SECTION IV

MER CARRIAGE AIRLOAD PREDICTION

The technique for predicting the airloads of a store carried on a multiple ejector rack (MER) is presented in this section. The approach consists of inserting the MER/store configuration into the flow-field of the base wing (45° sweep) as outlined in Subsection 2.3 to obtain an initial prediction for the side force, yawing moment, normal force, and pitching moment components for the two rack centerline stations (MER stations 1, 2). The MER shoulder stores are treated as increments to be added to the initial predictions made for MER stations 1 and 2 for these four components. The rolling moment and axial force components are predicted in a manner similar to that used for the single carriage predictions.

The method contained in this section has been developed primarily from data obtained on a fully loaded MER carrying M117 stores. Since the data base for the method is restricted to essentially one store type, a scaling factor has been defined in an attempt to scale the airloads predicted herein to other store types based on differences in isolated aerodynamic characteristics and physical size. The scaling factors for side force and normal force are presented below.

$$K_{SCALE_{SF}} = \frac{\left(\frac{SF}{q}\right)_{\psi_{ISO}} SPA}{96}$$

where

$\left(\frac{SF}{q}\right)_{\psi_{ISO}}$ - Store isolated characteristics, $C_{L_{\alpha_{ISO}}} S_{REF}$, where $C_{L_{\alpha_{ISO}}}$ is obtained from the method referenced in Subsection 2.2, $\frac{ft^2}{deg}$

SPA - Store total side projected area as defined in Subsection 2.2, in^2

$$K_{SCALE_{NF}} = \frac{\left(\frac{NF}{q}\right)_{\alpha_{ISO}} PPA}{9(}$$

where

$\left(\frac{NF}{q}\right)_{\alpha_{ISO}}$ - Store isolated characteristics, $C_{L_{\alpha_{ISO}}} S_{REF}$, where $C_{L_{\alpha_{ISO}}}$ is obtained from the method referenced in Subsection 2.2, $\frac{ft^2}{deg}$

PPA - Store plan projected area as defined in Subsection 2.3, in^2.

The scaling factors for yawing moment and pitching moment are presented below.

$$K_{SCALE_{YM}} = \frac{\left(\frac{SF}{q}\right)_{\psi_{ISO}} SPA}{71.4}$$

where

$\left(\frac{SF}{q}\right)_{\psi_{ISO}}$ - Defined above

SPA - Defined above.

$$K_{SCALE_{PM}} = \frac{\left(\frac{NF}{q}\right)_{\alpha_{ISO}} PPA}{71.4}$$

where

$\left(\frac{NF}{q}\right)_{\alpha_{ISO}}$ - Defined above

PPA - Defined above.

These factors are used in the equations throughout Section IV where required.

The airloads predicted for MER/store configurations assume that the MER is fully loaded.

4.1 SIDE FORCE

4.1.1 Basic Airload

The basic captive store airload is that airload generated by a zero-yaw pitch excursion of the parent aircraft.

4.1.1.1 Slope Prediction

The prediction of the variation of captive store side force with angle of attack is divided into two sections, fuselage centerline-mounted configurations and wing pylon-mounted configurations. The technique presented in this section predicts the slope, $\left(\frac{SF}{q}\right)_{\alpha}$, at M = 0.5.

FUSELAGE CENTERLINE-MOUNTED STORES

MER STATIONS 1 and 2 (MS1,2):

$$\left(\frac{SF}{q}\right)_{\alpha_{PRED_{\ell}}}_{MS1,2} = 0, \text{ due to symmetry}$$

MER STATIONS 3,4,5,6 (MS3-6):

$$\left(\frac{SF}{q}\right)_{\alpha_{PRED_{\ell}}}_{MS3-6} = C_{y_{\alpha_{\ell}}}_{MS3-6} S_{REF} = f(d)$$

where

$C_{y_{\alpha_{\ell}}}$ - Variation of $C_{y_{\alpha}}$ presented as a function of store diameter, Figure 330.

S_{REF} - Store reference area, $\frac{\pi d^2}{4}$, ft^2.

WING MOUNTED STORES

MER STATION 1:

$$\left(\frac{SF}{q}\right)_{\alpha_{PRED}}_{MS1} = K_{C_{SF}}_{MS1} \left(\frac{SF}{q}\right)_{\psi_{ISO}} K_{\eta}_{MS1} K_{\frac{LE_A}{C}} K_{\frac{Z}{C}} K_{\Lambda_1}$$

where:

$K_{C_{SF}}_{MS1} \left(\frac{SF}{q}\right)_{\psi_{ISO}}$ - Initial side force slope prediction, $\frac{ft^2}{deg.}$, see Subsection 7.3.2.

K_{η}_{MS1} - Store spanwise position correction factor, Figure 331.

$K_{\frac{LE_A}{C}}$ - Correction factor based on the distance from the wing leading edge to the nose of the store on MER STA 1 measured in a wing plan view divided by the local wing chord, positive, Figure 332.

$K_{\frac{Z}{C}}$ - Correction factor based on pylon height divided by the local wing chord, Figure 333.

K_{Λ_1} - Wing sweep correction factor, $\frac{\sin \Lambda}{\sin 45°}$, where Λ is the quarter-chord sweep angle of aircraft wing.

MER STATION 2:

$$\left(\frac{SF}{q}\right)_{\alpha_{PRED}}_{MS2} = K_{C_{SF}}_{MS2} \left(\frac{SF}{q}\right)_{\psi_{ISO}} K_{\eta}_{MS2} K_{\Lambda_1}$$

where

$K_{C_{SF}}\left(\frac{SF}{q}\right)_{\psi_{ISO}}$ (MS2) - Initial side force slope prediction, $\frac{ft^2}{deg.}$, see Subsection 2.3.2

K_{η} (MS2) - Store spanwise position correction factor, Figure 331.

K_{Λ_1} - Defined above.

MER STATIONS 3, 4, 5, 6 (MS3,5; MS4,6):

$$\left(\frac{SF}{q}\right)_{\alpha_{PRED}}_{MS3,5\ MS4,6} = [K_{C_{SF}}\left(\frac{SF}{q}\right)_{\psi_{ISO}}_{MS1\ MS2} + \Delta C_{y_\alpha}{}_{MS3,5\ MS4,6} K_{SCALE_{SF}}]K_{\Lambda_1}$$

where

$K_{C_{SF}}\left(\frac{SF}{q}\right)_{\psi_{ISO}}$ - Initial side force slope prediction, $\frac{ft^2}{deg.}$, see Subsection 2.3.2. MS1 initial prediction is used for MS3,5 while MS2 is combined with MS4,6.

ΔC_{y_α} - Incremental side force coefficient slope presented as a function of local chord, $\frac{1}{deg}$.
MER STA 3 - Figure 334
MER STA 4 - Figure 334
MER STA 5 - Figure 335
MER STA 6 - Figure 335

Example: Compute the side force variation with angle of attack, $\left(\frac{SF}{q}\right)_{\alpha}$, for an M117 store on MER STATION 6 of a fully loaded MER on the A-7 center pylon at M = 0.5.

Required for Computation:

$K_{C_{SF}}\left(\frac{SF}{q}\right)_{\psi_{ISO}} = .111 \frac{ft^2}{deg}$, see example Subsection 2.3.2
MS2

$C_{LOCAL} = 127.6$ in.

SPA = 1200 in^2. Subsection 2.2.2

$\left(\frac{SF}{q}\right)_{\psi_{ISO}} = .114 \frac{ft^2}{deg}$, Subsection 2.3.2

$K_{\Lambda_1} = \frac{\sin 35^\circ}{\sin 45^\circ} = .811$

$K_{SCALE_{SF}} = \frac{\left(\frac{SF}{q}\right)_{\alpha_{ISO}} SPA}{96}$

$\Delta C_{y_{\alpha_{MS6}}} = -.01$ - Figure 335

then

$$\left(\frac{SF}{q}\right)_{\alpha_{PRED}} = \left[.111 + (-.01)\frac{(.114)(1200)}{96}\right].811$$
MS6

$$= .078 \frac{ft^2}{deg}$$

4.1.1.2 Slope Mach Number Correction

To compute the variation in side force slope, $\left(\frac{SF}{q}\right)_\alpha$, between M = 0.5 and M = 1.6, use the following expression.

$$\left(\frac{SF}{q}\right)_{\substack{\alpha \\ M=x}} = \left(\frac{SF}{q}\right)_{\substack{\alpha \\ PRED}} + \Delta\left(\frac{SF}{q}\right)_{\substack{\alpha \\ M=x}}$$

where:

$\left(\frac{SF}{q}\right)_{\substack{\alpha \\ PRED}}$ - Side force slope predicted at M = 0.5.

$\Delta\left(\frac{SF}{q}\right)_{\substack{\alpha \\ M=x}}$ - Increment in side force slope at M = x.

FUSELAGE CENTERLINE MOUNTED STORES

MER STATIONS 1 AND 2 (MS1,2):

$$\left(\frac{SF}{q}\right)_{\substack{\alpha \\ M=x \\ MS1,2}} = 0, \text{ due to symmetry}$$

MER STATIONS 3, 4, 5, 6 (MS3-6):

$$\left(\frac{SF}{q}\right)_{\substack{\alpha \\ MS3-6 \\ M=x}} = \left(\frac{SF}{q}\right)_{\substack{\alpha \\ PRED_{\mathbb{C}} \\ MS3-6}} + \Delta C_{y_{\alpha_{\mathbb{C}}}} \; K_{SCALE_{SF}}$$

where:

$\left(\frac{SF}{q}\right)_{\substack{\alpha \\ PRED_{\mathbb{C}}}}$ - Slope predicted for fuselage centerline stores at M = 0.5, Subsection 4.1.1.1.

$\Delta C_{y_{\alpha_{\mathbb{C}}}}$ - Incremental side force coefficient slope presented as a function of Mach number, Figure 337.

$K_{SCALE_{SF}}$ - Defined in Section IV, ft^2.

WING MOUNTED STORES

A generalized curve depicting the side force slope variation with Mach number is given by Figure 336.

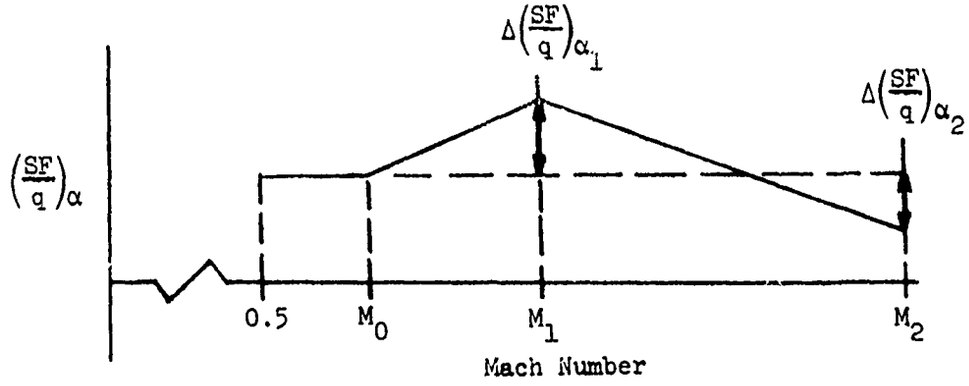

Figure 336. Side Force Slope - Generalized Mach Number Variation

The side force slope variation with Mach number has been approximated by a series of linear segments with breakpoints occurring at Mach numbers defined by M_0, M_1, and M_2 for each of the six MER stations. The variations of the Mach break points are presented in Figure 338 (MS1, 2), Figure 339 (MS4, 6), and Figure 340 (MS3,5) as a function of $C_{LOCAL}K_{\Lambda_1}$. M_0 is the Mach number where the slope initially deviates from the slope predicted at M = 0.5. Equations have been developed to predict the delta (incremental) slope change from that predicted at M = 0.5 for each of the six MER stations. These equations are presented below

Break 1 (M_1):

MER STATION 1 (MS1):

$$\Delta\left(\frac{SF}{q}\right)_{\alpha_1}_{MS1} = K_{SLOPE_1}_{MS1} (M_1 - M_0) K_{SCALE_{SF}} K_{\Lambda_1}$$

where:

K_{SLOPE_1} - Variation of ΔC_{y_α} with Mach number presented as a function of semi-span position, η, Figure 341.

$M_1 - M_0$ - Delta Mach number

$K_{SCALE_{SF}}$ - Defined in Section IV, $ft.^2$

K_{Λ_1} - Wing sweep correction factor, $\frac{\sin \Lambda}{\sin 45^\circ}$, is the quarter chord sweep angle of the aircraft wing.

MER STATIONS 2, 4 and 6 (MS2,4,6):

$$\Delta\left(\frac{SF}{q}\right)_{\alpha_1}_{MS2,4,6} = (K_{SLOPE_1}_{MS2,4,6} + \Delta K_{SLOPE_1}_{INTF\ MS2,4,6}) (M_1 - M_0) \cdot (K_{SCALE_{SF}} K_{\Lambda_1})$$

where: K_{SLOPE_1} - Variation of C_{y_α} with Mach number presented as a function of $C_{LOCAL} K_{\Lambda_1}$, $\frac{1}{deg}$.

MER STA 2 - Figure 341

MER STA 4 - Figure 343

MER STA 6 - Figure 343

$\Delta K_{SLOPE_1}_{INTF}$ - Increment in K_{SLOPE_1} due to the interference effect of the fuselage for high wing aircraft, $\frac{1}{deg}$, Figure 342.

$M_1 - M_o$ - Defined under Break 1, MS1.

$K_{SCALE_{SF}}$ - Defined in Section IV, ft^2.

K_{Λ_1} - Defined under Break 1, MS1

MER STATIONS 3 and 5 (MS3,5):

$$\Delta\left(\frac{SF}{q}\right)_{\substack{\alpha_1 \\ MS3,5}} = \Delta C_{y_{\substack{\alpha_1 \\ MS3,5}}} K_{SCALE_{SF}} K_{\Lambda_1}$$

where:

$\Delta C_{y_{\alpha_1}}$ - Incremental C_{y_α} presented as a function of $C_{LOCAL} K_{\Lambda_1}$, $\frac{1}{deg}$.

MER STA 3 - Figure 344

MER STA 5 - Figure 344

Break 2 (M_2):

MER STATIONS 1,2,4,6 (MS1,2,4,6):

$$\Delta\left(\frac{SF}{q}\right)_{\substack{\alpha_2 \\ MS1,2,4,6}} = \Delta\left(\frac{SF}{q}\right)_{\substack{\alpha_1 \\ MS1,2,4,6}} + K_{SLOPE_{\substack{2 \\ MS1,2,4,6}}} (M_2 - M_1) K_{SCALE_{SF}} K_{\Lambda_1}$$

where:

$\Delta\left(\frac{SF}{q}\right)_{\alpha_1}$ - Increment computed under Break 1 for the appropriate MER station.

K_{SLOPE_2} - Variation of ΔC_{y_α} with Mach number presented as a function of $C_{LOCAL} K_{\Lambda_1}$, $\frac{1}{deg}$.

MER STA 1 - Figure 345

MER STA 2 - Figure 345

MER STA 4 - Figure 346

MER STA 6 - Figure 346

$M_2 - M_1$ - Delta Mach number.

$K_{SCALE_{SF}}$ - Defined in Section IV, ft^2.

K_{Λ_1} - Defined under Break 1, MS1.

MER STATIONS 3 and 5 (MS3,5):

$$\Delta\left(\frac{SF}{q}\right)_{\alpha_2}_{MS3,5} = \Delta\left(\frac{SF}{q}\right)_{\alpha_1}_{MS3,5} + \Delta C_{y_{\alpha_2}}{}_{MS3,5} K_{SCALE_{SF}} K_{\Lambda_1}$$

where:

$\Delta\left(\frac{SF}{q}\right)_{\alpha_1}$ - Incremental side force slope computed under Break 1 for the appropriate MER station.

$\Delta C_{y_{\alpha_2}}$ - Incremental C_{y_α} presented as a function of $C_{LOCAL} K_{\Lambda_1}$, $\frac{1}{deg}$.

MER STA 3 - Figure 347

MER STA 5 - Figure 347

$K_{SCALE_{SF}}$ - Defined in Section IV, ft^2.

K_{Λ_1} - Defined under Break 1, MS1.

To compute $\left(\frac{SF}{q}\right)_\alpha$ at M = x, first determine from Figures 338, 339, or 340 (for the MER station of interest) between which Mach number break points M = x occurs. Let M_{LOW} be the lower Mach break and M_{HI} be the higher Mach break. Compute $\left(\frac{SF}{q}\right)_\alpha$ at M = x from the expression below.

MER STATIONS 1 - 6 (MS1-6):

$$\left(\frac{SF}{q}\right)_{\substack{\alpha \\ M = x \\ MS1-6}} = \left(\frac{SF}{q}\right)_{\substack{\alpha \\ PRED \\ MS1-6}} + \Delta\left(\frac{SF}{q}\right)_{\substack{\alpha \\ M_{LOW} \\ MS1-6}} + \left(\frac{x - M_{LOW}}{M_{HI} - M_{LOW}}\right)\left[\Delta\left(\frac{SF}{q}\right)_{\substack{\alpha \\ M_{HI} \\ MS1-6}} - \Delta\left(\frac{SF}{q}\right)_{\substack{\alpha \\ M_{LOW} \\ MS1-6}}\right]$$

If $x \leq M_0$, $\left(\frac{SF}{q}\right)_{\substack{\alpha \\ M = x}}$ will be the value obtained in Subsection 4.1.1.1 (the initial term in the above equation).

Example: Compute the side force variation with angle of attack, $\left(\frac{SF}{q}\right)_\alpha$, for an M117 store on MER STATION 6 of a fully loaded MER on the A-7 center pylon at M = 0.6.

Required for Computation:

$C_{LOCAL} = 127.6$ in.

$K_{\Lambda_1} = \frac{\sin 35^\circ}{\sin 45^\circ} = .811$

$K_{SCALE_{SF}} = \frac{\left(\frac{SF}{q}\right)_{\psi_{ISO}}^{SPA}}{96}$

$\left(\frac{SF}{q}\right)_{\psi_{ISO}} = .114 \frac{ft^2}{deg}$

SPA = 1200 in^2.

$\eta' = .352$

$\left(\frac{SF}{q}\right)_{\substack{\alpha \\ PRED}} = .078 \frac{ft^2}{deg}$ from example Subsection 4.1.1.1.

From Figure 339, M = 0.6 falls between M_0 and M_1. Let $M_{LOW} = 0.5$ and $M_{HI} = M_1 = 0.7$.

at $M_{LOW}(M_0)$: $\Delta\left(\frac{SF}{q}\right)_{\alpha}$ $= 0$ (since M_0 is the Mach number where the slope first deviates from that predicted at M = 0.5).

M_{LOW}
MS6

Break 1 (M_1):

$$K_{SLOPE_1} = -.185 - \text{Figure } 343$$
MS6

$$\Delta K_{SLOPE_1} = 0 - \text{Figure } 342$$
IMTF
MS6

then,

$$\Delta\left(\frac{SF}{q}\right)_{\alpha_1} = (-.185 + 0)(0.7 - 0.5)\frac{(.114)(1200)}{96}(.811)$$
MS6
$$= -.043 \frac{ft^2}{deg}$$

finally,

$$\left(\frac{SF}{q}\right)_{\alpha} = .078 + 0 + \left(\frac{0.6 - 0.5}{0.7 - 0.5}\right)[-.043 - 0]$$
M = 0.6
$$= .057 \frac{ft^2}{deg}$$

4.1.1.3 Intercept Prediction

The prediction of captive store side force intercept, $\left(\frac{SF}{q}\right)_{\alpha=0}$, is divided into two sections, fuselage centerline-mounted stores and wing-mounted stores. The technique presented in this section predicts the side force intercept, $\left(\frac{SF}{q}\right)_{\alpha=0}$, at M = 0.5.

FUSELAGE CENTERLINE-MOUNTED STORES

MER STATIONS 1 and 2 (MS1,2):

$$\left(\frac{SF}{q}\right)_{\substack{\alpha=0 \\ PRED_{\mathfrak{L}} \\ MS1,2}} = 0, \text{ due to symmetry}$$

MER STATIONS 3,4,5, and 6 (MS3-6):

$$\left(\frac{SF}{q}\right)_{\substack{\alpha \\ PRED_{\mathfrak{L}} \\ MS3-6}} = C_{y_{\substack{\alpha=0_{\mathfrak{L}} \\ MS3-6}}} S_{REF} = f(d)$$

where:

$C_{y_{\alpha=0_{\mathfrak{L}}}}$ - Variation of $C_{y_{\alpha=0}}$ presented as a function of store diameter, Figure 348.

S_{REF} - Store reference, $\frac{\pi d^2}{4}$, ft^2.

WING-MOUNTED STORES

MER STATIONS 1 and 2 (MS1,2):

$$\left(\frac{SF}{q}\right)_{\substack{\alpha=0 \\ PRED \\ MS1,2}} = C_{y_{\substack{\alpha=0 \\ MS1,2}}} K_{SCALE_{SF}} K_{\Lambda_1}$$

where:

$C_{y_{\alpha=0}}$ - Variation of $C_{y_{\alpha=0}}$ presented as a function of $C_{LOCAL} K_{\Lambda_1}$

MER STA 1 - Figure 349

MER STA 2 - Figure 349

$K_{SCALE_{SF}}$ - Defined in Section IV, ft^2.

K_{Λ_1} - Wing sweep correction factor, $\frac{\sin \Lambda}{\sin 45^\circ}$, where Λ is the aircraft quarter-chord wing sweep angle.

MER STATIONS 4 and 6 (MS4,6):

$$\left(\frac{SF}{q}\right)_{\substack{\alpha=0 \\ PRED \\ MS4,6}} = \left(\frac{SF}{q}\right)_{\substack{\alpha=0 \\ PRED_{\mathfrak{L}} \\ MS4,6}} + \Delta C_{y_{\substack{\alpha=0 \\ MS4,6}}} K_{SCALE_{SF}} K_{\Lambda_1}$$

where

$\left(\frac{SF}{q}\right)_{\substack{\alpha=0 \\ PRED_{\mathfrak{L}}}}$ - Value predicted for fuselage centerline-mounted stores, defined above, ft^2.

$\Delta C_{y_{\alpha=0}}$ - Variation of $C_{y_{\alpha=0}}$ based on $\frac{\ell_{LE_F}}{C_{LOCAL}}$ defined as the distance from the wing leading edge to the nose of the store on MER STA 2 measured in a wing plan view divided by the local wing chord, positive, Figure 350.

$K_{SCALE_{SF}}$ - Defined in Section IV, ft^2.

K_{Λ_1} - Defined above.

MER STATIONS 3 and 5 (MS3,5):

$$\left(\frac{SF}{q}\right)_{\substack{\alpha=0 \\ PRFD \\ MS3,5}} = \left(\frac{SF}{q}\right)_{\substack{\alpha=0 \\ PRED_{\ell} \\ MS3,5}} + \Delta C_{y_{\alpha=0}} K_{SCALE_{SF}} K_{\Lambda_1}$$

where:

$\left(\frac{SF}{q}\right)_{\substack{\alpha=0 \\ PRED_{\ell}}}$ - Value predicted for fuselage centerline-mounted stores, defined above, ft^2.

$\Delta C_{y_{\alpha=0}}$ - Incremental $C_{y_{\alpha=0}}$ for wing-mounted stores presented as a function of $C_{LOCAL} K_{\Lambda_1}$, Figure [illegible].

$K_{SCALE_{SF}}$ - Defined in Section IV, ft^2.

K_{Λ_1} - Defined above

Example: Compute the side force intercept, $\left(\frac{SF}{q}\right)_{\alpha=0}$, for an M117 store on MER STATION 6 of a fully loaded MER on the A-7 center pylon at M = 0.5.

Required for Computation:

$C_{LOCAL} = 127.6$ in.

$\ell_{LE_F} = 59.3$ in.

$d = 16.1$ in.

$S_{REF} = 1.42$ ft^2.

$\left(\frac{SF}{q}\right)_{\psi_{ISO}} = .114 \frac{ft^2}{deg}$

SPA = 1200 in^2.

$K_{\Lambda_1} = \frac{\sin 35^\circ}{\sin 45^\circ} = .811$

$$C_{y_{\alpha=0}}\Big|_{\substack{\mathfrak{L} \\ MS6}} = .174 \text{ - Figure 348}$$

then

$$\left(\frac{SF}{q}\right)_{\substack{\alpha=0 \\ PRED_{\mathfrak{L}} \\ MS6}} = (.174)(1.42) = .247 \text{ ft}^2.$$

$$\Delta C_{y_{\alpha=0}}\Big|_{MS6} = -.23 \text{ - Figure 350}$$

Substituting,

$$\left(\frac{SF}{q}\right)_{\substack{\alpha=0 \\ PRED \\ MS6}} = .247 + (-.23)\frac{(.114)(1200)}{96}(.811)$$

$$= -.019 \text{ ft}^2.$$

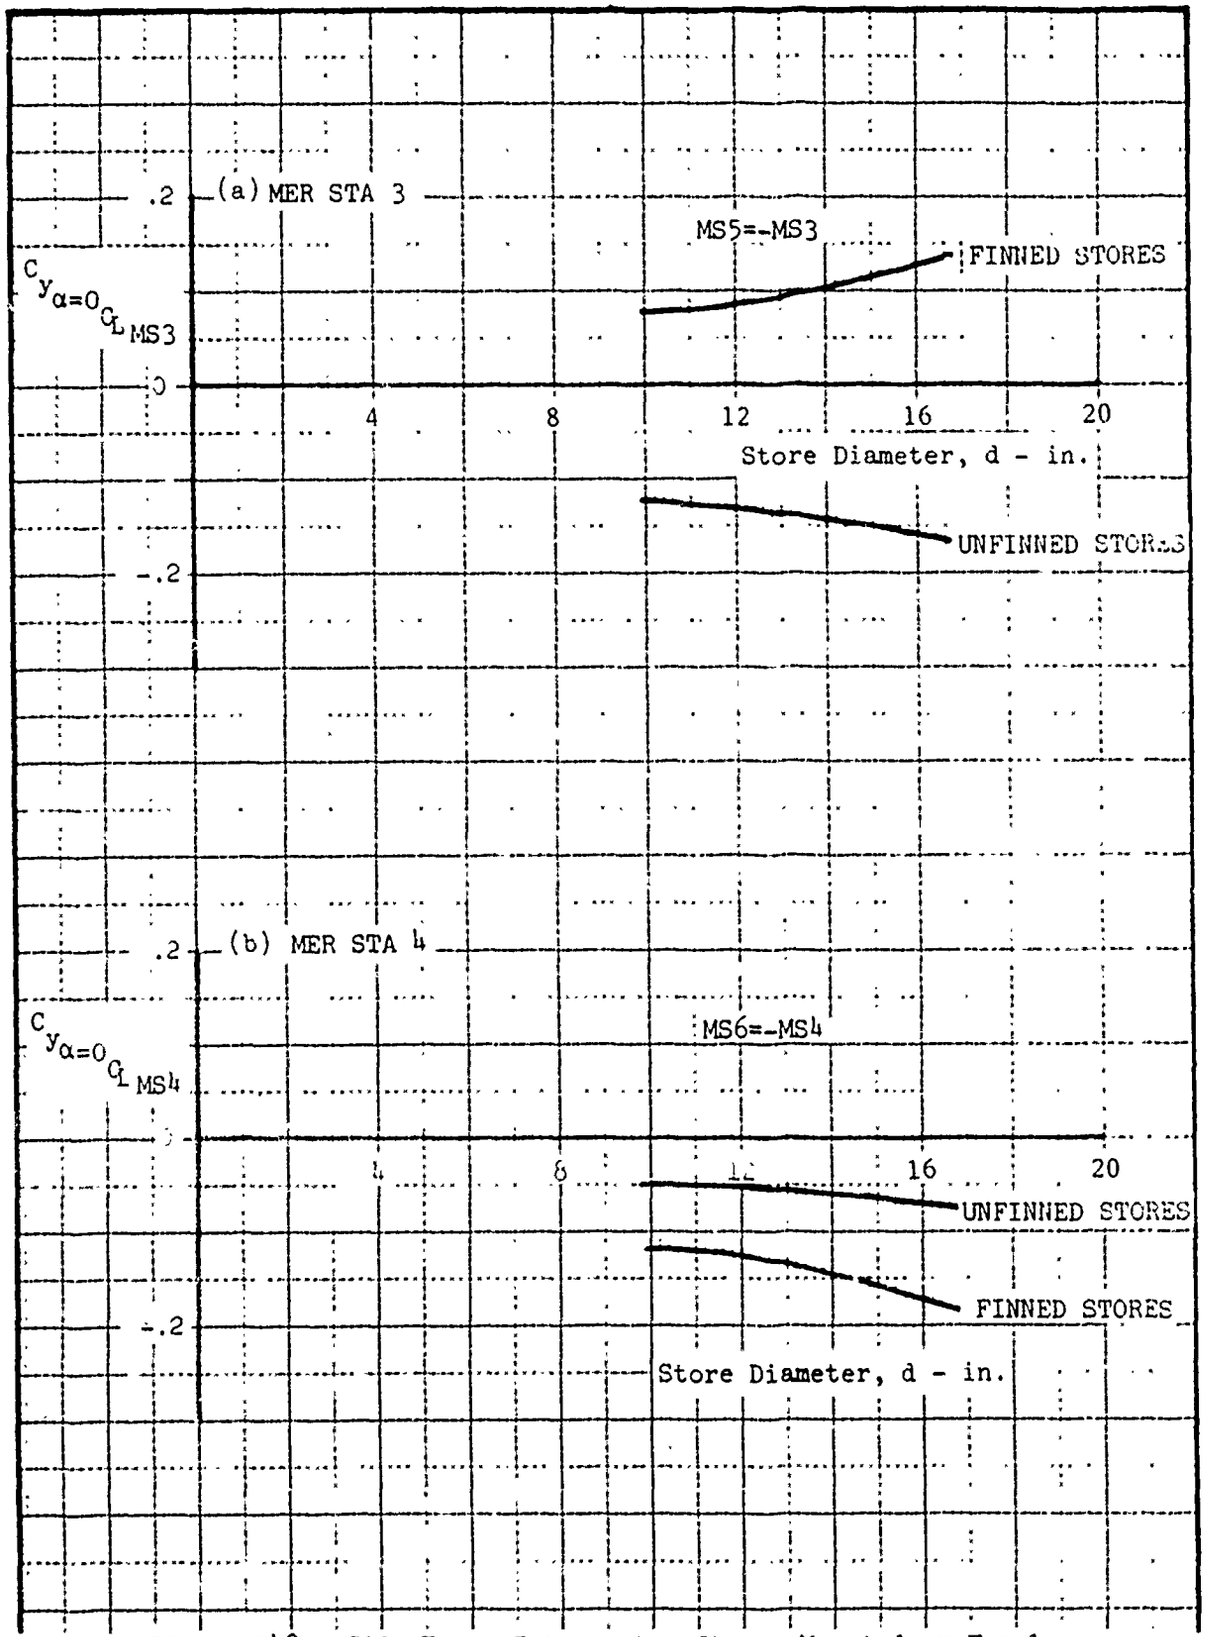

Figure 348. Side Force Intercept - Stores Mounted on Fuselage Centerline, MER Stations 3-6

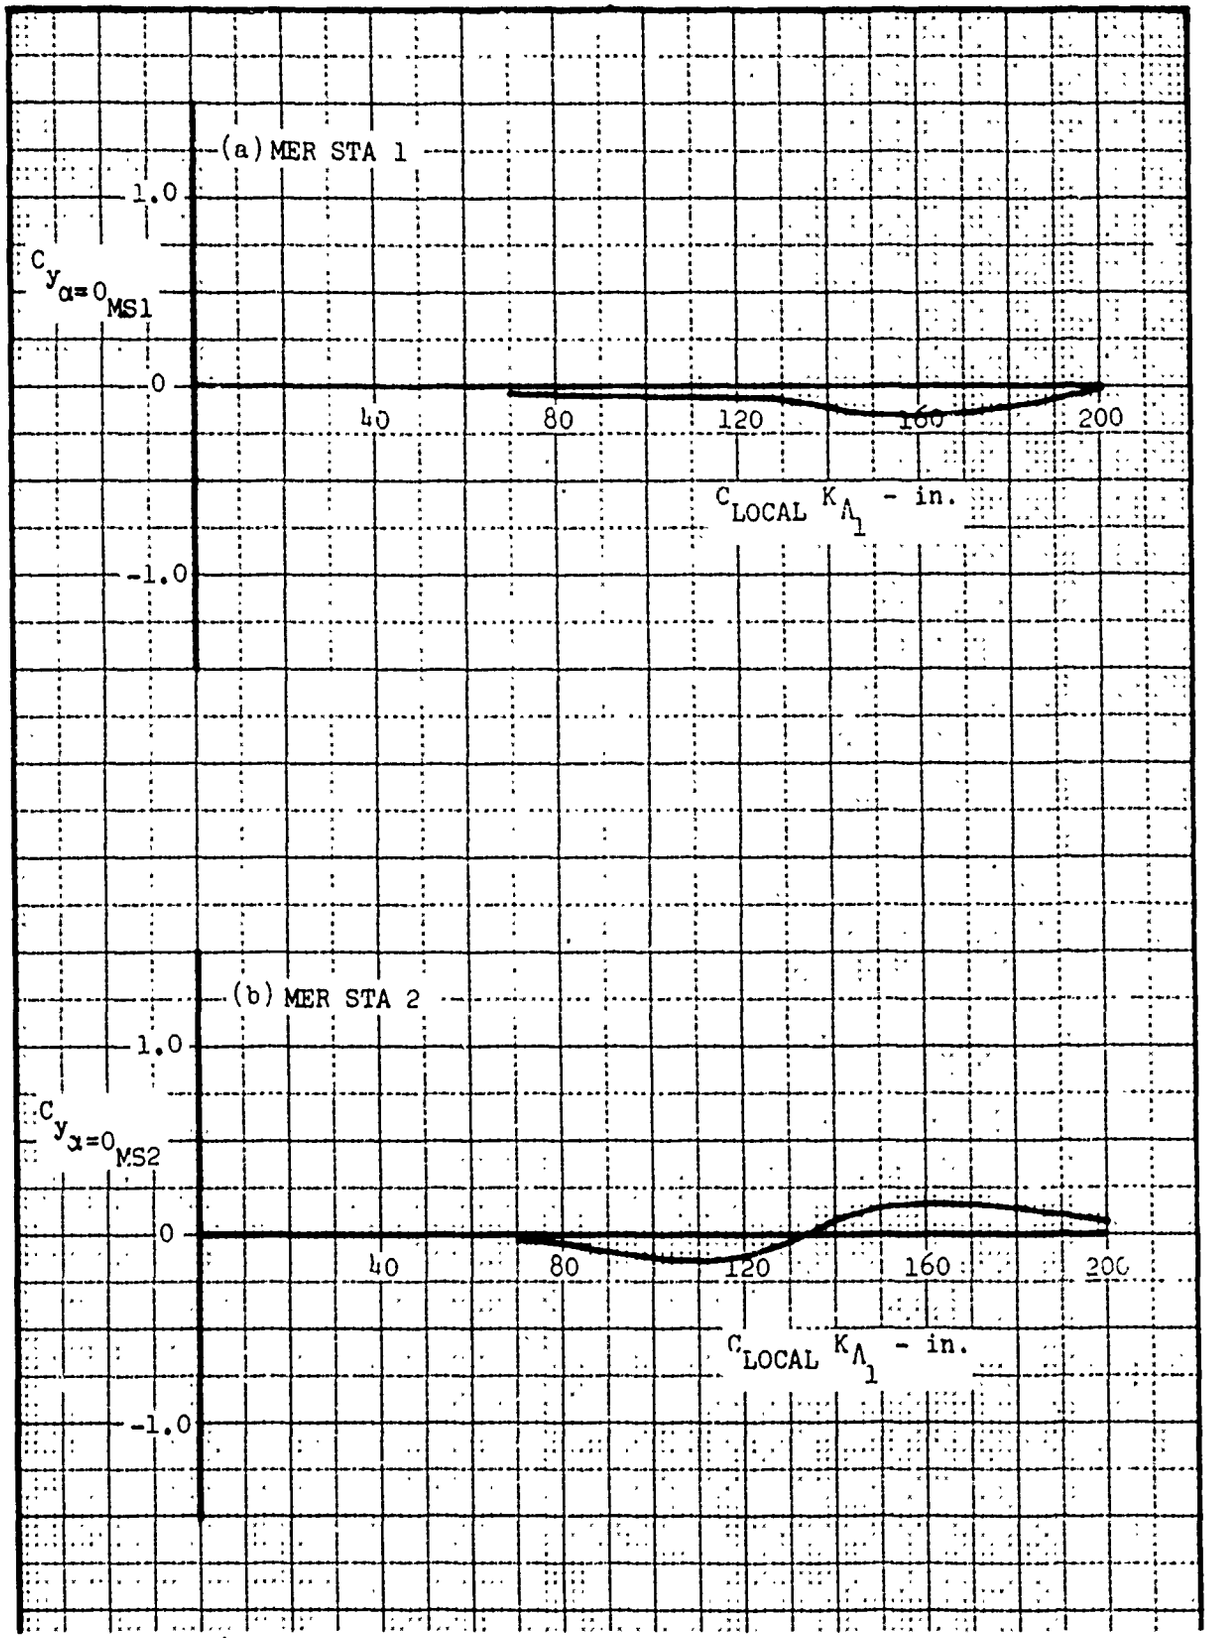

Figure 349. Side Force Intercept - Incremental Coefficient for Wing-Mounted Stores, MER Stations 1 and 2

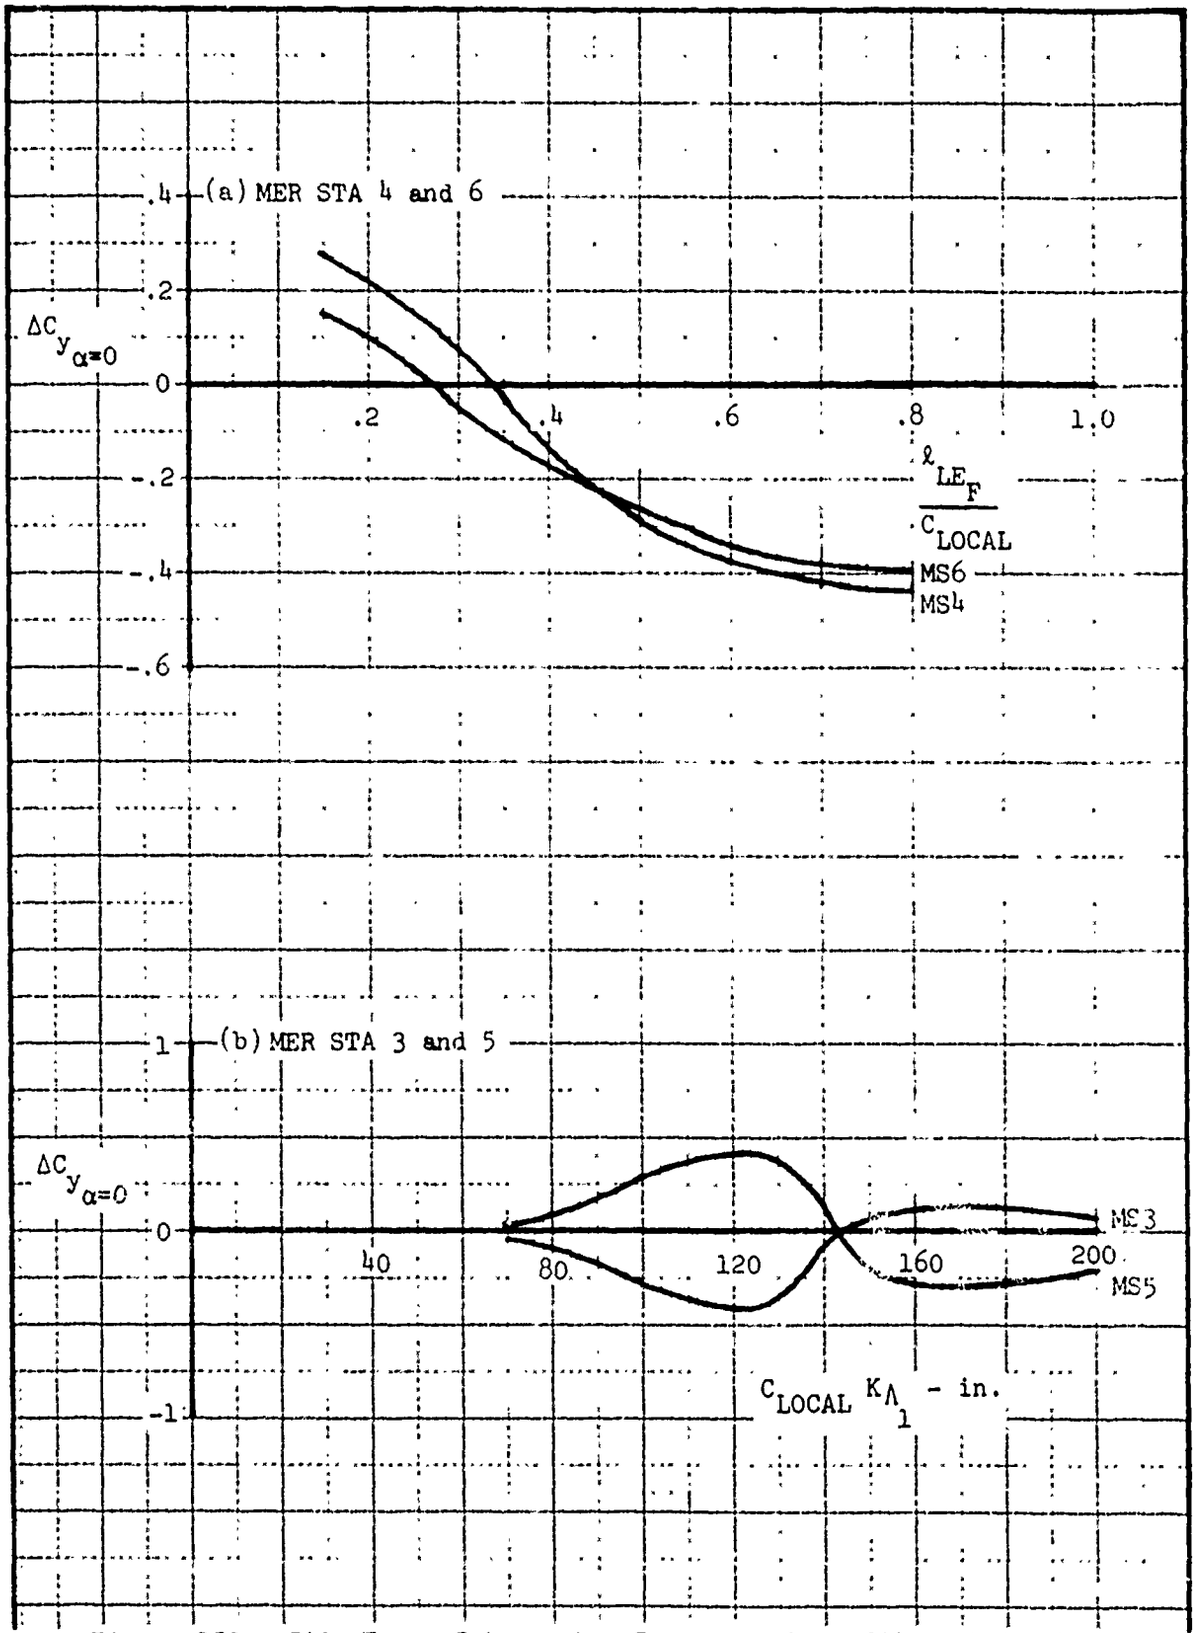

Figure 350. Side Force Intercept - Incremental Coefficient for Wing-Mounted Stores, MER Stations 3-6

4.1.1.4 Intercept Mach Number Correction

To compute the variation in side force intercept, $\left(\frac{SF}{q}\right)_{\alpha=0}$, between M = 0.5 and M = 1.6 use the following expression.

$$\left(\frac{SF}{q}\right)_{\substack{\alpha=0 \\ M=x}} = \left(\frac{SF}{q}\right)_{\substack{\alpha=0 \\ PRED}} + \Delta\left(\frac{SF}{q}\right)_{\substack{\alpha=0 \\ M=x}}$$

where:

$\left(\frac{SF}{q}\right)_{\substack{\alpha=0 \\ PRED}}$ - Side force intercept predicted at M = 0.5.

$\Delta\left(\frac{SF}{q}\right)_{\substack{\alpha=0 \\ M=x}}$ - Increment in side force intercept at M = x.

FUSELAGE CENTERLINE-MOUNTED STORES

WER STATIONS 1 and 2 (MS1,2):

$$\left(\frac{SF}{q}\right)_{\substack{\alpha=0_{\ell} \\ M=x \\ MS1,2}} = 0, \text{ due to symmetry}$$

WER STATIONS 3,4, 5 and 6 (MS3-6):

$$\left(\frac{SF}{q}\right)_{\substack{\alpha=0_{\ell} \\ M=x \\ MS3-6}} = \left(\frac{SF}{q}\right)_{\substack{\alpha=0_{\ell} \\ PRED \\ MS3-6}} + \Delta C_{y_{\substack{\alpha=0_{\ell} \\ MS3-6}}} \text{SCALE}_{SF}$$

where:

$\left(\frac{SF}{q}\right)_{\substack{\alpha=0_{\ell} \\ PRED \\ MS3-6}}$ - Intercept predicted for fuselage centerline stores at M = 0.5, Subsection 4.1.1.3.

$\Delta C_{y_{\alpha=0_{\mathcal{E}}}}$ - Incremental side force intercept presented as a function of Mach number, Figure 352.

$K_{SCALE_{SF}}$ - Defined in Section IV, ft^2.

WING-MOUNTED STORES

A generalized curve depicting the side force intercept variation with Mach number is given by Figure 351.

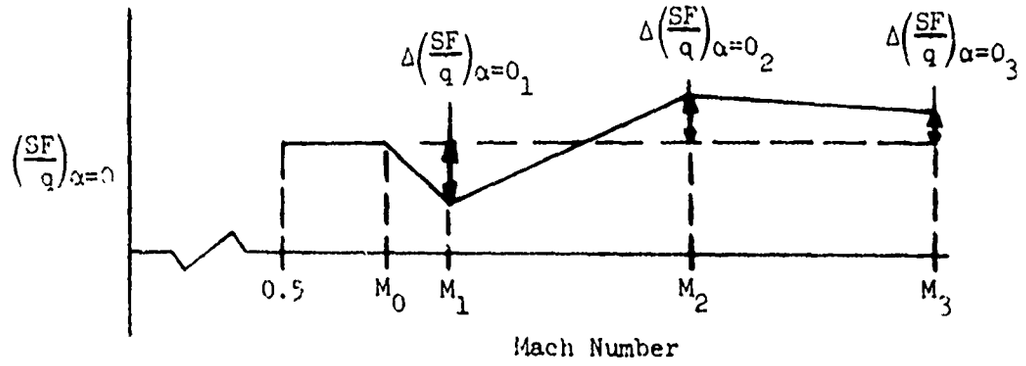

Figure 351. Side Force Intercept - Generalized Mach Number Variation

The side force intercept variation with Mach number has been approximated by a series of linear segments with break points occurring at Mach numbers defined by M_0, M_1, M_2, and M_3 for each of the six MER stations. The variations of the Mach break points are presented in Figure 353 (MS1, 2), Figure 354 (MS4,6), and Figure 355 (MS3,5) as a function of $C_{LOCAL}K_{\Lambda_1}$. M_0 is the Mach number where the intercept initially deviates from the intercept predicted at M = 0.5. Equations have been developed to predict the delta (incremental) slope change from that predicted at M = 0.5 for each of the six MER stations. These equations are presented below.

Break 1 (M_1):

MER STATION 1 (MS1):

$$\Delta\left(\frac{SF}{q}\right)_{\alpha=0_1}_{MS1} = \left(\Delta C_{y_{\alpha=0_1}}_{MS1} + \Delta C_{y_{\alpha=0_1}}_{\frac{\ell_{LE_F}}{C}_{MS1}} + \Delta C_{y_{\alpha=0_1}}_{INTF\ MS1}\right) K_{SCALE_{SF}} K_{\Lambda_1}$$

where

$\Delta C_{y_{\alpha=0_1}}$ - Incremental $C_{y_{\alpha=0}}$ at $M = M_1$ presented as a function of $\ell_{LOCAL} K_{\Lambda_1}$, Figure 356.

$\Delta C_{y_{\alpha=0_1}}_{\frac{\ell_{LE_F}}{C}}$ - Increment in $C_{y_{\alpha=0}}$ based on the distance from the wing leading edge to the nose of the store on MER STA 2 measured in a wing plan view divided by the local wing chord, positive, Figure 357.

$\Delta C_{y_{\alpha=0_1}}_{INTF}$ - Incremental $C_{y_{\alpha=0}}$ due to the interference effect of the fuselage for high wing aircraft, Figure 358.

$K_{SCALE_{SF}}$ - Defined in Section IV, ft^2.

K_{Λ_1} - Wing sweep correction factor, $\frac{\sin \Lambda}{\sin 45^\circ}$, where Λ is the quarter chord sweep angle of the aircraft wing.

MER STATIONS 2,3,4, and 5 (MS2-5):

$$\Delta\left(\frac{SF}{q}\right)_{\alpha=0_1}_{MS2-5} = \Delta C_{y_{\alpha=0_1}}_{MS2-5} K_{SCALE_{SF}} K_{\Lambda_1}$$

where:

$\Delta C_{y_{\alpha=0_1}}$ - Incremental $C_{y_{\alpha=0}}$ at $M = M_1$ presented as a function of $C_{LOCAL} K_{\Lambda_1}$.

MER STA 2 - Figure 356
MER STA 3 - Figure 359
MER STA 4 - Figure 360
MER STA 5 - Figure 359

$K_{SCALE_{SF}}$ - Defined in Section IV, ft^2.

K_{Λ_1} - Defined above

MER STATION 6 (MS6):

$$\Delta\left(\frac{SF}{q}\right)_{\alpha=0_1}_{MS6} = (\Delta C_{y_{\alpha=0_1}}_{MS6} + \Delta C_{y_{\alpha=0_1}}_{INTF\ MS6}) K_{SCALE_{SF}} K_{\Lambda_1}$$

where:

$\Delta C_{y_{\alpha=0_1}}$ - Incremental $C_{y_{\alpha=0}}$ at $M = M_1$ presented as a function of $C_{LOCAL} K_{\Lambda_1}$, Figure 360.

$\Delta C_{y_{\alpha=0_1}}_{INTF}$ - Incremental $C_{y_{\alpha=0}}$ due to the interference effect of the fuselage for high wing aircraft, Figure 361.

$K_{SCALE_{SF}}$ - Defined in Section IV, ft^2.

K_{Λ_1} - Defined above.

Break 2 (M_2):

MER STATIONS 1,2,3, and 5 (MS1,2.3,5):

$$\Delta\left(\frac{SF}{q}\right)_{\substack{\alpha=0_2 \\ MS1,2,3,5}} = \left(\Delta C_{y_{\substack{\alpha=0_2 \\ MS1,2,3,5}}} + \Delta C_{y_{\substack{\alpha=0_2 \\ INTF \\ MS1,2,3,5}}} + \Delta C_{y_{\substack{\alpha=0_2 \\ \frac{\ell_{LE_F}}{C} \\ MS1,2,3,5}}}\right) K_{SCALE_{SF}} K_{\Lambda_1}$$

where:

$\Delta C_{y_{\alpha=0_2}}$ - Incremental $C_{y_{\alpha=0}}$ at $M = M_2$ presented as a function of $C_{L_{SCALE}} K_{\Lambda_1}$.

MER STA 1 - Figure 362
MER STA 2 - Figure 362
MER STA 3 - Figure 365
MER STA 5 - Figure 365

$\Delta C_{y_{\substack{\alpha=0_2 \\ INTF}}}$ - Incremental $C_{y_{\alpha=0}}$ due to the interference effect of the fuselage for high wing aircraft.

MER STA 1 - Figure 364
MER STA 2 - Figure 364
MER STA 3 - Figure 367
MER STA 5 - Figure 367

$\Delta C_{y_{\substack{\alpha=0_2 \\ \frac{\ell_{LE_F}}{C}}}}$ - Incremental $C_{y_{\alpha=0}}$ based on the distance from the wing leading edge to the nose of the store on MER STA 2 measured in a wing plan

view divided by the wing local chord, positive.

MER STA 1 - Figure 363

MER STA 2 - Figure 363

MER STA 3 - Figure 366

MER STA 5 - Figure 366

$K_{SCALE_{CF}}$ - Defined in Section IV, ft^2.

K_{Λ_1} - Defined under Break 1, MS1.

MER STATIONS 4 and 6 (MS4,6):

$$\Delta\left(\frac{SF}{q}\right)_{\substack{\alpha=0_2 \\ MS4,6}} = \Delta C_{y_{\substack{\alpha=0_2 \\ MS4,6}}} K_{SCALE_{SF}} K_{\Lambda_1}$$

where:

$\Delta C_{y_{\alpha=0_2}}$ - Incremental $C_{y_{\alpha=0}}$ at $M = M_2$, presented as a function of $C_{LOCAL} K_{\Lambda_1}$

MER STA 4 - Figure 368

MER STA 6 - Figure 368

$K_{SCALE_{SF}}$ - Defined in Section IV, ft^2.

K_{Λ_1} - Defined under Break 1, MS1.

BREAK 3 (M_3):

MER STATION (MS1):

No break 3

MER STATION 2 (MS2):

$$\Delta\left(\frac{SF}{q}\right)_{\alpha=0_3}_{MS2} = \left(\Delta C_{y_{\alpha=0_3}}_{MS2} + \Delta C_{y_{\alpha=0_3}}_{INTF\ MS2} + \Delta C_{y_{\alpha=0_3}}\frac{\ell_{LE_F}}{C}_{MS2}\right) K_{SCALE_{SF}} K_{\Lambda_1}$$

where:

$\Delta C_{y_{\alpha=0_3}}$ - Incremental $C_{y_{\alpha=0}}$ at $M = M_3$ presented as a function of $C_{LOCAL} K_{\Lambda_1}$, Figure 369.

$\Delta C_{y_{\alpha=0_3}}_{INTF}$ - Incremental $C_{y_{\alpha=0}}$ due to the interference effect of the fuselage for high wing aircraft, Figure 371.

$\Delta C_{y_{\alpha=0_3}}\frac{\ell_{LE_F}}{C}$ - Increment in $C_{y_{\alpha=0}}$ based on the distance from the wing leading edge to the nose of the store on MER STA 2 measured in a wing plan view divided by the local wing chord, positive, Figure 370.

MER STATIONS 4 and 6 (MS4,6):

$$\Delta\left(\frac{SF}{q}\right)_{\alpha=0_3}_{MS4,6} = \Delta C_{y_{\alpha=0_3}}_{MS4,6} K_{SCALE_{SF}} K_{\Lambda_1}$$

where:

$\Delta C_{y_{\alpha=0_3}}$ - Incremental $C_{y_{\alpha=0}}$ at $M = M_3$ presented as a function of $C_{LOCAL} K_{\Lambda_1}$.

MER STA 4 - Figure 372

MER STA 6 - Figure 372

MER STATIONS 3 and 5 (MS3,5):

$$\Delta\left(\frac{SF}{q}\right)_{\alpha=0_3}_{MS3,5} = \left(\Delta C_{y_{\alpha=0_3}}_{MS3,5} + \Delta C_{y_{\alpha=0_3}}_{INTF\ MS3,5}\right) K_{SCALE_{SF}} K_{\Lambda_1}$$

where:

$\Delta C_{y_{\alpha=0_3}}$ - Incremental $C_{y_{\alpha=0}}$ at $M = M_3$ presented as a function of $C_{LOCAL} K_{\Lambda_1}$.

MER STA 3 - Figure 373

MER STA 5 - Figure 373

$\Delta C_{y_{\alpha=0_3}}$ - Incremental $C_{y_{\alpha=0}}$ due to the interference effect of the fuselage for high wing aircraft.

MER STA 3 - Figure 374

MER STA 5 - Figure 374

To compute $\left(\frac{SF}{q}\right)_{\alpha=0}$ at M = x, first determine from Figures 353, 354, or 355 (for the MER station of interest) between which Mach number break points M = x occurs. Let M_{LOW} be the lower Mach break and M_{HI} be the higher Mach break. Compute $\left(\frac{SF}{q}\right)_{\alpha=0}$ at M = x from the expression below.

MER STATIONS 1 - 6 (MS1-6):

$$\left(\frac{SF}{q}\right)_{\substack{\alpha=0 \\ M=x \\ MS1-6}} = \left(\frac{SF}{q}\right)_{\substack{\alpha=0 \\ PRED \\ MS1-6}} + \Delta\left(\frac{SF}{q}\right)_{\substack{\alpha=0 \\ M_{LOW} \\ MS1-6}} + \left(\frac{x - M_{LOW}}{M_{HI} - M_{LOW}}\right) \left[\Delta\left(\frac{SF}{q}\right)_{\substack{\alpha=0 \\ M_{HI} \\ MS1-6}} - \Delta\left(\frac{SF}{q}\right)_{\substack{\alpha=0 \\ M_{LOW} \\ MS1-6}}\right]$$

If $x \leq M_0$, $\left(\frac{SF}{q}\right)_{\substack{\alpha=0 \\ M=x}}$ will be the value obtained in Subsection 4.1.1.3 (the initial term in the above equation).

An example illustrating the application of the above equation is found in subsection 4.1.1.2.

4.1.2 Increment - Aircraft Yaw

The captive store incremental side force due to aircraft yaw is obtained as the difference between the yawed pitch polar and the zero-yaw pitch polar data as outlined in Section III. The incremental side force slope, $\Delta\left(\frac{SF}{q}\right)_{\alpha}$, and intercept, $\Delta\left(\frac{SF}{q}\right)_{\alpha=0}$, thus obtained are linear with aircraft yaw angle; therefore, the incremental slope and intercept equations are derived and presented per degree of store yaw angle, β. The incremental airloads due to aircraft yaw are referenced to the coordinate system presented in Subsection 2.3.1.1.

To compute the incremental side force slope, $\Delta\left(\frac{SF}{q}\right)_{\alpha}$, the following equation is used.

$$\Delta\left(\frac{SF}{q}\right)_{\alpha} = \Delta\left(\frac{SF}{q}\right)_{\alpha_{\beta}} \cdot \beta$$

where:

$\Delta\left(\frac{SF}{q}\right)_{\alpha_{\beta}}$ - Incremental side force slope per degree β as obtained by the methods presented in the following sections, $\frac{ft^2}{deg^2}$

β - Store yaw angle, deg., equal to $+\psi_{A/C}$ for right wing store installation or $-\psi_{A/C}$ for left wing store installations.

The equation and procedure for computing the incremental side force intercept, $\Delta\left(\frac{SF}{q}\right)_{\alpha=0}$, due to aircraft yaw is similar to the above presentation for incremental side force slope.

4.1.2.1 Slope Prediction

The incremental side force slope prediction is divided into two sections, fuselage centerline-mounted stores and wing-mounted stores. The technique presented in this section covers the Mach number range 0.5 to 1.6.

FUSELAGE CENTERLINE-MOUNTED STORES

MER STATIONS 1-6 (MS1-6):

$$\Delta\left(\frac{SF}{q}\right)_{\alpha_{\beta_{\mathfrak{L}}}} = \Delta C_{y_{\alpha_{\beta_{\mathfrak{L}}}}}{}_{MS1-6} K_{SCALE_{SF}}$$

where:

$\Delta C_{y_{\alpha_{\beta_{\mathfrak{L}}}}}$ - Variation of $C_{y_{\alpha_{\beta}}}$ presented as a function of Mach number, $\frac{1}{deg^2}$, Figures 375 and 376.

$K_{SCALE_{NF}}$ - Defined in Section 1V, ft^2.

WING-MOUNTED STORES

MER STATIONS 1, 3, and 5 (MS1,3,5):

$$\Delta\left(\frac{SF}{q}\right)_{\alpha_{\beta}}{}_{MS1,3,5} = \left(\Delta C_{y_{\alpha_{\beta}}}{}_{MS1,3,5} + K_{\frac{\ell_{LE_A}}{C}} \Delta C_{y_{\alpha_{\beta_{\frac{\ell_{LE_A}}{C}}}}}\right) K_{SCALE_{SF}} K_{\Lambda_1}$$

where:

$\Delta C_{y_{\alpha_{\beta}}}$ - Incremental $C_{y_{\alpha}}$ per degree β presented as a function of wing spanwise position for Mach numbers 0.7, 0.9, 1.05, 1.2, and 1.6, $\frac{1}{deg^2}$, Table 7.

$K_{\frac{\ell_{LE_A}}{C}}$ - Proportioning factor based on the distance from the wing leading edge to the nose of the store on MER STATION 1 measured in the wing plan view divided by the local wing chord, positive, Figure 388.

$\Delta C_{y_{\alpha_\beta}}$ $\frac{\ell_{LE_A}}{C}$ - Incremental C_{y_α} per degree β based on ℓ_{LE_A}/C defined above and presented as a function of Mach number, $\frac{1}{deg^2}$

MER STA 1 - Figure 387

MER STA 3 - Figure 387

MER STA 5 - Figure 387

$K_{SCALE_{SF}}$ - Defined in Section IV, ft^2.

K_{Λ_1} - Wing sweep correction factor, $\frac{\sin \Lambda}{\sin 45^\circ}$, where Λ is the quarter chord sweep of the aircraft wing.

MER STATIONS 2, 4, and 6 (MS2,3,6):

$$\Delta\left(\frac{SF}{q}\right)_{\alpha_\beta}_{MS2,4,6} = \Delta C_{y_{\alpha_\beta}}{}_{MS2,4,6} K_{SCALE_{SF}} K_{\Lambda_1}$$

where:

$\Delta C_{y_{\alpha_\beta}}$ - Incremental C_{y_α} per degree β presented as a function of wing spanwise position for Mach numbers 0.7, 0.9, 1.05, 1.2, and 1.6, $\frac{1}{deg^2}$, Table 7.

$K_{SCALE_{SF}}$ - Defined in Section IV, ft^2.

K_{Λ_1} - Defined in MS1, 3,5 above.

The variation of $\Delta C_{y_{\alpha_\beta}}$ for MER STATIONS 1-6 is presented at distinct Mach numbers of 0.7, 0.9, 1.05, 1.2, and 1.6. Table 7

presented below is a guide for locating the curves for $\Delta C_{y_{\alpha_\beta}}$ for each MER STATION at the Mach numbers indicated above. For Mach numbers between 0.5 and 0.7, the value at M = 0.7 should be used in the computation. For Mach numbers between 0.7 and 1.6 other than those distinctly presented, linear interpolation should be used between the appropriate Mach numbers to obtain the required value for computation.

$K_{SCALE_{SF}}$ - Defined in Section IV, ft^2.

WING-MOUNTED STORES

MER STATIONS 1, 3 and 5 (MS1,3,5):

$$\Delta\left(\frac{SF}{q}\right)_{\alpha=0_{\beta_{MS1,3,5}}} = \left(\Delta C_{y_{\alpha=0_{\beta_{MS1,3,5}}}} + K_{\frac{\ell_{LE_A}}{C}} \Delta C_{y_{\alpha=0_{\beta_{\frac{\ell_{LE_A}}{C}}}}}\right) K_{SCALE_{SF}} K_{\Lambda_1}$$

where:

$\Delta C_{y_{\alpha=0_{\beta}}}$ - Incremental $C_{y_{\alpha=0}}$ per degree β presented as a function of wing spanwise position for Mach numbers 0.7, 0.9, 1.05, 1.2, and 1.6, $\frac{1}{\text{deg}}$, Table 8.

$K_{\frac{\ell_{LE_A}}{C}}$ - Proportioning factor based on the distance from the wing leading edge to the nose of the store on MER STATION 1 measured in the wing plan view divided by the local wing chord, positive, Figure 388, Subsection 4.1.2.1.

$\Delta C_{y_{\alpha=0_{\beta_{\frac{\ell_{LE_A}}{C}}}}}$ - Incremental $C_{y_{\alpha=0}}$ per degree β based on ℓ_{LE_A}/C defined above and presented as a function of Mach number, $\frac{1}{\text{deg}}$

MER STA 1 - Figure 401
MER STA 3 - Figure 401
MER STA 5 - Figure 401

$K_{SCALE_{SF}}$ - Defined in Section IV, ft^2.

K_{Λ_1} - Wing sweep correction factor, $\frac{\sin \Lambda}{\sin 45^\circ}$, where Λ is the quarter chord sweep of the aircraft wing.

MER STATIONS 2, 4, and 6 (MS2,4,6):

$$\Delta\left(\frac{SF}{q}\right)_{\alpha=0_\beta\ MS2,4,6} = \Delta C_{y_{\alpha=0_\beta\ MS2,4,6}} K_{SCALE_{SF}} K_{\Lambda_1}$$

where:

$\Delta C_{y_{\alpha=0_\beta}}$ - Incremental $C_{y_{\alpha=0}}$ per degree β presented as a function of wing spanwise position for Mach numbers 0.7, 0.9, 1.05, 1.2, and 1.6, $\frac{1}{deg}$, Table 8.

$K_{SCALE_{SF}}$ - Defined in Section IV, ft^2.

K_{Λ_1} - Defined in MS1, 3, 5 above.

The variation of $\Delta C_{y_{\alpha=0_\beta}}$ for MER STATIONS 1 to 6 is presented at distinct Mach numbers of 0.7, 0.9, 1.05, 1.2, and 1.6. Table 8 presented below is a guide for locating the curves for $\Delta C_{y_{\alpha=0_\beta}}$ for each MER station at the Mach numbers indicated above. For Mach numbers between 0.5 and 0.7, the value at M = 0.7 should be used in the computation. For Mach numbers between 0.7 and 1.6, other than those distinctly presented, linear interpolation should be used between the appropriate Mach numbers to obtain the required value for computation.

4.1.3 Increment - Adjacent Store Interference

Methods to predict the increment in captive store side force variation with angle of attack, $\Delta\left(\frac{SF}{q}\right)_{\alpha}$, and the value at $\alpha=0$, $\Delta\left(\frac{SF}{q}\right)_{\alpha=0}$, for multiple carried stores are presented within this section. The basic prediction is made as a function of minimum store to store separation distance y_{INTF} (see Subsection 3.1.3), at discrete Mach numbers. The data are presented separately for the aft cluster of stores on MER STATIONS 1, 3, and 5, and the forward cluster, MER STATIONS 2, 4, and 6. Predictions are also separately made for inboard → outboard interference, the interfering store carried inboard of the subject captive store, and outboard → inboard interference, the interfering store carried outboard of the subject captive store. On the curves defining the basic prediction ADJ.SHOULDER refers to the MER shoulder store adjacent to the interfering store, OPPOSITE SHOULDER is the MER shoulder store furthest displaced laterally from the interfering store, and $\mathcal{L}$ STORE is the MER centerline store, MER STATION 1 or 2.

4.1.3.1 Slope Prediction

The equations governing the prediction of incremental side force variation with angle of attack are presented below.

INTERFERING STORES CARRIED INBOARD

MER STATIONS 1,2,3,4,5, and 6 (MS1-6):

AT A GIVEN MACH NUMBER:

$$\Delta\left(\frac{SF}{q}\right)_{\substack{\alpha \\ INTF \\ MS1-6}} = \left(\sum \Delta C_{y_{\substack{\alpha \\ INTF \\ IB\rightarrow OB \\ MS1-6}}}\right) K_{SCALE_{SF}}$$

where:

$\Delta C_{y_{\alpha_{\substack{INTF \\ IB \rightarrow OB}}}}$ - Incremental side force slope coefficient due to inboard to outboard interference as a function of y_{INTF}, $\frac{1}{deg}$, see Table 9.

$K_{SCALE_{SF}}$ - Side force scale factor, ft^2 , see Section IV.

INTERFERING STORES CARRIED OUTBOARD

MER STATIONS 1,2,3,4,5, and 6 (MS1-6):

AT A GIVEN MACH NUMBER:

$$\Delta\left(\frac{SF}{q}\right)_{\substack{\alpha \\ INTF \\ MS1-6}} = \left(\sum \Delta C_{y_{\substack{\alpha \\ INTF \\ OB \rightarrow IB \\ MS1-6}}}\right) K_{SCALE_{SF}}$$

where:

$\Delta C_{y_{\alpha_{\substack{INTF \\ OB \rightarrow IB}}}}$ - Incremental side force slope coefficient due to outboard to inboard interference as a function of y_{INTF}, $\frac{1}{deg}$, see Table 9.

$K_{SCALE_{SF}}$ - Side force scale factor, ft^2 , see Section IV.

INTERFERING STORES CARRIED INBOARD AND OUTBOARD

MER STATIONS 1,2,3,4,5, and 6 (MS1-6):

AT A GIVEN MACH NUMBER:

$$\Delta\left(\frac{SF}{q}\right)_{\substack{\alpha \\ INTF \\ MS1-6}} = \left| K_{INTC_1} + K_{SLOPE_1}\left(\sum \Delta C_{y_{\substack{\alpha \\ INTF \\ IB \rightarrow OB \\ MS1-6}}} + \sum \Delta C_{y_{\substack{\alpha \\ INTF \\ OB \rightarrow IB \\ MS1-6}}}\right)\right| K_{SCALE_{SF}}$$

where:

K_{INTC_1} - Intercept for the inboard - outboard combination correction for side force slope, $\frac{1}{deg}$, Figure 4.18.

K_{SLOPE_1} - Slope for the inboard-outboard combination correction for side force slope, Figure 4.1[illegible].

ΔC_{y_α} (INTF, IB→OB) - Previously defined.

ΔC_{y_α} (INTF, OB→IB) - Previously defined.

$K_{SCALE_{SF}}$ - Side force scale factor, ft^2, see Section IV.

The above equations define the interference increment calculation at a given Mach number. For Mach numbers other than those presented, M = 0.7, 0.9, 1.05, 1.2, 1.6, these guidelines should be followed. If the subject Mach number is less than M = 0.7, use the value at M = 0.7. For other Mach numbers linear interpolation should be used between the Mach numbers which are presented.

4.1.3.2 Intercept Prediction

The equations governing the prediction of incremental side force intercept are presented below.

INTERFERING STORES CARRIED INBOARD

PER STATIONS 1, 2, 3, 4, 5, and 6 (MS1-6):

AT A GIVEN MACH NUMBER:

$$\Delta\left(\frac{SF}{q}\right)_{\substack{\alpha=0 \\ INTF \\ MS1-6}} = \left(\sum \Delta C_{y_{\substack{\alpha=0 \\ INTF \\ IB\rightarrow CB \\ MS1-6}}}\right) K_{SCALE_{SF}}$$

where:

$\Delta C_{y_{\substack{\alpha=0 \\ INTF \\ IB\rightarrow OB}}}$ - Incremental side force intercept coefficient due to inboard to outboard interference as a function of y_{INTF}, see Table 10.

$K_{SCALE_{SF}}$ - Side force scale factor, ft^2, see Section IV.

INTERFERING STORES CARRIED OUTBOARD

PER STATIONS 1, 2, 3, 4, 5, and 6 (MS1-6):

AT A GIVEN MACH NUMBER:

$$\Delta\left(\frac{SF}{q}\right)_{\substack{\alpha=0 \\ INTF \\ MS1-6}} \left(\sum \Delta C_{y_{\substack{\alpha=0 \\ INTF \\ OB\rightarrow IB}}}\right) K_{SCALE_{SF}}$$

where:

$\Delta C_{y_{\substack{\alpha=0 \\ INTF \\ OB\rightarrow IB}}}$ - Incremental side force intercept coefficient due to outboard to inboard interference as a function of y_{INTF}, see Table 10.

$K_{SCALE_{SF}}$ - Side force scale factor, ft^2, see Section IV.

INTERFERING STORES CARRIED INBOARD AND OUTBOARD

MER STATIONS 1, 2, 3, 4, 5, and 6 (MS1-6):

AT A GIVEN MACH NUMBER:

$$\Delta\left(\frac{SF}{q}\right)_{\substack{\alpha=0 \\ INTF \\ MS1-6}} = \left|K_{INTC_2} + K_{SLOPE_2}\left(\sum \Delta C_{y_{\substack{\alpha=0 \\ INTF \\ IB\rightarrow OB \\ MS1-6}}} + \sum \Delta C_{y_{\substack{\alpha=0 \\ INTF \\ OB\rightarrow IB \\ MS1-6}}}\right)\right| K_{SCALE_{SF}}$$

where:

K_{INTC_2} - Intercept for the inboard-outboard combination correction for side force intercept, Figure [illegible].

K_{SLOPE_2} - Slope for the inboard-outboard combination correction for side force intercept, Figure [illegible].

$\Delta C_{y_{\substack{\alpha=0 \\ INTF \\ IB\rightarrow OB}}}$ - Previously defined.

$\Delta C_{y_{\substack{\alpha=0 \\ INTF \\ OB\rightarrow IB}}}$ - Previously defined.

$K_{SCALE_{SF}}$ - Side force scale factor, ft^2, see Section IV.

The above equations define the interference increment calculation at a given Mach number. For Mach numbers other than those presented, M = 0.7, 0.9, 1.05, 1.2, 1.6, these guidelines should be followed. If the subject Mach number is less than M = 0.7

use the value at M = 0.7. For other Mach numbers linear interporation should be used between the Mach numbers which are presented.

4.2 YAWING MOMENT

4.2.1 Basic Airload

The basic yawing moment data were generated by a zero yaw pitch excursion of the parent aircraft. The data are referenced along the store centerline at the mid-lug location of each ejector unit. Under each subsequent subsection the prediction method is separated to apply to fuselage centerline-mounted stores and to wing pylon-mounted stores.

4.2.1.1 Slope Prediction

The variation of captive store yawing moment with angle of attack when the store is installed on a MER at M=0.5 is defined by the following relationships.

FUSELAGE CENTERLINE-MOUNTED STORES

MER Stations 1 and 2 (MS1,2):

$$\left(\frac{YM}{q}\right)_{\substack{\alpha \\ PRED \\ MS1,2}} = 0 \quad \text{By symmetry}$$

MER Stations 3, 4, 5, and 6 (MS3-6):

$$\left(\frac{YM}{q}\right)_{\substack{\alpha \\ PRED \\ MS3-6}} = S_{REF}\, \ell_{REF}\, C_{\eta_{\alpha_{\ell}}}{}_{MS3-6} = f(d)$$

where:

$C_{\eta_{\alpha_{\ell}}}$ - Fuselage centerline captive store yawing moment variation with angle of attack, $\frac{1}{deg}$, presented as a function of store diameter.

MER STA 3 - Figure 436
MER STA 4 - Figure 436
MER STA 5 - Figure 436
MER STA 6 - Figure 436

S_{REF} - Store reference area, $\frac{\pi d^2}{4}$, ft^2

ℓ_{REF} - Store reference length, d, ft.

WING-MOUNTED STORES

MER Station 1 (MS1):

$$\left(\frac{YM}{q}\right)_{\substack{\alpha \\ PRED \\ MS1}} = K_{\Lambda_1} K_{\eta_{MS1}} K_{\frac{Z}{C}_{MS1}} K_{C_{YM_{MS1}}} \left(\frac{SF}{q}\right)_{\substack{\psi \\ ISO}}$$

where:

K_{Λ_1} - Aircraft wing sweep correction factor based on the sweep angle, Λ, of the quarter-chord, $\frac{\sin \Lambda}{\sin 45^\circ}$.

$K_{\eta_{MS1}}$ - Correction factor based on semispan location, Figure 437.

$K_{\frac{Z}{C}_{MS1}}$ - Pylon height correction factor, Figure 439.

$K_{C_{YM_{MS1}}} \left(\frac{SF}{q}\right)_{\substack{\psi \\ ISO}}$ - Initial pitching moment slope prediction, $\frac{ft^3}{deg}$, see Subsection 2.3.3.

MER Station 2 (MS2):

$$\left(\frac{YM}{q}\right)_{\substack{\alpha \\ PRED \\ MS2}} = K_{\Lambda_1} K_{\eta_{MS2}} K_{\ell_{LE_F}} K_{C_{YM_{MS2}}} \left(\frac{SF}{q}\right)_{\substack{\psi \\ ISO}}$$

where:

K_{Λ_1} - Aircraft wing sweep correction factor, $\frac{\sin \Lambda}{\sin 45^\circ}$.

$K_{\eta_{MS2}}$ - Correction factor based on semispan location, Figure 437.

$K_{\ell_{LE_F}}$ - Correction factor based on store longitudinal location, Figure 438.

$K_{C_{YM}}$ $\left(\frac{SF}{q}\right)_{\psi}$ - Initial pitching moment slope prediction, $\frac{ft^3}{deg}$, see Subsection 2.3.3.

MS2 ISO

MER Station 3, 4, 5, 6 (MS3-6):

$$\left(\frac{YM}{q}\right)_{\alpha_{PRED}} = K_{\Lambda_1} K_{C_{YM}} \left(\frac{SF}{q}\right)_{\psi_{ISO}} + K_{SCALE_{YM}} \Delta C_{n_\alpha}$$

MS3-6 MS1 MS2 ISO MS3,5 MS4,6

where:

$K_{C_{YM}}$ $\left(\frac{SF}{q}\right)_{\psi}$ - Initial yawing moment prediction, $\frac{ft^3}{deg}$, see Subsection 2.3.3. $K_{C_{YM}}$ to be used should be MS1 for MS3,5 and MS2 for MS4,6.

MS1 MS2 ISO

K_{Λ_1} - Aircraft wing sweep correction factor, $\frac{\sin \Lambda}{\sin 45^\circ}$.

$K_{SCALE_{YM}}$ - Yawing moment scale factor, ft.^{3}, see Section IV.

ΔC_{n_α} - Incremental yawing moment slope coefficient for the shoulder stations, $\frac{1}{deg}$.

MER STA 3 - Figure 440
MER STA 4 - Figure 441
MER STA 5 - Figure 440
MER STA 6 - Figure 441

Example: Calculate the variation of yawing moment with angle of attack for an M117 store on MER STA 6 carried on the A-7 center pylon at M=0.5.

Required for Computation:

$C_{LOCAL} = 127.6$ in.

$K_{\Lambda_1} = \frac{\sin 35^\circ}{\sin 45^\circ} = .811$

$\left(\frac{SF}{q}\right)_{\psi_{ISO}} = .114$ ft ^{2}

SPA = 1200 in ^{2}

$$K_{SCALE_{YM}} = \frac{\left(\frac{SF}{q}\right)_{\psi_{ISO}}^{SPA}}{71.4} = \frac{(.114)(1200)}{71.4} = 1.92 \text{ ft}^3$$

$$K_{C_{YM_{MS2}}} \left(\frac{SF}{q}\right)_{\psi_{ISO}} = -.088 \frac{\text{ft}^3}{\text{deg}}, \text{ Subsection 2.3.3}$$

$$\Delta C_{\eta_{\alpha_{MS6}}} = -.011 \frac{1}{\text{deg}}, \text{ Figure 441}$$

$$\left(\frac{YM}{q}\right)_{\alpha_{PRED_{MS6}}} = (.811)(-.088) + (1.92)(-.011) = -.092 \frac{\text{ft}^3}{\text{deg}}$$

4.2.1.2 Slope Mach Number Correction

To compute the variation in captive store yawing moment slope with angle of attack, $\left(\frac{YM}{q}\right)_{\alpha}$, between M=0.5 and M=1.6, use the following expression.

$$\left(\frac{YM}{q}\right)_{\substack{\alpha \\ M=x}} = \left(\frac{YM}{q}\right)_{\substack{\alpha \\ PRED}} + \Delta\left(\frac{YM}{q}\right)_{\substack{\alpha \\ M=x}}$$

where:

$\Delta\left(\frac{YM}{q}\right)_{\substack{\alpha \\ M=x}}$ - Increment in yawing moment slope at M=x, $\frac{ft^3}{deg}$.

$\left(\frac{YM}{q}\right)_{\substack{\alpha \\ PRED}}$ - Predicted yawing moment slope at M=0.5, Subsection 4.2.1.1, $\frac{ft^3}{deg}$

FUSELAGE CENTERLINE-MOUNTED STORES

MER Stations 1 and 2 (MS1,2):

$$\Delta\left(\frac{YM}{q}\right)_{\substack{\alpha \\ M=x \\ MS1,2}} = 0 \quad \text{by symmetry}$$

MER Stations 3, 4, 5 and 6 (MS3-6):

$$\Delta\left(\frac{YM}{q}\right)_{\substack{\alpha \\ M=x \\ MS3-6}} = K_{SCALE_{YM}} \Delta C_{n_{\alpha_{\substack{C_L \\ MS3-6}}}} = f(M)$$

where:

$\Delta C_{n_{\alpha_{\substack{C_L \\ MS3-6}}}}$ - Incremental yawing moment slope coefficient as a function of Mach number, $\frac{1}{deg}$.

MER STA 3 - Figure 442
MER STA 4 - Figure 442
MER STA 5 - Figure 442
MER STA 6 - Figure 442

$K_{SCALE_{YM}}$ - Yawing moment scale factor, ft^3, see Section IV.

WING-MOUNTED STORES

The generalized curve of the variation of $\left(\frac{YM}{q}\right)_\alpha$ with Mach number is given by Figure 61 in Subsection 3.2.1.2. The variation of yawing moment slope with Mach number is approximated by a series of linear segments. Each Mach number at which the line segments change slope is designated a break point. The initial break point, M_o, is defined as the Mach number at which the value of $\left(\frac{YM}{q}\right)_\alpha$ deviates from the subsonic M=0.5 value. The variation of the Mach break points (M_o, M_1, M_2, M_3) is presented in Figures 443 through 445 as a function of C_{LOCAL} and/or K_{Λ_1}. The variation of C_{n_α} with Mach number between break points for each MER station is presented in Figures 446 through 454. The expressions below define the calculation procedures for each MER Station over the applicable Mach range.

Break 1 (M_1): $M_o \leq x \leq M_1$

MER Station 1, 2, 3, 4, 5 and 6 (MS1-6):

$$\Delta\left(\frac{YM}{q}\right)_{\substack{\alpha \\ M=x \\ MS1-6}} = \left[\left(x-M_o\right) K_{SLOPE_1}{}_{MS1-6} \right] K_{SCALE_{YM}}$$

where:

K_{SLOPE_1} - The variation of C_{n_α} with Mach number between M_o and M_1, $\frac{1}{deg.}$

MER STA 1 - Figure 446
MER STA 2 - Figure 446
MER STA 3 - Figure 447
MER STA 4 - Figure 448
MER STA 5 - Figure 447
MER STA 6 - Figure 448

$K_{SCALE_{YM}}$ - Yawing moment scale factor, ft^3, see Section IV.

Break 2 (M_2): $M_1 \leq x \leq M_2$

MER Station 1, 2, 3, 4, 5 and 6 (MS1-6):

$$\Delta\left(\frac{YM}{q}\right)_{\substack{\alpha \\ M=x \\ MS1-6}} = \left[\left(M_1-M_o\right) K_{SLOPE_1}{}_{MS1-6} + \left(x-M_1\right) K_{SLOPE_2}{}_{MS1-6}\right] \cdot \left(K_{SCALE_{YM}}\right)$$

K_{SLOPE_1} - Defined under Break 1.

K_{SLOPE_2} - The variation of C_{n_α} with Mach number between M_1 and M_2, $\frac{1}{deg}$:

MER STA 1 - Figure 449
MER STA 2 - Figure 449
MER STA 3 - Figure 450
MER STA 4 - Figure 451
MER STA 5 - Figure 450
MER STA 6 - Figure 451

$K_{SCALE_{YM}}$ - Yawing moment scale factor, ft^3, see Section IV.

Break 3 (M_3): $M_2 \leq x \leq M_3$

MER Station 4 has only two break points between M=0.5 and M=1.6

MER Stations 2 and 6 (MS2,6):

$$\Delta\left(\frac{YM}{q}\right)_{\substack{\alpha \\ M=x \\ MS2,6}} = \left[\left(M_1-M_o\right) K_{SLOPE_1}{}_{MS2,6} + \left(M_2-M_1\right) K_{SLOPE_2}{}_{MS2,6} + \left(x-M_2\right) K_{SLOPE_3}{}_{MS2,6}\right] K_{SCALE_{YM}}$$

where:

K_{SLOPE_1} - Defined under Break 1

K_{SLOPE_2} - Defined under Break 2

K_{SLOPE_3} - The variation of C_{n_α} with Mach number between M_2 and M_3, $\frac{1}{deg}$.

MER STA 2 - Figure 452

MER STA 6 - Figure 454

$K_{SCALE_{YM}}$ - Yawing moment scale factor, ft^3, see Section IV.

MER Stations 1, 3 and 5 (MS1,3,5):

$$\Delta\left(\frac{YM}{q}\right)_{\substack{\alpha \\ M=x \\ MS1,3,5}} = \left[\left(M_1-M_o\right) K_{SLOPE_{1_{MS1,3,5}}} + \left(M_2-M_1\right) K_{SLOPE_{2_{MS1,3,5}}} + \left(x-M_2\right)\left(K_{SLOPE_{3_{MS1,3,5}}} + \Delta K_{SLOPE_{3_{\substack{AFT \\ MS1,3,5}}}}\right)\right] K_{SCALE_{YM}}$$

where:

K_{SLOPE_1} - Defined under Break 1.

K_{SLOPE_2} - Defined under Break 2.

K_{SLOPE_3} - The variation of C_{η_α} with Mach number between M_2 and M_3, $\frac{1}{deg}$.

MER STA 1 - Figure 452

MER STA 3 - Figure 453

MER STA 5 - Figure 453

$\Delta K_{SLOPE_{3_{AFT}}}$ - Increment to K_{SLOPE_3} for the aft cluster based on η', $\frac{1}{deg}$, Figure 455.

$K_{SCALE_{YM}}$ - Yawing moment scale factor, ft^3, see Section IV.

Example:

Compute $\left(\frac{YM}{q}\right)_\alpha$ for an M117 carried on MER Station 6 on the A-7 center pylon at M=0.8.

Required for Computation:

$C_{LOCAL} = 127.6$ in.

$$K_{\Lambda_1} = \frac{\sin 35^\circ}{\sin 45^\circ} = .811$$

$K_{SCALE_{YM}} = 1.92$ ft.^{3} - Subsection 4.2.1.1

$M_{0_{MS6}} = 0.5$ - Figure 444

$M_{1_{MS6}} = 0.9$ - Figure 444

$K_{SLOPE_{1_{MS6}}} = -.057 \frac{1}{deg}$ - Figure 448

$$\Delta\left(\frac{YM}{q}\right)_{\substack{\alpha \\ M=.8 \\ MS6}} = \left[\left(0.8-0.5\right)\left(-.057\right)\right] \quad 1.92 \quad = -.033 \frac{ft^3}{deg} .$$

$$\left(\frac{YM}{q}\right)_{\substack{\alpha \\ PRED \\ MS6}} = -.092 \frac{ft.^3}{deg.} \text{ - Subsection 4.2.1.1}$$

$$\left(\frac{YM}{q}\right)_{\substack{\alpha \\ M=.8 \\ MS6}} = -.092 - .033 = -.125 \frac{ft^3}{deg}.$$

4.2.1.3 Intercept Prediction

The value of captive store yawing moment at $\alpha=0$ for a store installed on a MER at M=0.5 is defined by the following relationships.

FUSELAGE CENTERLINE-MOUNTED STORES

MER Stations 1 and 2 (MS1,2):

$$\left(\frac{YM}{q}\right)_{\substack{\alpha=0 \\ \text{PRED} \\ \text{MS1,2}}} = 0 \quad \text{By symmetry}$$

MER Stations 3, 4, 5 and 6 (MS3-6):

$$\left(\frac{YM}{q}\right)_{\substack{\alpha=0 \\ \text{PRED} \\ \text{MS3-6}}} = S_{REF}\, \ell_{REF}\, C_{\eta_{\substack{\alpha=0 \\ C_L \\ \text{MS3-6}}}} = f(d)$$

where:

$C_{\eta_{\substack{\alpha=0 \\ C_L}}}$ - Fuselage centerline captive store yawing moment coefficient at $\alpha=0$ and M=0.5.

MER STA 3 - Figure 456

MER STA 4 - Figure 456

MER STA 5 - Figure 456

MER STA 6 - Figure 456

Note separate curves for finned and unfinned stores.

S_{REF} - Store reference area, $\frac{\pi d^2}{4}$, ft ^{2}.

ℓ_{REF} - Store reference length, d, ft.

WING-MOUNTED STORES

MER Stations 1, 3, 5 (MS1,3,5):

$$\left(\frac{YM}{q}\right)_{\substack{\alpha=0 \\ \text{PRED} \\ \text{MS1,3,5}}} = \left(C_{\eta_{\substack{\alpha=0 \\ C_L \\ \text{MS1,3,5}}}} + \Delta C_{\eta_{\substack{\alpha=0 \\ \text{MS1,3,5}}}}\right) K_{SCALE_{YM}}$$

where:

$C_{\eta_{\substack{\alpha=0 \\ \ell}}}$ - Defined under FUSELAGE CENTERLINE-MOUNTED STORES.

Note $C_{\eta_{\substack{\alpha=0 \\ \ell \\ MS1}}} = 0$ by symmetry.

$\Delta C_{\eta_{\alpha=0}}$ - Incremental yawing moment intercept correction for wing mounted stores presented as a function of C_{LOCAL}.

MER STA 1 - Figure 457

MER STA 3 - Figure 458

MER STA 5 - Figure 458

$K_{SCALE_{YM}}$ - Yawing moment scale factor, ft^3, see Section IV.

MER Stations 2, 4, 6 (MS2,4,6):

$$\left(\frac{YM}{q}\right)_{\substack{\alpha=0 \\ PRED \\ MS2,4,6}} = \left(C_{\eta_{\substack{\alpha=0 \\ \ell \\ MS2,4,6}}} + \Delta C_{\eta_{\substack{\alpha=0 \\ MS2,4,6}}}\right) K_{SCALE_{YM}} K_{\Lambda_1}$$

where:

$C_{\eta_{\substack{\alpha=0 \\ \ell}}}$ - Defined under FUSELAGE CENTERLINE-MOUNTED STORES.

Note $C_{\eta_{\substack{\alpha=0 \\ \ell \\ MS2}}} = 0$, by symmetry.

$\Delta C_{\eta_{\alpha=0}}$ - Incremental yawing moment intercept correction for wing mounted stores presented as a function of $C_{LOCAL} K_{\Lambda_1}$.

MER STA 2 - Figure 457

MER STA 4 - Figure 459

MER STA 6 - Figure 459

K_{Λ_1} - Aircraft wing sweep correction factor based on the sweep angle of the quarter-chord, $\frac{\sin \Lambda}{\sin 45^\circ}$.

$K_{SCALE_{YM}}$ - Yawing moment scale factor, ft^3, see Section IV.

Example:

Compute the yawing moment at $\alpha=0$ for an M117 store on MER STA 6 carried on the A-7 center pylon at M=0.5.

Required for Computation:

$C_{LOCAL} = 127.6$ in.

$K_{\Lambda_1} = \frac{\sin 35^\circ}{\sin 45^\circ} = .811$

$d = 16.13$ in.

$C_{\eta_{\substack{\alpha=0 \\ \ell \\ MS6}}} = .18$ - Figure 456

$K_{SCALE_{YM}} = 1.92\ ft.^3$ - Subsection 4.2.1.1

$\Delta C_{\eta_{\substack{\alpha=0 \\ MS6}}} = .48$ - Figure 459

$\left(\frac{YM}{q}\right)_{\substack{\alpha=0 \\ PRED \\ MS6}} = \left(.18+.48\right)(1.92)(.811) = 1.03\ ft^3$

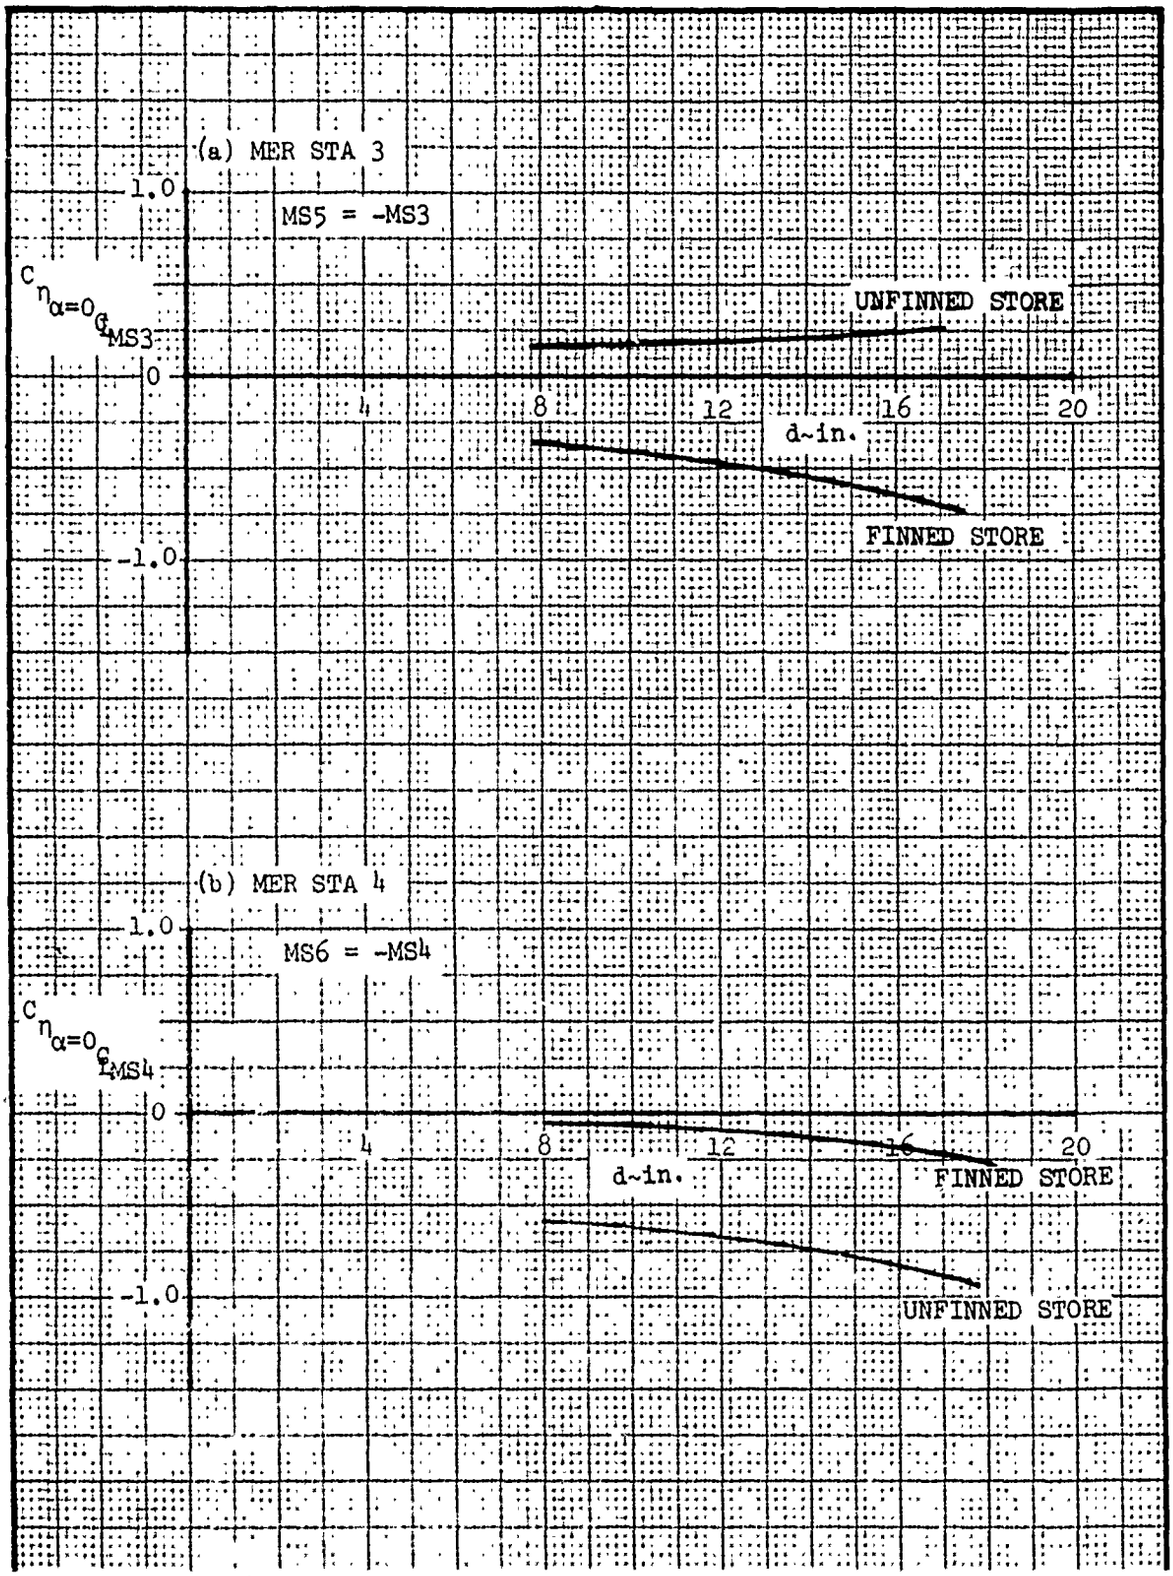

Figure 476. Yawing Moment Intercept - Stores Mounted on Fuselage Centerline, MER Stations 3-6

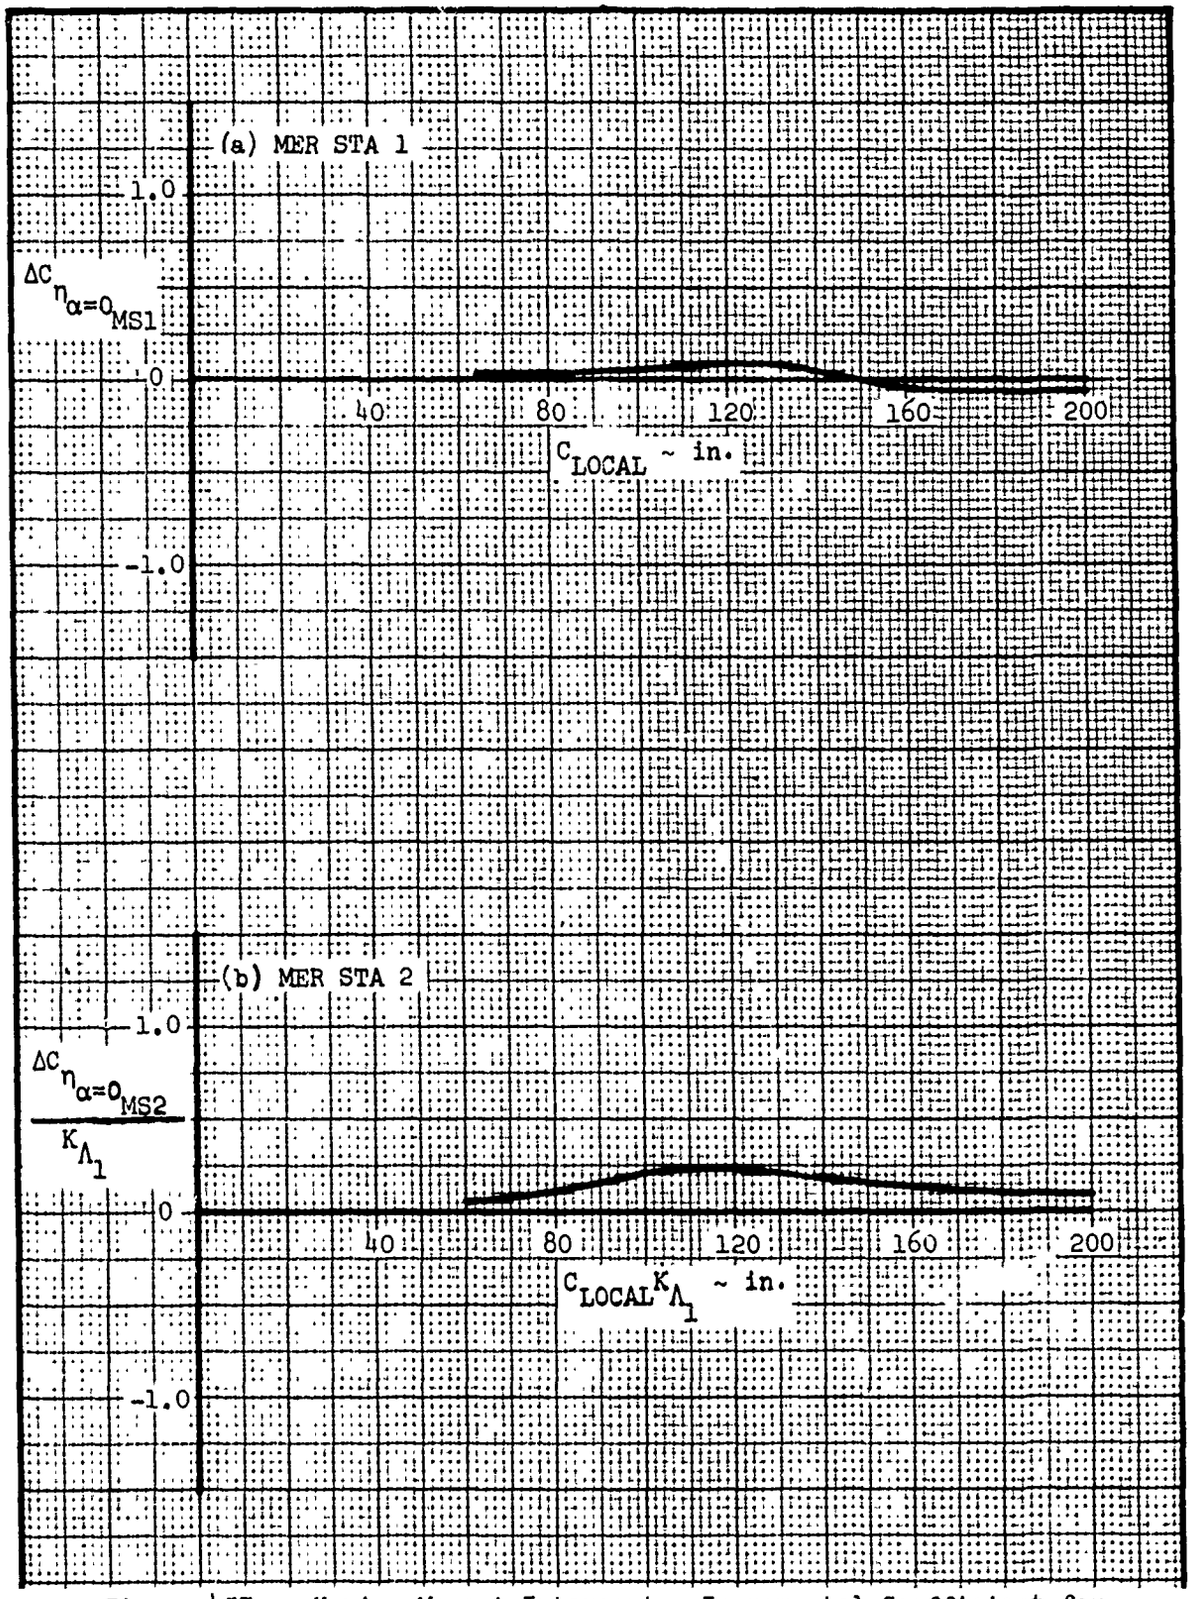

Figure 457. Yawing Moment Intercept - Incremental Coefficient for Wing-Mounted Stores, MER Stations 1 and 2

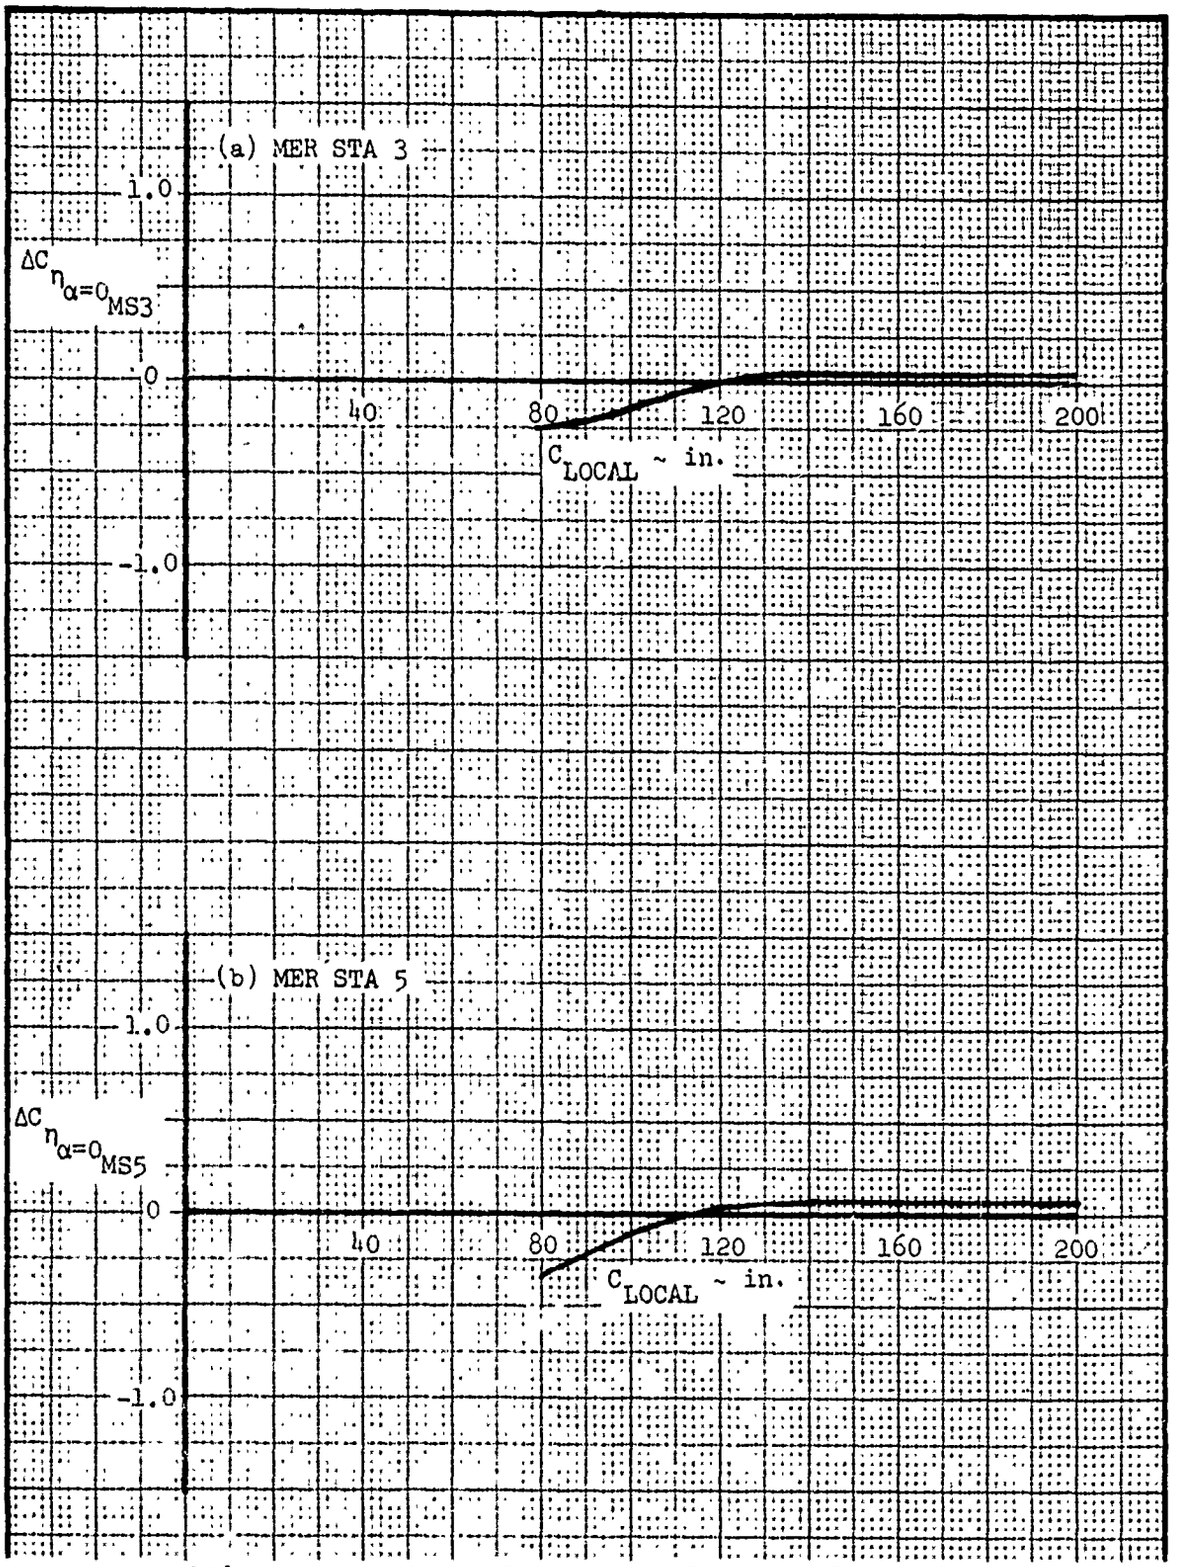

Figure 458. Yawing Moment Intercept - Incremental Coefficient for Wing-Mounted Stores, MER Stations 3 and 5

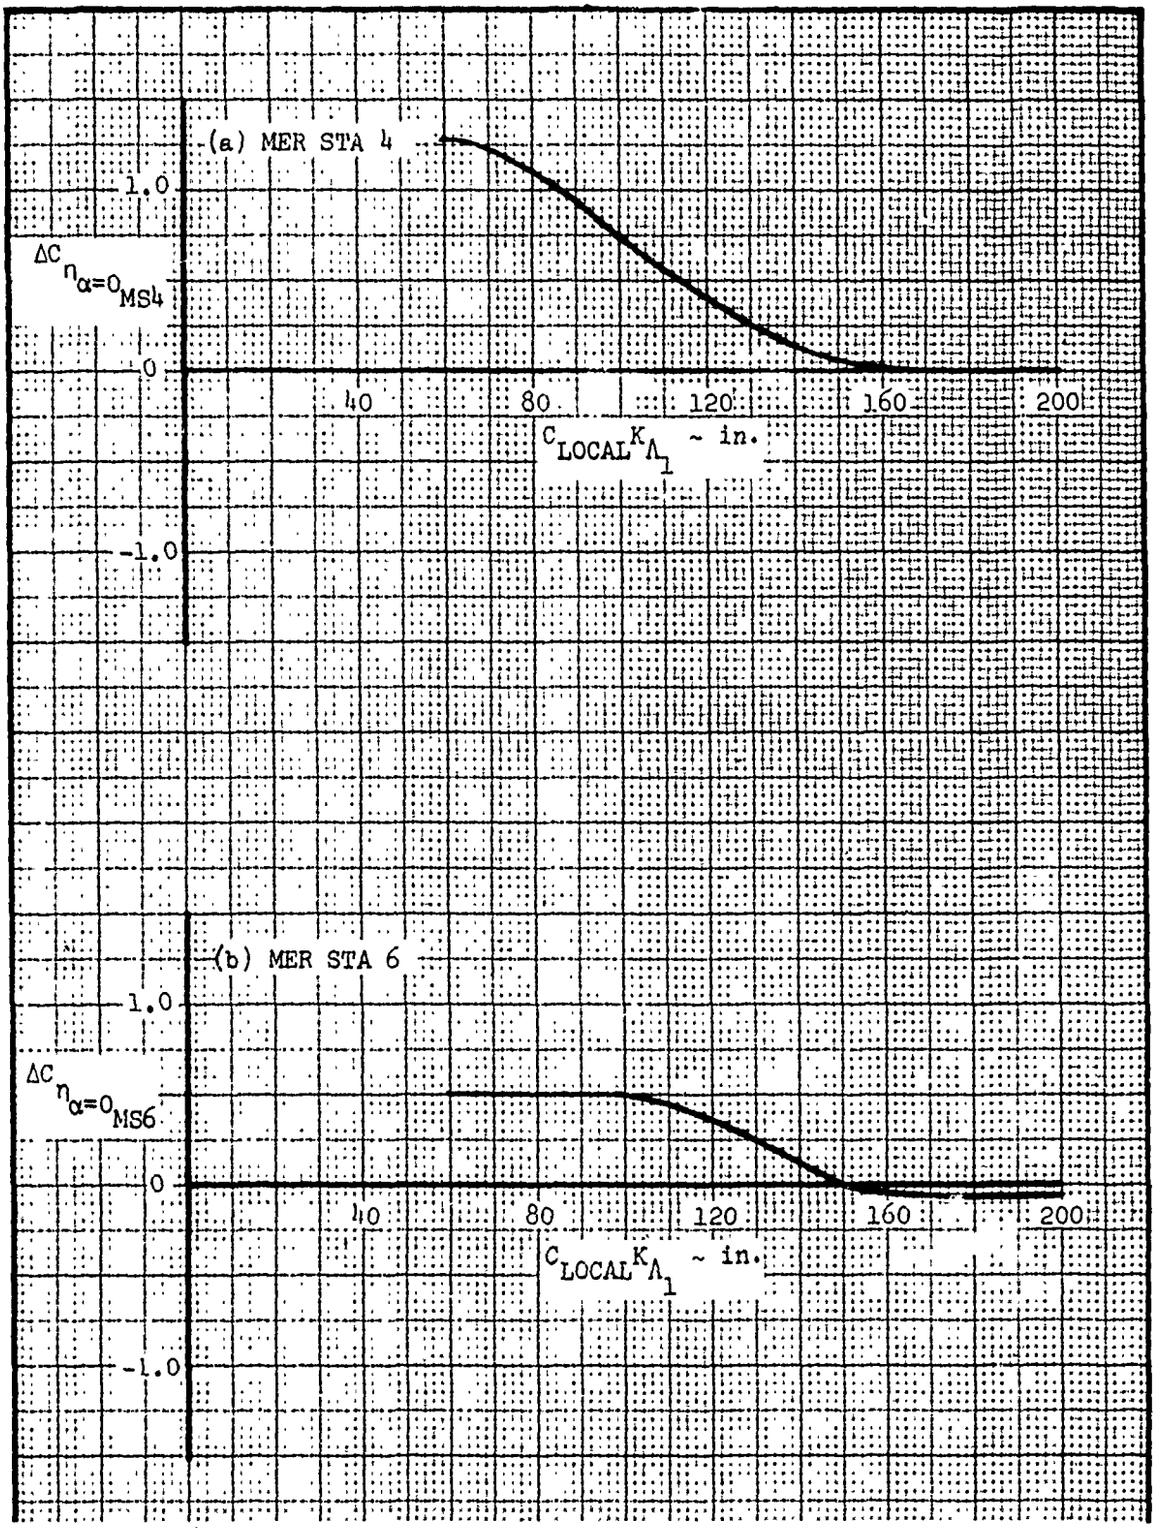

Figure 459. Yawing Moment Intercept - Incremental Coefficient for Wing-Mounted Stores, MER Stations 4 and 6

4.2.1.4 Intercept Mach Number Correction

To compute the value of captive store yawing moment at $\alpha=0$ between M=0.5 and M=1.6, use the following expression.

$$\left(\frac{YM}{q}\right)_{\substack{\alpha=0 \\ M=x}} = \left(\frac{YM}{q}\right)_{\substack{\alpha=0 \\ PRED}} + \Delta\left(\frac{YM}{q}\right)_{\substack{\alpha=0 \\ M=x}}$$

where:

$\left(\frac{YM}{q}\right)_{\substack{\alpha=0 \\ PRED}}$ - Predicted yawing moment intercept at M=0.5, Subsection 4.2.1.3, ft^3

$\Delta\left(\frac{YM}{q}\right)_{\substack{\alpha=0 \\ M=x}}$ - Increment in yawing moment intercept at M=x, ft^3

FUSELAGE CENTERLINE MOUNTED STORES

MER Stations 1 and 2 (MS1, 2):

$\Delta\left(\frac{YM}{q}\right)_{\substack{\alpha=0 \\ M=x \\ MS1,2}}$ = 0, by symmetry

MER Stations 3, 4, 5 and 6 (MS3-6):

$$\Delta\left(\frac{YM}{q}\right)_{\substack{\alpha=0 \\ M=x \\ MS3-6}} = K_{SCALE_{YM}} \Delta C_{\eta_{\substack{\alpha=0 \\ C_L \\ MS3-6}}} = f(M)$$

$\Delta C_{\eta_{\substack{\alpha=0 \\ C_L \\ MS3-6}}}$ - Incremental yawing moment intercept coefficient as a function of Mach number.

MER STA 3 - Figure 460
MER STA 4 - Figure 460
MER STA 5 - Figure 460
MER STA 6 - Figure 460

$K_{SCALE_{YM}}$ - Yawing moment scale factor, ft^3, see Section IV.

WING-MOUNTED STORES

The procedure for calculating the Mach number correction to yawing moment intercept for wing-mounted stores is essentially the same as the procedure for yawing moment slope in Subsection 4.2.1.2. The variation in Mach break points (M_o, M_1, M_2) is presented in Figures 461 through 463 as a function of C_{LOCAL} and/or K_{Λ_1}. The slopes of $C_{n_{\alpha=0}}$ versus Mach number between break points for each MER station are presented in Figures 464 through 471. The expressions below define the calculation procedures for each MER Station over the applicable Mach range.

Break 1 (M_1): $M_o \leq x \leq M_1$

MER Stations 1, 3, 4, 5 and 6 (MS1,3-6):

$$\Delta\left(\frac{YM}{q}\right)_{\substack{\alpha=0 \\ M=x \\ MS1,3-6}} = \left[\left(x-M_o\right) K_{SLOPE_1}\right]_{MS1,3-6} K_{SCALE_{YM}}$$

where:

K_{SLOPE_1} - The variation of $C_{n_{\alpha=0}}$ with Mach number between M_o and M_1.

MER STA 1 - Figure 464
MER STA 3 - Figure 465
MER STA 4 - Figure 466
MER STA 5 - Figure 465
MER STA 6 - Figure 466

$K_{SCALE_{YM}}$ - Yawing moment scale factor, ft^3, see Section IV.

MER Station 2 (MS2):

$$\Delta\left(\frac{YM}{q}\right)_{\substack{\alpha=0 \\ M=x \\ MS2}} = \left[\left(x-M_o\right)\left(K_{SLOPE_1}\right)_{MS2} + \left(\Delta K_{SLOPE_1}\right)_{MS2}\right] K_{SCALE_{YM}}$$

where:

K_{SLOPE_1} - The variation of $C_{n_{\alpha=0}}$ with Mach number between M_o and M_1.

MER STA 2 - Figure 464

ΔK_{SLOPE_1} - Incremental slope due to fuselage interference.
MER STA 2 - Figure 467

$K_{SCALE_{YM}}$ - Yawing moment scale factor, ft^3, see Section IV.

Break 2 (M_2): $M_1 \leq x \leq M_2$

MER Station 1, 2, 3, 5 and 6 (MS1-3,5,6):

$$\Delta\left(\frac{YM}{q}\right)_{\substack{\alpha=0 \\ M=x \\ MS1-3,5,6}} = \left[\left(M_1-M_o\right)\left(K_{SLOPE_1}{}_{MS1-3,5,6} + \Delta K_{SLOPE_1}{}_{MS2}\right) + \left(x-M_1\right) K_{SLOPE_2}{}_{MS1-3,5,6}\right] K_{SCALE_{YM}}$$

where:

K_{SLOPE_1} - Defined under Break 1.

ΔK_{SLOPE_1} - Defined under Break 1.

K_{SLOPE_2} - The variation in $C_{n_{\alpha=0}}$ with Mach number between M_1 and M_2.

MER STA 1 - Figure 468

MER STA 3 - Figure 469
MER STA 5 - Figure 469
MER STA 6 - Figure 470

$K_{SCALE_{YM}}$ - Yawing moment scale factor, ft^3, see Section IV.

MER Station 4 (MS4):

$$\Delta\left(\frac{YM}{q}\right)_{\substack{\alpha=0 \\ M=x \\ MS4}} = \left[\left(M_1-M_o\right) K_{SLOPE_1}{}_{MS4} + \left(x-M_1\right)\left(K_{SLOPE_2}{}_{MS4} + \Delta K_{SLOPE_2}{}_{MS4}\right)\right] \left(K_{SCALE_{YM}}\right)$$

where:

K_{SLOPE_1} - Defined under Break 1.

K_{SLOPE_2} - The variation in $C_{n_{\alpha=0}}$ with Mach number between M_1 and M_2.

MER STA 4 - Figure 470

ΔK_{SLOPE_2} - Incremental slope due to pylon height.

MER STA 4 - Figure 471

$K_{SCALE_{YM}}$ - Yawing moment scale factor, ft^3, see Section IV.

A similar computational procedure is included in Subsection 4.2.1.2.

4.2.2 Increment Aircraft Yaw

The captive store incremental yawing moment due to aircraft yaw is obtained as the difference between the yawed pitch polar and the zero-yaw pitch polar data as outlined in Section III. The incremental yawing moment slope, $\Delta\left(\frac{YM}{q}\right)_{\alpha}$, and intercept, $\Delta\left(\frac{YM}{q}\right)_{\alpha=0}$, thus obtained are linear with aircraft yaw angle; therefore, the incremental slope and intercept equations are derived and presented per degree of store yaw angle, β. The incremental airloads due to aircraft yaw are referenced to the coordinate system presented in Subsection 2.3.1.2.

To compute the incremental yawing moment slope, $\Delta\left(\frac{YM}{q}\right)_{\alpha}$, the following equation is used.

$$\Delta\left(\frac{YM}{q}\right)_{\alpha} = \Delta\left(\frac{YM}{q}\right)_{\alpha_{\beta}} \cdot \beta$$

where:

$\Delta\left(\frac{YM}{q}\right)_{\alpha_{\beta}}$ - Incremental yawing moment slope per degree β as obtained by the methods presented in the following sections, $\frac{ft^3}{deg^2}$

β - Store yaw angle, deg., equal to $+\Psi_{A/C}$ for right wing store installations or $-\Psi_{A/C}$ for left wing store installations.

The equation and procedure for computing the incremental yawing moment intercept, $\Delta\left(\frac{YM}{q}\right)_{\alpha=0}$, due to aircraft yaw is similar to the above presentation for incremental yawing moment slope.

4.2.2.1 Slope Prediction

The incremental yawing slope prediction is divided into two sections, fuselage centerline-mounted stores and wing-mounted stores. The technique presented in this section covers the Mach number range 0.5 to 1.6.

FUSELAGE CENTERLINE-MOUNTED STORES

MER STATIONS 1 - 6 (MS1-6):

$$\Delta\left(\frac{YM}{q}\right)_{\alpha_{\beta_{\ell}}} = \Delta C_{\eta_{\alpha_{\beta_{\ell}}}} \; K_{SCALE_{YM}}$$

$$\text{MS1-6}$$

where:

$\Delta C_{\eta_{\alpha_{\beta_{\ell}}}}$ - Variation of $C_{\eta_{\alpha_{\beta}}}$ presented as a function of Mach number, $\frac{1}{deg^2}$.

MER STA 1 - Figure 472
MER STA 2 - Figure 473
MER STA 3 - Figure 472
MER STA 4 - Figure 473
MER STA 5 - Figure 472
MER STA 6 - Figure 473

$K_{SCALE_{YM}}$ - Defined in Section IV, ft^3.

WING-MOUNTED STORES

MER STATIONS 1, 3, and 5 (MS1,3,5):

$$\Delta\left(\frac{YM}{q}\right)_{\alpha_{\beta}} = \left(\Delta C_{\eta_{\alpha_{\beta}}} + K_{\ell_{\frac{LE_A}{C}}} \Delta C_{\eta_{\alpha_{\beta_{\ell_{\frac{LE_A}{C}}}}}}\right) K_{SCALE_{YM}} A_1$$

$$\text{MS1,3,5} \qquad \text{MS1,3,5}$$

where:

$\Delta C_{\eta_{\alpha_{\beta}}}$ - Incremental $C_{\eta_{\alpha}}$ per degree β presented as a function of wing spanwise position for Mach numbers 0.7, 0.9, 1.05, 1.2, and 1.6, $\frac{1}{deg^2}$, Table 11.

$K_{\frac{\ell_{LE_A}}{C}}$ - Proportioning factor based on the distance from the wing leading edge to the nose of the store on MER STATION 1 measured in the wing plan view divided by the local wing chord, positive, Figure 485.

$\Delta C_{\eta_{\alpha_\beta}}{}_{\frac{\ell_{LE_A}}{C}}$ - Incremental C_{η_α} per degree β based on ℓ_{LE_A}/C defined above and presented as a function of Mach number, $\frac{1}{deg^2}$.

MER STA 1 - Figure 484
MER STA 3 - Figure 484
MER STA 5 - Figure 484

$K_{SCALE_{YM}}$ - Defined in Section IV, ft^3.

K_{Λ_1} - Wing sweep correction factor, $\frac{\sin \Lambda}{\sin 45^\circ}$, where Λ is the quarter chord sweep of the aircraft wing.

MER STATIONS 2,4,and 6 (MS2,4,6):

$$\Delta\left(\frac{YM}{q}\right)_{\alpha_\beta}{}_{MS2,4,6} = \Delta C_{\eta_{\alpha_\beta}}{}_{MS2,4,6} K_{SCALE_{YM}} K_{\Lambda_1}$$

where:

$\Delta C_{\eta_{\alpha_\beta}}$ - Incremental C_{η_α} per degree β presented as a function of wing spanwise position for Mach numbers 0.7, 0.9, 1.05, 1.2 and 1.6, $\frac{1}{deg^2}$, Table 11.

$K_{SCALE_{YM}}$ - Defined in Section IV, ft^3.

K_{Λ_1} - Defined in MS1,3,5 above.

The variation of $\Delta C_{n_{\alpha_\beta}}$ for MER STATIONS 1-6 is presented at distinct Mach numbers of 0.7, 0.9, 1.05, 1.2, and 1.6. Table 11 presented below is a guide for locating the curves for $\Delta C_{n_{\alpha_\beta}}$ for each MER station at the Mach numbers indicated above. For Mach numbers between 0.5 and 0.7, the value at M = 0.7 should be used in the computation. For Mach numbers between 0.7 and 1.6 other than those distinctly presented, linear interpolation should be used between the appropriate Mach numbers to obtain the required value for computation.

4.2.3 Increment-Adjacent Store Interference

Methods to predict the increment in captive store yawing moment variation with angle of attack, $\Delta\left(\frac{YM}{q}\right)_{\alpha}$, and the value at $\alpha=0$, $\Delta\left(\frac{YM}{q}\right)_{\alpha=0}$, for multiple carried stores are presented within this section. The basic prediction is made as a function of minimum store to store separation distance, y_{INTF} (see Subsection 3.1.3), at discrete Mach numbers. The data are presented separately for the aft cluster of stores on MER STATIONS 1, 3, and 5, and the forward cluster, MER STATIONS 2, 4, and 6. Predictions are also separately made for inboard→outboard interference, the interfering store carried inboard of the subject captive store, and outboard→inboard interference, the interfering store carried outboard of the subject captive store. On the curves defining the basic prediction, ADJ. SHOULDER refers to the MER shoulder store adjacent to the interfering store, OPPOSITE SHOULDER is the MER shoulder store furthest displaced laterally from the interfering store, and ℄ STORE is the MER centerline store, MER STATION 1 or 2.

4.2.3.1 Slope Prediction

The equations governing the prediction of incremental yawing moment variation with angle of attack are presented below:

INTERFERING STORES CARRIED INBOARD

MER STATIONS 1,2,3,4,5, and 6 (MS1-6):

AT A GIVEN MACH NUMBER:

$$\Delta\left(\frac{YM}{q}\right)_{\substack{\alpha \\ INTF \\ MS1-6}} = \left(\sum \Delta C_{\substack{\eta_{\alpha} \\ INTF \\ IB\rightarrow OB \\ MS1-6}}\right) K_{SCALE_{YM}}$$

where:

ΔC_{η_α} (INTF, IB→OB) - Incremental yawing moment slope coefficient due to inboard to outboard interference as a function of y_{INTF}, $\frac{1}{deg}$, see Table 13.

$K_{SCALE_{YM}}$ - Yawing moment scale factor, ft^3, see Section IV.

INTERFERING STORES CARRIED OUTBOARD

MER STATIONS 1, 2, 3, 4, 5, and 6 (MS1-6):

AT A GIVEN MACH NUMBER:

$$\Delta\left(\frac{YM}{q}\right)_{\substack{\alpha \\ INTF \\ MS1-6}} = \left(\sum \Delta C_{\substack{\eta_\alpha \\ INTF \\ OB\rightarrow IB \\ MS1-6}} + \sum \Delta^2 C_{\substack{\eta_\alpha \\ INTF \\ MS1-6}}\right) K_{SCALE_{YM}}$$

where:

ΔC_{η_α} (INTF, OB→IB) - Incremental yawing moment slope coefficient due to outboard to inboard interference as a function of y_{INTF}, $\frac{1}{deg}$, see Table 13.

$\Delta^2 C_{\eta_\alpha}$ (INTF) - Increment to ΔC_{η_α} (INTF, OB→IB) for the forward and aft cluster as a function of store nose separation, $\sqrt{x^2_{INTF} + y^2_{INTF}}$ (see Subsection 3.1.3), which is assumed to be negative when the interfering store is aft of the subject captive store, $\frac{1}{deg}$, Figures 514 and 515.

$K_{SCALE_{YM}}$ - Yawing moment scale factor, ft^3, see Section IV.

INTERFERING STORES CARRIED INBOARD AND OUTBOARD

MER STATIONS 1, 2, 3, 4, 5, and 6 (MS1-6):

AT A GIVEN MACH NUMBER:

$$\Delta\left(\frac{YM}{q}\right)_{\substack{\alpha \\ INTF \\ MS1-6}} = \left[K_{INTC_1} + K_{SLOPE_1}\left(\sum \Delta C_{\eta_{\substack{\alpha \\ INTF \\ IB\rightarrow OB \\ MS1-6}}} + \sum \Delta C_{\eta_{\substack{\alpha \\ INTF \\ OB\rightarrow IB \\ MS1-6}}} + \sum \Delta^2 C_{\eta_{\substack{\alpha \\ INTF \\ MS1-6}}}\right)\right] K_{SCALE_{YM}}$$

where:

K_{INTC_1} - Intercept for the inboard - outboard combination correction for yawing moment slope, $\frac{1}{deg}$, Figure 517.

K_{SLOPE_1} - Slope for the inboard - outboard combination correction for yawing moment slope, Figure 516.

$\Delta C_{\eta_{\substack{\alpha \\ INTF \\ IB\rightarrow OB}}}$ - Previously defined.

$\Delta C_{\eta_{\substack{\alpha \\ INTF \\ OB\rightarrow IB}}}$ - Previously defined.

$\Delta^2 C_{\eta_{\substack{\alpha \\ INTF}}}$ - Previously defined.

$K_{SCALE_{YM}}$ - Yawing moment scale factor, ft^3, see Section IV.

The above equations define the interference increment calculation at a given Mach number. For Mach numbers other than those presented, M = 0.7, 0.9, 1.05, 1.2, 1.6, these guidelines should be followed. If the subject Mach number is less than M = 0.7 use the value at M = 0.7. For other Mach numbers linear interpolation should be used between the Mach numbers which are presented.

4.2.3.2 Intercept Prediction

The equations governing the prediction of incremental yawing moment intercept are presented below.

INTERFERING STORES CARRIED INBOARD

MER STATIONS 1, 2, 3, 4, 5, and 6 (MS1-6):

AT A GIVEN MACH NUMBER:

$$\Delta\left(\frac{YM}{q}\right)_{\substack{=0 \\ INTF \\ MS1-6}} = \left(\sum \Delta C_{\eta_{\substack{\alpha \\ INTF \\ IB\rightarrow OB \\ MS1-6}}}\right) K_{SCALE_{YM}}$$

where:

$\Delta C_{\eta_{\substack{\alpha=0 \\ INTF \\ IB\rightarrow OB}}}$ - Incremental yawing moment intercept coefficient due to inboard to outboard interference as a function of y_{INTF}, see Table 14.

$K_{SCALE_{YM}}$ - Yawing moment scale factor, ft^3, see Section IV.

INTERFERING STORES CARRIED OUTBOARD

MER STATIONS 1, 2, 3, 4, 5, and 6 (MS1-6):

AT A GIVEN MACH NUMBER:

$$\Delta\left(\frac{YM}{q}\right)_{\substack{\alpha=0 \\ INTF \\ MS1-6}} = \left(\sum \Delta C_{\eta_{\substack{\alpha=0 \\ INTF \\ OB\rightarrow IB \\ MS1-6}}} + \sum \Delta^2 C_{\eta_{\substack{\alpha=0 \\ INTF \\ MS1-6}}}\right) K_{SCALE_{YM}}$$

where:

$\Delta C_{\eta_{\substack{\alpha=0 \\ INTF \\ OB\rightarrow IB}}}$ - Incremental yawing moment intercept coefficient due to outboard to inboard interference as a function of y_{INTF}, see Table 14.

$\Delta^2 C_{\eta_{\substack{\alpha=0 \\ INTF}}}$ - Increment to $\Delta C_{\eta_{\substack{\alpha=0 \\ INTF \\ OB\rightarrow IB}}}$ for the forward and aft cluster as a function of store nose separation, $\sqrt{x^2_{INTF} + y^2_{INTF}}$ (see Subsection 3.1.3) which is assumed to be negative when the interfering store is aft of the subject captive store, Figures 533 and 534.

$K_{SCALE_{YM}}$ - Yawing moment scale factor, ft^3, see Section IV.

INTERFERING STORES CARRIED INBOARD AND OUTBOARD

MER STATIONS 1,2,3,4,5,and 6 (MS1-6):

AT A GIVEN MACH NUMBER:

$$\Delta\left(\frac{YM}{q}\right)_{\substack{\alpha=0 \\ INTF \\ MS1-6}} = \left[K_{INTC_2} + K_{SLOPE_2}\left(\sum \Delta C_{\eta_{\substack{\alpha=0 \\ INTF \\ IB\rightarrow OB \\ MS1-6}}} + \sum \Delta C_{\eta_{\substack{\alpha=0 \\ INTF \\ OB\rightarrow IB \\ MS1-6}}} + \sum \Delta^2 C_{\eta_{\substack{\alpha=0 \\ INTF \\ MS1-6}}}\right)\right] K_{SCALE_{YM}}$$

where:

K_{INTC_2} - Intercept for the inboard-outboard combination correction for yawing moment intercept, Figure 536.

K_{SLOPE_2} - Slope for the inboard-outboard combination correction for yawing moment intercept, Figure 535.

$\Delta C_{\eta_{\substack{\alpha=0 \\ \text{INTF.} \\ \text{IB}\rightarrow\text{OB}}}}$ - Previously defined.

$\Delta C_{\eta_{\substack{\alpha=0 \\ \text{INTF} \\ \text{OB}\rightarrow\text{IB}}}}$ - Previously defined.

$\Delta^2 C_{\eta_{\substack{\alpha=0 \\ \text{INTF}}}}$ - Previously defined.

$K_{SCALE_{YM}}$ - Yawing moment scale factor, ft^3, see Section IV.

The above equations define the interference increment calculation at a given Mach number. For Mach numbers other than those presented, M = 0.7, 0.9, 1.05, 1.2, 1.6, these guidelines should be followed. If the subject Mach number is less than M = 0.7, use the value at M = 0.7. For other Mach numbers linear interpolation should be used between the Mach numbers which are presented.
