[#] FY 2013 Program is from the FY 2013 President's Budget, submitted February 2012												
^{##} The FY 2014 OCO Request will be submitted at a later date												
Note												
The High Performance Computing Modernization Program (HPCMP) transferred from the Office of the Secretary of Defense (RDT&E,DW) to the Department of the Army (RDT&E,A) in FY 12.												
During the Continuing Resolution in Fiscal Year (FY) 2012 the HPCMP received \$44.3 million and authority from the Office of the Secretary of Defense (OSD) for initial operations during the CRA period as the HPCMP was considered a new start for the Army even though it was a transferred program. When the FY 2012 budget was approved/appopriated, the \$44.3M was returned by the Army (RDT&E,A) to RDT&E,DW. The actual FY 2012 appropriated Army program was \$228.15 million including the paid back funding.												
A. Mission Description and Budget Item Justification												
This program element (PE) demonstrates and provides high performance computing hardware, parallel software, wide area networking services, and expertise that enable the Department of Defense (DoD) Research, Development, Test, and Evaluation (RDT&E) community to investigate and understand physical phenomena and behavior of systems through large scale computational simulation. DoD users of these services work in a diverse variety of science and technology areas including structural mechanics, fluid dynamics, material science, chemistry, biology, electromagnetics and acoustics, weather, ocean modeling, signal/image processing, forces modeling and simulation, environmental quality, electronics/networking/systems/C4I, and space and astrophysical sciences. The computational expertise and resources (massively parallel, networked, multi-core computers, advanced software applications and secure connectivity) provided by this Program enable DoD researchers and engineers to analyze complex problems and phenomena and develop novel solutions using state-of-the-art, physics-based and discrete event simulations. The combined capabilities of the HPC centers and the Defense Research and Engineering Network (DREN) enable massive calculations to be completed more efficiently and at reduced cost than if each DoD research organization were to duplicate the necessary resources. For example, DoD personnel use High Performance Modernization Program (HPCMP) resources to do such things as improve the performance of manned and unmanned aircraft, validate design concepts and establish expected performance of new armor and penetrator designs, speed the development of new ship designs, and demonstrate the viability of weapons systems performance. The HPCMP supports the requirements of DoD scientists and engineers in three major areas of effort: DoD Supercomputing Resource Centers

(DSRCs), the Defense Research and Engineering Network (DREN), and support for software applications. Dedicated HPC project investments (DHPIs) augment the DSRCs to form the total HPCMP computational capability. In 2012 the HPCMP provided approximately 1.47 billion processor hours to a user community representing requirements from all three services and the agencies of the DoD. The bulk of this capability is provided via 13 supercomputers (including systems for classified processing) located in the 5 DSRCs across the country providing a total of approximately 180,000 processors and 1.7 quadrillion floating point operations per second (1.7 petaFLOPS). DoD users store their results in 16 petabytes (16,000,000,000,000 bytes) of storage archival distributed across the centers and duplicated for backup (for a total storage capability of 32 petabytes). The DREN interconnects HPCMP resources and users nationwide via a research infrastructure that provides an aggregate network capacity of 25 billion bits per second to 38 user sites, 5 DSRCs, and 4 smaller affiliated resource centers (ARCs). Individual user site speeds range from 45 to 622 million bits per second, ARC speeds range from 155 to 2488 million bits per second, and DSRC speeds range from 622 to 3110 million bits per second. Mission-critical DoD applications across the spectrum of DoD activities are supported by the software component of the Program through training in advanced computational methods, the development of productive application development environments, tools, and methodologies, and through the direct provision of computational scientists and engineers to improve the performance, accuracy, and relevance of physics-based computational models.

The cited work is consistent with the Assistant Secretary of Defense, Research and Engineering Science and Technology priority focus areas and the Army Modernization Strategy.

# FY 2013 Program is from the FY 2013 President's Budget, submitted February 2012												
## The FY 2014 OCO Request will be submitted at a later date												
A. Mission Description and Budget Item Justification												
This project enables the Defense research, development, test and evaluation (RDT&E) community to resolve critical scientific and engineering problems more quickly, and with more precision, using advanced, physics-based computer simulation supported by high performance computing (HPC) technology. The computational expertise and resources enable DoD personnel to analyze phenomena that are often impossible, not cost effective, too time-consuming, or too dangerous to study any other way. The High Performance Modernization Program (HPCMP) supports the requirements of the DoD's scientists and engineers in three major areas of effort: supercomputing resource centers, the Defense Research and Engineering Network (DREN), and support for software applications. DoD Supercomputing Resource Centers (DSRCs) provide extensive capabilities and demonstrate new technologies that address user requirements for hardware, software, and programming environments. Efforts of the DSRCs are augmented by dedicated HPC project investments (DHPIs) that address near real-time and real-time HPC requirements. The total aggregate computational capability is roughly 1.7 quadrillion floating point operations per second (1.7 petaFLOPS); this capability is expected to double by 2013. All sites in the HPC Modernization Program are interconnected to one another, the user community, and major defense sites via the DREN, a research network which matures and demonstrates state of the art computer network technologies. The DREN interconnects 45 user and center sites at network speeds of up to 3 gigabits per second. The Software Application Support (SAS) effort optimizes and improves the performance of critical common DoD applications programs to run efficiently on advanced HPC systems, matures and demonstrates leading-edge computational technology from academic and commercial partners, and provides collaborative programming environments. Work in this project supports the Army S&T Innovation Enablers (formerly named Enduring Technologies) Portfolio. The cited work is consistent with the Assistant Secretary of Defense, Research and Engineering Science and Technology priority focus areas and the Army Modernization Strategy.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2012	FY 2013	FY 2014	
Title: Department of Defense (DoD) Supercomputing Resource Centers (DSRCs)									73.612	92.494	91.426	
Description: The program supports DoD Supercomputing Resource Centers (DSRCs) that are responsible for as large a fraction of DoD's science and technology and test and evaluation computational workload as feasible. Dedicated HPC project investments (DHPIs) support a one-time need and have no legacy within the HPC Modernization Program. DHPIs address critical

