100th Cong., 2d sess.
WRDA Nov. 28, 1990	Maintenance of Alafia Channel to a depth of 34 feet, if a Non-Federal Sponsor agrees to reimburse the Secretary	
WRDA Aug. 17, 1999	Project for navigation, Tampa Harbor-Big Bend Channel	P.L. 106-53, Aug. 17, 1999 106 th Cong., 1 st sess.
WRDA Aug. 17, 1999	Expedite completion of report for Alafia Channel and proceed to project preconstruction, engineering, and design if justified.	P.L. 106-53 Aug. 17, 1999 106 th Cong., 1 st sess.
WRDA Jan. 24, 2000	Project for navigation, Port Sutton, FL	P.L. 106-541 Jan. 24, 2000 106 th Cong. 2 nd sess.
	TAMPA HARBOR BRANCH CHANNELS, FL	
Report of the Chief of Engineers Jan. 25, 1979	Enlarging Hillsborough Bay Cut D, Sparkman Channel, Port Tampa Channel and existing turning basins at the entrance to Ybor Channel and at Port Tampa, all to a depth of 41 feet with varying lengths and widths and deepening Ybor Channel to a depth of 39 feet. This work will be associated with the Main Channel deepening.	P.L. 99-662, Nov. 17, 1986, 99th Cong., 2d sess

Acts	Work Authorized	Documents
Report of the	Project for the ecosystem restoration, to construct the headwaters	P.L. 102-580,

JACKSONVILLE, FL DISTRICT

Chief of Engineers Mar. 17, 1992	revitalization project, and any modifications for the environmental restoration of the Kissimmee River Basin, ensuring that implementation of the project to restore the Kissimmee River will maintain the same level of flood protection as is provided by the current flood control project.	Oct.31, 1992 102nd Cong., 2d sess.

EVERGLADES AND SOUTH FLORIDA ECOSYSTEM RESTORATION (See Section 78 of Text)

WRDA Oct. 12, 1996	Project consists of a comprehensive plan for the purpose of restoring, preserving, and protecting the South Florida ecosystem. The comprehensive plan shall provide for the protection of water quality in, and the reduction of the loss of fresh water from, the Everglades. The comprehensive plan shall include such features as are necessary to provide for the water-related needs of the region, including flood control, the enhancement of water supplies, and other objectives served by the Central and Southern Florida project.	P.L. 104-303, Oct. 12, 1996 104 th Cong.,

WRDA Aug. 17, 1999	Extension of program from 1999 until 2003 and amendment to credit and reimbursement of past and future activities to non-Federal sponsor.	P.L. 106-53 Aug. 17, 1999 106 th Cong., 1 st sess.

WRDA Jan. 24, 2000	Specific authorization for Pilot Projects and Initial Projects.	P.L. 106-541, Jan. 24, 2000, 106 th Cong., 2 nd sess.

HILLSBORO AND OKEECHOBEE AQUIFER, FLORIDA

WRDA Aug. 17, 1999	The project for aquifer storage and recovery described in the Central and Southern Florida Water Supply Study and House Document 369	P.L. 106-53 Aug. 17, 1999 106 th Cong., 1 st sess.

MOBILE, AL., DISTRICT

This district comprises a small portion of southeastern Tennessee, western George, western Florida, all of Alabama south of Tennessee River Basin, eastern Mississippi, and a small portion of southeastern Louisiana embraced in drainage basins tributary to the Gulf of Mexico, west of Aucilla River Basin, to and including the Pascagoula River Basin. The Pearl River Basin,

Mississippi was included as part of the Mobile District until October 1, 1981, when responsibilities were transferred to Vicksburg District, Lower Mississippi Valley Division. A section of the Gulf Intracoastal Water from St. Marks, Florida, to Lake Borgne Light No. 29, Louisiana is also within Mobile District.

Navigation

1. ALABAMA-COOSA RIVERS, AL AND GA

Location. Alabama River is formed 18 miles above Montgomery, Alabama, by the junctions of the Coosa and Tallapoosa Rivers. It then flows southwesterly through Alabama 318 miles and unites with the Tombigbee River about 45 miles north of Mobile, in southwestern Alabama, to form the Mobile River. (See Geological Survey maps for central and southwest Alabama.) The Coosa River is formed at Rome, Georgia, in northwest Georgia, by the junction of the Oostanaula and Etowah Rivers, which have their sources in southeastern Tennessee and northern Georgia. From Rome the Coosa River flows southwesterly through Georgia and Alabama 286 miles and unites with the Tallapoosa River near Montgomery, Alabama, at about the center of the State, to form the Alabama River. (See Geological Survey maps for northeast Alabama, southeast Tennessee, and northwest Georgia.)

Previous project. Projects for Alabama River: for details see page 1837, Annual Report for 1915; page 725, Annual Report for 1938; and page 592, Annual Report for 1944. Projects for Coosa River: for details see page 1837, Annual Report for 1915; page 728, Annual Report for 1938; and page 594, Annual Report for 1944.

Existing project. The authorized project provides for full development of the Alabama-Coosa Rivers and tributaries for navigation, flood control, power, recreation, and other purposes, in accordance with plans under preparation by Chief of Engineers, subject to modifications thereof which may be advisable for increasing development of hydroelectric power. (See Table 10-B for authorizing legislation.) Public Law 436, 83rd Congress, suspended authorization of the comprehensive plan, insofar as it provides for development of hydroelectric power for Coosa River, to permit non-Federal interests to develop the Coosa River by construction of a series of dams in accordance with conditions of a license issued pursuant to Federal Power Act and in accordance with certain other provisions and requirements of the aforementioned public law. The plan was further modified by the WRDA of 1986 to authorize planning, engineering and design for the project generally in accordance with the plans contained in Design Memorandum No. 1, General Design, dated May 1982. The present phase of improvement includes the construction of Robert F. Henry and Millers Ferry multiple-purpose improvements, Claiborne Lock and Dam, and supplemental channel work providing for a nine-foot deep navigation channel from the mouth of the Alabama River to Montgomery, Alabama, and construction of Carters Dam, a multiple-purpose improvement on Coosawattee River, Georgia.

Local cooperation. Requirements of local cooperation will be determined as formulation of plans for development of projects progress. No action in the matter of local cooperation has been initiated.

Terminal facilities. On the east bank of the river a natural landing connects with city streets at Montgomery. There are also various natural landings along the river. Facilities and natural landings on Alabama River are considered adequate for existing commerce.

Operations and results during fiscal year.

Maintenance: Contract maintenance dredging of the river system at a cost of \$1,433,434. General charges for water control management, condition surveys, engineering and design, supervision and administration amounted to \$3,070,513.

Condition at end of fiscal year. Construction was initiated on Carters Dam in April 1962, on Millers Ferry Lock and Dam in April 1963, Claiborne Lock and Dam in May 1965, and Robert F. Henry Lock and Dam in June 1966. Carters Dam was completed in FY 1980. The authorized nine-foot navigation channel to Montgomery, Alabama was opened to traffic in January 1972. Overall construction is complete in Millers Ferry Lock and Dam. Construction of Robert F. Henry Lock and Dam is complete. Total Federal cost of the existing project as of September 30, 2002 is \$127,060,108, including \$3,245,400 for new work and \$125,073,255 for maintenance. (See Table 10-L.)

1A. CLAIBORNE LOCK AND DAM, AL

Location. The site is in Monroe County at mile 72.5 on the Alabama River, 15 miles northwest of Monroeville and 5.7 miles upstream from the U.S. Highway 84 bridge.

Existing project. The existing project consists of a short earth dike on the right bank, a combination of a fixed-crest and gated spillway extending across the river channel and into the left bank, a navigation lock and mound on the left bank, and an earth dike extending across the left overbank to high ground. Normal upper pool is elevation 35 and the minimum pool will be elevation 32 to provide storage for reregulation of Millers Ferry powerplant releases. The 60-mile long reservoir has an area of 5,850 acres and a volume of 96,360 acre-feet. For other information see description of Alabama-Coosa projects.

Operations and results during fiscal year.

Maintenance: Operation and maintenance of the lock and dam totaled \$2,650,590.

Condition at end of fiscal year. Construction began in May 1965 and was completed in FY 1976 at a total cost of \$27,997,450. Recreation attendance during FY 2002 totaled 242,233 visits.

1B. COOSA RIVER, MONTGOMERY TO GADSDEN, AL

Location. The Coosa River is one of the two major tributaries forming the Alabama River approximately 18 miles northeast of Montgomery, Alabama. From its source at the juncture of the Etowah and Oostanaula Rivers in northwest Georgia, it flows southwesterly about 286 miles to join with the Tallapoosa River in forming the Alabama River.

Existing project. The improvement of the Alabama-Coosa River for navigation to Rome, Georgia was authorized by Congress in the River and Harbor Act of 1945. A report in House Document 320, transmitted to Congress on January 27, 1960, recommended that the navigation project for the Coosa River from Montgomery to Gadsden be accomplished after the waterway to Montgomery was assured. The plan of improvement identified in House Document 320 provided for a waterway 9 feet deep with widths of 200 feet to Montgomery, Alabama, and 150 feet to Rome, Georgia. The waterway to Montgomery is complete. The plan for the Coosa River segment of the waterway between Montgomery and Gadsden was further modified by the WRDA of 1986 to authorize planning, engineering and design for the project generally in accordance with the plans contained in Design Memorandum No. 1, General Design, dated May 1982. Total Federal cost of the existing project as of September 30, 2002 is \$14,986,400 for new work.

2. APALACHICOLA BAY, FL

Location. The project is on the coast of northwest Florida 160 miles east of Pensacola Harbor. (See Coast and Geodetic Survey Chart 11401.)

Previous project. For details, see page 1833, Annual Report for 1915, and page 689, Annual Report for 1938.

Existing project. The existing project provides for: (a) A channel 10 feet deep and 100 feet wide from the 10-foot depth in Apalachicola Bay, across St. George Island, to within 300 feet of the gulf shore, thence increasing uniformly in width to 200 feet at the shore and continuing with that width to the 10-foot depth in the Gulf of Mexico, with twin jetties extending from the dune line to the outer end of the channel; (b) an inner bar channel, 10 feet deep and 100 feet wide, in Apalachicola Bay; (c) a boat basin 200 feet by 880 feet and 9 feet deep at Apalachicola, Florida, with a connecting channel 9 feet deep and 80 feet wide through Scipio Creek to Apalachicola River; (d) a channel known as Link Channel, 10 feet deep and 150 feet wide, in Apalachicola Bay; (e) a channel generally parallel to the shore at Eastpoint, Florida, 6 feet deep, 100 feet wide, and about 6,000 feet long, and a connecting channel 6 feet deep and 100 feet wide to water at the same depth in

St. George Sound, with twin breakwaters on either side parallel to the shore and having a total length of 5,300 feet; (f) a channel 10 feet deep and 100 feet wide through Bulkhead Shoals, connecting Apalachicola Bay with St. George Sound; and (g) a 6-foot by 100-foot channel about one mile long, generally parallel to the shore at Two Mile, Florida, with a 6-foot by 100-foot connecting channel to water of the same depth in Apalachicola Bay. Mean range of tide throughout this harbor is 1.6 feet. Extreme range, except during storms, is about three feet. Plane of reference is mean low water. (See Table 10-B for authorizing legislation.)

Local cooperation. Requirements have been fully complied with.

Terminal facilities. Facilities consist of pile-and-timber wharves which are considered adequate for existing commerce.

Operations and results during fiscal year.

Maintenance: Condition surveys, contract dredging, supervision and administration and other miscellaneous costs amounted to \$114,532.

Condition at end of fiscal year. The existing project, authorized by the 1954 River and Harbor Act, was completed in 1959, including reimbursement to local interests for approved work, as authorized by the 1958 River and Harbor Act. Improvements at Two Mile except for modifications authorized in 1975 were completed in September 1964. Construction of the breakwater and channel improvements authorized in 1975 at Two Mile was completed in September 1977. Construction of breakwaters at Eastpoint authorized in 1983 was completed in March 1984. Total Federal cost under existing project as of September 30, 2002 is \$2,033,461 for new work and \$9,467,271 for maintenance, a total of \$11,500,732.

3. APALACHICOLA, CHATTAHOOCHEE, AND FLINT RIVERS, AL, GA, AND FL

Location. The Apalachicola River is formed at the southwest corner of the State of Georgia by the junction of the Chattahoochee and Flint Rivers and flows south 108 miles emptying into Apalachicola Bay. The Florida River enters the Apalachicola from the east at mile 45.4 and the River Styx also enters from the east at mile 36.7 and Chipola River enters from the west at mile 28.2. (See Coast and Geodetic Survey Chart 11401.) The Chattahoochee River, 418 miles long, rises in northeast Georgia and flows southwesterly to West Point, and thence southerly to join the Flint River at the southwest corner of Georgia, forming the Apalachicola River. (See Geological Survey maps for northwest Georgia.) The Flint River, 330 miles long, rises in west central Georgia, flows generally southeasterly to

Albany, and thence southwest to the southwest corner of the State, where it joins the Chattahoochee River to form the Apalachicola River. (See Geological Survey maps for southwest Georgia.

Previous project. For details see page 484 of Annual Report for 1963.

Existing project. The authorized project provides for development of the Apalachicola, Chattahoochee, and Flint Rivers for navigation, flood control, hydropower, and recreation. Navigation features of the existing project consist of a continuous 9-foot by 100-foot channel in the Apalachicola River from the intersection of the Gulf Intracoastal Waterway to the confluence of the Chattahoochee and Flint Rivers, 104 miles, thence to Columbus, Georgia, on the Chattahoochee River, 164 miles, and to Bainbridge, Georgia, on the Flint River, 29 miles, and a 3-foot by 100-foot channel on the Flint River from Bainbridge to Albany, Georgia, 74 miles, thence a channel suitable for light draft vessels at moderate stage to Montezuma, Georgia, 79 miles to be accomplished by dredging, contract works, and construction of three locks and dams (Jim Woodruff, George W. Andrews, and Walter F. George) along the 9-foot depth channel, two multipurpose dams (West Point and Buford) on the Chattahoochee River. Three multipurpose dams (Lower Auchumpkee Creek, Lazer Creek, and Spewrell Bluff) on the Flint River were deauthorized in the Water Resources Development Act of 1986. The project also provides for minor improvements of certain streams tributary to the Apalachicola River, including a 9-foot by 100-foot side channel, approximately 2,000 feet long, from Apalachicola River to Apalachicola River Industrial Park at Blountstown, Fla. Plane side of reference is mean low water. Hydropower and flood control storage is provided at Sidney Lanier, Walter F. George, and West Point, and hydropower is provided at Jim Woodruff. For further details see Annual Report for 1962. The project was originally authorized in section 2 of the River and Harbor Act of 1945, was further modified by the WRDA of 1986 (P.L. 99-662). (See Table 10-B for authorizing legislation.)

Mean range of tide at the mouth of Apalachicola River is 1.6 feet. At the point where the river is formed the variation between low and high water is about 37 feet. On the Chattahoochee River, variation between average low and high water is about 20 feet, and extreme fluctuation is 65.3 feet at Eufaula. On the Flint River the extreme fluctuation of stage due to flood is 40 feet, while average variation between low and high water is about 21.5 feet. A Comprehensive Basin Study has been completed on the Apalachicola, Chattahoochee, Flint (ACF), and Alabama-Coosa-Tallapoosa (ACT) River Systems.

Local cooperation. The six Florida Counties that originally served as local sponsors for the Florida portion of the waterway have all informed the District in writing that they no longer wish to serve as local sponsors. The State of Florida has also declined assumption of responsibilities of local sponsorship. At this time no items of local cooperation are being complied with. No local sponsors are required for the Alabama and Georgia portions of the waterway.

Terminal facilities. About 200 feet of public docks, in addition to private wharves, are available at Apalachicola, Florida. There are numerous constructed and natural landings along the entire system for launching small craft. For details of other terminal facilities, which are considered adequate for existing commerce, see individual project descriptions. See also Table 10-M on locks and dams and multiple-purpose development included in existing project.

Operations and results during fiscal year.

Maintenance: Operation and maintenance of George W. Andrew Lock and Dam cost \$553,061. All other cost for project amounted to \$8,420,782.

Condition at end of fiscal year. Improvement of Apalachicola River channel by dredging to provide project dimensions throughout is complete. All major construction on Lake Sidney Lanier Dam, George W. Andrews Lock and Dam, Jim Woodruff Lock and Dam, Walter F. George Lock and Dam and West Point are complete. Channel rectification in Apalachicola River was completed December 1970. More detailed information concerning condition at the end of fiscal year for individual locks and dams and multiple-purpose developments comprising the system is presented under their respective project titles elsewhere in this report. Total Federal cost under existing project as of September 30, 2002 is \$4,452,162 for new work and \$147,491,062 for maintenance, a total of \$151,943,224. (See Tables 10-A and 10-M for fiscal year costs and summaries of overall project.)

3A. GEORGE W. ANDREWS LOCK AND DAM, AL AND GA

Location. The project is on the Chattahoochee River about 46.5 miles above its mouth and about one mile below the town of Columbia, Alabama, near the head of Jim Woodruff Reservoir. (See Geological Survey maps for southeast Alabama). The pool extends up the navigation channel about 28 miles upstream to Walter F. George Lock and Dam.

Existing project. This single-purpose project provides for a concrete fixed-crest spillway 340 feet long extending into the right bank with a crest at elevation 102 feet national geodetic datum, a concrete gate spillway adjacent to the lock 280 feet long with crest at elevation 82 feet

national geodetic datum, a single-lift lock with usable chamber dimensions of 82 feet by 450 feet, and a maximum lift of 25 feet. Depths are 13 feet over the lower sill and 19 over the upper sill at normal pool elevation. The underlying foundation is limestone. The project provides for maintenance and care. The House Committee on Public Works, by resolution adopted May 19, 1953, approved the plan as proposed by the Chief of Engineers for a high dam at Walter F. George site and a low dam at the Fort Benning site and a high dam at the upper Columbia site, construction of which was authorized by the 1946 River and Harbor Act as the initiation and partial accomplishment of the plan for full development of the Apalachicola, Chattahoochee, and Flint River system. (See Table 10-B for authorizing legislation.)

Local cooperation. Local interests must operate all movable span bridges, provide suitable public terminals, and hold the United States free from damages. These conditions are being complied with.

Terminal facilities. At Columbia, Alabama, there is a public wharf with concrete deck for handling general cargo and a bulk petroleum terminal with an unloading dock. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year.

Maintenance: Maintenance cost included under overall Apalachicola, Chattahoochee and Flint project. Recreation attendance for FY 2002 totaled 399,615.

Condition at end of fiscal year. Construction of the lock and dam began in March 1959 and was completed in November 1963 at a total cost of \$13,038,427. (See also Table 10-M).

4. AQUATIC PLANT CONTROL (RIVER AND HARBOR ACT OF 1965)

Location. Navigable water, tributary streams, connecting channels and other allied waters in Mobile District.

Existing project. The existing project provides for management and control of water hyacinth, alligatorweed, Eurasian watermilfoil, hydrilla, and other obnoxious aquatic plant growths from navigable water, tributary streams, connecting channels, and other allied waters of the United States, in the combined interest of navigation, flood control, drainage, agriculture, fish and wildlife conservation, public health, and related purposes, including continued research for development of the most effective and economical control measures to be administered by the Chief of Engineers, under the direction of the Secretary of the Army, in cooperation with other Federal and State agencies. Research and planning cost prior to construction shall be borne fully by the United States. (See Table 10-B for authorizing legislation).

Local cooperation. Local interests shall agree to hold and save the United States free from claims that may occur from control operations and to participate to the extent of 50 percent of such operations. Requirements are being met in the state of Alabama by the Department of Conservation and Natural Resources.

Operations and results during fiscal year. Environmental studies amounted to \$10,563.

Condition at end of fiscal year. Total Federal cost under the exiting project as of September 30, 2002 is \$956,834. Contributed funds for maintenance amount to \$21,225.

5. BAYOU CODEN, AL

Location. The project is located in a small tidal stream on the southern coast of Mobile County, Alabama, emptying into Mississippi Sound about 7.6 miles northwest of Cedar Point, the southern tip of western mainland shore of Mobile Bay. (See Coast and Geodetic Survey Chart 11376.)

Previous project. For details see Annual Report for 1945, page 843.

Existing project. The existing project provides for a channel 8 feet deep by 60 feet wide extending from La Belle Avenue bridge south for about 3,000 feet through the bayou to Portersville Bay, thence 8 feet deep by 100 feet wide extending about 2.3 miles westward across Portersville Bay to connect with the Bayou La Batre channel, and a turning basin 8 feet deep by 60 feet wide by 100 feet long on the west side of the bayou channel about 500 feet south of the La Belle Avenue bridge. Mean tidal range is 1.75 feet, and extreme, except during storms, is 3.5 feet. Plane of reference is mean low water. (See Table 10-B for authorizing legislation.)

Local cooperation. Fully complied with.

Terminal facilities. Small privately-owned timber dock piles used in connection with fishing industry in this locality are adequate for existing commerce. A small ship building facility is located near the upper limits of the channel. The marina which will accommodate about 12 small recreational craft, and a slip with facilities for loading oyster shells are located near the mouth of the bayou, and are maintained by the Alabama Department of Conservation.

Operations and results during fiscal year.

Maintenance: Miscellaneous cost amounted to \$6,715.

Condition at end of fiscal year. That portion of the project authorized prior to the 1969 modification was completed in 1956. Construction authorized in 1969 was initiated March 31, 1975 and completed March 26, 1976. Total Federal cost under existing project as of September 30, 2002 is \$330,701 for new work and \$1,919,314 for

maintenance, a total of \$2,250,015. Contributed funds expended for new work amount to \$100,000 and \$131,912 for maintenance.

6. BAYOU LA BATRE, AL

Location. Bayou La Batre is a tidal stream about 10 miles long, emptying into Mississippi Sound on the southern coast of Mobile County, AL., about 10 miles northwest of Cedar Point, the southern tip of the western mainland shore of Mobile Bay. (See Coast and Geodetic Survey Chart 11373.)

Previous project. For details see Annual Report for 1945, page 844.

Existing project. The existing project provides for a 18-foot by 120-foot channel from Pascagoula Ship channel, connecting with the GIWW, along the GIWW alignment, connecting with an extension of the previous 12-foot channel alignment, through Mississippi Sound to the mouth of the bayou, a total distance of approximately 20 miles; then provides for a 12-foot by 100-foot channel to a point about 2,800 feet south of the highway bridge, thence a channel 12 feet deep by 75 feet wide to the bridge, with the channel widened at a point 0.6 mile below the bridge to provide a turning basin 12 feet deep and about 2.6 acres in area. Authorized by the Water Resources Development Act of 1990, the plan of improvement includes deepening channel to 18-foot by 100-foot from the mouth through the turning basin, a distance of about 1.8 miles; deepen channel from turning basin to 0.29 miles above highway 188 bridge to 14-feet by 75-feet, a distance of about 0.89 miles; extend a 14-foot by 50-foot channel from turning basin into Snake Bayou for about 730 feet and a 12-foot by 50-foot channel within Snake Bayou about 790 feet. Mean tidal range is 1.75 feet, and extreme, except during storms, is 3.75 feet. Plane of reference is mean low water. (See Table 10-B for authorizing legislation.)

Local cooperation. Fully complied with.

Terminal facilities. Wooden wharves have been provided at seafood processing plants and public launching ramps are available. Several boatways for construction of small seagoing vessels are also available. Facilities are adequate for existing commerce.

Operations and results during fiscal year.

New work: None.

Maintenance: Contract dredging cost \$802,766, environmental studies \$19,698 and miscellaneous cost \$17,844.

Condition at end of fiscal year. The existing project was modified December 30, 1966 under the discretionary authority of the Chief of Engineers to include a turning basin. The project was completed in March 1967. The contract for deepening the Sound Channel was completed in May 1994. The construction of the Bayou Channel was completed in September 1997. Total Federal cost under

existing project as of September 30, 2002 is \$5,755,195 for new work and \$11,657,958 for maintenance, a total of \$17,413,153. Contributed funds from local interests for new work amount to \$678,618.

7. BILOXI HARBOR, MS

Location. The project is located on Mississippi Sound in southeastern Mississippi, 32 miles by water west of Pascagoula Harbor, Mississippi, and 14 miles east of Gulfport Harbor, Mississippi (See Coast and Geodetic Survey Chart 11373.)

Previous project. For details see page 584, Annual Report for 1962.

Existing project. The existing project provides for a continuous channel 12 feet deep, 150 feet wide and 23 miles long from the Gulf Intracoastal Waterway through Mississippi Sound east of Deer Island, Biloxi Bay, Back Bay, Cranes Neck, and a land cut to Gulfport lake, including a 500-foot by 2,600-foot basin in the lake, thence a 12-foot deep by 100-foot wide channel for about two miles westward from the west end of the lake, terminating in a 300-foot by 500-foot basin; a 12-foot by 100-foot channel from the main channel in Big Lake to and up Bayou Bernard to the Air Force oil terminal at about mile 2.6; a 12-foot by 150-foot spur channel from the main channel in Biloxi Bay for about one mile, terminating in a 400-foot by 600-foot turning basin opposite Ott Bayou; continuation of maintenance of the 12-by 150-foot lateral channel westward about 2.2 miles to Biloxi's south waterfront; a 10-foot by 150-foot channel from Mississippi Sound, passing west of Deer Island to a point where it connects to the 12-foot by 150-foot lateral channel at Biloxi's south waterfront. Construction for the modifications lateral channel authorized by River and Harbor Act of November 7, 1966 was commenced in FY 1974 and completed in February 1975. Further modifications to the project were authorized by the Chief of Engineers on March 28, 1979, which provided for a channel 10 feet deep, 100 feet wide and 300 feet long extending northward from the Biloxi Lateral Channel, and into a rectangular basin, approximately 300 by 370 feet, for use by commercial small craft, and an East Harrison County Canal project which provides for a 12-foot project depth, 130-feet wide and about 2,100 feet long, and a 300 by 300 foot turning basin also to a 12-foot project depth. This work was completed in April 1980.

Cost of modification as authorized by the 1966 River and Harbor Act was \$664,390. That portion of the project providing for an entrance channel 6 feet deep, 50 feet wide, and about 1,800 feet long into Old Fort Bayou, as authorized by the 1945 River and Harbor Act, is inactive.

Estimated cost (1954) of this portion was \$6,000. (See Table 10-B for authorizing legislation.)

Local cooperation. Fully complied with.

Terminal facilities. A number of wooden piling-and-timber piers for small craft and fishing boats, a bulk gasoline terminal, several boat ways, and concrete products plant are available.

Operations and results during fiscal year.

Maintenance: Supervision and administration and other miscellaneous costs totaled \$107,279.

Condition at end of fiscal year. The existing project, prior to the modification authorized in 1966, was commenced in 1931 and completed in 1962. The 1966 modification was completed in FY 1975. The 1979 modification was completed in 1980. Total Federal cost under existing project as of September 30, 2002 is \$1,431,919 for new work and \$15,681,448 for maintenance, a total of \$17,113,367. Contributed funds for new work amount to \$102,600. Contributed funds for maintenance amount to \$238,640.

8. BLACK WARRIOR AND TOMBIGBEE RIVERS, AL

Location. Black Warrior River rises in northern Alabama above Birmingham and flows generally southwesterly to unite with the Tombigbee River at Demopolis, Alabama. Thence the Tombigbee flows south, uniting with the Alabama River to form the Mobile River 45 miles above the head of Mobile Bay. Distance by water from Mobile to vicinity of Birmingham is about 430 miles.

Previous project. For details see page 732, Annual Report for 1938.

Existing project. The existing project provides for a channel 9 feet deep and 200 feet wide from the mouth of the Tombigbee River, 45 miles above Mobile, to the vicinity of Birmingham, via the Tombigbee and Black Warrior Rivers, to mile 430.4 on Sipsey Fork, mile 429.6 on Mulberry Fork and mile 407.8 on Locust Fork, and for maintenance by snagging of Mobile River above the mouth of Chickasaw Creek, a total waterway distance of about 408 miles. The total lift of 255 feet is accomplished by six locks and dams. The original construction program, consisting of 17 dams and 18 lifts, was completed in 1915. Replacement of the original structures with new 110-by-600-foot locks and dams, under the modernization program is as follows: William Bacon Oliver replaced locks 10, 11, and 12; Armistead I. Selden replaced locks 8 and 9; Demopolis replaced locks 4, 5, 6, and 7; Coffeerville (Jackson) replaced locks 1, 2, and 3; and Holt replaced locks 13, 14, 15, and 16. Thus, 16 of the original locks have been replaced by five new locks. Bankhead Lock and Dam (Lock 17) rehabilitation to replace the original double

lift lock with a single lift lock was completed in 1980. The Coffeerville Lock and Dam wildlife refuge, authorized in 1960, includes 4,250 acres within the reservoir area and along its boundaries. A replacement lock for the old Oliver Lock located 2,300 feet downstream has been completed. The replacement lock has dimensions of 110 feet by 600 feet. A fixed crest spillway extends 800 feet across the river. Minimum provision was provided to allow construction of a hydropower plant. (See Table 10-B for authorizing legislation.)

Tidal influence extends upstream from Mobile 101.6 miles to Coffeerville Lock and Dam, where tidal effect is apparent only at low stages of the river. At Mobile the mean and extreme tidal ranges are 1.5 and 3.6 feet, respectively. These are at times slightly increased by the effect of winds. The greatest fluctuation of river stages is at Demopolis, Ala., the maximum being 59.7 feet. Maximum fluctuations at other points are 40 feet at old lock 1, which is 100.6 miles from Mobile; 57.8 feet at Tuscaloosa, 346.1 miles from Mobile; 13 feet at Birmingham, 404.9 miles from Mobile; and 27 feet at Cordova, 424.3 miles from Mobile. Ordinary fluctuations at these points are at old lock 1, 20 feet; at Demopolis, 35 feet; at Tuscaloosa, 40 feet; at Birmingham, four feet; and at Cordova, seven feet. Works of improvement reduced the amount of fluctuations at different points by three to 10 feet.

Local cooperation. Requirements of local cooperation have been fully complied with to date.

Terminal facilities. Docks, storage facilities, and handling equipment have been provided as required at most loading and unloading points along the waterway. These include facilities for handling petroleum and petroleum products, coal, ores, sand and gravel, pulpwood, manufacturers, and various other commodities. While most terminal facilities are privately owned, many are available for use by the general public. Facilities are considered adequate for existing commerce. (See Table 10-N for existing locks and dams.)

Operations and results during fiscal year.

Maintenance: Contract dredging of the river system cost \$2,872,436. Condition surveys, engineering and design cost supervision, administration and other general charges for the overall river project totaled \$19,807,044. Recreation attendance FY 2002 totaled 3,683,428 visits.

Condition at end of fiscal year. Work on the project, commenced in 1887, was essentially completed in 1915. Since then three of the original locks and dams (10, 11 and 12) were replaced by William Bacon Oliver (Tuscaloosa) Lock and Dam which was opened to navigation in August 1939; four original lock and dams (4, 5, 6 and 7) were replaced by Demopolis Lock and Dam which was opened to navigation in August 1954; two original locks and dams (8 and 9) were replaced by Warrior Lock and Dam which

was opened to navigation in October 1957; three original locks and dams (1, 2 and 3) were replaced by Coffeeville Lock and Dam which was opened to navigation in August 1960; and four original locks and dams (13, 14, 15 and 16) were replaced by Holt Lock and Dam which was opened to navigation in June 1966. Rehabilitation of the spillway at John Hollis Bankhead Lock and Dam commenced in 1966, and physically completed February 6, 1970. Replacement of the double lift lock with a single lift lock at John Hollis Bankhead Lock and Dam commenced in April 1970 and was completed in 1980. The power plant at John Hollis Bankhead Lock and Dam and Holt Lock and Dam, was built and is operated by the Alabama Power Co. Construction of the new Oliver Lock and Dam is completed with the new lock open to traffic as of July 1991. Project construction began in November 1986 and is scheduled for completion in January 1996. Total Federal cost under existing project as of September 30, 2002 is \$88,461,935 for new work and \$457,966,491 for maintenance, and \$52,292,880 and major rehabilitation, a total of \$598,721,306.

8A. OLIVER LOCK AND DAM (REPLACEMENT), AL

Location. The project is located at mile 337.7 on the Black Warrior-Tombigbee River System at Tuscaloosa, Alabama.

Existing project. The existing navigation facilities on the Black Warrior and Tombigbee include six (6) locks having a total lift of 255 feet. Each of the locks have chamber dimensions of 110 by 600 feet. Original work on the waterway was authorized by the River and Harbor Act of 1884. The 17 original locks have been replaced by the existing six (6) locks. Previously, Oliver Lock was the only lock in the system with chamber dimensions of 95 by 460 feet.

Authorized by the Water Resources Development Act of 1986, the plan of improvement was to replace Oliver Lock and Dam at a new location 2,300 feet downstream. The replacement lock with chamber dimensions by 110 by 600 feet was opened to traffic in July 1991. The fixed crest spillway, extends 800 feet across the river. Minimum provisions are being provided to allow construction of a hydropower plant. Land Acquisition is complete. Construction was initiated in November 1986 with the award of the Alabama Power Company relocation contract. The first stage cofferdam and river diversion contract was awarded in February 1987 and the lock and dam construction contract was awarded in March 1988. For other information see description of Black Warrior and Tombigbee Rivers project.

Local cooperation. A local cooperation agreement is not required. One-half of the total cost of construction of

the navigation lock and dam will be paid by amounts appropriated from the Inland Waterways Trust Fund.

Operation and results during fiscal year.

New work: None.

Condition at end of fiscal year. The project is complete. Total Federal (Corps of Engineers) cost under existing project to September 30, 2002 is \$61,373,200 for new work. Contributed funds (Inland Waterways Trust) expended total \$63,128,156.

9. BON SECOUR RIVER, AL

Location. Rises 2 miles south of Foley, Ala., and flows southerly about 8 miles, emptying into Bon Secour Bay, an arm of Mobile Bay in southwest Alabama.

Existing project. A 10- by 80-foot channel from Gulf Intracoastal Waterway through Bon Secour Bay to mouth of Bon Secour River and extending up river to vicinity of Swifts Landing, thence 6 by 80 feet up river to a point about 600 feet above Oak Landing with two turning and maneuvering areas 150 feet wide and 1,100 to 1,200 feet long opposite Swifts Landing and ice loading dock. Also a 10 by 80 foot South Fork channel from the intersection with the Bon Secour channel, 1.14 miles to a 150 x 150 foot turning basin. Plane of reference is mean low water. Overall length of improvement is about 4.7 miles. Mean tidal range is about 1.5 feet and extreme, except during storms, is 3.5 feet. Existing project was authorized by Chief of Engineers, May 16, 1963, under authority in Section 107, River and Harbor Act of 1960.

Local cooperation. Fully complied with.

Terminal facilities. A number of pile-and-timber marginal wharves used by the seafood industry and a marine ways are located along the existing project. These, together with numerous privately owned piers, are considered adequate for existing commerce.

Operations and results during fiscal year.

Maintenance: Contract dredging cost \$2,739.

Condition at end of fiscal year. Project was commenced in July and completed in October 1964. Total Federal cost under existing project as of September 30, 2002 is \$150,615 for new work and \$2,891,686 for maintenance, a total of \$3,042,301. Contributed funds for new work amounted to \$9,700.

10. CARRABELLE HARBOR, FLORIDA

Location. Carrabelle Bar and Harbor is located 50 miles south, southeast of Tallahassee, Florida, on St. George Sound and the Gulf of Mexico.

Existing Project. The existing project provides for a 27- by 200-foot channel from the Gulf of Mexico for 3 miles to a point west of Dog Island, thence a 25- by 150-foot channel for 5 miles through St. George Sound and Carrabelle River to a turning basin 500 feet square and 25

feet deep at the town of Carrabelle, a 10- by 100-foot channel from turning basin for 0.6 mile to U.S. 98 bridge, thence a 10- by 80-foot channel for 3 miles to the confluence of New and Crooked Rivers. Plane of reference is mean low water. Channels above the turning basin were authorized May 17, 1965 by Chief of Engineers under authority in Section 107 of the River and Harbor Act of July 14, 1960. Other features of existing project were authorized by River and Harbor Act of September 3, 1954. The mean tidal range is 2.2 feet, and extreme is 3.0 feet, exclusive of storms.

Local Cooperation. Items of local cooperation have been furnished by the Board of County Commissioners, Franklin County, Florida.

Terminal Facilities. Existing terminal facilities are adequate for the current needs of the project.

Operations and results during fiscal year.

Maintenance: Miscellaneous cost \$60.

Condition at end of fiscal year. All new work for this project was completed in 1965. Total Federal cost of the existing project to September 30, 2002 is \$481,627 for new work and \$1,033,264 for maintenance, a total of \$1,514,891.

11. DAUPHIN ISLAND BAY, AL

Location. The project is located between Dauphin and Little Dauphin Island on the west side of the entrance to Mobile Bay, about 30 miles south of Mobile, Alabama and 55 miles west of Pensacola, Florida. (See Coast and Geodetic Survey Chart 11376.)

Existing project. The existing project provides for: (a) A channel 7 feet deep and 150 feet wide from Mobile Bay to an anchorage basin of the same depth, and about 7 acres in area, in the marsh just north of Fort Gaines on Dauphin Island; a channel 6 feet deep and 40 feet wide from the anchorage basin to Dauphin Island Bay; and a jetty and revetment to protect the entrance channel; and (b) an anchorage basin 7 feet deep and 500 feet square at Dauphin Island Village, with an entrance channel of like depth, 100 feet wide and about 8,300 feet long, extending to the 7-foot hydrographic contour in Mississippi Sound. Mean tidal range is 1.1 feet, and extreme, except during storms is about 4 feet. Plane of reference is mean low water. (See Table 10-B for authorizing legislation.)

Local cooperation. Requirements of local cooperation have been fully complied with to date.

Terminal facilities. Several privately-owned wharves for handling seafood, a public dock and mooring slip, and a pier for recreational craft are located on the village basin. A marina, public launching ramp, and a number of private piers are located on the bay. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year.

Maintenance: Contract dredging cost \$18,512.

Condition at end of fiscal year. The project was completed in July 1959. Total Federal cost under existing project as of September 30, 2002 is \$292,864 for new work and \$4,265,854 for maintenance, a total of \$4,558,718.

12. DOG AND FOWL RIVERS, AL

Location. Dog and Fowl Rivers are primarily tidal streams emptying into the west side of Mobile Bay, 8.5 and 17 miles, respectively, south of central Mobile (See Coast and Geodetic Survey Chart 11376.)

Existing project. The Dog River project provides for a 7 by 100-foot channel with a total length of 4.5 miles to provide access to the Mobile ship channel.

The Fowl River project provides for a channel 8 feet deep and 100 feet wide from Mobile Bay into and up Fowl River to deep water about 6,700 feet above its mouth. Total length of the channel is about 2.6 miles. Plane of reference is mean low water. Mean range of tide is about 1.5 feet in Dog River. Extreme range during storms is about 3.6 feet. This segment of the project was completed in November 1973. (See Table 10-B for authorizing legislation.)

Local cooperation. Fully complied with.

Terminal facilities. Existing facilities consist of a boatyard for fabricating steel vessel hulls, nine marinas, four marine ways, a yacht basin on Dog River; two marinas on Fowl River, and numerous timber piers and docks on both rivers. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year.

Maintenance: Contract dredging cost \$2,230,767 and other miscellaneous cost \$599,945.

Condition at end of fiscal year. The existing Fowl River portion of the project was commenced in August 1973 and completed in November 1973. Work on the Dog River channel realignment was initiated and completed during FY 1986. Total Federal cost on the existing project as of September 30, 2002 is \$11,569,246; \$391,354 for new work and \$7,004,302 for maintenance. Contributed funds for new work amounted to \$195,626.

13. EAST PASS CHANNEL FROM GULF OF MEXICO INTO CHOCTAWHATCHEE BAY, FL

Location. East Pass Channel is located in the entrance from the Gulf into Choctawhatchee Bay at eastern end of Santa Rosa Island, 48 miles east of the entrance into Pensacola Bay and 49 miles west of the new entrance to St. Andrews Bay. (See Coast and Geodetic Survey Chart 11388.)

Previous project. For details see page 672 of Annual Report for 1937.

Existing project. The existing project provides for a 12-foot by 180-foot channel from the Gulf of Mexico into Choctawhatchee Bay, and a 6-foot by 10-foot channel from East Pass Channel into Old Pass Lagoon. The project consists also of two converging jetties spaced 1,000 feet apart at the seaward end. Mean range of tide is 1.3 feet; extreme range, except during storms, is 2.5 feet. Plane of reference is mean low water. (See Table 10-B for authorizing legislation.)

Local cooperation. Responsibilities of local cooperation have been complied with to date.

Terminal facilities. Small privately-owned pile-and-timber piers used in connection with the fishing industry in this locality are considered adequate for existing commerce.

Operations and results during fiscal year.

Maintenance: Contract dredging cost \$888,908.

Condition at end of fiscal year. Construction of the 1965 modification was commenced October 1967 and completed January 1969. Total Federal cost under existing project as of September 30, 2002 is \$916,715 for new work and \$14,717,285 for maintenance, a total of \$15,634,000. Contributed funds for new work from local interests amount to \$398,000.

14. FLY CREEK, AL

Location. Fly Creek (Volanta Bayou) is a small stream about 4.5 miles long rising in Baldwin County, Alabama, 3 miles east of town of Fairhope, from whence it flows northerly, thence westerly and southerly, to form an estuary on eastern shore of Mobile Bay just north of Fairhope and about 13 miles southeast of Mobile, Alabama. (See U.S. Coast and Geodetic Survey Chart No. 11376.)

Existing project. Provides for a channel 6 feet deep, 80 feet wide, and about 1,650 feet long from 6-foot depth in Mobile Bay to a turning basin of same depth, 100 feet wide and 350 feet long, in Fly Creek. Mean tidal range in vicinity of project is about 1.3 feet, and extreme, except during storms, is 3.5 feet.

Existing project was authorized by the River and Harbor Act of May 17, 1950, (H. Doc. 194, 81st Cong., 1st Sess.). The project document contains the latest published map.

Local cooperation. Fully complied with.

Terminal facilities. Fairhope Yacht Club has facilities for small recreational craft on the south bank near mouth of creek, consisting of a pile-and-timber service wharves, several sheet metal boat sheds, boat slips, and other mooring facilities. There is also a commercial marina on north bank of creek.

Operation and results during fiscal year.

Maintenance: Contract dredging cost \$145,424.

Condition at end of fiscal year. Project was commenced in August and completed in October, 1957. Total project costs as of September 30, 2002 amounted to \$1,031,180 of which \$29,000 was for new work and \$1,118,604 for maintenance.

15. GULF INTRACOASTAL WATERWAY BETWEEN APALACHEE BAY, FL AND MEXICAN BORDER (MOBILE DISTRICT)

Location. The project extends westward from Apalachee Bay, Florida, along the Gulf coast to the Rigolets, Louisiana, via a series of coastal lakes, bays, sounds, and land cuts. (For further details see Annual Report for 1962.)

Previous project. For details see page 906, Annual Report for 1930.

Existing project. The existing project provides for a waterway 12 feet deep and 125 feet wide at mean low water from Apalachee Bay, Florida, to Mobile Bay, Alabama, and 12 feet deep and 150 feet wide from Mobile Bay, Alabama to Rigolets, Louisiana (Lake Borgne Light No. 29), and for a tributary channel (Gulf County Canal), 12 feet deep, 125 feet wide and about six miles long connecting Intracoastal Waterway at White City, Florida, with St. Joseph Bay. The waterway between the 12-foot depth contours in Apalachee Bay and Lake Borgne Light No. 29 at the Rigolets is 379 miles long. (See Table 10-B for authorizing legislation.)

Local cooperation. None.

Terminal facilities. Facilities are available for public use at Carrabelle, Apalachicola, Panama City, and Pensacola, Florida; Mobile and Bayou La Batre, Alabama; and Pascagoula, Biloxi, Gulfport, Pass Christian, and Bay St. Louis, Mississippi. Facilities are considered adequate for existing commerce.

Operations and results during fiscal year.

Maintenance: Dredging navigation channel maintenance cost \$2,707,592. Condition surveys, water quality studies, supervision and administration totaled \$1,640,624.

Condition at end of fiscal year. The existing project is completed except for the portion between Apalachicola Bay and St. Marks, Florida, which has been deauthorized. Modification of the Gulf County Canal to provide a 12-foot by 125-foot channel was commenced July 1968 and completed June 1969. Total cost of the existing project to September 30, 2002 is \$115,196,628, of which \$6,480,299 was for new work and \$108,716,329 for maintenance.

16. GULFPORT HARBOR, MS

Location. The project is located on Mississippi Sound in southeastern Mississippi, about 35 miles west of Pascagoula, Mississippi, and 60 miles east of New Orleans. (See Coast and Geodetic Survey Chart 11373.)

Previous project. For details see page 747, Annual Report for 1938, and page 995, Annual Report for 1948.

Existing project. The existing project provides for: (a) A channel 32 feet deep, 300 feet wide, and about eight miles long across Ship Island Bar, a channel 30 feet deep, 220 feet wide, and about 11 miles long through Mississippi Sound, and an anchorage basin at Gulfport 30 feet deep, 1,320 feet wide, and 2,640 feet long; and (b) maintenance of the existing commercial smallboat harbor about 26 acres in area, and a straight-approach channel, 100 feet wide and about 4,300 feet long, from deep water in Mississippi Sound to a smallboat basin, all at a depth of 8 feet. Under ordinary conditions mean tidal range is about 1.75 feet, and extreme range, except during storms, is about 3.5 feet. Plane of reference is mean low water. The project is authorized in the Water Resources Development Act (WRDA) 1986, and further amended by WRDA 1988 to modify the existing ship channel to 36 by 300 feet in Mississippi Sound, and 38 by 400 feet across the bar, with changes in the channel alignment and the turning basin for safe and unrestricted navigation. The FY 91 construction appropriation provided for constructing an increment of the authorized project and provide a 36 by 220 feet channel in Mississippi Sound and 38 by 300 feet across the bar. (See Table 10-B for authorizing legislation.)

Local cooperation. Conditions of local cooperation have been fully complied with to date.

Terminal facilities. Existing modern rail-connected terminal facilities at this port are considered adequate for existing commerce. (See Port Series 19, revised in 1979.)

Operations and results during fiscal year.

New work: Miscellaneous cost \$130,245.

Maintenance: Contract dredging at a cost of \$185,437. Supervision and administration and miscellaneous costs amounted to \$176,755.

Condition at end of fiscal year. The main harbor was commenced 1932 and completed April 1950. Maintenance for small boat harbor and approach channel, constructed by local interests in 1950, was authorized by 1958 River and Harbor Act. Awarded thin-layer monitoring contract in June 1991 under the authority of WRDA 1986 and 1988. The channel contract was awarded in April 1992, and completed in September 1996. Total Federal cost under existing project as of September 30, 2002 is \$747,884 for new work and \$62,122,870 for maintenance, a total of

\$870,754. Contributed funds for new work amounted to \$8,638,980.

17. MOBILE HARBOR, AL

Location. The project is located along the lower 5 miles of Mobile River, and channel extends thru Mobile Bay and into Gulf of Mexico, in southwestern Alabama, 91 miles by water west of Pensacola Harbor, Florida, 90 miles east of Gulfport Harbor, Mississippi, and 144 miles by water northeast of mouth of Mississippi River. (See Coast and Geodetic Survey Chart 11376.)

Previous project. For details see page 503, Annual Report for 1963.

Existing project. The existing project provides for: (a) A 47-foot by 600-foot channel about 1.5 miles long across Mobile Bar; (b) a 45-foot by 400-foot channel in Mobile Bay to mouth of Mobile River; (c) a 40-foot channel in Mobile River to highway bridge, varying from 500 to 775 feet wide; (d) a 25-foot channel from highway bridge to and up Chickasaw Creek to a point 400 feet south of mouth of Shell Bayou, widths being 500 feet in Mobile River and 250 feet in Chickasaw Creek; (e) a turning basin 40 feet deep, 2,500 feet long, and 800 to 1,000 feet wide, opposite Alabama State Docks; (f) a turning basin 40 feet deep, 1,000 feet wide, and 1,600 feet long opposite Magazine Point; (g) a 27-foot by 150-foot channel from Mobile Bay Channel along Arlington pier to a turning basin 800 feet long and 600 feet wide opposite Brookley Complex ocean terminal, and continuing thence a turning basin 250 feet wide and 800 feet long in Garrows Bend, thence a 22-foot by 150-foot channel to the causeway linking McDuffie Island to the mainland; (h) a channel serving the Theodore Industrial Park 40 feet deep and 400 feet wide from the main ship channel in Mobile Bay and extending northwesterly for about 5.3 miles to the shore of Mobile Bay, including an anchorage basin near the shoreline, thence a land cut 40 feet deep, 300 feet wide and 1.9 miles long to and including a 42 acre trapezoid turning basin 40 feet deep, and a barge channel 12-by 100-feet, extending 6,500 feet and terminating in a 300- by 300-foot turning basin; and (i) maintenance of Three Mile Creek by snagging, from its intersection with Industrial Canal to Mobile River. The project provides also for an anchorage area 32 feet deep, 100 feet wide, and 200 feet long opposite site formerly occupied by the U.S. Quarantine Station at McDuffie (Sand) Island. Prior to widening the Mobile Bay Channel as authorized in 1954, the Quarantine Station anchorage area was maintained to a project width of 200 feet. Construction by local interests of a solid-fill causeway across Garrows Bend Channel between McDuffie Island and the mainland is also provided for under existing project. Total length of the bay and river channel is about 41.7 miles. Plane of reference is mean low water. Under

ordinary conditions mean tidal range at the lower end of the improvement is 1.2 feet and at the upper end 1.5 feet. Extreme tidal range is 3.4 feet at the lower end and 3.6 feet at the upper end.

Further authorization provides for future development to deepen and widen entrance channel over the bar to 57 feet by 700 feet about 7.4 miles long, deepen and widen bay channel to 55 feet by 550 feet about 27.0 miles long, deepen and widen an additional 3.6 miles of bay channel to 55 feet by 650 feet and provide 55 foot deep anchorage area and turning basin in vicinity of Little Sand Island. All dredged material will be placed in an approved disposal area in the Gulf of Mexico. (See Table 10-B for authorizing legislation.)

Local cooperation. A local cooperation agreement was signed by the local sponsor to construct the project for the first increment of work.

Terminal facilities. Modern rail-connected terminal facilities at this port are considered adequate for existing commerce. (See Port Series No. 18, revised in 1979.)

Operations and results during fiscal year.

New work: Engineering and Design \$362,192.

Maintenance: Contract dredging at a cost of \$19,881,265. Water quality studies, engineering and design and supervision and administration cost \$5,746,860.

Condition at end of fiscal year. Phase I of the project modification was completed in June 1990. Current estimated Federal cost is \$218,548,000, and non-Federal cost is \$178,452,000. Total Federal cost under existing project as of September 30, 2002 is \$97,810,268 for new work and \$353,011,708 for maintenance, a total of \$450,821,976. Contributed funds expended amounted to \$19,078,964 for maintenance. New work contributed funds amounts to \$202,040.

18. PANAMA CITY HARBOR, FL

Location. The project is located on the northwest coast of Florida, 102 miles east of entrance to Pensacola Harbor. (See Coast and Geodetic Survey Chart 11389.)

Previous project. For details see page 710, Annual Report for 1938.

Existing project. The existing project provides for a channel about 3.5 miles long, extending from deep water in St. Andrew bay through barrier peninsula, known as Lands End, to the Gulf of Mexico, 300 feet wide and 32 feet deep in the bay through Lands End; and 450 feet wide and 34 feet deep in the gulf, protected by east, west jetties, extending 2,075 feet and 2,896 feet respectively; a channel 100 feet wide and 8 feet deep in Grand Lagoon to a point about 2,400 feet east of State Highway 392 Bridge, with branches to serve terminal facilities; and the maintenance

of a channel in Watson Bayou, an arm of St. Andrew Bay, 100 feet wide and 10 feet deep from that depth in bay to highway bridge.

Authorized modifications includes branch channels 38 feet deep and 300 feet wide, leading from the inner end of the main entrance channel westward to the Port Authority terminal at Dyers Point and eastward to the Bay Harbor terminal, about 3.4 and 3.6 miles in length, respectively; turning and maneuvering areas comprising about 55 acres opposite Dyers Point, and 42 acres opposite Bay Harbor, both at a depth of 38 feet; and an anchoring and loading basin for LASH type intermodal carriers, 40 feet deep and containing about 177 acres in St. Andrew Bay near the inner end of the main entrance channel. Mean tidal range is about normally 1.3 feet and 3.0 feet extreme. (See Table 10-B for authorizing legislation.)

Local cooperation. Fully complied with.

Terminal facilities. Available terminal facilities are considered adequate for existing commerce. (See Port Series No. 19.)

Operations and results during fiscal year.

New Work: Engineering and Design cost \$392,852.

Maintenance: Miscellaneous costs totaled \$19,416.

Condition at end of fiscal year. The existing project (prior to modifications) was completed in November 1949. Repairs to jetties were commenced in June 1961 and completed October 1968. Modifications to the project at Grand Lagoon were completed in January 1972. Total Federal cost under existing project as of September 30, 2002 is \$2,326,348 for new work and \$13,561,443 for maintenance, a total of \$15,887,791. Contributed funds expended for new work amount to \$80,000.

19. PASCAGOULA HARBOR, MS

Location. The project is located along lower 6.8 miles of Pascagoula River, the lower six miles of Dog River, and in Bayou Casotte (about four miles east of the mouth of Pascagoula River), and through Mississippi Sound into the Gulf of Mexico, in southeastern Mississippi, about 38 miles west of Mobile, Alabama, and about 100 miles east of New Orleans, Louisiana. (See Coast and Geodetic Survey Chart 11373.)

Previous project. For details see page 741, Annual Report for 1938.

Existing project. The existing project provides for (a) An entrance channel 40 feet deep and 350 feet wide from the Gulf of Mexico through Horn Island Pass, including an impounding area for littoral drift, 40 feet deep, 200 feet wide, and about 1,500 feet long adjacent to the channel at the west end of Petit Bois Island; (b) a channel 38 feet deep

and 350 feet wide in Mississippi Sound and Pascagoula River to the railroad bridge at Pascagoula, including a turning basin 2,000 feet long and 950 feet wide (including channel area) on the west side of the river below the railroad bridge; (c) a channel 38 feet deep and 225 feet wide from the ship channel in Mississippi Sound to the mouth of Bayou Casotte, thence 38 feet deep and 300 feet wide for about one mile to a turning basin 38 feet deep, 1,000 feet wide, and 1,750 feet long; (d) a 22-foot deep by 150-foot wide channel up Pascagoula River from the railroad bridge to the mouth of Escatawpa (or Dog) River, then up Escatawpa River to Highway 613 (formerly 63) bridge; (e) a 12-foot by 125-foot channel from the highway bridge; via Robertson and Bounds Lakes, to mile 6 on Escatawpa River; and (f) a 12-foot by 80-foot channel extending from deep water in the Pascagoula River (about one-half mile north of the railroad bridge) to a turning basin in Krebs Lake a distance of about 1,500 feet, then along the south bank of the lake a channel 10-foot by 60-foot and terminating at a second turning basin, a distance of 2,700 feet from the first. Under ordinary conditions mean tidal range is 1.75 feet, and extreme range is 3.75 feet. Plane of reference is mean low water.

Further authorization provides for deepening and widening gulf entrance channel to 44 by 550 feet; widen Horn Island channel to 600 feet, relocating that channel about 500 feet westwardly; deepen Mississippi Sound portion to 42 feet; widen and deepen Bayou Casotte to 42 by 350 feet and construct turning basin. Disposal of all new work material in Gulf of Mexico. (See Table 10-B for authorizing legislation.)

Local cooperation. Fully complied with.

Terminal facilities. Modern rail-connected terminal facilities at this port are considered adequate for existing commerce. (See Port Series No. 19.)

Operations and results during fiscal year.

New Work: Contract dredging cost \$1,912,103.

Maintenance: Contract dredging at a cost of \$4,845,935. Water quality studies, supervision and administration, and miscellaneous costs totaled \$1,627,332.

Condition at end of fiscal year. The existing project was completed in August 1965 and the Krebs Lake project was completed in November 1983. The General Design Memorandum (GDM) was approved in June 1992 for deepening and widening channels. Preconstruction Engineering and Design is complete. The channel dredging contract was awarded in September 1994, and completed November 2001. Total Federal cost of existing project to September 30, 2002 is \$36,391,176 for new work and \$88,290,389 for maintenance, a total of \$124,681,565.

Contributed funds expended for maintenance amounted to \$8,277,431.

20. PENSACOLA HARBOR, FL

Location. The project is located in a landlocked bay on the coast of northwest Florida about 50 miles east of the entrance to Mobile Bay. (See Coast and Geodetic Survey Charts 490 and 11382.)

Previous project. For details see Annual Report for 1938.

Existing project. The existing project provides for: (a) A 35-foot by 500-foot entrance channel about five miles long, from the Gulf of Mexico to lower Pensacola Bay; (b) a 33-foot by 300-foot bay channel; (c) two 33-foot by 300-foot parallel approach channels to opposite ends of the inner harbor channel; (d) an inner harbor channel 500 feet wide, 33 feet deep, and 3,950 feet long; (e) a 30-foot by 250-foot approach channel to the pierhead line south of Muscogee wharf; and (f) a 15-foot by 100-foot entrance channel into Bayou Chico, thence a channel 14 feet deep, 75 feet wide, and about 4,400 feet long to a turning basin 14 feet deep and 500 feet square. Mean range of tide throughout the harbor is about 1.1 feet near the entrance and about 1.6 feet at the head of bay. Extreme tidal range, except during storms, is about three feet. Plane of reference is mean low water. Modification of the Bayou Chico project to provide for enlarging the entrance channel to 21 by 100 feet, the bayou channel to 20 feet by 100 feet, and deepening the turning basin to 20 feet has been deferred for restudy. (See Table 10-B for authorizing legislation.)

Local cooperation. Fully complied with.

Terminal facilities. Modern rail-connected terminal facilities at this port are considered adequate for existing commerce. (See Port Series No. 19, revised in 1979.)

Operations and results during fiscal year.

Maintenance: Contractual dredging and miscellaneous costs totaled \$249,702.

Condition at end of fiscal year. New work is completed except for features which are deferred for restudy. The modification authorized in 1962 was commenced in March and completed in May 1965. Total Federal cost of the existing project to September 30, 2002 is \$1,469,693 for new work and \$9,605,103 for maintenance, a total of \$11,074,796. Contributed funds for maintenance amount to \$312,350.

21. PERDIDO PASS CHANNEL, AL

Location. The project is located about midway between Pensacola, Florida, and Mobile, Alabama. (See Coast and Geodetic Chart 11378.)

Existing project. The existing project provides for a channel 12 feet deep and 150 feet wide for about 1,300 feet from the Gulf of Mexico into the inlet, thence 9 feet deep and 100 feet wide for about 2,200 feet to the highway bridge, where the channel branches into two arms, each having dimensions of 9 by 100 feet, one of which extends about 3,400 feet into Terry Cove and the other about 3,200 feet into the southern arm of Perdido Bay. The project also provides for two jetties spaced 600 feet apart at the seaward end. The east jetty has a low weir section, 1000 feet long to permit passage of littoral drift into a dredged deposition basin 800 feet by 1,200 feet located between the east jetty and the navigation channel. Mean tidal range is 1.1 feet and extreme is 2.8 feet. (See Table 10-B for authorizing legislation.)

Local cooperation. Requirements of local cooperation have been fully complied with to date.

Terminal facilities. Six marinas, numerous timber piers, docks, and several launching ramps are available. These facilities are considered adequate for existing commerce.

Operations and results during fiscal year.

Maintenance: Contract dredging cost \$546,635 and miscellaneous costs totaled \$41,501.

Condition at end of fiscal year. The existing project was commenced in May 1968 and completed in May 1969. Total Federal cost of the existing project to September 30, 2002 is \$629,860 for new work and \$11,800,967 for maintenance, a total of \$12,430,827. Contributions from local interest amount to \$510,000 for new work and \$10,325 for maintenance.

22. TENNESSEE-TOMBIGBEE WATERWAY, AL AND MS

Location. The waterway extends from mile 215 in Pickwick pool on the Tennessee River, southerly through northeastern Mississippi and western Alabama, a total of 234 miles, to the confluence of the Black Warrior and Tombigbee Rivers at Demopolis, Alabama.

Previous project. For details see Annual Report for 1953.

Existing project. The existing project provides for a waterway 234 miles long, connecting the Tennessee and Tombigbee Rivers via the East Fork of Tombigbee River and Mackeys and Yellow Creeks and consists of three sections as follows: (1) the river section, a 9-foot by 300-foot channel for 149 miles between Demopolis and Amory, Mississippi; (2) the canal section, 12 feet by 300 feet for 46 miles from Amory to Bay Springs; and (3) the divide section, a 12-foot by 300-foot channel (except in the 27 mile long divide cut in which the bottom width is 280 feet) for 39 miles from Bay Springs through the dividing ridge

to the Tennessee River. The total lift of 341 feet is accomplished by 10 locks (See Table 10-B for authorizing legislation.)

Local cooperation. Local interests have made and are maintaining alterations in highways and highway bridges and in sewer, water-supply, and drainage facilities and provide and maintain suitable and adequate river and canal terminals. Officials of the State of Mississippi were notified of these requirements on December 13, 1949, and officials of the State of Alabama were notified on December 20, 1949. Legislation enabling boards of supervisors of the various counties concerned to enter into agreements with the United States relative to navigation projects was adopted by the State of Mississippi in 1950. A compact between the States of Alabama, Mississippi, Tennessee, Kentucky and Florida has been formed for the purpose of promoting the project. The name of this organization is the Tennessee-Tombigbee Waterway Development Authority.

During its 1962 session the Mississippi Legislature authorized the formation of the Tombigbee River Valley Water Management District. The District was organized in accordance with the enabling legislation and is empowered to fulfill the requirements of local cooperation for the portion of the project in Mississippi. A satisfactory resolution has been furnished. During its 1967 session the Alabama Legislature authorized the formation of a public corporation to be named the Tombigbee Valley Development Authority for the purpose of further development of the Tombigbee River and tributary streams. The organization was formed in accordance with the enabling legislation and in a referendum held December 5, 1967 the voters of Alabama authorized a bond issue not to exceed \$10,000,000 of finance participation in this project and the Tombigbee River and Tributaries project. A satisfactory resolution has been furnished.

Terminal facilities. Docks, storage facilities and handling equipment are still being developed along this new waterway. As of September 30, 1998, twelve such facilities were operational, while five were under construction, and five more are planned. The operational facilities are handling grain, wood chips, and logs. When all facilities are complete, about half will be publicly owned and operated. Additional ports and terminals must be completed before the waterway can achieve its full potential. (See Table 10-N for existing locks and dams.)

Operations and results during fiscal year.

New work: Engineering and design cost \$43.

Maintenance: Total cost for operation and maintenance of the project for FY 2002 amounted to \$24,954,726. Recreation attendance for FY 2002 totaled 2,349,255 visits.

Condition at end of fiscal year. Total Federal cost under the existing project as of September 30, 2002 is \$1,053,070,400 for new work, and \$374,179,993 for maintenance for a total of \$1,427,250,393. Construction formally began December 12, 1972 and overall project is essentially complete. The waterway was opened for navigation in January 1985.

**22A. TENNESSEE-TOMBIGBEE
WATERWAY WILDLIFE
MITIGATION PROJECT, AL AND MS**

Location. This project is in Alabama and Mississippi at the following locations:

(1) Existing Project Lands - Approximately 72,500 acres of Tennessee-Tombigbee Project Lands have been designated for mitigation purposes. An additional 20,100 acres have also been designated at Coffeenville Lake, Demopolis Lake, Claiborne Lake and Dannelly Lakes in Alabama and at Okatibbee Lake in Mississippi.

(2) Separable Lands - Acquisition and management of 88,000 separable lands in the Mobile-Tensaw Delta, Alabama (not less than 20,000 acres); the Pascagoula, Pearl, and Mississippi Delta Basins in Mississippi (not less than 25,000 acres); and the balance at any location in the two states.

Previous project. None. This project was a new construction start in Fiscal year 1990. It was authorized by Section 601 of the Water Resources Development Act of 1986.

Existing project. The authorized project calls for the acquisition of separable lands at the above named locations. The Alabama Department of Conservation and Natural Resources, Mississippi Department of Wildlife Fisheries and Parks, and the U.S. Fish and Wildlife Service (FWS) assisted in the selection of separable lands. The selected lands are being purchased from willing sellers at fair market value. Emphasis is placed on forested wetlands, with a minimum of 34,000 acres of bottomland hardwoods being purchased.

Management of Lands, the separable lands and the existing project lands designated for mitigation purposes will be managed for wildlife. The States will be primarily responsible for managing these lands in accordance with management plans jointly developed by the States, Corps and the FWS. However, due to operational constraints it will be necessary for the Corps to retain management responsibility for some of the existing project lands included in the mitigation program.

Local cooperation. A local cooperation agreement is not required since the cost of this project is a 100% Federal responsibility.

Operation and results during fiscal year. Real Estate and miscellaneous cost \$69,477.

Condition at end of fiscal year. Initial funding for the project was received in January 1990. At the end of September 1998, 21,182 acres had been acquired in the Mobile-Tensaw Delta; 13,433 acres in the Pascagoula Basin; 18,542 acres in the Mississippi Delta; 7,655 acres in the Pearl Basin; 14,378 acres in northeast Mississippi; and 12,292 acres in other areas of Alabama. A variety of activities also continued to intensively manage the 92,600 acres of existing project lands included in the Mitigation Program. The total project cost is estimated to be \$94,042,000. Total Federal cost of the project as of September 30, 2002 is \$92,164,317 for new work. \$2,109,746 for environmental efforts, and \$1,829,202 for maintenance, a total of \$96,103,265.

**23. OTHER AUTHORIZED
NAVIGATION PROJECTS**

(See Table 10-C.)

**24. OTHER AUTHORIZED BEACH
EROSION CONTROL PROJECT**

(See Table 10-D.)

**25. OTHER AUTHORIZED FLOOD
CONTROL PROJECTS**

(See Table 10-E.)

26. DEAUTHORIZED PROJECTS

(See Table 10-G.)

**27. NAVIGATION WORK UNDER
SPECIAL AUTHORIZATION**

(See Table 10-H.)

**28. NAVIGATION WORK UNDER
SPECIAL AUTHORIZATION**

Navigation activities pursuant to Section 107, Public Law 86-645, as amended (Preauthorization). Studies conducted under this authority amounted to \$-153,928 in FY 2002. (See Table 10-H.)

**29. FLOOD CONTROL WORK UNDER
SPECIAL AUTHORIZATION**

(See Table 10-J.)

**30. RECONNAISSANCE AND
CONDITION SURVEYS**

(See Table 10-K.)

FLOOD CONTROL**31. CEDAR POINT EXTENSION
BAY ST. LOUIS, MS**

Location. The project is located in the city of Bay St. Louis, Mississippi. It is on St. Louis Bay about 95 miles from Mobile, Alabama, on the east and about 50 miles from New Orleans, Louisiana, on the west.

Existing project. The shoreline erosion project consists of a 4,500 linear-foot concrete/sheetpile wall constructed in front of an existing concrete seawall. Concrete was placed between the new sheetpile walls and the bottom step of the existing concrete seawall.

Operations and results during fiscal year. New work: Construction cost \$535,437, engineering and design cost \$34,225 and other miscellaneous cost \$35,630.

Conditions at end of fiscal year. Construction was authorized on September 5, 2002, with contract awarded on September 13, 2002. Total Federal cost to date is \$395,476 for new work. Contributed funds expended amounted to \$191,410 for new work.

**32. CHOCTAWHATCHEE/PEA RIVERS,
ALABAMA AND FLORIDA**

Location. The Choctawhatchee and Pea River Basins are located in southeast, Alabama. The damage center of Elba is located approximately 68 miles southwest from the head water of the Pea River. The damage center of Geneva is located approximately 48 miles south from the head water of the Choctawhatchee River.

Existing project. The project consists of the installation of 12 combination rain and stream gages and two raw gages within the Choctawhatchee and Pea River Basins. The base stations are located at Elba and Geneva, Alabama. The project is being upgraded to add one additional base station at New Brockton, Alabama. The flood warning system provides early warning time ranging between 18 to 36 hours.

Local cooperation. Fully complied with.

Operations and results during fiscal year.

New work: None.

Condition at end of fiscal year. Construction was initiated in September 1995 and completed in December 1999. Total Federal cost to date is \$385,800 for new work. Contributed funds expended for new work amounted to \$150,988.

**32A. CHOCTAWHATCHEE AND PEA
RIVERS MINOR REHABILITATION
PROJECTS ELBA AND GENEVA
LEVEES, ALABAMA**

Location. The minor levee rehabilitation projects are located in the cities of Elba and Geneva, Alabama. The damage center of Elba is located approximately 68 miles

southwest from the head waters along the Pea River. The damage center of Geneva is located at the confluence of the Pea River and the Choctawhatchee River, which is about 48 miles south from the headwaters of the Choctawhatchee River.

Existing project. The Elba and Geneva projects consists of a 3.2 mile and a 2.7 mile long earthen levee system respectively, which were constructed by the Works Project Administration (WPA) in 1938. Project rehabilitation work consists of replacing or repairing culverts flap gates, installing sluice gates on the inside of the levee and clearing the underbrush along the levee side slopes.

Local cooperation. Fully complied with.

Operation and results during fiscal year. New Work: None.

Conditions at end of fiscal year. The project was completed in August 1999. Total Federal cost under existing project to September 30, 2002 is \$629,356 for new work. Contributed funds for new work amounted to \$338,835.

**33. DANE AVENUE
WAVELAND, MS**

Location. The project is located in the city of Waveland, Mississippi. It is about 97 miles from Mobile, Alabama, and about 48 miles from New Orleans, Louisiana.

Existing Project. This shoreline protection project consists of a 4500 linear-foot sheet steel bulkhead with a concrete cap.

Local cooperation. Fully complied with.

Operation and results during fiscal year.

New Work: Environmental studies cost \$341,062. Supervision and administration and other miscellaneous cost \$63,681.

Conditions at end of fiscal year. Construction was authorized on May 30, 2001 and the contract awarded on August 24, 2001. Construction was completed on February 2002. Total Federal costs to date for new work is \$1,000,000. Contributed funds for new work amounted to \$524,810.

**34. GRAVELINE BAYOU EAST
JACKSON COUNTY, MS**

Location. The project is located on Mississippi Sound in Jackson County, Mississippi; generally between Pascagoula Harbor and Biloxi Harbor.

Existing project. This storm damage reduction project consists of a 600-foot-long vinyl sheetpile bulkhead with a timber cap.

Local cooperation. Fully complied with.

Operation and results during fiscal year. New Work: Miscellaneous costs \$3,454.

Conditions at end of fiscal year. Construction was authorized on November 1, 2000 and the contract awarded February 22, 2001. Construction was completed on February 28, 2002. Total Federal costs to date for new work is \$243,916. Contributed funds for new work amounted to \$72,332.

35. GULF BREEZE WETLANDS GULF BREEZE, FL

Location. The project is located in the city of Gulf Breeze, Florida, on the east bank of Pensacola Bay.

Existing project. This aquatic ecosystem restoration project consists of a 200-foot long riprap breakwater to control tidal impacts, and approximately 0.3-acres of productive seagrass beds; 4,000 square feet of emergent salt marsh plants.

Local cooperation. Fully complied with.

Operation and results during fiscal year. New Work: Engineering and design and other miscellaneous costs \$10,963.

Conditions at end of fiscal year. Construction was authorized on March 13, 2001 and the contract awarded on April 18, 2001. Construction was completed on September 26, 2001. Total Federal costs to date for new work is \$138,623, and non-Federal costs were \$3,771.

36. GULF OF MEXICO, HIGHWAY 193 MOBILE COUNTY, AL

Location. The project area is located along Highway 193 near the town of Dauphin Island, in Mobile County, Alabama. It is about 85 miles from Pensacola, Florida, on the east and about 125 miles from New Orleans, Louisiana on the west.

Existing project. The project consists of a 5,875 vinyl sheetpile/riprap seawall constructed along Highway 193 to prevent erosion and destruction of the highway due to wave action from the Gulf of Mexico.

Local cooperation. Fully complied with.

Operation and results during fiscal year. New work: Engineering and design cost \$1,383.

Conditions at end of fiscal year. Construction was authorized on and the contract awarded in September 1999. Construction was completed in May 2000. Total Federal costs were \$1,000,000 and non-Federal costs were \$632,034.

37. GULFSIDE SEAWALL WAVELAND, MS

Location. The project is located in Hancock County, in the city of Waveland, Mississippi. It is on Mississippi Sound about 95 miles from Mobile, Alabama, on the east and about 50 miles from New Orleans, Louisiana on the west.

Existing project. The project consists of construction of a 3,000-foot long sheetsteel concrete bulkhead to protect South Beach Boulevard from erosion due to wind driven wave action from Mississippi Sound.

Local cooperation. Fully complied with.

Operation and results during fiscal year. New work: Supervision and administration cost \$30,479.

Conditions at end of fiscal year. Construction was authorized on May 9, 2000, and the contract awarded on June 13, 2000. Total Federal costs were \$660,051, and non-Federal costs were \$344,186.

38. TEXAS FLAT ROAD KILN, MS

Location. The project area is located in northwestern Hancock County, in the city of Kiln, Mississippi. It is about 90 miles from Mobile, Alabama, on the east and about 55 miles from New Orleans, Louisiana on the west.

Existing project. The shoreline protection project protects a roadway and atrium through construction of a 150-foot revetment consisting of vinyl sheetpile and riprap placed along the southeastern slope of the Jourdan River.

Local cooperation. Fully complied with.

Operation and results during fiscal year. New work: Miscellaneous cost \$7.

Conditions at end of fiscal year. Construction was authorized on 30 June 1999, the contract awarded on September 24, 1999 and completed on February 3, 2000. Total Federal costs were \$190,867 and non-Federal costs were \$81,236.

39. OKATIBBEE LAKE, MS

Location. The project is located on Okatibbee Creek 37.7 miles above its mouth, in Lauderdale County, Mississippi, seven miles northwest of Meridian.

Existing project. The project provides for a dam and reservoir for flood control, water supply, water quality control, fish and wildlife, and recreation. The dam consists of a compacted earth fill 6,540 feet long with the top elevation 369.8 feet above national geodetic datum, with top width of 18 feet. The spillway, which is located 1,500 feet east of the east end of the dam, is an unpaved free overflow type, 1,500 feet long with a fixed crest at

elevation 359. A sluice intake structure near the center of the dam serves a 9.0-foot diameter concrete conduit. Storage allocated for water supply and water quality control varies seasonally from 21,400 acre-feet to 34,300 acre-feet between a minimum elevation of 328 and top-of-conservation-pool elevation varying from 339 to 343. Storage varying from 46,500 to 59,500 acre-feet between the top of the conservation pool and elevation 352 has been reserved exclusively for storage of flood waters. (See Table 10-B for authorizing legislation.)

Local cooperation. Complied with to date.

Operations and results during fiscal year.

Maintenance: Costs for the year for ordinary maintenance and recreational management amount to \$1,465,772. Recreation attendance at the reservoir during FY 2002 totaled 551,057 visits.

Condition at end of fiscal year. Construction began in June 1965, and was completed in November 1968. Total Federal cost of the existing project as of September 30, 2002 is \$9,739,528 for new work and \$31,045,178 for maintenance, a total of \$40,784,706.

40. TOMBIGBEE RIVER (EAST FORK), MS AND AL

Location. The project is located on the Tombigbee River and its tributaries between the junction of the Browns and Mackeys Creek in Itawamba County, Mississippi, for a distance of 53 miles along the East Fork of the Tombigbee River, from Walkers Bridge at the junction of Browns and Mackeys Creeks to the Monroe County line.

Existing project. Provides for alleviation of floods from the Tombigbee River by clearing and snagging and excavation of 13 cut-off channels, and other related channel improvements. (See Table 10-B for authorizing legislation.)

Local cooperation. Fully complied with on work done under the 1963 Flood Control Act. Work to be done under authority of the 1941 Flood Control Act requires local interest to provide all lands, easements, and rights-of-way for project construction; hold and save the United States free from damages due to construction of the project; and maintain and operate all the works after completion in accordance with regulations prescribed by the Secretary of the Army.

Operations and results during fiscal year.

Maintenance: Routine maintenance of channels cost \$156,272.

Condition at end of fiscal year. The project for Itawamba County, as authorized in the 1936 Flood Control Act, was completed during fiscal year 1940. No work has

been done on the extension of the project authorized in the 1941 Flood Control Act. Total Federal cost of the existing project as of September 30, 2002 is \$134,801 for new work and \$4,470,593 for maintenance, a total of \$4,605,394.

41. TOMBIGBEE RIVER TRIBUTARIES, MS AND AL

Location. The Tombigbee River rises in extreme northeast Mississippi and flows southerly through eastern Mississippi and western Alabama, emptying into the Mobile River about 45 miles above its mouth at Mobile, Alabama. Tributaries to be improved for flood control are all in northeast Mississippi and northwest Alabama. Luxapalila Creek project consists of 32 miles of completed channel modifications. Approved estimate of cost for new work is \$42,108,000; consisting of \$37,743,000 Federal funds, and \$4,365,000 non-Federal funds. (See Table 10-B for authorizing legislation.)

Local cooperation. Local interests must furnish lands and rights-of-way for construction; make all roads, highway bridge, and utility changes, alterations, additions, and relocations necessary for the project; hold the United States free from damages; prevent future encroachments along the improved channels; maintain all works after completion, with the exception of Twenty Mile Creek from mile 11.7 to mile 22.0.

Operations and results during fiscal year.

New work: Engineering and design cost \$16,186.

Condition at end of fiscal year. Construction commenced in July 1965, and is proceeding stream by stream as funds are made available. Total project is 98% complete. Luxapalila Creek is the only remaining work scheduled to be accomplished. The main construction contract was awarded in June 1994, and was completed in December 1997. Total Federal cost of existing project as of September 30, 2002 is \$40,006,029 for new work. Contributed funds for new work amounted to \$557,724.

42. UPPER GORDON CREEK, HATTIESBURG, MS

Location. The proposed project on Gordons Creek is located in Hattiesburg, MS.

Existing project. A Federal project on the lower 2.5 miles was constructed in 1979 under the Section 205 of the Flood Control Act of 1948. The project consisted of clearing and snagging from the creek's confluence with the Leaf River upstream to Bay Street and channel widening to a 40-foot bottom width between Bay and Broad Streets.

The work will consist of real estate acquisition of eight (8) residences and removal from floodplain; habitat mitigation and channel enlargement for 1.1 miles between

Broad and Hardy Streets; and flood damages mitigation downstream of Broad Street.

Local cooperation. Fully complied with.

Operations and results during fiscal year.

New Work: Miscellaneous cost \$2,909.

Condition at end of fiscal year. The construction contract was awarded in April 1994, and construction was completed in April 1995. Necessary right-of-ways for channel improvement are available and necessary relocations performed by non-federal sponsors. Also, acquisition of twenty-one (21) residences for mitigation is underway. Total Federal cost to date is \$3,910,761 for new work. Contributed funds expended \$130,689.

43. VILLAGE CREEK, BIRMINGHAM, AL

Location. The project is located in central Alabama, Jefferson County, in the city of Birmingham, Alabama.

Existing project. None. The project is basically non-structural and includes evacuating 642 structures, in six (6) separate neighborhoods, from the floodplain; enlarging 2 miles of the stream channel in the vicinity of the Municipal Airport which also involves modification of three (3) bridges, demolishing two (2) unused bridges, and relocating two (2) waterlines and other utilities, installing three (3) emergency floodwarning devices; and creating an area of 210 acres which can be utilized for future recreation development. Channel enlargements (2 miles) will reduce annual damages near Municipal Airport by 82 percent and evacuation of 642 structures will reduce annual damages in residential areas by 61 percent. The channel segment is not being constructed at the request of the sponsor.

Local cooperation. The Local Cooperation Agreement with the city of Birmingham, Alabama was executed on December 14, 1988. The local sponsor has also agreed to make all required payments concurrently with the project construction.

Operation and results during fiscal year.

New work: Miscellaneous cost \$6,954.

Condition at end of fiscal year. Real Estate design memorandum completed February 1988. Real Estate acquisition started January 1989. The project is complete with acquisition of 634 tracts. Total Federal cost under existing project to September 30, 2002 is \$22,877,900 for new work. Contributed funds for new work amounted to \$7,203,102.

44. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Flood Control activities pursuant to Section 205, Public Law 858, 80th Congress, as amended (Preauthorization).

Snagging and Clearing for flood control pursuant to Section 208 of Flood Control Act of 1954, as amended.

Emergency streambank and shoreline protection pursuant to Section 14 of the Flood Control Act of 1946, as amended.

(See Table 10-J)

Emergency flood control activities - repair, flood fighting, and rescue work under Public Law 99, 84th Congress, and antecedent legislation, and disaster relief and assistance under Public law 288, 93d Congress. (See Table 10-J)

45. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Local flood protection works for which inspection is performed under this heading consist of levee projects at West Point, Georgia, on the Chattahoochee River; Beaver Creek at Montezuma, Georgia, in the Flint River Basin; Elba and Geneva, Alabama in the Choctawhatchee River Basin; Rome, Georgia, and Little Wills Creek at Collinsville, Alabama, in the Alabama-Coosa River Basin. Channel rectification projects include Little Cove Creek, Glencoe, Alabama and Black Creek, Gadsden, Alabama in the Alabama-Coosa River Basin; Big Brown Creek, Donivan Creek, Twenty Mile Creek and Mantachie Creek, near Fulton, Mississippi, Burketts Creek and Stanifer Creek near Amory, Mississippi, Houlka Creek and Sakatonchee Creek in Chickasaw and Clay Counties, Mississippi, James Creek in Monroe County, Mississippi, and Luxapalila Creek, Lowndes County, Mississippi, all in the Tombigbee River Basin; Sowashee Creek, Meridian, Mississippi in the Pascagoula River Basin; Burnt Corn and Murder Creeks, Brewton, Alabama in the Conecuh River Basin; Autauga Creek, Prattville, Alabama; Poley Bridge, Goose Pond and Walnut Creeks, Clanton, Alabama; Pinchgut Creek, and Cahaba River, Trussville, Alabama; Town Creek, Americus, Georgia; and Lake Douglas in Bainbridge, Georgia. Shore protection and erosion control projects include Harrison County, Mississippi; Chattahoochee River at La Grange, Troup County, Georgia; Pumpkinvine Creek, Emerson, Georgia; and Chickasawbogue Creek, US Highway 43 Bridge, Linden, Alabama. The project at Rome and Montezuma, Georgia and Collinsville, Alabama include pumping stations. Inspections are made annually to determine the extent of compliance with approved regulations for maintenance and operation of the project. Responsible local officials are advised of inadequacies in the maintenance and operation of the local flood protection works under their jurisdiction where appropriate. Followup for compliance of the deficient projects continued during the year. Fiscal year costs were \$70,917. Total cost to September 30, 2002 is \$928,029 charged to maintenance.

46. OTHER AUTHORIZED FLOOD CONTROL PROJECTS

(See Table 10-E.) Multiple-Purpose Projects Including Power

Multiple Purpose Power Projects

47. ALLATOONA DAM, COOSA RIVER BASIN, GA

Location. The project is on Etowah River in Bartow County, Georgia, about 48 miles upstream from Rome, Georgia, about five miles due east of Cartersville, Georgia, and about 2,000 feet downstream from mouth of Allatoona Creek. The reservoir extends about 28 miles up the Etowah River at maximum power-pool elevation of 840 feet above mean sea level.

Existing project. The authorized project provides for a dam and reservoir for flood control, regulation of streamflow for navigation, and development of hydroelectric power. Height above the river bottom of the concrete, gravity-type dam is about 190 feet, from elevation 690 feet to 880 feet national geodetic datum. The spillway, with crest at elevation 835, is controlled by nine tainter gates, 40 feet wide by twenty-six feet high, and two tainter gates, 20 feet wide by twenty-six feet high; having a combined discharge capacity of 321,000 cubic feet per second with the water surface at elevation 870.3. One 48-inch diameter sluicing conduit with a free discharge valve and four sluices, 5 feet-8 inches wide by 10 feet high, are included in dam. Installed generating capacity consists of two 36,000 kilowatt units and one 2,000 kilowatt unit, or a total of 74,000 kilowatts. The reservoir, covering 19,200 acres at elevation 860, has a storage capacity of 670,000 acre-feet. The initial construction cost was \$31,424,738, excluding the addition of recreation facilities at the completed project. (See Table 10-B for authorizing legislation.)

Local cooperation. None required. (Sec. 2, Flood Control Act of June 28, 1938, applies).

Operations and results during fiscal year.

Maintenance: Operation and maintenance of the dam, reservoir, powerhouse, service and recreational activities, and administration totaled \$6,358,079. Gross power generation amounted to 75,624 megawatt hours during FY 2002 of which 73,243.3 megawatt hours were delivered to Southeastern Power Administration. Recreation attendance at Allatoona Lake during FY 2002 totaled 5,920,163 visits.

Condition at end of fiscal year. Construction of the existing project began in March 1944 and was completed in October 1955. Total Federal cost under existing project as

of September 30, 2002 is \$35,709,085 for new work and \$148,725,241 for maintenance, a total of \$184,434,326.

48. BUFORD DAM, LAKE SIDNEY LANIER, GA

Location. Buford Dam is on the Chattahoochee River about 348.9 miles above its mouth, 50 miles above Atlanta and five miles northwest of Buford, Georgia. The reservoir, Lake Sidney Lanier, extends about 47 miles upstream along the Chattahoochee River, and about 21 miles up the Chestatee River, which enters the Chattahoochee River 14.5 miles above the dam.

Existing project. The authorized project provides for a rolled-earth dam 1,630 feet long with crest elevation 1,106 feet national geodetic datum, or about 192 feet above streambed elevation; three earth saddle dikes with a total length of 5,406 feet; a chute spillway with crest at elevation 1,085; a powerhouse in a deep cut with steel penstocks in tunnels, and concrete intake structure at the upstream end of the tunnels; and a flood control sluice tunnel paralleling the power tunnels. The Lake Sidney Lanier reservoir has a gross capacity of 2,554,000 acre-feet of which 637,000 acre-feet of storage is reserved for flood control storage. The power installations consist of one generating unit of 6,000 kilowatts and two units of 40,000 kilowatts each, or a total of 86,000 kilowatts. (See Table 10-B for authorizing legislation.)

Local cooperation. None required.

Operations and results during fiscal year.

Maintenance: Operation and maintenance cost \$8,213,189. Gross power generation amounted to 58,890 megawatt hours during FY 2002, of which 55,206.2 megawatt hours were delivered to Southeastern Power Administration. Recreation attendance at Lake Sidney Lanier during FY 2002 totaled 7,359,181 visits.

Condition at end of fiscal year. Construction commenced in March 1950 and was completed in June 1960. The reservoir was in useful operation for flood control in February 1956. The first power generating unit was placed on the line June 19, 1957; the second on July 26, 1957; and the third on October 10, 1957. Total Federal cost under existing project as of September 30, 2002 is \$53,030,038 for new work, major rehabilitation cost \$12,101,464 and \$185,025,385 for maintenance, a total of \$250,156,887. (See also Table 10-M.)

49. CARTERS DAM AND RESERVOIR, GA

Location. The damsite is in Murray County, Georgia, on the Coosawattee River 26.8 miles above its junction with Conasauga River, one of the headwater tributaries of the Alabama-Coosa system. It is 60 miles north of Atlanta near

the town of Oakman, Georgia. The reservoir is in both Murray and Gilmer Counties.

Existing project. The existing project consists of a 1,950-foot long rockfill dam across the river, three saddle dikes on the left bank, a 258-foot long high-level, gated spillway on the left bank, a powerhouse on the right bank having two conventional units with a generating capacity of 125,000 kilowatts each and two pump-generating units of the same size, and a regulating dam 2,855 feet long with a gated spillway 208 feet long 1.5 miles downstream from the main dam. The lake has an area of 3,220 acres, at maximum pool power elevation 1,072, total capacity of 472,800 acre-feet, of which 134,900 acre-feet is usable for power and 95,700 acre-feet reserved for flood control and 242,200 acre-feet dead storage. For other information see description of Alabama-Coosa project.

Operations and results during fiscal year.

Maintenance: Operation and maintenance of the dam, reservoir, powerhouse, service and recreational activities and administration totaled \$8,547,332. Gross power generation amounted to 383,911 megawatt hours during FY 2002, of which 10,299.4 megawatt hours were delivered to Southeastern Power Administration. Recreation attendance during FY 2002 totaled 583,058 visits.

Condition at end of fiscal year. Construction which commenced in April 1962 and completed in September 1980. Total Federal cost of the existing project as of September 30, 2002 is \$222,435,271, including \$111,140,340 for new work and \$111,294,931 for maintenance.

**50. JIM WOODRUFF LOCK AND DAM,
GA AND FL**

Location. The project is located on the Apalachicola River 107.6 miles above its mouth, about 1,000 feet below confluence of the Chattahoochee and Flint Rivers, and 1.5 miles northwest of Chattahoochee, Florida. Reservoir extends about 46.5 miles upstream along the Chattahoochee River to the vicinity of Columbia, Alabama, and about 47 miles upstream along Flint River, or 17 miles above Bainbridge, Georgia. (See Geological Survey maps for southwest Georgia.)

Existing project. The existing project provides for a concrete open-crest spillway 1,634 feet long on the right bank, with a crest at elevation 79 feet national geodetic datum; a single-lift lock with usable chamber dimensions of 82 by 450 constituting a portion of the dam; an earth section 506 feet, a maximum lift of 33 feet, and depth over the sills of 14 feet; a gated spillway 766 feet long with the bridge at elevation 107 feet national geodetic datum, or about 67 feet above the streambed elevation; a powerhouse with an intake section constituting a portion of the dam; an earth section 506 feet long to accommodate the switchyard

and substation; and an overflow dike section 2,130 feet long on the left bank, with a crest at elevation 85. The underlying foundation is limestone. At the normal pool elevation of 77, the reservoir has a total capacity of 406,160 acre-feet. The power installation consists of three units of 10,000 kilowatts each, or a total of 30,000 kilowatts. (See Table 10-B for authorizing legislation.)

Local cooperation. Required cooperation is being fulfilled. Easements for rights-of-way and spoil-disposal areas were provided as required along the Apalachicola River. Adequate public terminals were constructed by local interests at Bainbridge, Georgia, on the Flint River, and at Columbia, Alabama, on the Chattahoochee River. Facilities are being planned for other localities on the project.

Terminal facilities. A public wharf with concrete deck for handling general cargo, a bulk storage terminal for petroleum, a grain elevator, and private riverside facilities at Bainbridge, Georgia, on the Flint River, are considered adequate for existing commerce.

Operations and results during fiscal year.

Maintenance: Operation and maintenance cost \$6,008,079. Gross power generation, amounted to 149,859 megawatt hours during FY 2002, of which 147,119 megawatt hours were delivered to Southeastern Power Administration. Recreational attendance at Lake Seminole during FY 2002 totaled 1,101,608 visits.

Condition at end of fiscal year. Construction of the lock was commenced in 1947, and completed in 1957. The pool was opened to navigation in May 1954, and the pool was raised to project level in January 1957. The first power-generating unit was placed on-the-line on February 1, the second on March 1, and the third April 26, 1957. Total Federal cost under existing project as of September 30, 2002 is \$47,978,858 for new work, major rehabilitation cost \$30,130,898 and \$137,253,751 for maintenance, a total of \$215,363,507. (See also Table 10-M.)

**51. MILLERS FERRY LOCK AND
DAM, AL**

Location. The site is in Wilcox County at mile 142.2 on the Alabama River, 10 miles northwest of Camden, Alabama, and 30 miles southwest of Selma.

Existing project. The existing project consists of an earth dike on the right bank, a concrete, gravity-gated spillway in the river channel, a lock and mound on the left bank, an earth dike extending downstream paralleling the lock, to the powerhouse intake structure; a powerhouse, and an earth dike extending to high ground on the left bank. Normal upper pool is at elevation 80. The powerplant contains two 25,000 kilowatt units and one 30,000 kilowatt unit. The 103-mile long reservoir has an area of 17,200 acres at normal pool level and a total capacity of 331,800 acre-feet. The lock chamber is 84 by 600 feet with a 13-foot depth over the miter sills. For other information see description of Alabama-Coosa project.

Operations and results during fiscal year.

Maintenance: Operation and maintenance of lock, dam, powerhouse, reservoir, and administration cost \$7,339,593. Gross power generation amounted to 317,297 megawatt hours during FY 2002, of which 315,003 megawatt hours were delivered to Southeastern Power Administration. Recreation attendance at William "Bill" Dannelly Reservoir during FY 2002 totaled 1,591,654 visits.

Condition at end of fiscal year. Construction began in April 1963. The lock was placed in temporary operations in June 1968 and opened to full use in November 1969. The powerhouse units were placed on line during April and May 1970. The project was completed in 1980. Total Federal cost of the project as of September 30, 2002 is \$63,125,300 for new work and \$103,777,076 for maintenance, a total of \$166,902,376.

52. ROBERT F. HENRY LOCK AND DAM, AL

Location. The site is in Lowndes and Autauga Counties at mile 281.2 on the Alabama River, 26 miles west of Montgomery.

Existing project. The existing project provides for a navigation lock, a gated spillway, and a power plant located at mile 281.2. The normal upper pool is at elevation 125.0 and the minimum lower pool due to the Millers Ferry Lock and Dam is at elevation 80.0. The structures consist of earth dikes and a power plant on the right bank, a gated spillway in the river channel, a lock and mound on the left bank, and an earth dike extending upstream parallel to the Western Railway of Alabama. The total length of the structures is about 14,962 feet with maximum height above the foundation at the power plant intake about 101 feet. The power plant contains four 20,500-kw. units. The 88-mile long reservoir has an area of 12,300 acres at normal pool level and a total capacity of 234,200 acre-feet. The lock has a chamber 84 feet wide and 600 feet long and provides a 12-foot depth over the lower miter sill. For other information see description of Alabama-Coosa project.

Operations and results during fiscal year.

Maintenance: Operation and maintenance costs amounted to \$5,834,553. Gross power generation amounted to 254,404 megawatt hours during FY 2002, of which 250,601 megawatt hours were delivered to Southeastern Power Administration. Recreation attendance during FY 2002 totaled 1,506,507 visits.

Condition at end of fiscal year. Construction began in March 1966 and is complete. The first powerhouse unit was placed in operation in June 1975, with the last unit on line in November 1975. Total Federal cost of the project as of September 30, 2002 is \$163,178,821, including \$83,360,800 for new work and \$79,818,021 for maintenance.

53. WALTER F. GEORGE LOCK AND DAM, AL AND GA

Location. The project is on the Chattahoochee River about 75.2 miles above its mouth and about 1.5 miles above Fort Gaines, Georgia. (See Geological Survey maps for southwest Georgia.)

Existing project. The existing project provides for a concrete dam, gated spillway, and single-lift lock, with earth embankments at either side. The non-overflow section of the dam includes a powerhouse and an intake structure. The gated spillway is 708 feet long with a fixed crest at elevation 163 feet national geodetic datum. The two earth embankments, of almost equal lengths, have a total length of 12,128 feet, with a crest elevation at 215, and a maximum height of about 68 feet. The nonoverflow section of the concrete dam is 200 feet long, with the deck of the powerhouse section at elevation 208. The lock, with usable chamber dimensions of 82 feet by 450 feet, has a lift of 88 feet with the normal upper pool elevation at 190. Depths are 13 feet over the lower sill and 18 feet over the upper sill at normal pool elevation. The underlying foundation is limestone. Total reservoir capacity is 934,400 acre-feet, with 244,000 acre-feet reserved for power. The power installation consists of four units of 32,500 kilowatts each, or a total of 130,000 kilowatts. The project provides for maintenance, including operation and care. (See Table 10-B for authorizing legislation.)

Local cooperation. Local interests must maintain and operate all utility and highway facilities which may be relocated or otherwise altered as part of the improvement, provide suitable public terminal facilities, and hold the United States free from damages. Local agencies and other organizations have indicated their willingness and ability to comply.

Terminal facilities. Public wharves at Eufaula and Phenix City, Alabama, and Columbus, Georgia, are considered adequate for existing commerce.

Operations and results during fiscal year.

Maintenance: Operation and maintenance cost for FY 2002 was \$6,322,634. Gross power generation amounted to 168,724 megawatt hours, of which 159,071 megawatt hours were delivered to Southeastern Power Administration. Recreational attendance during FY 2002 totaled 1,040,757 visits.

Condition at end of fiscal year. Construction was completed in 1963. The lock was opened to navigation in June 1963. The first power generating unit was placed on-the-line in March, the second in May, the third in September, and the fourth in November 1963. Total Federal cost under existing project as of September 30, 2002 is \$88,330,669 for new work, major rehabilitation cost \$25,280,035 and \$171,625,338 for maintenance, a total cost of \$285,236,042. (See also Table 10-M.)

**54. WEST POINT LAKE,
CHATTAHOOCHEE RIVER BASIN,
GA AND AL**

Location. The damsite is on the Chattahoochee River 2.8 miles upstream from West Point, Georgia, 201.4 miles above the mouth of the Chattahoochee River, and 309.2 miles above the mouth of the Apalachicola River. At the full power pool elevation of 635 feet above national geodetic datum, the reservoir would lie in Troup and Heard Counties, Georgia, and in Chambers and Randolph Counties, Alabama (See Geological Survey maps of Georgia and Alabama.)

Existing project. The existing project provides for flood control, power, recreation, fish and wildlife development, and streamflow regulation for downstream navigation. The project provides for a gravity-type concrete dam 896 feet long with earth embankments at either end 1,111 feet long on the east end and 5,243 feet long on the west end. The total length of the dam and spillway is 7,250 feet. The main dam consists of a concrete non-overflow section, 185 feet long on the west side and an earth embankment retaining wall on the east side; a gravity concrete spillway 390 feet long, including piers and abutments, with six tainter gates, each 50 feet by 41 feet. A monolith intake-powerhouse section and erection bay 321 feet long is constructed directly west and adjacent to the spillway. At the full power-pool elevation of 635 the reservoir provides a total storage of 605,000 acre-feet of which 307,000 acre-feet is usable. During the critical flood season the reservoir is operated with maximum power pool elevation at 625 feet to provide flood storage between elevations 625 and 635. The initial power installation of 73,375 kilowatts consisting of units 1, 2 and 3 were placed in operation in March and April, 1975. (See Table 10-B for authorizing legislation.)

Local cooperation. None required.

Operations and results during fiscal year.

Maintenance: Operation and maintenance of the project totaled \$6,204,334. Gross power generation amounted to 99,513 megawatt hours during FY 2002, of which 92,692 megawatt hours were delivered to Southeastern Power Administration. Recreational attendance during FY 2002 totaled 2,620,642 visits.

Condition at end of fiscal year. Construction of the project, which was initiated in June 1966, and completed at the end of FY 1984. Total Federal cost under existing project as of September 30, 2002 is \$131,565,760 for new work and \$120,945,890 for maintenance, a total of \$252,511,650 (See also Table 10-M.)

**55. SCHEDULING FLOOD CONTROL
RESERVOIR OPERATIONS**

Mobile District monitors flood control operations of Alabama Power Company's Weiss, H. Neely Henry, and Logan Martin Dams on Coosa River, Alabama, and their Lewis Smith Dam on Sipsey Fork (headwaters of Black Warrior River, Alabama), for compliance with regulation plans prepared in accordance with Public Law 436, 83rd Congress, and Federal Power Commission licenses. Fiscal year cost for these activities on the Weiss, H. Neely Henry, and Logan Martin Dams are included under operation and maintenance costs for the Alabama-Coosa Rivers. Fiscal year cost for the Lewis Smith Dam is included under the overall operation and maintenance costs for the Black Warrior-Tombigbee Rivers System.

**56. FLOOD CONTROL AND COASTAL
EMERGENCIES (FC & CE)**

Disaster Preparedness Program	\$1,421,939
Emergency Operations.....	18,575

Coordination Account Funds	\$2,266
Deer Island Marsh, MS	88,219
Total Other Aquatic (Sec. 204, P.L. 102-560)	\$90,485

General Investigations

62. SURVEYS

During FY 2002, costs of \$1,840,914 were incurred as shown below:

Flood Damage Preventive Studies	\$157,442
Navigation Studies	296,492
Special Studies	950,510
Shoreline Protection Studies	95,917
Coordination with Other Agencies, and non-Federal Interests	212,909
Miscellaneous Activities	127,644
Total Surveys	\$1,840,914

63. COLLECTION AND STUDY OF BASIC DATA

Collection and study of basic data continued during the fiscal year with the initiation of Flood Insurance studies, the cost of which was reimbursable by FEMA. In addition, Flood Plain Management Services were performed at a cost of \$385,595 and \$1,858 expended for Hydrologic Studies. (See Table 10-P for listings of studies completed during FY 2002.)

64. PRECONSTRUCTION ENGINEERING AND DESIGN

Total FY 2002 expenditures for Preconstruction, Engineering and Design (PED) were \$51,951.

65. RIVERS AND HARBORS CONTRIBUTED FUNDS (GENERAL INVESTIGATION)

Contributed funds expended for authorized Federal studies included:

Birmingham Watershed, AL.....	\$75,222
Brewton & East Brewton, AL	26,699
Metro Atlanta Watershed, GA.....	157,075
Planning Assistance to States	128,526
Total Contributed Funds	\$387,522

		Approp.	5,649,000	6,774,292	8,516,298	6,503,823	121,275,288
		Cost	6,051,989	6,753,889	8,523,232	6,204,334	120,945,890

1. Includes \$134,613 for previous projects and \$28,500 for DPR on Two-Mile.

2. Includes \$168,766 for previous projects.

3. Includes \$5,650 for previous projects.

4. Cost for providing spoil dikes for work authorized by 1965 River and Harbor Act.

5. Includes \$44,382 for previous projects of which \$5,000 was contributed funds.

6. Includes \$96,509 for previous projects of which \$10,200 was contributed funds.

7. Includes \$606,931 for previous projects and \$1,243,661 for recreational facilities on completed projects.

8. Includes \$50,000 for previous projects.

9. Includes \$45,605 for previous projects.

10. Includes \$65,137 for previous projects.

11. Includes \$269,017 for previous projects.

12. Includes \$2,312,297 for previous projects and \$442,836 Special O and M Funds.

13. Includes \$6,683,104 for previous projects, \$14,000 Public Work Funds, and \$41,242 Emergency Relief funds.

14. Includes \$4,096,681 for previous projects and \$494,136 Special O and M funds.

15. Includes \$203,560 for previous projects, \$581,959 Public Works Funds,

\$457,467 rehabilitation of jetties under existing project and \$48,001 for Grand Lagoon modification.

16. Includes \$513,604 for previous projects.

17. Includes \$904,442 for previous projects.

18. Includes \$412,624 for previous projects, \$124,565 Special O and M funds, and \$829,472 Emergency Work Funds.

19. Includes \$594,688 for previous projects.

20. Includes \$126,649 for previous projects.

21. Includes \$1,993,000 transferred to National Park Service; \$210,249 GI funds expended during FY 1957 thru FY 1961. Previous project cost amounted to \$197,651.

22. Includes \$234,331 for previous projects.

23. Includes \$3,692,483 for previous projects.

24. Includes \$2,978,050 for previous projects.

25. Includes \$3,347,489 for recreational facilities.

26. Includes \$1,883,193 Federal funds, \$1,924 contributed funds for previous projects; and \$809,553 for Lazer Creek design and \$301,310 for Rysco Channel.

27. Includes \$2,246,233 for previous projects.

28. Includes \$8,233,325 for recreational facilities.

29. Includes \$84,014 for recreational facilities.

30. Included under maintenance for overall Apalachicola, Chattahoochee and Flint Rivers projects.

31. Includes \$1,515,822 for recreational facilities.

32. Includes \$2,441,029 for recreational facilities.

33. Includes \$35,045 for previous project costs.

TABLE 10-B

AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
	APALACHICOLA BAY, FL (See Section 2 of Text)	
Mar. 2, 1907	Channel 18 feet deep through West Pass and Link Channels. Ten feet deep across the inner bar, and 9 feet deep through Bulkhead Shoals.	H. Doc. 422, 59th Cong., 1 st Sess.
Jan. 21, 1927	Modify project to provide for channel 10 feet deep from mouth of inner bar channel to Gulf via Link and West Pass Channels, and 10-foot depth in Bulkhead Shoals Channel.	H. Doc. 106, 69th Cong., 1 st Sess.
Sep. 3, 1954	At Eastpoint, FL., a channel 6 feet deep, 100 feet wide, and about 6,000 feet long, parallel to shore, with connecting channel 6 feet deep, and 100 feet wide to St. George Sound, and at Apalachicola, FL., a small-boat basin 200 feet and 9 feet deep, with a connecting channel 9 feet deep and 80 feet wide through Scipio Creek to the Apalachicola River.	H. Doc. 156, 82d Cong., 1 st Sess.
Sep. 3, 1954	Modify project to provide for a channel 10 feet deep and 100 feet wide from the 10-foot depth in Apalachicola Bay across St. George Island to within 300 feet of the Gulf shore, thence increasing uniformly in width to 200 feet at shore and continuing at this width to the 10-foot depth in the Gulf, with two jetties extending from the dune line on St. George Island to the outer end of channel, and for abandonment of West Pass Channel upon completion of channel through St. George Island.	H. Doc. 557, 82d Cong., 2d Sess.
Jul. 3, 1958	Modify improvement of Apalachicola Bay, FL., authorized by River and Harbor Act of Sept. 3, 1954 to provide that the Secretary of the Army shall reimburse local interests for such approved work as they may have done based upon the reduction in the amount of material which will have to be removed to provide project dimensions at such time as Federal dredging of the channel is undertaken.	
Nov. 21, 1963 ¹	A channel 6 feet deep, 100 feet wide, and about 1 mile long, parallel to shore at Two Mile, FL., with a 6-by 100-foot connecting channel to water of the same depth in Apalachicola Bay.	DPR (Sec. 107)
Feb. 5, 1975 ¹	A channel 6 feet deep and 100 feet wide extending from the eastern end of the existing Two Mile channel and generally paralleling the shoreline for a distance of about 9,000 feet to intersect with the Gulf Intracoastal Waterway about 1,650 feet south of Gorrie Bridge at Apalachicola, and a breakwater built to elevation 4.0 feet above mean low water along the seaward side of the existing channel parallel to the shore at Two Mile. The total length of the breakwater of about 6,150 feet, includes two 860-foot legs paralleling the existing entrance channel.	DPR (Sec. 107)
Aug. 11, 1983 ¹	Modify Eastpoint project to include breakwaters with a total length of 5,300 feet.	DPR (Sec. 107)
	AQUATIC PLANT CONTROL (See Section 4 of Text)	
Jul. 3, 1958	Aquatic plant control for N.C., S.C., Ga., FL., AL., Ms., and La.	H. Doc. 37, 85th Cong., 1 st Sess.
Oct. 23, 1962	Research and planning costs to be borne by U.S.	Public Law 87-874, 87th Cong.
Oct. 27, 1965	Provided for continued research.	H. Doc. 251, 89th Cong., 1 st Sess.
Nov. 17, 1986	Increased non-federal cost-sharing from 30% to 50%.	Water Resources Development Act of 1986 (P.L. 99-662)
	BAYOU CODEN, AL (See Section 5 of Text)	
Mar. 2, 1945	Channel 4 by 40 feet.	H. Doc. 824, 77th Cong., 2d Sess.
Jun. 2, 1969 ¹	Channel 8 by 60 feet to connect with Bayou La Batre channel	DPR (Sec. 107)
	BAYOU LA BATRE, AL (See Section 6 of Text)	
Oct. 27, 1965	A 12- by 100-foot channel from that depth in Mississippi Sound to a point about 2,800 feet south of the highway bridge, thence a channel 12 by 75 feet to the bridge, an overall distance of about 33,500 feet.	H. Doc. 327, 88th Cong., 2d Sess.
Nov. 28, 1990	Deepen existing channel to 18 feet to the bridge; to 14 feet above bridge, and into Snake Bayou at a depth of 12 feet.	Water Resources Development Act of 1990 (P.L. 101-640)
	BILOXI HARBOR, MS (See Section 7 of Text)	
Jul. 3, 1930	Channel 10 feet deep and 150 feet wide from Mississippi Sound west and north of Deer Island to deep water in Back Bay of Biloxi.	H. Doc. 754, 69th Cong., 2d Sess.
Jun. 20, 1938	Relocation of channel.	H. Doc. 639, 75th Cong., 3d Sess.
Mar. 2, 1945	Entrance channel 6 feet deep and 50 feet wide into Old Fort Bayou.	H. Doc. 258, 76th Cong., 1 st Sess.
Mar. 2, 1945	Entrance channel 8 feet deep and 100 feet wide through Cranes Neck into Bayou Bernard.	H. Doc. 326, 76th Cong., 1 st Sess.
May 17, 1950	Maintain channel 6 feet deep and 40 feet wide from Biloxi Harbor to Ott Bayou.	H. Doc. 256, 81st Cong., 1 st Sess.
Jul. 14, 1960	Continuous channel 12 feet deep from Mississippi Sound the Air Force terminal on Bayou Bernard via Back Bay and Cranes Neck.	H. Doc. 271, 86th Cong., 2d Sess.
Nov. 7, 1966	A 23-mile-long through channel 12 feet deep and 150 feet wide from the Gulf Intracoastal Waterway through: Mississippi Sound, Biloxi Bay (east of Deer Island), Back Bay, Big Lake, and via land cut to Gulfport Lake, including a 500 by 2,600-foot turning basin in the lake, thence, a channel 12 by 100 feet from the western end of Gulfport lake for about 2 miles to a 300- by 500-foot turning basin; adoption for maintenance of a 12- by 150-foot spur channel from the main channel in Biloxi Bay, westward about 1 mile to a 400- by 600-foot turning basin opposite Ott Bayou, and	H. Doc. 513, 89th Cong., 2d Sess.

TABLE 10-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
	abandonment of the existing 6- by 40-foot channel into Ott Bayou; continuation of maintenance of the 12- by 150-foot lateral channel westward about 2.2 miles from the main channel in Biloxi Bay to a point opposite Oak Street; continuation of maintenance of the channel west of Deer Island.	
Mar. 28, 1979 ¹	A channel 10 feet deep; 100 feet wide and 300 feet long extending northward from the Biloxi Lateral Channel and, into a rectangular basin approximately 300 feet by 370 feet.	DPR (Sec. 107)
Aug. 15, 1985	A channel 12-feet deep; 130-feet wide and 2,100-feet long, and a 300 by 300 foot turning basin also to a 12-foot depth.	DPR (Sec. 107)
	BLACK WARRIOR AND TOMBIGBEE RIVERS, AL (See Section 8 of Text)	
Jul. 5, 1884	Original appropriation for improving Black Warrior River. Original project for slack-water improvement authorized by Secretary of War, Apr. 19, 1887	Annual Report, 1887, pt. 2, p. 1302.
Mar. 3, 1899	Construction of the first locks between Tuscaloosa and Demopolis.	
Sep. 19, 1890	(Maintenance of the section of Tombigbee River below lock 1 to its mouth (66 miles) included in the existing project.)	
Sep. 19, 1890	Construction of locks and dams, 1, 2, and 3. Merging of the individual project for the Black Warrior and Warrior Rivers and the Tombigbee River below Demopolis	H. Doc. 178, 56th Cong., 2d Sess., and Annual Report, 1901, pt. 3, p. 1858 H. Doc. 165, 57th Cong., 1 st Sess., and Annual Report, 1902, p. 1293
Mar. 2, 1907	Construction of locks and dams 14, 15, 16, and 17.	
Mar. 3, 1909	Provides for reconstruction of obsolete structures, modified in plan and location, to provide efficient and economical maintenance and operation.	Public Law 317
Aug. 22, 1911	Lift of lock 17 changed to 63 feet, and construction of locks and dams 18 and 19 eliminated from the project. Extension of slack-water improvement on Sanders Ferry on Mulberry Fork and Nichols Shoal on Locust Fork.	H. Doc. 72, 62d Cong., 1 st Sess.
Mar. 2, 1919	Raising of various dams 2 feet and raising the lock walls 2 feet at lock 1 to provide a minimum depth of 8 feet at low water, widening the channel to 150 feet where practicable.	Annual Report, 1918, P. 876
Aug. 30, 1935	For snagging Mobile River from the mouth of Chickasaw Creek to the junction of the Alabama and Tombigbee Rivers.	H. Doc. 728, 71st Cong., 3d Sess.,
Aug. 30, 1935	Increase channel dimensions to 9 by 200 feet; construct crest gates at lock and dam 17; add flashboards at all dams; Sunflower Bend Cutoff.	H. Doc. 56, 73d Cong., 1 st Sess., and Rivers and Harbors and Committee Doc. 45 73d Cong.
Aug. 30, 1935	Construction of a lock and dam below Tuscaloosa to replace original locks and dams 10, 11, and 12.	Rivers and Harbors Committee Doc. 26., 74 th Cong., 1 st Sess.
Jun. 26, 1934	Operation and care of locks and dams provided for with funds from War Department appropriations for rivers harbors.	
Dec. 22, 1944	Recreation facilities.	
Mar. 2, 1945	Construction of a lock and dam near Demopolis to replace existing dams 4, 5, 6, and 7.	H. Doc. 276, 76th Cong., 1 st Sess.
Mar. 2, 1945	Provide increased spillway capacity at dam 1.	H. Doc. 382, 76th Cong., 1 st Sess.
Jul. 14, 1960	Coffeeville Lock and Dam Wildlife Refuge.	S. Doc. 50, 86th Cong., 1 st Sess.
Dec. 21, 1982	Provides for a wider navigation opening at the Franklin Ferry Bridge, Jefferson County, Al.	Public Law 97, 377
Jul. 30, 1983	Authorized to widen, as necessary for safe passage, the navigation opening of Franklin Ferry Bridge, Jefferson County, Al.	Public Law 98-63
Nov. 17, 1986	Conduct a feasibility study of protection from erosion problems on the southern bank from river mile 253 to river mile 255.	Water Resource Development Act of 1986 (P.L. 99-662)
	OLIVER LOCK AND DAM (REPLACEMENT), AL (See Section 8A of Text)	
Aug. 15, 1985	Construction and land acquisition for Oliver Lock Replacement	The Supplemental Appropriations Act, 1985 (P.L. 99-88)
Nov. 17, 1986	Construction of a lock and dam to replace the William Bacon Oliver Lock and Dam.	Water Resources Development Act of 1986 (P.L. 99-662)
	BON SECOUR RIVER, AL (See Section 9 of Text)	
May 16, 1963 ¹	A 10- by 100-foot channel from Gulf Intracoastal Waterway through Bon Secour Bay to mouth of Bon Secour River and extending up river to vicinity of Swift's Landing, thence 6 by 80 feet up river to a point 600 feet above Oak Landing, with two turning and maneuvering areas 150 feet wide and 1,100 and 1,200 feet long opposite Swift's Landing and ice loading dock. Overall length of improvement is about 4.7 miles.	DPR (Sec. 107)

MOBILE, ALABAMA, DISTRICT

TABLE 10-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Sep. 3, 1954	CARRABELLE HARBOR, FL (See Section 10 of Text) Entrance channel 27- by 200-foot, harbor channel 25- by 150-foot, turning basin 25- by 100-foot.	H. Doc. 451, 83d Cong., 2d Sess,
Mar. 2, 1945	DAUPHIN ISLAND BAY, AL (See Section 11 of Text) A channel 7 feet deep and 150 feet wide from Mobile Bay to an anchorage basin of same depth, about 7 acres in area, in marsh just north of Fort Gaines on Dauphin Island; a channel 4 feet deep and 40 feet wide from anchorage basin to Dauphin Island Bay; and a jetty and revetment to protect entrance channel; and (b) an anchorage basin 7 feet deep and 500 feet square at Dauphin Island Village, with an entrance channel of like depth, 100 feet wide and about 8,300 feet long, extending to 7-foot hydrographic contour in Mississippi Sound.	H. Doc. 333, 76th Cong., 1 st Sess.
Sep. 3, 1954		H. Doc. 394, 82d Cong., 2d Sess.
Aug. 16, 1991	Deepen existing 4-foot channel to 7-feet and 40-feet wide from anchorage basin to Dauphin Island Bay.	DPR (Sec. 107)
Jun. 23, 1993	Provides 400 feet of stone protection along the shoreline near the pier and erosion protection for shoreline in the immediate vicinity of Fort Gaines.	DPR (Sec. 14)
May 19, 1969 ¹	DOG AND FOWL RIVERS, AL (See Section 12 of Text) To provide small craft navigation on west side of Mobile Bay.	DPR (Sec. 107)
Jul. 3, 1930	EAST PASS CHANNEL FROM GULF OF MEXICO INTO CHOCTAWHATCHEE BAY, FL (See Section 13 of Text) Maintenance of 6-foot channel by 100-foot channel from Choctawhatchee Bay into Gulf.	H. Doc. 209, 70th Cong., 1 st Sess.
Oct. 24, 1951	Maintenance of 12-foot channel from Choctawhatchee Bay into Gulf, and maintenance of 6-foot channel into Old Pass Lagoon.	H. Doc. 470, 81st Cong., 2d Sess.
Oct. 27, 1965	Construction of twin jetties. (Present project dimensions.)	H. Doc. 194, 88th Cong., 2d Sess.
Oct. 1, 1980	Modifications to provide a channel length of approximately 3,800 feet in lieu of 2,000 feet from the East Pass Channel into Old Pass Lagoon, with no changes in width and depth.	Energy and Water Development Appropriation
May 17, 1950	FLY CREEK, FAIRHOPE, AL (See Section 14 of Text) A channel 6 feet deep, 80 feet wide, and about 1,650 feet long from 6-foot depth in Mobile Bay to a turning basin of same depth, 100 feet wide and 350 feet long, in Fly Creek.	H. Doc. 194, 81st Cong., 1 st Sess,
	GULF INTRACOASTAL WATERWAY BETWEEN APALACHEE BAY, FL, AND MEXICAN BORDER (Mobile District) (See Section 15 of Text)	
Jun. 25, 1910	APALACHICOLA RIVER TO ST. ANDREW BAY, FL A channel 5 feet deep at mean low water and 65 feet wide at the bottom. A channel 9 feet deep at mean low water and 100 feet wide at the bottom.	H. Doc. 670, 61st Cong., 2d Sess. Rivers and Harbors Committee Doc. 52.; 72d Cong., 2d Sess.
Aug. 30, 1935	CHOCTAWHATCHEE BAY TO WEST BAY, FL A channel 9 feet deep at mean low water and 100 feet wide at the bottom.	H. Doc. 259, 72d Cong., 1 st Sess.
Jun. 25, 1910	A channel 6 feet deep at mean low water, with no reference to width.	H. Doc. 565, 61st Cong., 2d Sess.
Aug. 30, 1935	CHOCTAWHATCHEE BAY TO PENSACOLA BAY, FL A channel 9 feet deep at mean low water and 100 feet wide at the bottom.	Rivers and Harbors Committee Doc. 42, 73d Cong., 2d Sess.
Jul. 3, 1930	PENSACOLA BAY, FL, TO MOBILE BAY, AL A channel 9 feet deep at mean low water and 100 feet wide at the bottom.	H. Doc. 42, 71st Cong., 1 st Sess.
Jul. 3, 1930	MOBILE BAY, AL, TO NEW ORLEANS, LA A channel 300 feet wide and 10 feet from the 10 foot contour in Mobile Bay to the 10-foot contour in Mississippi Sound,	Rivers and Harbors Committee Doc. 4, 71st Cong., 1st Sess.
Jul. 3, 1930	A channel 100 feet wide and 9 feet deep from Lake Pontchartrain to Mississippi Sound.	H. Doc. 341, 71st Cong., 2d Sess.
Jul. 23, 1942	APALACHEE BAY, FL, TO NEW ORLEANS, LA A channel 12 feet deep and 125 feet wide at mean low water, except in the section between Mobile, Al., and New Orleans, La, where the width is to be 150 feet.	Public Law 675, 77 th Cong., 2d Sess., and H. Doc. 96, 79 th Cong., 1 st Sess.
Jun. 17, 1943	Conditional acquisition of Gulf County Canal, Fl. And enlargement of the canal to 9 feet deep and 100 feet wide.	H. Doc. 257, 76th Cong., 1 st Sess., and P. L. 75, 78th Cong., 1st Sess.
Mar. 2, 1945	Construction of a movable span in the Georgia, Florida & Alabama R.R. bridge crossing the Ochlockonee River.	H. Doc. 442, 76th Cong., 1 st Sess,
May 17, 1950	Abandonment and closure of original channel between Big Lagoon and Pensacola Bay and construction of a new channel to enter the bay north of original entrance.	H. Doc. 325, 81st Cong., 1 st Sess.

TABLE 10-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Nov. 7, 1966	Authorized enlargement of Gulf County Canal to 12 by 125 feet.	P. L. 89-789, 89 th Cong. 2d Sess.
Mar. 3, 1899	GULFPORT HARBOR, MS (See Section 16 of Text) A channel 19 feet deep and 300 feet wide from the anchorage basin at Ship Island to Gulfport, Ms., and an anchorage basin next to the shore end 19 feet deep and not less than 2,640 feet by 1,320 feet in area.	H. Doc. 120, 55th Cong., 3d Sess.
Mar. 2, 1907	Combined Ship Island Pass with Gulfport Harbor project.	
Feb. 27, 1911	Increased depth to 26 feet and width to 300 feet across Ship Island Bar and depth to 19 feet in channel from anchorage basin at Ship Island to anchorage basin at Gulfport.	H. Doc. 2, 60th Cong., 1 st Sess.
Jan. 21, 1927	Authorized relocation of channel across Ship Island Bar.	
Jul. 23, 1930	Increased depth to 27 feet and width to 300 feet across Ship Island Bar, 26 feet deep and 220 feet wide through Ms. Sound and depth of 26 feet in the anchorage basin at Gulfport.	H. Doc. 692, 69th Cong., 2d Sess.
Jun. 30, 1948	Increased depth of 32 feet and width to 30 feet across Ship Island Bar, 30 feet deep and 220 feet wide through Ms. Sound and a depth of 30 feet in the anchorage basin at Gulfport.	H. Doc. 112, 81st Cong., 1 st Sess.
Jul. 3, 1958	Maintenance of the existing commercial small-boat harbor and an approach channel 100 feet wide and 4,300 feet long, from deep water in Ms. Sound to the small-boat basin, all at a depth of 8 feet.	S. Doc. 123, 84th Cong., 2d Sess.
Aug. 15, 1985	Modify the existing Ship Channel to 36 x 300 feet in Mississippi Sound, and 38 x 400 feet across the bar, with changes in the channel alignment and the entrance to the anchorage basin for safe and unrestricted navigation.	The Supplemental Appropriations Act, 1985 (P.L. 99-88)
Nov. 17, 1986	Modification of FY 1985 Supplemental Appropriations Act. Dredged material from project shall be disposed of in open water in the Gulf of Mexico in accordance with all provisions of Federal law.	Water Resources Development Act of 1986 (P.L. 99-662)
Nov. 17, 1988	Modify of WRDA of 1986 and authorize disposal of dredged material in open waters of the Gulf of Mexico; and by Thin-layer disposal in Mississippi Sound under a demonstration program.	Water Resources Development Act of 1988 (P.L. 100-676)
Aug. 26, 1937	MOBILE HARBOR, AL (See Section 17 of Text) For improvement of Threemile Creek by snagging from Mobile River to the Industrial Canal.	Rivers and Harbors Committee Doc. 69, 74th Cong., 1st Sess.
Mar. 2, 1945	Adoption of existing channel through Garrows Bend from Choctaw Point in Arlington pier, 27 feet deep and 150 feet wide, with 2 turning basins. Adoption of the existing channel alongside Arlington pier from the of Garrows Bend Channel, 27 feet deep and 150 feet wide. A channel 25 feet deep and generally 500 feet wide in Mobile River from the highway bridge to the mouth of Chickasaw Creek, then 25 feet deep and 250 feet wide in Chickasaw Creek to a point about 400 feet below Shell Bayou.	H. Doc. 739, 79th Cong., 2d Sess.,
Sep. 3, 1954	Enlarging Mobile Bay Channel to 42 by 600 feet. Enlarging Mobile Bay Channel to 40 by 400 feet. Deepening Mobile River Channel below highway bridge to 40 feet over present widths, including existing turning basin and anchorage areas. Widening river channel opposite Mazagine Point to provide a 40- by 800- by 1,400-foot turning basin. The turning basin was further modified for maintenance by SAD letter of November 27, 1973 under authority contained in ER-1130-2-307 to increase the turning basin's dimensions to 1000' by 1600'.	H. Doc. 74, 83d Congress, 1 st Sess.
Sep. 3, 1954	Closure of Garrows Bend Channel by construction and operation of an earth-filled causeway across said channel (work to be done by local interests).	H. Doc. 74, 83d Cong., 2d Sess.
Jul. 26, 1970 (SR)	To provide a channel 40 feet deep and 400 feet wide from the main ship channel in Mobile Bay and extending northwesterly for about 5.3 miles to the shore of Mobile Bay including an anchorage and turning basin near the shoreline, thence a land-cut 40 feet deep, 300 feet wide and about 1.9 miles long to and including a trapezoidal turning basin 40 feet deep and approximately 42 acres, 40 feet deep; a barge channel 12- by 100-feet extending 6500-feet and terminating in a 300-foot by 300-foot terminal basin.	(Under provision of Section 201 of the 1965 Flood Control)
Dec. 15, 1970 (HR)		
Aug. 15, 1985	Deepen and widen entrance channel over the bar to 57 by 700 feet, a distance of about 7.4 miles, deepen and widen Mobile Bay Channel from mouth of bay to south of Mobile River, 55 by 550 feet, a distance of about 27.0 miles, deepen and widen an additional 4.2 miles of Mobile Bay Channel to 55 by 650 feet, provide 55 foot deep anchorage area and turning basin in vicinity of Little Sand Island, and construct a 1710 acre disposal area adjacent to the Brookley Industrial Complex.	The Supplemental Appropriations Act.
Nov. 17, 1986	Modification of FY 1985 Supplemental Appropriations Act. Dredged material from project shall be disposed of in open water in the Gulf of Mexico in accordance with all provisions of Federal law.	Water Resources Development Act of 1986 (P.L. 99-662)
Nov. 17, 1986	PANAMA CITY BEACHES, FL Shoreline protection to provide a 110-foot wide beach with an artificial dune system and stabilization of vegetation.	Water Resources Development Act of 1986 (P.L. 99-662)
Aug. 30, 1935	PANAMA CITY HARBOR, FL (See Section 18 of Text) Channels 27 and 29 feet deep. Abandonment of project adopted by act of June 25, 1910.	H. Doc. 33, 73d Cong., 1 st Sess.
Mar. 2, 1945	Maintenance of a channel in Watson Bayou 100 feet wide and 10 feet deep	H. Doc. 555, 76th Cong., 3d Sess.

TABLE 10-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Jun. 30, 1948	from that depth in St. Andrew bay to the highway bridge.	
Mar. 23, 1967 ¹	Channels 32 and 34 feet deep.	H. Doc. 559, 80th Cong., 2d Sess.
	A channel 8 by 100 feet in Grand Lagoon from St. Andrew Bay to a point about 2,400 feet east of State Highway 392. Bridge with branches to serve shore facilities which terminate at the bridge.	DPR (Sec. 107)
Jun. 14, 1972	Channels 38, 40, 42 feet deep.	H. Doc. 196, 92d Cong., 2d Sess.
	PASCAGOULA HARBOR, MS (See Section 19 of Text)	
Mar. 4, 1913	Provides for through channel from the Gulf to mile 4 on Dog River 25 by 300 feet through Horn Island Pass, thence 22 by 225 feet across Mississippi Sound and up 150 feet in Pascagoula River above bridge, and up Dog River to mile 4, all subject to financial participation by local interests.	H. Doc. 682, 62d Cong.,
Mar. 4, 1915	Waived requirement for financial participation by local interests.	River and Harbor Committee Doc. 12, 63d Cong., 2d Sess.
May 17, 1950	Cutoff channel, 12 by 125 feet, from State Highway 63 bridge to mile 4 on Dog River, via Robertson and Bounds Lakes.	H. Doc. 188, 81st Cong., 1 st Sess.
Sep. 3, 1954	Modification to provide for channel dimensions of 35 by 325 feet through Horn Island Pass, thence 30 by 275 feet across Mississippi Sound and up Pascagoula River to the railroad bridge, and a turning basin just below the bridge.	H. Doc. 98, 96th Cong.,
Jul. 3, 1958	Reimbursement of local interests for work done on Dog River cutoff (\$44,000).	
Jul. 14, 1960	Modification to provide for maintenance of 12- by 125-foot channel to mile 6 on Dog River, and maintenance of 30-by 225-foot side channel from main ship channel in Mississippi Sound to the mouth of Bayou Casotte, thence 30 by 300 feet in Bayou Casotte to a turning basin of the same depth 1 mile above the mouth.	H. Doc. 98, 86th Cong., 1 st Sess.
Jul. 14, 1967	Deepening the Horn Island Pass channel to 38 feet and deepening the main ship channel in Mississippi Sound, the river channel to the railroad bridge, and the turning basin all to 33 feet.	Chief of Engineers Report dated Nov. 3, 1960.
Oct. 23, 1962	Enlarging Horn Island Pass Channel to 40 by 350 feet provision of an impounding area adjacent to and east of channel 40 feet deep, 200 feet wide, and about 1,500 feet long, enlarging main channel in Mississippi Sound and river channel to railroad bridge to 38 by 350 feet, and deepening turning basin in river and Bayou Casotte channels and basin to 38 feet.	H. Doc. 560, 87th Cong., 2d Sess.
Jul. 11, 1983 ¹	Modification to provide for channel dimensions 12 by 80 feet extending about 2,750 feet from deep waters in the Pascagoula River into Krebs Lake to a turning basin, thence, along the south bank of the lake a channel with dimensions of 10 x 60 feet terminating at a second turning basin, a distance of about 2,750 feet. The project was constructed by hydraulic dredging with the disposal placed in an upland diked area.	DPR (Sec. 107)
Nov. 17, 1986	Deepen and widen gulf entrance channel to 44 by 550 feet; widen Horn Island channel to 600 feet, relocating that channel about 500 feet westwardly; deepen Mississippi Sound portion to 42 feet; widen and deepen Bayou Casotte to 42 by 350 feet and construct turning basin. Disposal of all new work material in Gulf of Mexico.	Water Resources Development Act of 1986 (P.L. 99-662)
	PENSACOLA HARBOR, FL (See Section 20 of Text)	
Jun. 13, 1902	A channel 30 feet deep at mean low water and 500 feet wide from the Gulf of Mexico to the dock line at the east end of the city of Pensacola, and also provided that \$150,000 may be used in constructing or purchasing a seagoing suction dredge.	
Aug. 30, 1935	Modified the existing project for the present inner channels and the deepening of the entrance channel to 32 feet.	H. Doc. 253, 72d Cong., 1 st Sess.
Aug. 26, 1937	Improvements of Bayou Chico.	Rivers and Harbors Committee Doc. 96, 74th Cong., 2d Sess.
Aug. 27, 1962	Maintenance of the entrance channel from the Gulf of Mexico to lower Pensacola Bay, a distance of about 5 miles to dimensions of 35 feet deep and 500 feet wide; maintenance of a channel along the south side of the aircraft carrier mooring basin, a distance of about 2.5 miles, to dimensions of 33 feet deep and 300 feet wide; a bay channel 33 feet deep, 300 feet wide, and about 2.1 miles long; parallel approach channels to opposite ends of the inner-harbor channel, about 1.3 and 1.4 miles in length, each 33 feet deep, 300 feet wide, and flared at the junctions with the inner-harbor channel; and deepening the existing 500-foot wide inner-harbor channel to a depth of 33 feet and lengthening it to 3,950 feet.	H. Doc. 528, 87th Cong., 2d Sess.
	PERDIDO PASS CHANNEL, AL (See Section 21 of Text)	
Oct. 27, 1965	A 12- by 150-foot channel stabilized by twin rubblemount jetties, from the Gulf of Mexico into Perdido Pass, thence 9 by 100 feet into Perdido Bay with a spur channel of the same dimensions into Terry Cove.	H. Doc. 94, 88th Cong., 2d Sess.
	TENNESSEE-TOMBIGBEE WATERWAY, AL AND MS (See Section 22 of Text)	
Jul. 24, 1946	A waterway connecting Tennessee and Tombigbee Rivers via East Fork of Tombigbee River, Mackeys and Yellow Creeks. Plan of improvement consists of three sections: river section, 9- by 300-foot channel for 149 miles between Demopolis and Amory, Ms.;	H. Doc. 486, 79th Cong., 2d Sess.

TABLE 10-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
	canal section, 12 by 300 feet for 46 miles from Amory to Bay Springs; divide section, 12 by 300 feet (except in the 27 mile-long divide cut in which bottom width be 280 feet) for 39 miles from Bay Springs through dividing ridge to Tennessee. Total lift of 341 feet to be accomplished by 10 locks. Total length of project is 234 miles.	
Nov. 17, 1986	TENNESSEE-TOMBIGBEE WILDLIFE MITIGATION (See Section 22A of Text) Acquire from willing sellers in a timely manner at fair market value 88,000 acres of land for mitigation of wildlife losses resulting from construction and operation of the project for the Tennessee-Tombigbee Waterway.	Water Resource Development Act of 1986 (P.L. 99-662)
Sep. 5, 2002	CEDAR POINT EXTENSION, BAY ST. LOUIS, MS (See Section 31 of Text) Construction of a 4,500 foot concrete/sheetpile wall in front of existing concrete seawall.	DPR (Sec. 14)
Sep. 11, 1995	CHOCTAWHATCHEE/PEA RIVERS, AL (See Section 32 of Text) Install fourteen (14) combination rain and stream gages within Choctawhatchee and Pea River Basins.	DPR (Sec. 205)
Jan. 15, 1998	CHOCTAWHATCHEE AND PEA RIVERS ELBA AND GENEVA LEVEES, AL (See Section 32A of Text) Replacing or repairing culverts flap gates, installing sluice gates on inside of levee and clearing underbrush.	DPR (Sec. 205)
May 30, 2001	DANE AVENUE, WAVELAND, MS (See Section 33 of Text) Provide a 4,500 linear-foot sheetsteel bulkhead with a concrete cap for Shoreline protection.	DPR (Sec. 14)
Nov. 1, 2000	GRAVELINE BAYOU EAST, JACKSON CO., MS (See Section 34 of Text) Provide a 600-foot-long vinyl sheetpile bulkhead with a timber cap for storm damage reduction.	DPR (Sec. 103)
	GULF BREEZE WETLANDS, GULF BREEZE, FL (See Section 35 of Text) Provides for a 200-foot long riprap breakwater to control tidal impacts, and approximately 0.3-acres of productive seagrass beds; 4,000 square feet of emergent salt marsh plants.	DPR (Sec. 206)
Sep. 15, 1999	GULF OF MEXICO, HWY 193, MOBILE CO., AL (See Section 36 of Text) Provide a 5,875 vinyl sheetpile/riprap seawall along Highway 193 to prevent erosion and destruction of highway due to wave action from Gulf of Mexico.	DPR (Sec. 14)
Jun. 13, 2000	GULF SEAWALL, WAVELAND, MS (See Section 37 of Text) Provide a 3,000 foot long sheetsteel concrete bulkhead to protect South Beach Boulevard from erosion, due to wind driven wave action from Mississippi Sound.	DPR (Sec. 14)
Sep. 24, 1999	TEXAS FLAT ROAD, KILN, MS (See Section 38 of Text) Construct a 150-foot revetment, consisting of vinyl sheetpile and riprap, along southeastern slope of the Jourdan River to protect roadway and atrium.	DPR (Sec. 14)
Oct. 23, 1962	OKATIBBEE LAKE, MS (See Section 39 of Text) Provides for a dam and reservoir for flood control, water supply, water quality control, and recreation.	H. Doc. 549, 87th Cong., 2d Sess.
Aug. 18, 1941	TOMBIGBEE RIVER (EAST FORK), MS AND AL (See Section 40 of Text) Provides for alleviation of floods from the Tombigbee River by clearing, snagging, and excavation of 13 cut-off channels, and other related channel improvements.	Special Report on Record in Oct. (P.L. 222) 77th Cong., 1st Sess.
Jul. 23, 1958 Jul. 8, 1980	TOMBIGBEE RIVER TRIBUTARIES, MS AND AL (See Section 41 of Text) Provides for improvement of 22 tributaries of Tombigbee River. Extends project limits on Twenty Mile Creek and eliminates local cooperation for this remedial work.	H. Doc. 167, 84th Cong., 1 st Sess. Supplemental Appropriations and Recession Act
Oct. 13, 1988 ²	UPPER GORDON CREEK, HATTIESBURG, MS (See Section 42 of Text) Real Estate acquisition of nine (9) residences; habitat mitigation and channel enlargement.	DPR (Sec. 205) 1980 (P.L. 96-304)
	VILLAGE CREEK, JEFFERSON COUNTY, BIRMINGHAM, AL (See Section 43 of Text)	

TABLE 10-B (Continued) AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Nov. 17, 1986	Basically nonstructural and includes evacuating 642 structures in six separate neighborhoods from floodplain; enlarge 2 miles of channel and relocate necessary facilities; Install flood warning devices.	Water Resources Development Act of 1986 (P.L. 99-662)
Nov. 28, 1990	Authorized the Secretary to acquire private vacant lands within the definite project boundaries established in the Real Estate Design Memorandum as a nonstructural element of the project.	Water Resources Development Act of 1990 (P.L. 101-640)
MULTIPLE PURPOSE PROJECTS INCLUDING POWER ALABAMA-COOSA RIVERS, AL AND GA (See Section 1 of Text)		
Mar. 2, 1945	Provides for full development of Alabama-Coosa Rivers and tributaries for navigation, flood control, power, recreation, and other purposes. Authorized construction of Carters Lake, GA, Claiborne Lock and Dam, AL, Jones Bluff Lock and Dam, AL, and Millers Ferry Lock and Dam, AL.	H. Doc. 414, 77th Cong., 1 st Sess.
Jun. 28, 1954	Suspended comprehensive plan to permit non-Federal interests to develop Coosa River by constructing series of dams.	Public Law 436, 83 rd Cong.
May 25, 1982	Designated change of name from Jones Bluff to Robert F. Henry Lock and Dam.	S.2034 97 th Cong., 2d Sess.
Nov. 17, 1986	Modification to the plan for the Coosa River segment of the waterway between Montgomery and Gadsden, AL to carry out planning, engineering and design in accordance with the Montgomery to Gadsden, Coosa River Channel, AL Design Memorandum No. 1, General Design, dated May 1982.	Water Resources Development Act of 1986 (P.L. 99-662)
ALLATOONA LAKE, COOSA RIVER BASIN, GA (See Section 47 of Text)		
Aug. 18, 1941	Provides for dam and reservoir for flood control, regulation of stream flow for navigation, development of hydroelectric power and recreation.	Public Law 228, 77 th Cong., 1 st Sess.
Dec. 22, 1944		H. Doc. 674, 76 Cong., 3d Sess.
APALACHICOLA, CHATTAHOOCHEE AND FLINT RIVERS, AL, GA AND FL (See Section 3 of Text)		
Mar. 2, 1945	Development of Apalachicola, Chattahoochee, and Flint Rivers for navigation, flood control, hydropower, and recreation.	H. Doc. 342, 76th Cong., 1 st Sess.
Jul. 24, 1946	Modified general plan for full development of Apalachicola, Chattahoochee, and Flint River System and authorized construction of Lake Sidney Lanier multipurpose reservoir.	H. Doc. 300, 80th Cong., 1 st Sess.
Dec. 22, 1944	Authorized recreation facilities.	
Jan. 27, 1981 ¹	Modified the existing project to provide for 9- foot deep by 100-foot wide side channel into the Apalachicola River Industrial Park, Blountstown, FL.	DPR (Sec. 107)
APALACHICOLA, CHATTAHOOCHEE, AND FLINT		
Nov. 17, 1986	Modified Rivers and Harbors Act of 1945 to restore and maintain access to bendways and interconnecting waterways in the course of routine maintenance dredging; and to acquire lands for and to construct, operate, and maintain water-related public use and access facilities.	Water Resources Development Act of 1986 (P.L. 99-662)
LAKE SIDNEY LANIER, GA (See Section 48 of Text)		
Jul. 24, 1944	Provision of recreation facilities.	
GEORGE W. ANDREWS LOCK AND DAM, AL AND GA (See Section 3A of Text)		
Jul. 24, 1946	Construction of high dam at Walter F. George site and low dam at George W. Andrews site.	H. Doc. 300, 80th Cong., 1 st Sess.
Dec. 22, 1944	Provided recreation facilities.	
JIM WOODRUFF LOCK AND DAM, GA AND FL (See Section 50 of Text)		
Dec. 22, 1944	Provided for recreation facilities.	
WALTER F. GEORGE LOCK AND DAM, AL AND GA (See Section 53 of Text)		
May 19, 1953	Authorized construction of high dam at Walter F. George site and low dam at Columbia site.	H. Comm. On Public Works
WEST POINT LAKE, CHATTAHOOCHEE RIVER BASIN, GA AND AL (See Section 54 of Text)		
Oct. 23, 1963	Authorized construction for flood control, power, recreation, fish and wildlife development, and streamflow regulation for downstream navigation.	H. Doc. 570, 87th Cong., 2d Sess.

1. Authorized by Chief of Engineers under Section 107 of 1960 River and Harbor Act, as amended.
2. Authorized by Chief of Engineers under Section 205 of Flood Control Act of 1948, as amended.
3. Authorized by Chief of Engineers under Section 208 of Flood Control Act of 1954, as amended.
4. Authorized by Chief of Engineers under Section 14 of Flood Control Act of 1946, as amended.

For list of reports completed by Mobile District for FY 1965 thru FY 1974, see FY 1974 Annual Report, page 10-50; reports completed in FY 1975 see FY 1975 Annual Report, page 10-44; and for reports completed in FY 1976 and FY 1977, see FY 1977 Annual Report, page 10-46. See page 10-48 FY 1978 Annual Report for FY 1978 reports, and see page 10-43 FY 1984 Annual Report for FY 1978 through FY 1984 reports.

NEW ORLEANS, LA, DISTRICT

District comprises a portion of Louisiana, embraced in drainage basins tributary to Mississippi River and Gulf of Mexico, except Mississippi River above mile 325.5 above Head of Passes (AHP), drainage area of Ouachita-Black River Basin, and small eastern and western portions of Louisiana tributary to Pearl River and Sabine River and Lake. The New Orleans District territory encompasses 30,000 square miles.

It includes sections of the Gulf Intracoastal Waterway from Lake Borgne Light 29 at the mouth of Pearl River to Sabine River, and the Passes of the Mississippi River. It exercises jurisdiction over flood control work on Mississippi River from mile 325.5 AHP to Gulf of Mexico; Atchafalaya River; and in Atchafalaya Basin; and maintenance of project navigation channel of Mississippi River below mile 325.5 AHP, under supervision of President, Mississippi River Commission (MRC), and Division Engineer, Mississippi Valley Division.

1. INNER HARBOR NAVIGATION CANAL LOCK, LA

Location. The project is located within the city of New Orleans, Louisiana. It is a deep and shallow draft canal extending northward from the Mississippi River to Lake Pontchartrain.

Existing project. The existing Inner Harbor Navigation Canal Lock, built in 1920 by the Port of New Orleans, has dimensions of 31.5 feet deep, 75 feet wide, and 640 feet long (usable length). It passes barge traffic between the Mississippi River and the Gulf Intracoastal Waterway and is a vital link in the nation's Inland Waterway System. Delays to the navigation traffic average about 11 hours, with 24-36 hour delays common. The average yearly tonnage through the lock is about 20 million tons, 2/3 of which is coal, petroleum products, and crude petroleum. Other major commodities include metallic ores, industrial chemicals and non-metallic minerals. Two major vehicular roadway bridges (Claiborne and St. Claude Avenues) and one railroad/roadway bridge (Florida Avenue) cross the canal in the vicinity of the existing lock. The Corps of Engineers bought the lock from the Port of New Orleans in 1985.

Local cooperation. The cost sharing for the replacement lock is specified in the Water Resources Development Act of 1986. The costs of the new lock were apportioned between general cargo navigation and inland navigation. Costs assigned to inland navigation are shared 50 percent from the Inland Waterway Trust Fund and 50 percent from regular Corps of Engineer's appropriations. Those costs assigned to general cargo navigation, will be cost shared 65 percent Federal and 35 percent non-Federal, with the Port of New Orleans, who signed a non-Federal Project Cooperation Agreement (PCA) in Sep. 2001. The Recommended Plan is 40 feet deep by 110 feet wide by 1200 feet long (usable length) and is estimated to cost \$635,000,000.

Terminal facilities. Two container ship berths and one other ship wharf are located on the canal in the vicinity of the existing lock.

Operations and results during the fiscal year. The final Evaluation Report for the Replacement Lock, including a Community Impact Mitigation Plan, was approved by HQUSACE in Feb. 1998 and Supplement No. 1 to the Evaluation Report was approved in Sep. 2000. Detailed engineering and design for the replacement lock has continued. A contract for a test pile program was awarded in FY 99 and continued through FY 02. Also an initial job training program was completed in FY 01 as part of the Community Impact

Mitigation Plan. The Community Impact Mitigation Plan was specifically authorized to be a feature of this project in the Water Resources Development Act of 1996, and elements of the plan continued to be implemented through FY 02 and beyond.

Condition as of Sep 30. Initiation of construction was authorized in the FY 99 Appropriations Act. Demolition of existing facilities on both banks of the canal between Claiborne Ave. and Florida Ave. began in FY 01 and continued through FY 02.

2. MISSISSIPPI RIVER-GULF OUTLET, LA

Location. In State of Louisiana and the territorial waters of the United States and extends from existing Inner Harbor Navigation Canal at a point 7,500 feet north of existing IHNC lock and about 11,000 feet from Mississippi River, to a turning basin south of Michoud, LA, and then as a land and water cut from turning basin south of Michoud, LA, southeasterly to and along south shore of Lake Borgne and through marshes to and through Chandeleur Sound to 38-foot contour in Gulf of Mexico. (Refer to NOAA Coast Charts Nos. 11340, 11360, 11363, 11369, 11371, and 11373. Also see MRC 1989 (57th edition) folio of maps, Mississippi River-Cairo, IL, to Gulf of Mexico, LA.)

Existing project. Provides for a seaway canal, 36 by 500 feet, extending 76 miles as a land and water cut from Michoud southeasterly to and along south shore of Lake Borgne, and across Chandeleur Sound to Chandeleur Island and increasing gradually to 38 by 600 feet in Gulf of Mexico, with protective jetties at entrance, a permanent retention dike through Chandeleur Sound, and a wing dike along islands as required. It also provides for an inner tidewater harbor consisting of 1,000- by 2,000-foot turning basin 36 feet deep at landward end of seaway canal, and a connecting channel 36 by 500 feet wide extending easterly along Gulf Intracoastal Waterway from turning basin, including construction of a suitable highway bridge with approaches to carry Louisiana State Highway 47 (formerly 61) over channel. Plan further provides for future construction of a channel and lock in the vicinity of the existing lock to furnish an additional connection between tidewater harbor and Mississippi River. (See "Inner Harbor Navigation Canal Lock, LA" for more details).

Reevaluation studies to determine the economic feasibility of continuing to maintain the 36-foot depth in the channel were initiated in FY 99, all at Federal expense. Concerns about increased maintenance dredging costs and ecosystem deterioration prompted the study.

Local cooperation. Requirements of local cooperation are fully described on page 11-4 of FY 1986 Annual Report.

Terminal facilities. A public facility on the waterway is the Public Bulk Terminal of New Orleans constructed by Board of Commissioners, Port of New Orleans, on left descending bank at Mile 63. Two container ship berths are in operation at the Industrial Canal end of the seaway.

Operations and results during fiscal year. Four dredging contracts for removal of 6,773,441 cubic yards of material from the channel at a cost of \$10,546,470 were completed in FY 02. One contract to maintain the north bank foreshore dike at a cost of \$798,374 was completed in FY 02. Engineering and economic studies for the reevaluation report continued in FY 02.

Condition as of Sep. 30. Construction was initiated March 1958. The channel unit is 90 percent complete and the shiplock unit is 0 percent complete. The total project is 75 percent complete. The channel was opened to navigation Jul. 25, 1963, and completed Jan. 20, 1968. Paris Road Bridge was opened to traffic Jul. 21, and completed Nov. 14, 1967. The foreshore protection, south bank, Chalmette Area, Station 367+00 to Station 1007+00 is complete.

3. MISSISSIPPI RIVER SHIP CHANNEL, GULF TO BATON ROUGE, LA

Location. The project is located in the southeastern portion of Louisiana below Baton Rouge, and consists of the Mississippi River and its major outlet to the Gulf of Mexico, Southwest Pass.

Existing project. Provides more efficient deep-draft navigation access to the New Orleans and Baton Rouge reaches of the Mississippi River via Southwest Pass by enlarging the existing channel to a project depth of 55 feet and enlarging the adjacent channel along the left descending bank in New Orleans Harbor to a 40-foot depth, a turning basin at Baton Rouge, and training works in the passes to reduce maintenance.

Estimated cost of existing project (Oct. 1, 2002) is \$189,800,000 Federal and \$475,000,000 non-Federal. In addition, the Coast Guard is to provide navigation aids at an estimated cost of \$1,200,000.

Local cooperation. Requirements are described in full on pages 11-2 and 11-3 of the FY 92 Annual Report.

A third supplement to the LCA addressing the Permanent Saltwater Intrusion Mitigation Plan was executed on May 28, 1993.

A Project Cooperation Agreement (PCA) between the Government and the State of Louisiana was executed on Sep. 3, 1993 which provides for the dredging of a 45-foot channel from Mile 181 AHP to Baton Rouge.

Terminal facilities. See Mississippi River, Baton Rouge to the Gulf of Mexico, LA.

Operations and results during fiscal year. Construction is underway on the permanent mitigation plan. The permanent mitigation plan consists of the Government constructing an underwater sill, when needed, at Mile 64 AHP to prevent the intrusion of saltwater into water supplies of the metropolitan New Orleans area. The plan also provides for upgrading the Plaquemines Parish water distribution system to provide fresh water to water treatment plants impacted by increased saltwater intrusion caused by the deeper channel. A supplemental LCA for this work was executed on May 28, 1993. The underwater sill was constructed during FY 99 due to extremely low flows in the river which allowed salt water to threaten up river water supplies. The sill was successful in preventing impacts to these facilities. One contract to maintain the pile dikes at a cost of \$6,932,000 was completed in FY 00. Construction of soft dikes at Medora Crossing was completed at a cost of \$3,398,000 as part of our effort to lower maintenance dredging cost in FY 00.

We have initiated work on the General Design Memorandum for the remaining authorized features of the project. This includes the deepening of the Mississippi River to 55 feet from the Gulf of Mexico to Baton Rouge.

Condition as of Sep. 30. The 45-foot channel is completed from the Gulf to Baton Rouge. Construction of the permanent mitigation plan is underway. Work on the General Design Memorandum for the remaining authorized features continues.

4. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Navigation activities pursuant to Sec. 107, Public Law 86-645, as amended (preauthorization).

Preauthorization studies costs for FY 02 were Section 107 Coordination, \$10,000, Port Fourchon Extension for \$19,507, Short Cut Canal for \$18,978 and Cameron Oil Port for \$27,218.

Flood Control

5. AMITE RIVER AND TRIBUTARIES, LOUISIANA, EAST ROUGE PARISH WATERSHED

Location. In East Baton Rouge Parish, LA, consisting of the following five watersheds in the metropolitan Baton Rouge area: Jones Creek, Ward Creek, Bayou Fountain, Beaver Bayou, and Blackwater Bayou.

Existing project. The project will provide protection to residents of the metropolitan Baton Rouge area by reducing stages in the five waterways through clearing and snagging, earthen channel improvement and concrete lining of the waterways. The authorized project consists of modifying approximately sixty-six (66) total miles of channel. This involves approximately twenty-five (25) miles of minimal channel clearing and snagging, twenty-four (24) miles of earthen channel enlargement, and seventeen (17) miles of channel concrete lining. Included in the proposed construction are sixty (60) miles of stream bank aesthetic tree planting. Fish and wildlife mitigation feature consist of the reforestation of 397 acres of cleared land to compensate for an estimated 280 acres of bottomland hardwoods that would be lost to project construction. The authorized channel modifications for Beaver Bayou, Ward Creek, and Bayou Fountain are designed to have a ten percent chance of being out of bank in any one year. Blackwater Bayou and Jones Creek channel modification are designed to have a four percent and two percent chance, respectively, of being out of bank in any one year. The proposed project would reduce the extent of the Federal Emergency Management regulatory flood plain throughout the area. The estimated first costs at the October 2002 price levels is \$167,705,000 (\$108,408,000 – Federal, \$59,297,000 – non-Federal).

Local cooperation. The cost sharing provisions contained in the Water Resources Development Act of 1999 require that local interests shall provide cost sharing in accordance with the Chief of Engineers report dated December 23, 1996. The project requires that the local sponsor provide all land, easements, rights-of-way, relocations, and disposal areas (LERRD's) needed for project construction. In lieu of a portion of the cash contribution, the sponsor will perform work-in-kind, including design, construction and management of the proposed channel modifications for the Bayou Fountain Watershed, and perform all necessary clearing and snagging for channel modification on Beaver Bayou, Blackwater Bayou, Weiner Creek and Dawson Creek. Cost sharing for the flood

damage reduction features is in accord with the cost sharing specified by the Water Resources Development Act of 1986 (WRDA 1986), as amended by Section 202(a) and 202(c) of the Water Resources Development Act of 1996 (WRDA), and the Consolidated Resolutions Appropriation 2003.

Condition as of Sep. 30. A Post Authorization Change has been submitted for HQUSACE review. Plans and specifications for Jones Creek #1 was initiated in FY 02 and will continue in FY 03. Once the PAC has been approved, a supplemental Chief's report is anticipated that would increase the work-in-kind provisions.

6. COMITE RIVER (DIVERSION), LA

Location. In East Baton Rouge Parish, LA, between the Comite River and the Profit Island Chute of the Mississippi River, north of the town of Baker, LA, and south of the town of Zachary, LA.

Existing project. The project will provide protection for residents of the Comite River Basin by reducing stages in the river below the diversion point for events up to the 100-year flood event, and containing within banks events up to the 10-year flood event. The authorized project consists of construction of an eight-mile diversion channel from the Comite River to an outfall into Lilly Bayou, and then a four-mile diversion along Lilly and Cooper Bayous to the Profit Island Chute of the Mississippi River. The project also includes a diversion structure in the new channel near the diversion point, and an outfall structure near and at the outfall into Lilly Bayou, and four control structures at the intersections of Whites, Cypress and Baton Rouge Bayous, the fourth near McHugh Road. Disposal areas will be constructed along both banks of the new channel to retain the flood waters from the Comite River along both side of the new channel, and clearing and snagging of White, Cypress and Baton Rouge Bayous north of the diversion channel will also be done. Mitigation for the project includes the planting of trees on cleared land near the diversion point and on portions of the disposal area, the protection and management of existing forested lands near the diversion point. Upgrading two gauging stations and installing six new gauging stations to assist in flood prediction is also included in the project. The current approved cost of the project is \$163,000,000, including \$115,000,000 Federal cost and \$48,000,000 non-Federal cost. The Water Resources Development Act of 1999 authorized the Secretary to include the costs of highway relocations to be cost shared as project construction features.

Local cooperation. The cost sharing provisions contained in the Water Resources Development Act of 1986 require that local interests shall: (a) Provide to the Federal Government all lands, easements, rights-of-way, and dredged material disposal areas, and perform the necessary relocations required for construction, operation, and maintenance of the project (Current estimate is \$39,610,000); and (b) Provide to the Federal Government a cash contribution equal to 5 percent of the total cost of the project, excluding cultural resources (Current estimate is \$8,390,000). The total cost of items (a) and (b) mentioned above is limited to 50 percent of the total cost of the project.

Operations and results during the fiscal year. In FY 02, efforts continued with pre-construction, engineering and design for the Lilly Bayou Control Structure and right-of-way acquisition.

Condition as of Sep. 30. The Project Cooperation Agreement (PCA) was signed in Oct 2001 and the Real Estate Memorandum of Agreement (MOA) was signed March 2002. Award and start of construction for the Lilly Bayou Control Structure, Phase 1, is planned for FY 03, as well as continuing right-of-way acquisition and E&D of other project features.

7. GRAND ISLE AND VICINITY, LA

Location. In south Jefferson Parish, LA, along the Gulf of Mexico, about 50 miles south of New Orleans and 45 miles northwest of Southwest Pass (Mississippi River).

Existing project. The project provides protection from waves driven by hurricanes that have a frequency of recurrence of up to once in every 50 years. The plan consists of a berm and vegetated dune extending the length of Grand Isle's gulf shore and a jetty to stabilize the western end of the island at Caminada Pass. The dune has a 10-foot-wide crown at an elevation of 11.5 feet NGVD, 1 on 5 side slopes, and protective vegetation. The sandfill berm slopes from an elevation of 8.5 feet NGVD at the toe of the dune 180 feet gulfward to an elevation of 3 feet NGVD and, from this point, assumes its natural slope to the offshore bottom. The jetty provided by the plan has a top width of 6 feet at an elevation of 4 feet mean sea level, 1 on 2 side slopes, and extends approximately 3,600 feet along the western end of the island at Caminada Pass. Estimated cost of project (October 1991) is \$20,933,000 Federal and \$12,567,000 non-Federal, including \$7,157,484 contributed funds. The repair and restoration of Grand Isle were accomplished by two separate contracts. The jetty extensions and sand bar removal contract (partial fix), was completed in early 1988. The dune repair and

structural reinforcement contract was physically completed Sep. 4, 1991. The project has been turned over to the State of Louisiana for operation and maintenance.

The 1992 Dire Emergency Supplemental Appropriations Act provided funds to repair damage to the wave berm and dune caused by Hurricane Andrew and to add offshore breakwaters to the project as an integral part of the repair. The original plan was to construct 27 breakwater segments; however, only 23 breakwater segments were constructed due to limited federal funds. 19 additional breakwater segments were built in the summer of 1999 by the local sponsor.

Local cooperation. Requirements are described in full on page 11-4 of the FY 92 Annual Report. An additional \$4,750,000 was deposited in escrow to complete restoration of the dune which was completed on Sep. 4, 1991. The existing sand and beach dune have been damaged as a result of a series of storms between 1998 and 2002. PL-99 Federal assistance has been requested to repair the damages caused by the latest Hurricane Lili and Tropical Storm Isidore.

NORTH SHORE PROJECT

The Water Resources Development Act of 1996 authorized construction of \$17 million of additional improvements to the region subject to approval of a report justifying the improvements. The District received \$250,000 to initiate the study. The study is considering improvements, building breakwaters along the north side of the island, and the north side of Fifi Island.

The Water Resources Development Act of 1999 authorized the Secretary to consider shore protection benefits that the project provides to the main land coast of Louisiana.

The current estimated cost of the study is \$1,300,000, with the draft report scheduled to be issued in Nov. 2003, and completion of the study scheduled for Feb. 2004.

8. LAKE PONTCHARTRAIN AND VICINITY, LA (HURRICANE PROTECTION)

Location. In southeastern Louisiana, vicinity of New Orleans, in St. Charles, Jefferson, Orleans, St. Bernard, and St. Tammany Parishes, comprising lower land and water area between the Mississippi River alluvial ridge and the Pleistocene escarpment to north and west. The dominant topographic feature is Lake Pontchartrain, a shallow tidal basin, about

640 square miles in area and averaging 12 feet deep, connecting with lesser Lake Maurepas to the west and through Lake Borgne and Mississippi Sound to the Gulf to the east. The lake drains about 4,700 square miles of tributary area. (Refer to Geological Survey quadrangles Yscloskey and Malheureaux Point, Drum Bay, Door Point, Lake Eugenie, Oak Mound Bayou, Mitchell Keys, Lake Eloi, and Morgan Harbor; Engineer quadrangles Slidell, Covington, Ponchatoula, Springfield, Denham Springs, Donaldsonville, Mt. Airy, Bonnet Carre', Spanish Fort, Chef Menteur, Rigolets, St. Bernard, New Orleans, and Hahnville; and Coast and Geodetic Survey Charts Nos. 1115 and 1116.

Existing project. Provides protection to that part of the greater New Orleans area east of the Mississippi River and other communities bordering Lake Pontchartrain from the effects of hurricane-generated floods. The project is comprised of two major features: The Chalmette Area Plan and the High Level Plan. The Chalmette Area Plan consists of a levee and floodwall system around the Chalmette area and along the Mississippi River-Gulf Outlet, with connections to the Mississippi River levees. The High Level Plan provides for heightening and strengthening the existing hurricane protection levee systems in Orleans Parish and the east bank of Jefferson Parish, repairing and rehabilitating the Mandeville Seawall in St. Tammany Parish; building a new mainline hurricane levee on the east bank of the St. Charles Parish just north of U.S. Highway 61 (Airline Highway); raising and strengthening the existing levee which extends along the Jefferson-St. Charles Parish boundary between Lake Pontchartrain and Airline Highway; and deferring construction of the proposed Seabrook lock until its feasibility as a feature of the Mississippi River-Gulf Outlet navigation project can be determined. Areas which will be enclosed by the levee and floodwall construction will be provided protection against tidal surge resulting from the Standard Project Hurricane (SPH). The estimated project cost for work (October 2002) is \$XXX,000,000 Federal and \$XXX,000,000 non-Federal.

Local cooperation. Requirements are described in full on page 11-5 of the FY 92 Annual Report.

Operations and results during fiscal year. Preparation of design memorandums and plans and specifications continued by hired labor, Architect-Engineer Contractors, and the local sponsors.

A change from the original Barrier Plan to the current high level plan was approved in February 1985 by the Office, Chief of Engineers.

A draft mitigation report with corresponding EIS was prepared and distributed for public review on Mar. 16, 1988, and subsequently approved. The Louisiana Department of Natural Resources agreed to fund the Local Sponsor's share of mitigation and a segmented shoreline protection dike was constructed in FY 97.

Condition as of Sep. 30. Construction started May 1967 and is 90 percent complete.

In FY 03, we will initiate award of eight construction contracts, continue four ongoing construction contracts, and complete three construction contracts.

9. LAROSE TO GOLDEN MEADOW, LA (HURRICANE PROTECTION)

Location. In coastal section of Louisiana, along Bayou Lafourche, and includes lands on both banks of the bayou from Larose to 2 miles south of Golden Meadow. (Refer to Geological Survey quadrangles Cutoff, Lake Felicity, Bay Dosgris, Golden Meadow Farms, Bay Tambour, Mink Bayou, Caminada Pass, Leeville, Belle Pass, Pelican Pass, and Calumet Island; Engineer quadrangles New Orleans, Hahnville, Point a la Hache, Barataria, and Fort Livingston; and Coast and Geodetic Survey Charts Nos. 1115 and 1116.)

Existing project. Provides a loop levee about 40 miles long along both banks of Bayou Lafourche from Larose to South Golden Meadow; enlargement of 3 miles of existing levee at Golden Meadow; floodgates for navigation and hurricane protection in Bayou Lafourche at upper and lower bayou crossings; about 8 miles of low interior levees to regulate intercepted drainage. Estimated cost for new work (October 2002) is \$81,000,000 Federal and \$35,000,000 non-Federal.

Local cooperation. Requirements are described in full on page 11-6 of the FY 92 Annual Report.

Operations and results during fiscal year. One 2nd Lift contract and one 3rd Lift contract and the Pointe Au Chiene mitigation levee were completed in FY 02.

Condition as of Sep. 30. In FY 02, construction was completed on the 2nd lift for one levee reach and the 3rd lift for another levee reach. Construction was also completed for a second lift on the Point Au Chien mitigation levee. In FY 03, the Post authorization change report for the Leon Theriot Lock will be completed and detailed design will be initiated.

Construction commenced in February 1972 and is 95 percent complete.

10. NEW ORLEANS TO VENICE, LA, HURRICANE PROTECTION

Location. Includes land subject to inundation by hurricane tides extending along both banks of the Mississippi River below New Orleans from vicinity of Phoenix to Venice, LA.

Existing project. Provides for improvements along Mississippi River below New Orleans, LA, for prevention of hurricane tidal flood damages by increasing heights of existing back levees and modifying existing drainage facilities where necessary in three separate reaches: Reach A, on the west bank from St. Jude to Tropical Bend, 18 miles, 4,340 acres protected; Reach B, on the west bank from Tropical Bend to Venice, 21 miles, 4,900 acres protected; and Reach C, on the east bank from Phoenix to Bohemia 16 miles, 5,470 acres protected, and raising the river levee on the west bank (MR&T levee) from City Price to Venice, to a grade high enough to prevent overtopping by tidal surges from the east, generally called the West Bank River Plan. Reach B was later divided into two units, Reach B-1 from Tropical Bend to Fort Jackson and Reach B-2 from Fort Jackson to Venice, LA, as a result of a request made by the local agency.

Estimated cost of new work (October 2002) is \$175,000,000 Federal and \$75,000,000 non-Federal.

Local cooperation. Provide all lands, easements, and rights-of-way including borrow areas and spoil disposal areas necessary for the construction of the project, at costs presently estimated at \$9,032,000; accomplish all necessary alterations and relocations to roads, pipelines, cables, wharves, and other facilities required by the construction of the project at costs presently estimated at \$5,698,000; bear 30 percent of the first cost, a sum presently estimated at \$75,000,000, and cash contribution or equivalent work presently estimated at \$60,270,000 to be paid either in a lump sum prior to initiation of construction or in installments prior to start of pertinent work items.

The local sponsor has requested that an area extending from the upstream limits of Reach A at City Price to St. Jude, Louisiana be incorporated into the project. This work involves upgrading 3.3 miles of existing non-Federal levees to project standards. The local sponsor has elected to pay all of the costs of this reach of levee. While the sponsor will not receive credit for these costs, the increased protected area is eligible for Federally subsidized flood insurance. Savings to the

project achieved by a portion of levee no longer being required at the upstream end of Reach A, is creditable to the local sponsor. A Post Authorization Change report was prepared for this reach and was approved by the Lower Mississippi Valley Division on Mar. 6, 1992. Supplemental assurances for the City Price to St. Jude reach were accepted on Feb. 18, 1993.

Assuring Agency: Plaquemines Parish Government. Assurances for all reaches of the project have been furnished.

Requirements are described in full on page 11-7 of the FY 92 Annual Report.

Operations and results during fiscal year. Construction during FY 02 was initiated on WBRL, Sta. 1319-1797, 2nd Enlargement.

There are no new awards scheduled for FY 03.

Condition as of Sep. 30. Construction began on the project in September 1968 and the total project is approximately 80 percent complete.

11. SOUTHEAST LOUISIANA URBAN DRAINAGE PROJECT (FLOOD CONTROL)

Location. The authorized project is located in Orleans, Jefferson and St. Tammany Parishes. Features in Orleans Parish (city of New Orleans) are located on the east bank of the Mississippi River. Work in Jefferson Parish is located on the east and west banks of the Mississippi River in the vicinity of New Orleans, LA. St. Tammany Parish features are located in the southern portion of the parish, near Lake Pontchartrain, in and around the communities of Slidell, Mandeville, Madisonville, Abita Springs, and Lacombe, LA.

Project features. The work in Orleans Parish consists of enlargement of a major pumping station and work on two other stations; and improvements to about seven drainage canals and underground drainage lines. Jefferson Parish features include improvements to five pumping stations and almost thirty drainage canals. Work in St. Tammany includes: channel improvements, retention ponds, levees, and structure raising.

Local cooperation. The project requires that the local sponsor(s) provide all lands, easements, rights-of-way, relocations, and disposal areas (LERRDs) needed for project construction, as well as a minimum five percent cash contribution. The total (value) of the locals share must be a minimum of twenty-five percent of the project total, but not exceed fifty percent of the project total. Jefferson Parish and the Sewerage and Water

Board of New Orleans executed the Project Cost-sharing Agreements (PCAs) in January 1997.

Operations and results during fiscal year. Local interests in Jefferson and Orleans parishes continued (and in some instances, completed) some of the design and construction of features authorized in the project, for which they will get credit. Architect-Engineer contractors, working for both the Corps and the parishes, are doing most of the design work. Federal construction began in March 1997.

Eight additional investigations are underway, four in Jefferson Parish and four in Orleans Parish, to determine whether there are more Federally justified plans for improving drainage. Five of the studies are expected to conclude in FY 03 and the remaining three in FY 04. These studies are required to justify additional improvements to Orleans and Jefferson primary drainage systems.

Condition as of Sep. 30. Forty Federal contracts were awarded through FY 01. Funding constraints in FY 02 prevented the award of any new contracts. Twenty contracts remain to be awarded in Orleans and Jefferson Parishes. The project is about 60 percent complete.

12. WEST BANK AND VICINITY, NEW ORLEANS, LA, HURRICANE PROTECTION

Location. The project is located in Jefferson, Orleans and Plaquemines parishes on the West Bank of the Mississippi River in the vicinity of New Orleans, Louisiana.

The project area generally extends from the Jefferson-St. Charles Parish line to the community of Oakville in Plaquemines Parish and is bounded by the Mississippi River on the north and east and Lakes Cataouatche and Salvador and the GIWW on the south and west. The original project was from Westwego to Harvey Canal but has been expanded to include the area East of Harvey Canal and also the Lake Cataouatche area. These two areas were authorized by WRDA 96.

Existing project. The total project consists of about 57 miles of new and enlarged earthen levee, 9 miles of floodwall, a navigable floodgate in the Harvey Canal below Lapalco Boulevard, a discharge channel and 1,000 cfs capacity increase at the Cousins Pump Station. The protection is designed to protect against tidal floodwaters resulting from the Standard Project Hurricane (SPH).

The SPH has a frequency of recurrence of one in 500 years. The elevation of the SPH protection varies

from 9 feet NGVD to 12 feet NGVD. The project plan includes mitigation which consists of the construction of a timber pile and tire breakwater on the west bank of Lake Cataouatche adjacent to the Salvador Wildlife Management Area and the acquisition of approximately 1,300 acres of forested wetlands which will be managed to improve habitat quality.

The estimated project cost (October 2002) is \$313,000,000. (\$203,000,000 Federal and \$110,000,000 non-Federal).

Local cooperation. The project requires that the local sponsor provide all lands, easements, rights-of-way, relocations, and disposal areas (LERRDs) needed for project construction. The total (value) of the sponsors share must be a minimum thirty-five percent of the total project costs, in cash or creditable work.

Funds provided by non-Federal interests for interim hurricane protection on the Westwego to Harvey Canal area may be considered beneficial expenditures and may be credited as part of the non-Federal contribution of the project pursuant to the WRDA of 1986.

The Louisiana Department of Transportation and Development and West Jefferson Levee District executed amendment number 1 of the local cooperation agreement in April 1999.

Operations and results during fiscal year. One construction contract was awarded during FY 02 in the Westwego to Harvey Canal area. One construction contract was awarded during FY 02 in the East of Harvey Canal area (West of Algiers Canal).

Conditions as of September 30. Project construction began in February 1991 and the total project is approximately 25 percent complete. The project is currently scheduled for completion in 2014.

13. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Various hurricane protection projects, as well as small flood control projects, were inspected during FY 01. Also, periodic inspection and continuing evaluation of completed civil works structures was conducted in accordance with ER 1110-2-100, at various times during the year on an as needed basis.

Fiscal year costs for the period were \$357,602. Total costs to Sep. 30, 2001 were \$6,309,814.

14. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Emergency flood control activities—repair, flood fighting, and rescue work. (Public Law 99, 84th Cong., and antecedent legislation.)

Disaster preparedness, fiscal year costs for the period were \$336,499. There were no emergency or rehabilitation cost for FCCE in FY 01.

See Table 11-F.

15. PROTECTION OF NAVIGATION

During FY 01, operation and maintenance costs were \$18,271 on Project Condition Surveys and \$5,165,278 for Waterborne Commerce Statistics.

16. CATASTROPHIC DISASTER REPAIREDNESS ROGRAM

During FY 01, operation and maintenance costs were \$0 on Local Preparedness; \$182,270 on National Preparedness; \$5,936 on National Emergency Facilities; and \$377 Disaster Training and Exercise. Total costs for FY 01 were \$188,206.

17. COASTAL WETLANDS PLANNING, PROTECTION AND RESTORATION

Location. The coastal parishes of Louisiana.

Authority. Activities were authorized by the Coastal Wetlands Planning, Protection and Restoration Act (CWPPRA) (Title III of Public Law 101-646, dated Nov. 29, 1990), which established the Louisiana Coastal Wetlands Conservation and Restoration Task Force. The Task Force consists of the Secretary of the Army (chairman); the Administrator of the Environmental Protection Agency; the Governor of the State of Louisiana; the Secretary of the Interior; the Secretary of Agriculture; and the Secretary of Commerce.

Local cooperation. The conditions of local cooperation are established by this act.

Condition of Sep. 30. The first Priority List (PPL) was approved by the Task Force on Oct. 31, 1991. Fourteen projects were named on the list. Funds in the amount of \$37.3 million (\$28.1 million Federal, \$9.2 million State) were made available for construction of these projects. The Task Force has given final approval for construction for all 14 projects. Of the 14 projects, construction has been completed on

11: Bayou Labranche Wetlands Restoration, Apr. 94; Cameron Prairie Refuge Shoreline Protection, Aug. 94; Sabine Wildlife Refuge Erosion Protection, Mar. 95; Vermilion River Cutoff Bank Protection, Feb. 96; Lake Salvador Shoreline Protection at Jean Lafitte, Mar. 96; Bayou Sauvage #1, May 96; Barataria Bay Waterway Marsh Creation, October 96; Vegetative Planting Demo, December 96; Cameron-Creole Watershed Hydrologic Restoration, Jan. 97; Isles Dernieres (Phase 0), June 99; and GIWW Clovelly Wetland Restorations, Oct. 00. One project is scheduled to begin construction in FY 03, West Bay Sediment Diversion.

The 2nd PPL was approved by the Task Force on Oct. 19, 1992. Fifteen projects were named on the list. Additional funds in the amount of \$39.5 million (\$28.2 million Federal, \$11.3 million State) were made available for construction of these projects. The Task Force has given final approval for construction for 14 of the 15 projects. Of the 15 projects, construction has been completed on 13: Vermilion Bay/Boston Canal, Nov. 95; Mud Lake, Jun. 96; Clear Marais Bank Protection, Mar. 97; Point Au Fer, May 97; Bayou Sauvage #2, May 97; Atchafalaya Sediment Delivery, Mar. 98; West Belle Pass Headland Restoration, Jul. 98; Freshwater Bayou, Aug. 98; Big Island Mining, Oct. 98; and Isles Dernieres (Phase 1), Jun. 99; Hwy 384, Jan. 2000; Fritchie Marsh, Mar. 01; and Caernarvon Diversion Outfall Management, Jun. 02. One project, Jonathan Davis, is under construction.

The 3rd PPL was approved by the Task Force on Oct. 1, 1993. Seventeen projects were named. Additional funds in the amount of \$37.3 million (\$29.9 million Federal, \$7.4 million State) were made available for construction of these projects. Engineering and design of several of the projects has been completed, and the Task Force has given final approval for construction for 11 of the 17 projects. Of the 11 projects, construction has been completed on 10 projects; Channel Armor Gap Crevasse, Nov. 97; Lake Salvador Shore Protection, Jun. 98; Cameron Creole Maintenance, Jul. 98; Cote Blanche, Dec. 98; MR-GO Back Dike, Jan. 99; Lake Chapeau, May 99; Brady Canal, May 00; Whiskey Island, Jun. 00; and East Timbalier Island Restoration #1, May 01. One project is under construction: Sabine Refuge Structure-Hog Island. Additionally, one of the deauthorized projects, South West Shore White Lake Demo, was completed in Jul. 96.

The 4th PPL was approved by the Task Force on Dec. 16, 1994. Ten projects were named on the list. Additional funds in the amount of \$33.5 million (30.0 million Federal, \$3.5 million State) were made available for construction of these projects. Engineering and

design on several of the projects has been completed, and the Task Force has given final approval for construction for four of the ten projects. Construction has been completed on three of the 4th PPL projects, Perry Ridge Bank Protection, Feb. 99; Plowed Terraces Demo, Aug. 00; and Barataria Bay Waterway Bank Protection West, Nov. 00. One project is under construction: East Timbalier Island Restoration #2.

The 5th PPL was approved by the Task Force on Feb. 28, 1996. Nine projects were named on the list. Additional funds in the amount of \$40.6 million (\$33.4 million Federal, \$7.2 million State) were made available for construction of these projects. Engineering and design on several of the projects has been completed, and the Task Force has given final approval for construction for six of the nine projects. Six projects have been completed, Racoon Island Breakwaters Demo, Jul. 97, Freshwater Bayou Bank Stabilization, Jun. 98, Little Vermilion Bay Sediment Trapping, Aug. 99; Bayou Chevee, Dec. 01; Naomi Outfall Management, Jul. 02; and Sweet Lake/Willow Lake, Oct. 02.

The 6th PPL was approved by the Task Force on April 24, 1997. Thirteen projects were named on the list. Additional funds in the amount of \$45 million (39.1 million Federal, \$5.9 million State) were made available for construction of these projects and to fund 5th PPL phased projects. Engineering and design on several of the projects has been completed and five projects have completed construction: Barataria Bay Water Bank Protection (East), May 01; Marsh Island Hydrologic Restoration, Dec. 01; Flexible Dustpan Demo, Jun. 02; and Oaks/Avery Canals Hydrologic Restoration, Oct. 02. Three projects are under construction: Nutria Harvest for Wetland Restoration Demo, Sediment Trapping at the Jaws, and Delta-Wide Crevasses.

The 7th PPL was approved by the Task Force on Jan. 16, 1998. Four projects were approved on the list. Additional Federal funds in the amount of \$45.8 million (\$42.5 million Federal, \$3.3 million State) were made available for construction of these projects. Engineering and design on several of the projects has been completed. Construction has been completed on two projects, Thin Mat Float and Marsh Enhancement Demo, May 00; and Grande Terre, Jul. 01. The two remaining project, Barataria Basin Landbridge, Phase 1 and Phase 2, and Pecan Island Terracing are currently under construction.

The 8th PPL was approved on Jan. 20, 1999. Six projects were approved on the list. Additional funds in the amount of \$44.2 million (\$41.9 million federal,

\$2.3-million state) were made available for construction of these projects. Engineering and Design on several projects has begun. One project, Sabine Refuge Marsh Creation, is under construction

The 9th PPL was approved on Jan. 11, 2000. Nineteen projects were approved on the list. However, starting with PPL 9, the Task Force implemented cash flow management policy in which only the Phase 1 design of the projects was approved by the Task Force. After Phase 1 design is completed, the Phase 2 construction of the projects will need separate approval by the Task Force. Additional funds in the amount of \$52.9 million (\$47.9 million Federal; \$5.0 million State) were made available for construction of the projects. Four projects have been approved to proceed to Phase 2 construction. One project, Chandeleur Islands Restoration, was completed Jul. 01. Another project, Perry Ridge to Texas, is under construction.

The 10th PPL was approved on Jan. 10, 2001. Twelve projects were approved for Phase 1 design on the list. Additional funds in the amount of \$52.1 million (\$47.7 million Federal; \$4.4 million State) were made available for construction of the projects. Four projects have received Phase II approval: Delta management at Fort St. Philip, Grand-White Lake Landbridge Restoration, North Lake Mechant, and Terrebonne Bay Shore Protection Demo.

The 11th PPL was approved Jan. 16, 2002. Fourteen projects were approved for Phase I design on the list. Additional funds in the amount of \$74.0 million (\$57.3 million Federal; \$16.7 million State) were made available for construction of the projects. One project has received Phase II approval and is under construction: Coastwide Nutria Control Program.

In response to Section 303(b) of the CWPPRA, the Louisiana Coastal Wetlands Restoration Plan report was published in November 1993. Following public review of the final report, a Record of Decision was prepared, signed by the Task Force chairman and submitted to HQUSACE for transmittal to the ASA(CW). The report proposed \$1.3 billion worth of projects that could prevent 65 percent of the coastal wetland losses over the next 20 years.

The State of Louisiana expressed its intention (by letter of Jan. 5, 1993) to develop a Conservation Plan in accordance with provisions of the CWPPRA. Once approved (by the Administrator of the EPA, the Director of the U.S. Fish and Wildlife Service, and the Secretary of the Army), the State's share in project construction will be reduced from 25 percent to 15 percent. The State submitted the plan to the approving

agencies in May 1997. Approval was received on Nov. 21, 1997.

Section 532 of the Water Resources Development Act (WRDA) of 1996 amends the CWPPRA to provide for a further reduction in the State's share of CWPPRA projects. Upon approval of the Conservation Plan, the State's share of projects in 1996 and 1997 will be 10 percent. In a Sep. 3, 1996, speech in the House of Representatives, the Honorable Bud Shuster of Pennsylvania said that the intent of the legislation was to reduce the State's share of projects approved on the 5th and 6th Priority Project Lists. The amendment further provides that the Secretary of the Army must determine that a reduction in the non-Federal share is warranted.

Recognizing that restoration of the state's coastal wetlands requires projects of a more complex nature and a larger scope that can be analyzed in the process of developing annual priority lists, the Task Force has authorized the initiation of two feasibility studies. Projects with costs of more than \$40 million cannot be accommodated by the present funding stream of \$35 million per year and would need authorization through a Water Resources Development Act or similar act for implementation. The Mississippi River Sediment, Nutrient, and Freshwater Redistribution study, which is being managed by the Corps of Engineers, is intended to develop a plan for optimizing the resources of the Mississippi River, giving consideration to the river's many uses (e.g., navigation and water supply, in addition to creation and nourishment of wetlands). The study was completed in July 2000. The Louisiana Barrier Shoreline study, which is being managed by the Louisiana Department of Natural Resources, is intended to determine the feasibility of restoring the state's barrier islands and other shorelines to protect coastal

wetlands and related resources. The first phase of this study was complete.

In June 1997, the Task Force initiated a coast-wide grassroots planning effort termed the Coast 2050 initiative to develop a technically sound strategic plan to sustain coastal resources and provide an integrated multiple use approach to ecosystem management. The Coast 2050 plan differs from the 1993 restoration plan in that regional strategies, rather than basin strategies, will be developed and prioritized. Coast 2050 was completed in December 1998 and supports the Louisiana Coastal Area authority, Louisiana Ecosystem Restoration reconnaissance report, which was approved by HQUSACE in May 1999. Nine basin feasibility studies are planned for execution under the 1967 Louisiana Coastal Area authority. During FY 2002, a Comprehensive Cost-wide Ecosystem Restoration Study is scheduled to be initiated. This study will investigate the Feasibility of implementing large-scale restoration plans coast wide, currently estimated to cost \$15 billion. The study will seek programmatic authority from Congress for implementation of these plans through WRDA 2004. This study, along with other supporting interim studies and reports is estimated to cost \$30 million and is to be cost shared on a 50-50 basis with the State of Louisiana.

18. GENERAL REGULATORY PROGRAM

Permit Evaluation	\$4,029,662
Enforcement	532,967
Environmental Inspection Statement	11,603
Appeals	<u>208</u>
Total General Regulatory Program	\$4,574,441

AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
	MISSISSIPPI RIVER SHIP CHANNEL, GULF TO BATON ROUGE, LA (See Sec. 3 of Text)	
Approp. Act of 1985, dated Jul. 2, 1986 (PL 99-88)	Will provide more efficient deep-draft navigation access to the New Orleans and Baton Rouge reaches of the Mississippi River via Southwest Pass by enlarging the existing channel to a project depth of 55 feet and enlarging the adjacent channel along the left descending bank in New Orleans Harbor to a 40-foot depth, a turning basin at Baton Rouge, and training works in the passes to reduce maintenance.	H. Doc. 2577, 99th Cong., 1st sess.
Nov. 17, 1986 (PL 99-662)	Formalizes the cost sharing provisions of the project, permits the State of Louisiana to enact user fees to defray their portion of the project costs, and implements harbor maintenance fees to help pay for the Federal cost of the project. It also provides an option to the local sponsor to defer their initial payment for one year following initiation of construction. In terms of channel depths up to 45 feet, the cost sharing requirements are 75 percent Federal and 25 percent non-Federal for construction and 100 percent Federal for maintenance. For channels deeper than 45 feet, the cost sharing requirements are 50 percent Federal and 50 percent non-Federal for both construction and maintenance.	Water Resources Development Act of 1986, 99th Cong., 2d sess.
	PORT FOURCHON, LA	
Water Resources Development Act, 1996	Provides a Federal navigation channel with a project depth of 24 feet MLLW in Bayou Lafourche, Belle Pass, and the Gulf of Mexico to improve navigation access to Port Fourchon at a total cost of \$4,440,000, with an estimated Federal cost of \$2,300,000 and an estimated non-Federal cost of \$2,140,000.	Public Law 104-303, 104th Congress (See Section 101) Oct. 12, 1996
	WATERWAY FROM INTRACOASTAL WATERWAY TO BAYOU DULAC, LA (Bayous Grand Caillou and LeCarpe, LA)	
Aug. 30, 1985	Channel 5 by 40 feet from Intracoastal Waterway at Houma through Bayou LeCarpe, Bayou Pelton, and Bayou Grand Caillou to Bayou Dulac, about 16.3 miles.	H. Doc. 206, 72d Cong., 1st sess.
Oct. 23, 1962	Channel 10 by 45 feet in Bayou LeCarpe from Gulf Intracoastal Waterway to Houma navigation canal.	
	BAYOU RIGOLETTE, LA	
Water Resources Development Act, 1986	A project to construct six additional floodgates at Bayou Rigolette, LA, adjacent to the existing drainage structure, at a total cost of \$2,300,000.	Public Law 99-662, Nov. 17, 1986
	AMITE RIVER AND TRIBUTARIES, LOUISIANA, EAST BATON ROUGE PARISH WATERSHED	
Water Resources Development Act, 1999 August 17, 1999	Amite River and Tributaries, Louisiana, East Baton Rouge Parish Watershed. The project for flood damage reduction and recreation, Amite River and tributaries, Louisiana, East Baton Rouge Parish Watershed: Report of the Chief of Engineers Dated December 23, 1996, a total cost of \$112,900,000, with an estimated Federal cost of \$73,400,000 and an estimated non-Federal of \$39,500,000.	Public Law 106-53 August 17, 1999

TABLE 11-B

AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Oct. 27, 1965	LAROSE TO GOLDEN MEADOW, LA (HURRICANE PROTECTION) (See Sec. 10 of Text) A loop levee about 40 miles long along both banks of Bayou Lafourche from Golden Meadow to Larose; enlargement of 3 miles of existing levee at Golden Meadow; floodgates for navigation and hurricane protection in Bayou Lafourche at upper and lower bayou crossings; about 8 miles of low interior levees to regulate intercepted drainage; and seven multibarreled culverts controlled by flapgates.	H. Doc. 184, 89th Cong., 1st sess. ¹
Oct. 27, 1965	MORGAN CITY AND VICINITY, LA, HURRICANE PROTECTION Construction of new levees along Lake Palourde and Bayou Ramos, levee to tie-in with Bayou Boeuf lock levee and three gravity drainage structures in Morgan City unit and enlargement of bank levee, construction of new levee, and construction of one floodgate and five gravity drainage structures in Franklin and vicinity unit. The Franklin Area reparable element is currently under review for deauthorization in accordance with WRDA 1990.	H. Doc. 167, 89th Cong., 1st sess.
Section 14, Flood Control Act of 1946	MERMENTAU RIVER - GRAND CHENIER, LA (See Sec. 11 of Text) Construction of emergency bank-protection works to prevent flood damage to highways, bridge approaches and public works.	Public Law 526, 79th Cong., 2d sess. Jul. 24, 1946
Oct. 23, 1962	NEW ORLEANS TO VENICE, LA, HURRICANE PROTECTION (See Sec. 12 of Text) Improvements along Mississippi River below New Orleans, LA, for prevention of hurricane tidal flood damages by increasing heights of existing back levees and modifying existing drainage facilities where necessary in five separate reaches.	H. Doc. 550, 87th Cong., 2d sess.
Energy and Water Development Appropriations Act, FY 1996	SOUTHEAST LOUISIANA, LA (See Section 13 of text) Provides for drainage canal and pump station improvements in Orleans and Jefferson Parishes, and drainage improvements, flood protection and structure raising in St. Tammany Parish.	Public Law 104-46 (Sec 108)
Water Resources Development Act, 1996		Public Law 104-303 (Sec 533)
Water Resources Development Act, 1999	WEST BANK AND VICINITY, NEW ORLEANS, LA HURRICANE PROTECTION Combination of Projects - Section 328(b) of WRDA 99 states: The Secretary shall carry out work authorized as part of the Westwego to Harvey Canal project, the East of Harvey Canal project, and the Lake Cataouatche modifications as a single project, to be known as the "West Bank and Vicinity, New Orleans, Louisiana, Hurricane Protection", with a combined total cost of \$280,300,000.	Public Law 106-53, Aug. 17, 1999

TABLE 11-B

AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Water Resources Development Act, 1986	Westwego to Harvey Canal - Section 401(b) of WRDA 86 states: Structural and nonstructural measures to prevent flood damage to those areas identified in the Feb. 1984 draft Environmental Impact Statement for the West Bank Hurricane Protection Levee, Jefferson Parish, LA at a total cost of \$61,500,000, with an estimated first Federal cost of \$40,000,000 and as estimated first non-Federal Cost of \$21,500,000. Funds provided by non-Federal interest for interim hurricane protection may be considered beneficial expenditures and may be credited as part of the non-Federal contribution of the project pursuant to Section 104 of this Act.	Public Law 99-662, Nov 17, 1986
Water Resources Development Act, 1996	East of Harvey Canal - Section 101(a)(17) of WRDA96 states: The project for hurricane damage reduction, West Bank of the Mississippi River in the vicinity of New Orleans (East of Harvey Canal), Louisiana: Report of the Chief of Engineers, dated May 1, 1995, at a total cost of \$126,000,000, with an estimated Federal cost of 82,200,000 and an estimated non-Federal cost of \$43,800,000.	Public Law 104-303
Water Resources Development Act, 1996	Lake Cataouatche - Section 101(b)(11) of WRDA 96 states: The project for hurricane damage prevention and flood control, West Bank Hurricane Protection (Lake Cataouatche Area), Jefferson Parish, Louisiana, at a total cost of \$14,375,000 with an estimated Federal cost of \$9,344,000 and an estimated non-Federal cost of \$5,031,000.	Public Law 104-303
Coastal Wetlands Planning, Protection and Restoration Act	COASTAL WETLANDS PLANNING, PROTECTION AND RESTORATION ACT (See Section 19 of Text) Directed the Secretary of the Army to convene the Louisiana Coastal Wetlands Conservation and Restoration Task Force to initiate a process to identify and prepare a list of coastal wetlands restoration projects in Louisiana to provide for the the long-term conservation of such wetlands and dependent fish and wildlife populations in order of priority in creating, restoring, protecting, and enhancing coastal wetlands, taking into account the quality of such coastal wetlands, with due allowance for small-scale projects necessary to demonstrate the use of new techniques or materials for coastal wetlands restoration.	Public Law 101-64 Nov. 24, 1990 Section 301-306

1. Contains latest published map.
2. Permanent Appropriation Repeal Act.

1. Transferred to Department of Transportation. Authorized under Truman-Hobbs Act.
2. Completed. Date will be furnished when available.
3. Includes previous project costs.
4. No commerce reported.
5. Abandonment recommended in H. Doc. 467, 69th Cong., 1st sess.
6. Completed except that portion above mile 10.3 providing for widening from 40 feet to 60 feet, which is inactive.
7. By Public Law 88-404, that portion of Bayou Terrebonne between point where Barrow Street crosses said stream and a line determined by prolonging and extending eastern right-of-way line of New Orleans Boulevard southerly to south bank of said stream was declared nonnavigable.
8. Includes \$66,000 contributed funds.
9. Operation and maintenance of the structure reported under project "Calcasieu River and Pass, LA."
10. Excludes \$50,000 contributed funds.
11. Not completed; incorporated in navigation project "Mermentau River, LA."
12. Not completed; superseded for most of it length by present 12- by 125-foot Gulf Intracoastal Waterway, which coincides with or parallels it.
13. Maintenance project; no future work schedules.
14. Includes \$57,555 (\$29,974 of which was from Public Works funds) for new work on previous project. Includes \$114,519 for maintenance of previous project.
15. Work is under continuing authority.
16. Includes \$1,729,989 for previous project.
17. Does not include allotment of \$40,000 (9613123).
18. Does not include expenditures of \$63,370 (9613123).
19. Includes \$169,055 for previous projects and \$3,379,676 from permanent indefinite appropriation.
20. Includes \$8,811,000 Non-Federal Costs.
21. Channel completed except for IHNC Lock replacement and foreshore protection.
22. Does not include expenditures of \$7,703,830 for Dredge Wheeler Ready Reserve.

VICKSBURG, MS, DISTRICT

This district comprises western and central Mississippi, southern Arkansas, northern Louisiana, and a very small portion of southwestern Tennessee, embraced in drainage basins of eastern tributaries of Mississippi River south of Horn Lake Creek to and including Buffalo River; Pearl River Basin in Mississippi; independent tributaries of the Gulf of Mexico south of the Buffalo River Basin to the Mississippi-Louisiana state line; western tributaries of

Mississippi River between White and Atchafalaya Rivers including Arkansas River Basin below a point 3 miles upstream from Pine Bluff and Arkansas River below mile 36.1 near Pendleton, AR; Ouachita and Black Rivers in Arkansas and Louisiana; and Red River in Louisiana and Arkansas to the Texas-Arkansas state line. The Vicksburg District territory encompasses 68,000 square miles.

Navigation

1. OUACHITA AND BLACK RIVERS BELOW CAMDEN, AR

Location. Ouachita River rises in Polk County, AR, and flows southeasterly and southerly about 600 miles. Below its confluence with the Tensas and Little Rivers at Jonesville, LA, it is called Black River, which enters Red River 35.5 miles from the Mississippi River.

Previous projects. See page 683 of Annual Report for 1962 for details.

Existing project. See page 684 of Annual Report for 1962 for details of the old 6.5-foot navigation project. Modified project and project for Red River below Fulton, AR, provide for a channel 9 feet deep and 100 feet wide in Red River between Old River and mouth of Black River, and in Black and Ouachita Rivers from mouth of Black River to Camden, AR. Authorized features for the modified project include four new locks and dams, in-river construction dredging to achieve a 9-foot navigation channel depth, and channel realignment. All 4 locks and dams are complete and in operation and initial channel dredging is complete providing 9-foot navigation depth. Remaining work consists of realignment of 25 restricted bendway sites between river miles 195 at Sterlington, LA, and river mile 335 at Camden, AR, on the Ouachita River. With these improvements in place the river system will be navigable by a four-barge tow (two abreast) to Crossett, AR, river mile 237, and a two-barge tow (abreast) to Camden, AR. Mitigation features include the 65,000-acre Felsenthal National Wildlife Refuge in Arkansas, the 18,000-acre D'Arbonne National Wildlife Refuge in Louisiana, a series of recreation facilities along the waterway, and improvements to Catahoula Lake to preserve it for migratory waterfowl. Estimated total cost for the nine-foot navigation project is \$281,009,000 which includes \$263,000,000 Federal costs and \$18,009,000 non-Federal costs.

Local cooperation. Local interests are required to furnish the construction rights-of-way for the realignment work. Seven of the 25 sites are within the Felsenthal National Wildlife Refuge and are already owned by the Federal Government. However, there have been no indications that the land for the remaining 18 sites will be forthcoming because of strong opposition to the realignment work by local environmental groups. The six remaining recreation facilities are unscheduled at this time due to the lack of required cost sharing agreements.

Terminal facilities. Public loading docks are at Columbia, LA, and Camden and Crossett, AR. Privately owned docks and loading and unloading facilities are at Columbia, Monroe, and Sterlington, LA, and El Dorado, Calion, and Camden, AR. Two grain-handling facilities and a petroleum-loading facility are in the vicinity of Jonesville, LA, a grain-handling facility is in the vicinity of Acme, LA, and a petroleum-loading facility is in the vicinity of Smackover, AR.

Operations and results during fiscal year.

In FY 01, maintenance dredging was performed from Camden, AR, to the mouth of the Black River by the contract Dredge Jolly Roger and Dredge Marion, 827,601 cubic yards of material were moved from the navigation channel.

Condition as of Sep. 30. The project is 92 percent complete and provides limited navigation as far north as Camden, AR. All four locks and dams associated with the project are complete and in operation. Design and construction of the remaining features is on hold pending a consensus between the states of Arkansas and Louisiana concerning the type of development desired or the additional studies needed to reach a decision.

2. RED RIVER EMERGENCY BANK PROTECTION

Location. In northwest Louisiana, southwest Arkansas, and northeast Texas, along the Red and Old Rivers between the Mississippi River and the head of the levee system above Index, AR.

Existing project. Provides for realigning the banks by means of cutoffs and training works and for stabilizing banks by means of revetments, dikes, and other methods as emergency conditions may require in advance of developing the design for the entire Red River Waterway project. Estimated cost for this work (October 2002) is \$121,895,000 Federal and \$2,182,000 non-Federal, including a cash contribution of \$7,000.

Local cooperation. Fully complied with. For details see pages 11-19 to 11-20, Annual Report FY 80.

Operations and results during fiscal year. Construction was completed on Hunter's Island Revetment in ARK.

Condition as of Sep. 30. Construction was initiated in October 1972 and is 99 percent complete.

3. RED RIVER WATERWAY PROJECT

J. Bennett Johnston Waterway

Location. From east central to northwest Louisiana along the Red and Old Rivers between the Mississippi River and Shreveport, LA.

Existing project. Provides a navigation route from the Mississippi River at the junction with Old River via Old and Red River to Shreveport, LA, developing a channel approximately 236 miles long, 9 feet deep, and 200 feet wide. The development includes five locks and dams, realignment and contraction of the river as necessary to develop an efficient channel, and bank stabilization as necessary to hold the newly developed channel in position. Facilities to provide and acquisition of wildlife mitigation lands opportunities for recreation and for fish and wildlife development and acquisition of wildlife mitigation lands are an integral part of the project. Estimated cost for new work (October 2002) is \$1,918,082,000 Federal and \$93,832,000 non-Federal. The Federal cost includes \$626,000 for aids to navigation by U.S. Coast Guard.

Local cooperation. For details see page 11-21, Annual Report FY 80.

The Red River Waterway Commission, governing body of the Red River Waterway District, executed an act of assurance for all project features in Louisiana on Feb. 26, 1969, supported by resolution dated Jan. 30, 1969. The assurances were accepted for and on behalf of the United States on Apr. 15, 1969. The Commission furnished amended assurances covering the provisions of Public Law 91-646 and Public Law 91-611 on May 23, 1973, for the portion of the project within Louisiana. These were accepted for and on behalf of the United States on Nov. 14, 1973. A Local Cooperation Agreement between the Department of the Army and the Red River Waterway Commission for the acquisition of mitigation lands in the vicinity of Loggy Bayou Wildlife Management Area was executed on Jun. 16, 1993, and a project cooperation agreement between the same agencies for the acquisition of mitigation lands in the vicinity of Bayou Bodcau was executed on July 17, 1996.

Terminal facilities. Local interests are to provide adequate terminal facilities along the waterway. The Corps entered into an agreement with the City of Alexandria, LA, whereby material excavated from the Philip Bayou Realignment could be used as fill for port construction at mile 109. Construction of the

realignment and port fill are complete. Construction of the Caddo—Bossier and Natchitoches Parish ports are complete. Construction of the Red River Parish Port will start in FY 03.

Operations and results during fiscal year. The following contracts were completed in FY 01: Grand Bend Capout, Pool 3 Reinforcements, Teague Parkway Repairs, Coushatta Capout and dikes, and Hog Lake Reinforcement. Several channel training works will be initiated and completed in FY 03 to refine the reliability and safety in the navigation channel.

Maintenance dredging was performed along the waterway by the Contract Dredge Butcher, during Fiscal Year 2000. 1,623,328 cubic yards of material were removed from the navigation channel.

Condition as of Sep. 30. Construction was initiated in July 1973, and project is 90 percent complete.

Feasibility phase studies were authorized by WRDA 96 to determine the feasibility of extending navigation on the Red River from the vicinity of Shreveport, LA, to the vicinity of Index, AR, or to any justifiable interim point were initiated in Mar 99. Feasibility studies are scheduled for completion in Sep 02. The Arkansas Red River Commission is the non-Federal sponsor.

4. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Navigation activities pursuant to Sec. 107, Public Law 87-645, as amended.

In FY 02, \$15,018 was expended on Section 107 Coordination Accounts; \$929 on Vidalia Port, LA; \$55,277 on Yellow Bend Port, AR.

Flood Control

5. ALOHA-RIGOLETTE AREA, LA

Location. The project is located in north-central Louisiana between the towns of Winnfield and Pineville on the left descending bank of the Red River.

Authorized Project. The recommended plan consists of a three-barrel floodgate structure installed at the mouth of Bayou Darrow to reopen it to the Red River, 8.2 miles of clearing and snagging on Bayou Darrow from its mouth upstream to Bayou Rigolette, construction of a closure and low-flow structure on Bayou Rigolette just below its junction with Bayou

Darrow, and realignment of Sam's Bayou and appropriate mitigation features.

Local Cooperation. The City of Colfax, LA, has agreed to cost share this project. The Project Cooperation Agreement was signed on Sept. 19, 1994.

Operations And Results During Fiscal Year. Construction is complete on the Bayou Darrow Structure. Construction on Item 3 is underway.

Condition as of Sep. 30. Construction underway on Item 2, and Item 3.

6. MCKINNEY BAYOU, AR

Location. The project area is located in southwestern Arkansas in the vicinity of Texarkana, AR and TX. The McKinney Bayou area is a crescent-shaped watershed located adjacent to the Red River containing approximately 340 square miles.

Existing project. The authorized project consists of flow diversion to the Red River at the state line between Arkansas and Texas, flow diversion into the Red River at Buzzard Bluff, improvement of McKinney Bayou channel, and land acquisition for mitigation. The State Line Diversion, Buzzard Bluff Diversion, and channel improvement features have subsequently been reclassified to the inactive category due to a lack of local support or lack of economic justification. Alternative plans developed to reduce flooding consisted of various channel improvements on the lower 27.6 miles of McKinney Bayou. A clearing and snagging alternative with project first costs of \$3.2 million and a plan combining clearing and snagging with channel improvement with project first costs of \$4.9 million were found economically feasible. Shortly after initiation of reconnaissance studies, Headquarters, U.S. Army Corps of Engineers, in an effort to streamline the study process, approved proceeding directly from the reconnaissance phase to preconstruction engineering and design (PED), subject to reconnaissance study finding being substantially in accordance with the authorized McKinney Bayou project and with previous U.S. Army Corps of Engineers, New Orleans District, study findings. Under this arrangement, the cost-shared feasibility phase would be eliminated. Study findings substantiated this decision. As a result, it was recommended that the study effort progress into PED. The reconnaissance report was approved by the U.S. Army Corps, Mississippi Valley Division, on May 12, 1997. The plan recommended for implementation would be developed during PED.

The local cost-sharing sponsors, the Miller County Improvement and Drainage District and the McKinney Bayou Drainage District have indicated by letters dated Sep. 24, and Sep. 30, 1997, respectively, that they do not have the financial resources to undertake project construction. Therefore, they do not wish to continue into the next project development phase, PED. The project is being held in abeyance pending further developments regarding the local sponsor's ability to cost-share. If this cost-sharing issue cannot be resolved, all activities associated with the project will be terminated and it will be classified as inactive.

Condition as of Sep. 30. A new start reconnaissance study was initiated in January 1996. This restudy of the authorized project to address the feasibility of channel improvements on McKinney Bayou to reduce flooding of agricultural and other properties was completed in March 1997. Project is approved to proceed directly into preconstruction engineering and design pending execution of a PED cost sharing agreement.

7. OUACHITA RIVER LEVEES, LA

Location. East bank of Ouachita River between Bastrop, LA, and Sandy Bayou. Loop levees on the west bank at West Monroe, Columbia, and Bawcomville.

Existing project. There are 105.8 miles of levee on the east bank and 11.6 miles of levee in the three loops on the west bank. A Summary Report authorized gravel surfacing 117.4 miles of levee, and enlarging 36.6 miles of levee. Estimated Federal cost is \$30,417,000. Estimated non-Federal cost is \$5,404,000.

Local cooperation. Requirements and assurances of local cooperation are fully described on page 12-6 of FY 80 Annual Report. A supplemental agreement for the Bawcomville segment was executed in FY 90.

The 1991 Water and Energy Appropriations Act gave the Federal government responsibility for the repair and/or replacement of the deteriorated drainage structures. The Assurances Agreement for Local Cooperation was supplemented to reflect this change in responsibility. The supplemental agreement covered work performed since Fiscal Year 1992.

Condition as of Sep. 30. Item 1 of the Monroe to Sandy Bayou Levee enlargement project was completed Jul. 7, 1978. Additional work was deferred pending results of a comprehensive study of the entire Ouachita River Levee System. A summary report indicating that it is economically feasible to raise portions of the

existing levee to authorized grade and that complete rehabilitation of the levee system as necessary was approved by MVD on Oct. 1, 1986. The study results were disseminated to the project sponsor and interested parties in October 1986. The Project was reclassified as an active project on May 7, 1987. The final summary report was sent to the Office of the Chief of Engineers in July 1988 and design was initiated on the Bawcomville segment of the Ouachita River levees. A construction contract for the Bawcomville levee enlargement is complete. All of the deteriorated culverts have been replaced and/or rehabilitated. A contract to repair the last structure was awarded in FY 02. Item 1 of the Bastrop to Monroe Levee enlargement was completed in October 2001. Item 2 will be awarded in FY 03.

8. OUACHITA RIVER AND TRIBUTARIES, AR AND LA

Location. Improvements comprising comprehensive projects are on main stem Ouachita River, AR and LA, on its tributaries, Caddo and Little Missouri Rivers, and in Pine Bluff, AR. Description of Ouachita River Basin is presented in greater detail on page 690 of Annual Report for 1962.

Existing project. The authorized general plan for flood control and other purposes in the Ouachita River Basin includes the projects listed in Table 12-E. The 1966 Flood Control Act modified the Bayou Bartholomew and Tributaries, AR and LA, project to include 10 water-retention lakes in the western tributaries of Bayou Bartholomew in Arkansas and 6 local levee units along the main stem of the bayou in Louisiana.

Local cooperation. Fully complied with for completed features of comprehensive project. (See individual statements for further details.)

Operations and results during fiscal year. Operations for Blakely Mt. Dam-Lake Ouachita, DeGray Lake, Narrows Dam-Lake Greeson, Bayou Bartholomew and Tributaries, and Ouachita River Levees are shown in individual reports in 1985.

Condition as of Sep. 30. Pertinent data on those features which are complete or not started are in Table 12-E. Conditions of Blakely Mt. Dam-Lake Ouachita, DeGray Lake, and Narrows Dam-Lake Greeson are given in the individual reports in 1985 report.

Reconnaissance studies of flooding problems in Ouachita Parish, LA, were initiated in January 1994.

Study efforts are concentrating on the developing urban area around Monroe, LA. The reconnaissance report, completed in January 1995, recommended a feasibility study be conducted on flood reduction for the River Styx Bayou area under authority of Section 205 of the Flood Control Act of 1948, as amended. The study addressed alternative sized pumping stations. The final Detailed Project Report was completed in November 1995. The construction contract is complete.

9. PEARL RIVER BASIN, MS AND LA

Location. The basin comprises most of the South-central portion of Mississippi and a small part of southeast Louisiana. The Pearl River begins in Neshoba County, MS, and flows southwesterly 113 miles to the vicinity of Jackson, MS, then southeasterly 233 miles to the vicinity of Bogalusa, LA. At that point, the Pearl River splits into the East and West Pearl Rivers, and flows southerly 44 and 48 miles, respectively, before entering the Rigolets and Lake Borgne.

Existing projects. The Jackson-East Jackson Flood Control Project provides for improvements of the Pearl River at Jackson, MS. This project includes two levee systems totaling 13.2 miles in length, with two pumping stations, four gated outlets, and 18.9 miles of channel rectification including three cutoffs with a total length of 2.2 miles in the Pearl River. This project was authorized by the Flood Control Act of Jul. 14, 1960. Construction began in July 1964 and work was completed in FY 68. Total Federal cost of the project was \$7,190,200. The FY 83 Jobs Bill authorized extension of the Jackson-East Jackson West Bank levee system along the Fortification Street I-55 exit. This extension was initiated and completed in FY 84.

Public Law 98-63, dated Jul. 29, 1983, authorized the vicinity of Jackson project. This authority provided for additional measures to prevent recurring flood damages along the Pearl River at Jackson and included 3.3 miles of floodway clearing and enlarging the opening at the Highway 25 Bridge. This work has been completed. Mitigation lands for the clearing were purchased by the local sponsor in May 1985 and the Corps has reimbursed the local sponsor to cover the cost of these lands. Total Federal cost of this project is \$1,800,000.

Authorized projects. Public Law 99-88, dated Aug. 15, 1985, authorized planning, design, engineering, and construction of a levee system in Slidell, LA, to protect 3,265 residential and commercial structures from floods in the West Pearl. Public Law 99-662, dated Nov. 17, 1986, authorized

construction of Shoccoe Dam and various flood control measures for Carthage-Leake County, MS.

Local cooperation. Requirements are described in full on page 12-6 of the FY 92 report.

Condition as of Sep. 30. An overall basin study is essentially complete, except for alternative studies to Shoccoe Dry Dam as discussed below. Flood control feasibility studies for Slidell, LA, recommending a 15-mile levee system, and for Jackson, MS, recommending Shoccoe Dam have been completed. Detailed engineering and design studies for the Slidell levees have been terminated due to the lack of a local sponsor. As a result of upstream opposition, Shoccoe Dam is not implementable. In response to a request by the local sponsor, the Pearl River Basin Development District, reconnaissance studies to evaluate alternatives to Shoccoe for flood damage reduction in the Jackson Metropolitan Area have been completed and a potentially feasible levee plan identified. A Feasibility Cost Sharing Agreement was signed with the Local Sponsor on Sep. 25, 1991. The feasibility studies focused on a comprehensive levee system and other flood control measures across the basin to reduce damages associated with flooding from the Pearl River. The Feasibility Study was suspended in July 1998 due to the lack of a cost sharing sponsor. Discussions are continuing with potential sponsors to restart feasibility studies to investigate other alternatives to include a later plan extending downstream of Ross Barnett Reservoir through the Jackson Metropolitan area. Studies of various flood control measures for Carthage-Leake County, Columbia and Picayune, MS; Bogalusa, LA, and the Bogue Chitto Subbasin have been completed. None were found economically feasible. Navigation studies have been conducted on the East and West Pearl Rivers. Results of these studies indicate that maintenance necessary to reopen the existing West Pearl River navigation project is economically justified. The final EIS was filed with EPA in March 1994. Studies indicate that the West Pearl River Navigation Project is economically justified, engineeringly feasible, and in the overall public interest. Maintenance dredging was to resume in the spring of 1995; however, environmental litigation seeding declaratory and injunctive relief was filed and the Corps was enjoined to dredge any portion of the project. Also in 1995, the Corps officially placed the project in a caretaker status by directing that limited funds for the project be used for maintenance of the project in caretaker status. Investigation directed toward project deauthorization are scheduled to be initiated in FY 03. Studies also indicate that the East Pearl River does not have sufficient existing flows to support a 7- to 9-foot-deep navigation channel. The navigation study for Port

Bienville, MS, has been terminated due to withdrawal of the Hancock County Port and Harbor Commission as local sponsor. Reconnaissance studies of flow distribution between the West Pearl River and the East Pearl River (boundary between the States of Louisiana and Mississippi) in the Lower Basin have been completed. Investigations of low flow conditions in the Walkiah Bluff area were initiated in FY 95 under authority of Section 307(d) of WRDA 90. A detailed project report was completed in May 1997 which recommended a 50-50 low-flow distribution (50 percent down Wilson Slough and 50 percent down the Pearl River). Construction of this project was completed in Dec 99. Reconnaissance studies of flood damage prevention and erosion control along Caney Creek in Jackson, MS, have been completed. These studies indicated that flood damages attributable to headwater flooding from Caney Creek are relatively insignificant and will not economically justify a water resource improvement plan under current conditions. Studies also found that most of the more serious streambank erosion problems along the creek have been corrected through actions undertaken by other public entities and agencies.

10. PEARL RIVER, SLIDELL, ST. TAMMANY PARISH, LA

Location. The project is located in the southeastern portion of the State of Louisiana and consists of the area bounded by the West Pearl River on the east, Interstate 10 on the west, and Lake Pontchartrain on the south.

Authorized project. The project is broken into two segments of levees. The segment north of I-10 will consist of 4.0 miles of levee, a pumping station, a floodgate structure, and minor drainage structures. This levee will protect the Slidell area north of I-10 from flooding associated with a 200-year hydrological event on the Pearl River. The segment south of I-10 will consist of 9.0 miles of levees, three pumping stations, floodgates, and minor drainage structures. This levee will protect the Slidell area south of I-10 from flooding associated with a 200-year hydrological event on the Pearl River and provides the same level of protection against hurricane surges. These two levee segments total 13 miles of levee and would protect some 3,029 homes. Estimated Federal cost is \$28,437,000. Estimated non-Federal cost is \$9,479,000.

Local cooperation. The project sponsor, St. Tammany Levee Board, and the Assistant Secretary of the Army (Civil Works), in an agreement consistent with the Fiscal Year 1985 Supplemental Appropriation Act Public Law 99-88) and Senate Report 1567, signed

the Local Cooperation Agreement Jun. 30, 1986. The 1997 Louisiana Regular Legislative Session abolished the St. Tammany Levee District.

Operations and results during fiscal year. This project has been terminated due to the abolishment of the project sponsor.

Condition as of Sep. 30. Completed resolution of comments on the General Design Memorandum for north levee only. Preparation of plans and specifications has been terminated. No construction has taken place.

11. RED RIVER BELOW DENISON DAM (VICKSBURG DISTRICT)

Location. On Red River and its tributaries below Denison Dam, in Oklahoma, Arkansas, Texas, and Louisiana. (Refer to Geological Survey State maps and folio "Maps of Red River" - 1958 edition.)

Existing project. Flood Control Act of 1946 approved general plan for flood control on Red River below Denison Dam, TX and OK, which provides for construction of six flood control reservoirs in combination with existing or authorized Federal and non-Federal levee improvements, modified as required, and channel stabilization at locations where levee setbacks are impossible or uneconomical. This act further authorized incorporation of several separate existing projects for flood damage prevention along Red River below Denison, above jurisdiction of the MRC, into this project. By Public Law 780, 83rd Cong., 2nd sess., as amended by Public Law 218, 84th Cong., 1st sess., and Public Law 645, 86th Cong., 1st sess., plan of improvement was amended to include additional projects as indicated in following lists of reservoirs and local protection works considered in general flood control plan for the Red River below Denison Dam, and existing flood control projects incorporated into project in Vicksburg District. (See Table 12-F for new projects and Table 12-G for incorporated projects.)

Local cooperation. See individual reports herein.

12. RED RIVER BELOW DENISON DAM, LEVEES AND BANK STABILIZATION (VICKSBURG DISTRICT)

Location. Along the main stem of the Red River from the head of the levee system immediately above Index, AR, through the southwest corner of Arkansas to the vicinity of Boyce, LA, on the right bank, and Pineville, LA, on the left bank.

Existing project. Raising and strengthening existing and authorized Red River levees to provide protection against flooding and bank protection works at locations where levee setbacks are impossible or uneconomical. The plan consists of raising and strengthening existing and authorized Red River levees to provide against a flood approximately 20 percent greater than the flood of 1945, the flood of record, as modified by authorized reservoirs. Bank protection works are to be constructed at locations where levee setbacks are impossible or uneconomical. Estimated cost for new work (October 2002) is \$79,870,000 Federal and \$2,613,000 non-Federal.

Local cooperation. Requirements of local cooperation are fully described on page 12-10 of FY 1984 Annual Report.

Operations and results during fiscal year. Hired labor forces continued investigations, surveys, and preparation of plans and specifications.

Condition as of Sep. 30. Construction is underway on Levee Item 5 and Dillard Revetment. Construction was initiated in February 1948 and the levee and bank stabilization are complete with the exception of levee rehabilitation within the state of Arkansas. Construction was initiated on the rehabilitation of levee Item 5 in Arkansas.

13. WEST AGURS, LA, LEVEE

Location. The West Agurs, LA, Levee is located in Caddo Parish in northwestern Louisiana, immediately adjacent to the northern corporate limits of Shreveport.

Existing Project. The West Agurs levee was constructed by local interests in 1961 and incorporated into the Federal project Red River Below Denison Dam Project in 1983. The levee extends from U.S. Highway 71 at the north end of the area to the Texas and Pacific Railroad at the lower end, a distance of approximately 3 miles. In addition to the levee, appurtenant interior drainage works include a borrow pit channel at an approximate bottom elevation of 150.0 feet NGVD, a 55 CFS pumping station, and one 10- by 10-foot floodgate. The entire system was designed to protect the 700-acre West Agur area from Twelve Mile Bayou headwater and Red River backwater flooding. Total Federal cost is \$0.

Local Cooperation. The Caddo Levee District completed levee improvements consisting of a temporary ponding area required for the levees to be incorporated into the Federal project in 1983. The West Agur levee was incorporated into the Federal system in

1983. Operation and maintenance of the levee is the responsibility of the Caddo Levee District.

Condition as of Sep 30. Studies of flooding problems in the West Agur area conducted under the authority of Section 205 of the 1948 Flood Control Act as amended were completed in March 99. The report completed in December 1998 recommends an additional 55 cfs pump to provide flood protection to commercial and industrial properties located within the leveed area will be complete in FY 03.

14. TENSAS RIVER BASIN, LOUISIANA

Location. The Tensas River Basin is bounded by the Mississippi River on the east and the Ouachita-Black Rivers on the west, and extends southward from the Louisiana/Arkansas state line to Old River control Structure in Concordia Parish, Louisiana. Parts or all of Catahoula, Concordia, East Carroll, West Carroll, Ouachita, Franklin, Madison, Morehouse and Tensas Parishes lie in the basin. It encompasses approximately 3.3 million acres with over 50 lakes and streams, 4 national wildlife refuges, 11 wildlife management areas, 1 state wildlife refuge, 1 game and fish preserve, 2 state parks, 2 ports, and a historical site at Poverty Point. Four pumping plants and numerous weirs and drainage structures are also located in the area.

Existing Project. Flooding, water supply, and the decline of environmental resources are problems in the basin. In particular, this ecosystem is being rapidly degraded from pollution of water, sedimentation, and frequent and excessive flooding. Possible solutions to the problems include channel improvements, drainage structure(s), and weir(s).

A comprehensive study is required to balance these competing demands and is critical for this area to ensure the wise and efficient use of the basin's water resources. The study scope is more in accord with that requiring a comprehensive watershed approach to these problems, based on the size and complexity of the area (5,141 square miles with very sensitive environmental resources and complex hydrologic conditions), the need for multi-agency coordination, and the potential for multiple sponsors due to the potentially large project implementation cost.

Conditions as of Sep. 30. Congress added funds in the amount of \$100,000 in FY 02 to conduct the subject study. In order to adequately investigate the basin and provide the local sponsor with enough information for their decision to participate in a Feasibility Cost-

Sharing Agreement, the total study cost estimate is \$350,000 and the required study duration is 18 months.

14. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Inspection of completed work was accomplished at a cost of \$340,396 for the fiscal year. Total cost as of Sep. 30, 2001, is \$5,772,837.

15. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Emergency flood control activities—repair, flood fighting, and rescue work. (Public Law 99, 84th Cong., and antecedent legislation.)

FY 01 costs for the period were \$451,022 for disaster preparedness; \$287,401 for emergency operations; and \$152,169 on rehabilitation and inspection program.

Snagging and clearing of navigable streams and tributaries in the interest of flood control (Sec. 208 of 1954 Flood Control Act, Public Law 780, 83rd Cong.)

In FY 02, \$15,020 was expended on Section 108 coordination account; \$44,963 on Bakers Creek, Clinton, MS.

Emergency bank protection (Sec. 14 of 1956 Flood Control Act, Public Law 780, 83rd Cong.)

In FY 02, \$15,050 was expended on Section 14 coordination account; \$37,229 on Little Black Creek, Eupora, MS; \$75 on Bayou Pierre, Gorum, LA; \$28,057 on Bayou Pierre, Copiah County, MS; \$7,543 on Loggy Bayou, Bienville Parish, LA; \$65,873 on Fort Lookout, Ouachita River, AR; \$158,641 on Parker Bayou, Pearl River County, MS; \$20,938 on Lynch Creek, Jackson, MS; \$19,328 on Eubanks Creek, Jackson, MS; \$28,478 on Port Bienville Industrial Park Drainage Ditch; and \$111,989 on Black Creek, Grenada, MS.

Flood control activities pursuant to Sec. 205, Public Law 858, 80th Cong., as amended (preauthorization).

In FY 02, \$15,020 was expended on Section 205 coordination account; \$131,763 on Red Chute Bayou levee, LA; \$74,113 on Two Bayou, Camden, AR; \$89,699 on Twelve Mile Bayou, LA; \$29,944 on King's Point Island, MS; \$7,119 on Canal 19, South of

Dumas, AR; \$46,329 on City of Richland, MS; \$47,175 on City of Florence, MS; \$9,963 on Trailwood Subdivision, Clinton, MS; and \$2,188 on Gunby Dam, LA.

**16. ECOSYSTEM RESTORATION WORK
UNDER SPECIAL AUTHORIZATION**

Project modifications for improvement of environment pursuant to Sec. 1135, Public Law 99-662, as amended (preauthorization).

In FY 02, \$15,048 was expended on Section 1135 coordination account; \$17,977 on Lake George, MS; \$75,020 on Sulphur River, LA; \$70,407 on Bayou Macon, AR; \$225,362 on Remmel Dam, AR; \$7,267 on Frazier/Whitehorse Oxbow, LA; \$101,896 on Old River, Lake Providence, LA; \$20,026 on Lake Whittington, MS; \$258,670 on Bayou DeSiard, LA; \$182,973 on Bayou Macon, LA; \$79,893 on Dump Lake, Yazoo County, MS; \$152,082 on Boeuf River, Point Jefferson, LA; \$85,872 on Steep Bank Creek, AR; \$8,596 on Snake Creek, Yazoo River, Humphreys County, MS; \$9,732 on Tchula Lake, MS; \$44,969 on Cannon Brake/Lower Vallier, AR; and \$5,200 on Sunflower River, MS Delta Section, MS; Lower Deer

Creek, MS Delta Section, MS; and upper Deer Creek, MS Delta Section, MS.

Aquatic Restoration pursuant to Section 206, P.L. 104-303.

In FY 02, \$15,028 was expended on Section 206 coordination account; \$9,982 on Indian Bayou, Indianola, MS; and \$4,346 on Lake Bruin, Tensas Parish, LA.

**17. CATASTROPHIC DISASTER
PREPAREDNESS PROGRAM**

During FY 01, \$4,033 was expended on Local Preparation; \$116,406 on National Preparedness, and \$9,074 on National Emergency Facilities. Total costs for FY 01 was \$129,513.

18. GENERAL REGULATORY PROGRAM

During FY 01, \$2,252,931 was expended on Permit Evaluation; \$394,894 on Enforcement; and \$3,645 on appeals. A total of \$2,651,470 was expended in FY 01.

1. Includes \$674,068 for new work on previous projects.
2. Includes \$3,312,000 PL 98-8 Jobs Bill. Excludes \$47,854,000 previously allocated to New Orleans District.
3. Excludes New Orleans District allocation and cost.

12-12

TABLE 12-B
(Continued) **AUTHORIZING LEGISLATION**

Acts	Work Authorized	Documents
Water Resources Development Act of 1996	NATCHEZ BLUFFS, MS Authorizes bluff stabilization in accordance with the Natchez Bluff study at a total cost of \$17,200,000, estimated federal cost of \$12,900,000 and non federal cost of \$4,300,000.	Public Law 104-303
Jun. 30, 1948 as amended	CHAUVIN BAYOU, LA Construction of a 250-cfs pumping plant located adjacent to Chauvin Bayou at the Ouachita River levee and a water control structure in Canal L-11.	Sec. 205 of the Flood Control Act of 1948, as amended. Authorized by the Chief of Engineers Feb. 6, 1990.
Jun. 30, 1948, as amended	LEAD BAYOU, MS Channel enlargement.	Sec. 205 of the Flood Control Act of 1948, as amended. Authorized by Chief of Engineers Jun. 10, 1980.
Jul. 29, 1983	MCKINNEY BAYOU, AR AND TX (See Section 6 of text) Authorizes a comprehensive study and recommendations for development and efficient utilization of water and related resources for the McKinney Bayou area, a tributary of Red Water.	Public Law 98-63 98th Cong., 1st sess.
Nov. 17, 1986	MONROE AND WEST MONROE, LA, AND OUACHITA PARISH, LA Authorizes such structural and nonstructural measures as the Secretary deems feasible to prevent flood damage to the cities of Monroe and West Monroe, LA, and Ouachita Parish, LA.	Public Law 99-662, 99th Cong., 2d sess.
May 17, 1950	OUACHITA RIVER AND TRIBUTARIES, AR AND LA (See Section 8 of Text) Authorized DeGray Lake; Murfreesboro Lake; extension of floodwall at Monroe to partially close the existing gap; local protection at Bawcomville, LA (subsequently constructed under Sec. 6, Act of May 15, 1928, with local interests contributing one third of cost); Bayou Bartholomew channel improvement, including Deep Bayou and Overflow Creek; Pine Bluff local protection; local protection at Calion, AR; and incorporation, into the Ouachita River and Tributaries project, of all existing projects and portions thereof in the basin above the lower end of the levees on the east bank of the Ouachita River. In addition, the Chief of Engineers authorized on Nov. 14, 1966, additional work on the levees.	S. Doc. 117, 81st Cong., 1st sess.

TABLE 12-B
(Continued) **AUTHORIZING LEGISLATION**

Acts	Work Authorized	Documents
Jul. 14, 1960	PEARL RIVER, MS AND LA (See Section 9 of Text) Construction of levee system and channel rectification, Pearl River, vicinity of Jackson, MS	H. Doc. 441, 86th Cong., 1st sess.
Jun. 13, 1983	Accomplish the clearing and channel improvements at Hwy 25 bridge on the Pearl River in the vicinity of Jackson, MS.	S. Doc. 153, 98th Cong., 1st sess.
Jul. 29, 1983	Design and construct protection to prevent flooding along the Pearl River in the vicinity of Jackson, MS	Public Law 98-63, 98th Cong., 1st sess.
Aug. 15, 1985	Planning, design, engineering, and construction of a levee system for Slidell, LA, pending binding cost-sharing arrangements acceptable to the Secretary of the Army or under terms and conditions provided in subsequent legislation when enacted into law.	Public Law 99-88, 99th Cong., 2d sess.
Nov. 17, 1986	Authorizes the Pearl River Basin, including Shoccoe, MS, for the construction of the Shoccoe Dam plus upstream flood control measures at east-central Leake County, south part of Carthage, MS, Highway 35 vicinity, upstream reservoirs on the Pearl River and upstream channels on the Pearl River and elsewhere in Leake County.	Public Law 99-662, 99th Cong., 2d sess.
Nov. 17, 1986	PEARL RIVER, SLIDELL, ST. TAMMANY PARISH, LA (See Section 10 of Text) Authorizes flood control improvements for Pearl River Basin, St. Tammany, LA, subject to a favorable Chief's report and approval by the Secretary of the Army for Civil Works.	Public Law 99-662 99th Cong., 2d sess.
Jun. 30, 1948, as amended	PORTER BAYOU, MS Selective snagging and clearing of Porter Bayou, MS, from mile 12.5 to mile 32.3	Sec. 205 of the Flood Control Act of 1948, as amended. Authorized by Chief of Engineers, Feb. 18, 1982.
Nov. 17, 1986	RED RIVER WATERWAY, LA (See Section 11 of Text) Water Resources Development of 1986 authorized for construction the project for mitigation of wildlife losses, Red River Waterway, LA, which may include all or such portion of any land adjacent to the Loggy Bayou Wildlife Management Area.	Public Law 99-662, 99th Cong., 2d sess.
Nov. 28, 1990	Water Resources Development Act of 1990 modified the mitigation project to authorize the Secretary to acquire an additional 12,000 acres adjacent to or close to the Bayou Bodcau Wildlife Management Area.	Public Law 101-640, 101st Cong., 2d sess.
Water Resources Development Act of 1996	WRDA 96 modified the mitigation project to authorize the Secretary to acquire lands adjacent to Loggy Bayou Wildlife Management Area in Caddo and Red River Parishes and increasing the authorized cost to \$10,500,000.	Section 301, Public Law 104-303

TABLE 12-B
(Continued)

AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
Water Resources Development Act of 1996	WRDA 96 modified the project to include dredging of the entrance to the Oxbow Lakes designated for preservation in project documentation and stated that the cost sharing for this dredging should be the same as the general navigation features.	Section 301, Public Law 104-303
Water Resources Development Act of 2000	WRDA 2000 modified the mitigation project to authorize the acquisition of lands in any of the parishes that comprise the Red River Waterway District, consisting of Auoyelles, Bossier, Caddo, Grant, Natchitoches, Rapides, and Red River Parishes.	
	RED RIVER BELOW DENISON DAM LEVEES AND BANK STABILIZATION (VICKSBURG DIST.) (See Section 12 of Text)	
Jul. 24, 1946	Levee and bank stabilization.	H. Doc. 602, 79th Cong., 2d sess.
Aug. 13, 1968	Deauthorization of Morringsport Dam and Reservoir on Cypress Creek; realining and stabilizing the banks of the Red River; and recreational facilities from the Mississippi River to Denison Dam, OK and TX.	H. Doc. 304, 90th Cong., 2d sess.
	RED RIVER WATERWAY-SHREVEPORT, LA, TO INDEX, AR	
Aug. 13, 1968	Provides for realinement of the channels of the Red River from Shreveport, LA, to Index, AR.	H. Doc. 304, 90th Cong., 2d sess.

1. Status and Date unavailable.
2. Abandonment recommended in H. Doc. 1962, 64th Cong., 2d sess., and H. Doc. 467, 69th Cong., 1st sess.
3. Channels adequate for existing commerce.
4. Inactive project. No commerce.
5. Abandonment recommended in H. Doc. 467, 69th Cong., 1st sess.
6. Project curtailment recommended by elimination of work between Pentecost and mouth of Hushpuckena River. (Abandonment of entire project erroneously recommended in H. Doc. 467, 69th Cong., 1st sess.)
7. See report of Mississippi River Commission for operations in connection with Yazoo Basin.
8. Report of New Orleans District, pp. 919-920 for Fiscal Year 1949.
9. Project curtailment recommended by elimination of work above Girard, LA. (Abandonment of entire project recommended erroneously in H. Doc. 467, 69th Cong., 1st sess.)
10. Due to decline of traffic, local interests not sufficiently interested to provide rights-of-way and dumping privileges.
11. No additional funds available under this project. Work is being carried on under appropriation flood control, Mississippi River and tributaries.
12. Year authorized.
13. Inactive. Channel adequate for commerce.
14. See report of Mississippi River Commission for operations in connection with Yazoo Basin flood control project including channel clearing and rectification and Grenada Lake on Yalobusha River.
15. Excludes \$50,000 contributed funds.
16. Includes \$1,553,878 for previous projects.
17. Incorporated in the project "Red River Waterway-Mississippi River Shreveport, LA" Sept. 30, 1976.
18. Emergency bank protection on this project is reported separately as "Red River Emergency Bank Protection." Two reaches, "Red River Waterway-Mississippi River to Shreveport, LA" and "Red River Waterway-Shreveport, LA, Daingerfield, TX," are also reported separately.
19. Includes \$674,068 for new work on previous projects.

1. Details presented in individual report herein.

2. Construction on this project not started.

3. In addition, non-Federal funds are:

Bayou Bodcau and tributaries, AR and LA	\$5,300,000
Bayou Pierre in vicinity of Shreveport, LA (cash contribution)	89,047
Caddo Lake, LA.....	28,000
Campti-Clarence Area in Natchitoches Parish, LA.....	480,000
East Point.....	67,000
Garland City, AR	6,000
Maniece Bayou, AR (cash contribution).....	18,000
McKinney Bayou, AR (cash contribution)	508,000
Red River below Denison Dam, levees and bank stabilization, TX, AR, and LA	1,560,000

4. For last full report, see Annual Report for 1964.

5. For last full report, see Annual Report for 1951.

6. Inactive.

7. Includes \$4,330,200, Code 711, and \$399,739 accelerated Public Work funds.

8. Joint-use pool (sediment).

9. Deauthorized by resolution Dec. 17, 1970, which also authorized new project "Posten Bayou, AR," under provision of Sec. 201 of Flood Control Act of 1965.

MEMPHIS, TN, DISTRICT

This district comprises a portion of southeastern Missouri and southern Illinois, western portions of Kentucky and Tennessee, a small portion of northern Mississippi, and the northeastern portion of Arkansas; includes area embraced in drainage basins of eastern tributaries of the Mississippi River south of Ohio River Basin to Nonconnah and Horn Lake Creeks, inclusive, and those of western tributaries south of Little River

diversion channel and Commerce, MO, including St. Francis River Basin and White River and tributaries below Peach Orchard Bluff, AR, on the right bank and below Augusta, AR, on the left bank; also includes left bank Mississippi River levee from vicinity of Memphis south to about mile 620, and right bank levees from Cape Girardeau, MO, to about mile 605.

Flood Control

1. MAIN DITCH NO. 8, PEMISCOT COUNTY, MO

Location. This project is located in Pemiscot County in the vicinity of Hayti, Missouri, about 50 miles southeast of Poplar Bluff, Missouri.

Existing project. The purpose of the project is control of channel flooding on agricultural lands, while minimizing damage to the environment. The project consists of approximately 15.4 miles of selective cleanout of vegetation and excessive sediment deposits from the bottom of the channel and selective clearing of trees, brush, and other types of blockages from upstream of Elk Chute Ditch to approximately 1.0 mile above the intersection with State Highway P, where

Lateral No. 27 flows into Main Ditch No. 8. A detailed project report was approved in December 1995 for preparation of plans and specifications. A project cooperation agreement was signed on 12 September 1997. The sponsor completed acquisition of right-of-way on 22 January 2001. A construction contract was awarded on 29 June 2001 for \$1,078,795.

Local cooperation. Pemiscot County is the local sponsor for the project.

Operations during fiscal year. The construction on the project is 98% complete as of Sep 30, 2002.

2. MUD CREEK, DRESDEN, TN

Location. Mud Creek is located in Weakly County Tennessee, about 50 miles north of Jackson, Tennessee.

Existing project. The city has a multiple cell sewage lagoon system located along Mud Creek on the eastern limits of the city. Mud Creek is a naturally meandering stream and this stream bank erosion is threatening the stability of the containment dikes for the lagoons. A detailed project report was approved in February 2002, and a project cooperation agreement was signed on 19 June 2002. The project was approved for construction and all construction was completed by September 30, 2002. The construction Costs for the project is \$160,000 and of that \$56,000 is non-Federal.

Local Cooperation. The City of Dresden Tennessee is the local sponsor for the project.

3. TUNICA WEIR, TUNICA, MS, AR

Location. Tunica Weir is located on the outlet for Tunica Lake approximately 30 miles southwest of Memphis, TN. on the Mississippi River.

Existing project. This project is the environmental restoration of the 1500-acre Tunica Cutoff Lake formed on a previous cutoff project of the Mississippi River and was approved for construction under the authority of Section 1135 (b) of WRDA 1986 as amended. The weir will stabilize water levels in the lake that had been steadily declining. A construction contract was awarded on Nov 15, 2001 in the amount of \$993,201-.

Operations during fiscal year. The construction is substantially complete and final completion is scheduled for Oct. 2002.

4. TURKEY CREEK, MEDINA, TN

Location. Turkey Creek is located in Gibson County about 7 miles north of Jackson, TN in Medina, TN

Existing project. This project is streambank protection for the sewage lagoon at Medina, TN and was approved for construction under the authority of Section 14 of the flood control act of 1946. A PCA was signed on Sep 27, 2002.

Operations during fiscal year. Construction is scheduled for FY03.

General Investigations

5. DESOTO COUNTY REGIONAL WASTE-WATER SYSTEM, DESOTO COUNTY, MS

Location. DeSoto County is located in north Mississippi, just south of Memphis, TN. The county's rapid growth demands expansion of existing sewer systems and the development of new systems into one unified county-wide system.

Existing project. Section 219 of WRDA 1992, as amended in Section 502 of WRDA 1999 and Section 108 of the Consolidated Appropriations Act, 2001 authorized \$20,000,000 for the design and construction of a regional wastewater system in DeSoto County, Mississippi.

Local cooperation. DeSoto County is the local sponsor for the project. Memphis District has completed a Letter Report and Project Management Plan; prepared, negotiated, and executed a design-construction cost-sharing agreement (PCA); verified NEPA compliance by local interests, conducted design review and value engineering studies, and prepared the bid package for the Short Fork Creek Wastewater Treatment Plant (WWTP). The PCA for construction of the Short Fork Creek WWTP was executed on 13 May 2002.

Operations during fiscal year. Project is in early stages of construction. Construction of the Wastewater Treatment Plant (WWTP) access road was initiated in September 2002. A construction contract award for the WWTP is scheduled for March 2003. Design activities for the Camp Creek Canal Interceptor to Ross Road WWTP are underway.

6. WHITE RIVER TO NEWPORT, AR

Pre-Construction Engineering and Design

Location. The project is located in Arkansas on the White River, starting at Newport, AR (mile 254) to the Arkansas Post Canal (mile 10)

Existing project. Project was authorized by WRDA of 1986, subsequently deauthorized by WRDA of 1988, and reauthorized by WRDA of 1996. The

existing authority is for 4.5 ft deep by 100 ft wide from Augusta (River Mile 198) to Newport (Mile 254); and 8 ft deep by 125 ft wide from the Arkansas Post Canal (Mile 10) to river mile 198 at stages equivalent to or exceeding 12 ft on the Clarendon gage, with a 5 ft minimum depth at lower stages.

Operations during fiscal year. Funds are being used to continue the general reevaluation of the authorized White River to Newport, AR project. During this period \$206,018 was expended

7. COORDINATION WITH OTHER AGENCIES

During this period \$118,221 was expended.

8. COLLECTION AND STUDY OF BASIC DATA

During this period \$71,171 was expended.

Environmental

9. REELFOOT LAKE, TENNESSEE AND KENTUCKY

Location. The project is located in northwest Tennessee in Lake and Obion counties and southwest Kentucky in Fulton County.

Existing project. The project includes a new spillway, with an inlet and outlet channel; relocation of a highway bridge; circulation channels in the lake; a sediment retention basin and restoration of Shelby Lake; waterfowl management units. The project was authorized for construction in Section 101(b) of the Water Resource Development Act of 1999. The Estimated Federal Cost for construction for the project is \$18,900,000 and the Estimated Non-Federal Cost for construction for the project is \$12,000,000.

Local cooperation. The Tennessee Wildlife Resources Agency (TWRA) has agreed to act as non-Federal sponsor. The PED phase was initiated in FY 2000 subsequent to executing a PED agreement with TWRA.

Operations during fiscal year. FY 2002 funds were used to perform an analysis to determine and identify any potential flooding impacts to farmland due to the new spillway and its operation. The acres identified for the winter pool elevation do not suffer substantial damage because the duration in December through February is only one day. For the acres identified at the summer pool elevation, the increase in duration (three to four days in April and May and six

days in June) will not impose the level of “substantial interference” required for a taking.

10. WOLF RIVER, MEMPHIS, TN

Location. The project is located in Shelby and Fayette Counties, Tennessee. The Wolf River basin covers approximately 819 square miles in southwest Tennessee and north Mississippi. The Wolf River flows northwestward approximately 86 miles to its confluence with the Mississippi River at Memphis, Tennessee, meandering through bottomland hardwood forests in its upper reaches and a man-altered channel in its lower reaches.

Existing project. A severe headcut is threatening a bridge and destroying fish and wildlife habitat and development is encroaching on wetlands, bottomland hardwoods and other fish and wildlife habitat in the Wolf River and its floodplain. The project will include six main channel stabilization weirs with two cutoff prevention weirs; eighteen tributary weirs; wildlife corridors and trails in Shelby County; and three boat ramps, two in Shelby County and one in Fayette County. The project was authorized for construction in Section 101, Water Resources Development Act of 2000. The Estimated Federal Cost for construction for the project is \$6,350,000 and the Estimated Non-Federal Cost for construction for the project is \$3,555,000.

Local cooperation. The Chickasaw Basin Authority and Shelby County, Tennessee are the non-Federal sponsors for this project and signed a PED cost sharing agreement in July 2001. Costs sharing of features in Fayette County are contingent upon receipt of funds from Fayette County and/or the state of Tennessee. The PED phase is scheduled for completion in December 2002. The project cooperation agreement is scheduled for execution in September 2003.

Operations during fiscal year. WRDA 2000, Section 101 authorizes the project for construction per approval of the Chief’s Report on 29 December 2000. An additional capability of \$75,000 in FY03 could be used to initiate construction on the first item of work, which includes construction of three (3) of the six main channel weirs, two cutoff prevention weirs, and associated access roads.

Other Activities

11. INSPECTION OF COMPLETED WORKS

Completed projects were inspected at a cost of \$198,100 during this period. Total cost as of Sep. 30,

2002, was \$3,689,078. This included in-depth inspection of projects.

12. WORKS UNDER SPECIAL AUTHORITIES

Navigation activities pursuant to Sec. 107, Public Law 87-645, as amended.

During this period, \$1,028 Federal and \$4,466 non-Federal was expended on Blytheville Harbor, AR; \$234 Federal and \$1,304 non-Federal on Northwest Tennessee Regional Harbor, TN.

Flood control activities pursuant to Sec. 205, Public Law 858, 80th Cong., as amended (preauthorization).

During this period \$11,503 was expended on Section 205 Coordination Account; \$43,951 was expended on Bayou De Chein KY; \$4,265 was expended on Baxter Bottom, TN; \$56,321 was expended for Bono AR; \$13,322 was expended on Covington TN; \$34,789 was expended on Dresden TN; \$3,161 was expended on Dyer County Levee, TN; \$33,198 was expended on Higginson AR; \$474,886 \$26,004 was expended on Indian Bayou Ditch, AR; \$80,062 was expended on Mayfield Creek & Tribs., KY; \$9,330 was expended on Oliver Creek, TN; \$46,884 was expended on Spring Creek, AR; \$13,111 was expended on Truman, AR.

Emergency bank stabilization activities pursuant to Sec. 14, Public Law 526, 79th Cong., as amended.

During this period, \$6,704 was expended on Section 14 Coordination Account; \$13,439 was expended on Colt, AR; \$101,224 was expended on Dresden Sewage Lagoon, TN; \$14,853 was expended on Heathcott Road, TN; \$20,284 was expended on Hollywood Interceptor, TN; \$14,241 was expended on Mt Moriah Culvert, TN; \$13,932 was expended on Poplar Estates Park, TN; \$31,484 was expended on Turkey Creek, TN; \$7,332 was expended on Woodland Hills Site A, TN; \$5,338 was expended on Woodland Hills Site B, TN.

Snagging and clearing of navigable streams and tributaries in the interest of flood control (Sec. 208 of 1954 Flood Control Act, Public Law 780, 83rd Congress).

During this period, \$8,295 was expended on Section 208 Coordination Account During this period \$4,436 was expended on Big Slough Ditch Craighead

County, AR and this study was terminated due to significant cultural resources; \$1,979 was expended on Ditch 2 Craighead County, AR; \$8,009 was expended on Farrenburg Ditch New Madrid County, MO; \$8,117 was expended on Lateral No 3 MO.

Project Modifications for improvement of environment pursuant to Sec. 1135, Public Law 99-662, as amended (preauthorization).

During this period \$7,603 was expended on Section 1135 Coordination Account; \$6,912 was expended on Ditch 28 Structure & Levee, AR; \$45,264 was expended on Duck Creek, MO; \$56,754 was expended on Horseshoe Lake, AR; \$71,194 was expended on Lower Obion River, TN.

Aquatic Ecosystem Restoration, Public Law 104-303, Sec. 206

During this period, \$10,334 was expended on Aquatic Ecosystem Restoration Coordination Account Funds.

13. ENVIRONMENTAL IMPROVEMENT PROJECTS

Environmental Infrastructure

During this period, Federal cost was \$43,122 for DeSoto County Wastewater Treatment, MS

14. EMERGENCY RESPONSE ACTIVITIES

Emergency flood control activities, Public Law 99, 84th Cong.

During this period, Federal cost was \$237,755 for disaster preparedness.

TABLE 13-B AUTHORIZING LEGISLATION

Acts	Work Authorized	Documents
WRDA as amended 1948, Sec 205	Main Ditch No. 8 Pemiscot County, MO The purpose of the project is control of channel flooding on agricultural lands, while minimizing damage to the environment.	Public Law 858, 80 th Congress Jun. 30, 1948
Section 14 of the Flood Control Act of 1946	Mud Creek, Dresden, TN The city has a multiple cell sewage lagoon system located along Mud Creek on the eastern limits of the city. Mud Creek is a naturally meandering stream and this stream bank erosion is threatening the stability of the containment dikes for the lagoons.	Public Law 526, 79 th Congress 2 nd session, Jul. 24, 1946
WRDA as amended 1986 Section 1135(b) of	Tunica Weir, Tunica, MS, AR. This project is the environmental restoration of the 1500-acre Tunica Cutoff Lake formed on a previous cutoff project of the Mississippi River. The weir will stabilize water levels in the lake that had been steadily declining.	Public Law 99-662, 99 th Congress 2 nd session, Jul. 14, 1960
Section 14 of the Flood Control Act of 1946	Turkey Creek, Medina, TN. This project is streambank protection for the sewage lagoon at Medina TN	Public Law 526, 79 th Congress 2 nd session, Jul. 24, 1946
Section 219 of WRDA 1992, as amended in Section 502 of WRDA 1999 and Section 108 of the Consolidated Appropriations Act, 2001	Desoto County Wastewater Treatment, MS DeSoto County is located in north Mississippi, just south of Memphis, TN. The county's rapid growth demands expansion of existing sewer systems and the development of new systems into one unified county-wide system.	Public Law 106-53, 106 th Congress Aug. 17, 1999
WRDA as amended 1999, Sec 101(b)	Reelfoot Lake, Tennessee and Kentucky A new spillway, with an inlet and outlet channel; relocation of a highway bridge; circulation channels in the lake; a sediment retention basin and restoration of Shelby Lake; waterfowl management units.	Public Law 106-53, 106 th Congress Aug. 17, 1999
WRDA as amended 2000 , Sec 101(b)	Wolf River, Memphis Tennessee A severe headcut is threatening a bridge and destroying fish and wildlife. The project will include six main channel stabilization weirs with two cutoff prevention weirs; eighteen tributary weirs; wildlife corridors and trails in Shelby County; and three boat ramps.	Public Law 106-541, 106 th Congress Dec. 11, 2000

ST. LOUIS, MO, DISTRICT

This district comprises those portions of southwestern Illinois and eastern Missouri which lie in the drainage basin of Mississippi River and its western tributaries, exclusive of the Missouri River, from the mouth of the Ohio River to mile 300, and of its eastern tributaries to Hamburg Bay at mile 261 on the left bank, exclusive of tributary basin of Illinois Waterway upstream of new La Grange Lock and Dam at mile 80.15 above confluence of the Illinois and Mississippi Rivers. The St. Louis District territory encompasses 27,000 square

miles. The District also includes a drainage basin in Missouri tributary to the Little River diversion channel. The Mississippi River between the Missouri River and mile 300 is included in a separate report on the Mississippi River between the Missouri River and Minneapolis, MN. The portion of the Illinois River downstream of new La Grange Lock and Dam is included in the report of the Chicago District on the Illinois Waterway, Illinois and Indiana.

Navigation

1. ILLINOIS WATERWAY, IL (ST. LOUIS DISTRICT)

See report on Illinois Waterway, IL and IN, under Rock Island District.

2. KASKASKIA RIVER, IL

Location. The river rises in Champaign County, IL, about 5 miles northwest of Urbana, in the east-central part of the state. It flows southwesterly about 325 miles and empties into the Mississippi River about 8 miles above Chester, IL, or about 118 miles above the mouth of the Ohio River. (See Cincinnati sheet of maps of United States published by Army Map Service, scale 1:500,00.)

Previous project. For details, see Annual Report for 1986.

Existing project. Improvement for navigation provides a channel 9 feet deep and 225 feet wide from the mouth to Fayetteville, IL. Improvements included channel enlargement and a dam at mile 0.8 with a single lock 84 feet wide and 600 feet long. Federal cost totaled \$147,387,000; non-Federal cost totaled \$7,665,000, which included \$1,118,160 local contributions.

Local cooperation. State of Illinois passed legislation authorizing Illinois Department of Public Works and Buildings to enter into assurances of local cooperation with the United States. These assurances have been furnished and were accepted on behalf of the United States on Sep. 10, 1965; these assurances were supplemented on Aug. 7, 1972, to incorporate the provisions of Public Law 91-646.

Operations and result during fiscal year. Hired labor performed operation (\$1,318,004) and maintenance (\$714,642) of the project.

3. MISSISSIPPI RIVER BETWEEN MISSOURI RIVER AND MINNEAPOLIS, MN (ST. LOUIS DISTRICT)

See separate section entitled "Mississippi River between Missouri River and Minneapolis, MN," printed in the Annual Report of the Chief of Engineers. This section includes Lock & Dam 24 Major Rehabilitation, Lock & Dam 25 Major Rehabilitation, and Melvin Price Locks & Dam.

4. ST. LOUIS HARBOR, MO AND IL

Location. The project area includes both sides of the Mississippi River from miles 138.8 to 208.8 above the Ohio River (generally, the limits of the Port of Metropolitan St. Louis).

Existing project. The project was authorized by the Water Resources Development Act of 1986. The authorized project includes improvements in two areas: the North Riverfront area in Missouri (which is served by the St. Louis Municipal Docks) and the Tri-City Port area along the east bank of the Chain of Rocks Canal in Illinois. The principal project at the St. Louis Municipal Docks is an L-dike sediment control structure in the river to provide reliable water access to the dock when the river is low. The principal project at the Tri-City Port area is a 210 ft. wide harbor along 6,900 ft. of the Chain of Rocks Canal. The North Riverfront project and half the Tri-City harbor (3,450 ft.) would be constructed in Phase 1, and the second half of the Tri-City harbor in Phase 2 approximately 10 years later. Estimated cost of the project (2000) is \$15,524,000 Federal and \$30,624,000 Non-Federal. A March 1986 Reevaluation Report described model tests which showed that the L-dike sediment control structure recommended for the St. Louis Municipal Docks would not be effective but that appropriate configuration of a new outer wall for the docks, referred to as the Prototype River Access Improvement Structure (PRAIS), would divert currents so as to control scour and sedimentation and maintain sufficient water depths for the needs of the harbor.

Local cooperation. The District coordinated with the two local sponsors and found that (1) the city of St. Louis is unable to continue as a sponsor for the PRAIS project and (2) the Tri-City Regional Port Authority wants the Corps to consider a project location just below the mouth of the Chain of Rocks Canal adjacent to the former Charles Melvin Price Support Center that the sponsor recently acquired. The proposed reconfigured harbor facility is considerably smaller than the authorized 6,900-foot facility.

Operations and results during the fiscal year. The District submitted a plan formulation package for Division and Headquarters review in April 2002. Since then, the District has addressed preliminary comments; policy review is continuing in FY 2003.

5. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

No activity in FY 02.

Flood Control**6. ALTON TO GALE ORGANIZED
LEVEE DISTRICTS, IL & MO**

Location. The levee system is located adjacent to the Mississippi River between Alton and Gale, Illinois.

Existing Project. The project is authorized by the Flood Control Acts of 1936, 1938 and 1946. Construction of the Alton to Gale levee system was completed in 1977. Some reaches of this levee system have, for many years, been experiencing a significant number of slides associated with design deficiencies increasing the probability of levee failure during flood events. The recommended plan will correct these slides by a lime stabilization procedure. Estimated cost (1997) is \$109,018,000 Federal and \$4,374,000 non-Federal. Resumption of project initiated. New slides were discovered during the 1997 spring levee inspections. The contract to repair the Blue Waters Levee in the Metro East Drainage and Levee District was completed Oct. 1997.

Local cooperation. The cost sharing applicable for the Alton to Gale Levee Slide repairs is in accordance with policies established for the Water Resources Development Act of 1986, PL 99-662. The local sponsor is required to operate and maintain all works after completion. Supplemental assurances have been completed for a portion of the remedial work that was 100% federally funded. In Nov. 2000, ASACW granted an exception to the policy requiring non-Federal cost sharing for deficiency corrections. As a result, 44 levee slides were repaired at 100 percent Federal cost.

Operations and results during fiscal year. The contract to repair 44 levee slides in the Grand Tower, Prairie du Rocher, Metro East, and Degonia-Fountain Bluff levee districts was awarded in Aug. 2001 and completed in Sep. 2002 at a cost of \$2.6 million. A letter report is currently being developed which will address future deficiency corrections.

7. CAPE GIRARDEAU-JACKSON, MO

Location. Missouri, along the right bank of the Mississippi River between River Miles 50 and 55 above the Ohio River.

Existing Project. The project includes a 157 acre dry detention reservoir; approximately one mile of channel improvements on Cape La Croix Creek and two miles of channel improvements on Walker Branch, eight bridge replacements; recreational/environmental

features and non structural features which are not going to be implemented at this time. The project is authorized by the Water Resources Development Act of 1986 (PL 99-662). The estimated Federal project cost is \$36,806,000. Non-Federal cost is \$13,787,000.

Local Cooperation. The city of Cape Girardeau, MO, local sponsor, is strongly supportive of the project. The Local Cooperation Agreement (LCA) was executed on May 25, 1990 with a modification to the LCA executed on Oct. 27, 1992. Requirements of local cooperation are fully described in the FY 1991 Annual Report.

Operations and results during fiscal year. Construction of the detention reservoir was 98% complete in FY 2002.

8. CHESTERFIELD, MO

Location. The Chesterfield, Missouri, project includes the Monarch-Chesterfield Levee, which is located in St. Louis County along the right bank of the Missouri River between river miles 46 and 38.5.

Existing project. The project was authorized by the Water Resources and Development Act of 2000 (PL 106-541). The project includes a 5-7 foot levee raise, approximately 12 miles long; seepage berms; relief wells; closure structures; pump stations; and several gravity drains.

Local cooperation. The Monarch-Chesterfield Levee District signed a Design Agreement in August 2001.

Operations and results during fiscal year. Continued preconstruction engineering and design.

9. EAST ST. LOUIS AND VICINITY , IL

Location. Project is in St. Clair and Madison Counties, IL, on the left bank of the Mississippi River between river miles 175 and 195 above the Ohio River. Project includes all bottom lands between bluffs on the east and Mississippi River and Chain of Rocks Canal on the west, and extends from Cahokia diversion channel on the north to Prairie du Pont Creek on the south. (See Corps of Engineers Navigation Charts, Middle and Upper Mississippi River, Cairo, IL, to Minneapolis, MN.)

Existing project. The 1936 Flood Control Act authorized raising and enlarging existing levee systems by construction or reconstruction of 19.8 miles of levee, including 3.1 miles of floodwall, together with

necessary appurtenant works consisting of gravity drainage structures, highway and railroad closure structures, alterations and reconstruction of existing pumping plants, alterations to railroad bridges and approaches at levee crossings, service roads on levee crown, and seepage control measures. The completed 10 miles of levee along Chain of Rocks Canal and Lock 27 provide flood protection on the landward side integral with and to the same degree as the East St. Louis levee. Final cost of work under this authorization is \$22,550,100. The Flood Control Act of 1965 modified existing project to provide for channel improvements, diversion ditches, flood plain detention areas, a reservoir on Little Canteen Creek, and a pumping plant to considerably reduce damages resulting from interior flooding. This act also authorized reconstruction of a channel stabilization dam in Cahokia Creek diversion channel to provide protection to adjacent levees and bridges from scour and eventual loss. Post authorization studies in the early 1980's justified a project that was constructed for the Blue Waters Ditch area, which included channel improvements and a pumping station with a final project cost of \$11,530,000 and \$2,950,000 non-Federal. However, flood plain detention areas, the reservoir on Little Canteen Creek and other related flood control measures in the Cahokia-Harding Ditch Area are not economically feasible.

Severe flooding, which has resulted in National Disaster Declarations each year from 1993 to 1996, resulted in a new Congressional appropriation in FY 1997 to restart a cost-shared general reevaluation of the interior area. Congress added funds each year since FY 1997 to continue this effort. The project has been reformulated as an ecosystem restoration project that provides incidental flood damage reduction. The report is due out in February 2003. Project costs are estimated to be \$210 million. The 1988 Energy and Water Development Appropriations Act authorized repair and rehabilitation of pump stations and appurtenant works, channels and bridge structures. The estimated total cost of this work (2001) is \$38,685,000 Federal and \$16,267,000 Non-Federal.

Local cooperation. For work under the Energy and Water Development Appropriations Act of 1988, PL 100-202, local interests have entered into three Local Cooperation Agreements (LCA) which cover all of the work in the Flood Protection Rehabilitation project. Construction work under the first two LCAs complete, and construction work under the third LCA is underway.

Operations and results during fiscal year. Construction was initiated on Canteen Creek Phase II and North and East pump station repairs.

10. MERAMEC RIVER BASIN (VALLEY PARK), MISSOURI

Location. The project is located in St. Louis County, Missouri, adjacent to the left bank of the Meramec River between miles 20.7 and 22.1 above the confluence with the Mississippi River.

Existing project. The project was authorized for construction by Section 2(h), Public Law 97-128, Dec. 29, 1981, and the Water Resources Development Acts of 1986 and 1999. It protects Valley Park from the 100-year flood on the Meramec River. The project includes 3.2 miles of earthen levee with six gravity drains, three closure structures, interior ponding areas and 41 relief wells required for under-seepage control. Estimated total project cost (2001) \$42,928,000; \$32,120,000 Federal, and \$10,808,000 non-Federal.

Local cooperation. The city of Valley Park, Missouri is the local sponsor. A Local Cooperation Agreement was executed on August 12, 1992.

Operations and results during fiscal year. The project is about 60 percent complete, including about 1.6 miles of levee and 3 closure structures. Design and land acquisition continued for the remaining 1.6 miles of levee (which includes two "engineered fills" for material from the ruins from an abandoned glass plant). A tree clearing contract was awarded for the remaining 1.6-mile levee area.

11. NUTWOOD DRAINAGE AND LEVEE DISTRICT, IL

Location. The levee district is in Green and Jersey Counties, IL, on the left bank of the Illinois River between miles 15.2 and 23.7 above the Mississippi River. (See Quincy, IL-MO, sheet of maps of the United States, published by Army Map Service, scale 1:250,000.)

Existing Project. Project was authorized by the 1962 Flood Control Act (H. Doc. 472, 87th Cong., 2d sess.). Project provides for raising and enlarging 11.4 miles of levee, construction of 1.0 miles of new levee, altering a pumping station and construction of seepage control measures. This project would provide protection to 10,360 acres of land, 9,365 of which are

highly productive agricultural lands. A General Design Memorandum (GDM), completed in 1986, indicated that the plan was not economically justified at the interest rate used at the time. The project was declared inactive on Jun. 3, 1987. As a result of the Great Flood of 1993 and the inundation of Illinois State Highway 16/100 within the project area, the 1995 Energy and Water Development Appropriations Bill included funding to perform a flood damage reduction study.

Local Cooperation. Requirements of local cooperation are described on page 14-11 of FY 1980 Annual Report except that cost sharing policies established by the Water Resources Development Act of 1986, PL-99-662, will also apply. The Nutwood Drainage and Levee District is the local sponsor. The cost sharing agreement for preconstruction engineering and design (PED) was executed in July 1997.

Operations and results during fiscal year. Construction funding was received in FY 2002. Work efforts to acquire necessary permits and prepare plans and specifications were initiated. The present total Federal project cost (2002) is \$12,575,000; non-Federal cost is \$4,192,000.

12. RIVER DES PERES, MO

Location. River des Peres drains a 111-square mile area in the city of St. Louis and St. Louis County, Missouri, and empties into the Mississippi River.

Existing project. The project was authorized by the Water Resources and Development Act of 1990 (PL 101-640). The authorized project consists of two subprojects, Deer Creek and University City. The Deer Creek portion consists of 2.5 miles of channel widening and stabilization improvements through the cities of Rock Hill, Webster Groves, Brentwood, and Maplewood. The University City portion consists of channel enlargement and stabilization along about 2.5 miles of the University City branch of upper River des Peres, a 2.53-mile recreation trail, and a small recreation park to be constructed by non-Federal interests on non-project lands.

Local cooperation. The Metropolitan St. Louis Sewer District (MSD) and the mayors of Brentwood, Rock Hill, Webster Groves, and Maplewood signed a Design Agreement on 17 May 2001 to serve as the local sponsors for the Deer Creek portion of the project. MSD and the city of University City signed a Letter of Intent in February 2001.

Operation and results during fiscal year.

Hazardous waste testing of soils in the project area indicated several spots with hazardous waste, making project implementation more difficult. The city of Rock Hill decided to withdraw its sponsorship of the Deer Creek portion of the project. The remaining sponsors have asked the Corps to revise the reevaluation study to analyze floodproofing as a flood damage reduction measure.

13 ST. LOUIS FLOOD PROTECTION, MO

Location. The St. Louis Flood Protection project is located in St. Louis, Missouri, on the right bank of the Mississippi River between miles 176.3 and 187.2 above the mouth of the Ohio River.

Existing project. The project was authorized by Public law 84-256, 9 August 1955, and was completed in 1974. The reevaluation of the project consists of analyzing possible structural deficiencies and geotechnical concerns and the enhancement of recreation features within the project area.

Local cooperation. The city of St. Louis signed the Design Agreement on 2 February 2000.

Operations and results during fiscal year. Continued the reconstruction evaluation.

14. STE. GENEVIEVE, MO

Location. The City of Ste. Genevieve is located in Ste. Genevieve County at the edge of the Mississippi River floodplain about 54 miles south of St. Louis, MO.

Existing project. The project was authorized by the Water Resources Development Act of 1986 (PL 99-662). The authorizing language states "Congress finds that, in view of the historic preservation benefits resulting from the project, the overall benefits of the project exceed the costs of the project." The overall project consists of four parts. Part 1 is a major levee and associated features that will protect the town from the Urban Design Flood on the Mississippi River. Parts 2 and 3 are channel improvements on tributary streams that flow through the town, North and South Gabouri Creek, respectively. Part 4 is recreation features on flood control lands. Estimated total project cost (2001) is \$49,665,000; \$35,775,000 Federal, and \$13,890,000 is non-Federal.

Local cooperation. The project sponsor is the Ste. Genevieve Joint Levee Commission. The City of Ste. Genevieve, Ste. Genevieve County Levee District Number 2, and Ste. Genevieve County Levee District Number 3 hold membership on the Commission.

Operations and results during fiscal year. The Corps of Engineers and the project sponsor have essentially completed Part 1 and are reformulating the plans for Parts 2, 3, and 4.

15. WOOD RIVER DRAINAGE AND LEVEE DISTRICT, IL

Location. The Wood River Drainage and Levee District project is located in the Mississippi River floodplain of Madison County, Illinois, just upstream of the city of St. Louis.

Existing project. The project was authorized by the Flood Control Act of 1938 and modified by the Flood Control Act of 1965. The original project provided for local flood protection works. The modified project provides for a pumping station with collector ditches and necessary appurtenant facilities for removal of water impounded by the existing levees. The pump station was never built.

Local cooperation. The Wood River Drainage and Levee District signed a Design Agreement in May 2000.

Operations and results during fiscal year. Continued plans and specifications.

16. WOOD RIVER LEVEE, IL

Location. The Wood River Levee project is located in the Mississippi River floodplain of Madison County, Illinois, just upstream of the city of St. Louis.

Existing project. The project was authorized by the Flood Control Act of 1938 and constructed in the 1950s. The existing project provides urban level protection for the 500-year Mississippi River flood stage. A reconstruction evaluation is underway to address the aging infrastructure and determine Federal interest. The recommended project includes the rehabilitation of the levee system to bring it into original performance compliance.

Local cooperation. The Wood River Drainage and Levee District signed a Design Agreement on 6 April 2000.

Operations and result during fiscal year. Continued the reconstruction evaluation.

17. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Inspection of completed work was accomplished at a cost of \$426,525 for the Fiscal Year 2002. Total cost as of end of fiscal year is \$12,308,629.

18. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION

Flood control activities pursuant to Sec. 205, Public Law 858, 80th Cong., as amended (preauthorization).

See Table 14-F.

Emergency bank stabilization activities pursuant to Sec. 14, Public Law 526, 79th Cong., as amended.

See Table 14-F.

Emergency flood control activities - repair flood fighting, and rescue work (Public Law 99, 84th Cong., and antecedent legislation).

Federal costs for the fiscal year were \$359,452 for Disaster Preparedness, \$453,992 for Emergency Operations, and \$40,225 for Rehabilitation.

Miscellaneous

19. ECOSYSTEM RESTORATION WORK UNDER SPECIAL AUTHORIZATION

Project Modifications for improvement of environment pursuant to Sec. 1135, Public Law 99-662, as amended (preauthorization).

During FY 02, the following funds were expended: \$4,903 Coordination Account; \$7 Carlyle Lake Wildlife Management; \$221,020 Rend City Wetlands Restoration; \$71,814 Spunky Bottoms; \$377,955 Shelbyville Wildlife Management Area; and \$1,625 Mark Twain Lake Fish Habitat.

Aquatic Ecosystem Restoration Public Law 104-303, Sec. 206.

In FY 02, funds were expended as follows: \$4,997 Coordination Account; \$68,609 Confluence Greenway; \$40,561 Ted Shanks Area Reforestation; \$52,898 Lemay Wetland Restoration; \$73,688 Horseshoe Lake Restoration; \$4,987 Lake Lou Yeager Restoration; \$2,768 Gabaret Island Ecosystem Restoration; \$8,053 Northshore Wetlands Restoration; and \$6,853 North Chutes Area Restoration.

Multiple-Purpose Project Including Power

20. GENERAL REGULATORY FUNCTIONS

Permit Evaluations	\$1,286,468
Enforcement	115,912
Studies	23,170
Environmental Inspection Statement	<u>14,965</u>
Total Regulatory	\$1,440,515

21. CATASTROPHIC DISASTER PREPAREDNESS PROGRAM

Local Preparedness	\$ 0
National Preparedness	87,732
National Emergency Facilities	<u>8,986</u>
Total	\$96,718

22. OTHER PROGRAMS AND ACTIVITIES

In FY 02, \$1,169,841 was expended on Native American Grave Protection for operation and maintenance.

23. UPPER MISSISSIPPI RIVER ENVIRONMENTAL MANAGEMENT PROGRAM

Location. The portion of the Upper Mississippi River within the boundaries of the St. Louis District extends from the mouth of the Ohio River (river mile 0) to river mile 300, downstream of Lock and Dam 22.

Existing project. The project is composed of five elements: Habitat Rehabilitation and Enhancement Projects, Long-term Resource Monitoring, Recreation Projects, Studies of Recreation Impacts and Navigation Traffic Monitoring. (The St. Louis District's involvement has been limited to Habitat Rehabilitation and Enhancement Projects and Long Term Resource Monitoring.) The overall program, involving five states and three engineer districts, is administered by the Mississippi Valley Division. In the St. Louis District, five habitat rehabilitation projects have been completed. These are Clarksville Management Area, Dresser Island, Pharrs Island, and Stag Island in

Missouri and Stump Lake in Illinois. Through FY 2002, funds allocated to the St. Louis District have amounted to \$37,518,000 for design and construction of Habitat Rehabilitation and Enhancement Projects (HREP), \$1,660,500 for Long Term Resource Monitoring (LTRM), \$2,258,800 for Program Management; and \$968,900 for Habitat Needs Assessment.

During FY 02, expenditures of \$6,077,194 included the following:

Baseline Monitoring	\$ 5,330
Batchtown	3,771,455
Biological Response Monitoring	8,640
Calhoun Point	79,733
Cuivre Island	48,948
Dike Alterations	88,506
Dresser Island	44,098
Fort Chartres	3,987
Habitat Needs Assessment	-437
Jefferson Barracks	0
Pools 25/26	41,859
Program Management	166,781
Project Coordination LTRM	3,852
Project Evaluation LTRM	63,318
Schenimann Chute	100,217
Stump Lake	4,721
Swan Lake	1,571,894
U.S. Fish and Wildlife Service Coordination	74,292

Local cooperation. The terms of local cooperation, as established by Public Law 99-662, will vary according to the nature of the project, land ownership and pre-existing management responsibilities. The local sponsor for Habitat Rehabilitation and Enhancement projects is usually the U.S. Fish and Wildlife Service in coordination with the state of Missouri or the state of Illinois. A PCA agreement with the state of Missouri was completed in FY 97 for the Cuivre Island project.

Operations and results during the fiscal year. During FY 2002, construction continued at Batchtown (Phase II) and Swan Lake. Habitat and biological response monitoring activities continued at the Missouri projects of Dresser Island, Clarksville Refuge, and Pharrs Island.

24. FORMERLY UTILIZED SITES REMEDIAL ACTION PROGRAM (FUSRAP)

On October 13, 1997, Congress transferred the management of the Formerly Utilized Sites Remedial Action Program (FUSRAP) to the Corps of Engineers, via the Energy and Water Development Appropriations Act, 1998. The St. Louis District was chosen to

remediate low-level radioactive contamination, which resulted from activities conducted by the Manhattan Engineer District/Atomic Energy Commission, at the five St. Louis area sites. These sites include Madison, Illinois, and Latty Avenue, St. Louis Airport (SLAPS), St. Louis Airport and Vicinity Properties (SLAPS VPs), and St. Louis Downtown (SLDS), Missouri. A sixth site, the Iowa Army Ammunition Plant (IAAAP), was declared eligible for inclusion in FUSRAP in FY 01. Cleanup will follow the provisions of the Comprehensive Environmental Response, Compensation, and Liability Act.

Major accomplishments in FY 02 include the disposal of 91,641 cubic yards of material from the Missouri sites (13,247 from SLDS; 73,857 from SLAPS; 4,537 from Latty Avenue).

The Corps of Engineers continued remediation efforts at SLDS under the approved Record of Decision. Remediation and restoration of Mallinckrodt

Plant 1 continued. Remediation of Plants 6 East/East Half and Midwest Waste (DT-7) were initiated.

The Corps made significant progress on the cleanup of the North County area. Continuing its site stabilization efforts at SLAPS, contaminated material was removed from the central portion of SLAPS, referred to as the Phase 1 work area.

Long-term stewardship responsibility for the Madison site in Illinois was seamlessly transferred to the Department of Energy under the Memorandum of Understanding. The responsibility consists of long-term records management documenting the successful cleanup of the site.

The final remedy for the North County Sites, which include SLAPS, HISS, and the SLAPS VPs, will be accomplished according to the remedy selected from the feasibility study/proposed plan. The study/plan is scheduled for release to the public in FY 03.

ROCK ISLAND, IL, DISTRICT

This district comprises most of the northern half of Illinois, portions of southern Wisconsin, southern and southwestern Minnesota, eastern and central Iowa, and northeastern Missouri, embraced in drainage basin of Mississippi River and its eastern and western tributaries between mile 300 (above mouth of Ohio River) and 614, and of its eastern tributaries only, between

Hamburg Bay, at mile 261 and 300. This district also includes the Illinois Waterway above mile 80 with its tributaries and drainage basins. The section of the Mississippi River between river miles 300 and 614 is included in the report on Mississippi River between Missouri River and Minneapolis, MN.

Navigation

1. ILLINOIS AND MISSISSIPPI CANAL, IL

Location. This canal extends for 75 miles from the Illinois River near LaSalle, IL, to the Mississippi River at Rock Island, IL. A feeder canal, 29 miles in length, extends from the summit level of the canal to the Rock River at Rock Falls, IL.

Existing project. See pages 1306-1308 of Annual Report for 1962 for details regarding project. The canal was constructed in the period 1892-1918. The canal has not been operated for navigation since June 1951 in accordance with Corps policy to discontinue operation of waterways affording little or no benefit to navigation. The River and Harbor Act of 1958 authorized the appropriation of \$2,000,000 for the purpose of placing the canal in proper condition for public recreational use and to convey and transfer the canal to the State of Illinois as part of the State park system.

The repair and modification program was initiated in 1961, and a number of canal features have been repaired or modified. In connection with this program, fee title of 1,062 acres and recreational flowage easements over 309 acres of land in Rock River at Rock Falls, formerly under navigation flowage easement, have been acquired. The State of Illinois accepted title to the canal as of August 1, 1970. The River and Harbor Act of 1970 authorized the additional appropriation of \$6,528,000 to be expended for the repair, modification, and maintenance of bridges, title transfer, modification or rehabilitation of hydraulic structures, fencing, clearing auxiliary ditches, and for the repair and modification of other canal property appurtenances.

The repair and modification work was underway until a suit was filed by three Illinois counties and their Commissioners of Highway against the Federal Government and the State in 1974 over maintenance of highway bridges crossing the canal. After the lawsuit was filed, further rehabilitation work by the Federal Government on the canal was suspended.

On November 4, 1981, the Corps of Engineers deposited \$3,722,572 with the Clerk of the U.S. District Court in Chicago in full satisfaction of the Court's judgment. These funds were used by the counties to complete rehabilitation work as directed in the court order. Rehabilitation work by the Federal Government in coordination with the state was resumed in 1984 with the remaining authorization expended in 1987.

The Water Resources Development Act of 1986 authorized an additional appropriation of \$8,472,000 to accomplish the work described in the 1970 River and Harbor Act.

The State of Illinois filed an additional lawsuit against the United States on July 6, 1987 in the U.S. Claims Court in the amount of \$8,472,572. In a preliminary decision on September 22, 1988, the court dismissed the claim for \$3,722,572. A settlement agreement between the State of Illinois and the United States was signed on November 14, 1991. The agreement provided that Illinois release all claims against the United States as stipulated in the claims court and that the United States provide \$4,750,000 to Illinois as reimbursement for previous repair work performed upon the canal bridges by Illinois. On December 16, 1991, the U.S. Claims Court entered a judgment for \$4,750,000 in favor of the State of Illinois. This judgment was paid in FY 92.

Once funds are received, principal work features to restore the canal to acceptable conditions consist of the repair or reconstruction of retaining walls, embankments, portions of the lock and dam structures, culverts, drainage ditches, and other related work features which the United States has maintained or has been obligated to maintain under previous agreements. These features are consistent with a Master Management Plan prepared by the Illinois Department of Conservation. NEPA documentation to assess remaining work items must be completed prior to initiation of construction.

Local cooperation. A revised Supplemental Agreement with all work items remaining was executed between the state of Illinois and the Federal Government in April 1996.

Operations during fiscal year. Engineering and Construction work was performed for a total cost of \$3,055.

2. ILLINOIS WATERWAY, IL AND IN

Location. Illinois River (entirely within State of Illinois), formed by confluence of Kankakee and Des Plaines River, flows southwesterly and enters Mississippi at Grafton, IL, about 38 miles above St. Louis. Illinois Waterway comprises Illinois River from its mouth to confluence of Kankakee and Des Plaines Rivers (273 miles), Des Plaines River to Lockport (18.1 miles) and Chicago Sanitary and Ship Canal and South Branch of Chicago River to Lake Street, Chicago (34.5 miles). Also from a point

12.4 miles above Lockport, IL, waterway comprises Calumet-Sag Channel and Little Calumet and Calumet Rivers to turning basin 5, near entrance to Lake Calumet (23.8 miles); and Grand Calumet River from junction to 141st Street, deep (lake) draft navigation (9 miles) and to Clark Street, Gary, IN (4.2 miles).

Previous projects. For details, see page 1945 of Annual Report for 1915 and page 1172 of Annual Report for 1932.

Existing project. See Table 23-K and page 1255 of Annual Report for 1963. Cost of new work was \$124,041,436 and includes \$445,000 for Recreation Facilities under Code 711. Calumet-Sag Modification, Part III, placed in the deferred-for-restudy category in March 1972, cost of \$33,000,000 (July 1971) Federal and \$20,700,000 (July 1971) non Federal; is excluded from present cost estimate. Land acquired for the project consisted 865.937 acres in fee and 657.74 acres in flowage easement. See Table 23-B for authorizing legislation.

(See Table 15-J through 15-N on existing locks and dams; lock and dam construction, foundations, cost; additional features entering into cost of project; existing project and total cost of existing project.)

Local cooperation. Complied with for completed modifications and Part I of Calumet-Sag Modification.

All pools above Alton Pool:

Maintenance: Channel dredging by contract cutterhead pipeline dredge was performed in LaGrange pool, at various locations with a total of 160,077 cubic yards of material being removed. Mechanical dredging was performed at Starved Rock, Dresden, Peoria, and LaGrange pools, at various locations with a total of 25,268 cubic yards being removed. The total cost of dredging was \$1,460,300. Continuing construction includes Lockport Access Bridge Construction. Construction was initiated for LaGrange Lock and Dam Scour Protection. Maintenance for the navigation function continued at a cost of \$11,757,800 (includes dredging costs). Maintenance of Recreation Features continued at a cost of \$66,300. Total maintenance costs for Operation and Maintenance were \$11,824,100. Net credits to the project were \$10,000, primarily as a result of collections from towboat companies for damages to lock and dam structures.

Operation and Care: Operations for navigation continued at a cost of \$10,475,500. Environmental Stewardship – Management of Natural Resources continued at a cost of \$60,000. Operations for the

Recreation Function continued at a cost of \$341,400. Total operation costs were \$10,876,900.

Total Operation and Maintenance costs were \$22,691,002.

Alton Pool Operation: Costs for the year were \$10,000 for lock operation; \$47,660 for management of natural resources; \$100,092 for water control management; \$5,635 for outgrants and inspections; and \$63,956 for studies and surveys. Total operation costs were \$227,343.

Alton Pool Maintenance: Maintenance costs for the year totaled \$679,424, all for dredging.

Total operation and maintenance costs for all pools above Alton Pool were \$22,691,002. Alton Pool operation and maintenance costs were \$906,767. Total costs incurred were \$23,597,769.

3. MISSISSIPPI RIVER BETWEEN MISSOURI RIVER AND MINNEAPOLIS, MN

For report on this improvement, see chapter on “Mississippi River between Missouri River and Minneapolis, MN.”

4. UPPER MISSISSIPPI - ILLINOIS NAVIGATION STUDY

Location. The study includes both the Upper Mississippi River and the Illinois Waterway. The study area covers over 850 miles of navigable waterways and 29 locks and dams of the Upper Mississippi River from the headwaters at St. Anthony Falls near Minneapolis-St. Paul, Minnesota; downstream to the mouth of the Ohio River at Cairo; and the Illinois Waterway (eight locks and dams) from Lake Michigan in Chicago, Illinois, southwest to where the waterway joins with the Mississippi River at Grafton, Illinois, 348 miles long. The Upper Mississippi River system meanders through the states of Minnesota, Wisconsin, Iowa, Illinois, and Missouri, and over 40 counties. The Illinois Waterway is located entirely within the State of Illinois.

Existing project. The Study has been restructured to give equal consideration of fish and wildlife resources and navigation improvement planning consistent with recommendations from the National Research Council and the Federal Principals Group. The restructured study is addressing the navigation efficiency needs of the UMR-IWW system, the ongoing cumulative effects of navigation, and the ecosystem restoration needs with a goal of attaining an

environmentally sustainable navigation system. Undertaken by four Corps Districts (St. Paul, Rock Island, St. Louis, and New Orleans). The review of this completed project is authorized by Section 216, Flood Control Act of 1970, PL 91-611.

Local cooperation. None required.

Operations during fiscal year. The interim report was completed and submitted to the Chief of Engineers in July 2002. The Feasibility Phase was continued during FY 02 at a cost of \$5,388,662.

5. UPPER MISSISSIPPI RIVER SYSTEM ENVIRONMENTAL MANAGEMENT PROGRAM (USMRS-EMP), IL, IA, MN, MO, WI

Location. The project is authorized for those river reaches having commercial navigation channels on the Upper Mississippi River, Illinois River, Minnesota River, St. Croix River, and Kaskaskia River in the states of Illinois, Iowa, Minnesota, Missouri, and Wisconsin.

Existing project. The purpose of the UMRS-EMP as stated in the authorizing legislation is to ensure the coordinated development and enhancement of the Upper Mississippi River system, recognizing its several purposes. The program includes habitat rehabilitation and enhancement projects to counteract the effects of backwater sedimentation. Long Term Resource Monitoring will provide the means for more informed management of the UMRS. Also authorized was a study of the economic impacts of completed recreation, completed navigation traffic monitoring, and recreation projects (currently unfunded). The program was initiated in 1986 utilizing funds provided by PL 99-88, FY 1985 Supplemental Appropriation Act. PL 99-662, Water Resources Development Act of 1986, further defined the program and provided for a 10 year implementation period and was extended to 15 years by PL 101-640, Water Resources Development Act of 1990. The Water Resources Development Act of 1999, P.L. 106-53, amends the previous authority by deleting recreation as a project purpose; increasing annual appropriation limits available to the program; authorizing an independent technical advisory committee; requiring submission of a report to Congress on a 6 year cycle that evaluates programs, accomplishments, assesses systemic habitat needs, and identifies any needed changes to the Program authorization.

Local Cooperation: Local cooperation agreements are obtained for habitat projects for such projects not located on lands managed as a national wildlife refuge,

within the meaning of Section 906(e) of the 1986 WRDA. WRDA 1999 establishes a cost sharing percentage of 35 percent for such projects.

Operations During Fiscal Year. Expenditures during the year totaled \$16,524,000. The majority of funds was expended on two primary program elements: habitat projects and long term resource monitoring. FY 02 funds were used for construction on 7 habitat projects and for design activities on 21 additional habitat Projects, as well as applied research and long term resource monitoring. Construction has essentially been completed on a total of 41 projects (with many multiple phases) since the program was initiated. Data collection, analysis of data and production of technical and special reports was continued by contract with the Upper Midwest Environmental Sciences Center in Lake Onalaska, WI. The first report to Congress detailing the programs activities since the programs inception was completed and was submitted to Congress in January 1998. The second report to Congress is scheduled for submission in January 2004. A Habitat Needs Assessment was submitted to Congress in Sep. 2000. This assessment addressed the ecosystem needs along the Environmental Management Programs' reaches of the Upper Mississippi River.

6. OTHER AUTHORIZED NAVIGATION PROJECTS

See Table 15-C.

Flood Control

7. CORALVILLE LAKE, IA

Location. Coralville Lake is formed by the Coralville Dam on the Iowa River, several miles upstream from Iowa City, Johnson County, IA, about 83 miles above the confluence of the Iowa River with the Mississippi River.

Existing project. See page 28-4, Annual Report for 1981, for project details. Construction began in July 1949 and the project has been in operation since February 1958. About 25,035.76 acres in fee of land were acquired and 3,673.113 acres in flowage easements. The project was modified to provide for construction of a highway bridge crossing the lake at the Mehaffey site, which was begun in June 1964 and completed in October 1966. See Table 15-B for authorizing legislation.

Operations during fiscal year. No new work was performed during FY 02. Operation and Maintenance: Routine maintenance activities continued at a cost of \$2,752,463.

8. DES MOINES RECREATIONAL RIVER RIVER AND GREENBELT, IA

Location. The greenbelt area is located along both banks of the Des Moines River in central IA and extends from a point at which relocated U.S. Highway 92 crosses the Des Moines River near Harvey, upstream approximately 169 river miles to U.S. Highway 20, and includes portions of Fort Dodge, IA. It also includes the Corps' operated Lake Red Rock and Saylorville Lake projects.

Existing project. The project will include, but not be limited to: (1) the construction, operation, and maintenance of recreational facilities and streambank stabilization structures; (2) maintenance of all structures constructed before the date of authorization of this project (other than any such structure operated and maintained by any person under a permit or agreement with the Secretary); (3) such tree plantings, trails, vegetation, and wildlife protection and development for recreational purposes; and (4) the prohibition or limitation by the Secretary of the killing, wounding, or capturing at any time of any wild bird or animal in such areas as may be directed by the Secretary. In carrying out the project the Secretary may acquire by purchase, donation, exchange, or otherwise, land and interests therein, as the Secretary determines are necessary to complete the project.

The authorization requires that an Advisory Committee be established for consultation with the Department of the Army consisting of 47 members; three Corps of Engineers appointees, one person from the city of Des Moines, and one from each other incorporated municipality within the greenbelt, two from each of the nine counties in the greenbelt, and five from the State of Iowa. See Table 15-B for authorizing legislation.

Local Cooperation. Letters of assurance have been received for 15 separable elements. Local Cooperation Agreements have been executed for five separable elements.

Operations during fiscal year. Coordination was maintained with the Advisory Committee in accordance with Public Law 99-88. Due to lack of funding, work remained deferred on eleven projects: Red Rock Trails Segment IVB; Botanical Center Park; Johnston Trail and Canoe Access; Raccoon River Trail; Raccoon River Regional Park; Polk City - Big Creek Trail; Webster City - Briggs Wood Trail; Dayton - Stratford Trail; Knoxville; Riverview Park; and Saylorville Barrier Dam Trail. Twelve projects in total have been

completed to date. Costs incurred in FY 02 were \$6,592.

9. LOVES PARK, IL

Location. The Loves Park project is located in Winnebago County, IL on the northeast boundary of the city of Rockford, IL. Loves Park is 17 miles south of the Illinois-Wisconsin state line.

Existing project. The project provides 100-year flood protection along Loves Park Creek. Protection measures consist of 14,000 feet of channel improvements, two diversion structures, use of two existing lakes as storage reservoirs, and 3,100 feet of buried concrete pipe. The estimated project cost is \$30,400,000 including \$9,400,000 non-federal costs. See Table 15-B for authorizing legislation.

Local cooperation: The local cooperation agreement was executed on March 26, 1991.

Operations during fiscal year. FY 02 Funds were used to complete design and initiate construction of Stage 1B. The city continued to work on the acquisition of rights-of-way for Stage 1B. Construction was completed on Stage 1A. Total costs incurred during FY 02 were \$1,327,628.

10. RED ROCK DAM AND LAKE RED ROCK, IA

Location. The site of this project is on the Des Moines River, chiefly in Marion County, but extending into Jasper, Warren, and Polk Counties. The dam is 142.9 miles above the mouth of the Des Moines River, which empties into the Mississippi River at mile 361.4 above the mouth of the Ohio River. The city of Des Moines lies northwesterly from the site, about 60 miles upstream.

Existing project. See page 28-6, Annual Report for 1981 for description of the project. Construction began in May 1960, and the dam was placed in beneficial use for storage of flood water in January 1969. Land acquired for the project consisted of 50,207.860 acres in fee and 26,353.645 acres in flowage easement. Landowner complaints, that lake operation have flooded their lands more frequently than what they were told to expect when flowage easements were initially acquired, led Congress to modify the project authorization. Language in PL 99-190 authorizes acquisition from willing sellers fee simple title in real property, which is subject to periodic flooding in connection with the operation of the project. Potentially there are approximately 1,000 tracts consisting of about

30,000 acres. Estimated Federal cost is \$43,500,000. See Table 15-B for authorizing legislation.

Local Cooperation. None required.

Operations during fiscal year. Additional Land Acquisition efforts were deferred due to lack of funding. Operation and Maintenance activities were continued at a cost of \$5,151,635.

11. SAYLORVILLE LAKE, IA

Location. The project site is chiefly in Polk County, IA, but portions extend into Dallas and Boone Counties. The dam is about 213.7 miles above the mouth of the Des Moines River and about 5 miles upstream from the city of Des Moines, IA.

Existing project. The dam is an earth embankment 6,750 feet long at crest with a height of 120 feet. Outlet works are a single circular concrete conduit, 22 feet in diameter, located at the toe of the west bluff. Control structure is at upstream end of conduit and uses three gates. A stilling basin is provided to dissipate energy of discharge from outlet conduit. Spillway is in the west bluff, weir 430 feet long. Water flowing over the spillway weir discharges into a paved chute and thence into an excavated earth channel to the Des Moines River. Top of spillway is about 31 feet below top of earth embankment section, and flow over weir is uncontrolled when water in reservoir reaches its crest. Watershed area above dam site is 5,823 square miles. With pool at spillway crest elevation, lake area is 16,700 acres and contains about 676,000 acre-feet of water at that height (602,000 for flood control and 74,000 for a conservation pool to maintain minimum flows at downstream points). Lake supplements capacity of downstream Lake Red Rock at river mile 142.9. The two lakes provide a high degree of flood protection to the lower Des Moines River Valley. Reach along the Mississippi River downstream from the mouth of the Des Moines River are also benefitted.

A project modification plan to minimize the adverse environmental effects at Ledges State Park, located upstream from the dam, was authorized in 1976. The project modification included relocation of affected park facilities, acquisition of additional park land, and the development of a floodway corridor, with recreational facilities, from the dam downstream to Sixth Avenue in Des Moines. Improvements to Highway 415, the main access road to existing facilities on the east side of the reservoir, were added to the project by Congress in 1984. Segments A and B of Highway 415 have been completed. Segment C of Highway 415 was completed in 1994.

Construction began in June 1965, and the dam was placed in operation for the storage of flood water in April 1977. Remedial work in Big Creek Valley, consisting of diversion dam and channel and a barrier dam, for the protection of the town of Polk City was completed in December 1974. The land acquisition program involved 25,529.397 acres in fee and 1,498.444 acres in flowage easements. The estimated project cost is \$116,470,000 including \$2,820,000 in non-Federal costs from the State of Iowa and the City of Des Moines, for recreational development. See Table 15-B for authorizing legislation.

Local cooperation. Fully complied with.

Operations during fiscal year. New work: Project right-of-way has been transferred to the Iowa Department of Transportation, the project sponsor. Planning, Engineering, and Design efforts for the 86th street improvements project were turned over to Polk County. Costs incurred were \$16,627. Operation and maintenance activities were continued at a cost of \$3,758,959. The project is about 97 percent completed, excluding deferred work.

12. WEST DES MOINES, IA

Location. The city is located in Polk County in central Iowa.

Existing project. The project provides flood protection from the Raccoon River and Walnut Creek. The project consists of four stages: Stage I, 3,100 feet of levees and floodwalls along Walnut Creek north of Ashworth Road; Stage II, 9,000 feet of levees along the Raccoon River from Jordan Creek to 63rd Street, with pump station; Stage IIIA, 4,500 feet of levees along the lower end of Walnut Creek; and Stage IIIB, 5,800 feet of levees and flood walls tying Stages I and IIIA along Walnut Creek with pump station and tying Stages II with IIIA along the Raccoon River. The project provides 100-year protection and will prevent 4.387 million dollars in average annual damages. See Table 15-B for authorizing legislation.

Local cooperation. Fully complied with.

Operations during fiscal year. New Work: Construction of the project is complete and closeout is underway. Total costs incurred during FY 02 were \$6,869.

13. MUSCATINE ISLAND, IA

Location. Muscatine Island lies on the west bank of the Mississippi River in Muscatine and Louisa Counties, Iowa, adjacent to and in the city of Muscatine, IA. The flood protection area of 30,800 acres is protected by 15.6 miles of existing sand and clay levees. The protected area consists of residential, commercial, industrial and agricultural areas and also includes U.S. Highway 61 and the Muscatine Municipal Airport.

Existing Project. The existing levee has been raised to provide protection from 200-year floods. This protection level is achieved by improving and raising approximately 6.6 miles of the existing levee system. Also included in the project is construction of an upstream railroad closure structure, improving drainage facilities, concrete I-wall sections and relocating existing utilities. See Table 15-B for authorizing legislation.

Local Cooperation. The city of Muscatine and Muscatine Island Levee District are co-sponsors for the project. The Project Cooperation Agreement (PCA) was executed on 21 September 1995.

Operations during fiscal year. The project was completed in June 2000 and project closeout is underway. Total costs incurred during FY 02 were \$25,018.

14. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Federal flood control regulations (part 208 of title 33, Code of Federal Regulations) provide that the structures and facilities constructed by the United States for local flood protection shall be continuously maintained in such a manner and operated at such times and for such periods as may be necessary to obtain the maximum benefits. Costs during the period for inspections of projects turned over to local interests to ascertain compliance with Federal requirements were \$235,139. (See Table 15-H for list of completed flood control projects inspected.)

15. OTHER AUTHORIZED FLOOD CONTROL PROJECTS

See Table 15-E.

16. FLOOD CONTROL WORK UNDER SPECIAL AUTHORIZATION – Continuing Authorities Program

Navigation (Section 107) 1960 Act & Mods.) See Table 15-I.

Emergency Bank Protection (Section 14 of the 1946 Flood Control Act, Public Law 526.) See Table 15-I.

Flood Control Activities (Section 205, Public Law 84-685.) See Table 15-I.

Snagging and Clearing of Navigable Streams and Tributaries in Interest of Flood Control (Section 208, Public Law 83-780.) See Table 15-I.

Miscellaneous

17. ECOSYSTEM RESTORATION WORK UNDER SPECIAL AUTHORIZATION

Project Modifications for Improvement of Environment Pursuant to Sec. 1135, Public Law 99-662, as amended (preauthorization). See Table 15-I.

Aquatic Ecosystem Restoration Pursuant to Sec. 206, P.L. 104-303. See Table 15-I.

Wetland/Other Aquatic Habitat Section 204, P.L. 102-560. See Table 15-I.

18. GENERAL REGULATORY FUNCTIONS

Administrative Appeals	\$ 1,696
Enforcement	\$ 335,017
Permit Evaluations	<u>1,695,787</u>

TABLE 15-B AUTHORIZING LEGISLATION

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
2.	January 21, 1927	ILLINOIS WATERWAY, IL AND IN Channel 9 feet deep and 200 feet wide from mouth of Illinois River to Utica, 231 miles, modification of 2 U.S. locks and dams, removal of 2 State dams. (Act authorized appropriation of not to exceed \$3,500,000 for carrying on work.)	Rivers and Harbors Committee Doc. 69th Cong., 1st sess., and S. Doc. 130, 69th Cong., 1st sess.
	July 3, 1930	Channel 9 feet deep from Utica, IL, to heads of present Federal projects on Chicago and Calumet Rivers 94.6 miles to Lake Street, and 96.3 miles to turning basin 5, respectively, to be secured by means of completed dams, locks, lateral canals, and dredging begun by State of Illinois in general accordance with present plans of State for that work. Act adopting project authorized appropriation of not to exceed \$7,500,000 for carrying on work.	S. Doc. 126, 71st Cong., 2nd sess.
	June 26, 1934 ¹	Operation and care of locks and dams provided for with funds from War Department appropriation for rivers and harbors.	
	August 30, 1935	Construct modern locks and dams at LaGrange and Peoria and a channel 9 feet deep and 300 feet wide below Lockport, exact location and details of design of all structures to be left to discretion of Chief of Engineers, and for time being, that no change be made in water authorized for navigation of Illinois River by act of July 3, 1930.	H. Doc. 184, 73rd Cong., 2nd sess. ²
	August 30, 1935 ³	Also provides for 3 passing places along Sag Channel and authorized channel in Calumet-Sag route to turning basin 5, and dredging at entrance of Lake Calumet.	H. Doc. 180, 73rd Cong., 2nd sess.
	June 14, 1937	Realign portion of Calumet River and abandonment of bypassed section of Calumet River.	Rivers and Harbors Committee Doc. 19, 75th Cong., 1st sess.
	June 20, 1938	Modifies local cooperation requirements in 1935 act.	
	October 23, 1943	Pay damages to levee and drainage districts due to seepage and other factors, not to exceed \$503,500.	H. Doc. 711, 77th Cong., 2nd sess.
	March 2, 1945	Enlarge Calumet-Sag Channel to 160 feet wide and a usable depth of 9 feet. Dredge a barge channel 160 feet wide with a usable depth of 9 feet in Grand Calumet and Little Calumet River Branch of Indiana Harbor Canal to deep (lake) draft through 141st St., East Chicago, IN. Construct in Little Calumet River a lock of suitable dimensions for large navigation. Rebuild or otherwise alter at Federal expense all obstructive railroad bridges across Calumet-Sag Channel, Little Calumet River, Calumet River, Grand Calumet River, and Indiana Harbor Canal, so as to provide suitable clearance, except that no Federal funds shall be expended for removal or alteration of Illinois Central RR bridge at mile 11.20 of Little Calumet River.	H. Doc. 145, 76th Cong., 1st sess.

AUTHORIZING LEGISLATION

See Section in Text	Date Authorizing Act	Project and Work Authorized	Documents
	July 24, 1946	Substitute following work for that authorized by act of March 2, 1945; replace emergency dam in Chicago Sanitary and Ship Canal; enlargement of that canal thence to Sag Junction and of Calumet-Sag Channel to afford channels 225 feet wide and usable depth of 9 feet; construct along general route depth of 9 feet to 225 feet wide between Little Calumet River and junction with Indiana Harbor Canal and 160 feet wide thence to Clark St., Gary, IN, with a turning basin at Clark St., enlarge Indiana Harbor Canal to 225 feet wide and usable depth of 9 feet between Grand Calumet River and vicinity of 141st St., inclusive; remove Blue Island lock and construct a lock and control works in Calumet River near its head, and similar structures in proposed Grand Calumet Channel west of Indiana Harbor Canal; alter or eliminate railroad bridges across three channels lakeward of Chicago Sanitary and Ship Canal, or construct new railroad bridges to provide suitable clearance.	H. Doc. 677, 79th Cong., 2nd sess.
	July 24, 1946	A small-boat harbor in vicinity of Peoria, IL, by construction of a basin 510 by 250 feet, dredged to 7 feet deep.	H. Doc. 698, 79th Cong., 2nd sess.
	July 17, 1953	\$48,933 to reimburse Nutwood Drainage and Levee District for additional pumping operation; supplementing \$58,750 authorized in October 1943 act.	H. Doc. 144, 81st Cong., 1st sess.
	July 3, 1958	Federal participation in alteration of highway bridges, Calumet-Sag Modification, Part I, which constitute unreasonable obstructions to navigation, in accordance with Public Law 647, 76th Cong., as amended.	H. Doc. 45, 85th Cong., 1st sess. ⁴
	August 18, 1968	Federal participation in alteration of highway bridges, Calumet-Sag Modification, Part II, which constitute unreasonable obstructions to navigation, in accordance with the Public Law 647, 76th Cong., as amended.	Specified in Act. Also H. Doc. 45, 85th Cong., 1st sess.
	November 17, 1986	Illinois River at Peoria, IL modification of navigation project to include an adjacent downstream water area.	Sec. 857, H.R.6, Water Resources Development Act of 1986.
	October 5, 1992	The project for inland navigation, Illinois River, Illinois, authorized by the Rivers and Harbors Act of 1935 (49 Stat. 1035), is modified to direct the Secretary to acquire dredge material disposal areas for such project, at a total Federal cost of not to exceed \$70,000,000.	Sec. 102, Water Resources Development Act of 1992.

4.	UPPER MISSISSIPPI RIVER SYSTEM ENVIRONMENTAL MANAGEMENT PROGRAM, IL, IA, MN, MO, WI		
	August 15, 1985 (P.L. 99-88)	Provide for a 10-year environmental program to include habitat rehabilitation and enhancement; long-term resource monitoring with computerized inventory and analysis; recreational development; assessment of economic benefits from recreational activities; and navigation system traffic monitoring.	H. Doc. 2577, 99th Cong., 1st sess.
	November 17, 1986	Approves 1982 Upper Mississippi River Master Plan, authorizes interstate agreements between Upper Mississippi River states, directs Secretary to implement GREAT II recommendations for disposal of dredged material and facilitate the productive use of dredge material, directs and interagency agreement with the Department of Interior for its participation in the plan, authorizes second lock at Lock and Dam No. 6.	Sec. 1103, H.R.6, Water Resources Development Act of 1986.
	November 28, 1990 (P.L. 101-640)	Extending authorization for EMP program and additional 5 years.	Sec. 405, Water Resources Development Act of 1990.
	October 31, 1992 (P.L. 102-580)	Increase the HREP appropriation authority to a total of \$189,600,000. Sets limits on amounts which could be transferred between authorities. Operations and Maintenance costs were specified to be the responsibility of the State/Federal/ or local agency responsible for fish and wildlife management.	Sec. 102, Water Resources Development Act of 1992.
	August 17, 1999 (P.L. 106-53)	Extended the program until perpetuity. Increase authorization limits and established a 20% transfer limit. Established an Advisory Committee for independent technical review that requires a Report to Congress NLT 31 Dec 04, and every subsequent 6 years.	Sec. 509, Water Resources Development Act of 1999.
5.	CORALVILLE LAKE, IA		
	June 28, 1938	Reservoir for flood control and recreation.	Flood Control Committee Doc. 1, 75th Cong., 1st sess.
	July 14, 1960	Highway bridge across Coralville Lake at or near the Mehaffey site.	None
6.	DES MOINES RECREATIONAL RIVER AND GREENBELT, IA		
	August 15, 1985 (P.L. 99-88)	Recreational development; environmental enhancement; and related streambank stabilization.	H. Doc. 2577, 99th Cong., 1st sess.
	November 17, 1986	Defines area of work.	Sec. 604, H.R.6, Water Resources Development Act of 1986.
7.	November 17, 1986	LOVES PARK, IL Improved channel, pumping plant and pond storage.	Sec. 401, H.R.6, Water Resources Development Act of 1986.

Dresden Island Lock	271.5	8 above Morris, IL	110	600	21.75	12.25	16.85
Brandon Road Lock	286.0	Joliet, IL	110	600	34.0	13.8	17.85
Lockport Lock	291.1	Lockport, IL	110	600	30.5-39.5 ²	15.0	11.0-20.2 ²
T.J. O'Brien Lock	326.5	Chicago, IL	110	1,000	--	14.0	14.0

1. Lifts and depth on miter sills are those obtained with flat pools.

2. Variation in lift and depth on upper miter sill at Lockport is due to fluctuation of water surface in the sanitary district canal.

ST. PAUL, MN, DISTRICT

District comprises western Wisconsin, major portion of Minnesota, northern and eastern North Dakota, and small portions of northeastern South Dakota and northern and northeastern Iowa embracing drainage basins of Mississippi River and tributaries from its source to mile 614 above mouth of Ohio River;

Red River of the North and tributaries; those streams north of Missouri River Basin in North Dakota; and U.S. waters of Lake of the Woods and its tributaries. That section of Mississippi River above mile 614 is included in report on Mississippi River between Missouri River and Minneapolis, Minnesota.

Navigation

1. MISSISSIPPI RIVER BETWEEN MISSOURI RIVER AND MINNEAPOLIS, MN

For report on this improvement see chapter on Mississippi River between Missouri River and Minneapolis, Minnesota.

2. RESERVOIRS AT HEADWATERS OF MISSISSIPPI RIVER, MN

Location. Reservoirs are on the Mississippi River and several of its tributaries in Itasca, Beltrami, Hubbard, Aitkin, Cass and Crow Wing Counties, MN. (See Table 16-H on reservoirs.)

Previous projects. For details see page 1888 of Annual Report for 1915, and page 1098 of Annual Report for 1938.

Existing project. Provides for reconstruction from timber to concrete at Winnibigoshish, Leech Lake, Pokegama, Sandy Lake and Pine River Dams, and construction of a concrete dam at Gull Lake. Pokegama was built on bedrock and the others on pile foundations. A portion of Leech Lake Dam from piers 26 to 39 was replaced with an earth fill. Constructed three dikes at Winnibigoshish, four at Pokegama, two at Sandy Lake, and 16 at Pine River. Sandy Lake Dam includes a lock 160 feet long, 30 feet wide, with a maximum lift of 9.5 feet and a depth of 2.5 feet on lower sill at low water which was converted to use as a spillway. (See Table 16-B for authorizing legislation.) The Pine River Dam main embankment consists of a timber diaphragm core and earth fill. The Pine River Dam control structure is made of reinforced concrete with a wooden sheet pile cutoff and is supported on a timber substructure. Pine River Dam was modified during the period 1999-2002 to pass 70% of the Probable Maximum Flood. During this period, the 13 gate openings were enlarged and outfitted with new gates; the wing walls were modified; the existing dam and embankment was raised via addition of a parapet wall and a concrete-capped sheet pile wall, to provide 5 ft. of freeboard over the design flood; the foundation was grouted to stop seepage and fill voids; and the perimeter dikes were improved. Estimated cost (2001) to the United States for new Dam

Safety Assurance work at the Pine River Dam is \$10,200,000.

Local cooperation. Fully complied with.

Terminal facilities. None.

Operation and results during fiscal year. Reservoirs were operated as required, recreation facilities and equipment maintained, and surveys, repairs, reports and data collection cost \$4,071,888. Dam Safety: Engineering and design for dam safety modifications at Pine River Dam cost \$1,846,601.

Condition at end of fiscal year. Existing project was completed in 1937. Flowage rights were acquired on all lands affected by construction, maintenance, and operation of reservoirs. A total of 1,672.26 acres in fee are owned by the United States. The United States has easements, flowage rights, and other rights of use on another 296,334.44 acres. Structures are in fair condition. Recreation facilities for public use are being constructed intermittently at all reservoir areas. (See Table 16-H for capacities and costs by reservoir.) Pine River Dam has been classified as a high hazard dam under the National Dam Safety Program due to inadequate spillway capacity which could lead to dam failure during a flood event. Construction of dam safety modifications is currently underway.

3. UPPER MISSISSIPPI RIVER SYSTEM ENVIRONMENTAL MANAGEMENT PROGRAM (UMRS-EMP)

Location. The program is authorized for the commercially navigable portions of the Upper Mississippi River System. In the St. Paul District, this includes the Mississippi, Minnesota, Black, and St. Croix Rivers in the states of Minnesota, Wisconsin and Iowa.

Existing project. The purpose of the UMRS-EMP as stated in the authorizing legislation is to ensure the coordinated development and enhancement of the Upper Mississippi River System, recognizing its several purposes. It is intended to protect and/or enhance the river resources and guide future river management. The primary emphasis of the program is on habitat rehabilitation and enhancement projects. Long term resource monitoring will provide the means for more

informed management of the UMRS. Also authorized, was a study of the economic impacts of recreation (completed), navigation traffic monitoring (continuing under other authority), and recreation projects (unfunded). The program was initiated by WRDA in 1986 and the 1999 WRDA extended the EMP on a continuing basis. The execution of the program is closely coordinated with the Upper Mississippi River Basin Association, the U.S. Fish and Wildlife Service, the U.S. Geological Survey, and the three affected states in the St. Paul District. See Rock Island District Tables 15-A and 15-B for total program costs and authorizing legislation.

In the St. Paul District, twenty-one habitat projects have been completed. These are the Guttenberg Waterfowl Ponds (IA), Island 42 (MN), Lake Onalaska (WI), Blackhawk Park (WI), Pool 8 Islands Phases I and II (WI), Indian Slough (WI), Finger Lakes (MN), Lansing Big Lake (IA), Cold Springs (WI), Pool 9 Island (WI), Spring Lake Peninsula (WI), Bussey Lake (IA), Peterson Lake (MN), Polander Lake (MN), East Channel (WI/MN), Rice Lake (MN), Small Scale Drawdown (WI), Trempealeau (WI), Bank Stabilization (IA, WI, MN), and Long Lake (WI). The projects are being operated and maintained by the U.S. Fish and Wildlife Service, except for Blackhawk Park which is maintained by the Wisconsin Department of Natural Resources. Through FY 2002, funds expended by the St. Paul District have amounted to \$36,528,000 for planning, design, construction and monitoring of habitat rehabilitation and enhancement projects; \$954,000 for long term resource monitoring; \$768,000 for economic impacts of recreation study; and \$2,617,000 for program management. The annual authorized funding level for the overall program is about \$34 million.

Local cooperation. Local cooperation agreements are obtained for habitat project features not located on lands managed as a national wildlife refuge, as specified in Section 906(e) of the 1986 WRDA.

Operations and results during fiscal year. In the St. Paul District, costs during the year totaled \$1,572,904 Federal. The majority of funds were expended on the planning, design, construction and monitoring of habitat projects. Design was continued on eight projects. Construction was completed on one project and is ongoing on two projects.

Flood Control

4. NAVIGATION WORK UNDER SPECIAL AUTHORIZATION

Navigation activities pursuant to Sec. 107, Public Law 87-645, as amended.

In FY 02, \$10,069 was expended on Section 107 Coordination Account; \$6,749 on East Two River, Tower, MN.

5. BASSETT CREEK, MN

Location. In Hennepin County and Minneapolis, Minnesota, on Bassett Creek, a tributary of the Mississippi River. (For general location, see Geological Survey map of Minnesota.)

Existing project. The project consists of nonstructural and structural flood control measures. Nonstructural measures include continuation of existing floodplain regulations, flood insurance and forecasting, and flood warning. Principal structural measures consist of six small control structures in the upper watershed to temporarily impound flood waters and a new tunnel (part of which was constructed on a cooperative basis with the Minnesota Department of Transportation) in a highly urbanized area of Minneapolis to replace the existing tunnel outletting Bassett Creek to the Mississippi River. Also included in the project are a limited reach of channel widening, bridge removals, culvert replacements, a weir structure, a flood storage area, and a railroad bridge replacement. Project was authorized by the 1976 Water Resources Development Act.

Local cooperation. See Annual Report for 1977 for requirements. Under current cost sharing policies, when the costs of lands, easements, rights-of-way, relocations and disposal areas (LERRD) are less than 20 percent of total project costs, local interests are required to furnish the standard local cooperation requirements plus a cash contribution, the total of the two to amount to a minimum of 25 percent of the total project costs. On June 27, 1986, the City of Minneapolis entered into a local cooperation agreement with the Department of the Army.

Operations and results during fiscal year. Project financial closeout work is complete. New Work: Construction on the final stage of work was completed in FY 98. Total Federal costs were \$128,153 and non-Federal, -\$127,959.

Condition at end of fiscal year. Construction has been completed on all components. The project financial closeout work is complete.

6. BRECKENRIDGE, MN

Location. Breckenridge, Minnesota, is located in Wilkin County in western Minnesota, approximately 200 miles north and west of the Minneapolis-St. Paul metropolitan area. The city is bounded on the west by the Red River of the North and the Bois de Sioux River. The Ottertail River flows from the east, bisecting the city. The city of Wahpeton, ND, lies across the Red River from Breckenridge.

Existing project. A feasibility study recommended implementation of a flood damage reduction project consisting of a high-flow diversion channel located to the north of the Ottertail River and entering into the Red River and two separable permanent levee reaches that would protect all of Breckenridge. The project is authorized by Section 205 of the 1948 Flood Control Act, as amended. Section 205 authorizes construction of small projects for flood control and related purposes not specifically authorized by Congress. Projects recommended for construction under Section 205 must be economically justified and limited to a federal cost of \$7 million. However, WRDA 2000 specifically authorized this project and it was transitioned from a small project to a specific project in FY 02.

Local cooperation. A Feasibility Cost Sharing Agreement was executed between the Federal Government and the city of Breckenridge on June 29, 1999. This agreement required the city to provide 50 percent of the costs of performing the feasibility study. A Project Cooperation Agreement, negotiated between the Federal Government and the city, will be executed prior to proceeding with the construction of the project.

Operations and results during fiscal year. Preparation of the first stage of plans and specifications was initiated. Total FY 02 Federal costs were \$880,684 and non-Federal, \$175,862.

Condition at end of fiscal year. The first stage of construction is scheduled for early 2003.

7. BROOKLYN CENTER SEWER LINE, MISSISSIPPI RIVER, MN

Location. Along the right bank of the Mississippi River, Hennepin County, about 5 miles north of Minneapolis, Minnesota.

Existing Project. The emergency streambank protection project on the Mississippi River involves approximately 750 feet of riverbank. The project

consists of rockfill toe protection and associated earthwork to protect an 18-inch sanitary sewer line. The project was approved by the Mississippi River Division for construction on 6 March 2002, under the authority contained in Section 14 of the 1946 Flood Control Act, as amended.

Local Cooperation. A project Cooperation Agreement was executed between the Federal Government and the City of Brooklyn Center on 28 May 2002. The agreement requires the city to provide, during the period of construction, a cash contribution of at least 5 percent of the total project costs and any additional funds needed to make its total contribution, including the value of all required local responsibilities, equal to 35 percent of the total project costs; provide without cost to the United States all lands, easements, and rights-of-way, including suitable borrow and dredging material disposal areas necessary for construction, operation and maintenance of the project; perform all relocations and alterations of building utilities (other than those portions which pass under or through the project structure), highways, railroads, bridges (other than railroad bridges and approaches thereto), sewers and related and special facilities determined by the Government to be necessary for construction of the project; pay all costs in excess of the Federal statutory limitation of \$1,000,000; hold and save the United States free from all damages arising from construction, operation and maintenance of the completed project, except for damages due to fault or negligence of the Government or its contractors; comply with the provisions of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, Public Law 91-646, approved 2 January 1971, in acquiring lands, easements, and rights-of-way for construction and subsequent operation and maintenance of the project, and inform all affected persons of applicable benefits, policies and procedures in connection with said Act; operate, maintain, replace, and rehabilitate the project upon completion in accordance with regulations or directives prescribed by the Government; give the Government a right to enter, at reasonable times and in a reasonable manner, upon land which it owns or controls for access to the project for the purpose of completing, operating, maintaining, repairing, rehabilitating, or replace the project; and comply with all applicable federal and State laws and regulations, including Section 601 of Title VI of the Civil Rights Act of 1964 (Public Law 88-352) and Department of Defense Directive 5500.11 issued pursuant thereto and published in Part 300 of Title 32, Code of Federal Regulations, as well as Army Regulation 600-7, entitled "Nondiscrimination on the Basis of Handicap in

Programs and Activities Assisted or Conducted by the Department of the Army.”

Operation and results during fiscal year. New Work: The Preparation plans and specifications is essentially complete. The City is proceeding with the acquisition of the lands easements and right-of-way necessary to construct the project. Total FY 02 Federal Costs were \$37,953 and non-Federal, \$931.

Condition at the end of the fiscal year. Construction of the emergency streambank protection project will be initiated after the necessary real estate interests are acquired by the city.

8. CHASKA, MN

Location. In Carver County in south-central Minnesota on the Minnesota River. (For general location, see Geological Survey map of Minnesota.)

Existing project. The plan of improvement consists of a levee and interior drainage works along the Minnesota River, flood diversion channels on Chaska Creek and East Creek, and appropriate flood-plain regulation measures. Principal project features include: approximately 1.1 miles of upgraded levee, 1.5 miles of new levee, and one pumping station on the Minnesota River; 1.1 miles of diversion channel on Chaska Creek; and 1.0 mile of diversion channel on East Creek. Approximately 2.9 miles of paved recreation trails on top of the levee and around Courthouse Lake are also included in the proposed plan. Estimated Federal cost for new work is \$30,397,000 and \$12,558,000 is to be contributed by local interests. Project was authorized by the 1976 Water Resources Development Act. (H. Doc. 644, 94th Congress, 2d sess., contains latest published map.)

Local cooperation. See Annual Report for 1977 for requirements. A local cooperation agreement was executed on Sep. 12, 1988. The agreement included cost sharing provisions in accordance with the 1986 Water Resources Development Act.

Operations and results during fiscal year. Stage 3A construction (final stage) is complete. Total Federal costs were \$28,177 and non-Federal, \$0.

Condition at end of fiscal year. Construction is complete. A project dedication was held on July 28, 1998.

9. CROOKSTON, MN

Location. In Polk County in northwest Minnesota, approximately 25 miles east of Grand Forks, North Dakota. It is located on the Red Lake River 52 miles upstream from its confluence with the Red River of the North at East Grand Forks.

Existing project. This flood reduction project was specially authorized by Congress via the Water Resources Development Act of 1999 and appropriations for the new start construction was provided in 2001 budget appropriations. The cost-shared feasibility report and environmental assessment that justified the Federal project was completed in 1997 and recommended a local flood protection project consisting of 2 downstream high-flow cutoff channels, and levees built to the 100-year level of protection for Thorndale, Woods and Downtown/Riverside neighborhoods. The recommended plan has a fully funded baseline cost estimate of \$9.5 million, and a benefit to cost ratio of 1.6. However, based on plans and specification efforts now done, the actual costs are now projected to increase to approximately \$10.5 million. Preconstruction engineering and design efforts began in 1998 and the plans and specifications for Stage I of the project construction were completed in October 2000. Construction began on Stage I in July 2001 and was completed in September 2002. The Stage II plans and specifications were completed in August 2001. Stage II construction began in August 2002 and will be completed in November 2003.

Local cooperation. Negotiation of a Project Cooperation Agreement was completed and signed on Mar. 19, 2001. The non-Federal Sponsor will comply with the local cost sharing requirements of Water Resources Development Act of 1986, as amended.

Operations and results during fiscal year. New Work: Engineering associated with pre-engineering and design was accomplished at a cost of \$1,026,901 Federal and \$321,133 non-Federal.

Condition at end of fiscal year. Construction on Stage I is 100 percent complete and 10% complete on Stage II.

10. GRAFTON, PARK RIVER, ND

Location. In Walsh County in northeastern North Dakota along the Park River where State Highway 81 and the Park River intersect about 340 miles northwest of Minneapolis-St. Paul, Minnesota.

Existing project. The recommended plan will provide flood protection for the city of Grafton; it consists of a 3-mile-long bypass channel just north of Grafton. The tieback levee will direct the flood flows to the inlet of the control structure. River flows that exceed 2,000 cubic feet per second (cfs) will be diverted through the proposed bypass channel. The project is estimated to cost \$34,500,000 with an estimated Federal cost of \$22,450,000 and an estimated non-Federal cost of \$12,050,000. Grafton was authorized for construction by WRDA 1986, deauthorized in 1991, and subsequently reauthorized by Section 364 of WRDA 1999.

Local cooperation. The city of Grafton is the local sponsor. In accordance with the cost sharing and financing concepts reflected in the Water Resources Development Act of 1986, as amended, local interests will be required to provide lands, easements, rights-of-way, and borrow and excavated or dredged material or disposal areas; modify or relocate utilities, roads, bridges (except railroad bridges), and other facilities, where necessary in the construction of the project; pay five percent of the costs allocated to flood control; contribute an additional amount in cash as necessary to bring the non-Federal shares of costs allocated to flood control to a minimum 35 percent; and bear all costs of operation, maintenance, and replacement of the flood control facilities.

Operations and results during fiscal year. New Work: Engineering associated with pre-engineering and design was accomplished at a Federal cost of \$110,667 and non-Federal costs of \$218,219.

Condition at end of fiscal year. Funds are being used to prepare and complete a General Reevaluation Report. The completion schedule for preconstruction engineering and design is August 2003.

11. GRAND FORKS, NORTH DAKOTA AND EAST GRAND FORKS, MINNESOTA

Location. Grand Forks, North Dakota is located in Grand Forks County in eastern North Dakota about 70 miles south of the Canadian border. East Grand Forks, Minnesota is located at the outlet of the Red Lake River to the Red River of the North, immediately across the river from Grand Forks. (For General

Location see Geological Survey map of either North Dakota or Minnesota.)

Existing project. Project was authorized by P.L. 105-277, Omnibus Appropriation Bill FY 99. Estimated cost (1998) of the entire flood damage reduction project is \$355,800,000, total cost to the United States is estimated at \$178,600,000 and total cost to the non-Federal sponsors (cities of Grand Forks and East Grand Forks) is estimated at \$177,200,000. The current working estimate is being updated based on construction bids received to date. The flood damage reduction project consists of a flood barrier around both communities providing protection against a flood equivalent to the peak discharge that occurred during the devastating flood of 1997 (136,900 cubic feet per second). A secondary purpose of recreation is also included in the authorized project.

Local cooperation. Project Cooperation Agreement was signed with both communities in January 2000. The non-Federal sponsors will comply with the local cost share requirements of Water Resources Development Act of 1986, as amended.

Operations and results during fiscal year. New Work: Total Federal construction costs for FY 02 were \$35,209,964 and non-Federal costs of \$5,042,915.

Condition at end of fiscal year. Construction of the Riverside Dam Bank Stabilization and removal of the Pedestrian Bridge are complete. Construction is progressing towards completion on the Phase I Levees, and beginning on the Phase II levees for both Grand Forks and East Grand Forks. Work continues on the English Coulee Diversion and Pump Station construction. The Hartsville Coulee Diversion design is nearing completion, with the designs of the Phase III and IV levees ongoing.

12. HOMME LAKE AND DAM, ND

Location. Dam is on South Branch of Park River about 4 miles upstream from Park River, ND, and 62.1 miles above mouth of Park River. South, Middle, and North Branches, headwater streams of Park River, rise in Cavalier County in northeastern North Dakota and flow easterly to an almost common confluence near Grafton, ND, forming main stream which flows easterly 35 miles to join Red River of the North about 35 miles south of the international boundary. (For general location, see Geological Survey map of North Dakota.)

Existing project. See Annual Report for 1962. Project was authorized as Park River Reservoir by 1944 Flood Control Act (S. Doc. 194, 78th Cong., 2d sess.),

and redesignated Homme Reservoir and Dam by Public Law 435, 80th Congress, 2d session. Project restoration of wetland habitat conditions is taking place under the authority contained in Section 1135 of the 1986 Water Resources Development Act, as amended. Latest published maps are in project document. A reconnaissance report was completed in 1994 under the Dam Safety Assurance Program. The report recommended adding a new spillway to increase the dam's discharge capacity to the Probable Maximum flood level. Estimated cost (2000) to the United States for new Dam Safety Assurance work is \$12,400,000 and \$85,000 is to be contributed by local interests.

Local cooperation. Fully complied with. Total costs for all requirements of local cooperation under terms of project authorization, including required non-Federal contributions, were \$62,800. In addition, local interests contributed \$16,220 for construction of a water supply outlet through dam and incurred other costs of \$19,600. The North Dakota Game and Fish Department has agreed to serve as the non-Federal sponsor for the environmental improvement to the project.

According to current Dam Safety cost sharing guidance, the local sponsors are required to fund 15 percent of the dam safety improvement costs in the same proportion as the original construction was cost shared. The local sponsors would therefore pay for 4.5 percent of 15 percent or 0.68 percent of the dam safety costs. The North Dakota Office of the State Engineer has supported the proposed modifications identified in the Reconnaissance Report.

Operations and results during fiscal year. Maintenance: Structure was operated, maintained, inspected and evaluations were performed at a cost of \$172,774. Dam Safety: Total Federal costs of \$3,313,976 and non-Federal costs of \$7,000.

Condition at end of fiscal year. Project completed in June 1956 except for additional recreational facilities which have been done intermittently since that time. Construction began in April 1948 and major structures completed in May 1951. Structures are in good condition. Government has acquired 395 acres of land in fee and easements over 7.8 acres of land for project. An additional 6.3 acres of land have been donated for recreational development and 3.75 acres have been acquired due to bank erosion bordering the project. Construction of a habitat improvement project (under Section 1135 authority) was completed and the project was turned over to the local sponsor, the North Dakota Fish and Game Department. Homme Dam has been classified as a high hazard dam under the National Dam Safety Program due to inadequate spillway

capacity which could lead to dam failure during a flood event. Engineering and design of dam safety modifications has been completed and construction of a new concrete spillway is underway and is scheduled for completion in the fall of 2002.

13. LA FARGE LAKE AND CHANNEL IMPROVEMENT, WI

Location. On the Kickapoo River which rises in Monroe County in southwestern Wisconsin and flows south and southwest through Vernon, Richland, and Crawford Counties emptying into Wisconsin River about 16 miles above junction of latter stream with Mississippi River. (For general location see Geological Survey map of Wisconsin.)

Existing project. See Annual Report for 1996 for flood control dam and impoundment project authorized by 1962 Flood Control Act. The Water Resources Development Act of 1996 (WRDA 96) authorized a modification to the original project to include transfer of approximately 8,569 acres of project lands to the State of Wisconsin and the Secretary of the Interior to be held in trust for the Ho-Chunk Nation. The Ho-Chunk Nation is to receive up to 1,200 acres of lands that are of cultural and religious significance. The modification also includes deauthorizing the construction of the reservoir and dam, while completing other features of the original project. Estimated Federal cost for work authorized by WRDA 96 is \$17,000,000.

Local cooperation. None required for construction of La Farge Lake. See Annual Report for 1967 for requirements for local protection works. A Project Cooperation Agreement is not required for the land transfer.

Operations and results during fiscal year. New Work: Work associated with WRDA 96 project was accomplished at a cost of \$7,604,807.

Condition at end of fiscal year. See Annual Report for 1996 for status of work authorized by 1962 Flood Control Act. The project was specifically deauthorized by Section 361(b)(7) of Public Law 104-303, Oct. 12, 1996, with the exception of named relocation and restoration features that remain authorized.

14. LAKE ASHTABULA AND BALDHILL DAM, SHEYENNE RIVER, ND

Location. Baldhill Dam is on the Sheyenne River, 16 miles upstream from Valley City, ND, and about 271 miles above mouth. Sheyenne River rises in

central North Dakota and flows 500 miles generally southeast to enter Red River of the North about 10 miles north of Fargo, ND. (For general location see Geological Survey map of North Dakota.)

Existing project. See Annual Report for 1962. Project was authorized by Flood Control Act of 1944 (S. Doc. 193, 78th Cong., 2d sess., contains latest published map). Estimated cost (1998) to the United States for Major Rehabilitation is \$8,200,000. Estimated cost (2000) to the United States for new Dam Safety Assurance work is \$14,700,000 and \$260,000 is to be contributed by local interests. The reservoir above Baldhill Dam was designated as Lake Ashtabula by Public Law 772, 81st Congress, 2d session.

Local cooperation. See Annual Report for 1962. Complied with.

Operations and results during fiscal year. Major Rehabilitation: The construction of Stage 4 (replacement of permanent operation equipment) was completed. Total Federal costs were \$94,333. Dam Safety: Stage 5 (instrumentation) installation was completed. Total Federal costs were \$4,980 and non-Federal costs, \$5,000. Maintenance: Project was operated, maintained, inspected, investigated, monitored and evaluations were performed at a cost of \$1,379,676.

Condition at end of fiscal year. Project completed in March 1956 except construction of recreational facilities which is being accomplished intermittently. United States owns 7,816.5 acres of land in fee and easements on 666.2 acres. Construction initiated in July 1947 and major features completed in November 1950. Dam was placed in permanent operation in spring of 1951. Structures are in good condition. Baldhill Dam was classified as a large, high hazard dam under the National Program for the inspection of dams. A risk assessment report prepared in June 1986 indicated a serious spillway discharge capacity deficiency. Construction of dam safety and major rehabilitation modifications were completed in 2000.

15. MARSHALL, MN

Location. In Lyon County in southwestern Minnesota along the Redwood River about 68 miles above its confluence with the Minnesota River at the city of Marshall, Minnesota. (For general location see Geological Survey map for Minnesota.)

Existing project. See page 1059 of Annual Report for 1964 for completed channel improvement project authorized by 1960 Flood Control Act. Federal costs

amounted to \$1,802,866. The existing flood control project was completed in 1963. In response to a need for additional flood control, a feasibility study was completed in 1979. The project recommended in the feasibility report was authorized by the Water Resources Development Act of 1986, Public Law 99-662, Section 401(a) and reauthorized by the Water Resources Development Act of 1988, Public Law 100-676. Improvements include 4.7 miles of additional levees, 3.8 miles of bank protection, 0.3 mile of new high-flow diversion channel, an interbasin overflow structure, modifications to the existing diversion and drop structures, and a recreation plan. The project would provide protection against a flood having an occurrence interval of about once in 115 years. Estimated Federal cost (2000) for new work is \$7,850,000 and \$2,580,000 is to be contributed by local interests.

Local cooperation. Fully complied with for completed work. Project was transferred to local interests on Dec. 23, 1963.

For new work, see Annual Report for 1985 for requirements. A local cooperation agreement was executed on Sep. 9, 1996. The agreement included cost sharing provisions in accordance with the 1986 Water Resources Development Act.

Operations and results during fiscal year. New Work: Stage 2 (final stage) construction was essentially completed. Federal costs were \$46,656, non-Federal \$40,000.

Condition at end of fiscal year. Construction of completed work was initiated August 1962 and completed December 1963. Construction of improvements to that work was completed in September 2000.

16. PORTAGE, WI

Location. In Columbia County in central Wisconsin along the Wisconsin River about 35 miles north of Madison, Wisconsin. (For general location see Geological Survey map for Wisconsin.)

Existing project. The project includes 1.2 miles of existing levee improvement; 1.6 miles of new levee; one highway and one railroad closure; cultural mitigation; and recreation features along the left bank of the Wisconsin river at Portage. The project would protect against a flood having an occurrence interval of about once in 100 years. Estimated Federal cost (2001) for new work is \$8,450,000 and \$2,950,000 is to be contributed by local interests. Project was authorized

by the Water Resources Development Act of 1986 (Public Law 99-662).

Local cooperation. See Annual Report for 1989 for requirements. A Project Cooperation Agreement between the city of Portage and the Federal Government was executed in October 1996. The agreement included cost sharing provisions in accordance with the 1986 Water Resources Development Act.

Operations and results during fiscal year. New Work: A construction contract which was awarded in July 1997 is complete. Federal costs were \$0, non-Federal \$219,085.

Condition at end of fiscal year. Construction of flood protection is complete. Remaining work to be completed by January 2003, consists of raising a railroad spur track and constructing a short reach levee to allow interbasin flow to the Fox River, which will offset a project induced stage increase of .08 feet on the Wisconsin River.

17. RED RIVER OF THE NORTH, FARGO PUBLIC FACILITIES, ND

Location. Three separate and distinct erosion sites are located on the left bank of the Red River of the North in Fargo, Cass County, North Dakota. Fargo is located on the eastern border of North Dakota approximately 240 miles northwest of St. Paul, Minnesota. Reach A is north of 37th Avenue North near 37th Street North. Reach B is north of Kandi Lane and east of North Broadway. Reach C is east of Elm Street between 14th Avenue North and 15th Avenue North.

Existing project. The emergency streambank protection project on the Red River of the North involves approximately 4,100 feet of riverbank at three locations. The project consists of rockfill toe protection and associated earthwork to protect a flood-control levee, an interior drainage pump station, three roadways (Kandi Lane, North Broadway, and Elm Street) and the Fargo wastewater treatment plant. The project was approved by the Mississippi River Division for construction on 19 June 2000 under the authority contained in Section 14 of the 1946 Flood Control Act, as amended.

Local cooperation. See Annual Report for 2000. A project Cooperation Agreement was executed between the Federal Government and the City of Fargo on 10 August 2000. Complied with.

Operation and results during the fiscal year. All three reaches are essentially complete. Total FY 02 Federal costs were \$439,750 and non-Federal \$368,760.

Condition at end of fiscal year. Construction of the emergency streambank protection project is essentially complete.

18. SHEYENNE RIVER, ND

Location. The Sheyenne River Basin is included in 16 counties in the southeastern portion of North Dakota and drains an area of 7,140 square miles into the Red River of the North near Fargo, North Dakota. The principal area of flood damages in the basin is located at the lower end within Cass County and the city of West Fargo. (For general location, see Geological Survey map of North Dakota.)

Existing project. The project as authorized by the 1986 Water Resources Development Act consists of three major components for Federal implementation: 1) 11.9 miles of levee and a 6.7 mile flood diversion channel at West Fargo; 2) 7.5 miles of flood diversion channel from Horace to West Fargo; and 3) a five-foot raise of the Baldhill Dam flood control pool. The Water Resources Development Act of 1986 stipulated that the project shall also include a dam and reservoir of approximately 35,000 acre-feet of storage for the purpose of flood protection on the Maple River. This component was deauthorized April 16, 2002. There are several items of local cooperation required to implement the plan, and several components identified for non-Federal implementation which would supplement the recommended plan. Estimated cost (2000) to the United States for new work is \$31,130,000 and \$12,470,000 is to be contributed by local interests.

Local cooperation. See Annual Report for 1988 for requirements. Project consists of three separable components each requiring a local cooperation agreement. The Southeast Cass Water Resource District is the local sponsor for the West Fargo Unit and the Horace to West Fargo Unit. The local cooperation agreement for the West Fargo Unit was executed on July 25, 1988 (amended on June 4, 2001), and for the Horace to West Fargo unit on Mar. 6, 1990. The Sheyenne River Joint Water Resource District is the local Sponsor for the Baldhill Pool Raise Unit. The local cooperation agreement for the Baldhill Pool Raise Unit was executed on May 31, 2000. The Maple River Reservoir Unit was deleted from the project.

Operations and results during fiscal year. New Work: Construction of the Stage I (Gate Modifications) contract for the Baldhill Pool Raise Unit was completed. Design was completed and construction was initiated and completed on the Stage 2 (Cabin Modifications) and Mitigation Area contracts. Design of the Stage 3 (Wesley Acres Church Camp) contract was initiated. Design was completed and construction was initiated for an additional pump station for the West Fargo component. Total Federal costs were \$1,970,654 and non-Federal costs \$165,000.

Condition at end of fiscal year. Construction of the West Fargo Unit is essentially complete and construction of the Horace to West Fargo Unit is fully complete. Both of these units were operated during the spring and summer floods of 1993 and the spring floods in 1994, 1995, 1996, and 1997 and performed very well although some erosion damage was sustained on both projects. For the Baldhill Pool Raise Unit, contract for Stage 1, Gate Modifications, was completed; contract for Stage 2, Cabin Modifications, was completed; contract for the Mitigation Area was completed; preparation of plans and specifications for Stage 3, Wesley Acres Church Camp, was initiated; and preparation of a revised operating plan continued.

19. SOURIS RIVER BASIN, ND

Location. On the Souris River in Ward, Renville, McHenry, and Bottineau Counties in northwestern North Dakota. The existing Lake Darling Dam is located about 20 miles northwest of Minot, North Dakota. The project also includes features at the communities of Sawyer and Velva and at various locations along the 358-mile U.S. portion of the Souris River. (For general location see Geological Survey map of North Dakota.)

Existing project. The plan of improvement authorized by the Water Resources Development Act of 1986 is the one-time purchase of 377,800 acre-feet of flood storage in Rafferty and Alameda Dams in Saskatchewan, Canada and the operation of these dams with the existing Boundary Dam and Lake Darling Dam to provide 100-year flood protection at Minot, North Dakota. The Act also authorizes those flood control measures upstream and downstream of the dam which are necessary for effective operation of the project. The 4-foot raise of the Lake Darling design pool (authorized by Section III of the Energy and Water Development Appropriations Act, 1982, PL 97-88) and the construction of Burlington Dam (authorized by PL 91-611) was deauthorized March 10, 1995, with the completion of the structures in Canada. An International Agreement

between Canada and the United States was signed in October 1989.

The work under the current plan authorized by PL 99-662, consists of two reservoirs in Saskatchewan, Canada (known as the Rafferty and Alameda projects); a modified outflow structure at Lake Darling Dam; a flood warning system for Minot; levee and channel improvements at Sawyer and six subdivisions from Burlington to Minot; levee and diversion channel at Renville County Park; flood proofing of about 90 rural homes in the basin and the purchase of flowage easements; modifications to dams 87 and 96 in the Upper Souris National Wildlife Refuge; and modifications to dams 320, 326, 332, 341, and 357 in the J. Clark Salyer National Wildlife Refuge. Estimated Federal cost for new work is \$109,260,000 and \$8,180,000 is to be contributed by local interests.

Local cooperation. See Annual Report for 1983 for requirements. Representatives of the water resource districts from Ward, Renville, McHenry, and Bottineau Counties area agreed to become members of a Souris River Joint Board for flood control, which would serve as local sponsor for the project. A local cooperation agreement for construction at Velva was signed in November 1984. A local cooperation agreement for the remainder of the project as authorized by the Water Resources Development Act of 1986 was signed in October 1989.

Operations and results during fiscal year. New Work: Construction was completed on the final stage of work at Renville County Park. Total costs, all Federal, were -\$123,196. Maintenance: Total cost was \$340,422.

Condition at end of fiscal year. Construction of the channel and levee improvement work at Velva, Sawyer, Renville County Park and Burlington to Minot Stages 1, 2, and 3 is complete. Construction at Rafferty Dam and Alameda Dam is complete. Construction on rural improvements Stage 1 and Stage 2, road raises and acquisitions, is complete. Construction on improvements to Fish and Wildlife Service refuge dams is complete. Lake Darling Dam construction is complete. The project dedication ceremony was held on May 27, 1998.

20. ST. CLOUD, MN

Location. Along the right bank of the Mississippi River, Stearns County, About 70 miles northwest of Minneapolis-St. Paul, Minnesota.

Existing Project. The emergency streambank protection project on the Mississippi River involves approximately 1,100 feet of riverbank. The project consists of rockfill toe protection and associated earthwork to protect a 30-inch interceptor sanitary sewer line, which is 20 to 30 feet from the river. The project was approved by the Mississippi River Division for construction on 19 July 2002, under the authority contained in Section 14 of the 1946 Flood Control Act, as amended.

Local Cooperation. A Project Cooperation Agreement was executed between the Federal Government and the City of St. Cloud on 13 August 2002. The agreement requires the city to provide, during the period of construction, a cash contribution of at least 5 percent of the total project costs and any additional funds needed to make its total contribution, including the value of all required local responsibilities, equal to 35 percent of the total project costs; provide without cost to the United States all lands, easements, and rights-of-way, including suitable borrow and dredging material disposal areas necessary for construction, operation and maintenance of the project; perform all relocations and alterations of building utilities (other than those portions which pass under or through the project structure), highways, railroads, bridges (other than railroad bridges and approaches thereto), sewers and related and special facilities determined by the Government to be necessary for construction of the project; pay all costs in excess of the Federal statutory limitation of \$1,000,000; hold and save the United States free from all damages arising from construction, operation and maintenance of the completed project, except for damages due to fault or negligence of the Government or its contractors; comply with the provisions of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, Public Law 91-646, approved 2 January 1971, in acquiring lands, easements, and rights-of-way for construction and subsequent operation and maintenance of the project, and inform all affected persons of applicable benefits, policies and procedures in connection with said Act; operate, maintain, replace, and rehabilitate the project upon completion in accordance with regulations or directives prescribed by the Government; give the Government a right to enter, at reasonable times and in a reasonable manner, upon land which it owns or controls for access to the project for the purpose of completing, operating, maintaining, repairing, rehabilitating, or replace the project; and comply with all applicable federal and State laws and regulations, including Section 601 of Title VI of the Civil Rights Act of 1964 (Public Law 88-352) and Department of Defense Directive 5500.11 issued pursuant thereto and published in Part 300 of Title 32, Code of Federal

Regulations, as well as Army Regulation 600-7, entitled "Nondiscrimination on the Basis of Handicap in Programs and Activities Assisted or Conducted by the Department of the Army."

Operation and results during fiscal year. New Work: A construction contract was awarded on 3 September 2002 and construction was initiated. Total FY 02 Federal costs were \$230,146 and non-Federal \$3,941.

Condition at the end of the fiscal year. Construction of the emergency streambank protection project is underway.

21. ST. CROIX RIVER, STILLWATER, MN

Location. In Washington County in eastern Minnesota along the St. Croix River about 18 miles northeast of St. Paul, Minnesota. (For general location, see Geological Survey map of Minnesota).

Existing project. The proposed plan provides for repair of the existing 1000-foot retaining wall system, construction of a 1000-foot extension to the wall and expansion of the wall system to include a new secondary landward flood wall to aid in flood protection for the downtown area. Estimated Federal cost for new work is \$8,700,000 and \$2,900,000 is to be contributed by local interests. Project was authorized by the Water Resources Development Act of 1992 (Public Law 102-580) as amended by the Water Resources Development Act of 1996 (Public Law 104-303).

Local cooperation. See Annual Report for 1996 for requirements. A Project Cooperation Agreement was executed between the Federal Government and the city of Stillwater, Minnesota on Apr. 22, 1996 which covered Stage I of the project. An amendment to the Project Cooperation Agreement to encompass Stage II was executed on September 29, 1998.

Operations and results during fiscal year. Construction of Stage II was completed. Total costs were \$21,696 Federal, and \$0 non-Federal.

Condition at end of fiscal year. The Stage III economic feasibility study was completed and no Federal interest was identified. It has been recommended that the study be terminated..

22. ST. PAUL, MN

Location. In Ramsey County at St. Paul, Minnesota, on the Mississippi River. (For general location see Geological Survey map of Minnesota.)

Previous project. For details see page 27-20 of Annual Report for 1974.

Existing project. Since completion of the St. Paul and South St. Paul flood control project in 1964, the protected area has experienced two floods greater than the previous flood of record. The plan of protection provides for a nominal 4-foot barrier raise along the existing project alignment. Project was authorized by the Water Resources Development Act of 1986 (Public Law 99-662) and reauthorized by the Water Resources Development Act of 1990 (Public Law 101-640).

Local cooperation. See Annual Report for 1988 for requirements. The local cooperation agreement was executed on Aug. 22, 1991.

Operations and results during fiscal year. New Work: Completion of the Operation and Maintenance manuals and other project close out activities. Total Federal costs were \$2,379 and non-Federal costs of \$0.

Condition at end of fiscal year. Construction of the project is complete.

23. STATE HIGHWAY 7 BRIDGE, POMME DE TERRE RIVER, APPLETON, MN

Location. Along the left bank of the Pomme de Terre River, Swift County, about 150 miles west of Minneapolis-St. Paul, Minnesota.

Existing Project. The emergency streambank protection project on the Mississippi River involves approximately 350 feet of riverbank. The project consists of rockfill toe protection and associated earthwork to protect a portion of Theile Avenue (County Road 106) and a city warehouse building. The project was approved by the Mississippi River Division for construction on 18 January 2002, under the authority contained in Section 14 of the 1946 Flood Control Act, as amended.

Local Cooperation. A project Cooperation Agreement was executed between the Federal Government and the City of Appleton on 1 July 2002. The agreement requires the city to provide, during the period of construction, a cash contribution of at least 5 percent of the total project costs and any additional funds needed to make its total contribution, including the value of all required local responsibilities, equal to 35 percent of the total project costs; provide without cost to the United States all lands, easements, and rights-of-way, including suitable borrow and dredging material disposal areas necessary for construction, operation and maintenance of the project; perform all relocations and

alterations of building utilities (other than those portions which pass under or through the project structure), highways, railroads, bridges (other than railroad bridges and approaches thereto), sewers and related and special facilities determined by the Government to be necessary for construction of the project; pay all costs in excess of the Federal statutory limitation of \$1,000,000; hold and save the United States free from all damages arising from construction, operation and maintenance of the completed project, except for damages due to fault or negligence of the Government or its contractors; comply with the provisions of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, Public Law 91-646, approved 2 January 1971, in acquiring lands, easements, and rights-of-way for construction and subsequent operation and maintenance of the project, and inform all affected persons of applicable benefits, policies and procedures in connection with said Act; operate, maintain, replace, and rehabilitate the project upon completion in accordance with regulations or directives prescribed by the Government; give the Government a right to enter, at reasonable times and in a reasonable manner, upon land which it owns or controls for access to the project for the purpose of completing, operating, maintaining, repairing, rehabilitating, or replace the project; and comply with all applicable federal and State laws and regulations, including Section 601 of Title VI of the Civil Rights Act of 1964 (Public Law 88-352) and Department of Defense Directive 5500.11 issued pursuant thereto and published in Part 300 of Title 32, Code of Federal Regulations, as well as Army Regulation 600-7, entitled "Nondiscrimination on the Basis of Handicap in Programs and Activities Assisted or Conducted by the Department of the Army."

Operation and results during fiscal year. New Work: A construction contract was awarded on 23 September 2002 and construction was initiated. Total FY 02 Federal Costs were \$15,672 and non-Federal \$0.

Condition at the end of the fiscal year. Construction of the emergency streambank protection project is underway.

24. WAHPETON, ND

Location. Wahpeton, ND, is located in Richland County in eastern North Dakota, approximately 55 miles south of Fargo, ND. The Red River of the North and the Bois de Sioux River bound the city on the east. The confluence of the Ottertail River with the Red River of the North is located at Wahpeton. The city of Breckenridge, MN, lies across the Red River of the North from Wahpeton.

Existing project. A feasibility study recommended implementation of a flood reduction project that consists of a permanent levee system protecting most of the city and a flood easement to keep the breakout flood flows from being blocked in the future. The project is authorized by Section 205 of the 1948 Flood Control Act, as amended. Section 205 authorizes construction of small projects for flood control and related purposes not specifically authorized by Congress. Projects recommended for construction under Section 205 must be economically justified and limited to a Federal cost of \$7 million.

Local cooperation. See Annual Report for 2001. The Project Cooperation Agreement was executed between the Federal Government and the city of Wahpeton on June 12, 2002.

Operations and results during fiscal year. Construction was initiated. Total FY 02 Federal costs were \$860,307 and non-Federal \$24,255.

Condition at end of fiscal year. Construction of the flood damage reduction project at Wahpeton, North Dakota is underway.

Environmental

25. MILLE LACS REGIONAL WASTEWATER, MN

Location: Project is located in the City of Garrison and the townships of Kathio and West Mille Lacs (GKWML). Existing development along the western shoreline of Mille Lacs Lake, one of the largest and most popular trophy fishing lakes in Minnesota, consists of a mixture of residential, commercial, and Mille Lacs Band of Ojibwe housing and casino structures. Most of the structures' wastewater is treated by individual unreliable septic systems.

Existing Project: The GKWML Sanitary District and the Mille Lacs Band have entered into an agreement to design, construct, and operate a regional wastewater treatment project. The Band has constructed a lift station at the northern edge of its reservation boundary. The Band has also initiated construction of the Regional Sewage Treatment Plant. The GKVNNIL Sanitary District will construct a sanitary sewer line to collect and transfer wastewater within its jurisdiction to the Band's lift station for further transport to the Regional Treatment Plant.

Local Cooperation: The estimated total cost of the GKWML portion of the project is \$16,500,000.00. Section 219 funds will be used to assist the Sanitary

District in the construction of a \$1,600,000.00 "functional" portion of the GKWML project. Functional is defined as a portion of the Project that can be operated and maintained in advance of completion of the entire Project and can function independently and for a useful purpose, although the balance of the Project is not complete. A Section 219 Project Cooperation Agreement has been drafted and is awaiting definition of the functional project portion to be completed. Under Section 219 the PCA must be signed at USACE, and the Corps has design and construction responsibilities for the functional project portion.

Operations and results during the fiscal year. As appropriations for the Section 219 project were received after the Local Sponsor had entered into a contract with an AE firm, the Corps is coordinating with the AE to insure plans are completed for advertisement and award by the Corps. Federal costs for FY 02 were \$15,831.

Condition at end of the fiscal year. Plans and specifications for the GKWML wastewater project are underway.

26. NORTHEASTERN, MN

Location. Northeastern Minnesota is defined as the Counties of Aitkin, Benton, Carlton, Cass, Chisago, Cook, Crow Wing, Isanti, Itasca, Kanabec, Koochiching, Lake, Mille Lacs, Morrison, Pine, St. Louis, and Sherburne, Minnesota. Areas within the 17 counties essentially comprise Minnesota Congressional District 8.

Existing project. Federal Fiscal Year 2002 was the second year that funds were made available to implement the Section 569 program. Section 569 of the Water Resource Development Act of 1999 provided the Corps authority to assist Northeastern Minnesota communities with their environmental infrastructure projects. Ten projects were selected in FY 02 for implementation including Garrison/Kathio/West Mille Lacs (wastewater), Fond du Lac Reservation (water supply), Bois Forte Reservation (water supply), Koochiching County (wastewater), Aikin (wastewater), City of Bigfork (water supply), City of Orr (wastewater), Duluth/North Shore Sanitary District (wastewater), Western Lake Superior (wastewater), and Cities of Cloquet/Proctor (water supply).

Local cooperation. Project Cooperation Agreements for the above listed projects require the local sponsor to provide lands, easements, and rights of way as well as the required 25 percent local Sponsor cost share funding. The program is operated on a

reimbursable basis. The government and local sponsor agree on Project cost and work. The Sponsor retains a contractor to perform the work. Upon receipt of proper invoice and Government construction inspector verification that the work was performed, the Government reimburses the Sponsor for 75 percent of the invoice billing.

Operation and results during FY 02. PCAs were signed with the City of Orr, Koochiching County, and the City of Bigfork. PCAs with the remaining local sponsor are in progress. Federal costs for FY 02 were \$630,617.

Condition at end of fiscal year. Construction is near completion at the cities of Orr and Bigfork. Design work is underway at Koochiching County.

Miscellaneous

27. INSPECTION OF COMPLETED FLOOD CONTROL PROJECTS

Flood control projects turned over to local interests were inspected to determine that project channels are kept clean and unobstructed, dikes and revetments are in good condition, and structures are in good repair and operable. Deficiencies, if any, were minor unless noted. (See Table 16-J on inspection of completed flood control projects.)

Cost for the period was \$132,755. Total cost to Sep. 30, 2002 is \$2,486,549.

28. PROTECTION OF NAVIGATION

During FY 02, operation and maintenance costs were \$845,807 at Little Falls, MN (Section 3), \$5,451 on Project Condition Surveys and \$65,248 for Waterborne Commerce Statistics.

29. OTHER WORK UNDER SPECIAL AUTHORITY

In the Sign Standards Programs (as described in Chap. 6, ER 1130-2-500) there were costs of \$81,297. In the Anti-Terrorism/Force Protection Program (Emergency Supplement) there were costs of \$227,924.

30. FLOOD CONTROL AND COASTAL EMERGENCIES (FC & CE)

Disaster Preparedness	\$ 295,349
Emergency Operations	992,524
Rehabilitation and Inspection Program	500,686
Advanced Measures	<u>1,788,408</u>
Total FC & CE	\$3,576,967

31. NATIONAL EMERGENCY PREPAREDNESS PROGRAM (NEPP)

National Mobilization	\$ 22,403
Emergency Operations Center Support	<u>9,025</u>
Total NEPP	\$31,428

32. REGULATORY FUNCTIONS PROGRAM

Permit Evaluation	\$4,054,761
Enforcement	424,507
Environmental Impact Statements	293,454
Administrative Appeals	<u>4,235</u>
Total Regulatory	\$4,776,957

General Investigations

33. SURVEYS

Fiscal year cost was \$923,345 which included five special studies, miscellaneous activities, and coordination with both Federal and non-Federal agencies. Table 16-N provides a specific list and respective fiscal year expenditures.

34. COLLECTION AND STUDY OF BASIC DATA

Fiscal year cost was \$410,699 which included the items concerning international water studies, floodplain Management services and hydrologic studies. Table 16-N provides a specific list and respective fiscal year expenditures.

35. ADVANCE ENGINEERING AND DESIGN

Fiscal year cost was \$4,631,350 which included two local protection projects and one ecosystem restoration project. Table 16-N provides a specific list and respective fiscal year expenditures.

		Cost	0	0	73,166	630,617	703,783

1. Includes \$681,805 for new work for previous project.
2. Includes \$100,857 for maintenance for previous projects and MO of Dams funds of \$126,391.
3. Excludes \$1,034,561 in other contributed funds that have been expended for betterments.
4. Excludes \$744,114 in other contributed funds that have been expended for betterments.
5. Excludes \$56,220 contributed funds. Includes \$23,000 expended during FY91-FY95 under Section 1135, Public Law 99-662 authority.
6. Excludes \$1,802,866 for previous project. Includes \$372,000 CP&E funds obligated prior to 1 Oct 85 which remains excluded from the project cost estimate.
7. Excludes \$1,150,000 sunk costs for deauthorized Kindred Lake unit (see Table 16-G). Excludes \$475,000 for costs associated with inactive Maple River unit.
8. Excludes \$4,919,000 sunk costs for deferred Lake Darling Dam unit (see Table 16-E).
9. Excludes \$383,048 in other contributed funds that have been expended for betterments.
10. Excludes \$5,886 in other contributed funds that have been expended for betterments.

AUTHORIZING LEGISLATION

See Sec. in Text	Date of Authorizing Act	Project and Work Authorized	Documents
12.	December 22, 1944	HOMME LAKE AND DAM, ND Authorized as Park River Reservoir	1944 Flood Control Act (S. Doc. 194, 78 th Cong., 2d sess.) Public Law 435 (80th
		Redesignated Homme Reservoir and Dam Cong. 2d sess.)	
	November 17, 1986	Project restoration of wetland habitat conditions	Sec 1135 1986 WRDA-- Public Law 99-662
13.	October 23, 1962	LA FARGE LAKE AND CHANNEL IMPROVEMENT, WI Flood control dam and impoundment project	1962 Flood Control Act WRDA 1996
	October 12, 1996	Modification to original project to include transfer of approximately 8,569 acres of project lands to the State of Wisconsin and the Secretary of the Interior to be held in trust for the Ho-Chunk Nation. Modification also includes deauthorizing the construction of the reservoir and dam, while completing other features of the original project.	
14.	December 22, 1944	LAKE ASHTABULA AND BALDHILL DAM	Flood Control Act 1944
15.	November 17, 1986	MARSHALL, MN	WRDA 1986- Public Law 99-662, Sec 401 (a)
	November 17, 1988		WRDA 1988- Public Law 100-676
16.	November 17, 1986	PORTAGE, WI	WRDA 1986-Public Law 99-662
17.	July 24, 1946 June 19, 2000	RED RIVER OF THE NORTH, FARGO PUBLIC FACILITIES, ND	Sec 14 1946 Flood Control Act, as amended
18.	November 17, 1986	SHEYENNE RIVER, ND Project shall include a dam and reservoir of approximately 35,000 acre-feet of storage for the purpose of flood protection Maple River.	WRDA 1986- Public Law 99-662
19.	November 17, 1986	SOURIS RIVER BASIN, ND Consists of two reservoirs in Saskatchewan, Canada (known as Rafferty and Alameda projects); a flood warning system for Minot; Levee and channel improvements at Sawyer and six subdivisions from Burlington to Minot; levee and diversion channel at Renville County Park; flood proofing in the basin and Purchase of flowage easements; modifications to dams 87 and 96 in the Upper Souris National Wildlife Refuge; and modifications to Dams 320, 326, 332, 341 and 357 in the J. Clark Salyer National Wildlife Refuge.	WRDA 1986-Public Law 99-662

1. Contains latest published map.
2. Permanent Appropriations Repeal Act.

33. Includes cost of the Wahpeton-Breckenridge unit \$11,239, which is classed as "deferred" and the units on which authorization has expired: Maple River, \$1,241; Moorehead, \$27,700; which Sheyenne, \$37,956. In addition, \$203,874 special deposit funds and \$146,160 in other contributed funds have been expended for work under government contract paid for by local interests. Includes \$184,352 expended on Orewll Lake between FY91 - FY96 under Section 1135, Public Law 99-662 authority. Excludes \$64,775 contributed funds under Section 1135, PL 99-662 authority.
 34. Excludes \$61,895 contributed funds.
 35. Excludes \$67,014 contributed funds.
 36. Excludes \$65,902 contributed funds.
 37. Excludes \$175,357 contributed funds.
 38. Excludes \$62,620 contributed funds.
 39. Excludes \$100,000 contributed funds.
 40. Excludes \$5,253 contributed funds.
 41. Excludes \$225,000 sunk costs for inactive Ebner Coulee unit (see Table 16-E) and \$4,206,836 contributed funds.
 42. Excludes \$39,815 contributed funds.
 43. Excludes \$31,064 contributed funds.
 44. Excludes \$545,637 contributed funds for new work and \$38,000 expended by South St. Paul for work in lieu of required cash contribution. Excludes an additional \$206,629 expended for work done at request of local interests.
 45. Excludes \$73,619 contributed funds.
 46. Excludes \$37,631 contributed funds.
 47. Excludes \$184,709 contributed funds.
 48. Excludes \$97,800 contributed funds.
 49. Excludes \$589,316 contributed funds. In addition, \$717,809 in other contributed funds have been expended for work under Government contract paid for by local interests.
 50. Excludes \$11,066 contributed funds.
 51. Excludes \$38,173 contributed funds.
 52. Excludes \$20,000 contributed funds.
 53. Excludes \$777,070 contributed funds.
 54. Excludes \$7,628,650 contributed funds.
 55. Excludes \$177,500 contributed funds.
 56. Excludes \$114,000 contributed funds.

Warroad Harbor and River, MN ⁹	1981	Aug. 5, 1977	--	--

1. Portion of project for removal of obstructions at various points outside the dredged area to clear channel to full project width (see Table 16-C for costs for completed portion of the project).
2. Advance engineering and design costs only. The Senate Report 97-256 states that the Corps is to take no further action to construct Burlington Dam until directed to do so by Congress.
3. Grafton, ND, was reauthorized by Section 364 of WRDA in 1999.
4. Part of the St. Croix River, Minnesota and Wisconsin project.
5. Previously part of Sheyenne River, ND project (see Section 23 and Table 16-A for costs for active project).
6. Authorized for further study by a House Committee on Public Works Resolution dated March 15, 1988.
7. Advance engineering and design costs only. (See Section 25 and Table 16-A for costs for active project).
8. Part of Red River of the North Drainage Basin (see Section 20 in text and Table 16-I for costs for active units of project).
9. Portion of dredging of entrance channel and turning basin to complete project width and depth (see Table 16-C for costs for completed portion of project).

Otter Tail River	Minnesota	Channel improvement	174,768	174,800
Red River at Grand Forks	North Dakota	Levees and floodwall	948,895	948,900
Red River at East Grand Forks	Minnesota	Levees, floodwall, pumping plants	1,698,200 ²	1,698,200 ³
Red River at Fargo	North Dakota	Channel improvement	1,639,924	1,639,900 ⁴
Total Cost to Date			\$8,060,848 ⁵	
Total Estimate Cost				\$8,060,900 ⁶

1. Includes \$181,713 for lands and \$25,045 for recreation facilities.
2. Excludes cost for current planning, engineering and design work.
3. The East Grand Forks unit was reclassified from active to inactive on August 19, 1988; the project was reactivated in June 1997. The cost of this unit was last revised in 1987. A new flood control plan for a combined Grand Forks-East Grand Forks project was authorized in 1999.
4. Includes \$67,900 for lands.
5. Costs of \$11,239 for the Wahpeton-Breckenridge deauthorized unit not included. Authorization of the Sheyenne River, Moorhead, and Maple River units has expired. Cost of these units also not included total \$66,897.
6. The Wahpeton-Breckenridge unit of the project is classed as deauthorized and is excluded from the estimate. The cost of this unit, last revised in 1955, was estimated to be \$666,000. The Flood Control Act approved December 31, 1970 (H. Doc. 330-91-2) provided for deletion of the Sheyenne River unit, and authorization of the Maple River and Moorhead units expired at the end of the 5-year period within which local interests were required to furnish assurances of local cooperation. Authorization of these units, not included, expired on the dates indicated in Table 16-G. In FY 89, the Wahpeton-Breckenridge unit was included as part of the General Investigation program under Restudy of Deferred projects.

MISSISSIPPI RIVER BETWEEN THE MISSOURI RIVER AND MINNEAPOLIS, MN

Section of river covered in this report is divided into three reaches, under supervision and direction of District Engineers at St. Louis, Rock Island, and St. Paul. Section in St. Louis District extends 105 miles from Mouth of Missouri River to Upper Mississippi River mile 300 above Ohio River; Rock Island District extends about 314 miles from mile 300 to 614; and St. Paul District extends about 244 miles from mile 614 to Soo Line Railroad bridge, Minneapolis (mile 857.6).

Location. Mississippi River rises in northern Minnesota, flows about 2,360 miles southerly and empties into Gulf of Mexico. Portion included in this report extends about 663 miles from mouth of Missouri River to Soo Line Railroad bridge, Minneapolis. The latest map and profile showing this section of river are in House Document 669, 76th Congress, 3d session. A map showing Lake Pepin is in House Document 511, 79th Congress, 2d session. A map of section Minneapolis to Dubuque is in House Document 515, 79th Congress, 2d session. A map showing location of drainage districts (Bellevue, Iowa, to Missouri River) is in River and Harbors Committee Document 34, 75th Congress, 1st session.

Previous projects. See page 1199 of Annual Report for 1963.

Existing project. Provides a channel of 9-foot depth and adequate width between mouth of Missouri River (1,179 miles from the gulf) and Soo Line Railroad at Minneapolis, by construction of a system of locks and dams, supplemented by dredging. Project also provides for further improvements at St. Paul to provide a 2.7 mile basin extending downstream from Robert Street Bridge, and at Minneapolis to provide adequate terminal facilities, and for other harbor improvements and miscellaneous work. Pertinent data on locks and dams, harbor improvements, additional features entering into cost of project, and authorizing legislation are given in Tables 17-C, 17-D, 17-E, and 17-G. All dams are concrete. Three dams (Upper St. Anthony Falls, 1 and 19) are fixed, remainder are movable. See House Document 669, 76th Congress, 3d session, for a report of Chief of Engineers dated February 27, 1940, containing a

general plan for improvement of Mississippi River between Coon Rapids Dam and mouth of Ohio River for purposes of navigation, power development, flood control, and irrigation needs.

Local cooperation. Small-boat harbors authorized in the River and Harbor Act of 1962 are subject to conditions that local interests make a cash contribution toward cost of construction (except in case of Quincy Harbor which involves maintenance only of an existing harbor); furnish lands and rights-of-way for construction and future maintenance; hold the United States free from damages; provide and maintain mooring facilities and utilities; reserve accommodations for transient small boats; accomplish all necessary relocations and alterations; and establish public bodies empowered to regulate use, growth and development of the harbors.

Rectification of seepage damages to privately owned lands in the Sny Island Levee Drainage District, IL, was contingent upon the conditions that local interests acquire all lands, easements, and rights-of-way necessary for construction and maintenance of the project; comply with applicable provisions of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970; accept, operate, and maintain the project upon its completion; and hold and save the United States free from damages arising from the construction and operation of the completed project; provided further that the local public entity shall be reimbursed by the Government in the amounts actually expended by it in the acquisition of real estate and for payments required under Public Law 91-646 if said amounts have been previously submitted to and approved by the Government.

Local cooperation requirements have been complied with for improvement of commercial harbor at Dubuque, IA; for improvement of Beaver Slough at Clinton, IA, for navigation; and for general navigation facilities at small-boat harbors at Rock Island, IL; Hannibal, MO; Fort Madison, IA; Davenport (Lindsay Park), IA; Muscatine, IA (including freight terminal approach channel); Andalusia, IL; Warsaw, IL; Moline, IL; Clinton, IA; and Savanna, IL.

Licenses. Federal Energy Regulatory Commission collects from non-Federal licensees annually to recompensate the United States for use of government dams for generation of hydroelectric power. Amounts collected are returned to U.S. Treasury. (See Table 17-F for license fees collected for the fiscal year.)

St. Paul District. New Work: None.

Maintenance: During fiscal year 2002, the Government pipeline dredge WILLIAM A. THOMPSON removed 471,482 cubic yards of material at five sites. Government derrick barge HAUSER/WADE removed 12,746 cubic yards of material at eight sites. Government pipeline dredge DUBUQUE removed 22,081 cubic yards of material at one site in the main channel. A contract pipeline dredge also removed 94,500 cubic yards of material from a historically used dredge material placement site. Mechanical dredging contractors removed 303,412 cubic yards of material at fourteen sites. Major maintenance projects included lock dewatering at Upper Sr. Anthony Falls, central control building and electrical controls at Locks 8 and 9, and painting of the bridge at Dam 10, and the dam gate painting at Lock and Dam 4.

Operating and Care: Locks and Dams were operated as required and necessary repairs were made to those and appurtenant structures. Other studies, reports, and miscellaneous engineering work were also accomplished.

Rehabilitation: The rehabilitation of the district's central control buildings continued. During FY 2002 the building and site work was completed at Lock 7, continued at Lock 8, and was initiated at Lock 9. Installation of replacement crane carriers and bulkhead hoists was completed at several sites.

The related navigation safety and embankments problems at Lock and Dam 3 were examined in separate reports in 1995 with recommended structural fixes for these problems. The proposed projects were approved by Corps Headquarters, but have not been implemented for a number reasons including the presence of a diverse mussel bed with state-listed endangered species in the tailwater area. Construction of the first stage of the embankment project was completed in the summer of 1999. The St. Paul District has decided to re-evaluate these related problems in an effort to find more optimal solutions. A Notice of Intent to Prepare an Environmental Impact Statement for the Lock and Dam 3 navigation

safety and embankments re-evaluation is being published in the Federal Register.

Alternative plans for navigation safety and embankments are being evaluated in a risk and benefit cost assessment. The reevaluation study will be completed in FY 2003.

Costs to St. Paul were \$44,105,525 for operation and maintenance and \$3,048,341 for rehabilitation; for a total cost of \$47,153,866.

Rock Island District. New Work: None.

Maintenance: Channel dredging by Government Cutterhead Pipeline Dredge WILLIAM A. THOMPSON was performed at various locations in Pools 12, 14, 16, 17, 18, 21, and 22, with a total of 358,927 cubic yards of material being removed. Mechanical dredging was performed in pools 13, 14, 16, 18, and 20, with a total of 116,103 cubic yards of material being removed. The total cost of dredging was \$1,950,000. Continuing construction includes: Lock and Dam 14 Major Rehab State II, and Lock and Dam 14 Major Rehab State _____. Construction was initiated for Lock and Dam 17 Upper Approach Wall Repair. Maintenance for the Navigation Function continued at a cost of \$22,345,500 (includes dredging costs). Maintenance for Environmental Stewardship continued at a cost of \$48,800. Maintenance of Recreation Features continued at a cost of \$860,700. Total maintenance costs for Operation and Maintenance were \$23,255,000. Net credits to the project were \$265,800, primarily as a result of collection from towboat companies for damages for lock and dam structures.

Operation and care: Operations for Navigation continued at a cost of \$16,551,200. Environmental Stewardship continued at a cost of \$621,500. Operations for the Recreation Function continued at a cost of \$1,947,800. Total operation costs were \$19,120,500. Total operations and maintenance costs were \$42,375,500.

Rehabilitation: Rehabilitation was continued at Locks and Dams 12, 13, 14, and 15 for costs of \$799,215, \$3,567,430, and \$7,342 respectively. Total rehabilitation and maintenance costs were \$4,373,987.

Costs to the Rock Island District were \$42,109,705 for operations and maintenance and \$4,373,987 for major rehabilitation for a total cost of \$46,483,692.

St. Louis District. New Work: Costs incurred for Melvin Price Locks and Dam, formerly Lock and Dam 26 Replacement, were \$16,266 for real estate acquisition; \$1,168 for the dam; \$1,301 for the locks; \$986 for cultural resource monument, \$633,880 for buildings, grounds and utilities; \$98,498 for engineering; \$66,569 for supervision and administration. Cost for Melvin Price totaled \$818,668. Costs incurred for the second lock totaled \$13,052, all for engineering. Total cost of new work was \$831,720.

Rehabilitation: Major rehabilitation continued in FY 2002 at Lock and Dam 25. Construction costs included \$247,786 for the dam; \$106,599 for the lock; \$118,445 for engineering; and \$36,674 for supervision and administration. Costs for Lock and Dam 25 totaled \$509,504. Major rehabilitation also continued at Lock and Dam 24 at a cost of \$7,834 for the dam; \$10,494,980 for the lock; \$747,270 for engineering; and \$659,200 for supervision and administration. Costs for Lock and Dam 24 totaled \$11,909,284. Total rehabilitation cost \$12,418,788.

Operating and care: The locks and dams were operated as required and necessary repairs were made thereto. Other work accomplished was management of natural resources, operations of recreation areas, condition and operating studies, water control management, and other studies and reports for a total cost of \$7,075,556.

Maintenance: Total maintenance cost \$7,767,740.

Costs to the St. Louis District were \$831,720 for new work on the Melvin Price Locks and Dam and Second Lock; \$12,418,788 for major rehabilitation; \$14,843,296 for operation and maintenance for a total cost of \$28,093,804.

Total Federal costs of existing project to the end of the fiscal year for the three Districts were \$831,719 for new work; \$101,058,526 regular funds for operation and maintenance; and \$11,034,714 regular funds for rehabilitation. Total costs for FY 02 were \$112,924,959.

Condition of the channel at end of fiscal year: The controlling depths of nine feet at low water and minimum widths suitable for long-haul common carrier service were maintained in all pools.

St. Paul District. Work completed: Locks and Dams at St. Anthony Falls and 1 to 10, inclusive,

except for relatively minor appurtenant work; major improvements of channels and harbors at St. Paul and Minneapolis; small boat harbors and commercial harbors at Lake City, Red Wing, and Winona, MN; and Prairie du Chien, WI; small-boat harbors at St. Paul, Hastings, Red Wing, Wabasha, Lake City and Winona, MN; Lansing, IA; and Bay City, Alma, Pepin, and Prairie du Chien, WI; a remedial drainage ditch at Cochrane, WI; miscellaneous channel dredging and realignment; channel markers; pool clearing; and construction of various facilities for recreation use.

Status of land and flowage acquisition: Approximately 50,696.05 acres of land in fee, including 47,305 acres used by the Department of the Interior in accordance with a cooperative agreement and general plans, and easements of 15,458.35 acres of land are owned or controlled in Pools 1 to 10, inclusive, at end of fiscal year. In addition, fee title to 12.46 acres and perpetual easements on 2.98 acres of land for St. Anthony Falls and perpetual easements over 244.39 acres of land for harbors have been obtained and Department of the Army holds special rights over 62,954.74 acres owned by the Department of the Interior in pools 3 to 10, inclusive. Dredge sites acquired in FY 02 added 4.2 acres in fee.

Work remaining to complete portion of project in St. Paul District: FY 2003 projected acquisitions include approximately 5 acres fee for Baldhill Dam Reservoir and five dredge sites containing approximately 50 acres in fee.

Condition of channel at end of fiscal year: The controlling depths of 9 feet at low water and minimum depths for long-haul common carrier service were maintained in all pools.

Rock Island District. Work completed: Major construction items including all locks and dams, are completed and in operation. The following related work has also been completed: construction of small-boat harbors at Rock Island, IL; Moline, IL; Andalusia, IL; Warsaw, IL; Fort Madison, IA; Davenport (Lindsay Park), IA; Muscatine, IA; Clinton, IA; and Hannibal, MO; improvement of Beaver Slough at Clinton, IA, for navigation; improvement of commercial harbor at Dubuque, IA; rehabilitation of old auxiliary lock at Lock and Dam 14; permanent closure of old Lock 19 and dry dock; rock and conglomerate excavation in Pools 15 and 16; rectification of seepage damage in the Sny Island Levee Drainage District, IL; recreational facilities; and construction of visitor center at Lock and Dam 15.

Status of land and flowage acquisition:

Acquisition of land in Pools 11 to 22, inclusive consisting of 93,658.174 acres in fee and 11,682.071 acres in flowage easement, has been completed.

Condition of the channel at end of fiscal year:

The controlling depths of nine feet at low water and minimum widths suitable for long-haul common carrier service were maintained in all pools.

Work remaining to complete portion of project in Rock Island District: None.

St. Louis District. Work completed: Major construction items, including all locks and dams, are completed and in operation, with the exception of the remaining work at Melvin Price.

Status of land and flowage acquisition:

Acquisitions of land in Pools 24, 25, and 26,

involving 4,448 acres of land in fee and flowage easements over 6,600 acres, is complete. A total of 4,201 acres has been acquired for the Melvin Price Locks and Dam project.

Condition of channel at end of fiscal year:

The controlling depth of nine feet at low water and generally suitable widths for long-haul common carrier services were maintained in all pools and between Melvin Price Locks and Dam and Missouri River.

Work remaining to complete portion of project in St. Louis District: Work remaining at the Melvin Price Locks and Dam project includes the esplanade landscaping and implementation of remaining required fish and wildlife mitigation measures for the second lock, and visitor center exhibits for the main lock.

TABLE 17-A COST AND FINANCIAL STATEMENT

Project	Funding	FY 99	FY 00	FY 01	FY 02	Total Cost to Sep 2002

1. Excludes \$2,041,140 contributed funds. Includes \$7,673 expended in pool No. 11.
2. Includes \$159,359 transferred from Rock Island District covering pro rata share of cost of derrick boat Hercules.
3. Includes \$762,196 expended between 1930 and 1936 on operating and care of works of improvement under provisions of permanent indefinite appropriation for such purposes. Excludes \$797,670 contributed funds.
4. Excludes \$58,999 contributed funds.
5. \$687,709 was transferred to St. Louis District in fiscal year 1958. Excludes \$201,167 transferred to St. Paul and St. Louis Districts covering their pro rata share of cost of derrick boat Hercules.
6. Cost subsequent to FY 1953 included with operating and care. Includes the sum of \$395,442, expended between 1930 and 1934 on the operating and care of the works of improvement under the provisions of the permanent indefinite appropriation for such purposes.
7. Includes \$47,800 transferred from Rock Island District covering pro rata cost of derrick boat Hercules and \$687,709 transferred from Rock Island District.
8. Includes \$943,342,448 for Melvin Price Locks and Dam.

1. Elevation of Pools 1 to 22 and at St. Anthony Falls are mean sea level 1912 adjustment: Pools 24, 26 are mean sea level 1929 adjustment.

2. Includes existing dam, owned by Northern States Power Co.

3. Includes dredging above upper lock. (Federal cost only.)

4. Based on pool elevation 723.1 in Pool 1 which is crest of dam. Pool is normally maintained at elevation 725.1 by flashboards.

5. Includes lower approach dredging and dredging between upper and lower rock. (Federal cost only.)

6. In addition \$1,948,000 expended from previous projects and \$1,349,600 from O & M appropriation for first of twin locks. Excludes lock and dam rehabilitation program.

7. Old upper guard sill.

8. Landward lock.

9. In addition, \$1,965,300 expended from previous projects.

10. Existing Le Claire Canal lock is used as auxiliary to lock 14; previous project cost \$540,000.

11. Depth over upper poiree sill. Depth over upper miter sill is 27 feet, at lock 15.

12. \$640,868 for first lock was reported by Mississippi River Power Company, transferred to Government free in lieu of improvements destroyed. (Annual Report, 1928, pp. 1118-1119.) Present estimate includes \$13,132,600 for main lock and appurtenant work.

13. Includes cash contribution of \$4,900,000.

14. Complete except for guidewall extensions.

15. Lock and Dam 26 has been replaced by the Melvin Price Locks and Dam at which full pool was raised 1 February 1990. Lock and Dam 26 has been removed.

6. Guidewall extensions at Locks 16, 18, and 21; construction of mooring facilities at Locks and Dams 11, 12, 14, 15, 16, 17, and 18; upper approach improvement at Lock 19 and Lock and Dam 20; and rock and/or conglomerate excavation in Pools 14, 18, and 21 deauthorized FY 90 (WRDA of 1986).

PITTSBURGH, PA DISTRICT

This District comprises part of eastern Ohio, western Pennsylvania, southwestern New York, northern West Virginia, and northwestern Maryland embraced in

drainage basin of Ohio River and Tributaries above mile 127 (below Pittsburgh, PA), immediately upstream from New Martinsville, WV.

Navigation

1. ALLEGHENY RIVER, PA

Location. The Allegheny River is 321 miles long. It rises in northern Pennsylvania, flows northwestward into New York, thence generally southwestward to Pittsburgh, PA, where it joins with Monongahela River to form the Ohio. (See Geological Survey Charts for western Pennsylvania and southwestern New York.)

Existing Project. The project consists of eight locks and dams to afford slack-water navigation for a length of 72 miles from Pittsburgh, PA to above East Brady, PA. Controlling depth through canalized portion is 9' at normal pool level. Channel width varies from a minimum of 200' to full width of river at mouth. Existing project is complete, the last lock, No. 9, was placed in service in 1938. All locks and dams are in fair condition. Navigation channel has been widened at certain points and, in general, maintained to project depth, thus affording adequate depth for passage of commercial tows.

Local Cooperation. Fully complied with.

Terminal Facilities. City of Pittsburgh constructed a modern wharf for river freight. There are numerous privately maintained terminals and docks, consisting of tipples, various types of hoists, chutes, and pipelines for use in loading and unloading coal, stone, sand, gravel, petroleum products, steel products and other commodities. Transshipment of freight between river and railroads is handled at privately owned river-to-rail terminals. Existing private terminals are adequate for shipments and receipt in Pittsburgh District of type of commerce now in existence.

Licenses. The Federal Energy Regulatory Commission granted license for construction on non-federal hydropower facilities on the abutment side of the dam at the following locations: Lock 5, Allegheny - FERC license 3671, generating capacity 9.3 megawatt, start of operation October 1988; Lock 6, Allegheny - FERC license 3494, generating capacity 8.6 megawatt, start of operation December 1988; Lock 8, Allegheny - FERC license 3021, generating capacity 13.6 megawatts, start of operation November 1990; Lock 9, Allegheny - FERC license 3021, generating capacity 18.0 megawatts, start of operation November 1990.

Operations & Maintenance, General. During FY02 there was no major repair or maintenance work done on the Allegheny River.

2. CONSTRUCTION OF LOCKS & DAMS, OHIO RIVER

See this heading under Ohio River portion.

3. MONONGAHELA RIVER, PA & WV

Location. Formed by junction of Tygart and West Fork Rivers about one mile south of Fairmont, WV, and flows northerly for 128.7 miles to its junction with Allegheny River, forming Ohio River at Pittsburgh, PA. (See Geological Survey Charts for southwestern Pennsylvania and northern West Virginia.)

Previous Project. For details see Annual Report for 1963, page 1070.

Existing Project. Provides for improvement of river by nine locks and dams to afford slack-water navigation for its entire length from Pittsburgh to above Fairmont, WV. Original Locks and Dams 7, 8 and 9 were replaced by new Locks and Dams 7 and 8 in 1925. Increased traffic necessitated enlargement and improvement of Locks and Dams 1 to 6 between Pittsburgh and Rices Landing, PA, by building two parallel chambers and fixed concrete dams during 1905 and 1932. Locks and Dam 1 were eliminated in 1938 by raising Emsworth Dam, Ohio River. Reconstruction of Lock 2 was completed in 1953 to provide two modern navigation chambers. The existing Locks and Dam 2 were originally completed in 1907; major modifications were made in 1923 and 1924, and in 1926 the upper guard and guide walls were extended. Construction of Maxwell Locks and Dam and the reconstruction of Dam 4 have allowed for removal of obsolete Locks and Dams 5 and 6. Small and antiquated original Locks and Dams 10 to 15, inclusive, have been replaced by three modern structures. Morgantown Lock and Dam, initial step in replacement program, was completed in 1950 replacing Locks and Dams 10 and 11. Hildebrand Lock and Dam, next upstream, was completed in 1959 replacing Locks and Dams 12 and 13. Raising crest of Dam 8 was also completed in 1959 as part of upper river improvement and eliminates restricted depth in upper reach of pool. Opekiska Lock and Dam was completed in 1967 replacing Locks and Dams 14 and 15. Completion of this link in upper river replacement program provides for entire river length of minimum channel depth of 9', varying in width from a minimum of 250' to practically full width at mouth.

Locks and Dam 3 showed advanced stages of deterioration and, because of its strategic location and its importance to industry throughout the greater Pittsburgh area and the nation, emergency remedial work had to be done in 1977. Major rehabilitation of Locks and Dam 3 was completed on October 27, 1980.

The Water Resources Development Act of 1986 authorized the replacement of Lock and Dam 7 with Grays Landing Lock and Dam and the construction of a new lock landward of the existing lock at Lock and Dam 8 (renamed Point Marion Lock and Dam). In accordance with the provisions of this act, 50% of the total cost of construction for the Grays Landing and Point Marion projects was derived from the Inland Waterways Trust Fund. Construction of a new lock at Point Marion was completed and put into service in December 1993. Construction of a new lock at Grays Landing was completed and put into service in May 1993. Construction of the dam at Grays Landing was completed in December 1995.

Local Cooperation. None required.

Terminal Facilities. City of Pittsburgh constructed a modern wharf for freight. Boat landings are maintained by some municipalities along the river. A large number of tipples at mines and various types of hoists at manufacturing plants and sand and gravel supply companies are maintained for private use in loading and unloading coal, coke, billets, steel products, sand, gravel, and other commodities. These terminals and docks are not available for general commerce. A

PITTSBURGH, PA, DISTRICT

number of docks and pipelines are also privately maintained for petroleum and acid products. Marine ways are maintained by some of the larger industries. These are also several terminals for rail-to-river and river-to-rail transfer. Facilities are considered adequate for existing commerce.

Operations During Fiscal Year. New Work: construction of the new Grays Landing Dam was completed in December 1995 at an approximate cost of \$25,000,000. Construction of the lock was completed in May 1993 at a contract cost of approximately \$80,000,000. Removal of the old fixed crest dam and river lock wall at Lock and Dam 7 was completed in FY96 at a cost of \$2,800,000. Work continues on cultural resources and the acquisition of real estate for the remainder of the project. The present project consists of 84 acres of fee land and 403.3 acres of easement. The estimated total cost of the project, which is scheduled to be complete in September 2003, is \$181,000,000.

The Water Resources Development Act of 1992 authorized the District to proceed with navigation improvements on the Lower Monongahela River. Locks and Dams (L/D) 2, 3 and 4 are located within 50 miles of the "Point" in Pittsburgh. The authorized Lower Mon Project is a two-for-three improvement that will replace the 100-year old fixed-crest dam at L/D 2 with a gated dam (Braddock Dam) and replace the 70-year old, undersized Locks 4 with new twin 84' x 720' locks. The 100-year old L/D 3 will be removed and a new navigation pool will be established that will be 5' higher between Braddock and Elizabeth and 3.2' lower between Elizabeth and Charleroi. The project will adjust all municipally owned facilities adversely affected by these river level changes and dredge existing Pool 3. In addition, the Port Perry Railroad Bridge crossing at river mile 11.7 will be adjusted to accommodate the higher pool level under a cost sharing contract with Norfolk Southern Railroad. Construction delays fail to reduce risks associated with continued reliance and use of existing L/D 3 and Locks 4. A structural failure would cause a loss in transportation savings of over \$200 million/year. Delays increase the cost of work by about 2.7%/year for inflation and result in continued transportation inefficiencies of about \$30 million/year. Each year the project is delayed, \$1,500,000 of Operations & Maintenance funds must be used to continue L/D 3 in service. The project is funded equally from General Appropriations from the U.S. Treasury and from the Inland Waterways Trust Fund. The new Braddock Dam is being constructed from two large prefabricated concrete segments that were floated into place above, and set down upon, a pre-constructed foundation system of sheet-pile cut-off walls and large diameter drilled shafts. The segments placed in-the-wet form the base of the new dam, which is now being constructed above the water from floating plant. This in-the-wet technology is expected to save about \$5,000,000 and reduce construction time by one year over traditional cofferdam construction. Approximately \$150,000,000 of project construction has been undertaken through FY03, including the \$107,400,000 Braddock Dam contract, prior improvements at L/D 2 in preparation of the new gated

Braddock Dam, approach dikes for the new Charleroi Locks and initial Pool 3 dredging contract and relocations for West Elizabeth, Elizabeth, Dravosburgh, Glassport, Charleroi and Mon Valley Sewage. A \$7,900,000 site development contract is underway at Charleroi. FY03 funds will be used for on-going construction and relocation contracts, to award contracts for the demolition of the Charleroi river chamber and for the fabrication of the Charleroi lower guardwall, and to finalize plans and specification for the new Charleroi Locks.

Operations & Maintenance, General. Major work accomplished by government hired labor was the replacement of the river wall emptying valve and river wall filling valve at Morgantown L/D (\$803,592); the replacement of the river wall emptying valve at Maxwell L/D (\$689,670); replacement of the land wall filling valve at L/D 4 (\$478,061); and replacement of the middle wall filling valve at L/D 4 (\$497,675).

4. OPEN-CHANNEL WORK, OHIO RIVER

See this heading under Ohio River portion.

5. TYGART LAKE, WV

Location. Tygart Lake is located on the Tygart River in Taylor and Barbour Counties, north central WV. The lake is approximately 26 road miles due east of Clarksburg, WV and 30 road miles south of Morgantown. The dam is situated 22.7 river miles above the mouth of the Tygart River at Fairmont, or 2.25 miles upstream from Grafton, WV, and about 78 miles south of Pittsburgh, PA. (See Geological Survey Charts for Fairmont, Thornton, and Belington, WV.)

Existing Project. A reservoir for low water regulation and flood control. Dam is concrete gravity type with an uncontrolled center spillway flanked by abutment sections joining valley sides. Project was authorized by Public Works Administration January 11, 1934, and adopted by 1935 River and Harbor Act. For further project description see Annual Report for 1962. Authorized project is complete. Reservoir is in operation for low water control in Monongahela River and for purpose of flood protection in Monongahela and Ohio Valleys. Construction of dam was started in 1935 and placed in operation in 1938. Present project lands consist of 2,662.9 acres in fee, flowage easements over 1,216.9 acres and 1,731.9 acres of other easements.

Local Cooperation. The State of West Virginia has assumed responsibility for the development and operation of hunting and fishing areas as well as the Tygart Lake State Park. Controlled releases for downstream navigation and recreation are also coordinated with others to the extent feasible. No local cooperation is required at completed project; however, future recreational developments are subject to certain conditions of non-federal cost-sharing under Federal Water Project Recreation Act of 1965. A cost-sharing agreement was executed with the West Virginia Department of Recreation in May 1981.

Licenses. The Federal Energy Regulatory Commission granted a license to the City of Grafton for construction of a non-federal hydropower facility at this project (FERC license 7307). Details of the design and other issues are still being finalized. The deadline for

REPORT OF THE SECRETARY OF THE ARMY ON CIVIL WORKS ACTIVITIES FOR FY 2002

the start of project construction expired on April 15, 1995; however, the developer was granted an extension which expires March 1, 2004.

Operations During Fiscal Year. Operations & Maintenance, General: Reservoir was operated for benefit of flood control and low water regulation, as required, and project structures were operated and maintained in a serviceable condition throughout the year. Estimated flood control benefits achieved by this project through September 30, 2002 revised to reflect damages prevented in downstream districts as well as Pittsburgh District, were \$1,074,321,000. Activities under reservoir management program comprising sanitation measures, conservation, land management, and operation and maintenance of public use facilities continued. This work was limited in scope as the State of West Virginia has jurisdiction over most of the recreation in the reservoir area.

Tygart Dam was selected as a Dam Safety Assurance Project in March 1996. The Evaluation Report was initiated in March 1994 to address spillway capacity and structural stability in relation to the probable maximum flood event. Findings of the report concluded that under present conditions, the probable maximum flood would overtop the dam and cause failure. The report recommends protecting the dam from failure to include downstream erosion protection and stilling basin modifications. The Design Memorandum was completed in September 1998 and Plans and Specifications were completed in July 1999. The construction contract was advertised in August 1999 and awarded to Joseph B. Fay Co. on September 28, 1999 for \$5,628,929. The Notice to Proceed was issued in October 1999 and the scheduled work will be completed in November 2002. The project features include construction of a new road to provide access to the left bank abutment of the dam, new concrete channels consisting of a concrete wall (end sill) and concrete slope paving on the downstream side of the dam, new concrete lagging retaining walls on the left and right banks of the dam, modification of the existing parapet wall, and minor repairs to the roadway decking. A construction contract for the replacement of the bulkhead hoist and slide gate rehab will be advertised in April 2003. The design to rewire the project and upgrade the hydraulic system will be completed in the 3rd quarter FY03 and ready for advertisement in the 4th quarter FY03.

6. OTHER AUTHORIZED NAVIGATION PROJECTS

See Table 18-C on other authorized navigation projects.

Flood Control - Local Protection

7. ELKINS, WV

Location. On Tygart River in north central Randolph County, WV, about 155 miles south of Pittsburgh, PA. It is at downstream end of a long, broad reach of upper Tygart Valley, about 75 miles above

mouth of river. (See Geological Survey Chart for Elkins, WV.)

Existing Project. Provides flood protection by diverting flood discharges from upstream arm of loop of natural river channel into an artificial cutoff channel, thereby bypassing City of Elkins. Improvement is designed to accommodate discharges equivalent to maximum flood of reasonable expectancy. Project construction was started in May 1946 and completed in May 1949. Completed work, except that portion of channel maintained by federal government, has been operated and maintained by City of Elkins since March 31, 1949. Present project lands consist of 32.04 acres in fee and 526.01 acres in easements. Project was authorized by 1938 Flood Control Act. For further project description see Annual Report for 1962, page 1222. Federal cost of completed project was \$1,772,627; estimated non-federal cost for lands, easements, and rights-of-way was \$40,000.

Local Cooperation. Fully complied with.

Operations During Fiscal Year. Operation & Maintenance, General: routine investigations and inspections were made. Project was last inspected in June 2002. Flood damages prevented through FY02 were estimated to be \$19,669,000.

8. JOHNSTOWN, PA

Location. Project is located in southwestern Cambria County, PA, about 58 miles east of Pittsburgh, PA. It is in a deep and comparatively narrow valley at junction of Stoney Creek and Little Conemaugh River, which unite to form Conemaugh River. (See Geological Survey Chart for Johnstown, PA.)

Existing Project. Provides for increased channel capacity by enlarging and realigning channels and protecting banks with concrete pavement. Improvement designed to accommodate discharges equivalent to those of March 1936 flood, maximum natural flow of record, minimum of over-bank flow and to practically eliminate damages there from. Project construction began in August 1938 and was completed in November 1943. Footer protection for Unit 4 was completed in November 1949. Present project lands consist of easements over 199 acres. Project was authorized by Flood Control Acts of 1936 and 1937. For further project description see Annual Report for 1962, page 1215.

Local Cooperation. The rules of local cooperation for the rehabilitation of the existing project are governed by the FY91 Energy and Water Resources Appropriations Act. Pursuant to this act, the City of Johnstown will have a limited role in securing the needed rights of access to non-federal structures included in the line of protection and will hold and save the United States from damages due to construction or operation and maintenance of the work on the non-federal structures, except for damages due to the fault or negligence of the United States or its contractors.

Operations During Fiscal Year. Operations & Maintenance, General: The FY91 Energy and Water Resources Development Appropriations Act authorized and directed the Corps to undertake a major rehabilitation of the existing project. The Project

PITTSBURGH, PA, DISTRICT

Design Memorandum was approved in June 1995. The major rehabilitation work is to be accomplished under the Construction, General appropriation at an estimate cost of \$32,500,000. Contract plans and specifications were initiated in July 1995. Six of seven construction contracts were awarded through September 2002. The seventh contract is dependant on Operations & Maintenance funds availability. The CG project is scheduled to be physically complete in September 2004. The Construction, General work consists of the repair of 54 existing wall sections, slope paving and replacement of balustrade (safety) wall. Also included in the major rehabilitation is all the necessary Operation and Maintenance funded work. The O&M work estimated to cost \$7,500,000 consists of concrete spill repairs, slope paving joint repairs, sediment removal and miscellaneous repairs. Through FY02 \$29,400,000 CG and \$2,600,000 O&M has been expended. Flood damages prevented by the project through September 30, 2002 were estimated to be \$803,071,000.

9. PUNXSUTAWNEY, PA

Location. Borough of Punxsutawney is on Mahoning Creek in Jefferson County, PA, about 85 miles northeast of Pittsburgh, PA. It is on a comparatively wide, alluvial flood plain about 52 miles above mouth of stream and 30 miles above Mahoning Creek flood control dam. (See Geological Survey Charts for Punxsutawney and Smicksburg, PA.)

Existing Project. Provides flood protection by channel enlargement, dikes, and walls. Improvement is designed to accommodate discharges 20% greater than that of maximum flood of record. Construction was accomplished by construction of four units. Construction started in May 1946 and was completed in June 1950. Present project lands consist of perpetual easements over 72.6 acres. Completed works, except that portion of channel maintained by the federal government, have been operated and maintained by Borough of Punxsutawney since July 31, 1950. Project was authorized by 1938 Flood Control Act. For further project description see Annual Report for 1962, page 1209.

Local Cooperation. Fully complied with.

Operations During Fiscal Year. Operations & Maintenance, General: operation activities continued and routine investigations and inspections were made. Project was last inspected in October 2002. Total flood damages prevented through FY02 were estimated to be \$72,196,000.

10. SAW MILL RUN, PITTSBURGH, PA

Location: The project is located within the City of Pittsburgh, Allegheny County, at Ohio River mile 0.7 and traverses upstream from the mouth of Saw Mill Run approximately 4,700 L.F.

Existing Project: The proposed project was authorized in the 1986 WRDA in accordance with the Chief of Engineers report dated January 30, 1978. The 1996 WRDA increased the project estimate to \$12,780,000, the current project estimate in 1994 dollars. This project was included in the FY97 appropriations as a new construction start.

Local Cooperation: The City of Pittsburgh is the local sponsor for this project and is responsible for real estate acquisition and relocation design and construction. The project will be cost shared 75% federal and 25% non-federal in accordance with the requirements of the 1986 WRDA.

Operations During Fiscal Year: In October 1997, a Project Cooperation Agreement was executed with the City of Pittsburgh. In June 1998, the District executed a Memorandum of Agreement (MOA) for the purpose of allowing the District to acquire the real estate and complete relocation work on behalf of the city. With the MOA executed and the funds for this effort transferred to the District in July 1998, real estate acquisition was initiated, and was completed in November 2000. Plans and specifications for the project were completed in March 2000 and the construction contract was advertised in November 2000. The contract was awarded to Carmen Paliotta Contracting in April 2001 for \$12,881,875. The construction contract is currently 65% complete. The completion date for the contract is November 2003. Once the project is completed, it will be turned over to the City of Pittsburgh for operation and maintenance responsibilities.

11. WEST VIRGINIA & PENNSYLVANIA FLOOD CONTROL
