Note

Beginning in FY 2014 Special Operations Forces (SOF) Underwater Systems represents the approved consolidation of SOF Surface Craft, Program Element (PE)1160484BB and SOF Underwater Systems, PE 1160483BB. The consolidated PE 1160483BB has been renamed Maritime Systems.

A. Mission Description and Budget Item Justification

This consolidated PE provides for engineering & manufacturing development and operational development of SOF Surface and Undersea Mobility platforms. This program element also provides for pre-acquisition activities to quickly respond to new requirements for SOF surface and undersea mobility, looking at multiple alternatives to include cross-platform technical solutions, service common solutions, commercial off the shelf technologies and new development efforts.

The Underwater Systems project provides for engineering and manufacturing development and operational systems development of combat underwater submersibles and underwater support systems and equipment. This project also provides for pre-acquisition activities (materiel solutions analysis, advanced component development and prototypes) to respond to emergent requirements. These submersibles, systems, and equipment are used by SOF in the conduct of infiltration/extraction, hydrographic/inland reconnaissance, beach obstacle clearance, underwater ship attack, and other missions. The capabilities of the submersible systems and unique equipment provides small, highly trained forces the ability to successfully engage the enemy and conduct clandestine operations associated with SOF maritime missions.

The Surface Craft project provides for engineering & manufacturing development and operational systems development of light, medium, and heavy surface combatant craft and selected items of specialized equipment to meet the unique requirements of SOF. This project element also provides for pre-acquisition activities (materiel solutions analysis, advanced component development & prototypes) to quickly respond to new requirements for surface craft and equipment, such as the light and heavy combatant crafts that are currently being studied in the Joint Capabilities Integration and Development System process. The craft capabilities and unique equipment provide small, highly trained forces the ability to successfully engage the enemy and conduct operations associated with SOF maritime missions.

Change Summary Explanation

Funding:

FY 2012: Decrease of -\$1.767 million due to a transfer of funds to Small Business Innovative Research Program.

FY 2013: None.

FY 2014: Net decrease of -\$48.983 million is due a program increase to support the Next Generation Forward Looking Infrared Radar and Next Generation Surface System (\$.520 million), the approved SOF Surface Craft PE consolidation (\$10.572 million), a reprogramming to support higher command priorities (-\$26.018 million) , and a reduction to support higher Departmental priorities (-34.057 million).

Schedule: Delays in Shallow Water Combat Submersible Block 1 design challenges by prime contractor resulted in schedule slip. Delays in Dry Combat Submersibles due to competing priorities.

Technical: None.

# FY 2013 Program is from the FY 2013 President's Budget, submitted February 2012												
## The FY 2014 OCO Request will be submitted at a later date												
A. Mission Description and Budget Item Justification												
This project provides for engineering and manufacturing development and operational systems development of small combat underwater submersibles and underwater support systems and equipment. This project also provides for pre-acquisition activities (materiel solutions analysis, advanced component development and prototypes) to respond to emergent requirements. These submersibles, systems, and equipment are used by Special Operations Forces (SOF) in the conduct of infiltration/extraction, hydrographic/inland reconnaissance, beach obstacle clearance, underwater ship attack, and other missions. The capabilities of the submersible systems and unique equipment provides small, highly trained forces the ability to successfully engage the enemy and conduct clandestine operations associated with SOF maritime missions. Sub-projects include:												
• Combat Submersibles: Includes incorporating obsolescence solutions and conducting product improvement efforts for the in-service SEAL Delivery Vehicle MK 8 and conducting technology development and engineering and manufacturing development for the follow-on combat submersibles such as the various types of shallow water combat submersibles. The shallow water combat submersibles use an evolutionary acquisition approach to develop a family of submersibles, to include a new wet submersible capable of operating from existing Dry Deck Shelters, and more capable wet and/or dry submersibles that will operate from future large submarine shelters/systems and/or surface ships. The combat submersible sub-project leverages existing SEAL Delivery Vehicle components, develops new state-of-the-art components where appropriate, and leases or purchases commercial-off-the-shelf components and vehicles for test and evaluation and operational assessment.												
• Underwater Support Systems and Equipment: Includes conducting product improvement efforts for in-service submarine support systems such as the Dry Deck Shelters, unmanned underwater vehicles such as the Semi-autonomous Hydrographic Reconnaissance Vehicle, and diver equipment such as the Hydrographic Mapping Unit, Non-gasoline Burning Outboard Engines and Diver Propulsion Devices. Also provides for technology development and engineering and manufacturing development, and studies and analysis for follow-on underwater systems and support equipment.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2012	FY 2013	FY 2014	
Title: Shallow Water Combat Submersible (Block I)									13.052	8.989	2.844	
FY 2012 Accomplishments: Completed Integrated Baseline Review and Preliminary Design Review. Entered detailed design phase.												
FY 2013 Plans:

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2012	FY 2013	FY 2014
Complete contractor quality assurance, acceptance and system build up test. Continue test and evaluation of SWCS Block I and begin contractor verification trials. FY 2014 Plans: Completes developmental testing and Engineering Development Model (EDM) manufacturing and enters into the system-level developmental testing program phase. EDM vehicle delivery and acceptance will occur before the end of FY 2014.				
Title: Dry Combat Submersibles FY 2012 Accomplishments: Procured government furnished equipment and continued commercial submersible prototyping efforts for advanced technology demonstrator User Operational Evaluations System (UOES) #2. Commenced and completed Phase I, Concept Design Studies for additional prototyping efforts for UOES #3. The project was initiated as part of Congressional Adds: Alternative SOF Submersible Concept Design Study in Program Element 1160483BB. FY 2013 Plans: Continue commercial submersible prototype efforts, including the construction of UOES #2 and potential design and construction of additional advanced technology demonstrator prototypes. FY 2014 Plans: Continues to design, construct, and test commercial prototype submersibles.		51.645	9.234	10.894
Title: Dry Combat Submersible Medium (DCSM) FY 2013 Plans: Perform studies and analysis to prepare for the commencement of a DCSM acquisition program at Milestone B based on results of user operational evaluation projects.		0.000	5.028	0.000
Title: Dry Deck Shelter FY 2012 Accomplishments: Conducted Analysis of Alternatives for next generation shelter to accommodate family of combat submersibles. FY 2013 Plans: Continue Analysis of Alternatives for next generation shelter and evaluate SOF Underwater Systems mobility needs.		1.960	3.154	0.000

Remarks

D. Acquisition Strategy

- Combat Submersibles: Shallow Water Combat Submersible Block I used full and open competition, with a down-select to a single contractor. Broad Agency Announcements were issued for Dry Combat Submersible multiple design efforts with follow-on prototyping. Additionally, existing contracts are utilized where appropriate for various component development and prototypes.
- Dry Deck Shelter analysis of alternatives will perform some in-house work, other government agency support or existing contracts.
- Underwater Support Systems and Equipment: Existing contracts are utilized where appropriate, and various new contracts are awarded as necessary.

A. Mission Description and Budget Item Justification

This project provides for engineering and manufacturing development, and operational systems development of light, medium, and heavy surface combatant craft and selected items of specialized equipment to meet the unique requirements of Special Operations Forces (SOF). This project also provides for pre-acquisition activities (materiel solutions analysis, advanced component development and prototypes) to quickly respond to new requirements for surface craft and equipment, such as the light and heavy combatant crafts that are currently being studied in the Joint Capabilities Integration Development System process. The craft capabilities and unique equipment provide small, highly trained forces the ability to successfully engage the enemy and conduct clandestine operations associated with SOF maritime missions. Sub-projects include:

The Combatant Craft Medium (CCM) sub-project provides a family of next generation combatant craft to replace the current rigid inflatable boat (RIB) and the MKV. One version of these craft will be a reconfigurable, multi-mission surface tactical mobility craft with a primary mission of insertion and extraction of SOF in a medium threat environment. It will incorporate additional performance capabilities above current platform capabilities such as shock mitigation, low observability, improved maneuverability and SOF warfighting capabilities required to operate in future threat environments. Other variants of craft will be developed to support foreign security assistance missions and operations in low or permissive threat environments. These variants are dependent on the threat environment, training requirement, or mission.

The Combatant Craft Heavy (CCH) sub-project represents a family of solutions that will provide engineering support for design and specification of a development combatant craft for movement and maneuver of SOF personnel. Requirements include maneuverability, reduced detectability with enhanced shock mitigation, and human systems integration. Potential solution for Combatant Craft Heavy is the Sea, Air, and Land Teams Insertion, Observation and Neutralization (SEALION) that was developed as an advanced technology prototype by the United States Navy and may be modified and tested for transition to SOF operations. Additional studies may be performed to support analysis of SOF-peculiar needs for an Afloat Staging Base to command, control, sustain, launch and recover Joint SOF.

The Next Generation Combat Craft Forward Looking Infrared Radar (CCFLIR) sub-project provides SOF with daylight, high resolution, and additional spectrum imaging capabilities to augment existing optical and radar sensors. Technology insertion is needed to enhance the detection, recognition, identification, and tracking of small and near surface targets and ships. This program is an FY 2014 new start.

The Next Generation Surface Systems (NGSRF) sub-project provides a rapid response capability to support SOF Combatant Craft Systems and subsystems. The NGSRF will explore solutions to support emerging requirements in support of SOF exercises and training for future missions. It provides technology refresh efforts to

correct system deficiencies, improve asset life, and enhance mission capability through the means of feasibility studies, analyses of alternatives, pre-developmental risk reduction, and engineering analyses. Demonstrations and modifications may be made to support emerging capability enhancements such as but not limited to, weapons mounts, sensors, enhanced communications and navigation subsystems, and other minor modifications to craft in support of future missions. Solutions may be commercial-off-the-shelf (COTS) solutions, other agency solutions or new solutions. This program is an FY 2014 new start.

D. Acquisition Strategy Combatant Craft Medium acquisition strategy is a competition using a two-phase source selection process. Phase I involved a Small Business Set-Aside competition for two companies to design, build and deliver test articles. Phase II will select a single company to provide a fully integrated baseline craft system for test and evaluation with options for production, engineering support and contractor logistic support. Acquisition strategies for other craft may be based on the rapid acquisition of available non-developmental commercial-off-the-shelf (COTS)/government-off-the-shelf craft. Combatant Craft Heavy acquisition strategy is to complete the initial planning and studies for the craft, which will be performed in-house with some support from other government agencies or existing contract services. Next Generation Surface Systems and Subsystems to include the Combatant Craft Forward Looking Infrared Radar will explore the spectrum of acquisition strategies depending on selection of COTS solutions, modification of existing systems, or new competitive acquisitions.