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2012	FY 2013	FY 2014
HPC requirements that cannot be met at DSRCs, such as real-time, and near real-time computing requirements, and leverage significant HPC and mission expertise located at these remote sites.					
FY 2012 Accomplishments: Supported five DoD Supercomputing Resource Centers (DSRCs) and awarded two to five competitive Dedicated HPC project investments (DHPs). This effort was formerly under PE 0603755D8Z- HPCMP.					
FY 2013 Plans: Provide advanced storage, supercomputing, and analysis capabilities to DoD S&T community via five DoD Supercomputing Resource Centers (DSRCs) and through the award of one or more competitive dedicated HPC project investments (DHPs). It is expected that by 2013 program will provide approximately 3.2 billion processor hours and over 3.5 quadrillion floating point operations per second in aggregate. This increase in computing capability is supported by an expected increase in storage capability to over 60 petabytes (60,000,000,000,000 bytes). This expansion in computational capacity is supported by advanced computational expertise that will ensure the resources are available and configured to support the DoD's most challenging problems, provide analysis of the massive and complex datasets resulting from the simulations, and develop optimized applications for rapidly evolving computer technology.					
FY 2014 Plans: Will provide advanced storage, supercomputing, and analysis capabilities to DoD S&T community via five DoD Supercomputing Resource Centers (DSRCs) and through the award of one or more competitive dedicated HPC project investments (DHPs); provide approximately 4.4 billion processor hours to users; increase in storage capability to over 78 petabytes (78,000,000,000,000 bytes). This expansion in computational capacity will be supported by advanced computational expertise that will ensure the resources are available and configured to support the DoD's most challenging problems, provide analysis of the massive and complex datasets resulting from the simulations, and develop optimized applications for rapidly evolving computer technology.					
Title: Networking			22.432	31.265	29.894
Description: The Defense Research and Engineering Network (DREN) provides wide area network (WAN) connectivity among the Department's science and technology (S&T) and test and evaluation (T&E) communities via a research network. The DREN matures and demonstrates new communications technologies of relevance to DoD users, and provides the computer and network security for the HPCMP.					
FY 2012 Accomplishments: Provided network services to link all elements of the program and operation of security systems and enhancements. Continued collaborative work with the federal networking community and standards associations continued to assure that the Defense

Research and Engineering Network (DREN) remained compatible with future technology change. This effort was formerly under PE 0603755D8Z- HPCMP.					
FY 2013 Plans: Provide an advanced network platform (DREN) and mature new high performance communications and data security technologies and enable advanced computational simulations and data analysis for users in both the Science and Technology (S&T) and Test and Evaluation (T&E) communities with new capabilities in excess of 3 Gbps network bandwidth provided on the highest bandwidth links. Lead and partner in efforts within the federal networking community to ensure that DoD users remain ready to take advantage of anticipated technology change.					
FY 2014 Plans: Will provide an advanced network platform (DREN) and mature new high performance communications and data security technologies; enable advanced computational simulations and data analysis for users in both the Science & Technology and Test & Evaluation communities with new capabilities of up to 10 Gbps network bandwidth provided on the highest bandwidth links; lead and partner in efforts within the federal networking community to ensure that DoD users remain ready to take advantage of anticipated technology change.					
Title: Software Applications			36.933	56.823	59.342
Description: Software Applications provide for the adaptation of broadband, widely used applications and algorithms to address research, development, test and evaluation (RDT&E) requirements; continued training of users as new system designs and concepts evolve. Continue interaction with the national high performance computing (HPC) infrastructure, including academia, industry, and other government agencies to facilitate the sharing of knowledge, tools, and expertise.					
FY 2012 Accomplishments: Computational Research and Engineering Acquisition Tools and Environments (CREATE): continued development of supercomputer-based engineering design and test tools to improve the acquisition process for major weapons systems across the DoD; continued development efforts in software programs continued to mature as other projects are completed, and others begun with a greater emphasis on engineering applications. Software Institutes: continued to develop shared scalable applications to exploit scalable HPC assets. Academic Outreach Program: continued support to encourage and support computational science in universities across the United States. Programming Environments and Training (PETTT): continued to provide computational and computer science support to the DoD HPC user community through interaction and collaborative projects with academic and industrial partners; this effort was adjusted as the program is re-focused. This effort was formerly under PE 0603755D8Z- HPCMP.					
FY 2013 Plans:
